Clause (3) of Art.28 achieves, to quote the words of Dr. Ambedkar, again two purposes. One is as he said "There we are permitting a community which has established its educational institution for the advancement of its religion or its cultural life, to give such instruction in the school. We have also provide that (the) children of other communities who attend the school shall not be compelled to attend such religious instruction which undoubtedly and obviously must be the instruction in the religion of that particular community unless the parent consent to it. As I say we have achieved this double purpose and those who want religious instruction to be given are free to establish their institutions and claim aid from the State, give religious instruction, but shall not be in a position to force that religious instruction on other communities"[17] . It may also be noted that, according to Dr. Ambedkar, once an educational institution, whether maintained by a community, or not, gets a grant out of State funds, it must be open to all communities. Presumably this follows from clause (2) of Art. 29 of the Constitution. The essence of these speeches provides enough light to the people of India to decide upon matters when certain political forces try to implement their religious agenda through government regulations and orders in the name of value-creation in kids.

Speaking on the limitations on fundamental rights, Dr. Ambedkar stated, "The rights of the American Constitution are not absolute. In support of every exception to fundamental rights set out in the Constitution, one can refer to at least one judgement of the U.S. Supreme Court. The purpose of the provisos (reasonable restrictions) was to prevent endless litigation and the Supreme Court having to rescue Parliament. The provisos permit the State directly to impose limitations on the Fundamental Rights. There is really no difference in the result"[18].

3. CONCLUSION

Concluding upon the loom, it can be certainly said that Dr. Ambedkar was a progressive leader as well an egalitarian constitutionalist. He, undoubtedly, held no intention to interfere with the religious sentiments, neither had he endeavoured to validate or invalidate their thoughts, however, he was firm believer of modern democratic values such as equality, justice, freedom

16. *Id* at p.287.
17. *Id* at p.287.
18. Granville Austin, The Indian Constitution: Cornerstone of a Nation 73(Oxford University Press, Oxford, 1st ed. 1972).

and participatory politics and their practical existence in matters of State and governance. He believed in the secular rule of law and wanted the excesses committed upon the women, minorities and backward classes to be eliminated as well as penalised, in appropriated ways backed by justice oriented juristic principles. He seems to have come forward in approving the intellect of the state, its power to bring equilibrium between religion and social reform. He believed in thoughtful legal reasoning to contest the matters in conflict with religion. He was also conceived of the idea that so far as the reforms are concerned, ideological constitutionalism should not come in the way of practical necessity and hinder the progress, an idea cherished by Sir Ivor Jennings that many a times, "the 'Principles' of constitutional lawyers become a dangerous foundation for the formation of policy"[19] .

The Constitution has, through Fundamental Rights and Directive Principles of the State Policy, cast a duty upon the State to continue the reform process till the goals set out in the Preamble are not achieved. This struggle is a continuing phenomenon. However, the co-operation of the masses is also needed. Change is the rule of nature. Dr. Ambedkar also believed that the thrust for it should also come from masses or be recognised by the people in general and reform agenda should be applied to all the creeds without any discrimination. National interest and Constitutional goals should be the guiding force for reforms and not hollow political categorical ideologies which are bound to disrepute the whole process. Thus, State should continue to endeavour to uphold the democratic values and Constitutional morality through an intelligent social engineering approach based on prudent legal postulates and broad consensus of masses as undertaken by the progressive leaders of the Constituent Assembly, including, prominently, the great Dr. Bhim Rao Ambedkar.

LAW RELATING TO WILLS: INDIAN PERSPECTIVE

-Dr Rattan Singh* & Ms Balwinder Kaur**

I. INTRODUCTION

Ironically, the most certain thing in one's life comes at the very end of it—the curtain call, the death. But life still goes on and beyond. And the dead lives among the alive—in their memories that he leaves behind besides other things. There cannot be a dispute regarding the fond memories, for they can be shared without dispute but the other material things most of the time become a bone of bitter contention. This is where enters the Will. Will is a legal document containing the desire of the dead regarding his/her other material things-his property. A Will goes a long way in precluding the probability of all possible disputes that might arise after the death of the testator among his/her legal heirs.[1] Since wealth is a well known corrupter of mind, which blinds humans from the distinction between the right and the wrong, it is important to preserve the confidentiality of the Will, for, the lack of confidentiality may pose a grave threat to the life of the testator.[2]

A Will is not an instrument of transfer of property by sale, gift, exchange, mortgage, lease or assignment, nor it is an agreement. These transactions need two living persons to execute them, whereas a Will is a unilateral declaration of a person fixing his own line of succession to his estate on his demise. The Will speaks as on the death of the testator. It is an instrument that contains the last desire of the testator. It may change the course of devolution of property as prescribed by law about intestate succession.[3] A Will was generally resorted to when a testator desired to distribute the property after his death according to his wishes contrary to the normal mode in which the property would have passed on the basis of the prevailing customary law.[4]

A coparcener governed by the Dayabhagha law always could and at present can dispose of his coparcenary interest by Will, subject to the claims of those who were entitled to be maintained by him. In case of persons governed by the Mitakshara law, the rule which existed before the promulgation of the Hindu Succession Act, 1956, has been considerably modified by Section 30 of the said Act and this section now permits one governed by the Mitakshara law to dispose of his

undivided interest in the coparcenary property by Will.[5]

II. HISTORICAL PERSPECTIVE

The origin of wills in India is shrouded in obscurity and its investigation is rendered all the more difficult as there is no text at all dealing with the subject expressly. According to Sir Thomas Strange there is no term in Sanskrit or in the local language to express the idea of a will. The seven kinds of documents in use among Hindus, as per description of documents given by the Sanskrit writers, were documents of partition, gift, purchase, mortgage, agreement, bondage and debt. Will was not expressly mentioned. The orthodox Hindu contemplated the claims of his children and dependants as indefeasible and they in their turn revered as laws the authority and wishes of his ancestors. Hence the scarcity of wills were also in ancient times. But it cannot be said that wills were wholly unknown to Hindu law. Gifts were undoubtedly very common and, as in other countries, the conception of a gift gave rise to the conception of a will.

The first known will was executed by the well knownOmichand in 1758. Omichand was a resident of Calcutta and was conversant with the English Laws and customs administered there. The probate of his will was granted by the court of Records of Calcutta. The validity of Wills made by Hindus was, however, not easily established. In 1786, Wills were considered valid by the Supreme Court in two cases.[6] In 1791, the Supreme Court of Calcutta held that the probate of a Hindu will could not be granted. In 1792, the Sudder Court decided in favour of a will by which a father bequeathed his entire Zamindari to his eldest son.[7] The Supreme Court laid down the same rule in 1793.[8] The validity of Hindu Wills was considered as undisputed in the matter of wills of *Raja NabaKissan*[9], NemiCharanMullick (1808)[10] in a Bengal case (1812) [11].

III. CONCEPT OF WILL: MEANING AND DEFINITION

Will is a translation of the Latin word "Voluntas", which was a term used in the texts of Roman law to express the intention of a testator. It is curious that the abstract term has come to mean the document in which the intention is contained. The same has been the case with several other English law terms, the concrete has superseded the abstract-obligation, bond, contract, are examples. The word 'testament' is derived from 'testatiomenties', it testifies the determination

5. S.K. Mitra, Hindu Law195 (Orient Publishing Company, New Delhi, 2nd Edition, 2006).

11. Ram Coomar v. Kishan Kinker 2 S.D. 42 (India).

of the mind.[12]

Will means a continous act of gift up to moment of the donor's death and though revocable in his lifetime, is, until revocation, a continous act of gift up to the moment of death, and does then operate to give the property disposed of to the persons designed as beneficiaries.[13]

The expression "Will" has been defined in the Indian Succession Act, 1925, Section 2(h),'Will' means "the legal declaration of the intention of a testator with respect to his property which he desires to be carried into effect after his death."[14]

According to Judicial Dictionary, "a will is the legal instrument whereby a man declares what is to be done with his property after his death. Will means the legal declaration of the intention of the testator with respect to his property which he desires to be carried into effect after his death. The word 'will' shall extend to a testament and to a codicil and to an appointment by a will or by writing in the nature of a will in exercise of a power and also to a disposition by will.[15]

Bouvier's Law Dictionary defines will as the, "disposition of one's property to take effect after death. The term will, as an expression of the final disposition of one's property, is confined to English Laws and those countries which derive their jurisprudence from that source.[16]

TERMS RELATING TO WILLS

Probate: Probate means the copy of a Will certified under the seal of a Court of competent jurisdiction with a grant of administration to the estate of the testator. The term 'probate' in its strictest sense, signifies the copy of the Will which is given to the executor, together with a certificate granted under seal of the Court, and signed by one of the registrars, certifying that the Will has been proved. This probate or copy of the Will constitutes the executor's title to act, the original document being left in the registry. When the two documents differ, and questions of interpretation arise, the Court may look at the original Will.[17]

Codicil : It is a document executed in the same manner as a Will changing or altering or adding to the disposal made earlier in the Will. Just as a Will can be revoked by subsequent Will, a codicil can also be revoked by subsequent Will or Codicil. It may be noted that putting cross lines on the Will or codicil does not amount to cancellation or revocation of the Will/codicil unless such

12. Acharya Shuklendra, Hindu Law1134 (Modern Law Publications, 2004).
13. T.P. Gopalakrishnan, Law of Wills 22 (Law Book Company, Allahabad, 3rdEdition, 1975).
14. The Indian Succession Act, 1925 (Act 39 of 1925).

16. Bouvier's Law Dictionary, Third Revision, 3455.
17. *Id.,* at 1189.

cancellation follows the procedure required for making the Will and words are used to that effect.[18]

According to the definition as given in section 2 (b) of the Indian Succession Act, 1925, three things are evident:

i) That a codicil cannot be oral but must be an instrument in writing.

ii) It must have been made in relation to will which has already come into existence.

iii) Its object is to explain, alter or add to the disposition under the will.

Letter of Administration: Letter of Administration is certificate granted by the competent court to an administration where there exists a will authorizing him to administer the estate of the deceased in accordance with the will. If the will does not name any executor, an application can be filed in the court for grant of letter of administration for property. A letter of administration can be obtained from the court of competent jurisdiction to appoint an executor under will or where the executor appointed under a will refuses to act or where he has died before or after proving the will. This is one of the well established maxims of the law of grant of letters of administration that grant follows the interest. In other words letters of administration is to be granted to the person who has the maximum interest in the estate of the testator. The universal legatee is the testator's first choice and thereafter is the residuary legatee. Where there are several residuary legatees, the one who represents the maximum interest will be preferred.[19]

Testator: A male person who makes a Will. A female who makes a Will is known as testatrix.[20]

IV. LAWS APPLICABLE TO WILL

Following are the statutes relating to wills:

i) **The Constitution of India, 1950:** In Indian Constitution, under entry 5 of concurrent list, it is mentioned that all matters relating to wills in respect of which parties in judicial proceedings were immediately before the commencement of this Constitution subject to their personal laws.[21]

ii) **The Indian Succession Act, 1925:** The Indian Succession Act, 1925 is mainly related to the general law of testamentary succession. It is applicable to the wills made by Hindus, Buddhists, Sikhs, Jains, Parsis and Christians but not to Mohammedans. It is

18. H.k.s. Malik, Testamentary Disposition of Property Under The Hindu Succession Act, 1956, 1 (The Commercial Law Publications, Delhi, 1981).
19. The Indian Succession Act, 1925, section 232.
20. *Supra* note 1 at 30.
21. India Const. schedule 7.

only a consolidating and not an amending enactment, prima facie the same effect ought to be given to its provisions as way given to the provisions of the Acts of which it is substituted.[22]

iii) **The Indian Evidence Act, 1872:** A will must be executed in accordance with the formalities as laid down in the Indian Succession Act, 1925. The Evidence Act lays down that whenever a document is produced before a court as evidence at least one atlesting witness shall be called to prove the execution of the document. This principle will apply only if at least one of the giving evidence and subject to the process of the court.[23]

iv) **The Indian Registration Act, 1908:** Will is a document, registration of which is optional under the provisions of the Indian Registration Act, 1908. The registration of a document provides evidence that the proper parties had appeared before the registering officers and the latter had attested the same after ascertaining their identity. The non-registration of a will does not lead to any inference against the genuineness of a will. Once a will is registered under the Registration Act, it is placed in the safe custody of the Registrar.[24]

MUSLIM AND CHRISTIAN LAW ON WILL

Muslim Law: There is no codified law for Wills by Muslims. Wills by Muslims can be made as per their religious books. Further it may be kept in mind that the Muslim Law of Wills is not uniform for all the sections. There are many differences among the Shias and the Sunnis.[25]

It may be mentioned here that the Indian Succession Act, 1925, does not affect the provisions of Muslim Law relating to testamentary succession to the estate of a Muslim. The leading authority on Muslim Will is *Hedaya.* The *Hedaya* was composed by Sheikh Burhan-ud-din-Ali who belonged to *Hanafi* School. Another source is Fatwa *Alamgiri* which was composed by the author belonging the *Hanafi* School.[26]

Capacity to make Will under Muslim Law: Every Muslim who is of sound mind and has attained majority is competent to make a will. To make a valid will, it should satisfy two conditions, viz.:

i) The testator must have a sound mind at the time of making the will, and

---

22. Sanjiva Row's, Indian Succession Act,2 (1985).
23. Act No. 1 of 1872.
24. Act No. XVI of 1908.
25. *Supra* note 35 at 112.
26. *Supra* note 1 at 107.

ii) The testator should be major as per Indian Majority Act, 1875.[27]

Limited Power

Muslim Law limits the power of bequests to one-third of the net assets. The two-third must in any case be distributed according to rules of intestacy, unless there are no heirs at all claiming adversely to the legatees, which is rather a remote contingency.

Thus, a Muslim can validly bequeath only one-third of his net assets, when there are heirs. The net assets are ascertained after payment of the funeral expenses of the deceased, his debts, etc.

If there are no heirs, testamentary power can be exercised over the entire property of the testator. If all heirs agree and give their consent, then one-third limit can be exceeded.[28]

Form of Will: A will by a Mohammedan, is not required to be in writing but it may be oral also. No writing is required to make a Mohammedan will valid and no particular form is there for it. Intention of the testator is the prime concern. A Mohammedan will though in writing does not require to be signed or attestation.[29]

Christian Law: According to Indian Succession Act, 1925, except for Muslims, the process and procedure of making or executing a Will is the same for every other community. Therefore, like others, a Christian can make a Will only when he is of sound mind and is free from duress or coercion or fraud. The mental power of a testator may be impaired by old age or disease, but he must be able to comprehend the nature and effect of disposition. He should possess memory and intelligence to form a proper judgment regarding the disposition. Old age itself is no incapacity. The mental capacity and memory must exist at the actual moment of execution.

The formalities required for a Christian to make a Will are--

i) That it must be in writing;

ii) That it must be duly signed or marked by the testator or signed by some other person in the presence of and under the direction of the testator himself;

iii) That it must be attested by two or more witnesses.

Simultaneous presence of both the witnesses is not necessary as such a Will can be proved by one of the attesting witnesses.

Here it must be noted that Christians have the facility to make Privileged Wills also, provided the testator is employed as a soldier in an expedition or engaged in actual warfare, or an airman. He

27. R.k. Bag And D.p. Dey, Wills Law And Practice 358 (Eastern Law House, New Delhi, 2018).
28. *Supra* note 1 at 108.
29. *Supra* note 52 at 360.

should be of 18 years in age. The soldier includes a civilian in actual military service, but a Will made in military hospital eighteen months after the cessation of active military service, cannot be admitted as a Privileged Will.

Privileged Wills may be made by word of mouth, words spoken in course of casual conversation will not constitute testamentary act of disposition. Cogent evidence must be adduced to prove the statements made by the deceased after executing the Will in order to find the contents of the Will.[30]

V. JUDICIAL ATTITUDE TOWARDS WILLS

The Indian judiciary has interpreted the provisions relating to wills, of which some famous cases have been discussed hereunder.

In Tagorev. Tagore case,[31] Privy Council point out that no new form of estate or no new line of inheritance could be started by the donor or testator in order to satisfy his personal whims. Principles governing the construction of a will apply, by and large, to the construction of a gift.

- Inheritance being a thing laid down by the State for reasons of public policy, a private person cannot lay down a mode of inheritance unknown to the law. Thus if a testator grants property to a person and his eldest nephew and the eldest nephew of such nephew, and so forth, here the mode of inheritance not being legal, it fails except as to those persons in whose favour it is valid by way of gift. Here the succession of life-estate, being repugnant to Hindu law, it fails as a mode of inheritance. It remains to be seen whether it can be upheld by the law of gift.
- Under the Hindu Law, in the case of a gift, the donee must be a person in existence.
- Trusts of various kinds have been reorganised and acted on in India and there is no reason why they should not be upheld, if created by Hindus. But the interposition of trustees in this case cannot cure the illegality of the will. Trusts for illegal purposes are invalid.
- The maintenance is sufficient. The amount of maintenance is to be determined by various circumstances among which the magnitude of the property is one; but it is not to have a fixed proportion to the extent of the property.
- A general provision in the will that the heir at law shall be disinherited is ineffectual,

30. *Supra* note 1 at 105.
31. (1872) 9 Beng.LR 377 (India).

without a valid bequest to another person.

- The principles of Hindu Law laid down in this case were a governing factor for half century. Now it has been superseded by the Hindu Disposition of Property Act (XV of 1916) which provided that a gift of bequest to an unborn person is valid, provided he is given an absolute interest and the gift is in conformity with Section 113 of the Indian Succession Act, 1925.

In ***ValliammaiAchi v. Nagappa Chettiar***,[32] the Supreme Court observed that where a person by his 'Will' professes to dispose of something which he has no right to dispose of, the person to whom the thing belongs shall elect either to confirm such disposition or to dissent from it and in the latter case he shall give up any benefits which may have been provided for him by the 'Will'. The property being joint family property, Pallaniappa's father was not entitled to Will it away and his making a Will would make no difference to the nature of the property when it came into the hands of Pallaniappa. A father cannot make the joint family property into absolute property by merely making a Will. A father in a Mitakshara family has a very limited right to make a Will. The character of the property would not change. No doubt, Pallaniappa had also taken the probate of the Will as a dutiful son, the property would still remain a joint family property in the hands of Pallaniappa.

In ***Raman Nadar Viswanathan Nadar v. Snehappoo Kasalamma***,[33] the Supreme Court held thatAlthough there is no authority in Hindu Law to justify the doctrine that a Hindu cannot make a gift or bequest for the benefit of an unborn person yet that doctrine has been engrafted on Hindu Law by the decision of the Judicial Committtee in Tagor's case, 1872 Ind App Supp 47 (PC). Though the decision is based on wrong reading of the relevant verse in Dayabhaga, yet it has taken roots, may be on the basis of the maxim, "communis error facit Jus". This doctrine has not been altered by further legislative measures by which no bequest shall be invalid by reason only that any person for whose benefit it may have been made was not born at the date of testator's death. This rule, however, is subject to the limitations and provisions contained in sections 113, 114, 115 and 116 of the Indian Succession Act, 1925.

In ***S. Rathinam @ Kuppamuthu v. L.S. Mariappan,***[34] in this case, Apex Court declared that the founder of the trust dedicated properties for the maintenance of the temple and performance of

32. AIR 1967 SC 1153(India).
33. AIR 1970 SC 1759(India).
34. AIR 2007 SC 2134(India).

Pujas consisting of four shop rooms in the front and a few residential buildings at the back of the temple. Disputes and differences arose between two branches of the family. It was held that a testator by his Will, may make any disposition of his property subject to the condition that the same should not be inconsistent with the laws or contrary to the policy of the State. A Will being not a transfer, the bar contained in section 6(d) of the Transfer of Property Act, 1882, will have no application and as such the Will is valid.

In ***B. Rajeogowdav. H.R. Shandaregowda***[35], the Apex Court observed that as per section 3 of the Transfer of Property Act, the essential condition of attesting is 1) two or more persons have seen the executants sign the instrument or have received from him a personal acknowledgment of his signature, 2) with a view to attest or to bear witness to this fact each one of them has signed the instrument in the presence of the executants. It is essential that the witness must have put his signature animoattestandi i.e. for the purpose of attesting that he has seen the executants sign or receive from him a personal acknowledgment of his signature. It is for the attesting witness to see the attesting of the document or must have knowledge of the acknowledgment of the signature of the executant.

In ***GurdevKaur v. Kaki***[36], Supreme Court pointed out that when execution of the Will is fully proved then in order to ascertain the wishes of the testator we have to look to the text of the Will. The intention of the testator has to be discerned from the language used in the Will. If a Will appears on the face of it to have been duly executed and attested in accordance with the requirements of the Statute, a presumption of due exception and attestation applies.

In***Mathai Samuel v. Eapen Eapen***[37], the Supreme Court held that subsequent events or conduct of parties after the execution of the document shall not be taken into consideration in interpreting a document especially when there is no ambiguity in the language of the document.

The Apex Court in ***Dr. ParkashSoni v. Deepak Kumar***[38], viewed the facts of the case and stated that the entire case revolved around the proof of due execution of the alleged Will and was surrounded by suspicious circumstances. The Court observed that as per the presented case, the Will was executed by the deceased Srimati Mooli Swarnkar on the date of her death and the

35. AIR 2006 Kant. 48 (India).
36. 2007 (2) A.L.D. 20 at p. 26 (S.C.) (India).
37. AIR 2013 S.C. 532 (India).
38. 2017 SCLT 2446 (India).

witnesses who were allegedly present also stated that hands of Srimati Mooli Swarnkar was shivering while signing the disputed Will.

Alleged Will not a result of testator's free will and mind: The Court pointed out that at the time of alleged execution of Will, SrimatiMooliSwarnkar was very weak and she was being ¬¬¬-administered drip. The Court also noted that on comparison of the disputed signature on the Will and other signatures of the deceased, it was observed that they were totally different.

The Court on the basis of facts and circumstances of the case, was of the view that the condition of the testator's mind and body was very feeble and debilitated. The signature of the testator was allegedly taken on the death bed while she was administered drip. The dispositions made in the will may not be the result of the testator's free will and mind.

To prove due execution of Will, suspicious circumstances shall be discharged satisfactorily: The Court held that in such cases, the Court would naturally expect that all legitimate suspicions should be completely removed before the document is accepted as the last will of the testator. The presence of such suspicious circumstances naturally tends to make the initial onus very heavy and unless it is satisfactorily discharged, Courts would be reluctant to treat the document as the last will of the testator.

The Court observed that in the instant case there were many suspicious circumstances hence the dispositions made in the alleged will may not be as a result of testator's free will and mind. The Court further held that the Respondents being the propounders of the will had failed in the case to satisfy the judicial conscience of this Court regarding due execution of the will.

VI. CONCEPT OF LIVING WILL

The issue of euthanasia has a long history stretching back to the Ancient Greeks, Romans, and Indians, the right to a death with dignity was brought to the fore recently. Before this right was considered, the arguments surrounding euthanasia related more to morality (as with the Roman Stoics)[39] and religion (for example, Judeo-Christian philosophy considered suicide to be irreligious).[40]

In ***Aruna Ramchandra Shanbaug v. Union of India***[41], the Supreme Court allowed passive euthanasia, but before the case of Aruna Ramchandra Shanbaug v. Union of India, little was clear in India about the law applicable to terminally ill patients who wished to die a natural death

39. Frederick Lowy, Douglas M Sawyer & John R Williams, "Canadian Physicians and Euthanasia: 4 Lessons from Experience" (1993) 148 CANADIAN MEDICAL ASSOCIATION JOURNAL (CMAJ) 1895.
40. Norman L. Geisler, Christian Ethics: Contemporary Issues And Options 171 (United States of America, Baker Academic, 2nd Edition, 2010).
41. (2011) 4 SCC 454 (India).

by refusing modern medical life-sustaining treatment. The 196th Report of the Law Commission of India had made a study of the law relating to euthanasia and its related facets and had proposed a Bill for its implementation. However, euthanasia was not given legal validity until this landmark judgment.

Common Cause ***(A Regd. Society) v. Union of India***[42], the Supreme Court declared right to die with dignity was a fundamental right and that an advance directive by a person in the form of living will could be approved. Advance Medical Directive cannot operate in abstraction. There has to be safeguards. They need to be spelled out. We enumerate them as follows:

i) The Advance directive can be executed only by an adult who is of sound mind, and healthy state of mind and in a position to communicate, relate and comprehend the purpose and consequences of executing the documents.

ii) It must be voluntarily executed and without any coercion or inducement or compulsion and after having full knowledge or information.

iii) It should clearly indicate the decision relating to the circumstances in which withholding or withdrawal of medical treatment can be resorted to.

iv) It should disclose that the executor has understood the consequences of executing such a document.

v) The document should be signed by the executor in the presence of two attesting witnesses, preferably independent, and countersigned by jurisdictional judicial magistrate first class so designated by the concerned District Judge.

vi) In the event, the executor becomes terminally ill and is undergoing prolonged medical treatment with no hope of recovery and care of the ailment, the treating position, when made aware about the advance directive, shall ascertain the genuineness and authenticity thereof from the jurisdictional Judicial Magistrate First Class before acting upon the same.

vii) An Advance Directive shall not be applicable to the treatment in question if there are reasonable grounds for believing that circumstances exist which the person making the directive did not anticipate at the time of the Advance Directive and which would have affected his decision had he anticipated them.

If the Advance Directive is not clear and ambiguous, the concerned Medical Boards

42. AIR 2018 SC 172 (India).

shall not give effect to the same and, in that event, the guidelines meant for patients without Advance Directive shall be made applicable.

VII. CONCLUSION

Wills are legally recognised documents which enables ones property to be distributed according to his or her desires or wishes. In case where a person dies without making a will usually referred to as intestate situation, various issues may arise. Though writing of a will accrues various benefits, very little people do so. The most commonly types of will embraced by individuals are oral and handwritten wills. In cases where no will was written by the deceased person, the governing law automatically controls and regulates property distribution among the beneficiaries. The improvement in current law relating to wills in India is required to make the present status (framework) more effective like a will should be made video-graphed, the person who is making will should medically examined.

LEGAL PROTECTION TO REFUGEES IN INDIA: AN ANALYSIS

-Ms Indu Bala*

I. INTRODUCTION

One of the biggest political and human tragedies of the twentieth century has arisen in the shape of more than fifty million refugees and displaced persons in the world today. Century is referred to by many as the century of the up-rooted and the homeless persons. It has been marked by a seemingly unending number of mass flights of people fleeing their native lands, seeking a new life in foreign countries. Human rights violations are a major factor in causing the flight of refugees as well as an obstacle to their safe and voluntary return home.[1]

The impact of this problem is felt worldwide and its influence on international politics is increasingly becoming more pronounced. Coming to Indian scene, India is one of the few countries in the world which has experienced refugee situations on a gigantic scale during last century. It has given humanitarian assistance and protection to millions of refugees.[2] When India gained its independence from Britain on August 15, 1947, there followed a phase of armed conflict and enormous human suffering. With the creation of Pakistan, an estimated 5 million refugees arrived in India.[3] There was another steep rise in the number of refugees in 1965, this time from East Pakistan, as a result of the Indo-Pakistani war. People from minority communities fled East Pakistan for India due to fear of persecution by the Pakistani Army. During the period of 1964-1968, a large number of Chakmas migrated to India due to the ethnic disturbances in the Chittagong Hill Tracts area.[4] The largest wave of refugees, however, was admitted in 1971 when the liberation war in Bangladesh began. Another wave of refugees arrived from the Chittagong Hill Tracts in Tripura from Bangladesh in 1986, when the Government of Tripura arranged for rehabilitation packages for these people.[5] Minority population in Bangladesh continue to cross the international border to escape religious

persecution, and the Government of India took several steps to regularise the entry, stay and citizenship process for these persecuted minorities.[6] More than 60,000 Afghan refugees came to India in the years following the 1979 to 1989 due to Soviet–Afghan war. There are more than 1,00,000 Sri Lankan Tamils in India, most of whom migrated during the rise of militancy in Sri Lanka. The Indian government does not officially recognise them as refugees, but has allowed the UNHCR India to operate a programme for them. Rohingya people are ethnic Muslims of Rakhine state, Burma. Rohingyas have been declared as the most persecuted ethnic group in the world by the UNHCR. India hosts a significant number of Rohingyas in Delhi, Hyderabad, J&K, West Bengal and Northeast India. The Indian government does not officially recognize them as refugees.[7]

Tibet is a mountainous State. Chinese interference in Tibet intensified the dispute over its legal status. The People's Republic of China (PRC) claims that Tibet is an integral part of China. The Tibetan government-in-exile maintains that Tibet is an independent State under unlawful occupation. It led to civil war in 1959, due to this 14th Dalai Lama and more than 1,50,000 Tibetan fled to India, took asylum and are residing here for the last 60 years.[8] Jawaharlal Nehru, then Prime Minister, agreed to provide all assistance to the Tibetan refugees to settle in India until their eventual return. 1,00,000 refugees remain in India today. Refugees are eligible to apply for long term visas (LTVs) / stay visas issued by the Government of India. The LTV / stay visa regularises their stay in India and reduces challenges in accessing public services and employment. UNHCR advocates that UNHCR documentation and LTVs are recognised by authorities and service providers to facilitate continued access to basic services and opportunities in asylum. The Tibetan diaspora maintains a government in exile in Himachal Pradesh, which coordinates political activities for Tibetans in India. The Tibetan government-in-exile functions from McLeod Ganj, a suburb of Dharamshala.[9]

II. MEANING AND DEFINITION OF REFUGEE

A refugee is a person who has fled across the physical borders of his homeland to seek refuge in another place and who, upon granting refugee status, receives certain rights not available to

other international migrants.[10] Refugee means one who, owing to religious persecution or political trouble seeks refuge in a foreign country.[11] The Webster's Dictionary defines refugee as "one who flees to a refuge or one who flees from invasion, persecution or political danger."[12]

According to United Nations Convention Relating to the Status of Refugees, 1951 the term refugee shall apply to "any persons who, owing to a well founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion, is outside the country of his nationality and is unable or, owing to such fear, is unwilling to avail himself of the protection of that country".[13]

The term 'persecution' comprises human rights abuses or other serious harm, often but not always with a systematic or repetitive element. While it is generally agreed that "mere" discrimination may not, in the normal course, amount to persecution in and of itself (though particularly egregious forms undoubtedly will be so considered), a persistent pattern of consistent discrimination will usually, on cumulative grounds, amount to persecution and warrant international protection.[14]

The 1969 Refugee Convention expanded the definition of refugee. It provided that term refugee shall also apply to every person who, owing to external aggression, occupation, foreign domination or events seriously disturbing public order in either part or the whole of his country of origin or nationality, is compelled to leave his place of habitual residence in order to seek refuge in another place outside his country of origin or nationality.[15]

The Cartagena Declaration determine that a refugee include persons who flee their countries because their lives, safety or freedom have been threatened by generalised violence, foreign aggression, internal conflicts, massive violation of human rights or other circumstances which have seriously disturbed public order.[16]

The definition of refugee in the 1951 Convention has been the principal tool for providing effective protection to millions of refugees since it was crafted sixty nine years ago. It has proven

its resilience and adaptability over those years, demonstrating that a proper interpretation of article 1 respects and furthers the objects and purposes of the 1951 Convention. A principled approach to the inclusion elements and a careful application of the exclusion and cessation clauses are indispensable for the continuing efficacy of refugee protection, ensuring that refugee protection will neither be brought into disrepute by its abuse, nor weakened by its unwarranted restriction. In sum, a balanced and holistic application of the definition, incorporating human rights law principles, has the best chance of yielding the correct result.[17]

III. INTERNATIONAL EFFORTS FOR REFUGEE PROTECTION

The lack or denial of protection is a principal feature of refugee character, and it is for international law, in turn, to substitute its own protection for which the country of origin could not provide. Non-refoulement is the foundation-stone of international protection. [18] The office of the United Nations High Commissioner for Refugees was established on December 14, 1950.[19] The High Commissioner's work is entirely humanitarian and non political. The basic function of the United Nations High Commissioner for Refugees is to encompass providing international protection and seeking permanent solution to the problems of refugees by way of voluntary repatriation or assimilation in new national communities. Following are the main documents, Conventions and Protocols for the protection of refugees:

A. **Universal Declaration of Human Rights, 1948:** It showed their concern and played very effective role for the protection of refugees. It guarantees right to leave any country including his own and return to his own country.[20] The Declaration also lay down that everyone has the right to seek and to enjoy in other countries asylum from persecution, right to nationality.[21]

B. **Geneva Convention Relative to the Protection of Civilian Persons in Time of War, 1949:** It provides that the detaining power shall not treat as enemy aliens exclusively on the basis of their nationality *de jure* of an enemy State, refugees who do not, in fact, enjoy the protection of any government.[22]

C. **The Convention Relating to the Status of Refugees, 1951 and its Protocol, 1967:** It

considered as an internationally agreed instrument and a milestone of refugee protection. It has given very important rights to refugees. Countries that have ratified the 1951 Convention are obliged to protect refugees that are on their territory, in accordance with its terms. Refugees shall abide by the national laws of the Contracting States.[23] The Member States shall provide free access to courts for refugees, identity papers for refugees, travel documents for refugees.[24] The State Parties shall not discriminate refugees, expel, forcibly return or refoul refugees to the country they have fled from.[25] Therefore, States are obligated under the Convention and under customary international law to respect the principle of non-refoulement. If and when this principle is threatened, UNHCR can respond by intervening with relevant authorities, and if it deems necessary, will inform the public.

Refugees shall be treated at least like nationals in relation to freedom to practice their religion, labour legislation and social security.[26] Refugees shall be treated at least like other non-nationals in relation to movable and immovable property, the right of association in unions or other associations, wage-earning employment,[27] education higher than elementary, the right to free movement and free choice of residence within the country.[28]

D. **Convention Relating to the Status of Stateless Persons, 1954:** This Convention provides that the Contracting States shall accord to stateless persons within their territories treatment at least as favourable as that accorded to their nationals with respect to freedom to practise their religion and freedom as regards the religious education of their children.[29] A stateless person shall have free access to the courts in the territory of all Contracting States.[30]

E. **International Covenant on Civil and Political Rights, 1966:** This Covenant deals with freedom of movement and to choose residence[31] and prohibition of expulsion of aliens except by due process of law.[32]

F. **The African Convention on Refugee, 1969:** This Convention[33] concerned with the

governance of specific aspects of the refugee problem in Africa. It provides that Member States shall use their best endeavours consistent with their respective legislations to receive refugees and to secure the settlement of those refugees who for well founded reasons are unable or unwilling to return to their country of origin or nationality.

G. **Convention on the Elimination of All Forms of Discrimination against Women (CEDAW), 1979:** This Convention[34] stated that State Parties shall grant women equal rights with men to acquire, change or retain their nationality and equal rights with men in respect to nationality of their children.

H. **The Cartagena Declaration on Refugees, 1984:** This Declaration also reaffirms the importance of the right to asylum, the principle of non-refoulement and the importance of finding durable solutions. The Declaration also provides to adopt national laws and regulations to promote within the countries of the region facilitating the application of the Convention and the Protocol and, if necessary, establishing internal procedures and mechanisms for the protection of refugees.[35]

I. **Convention on the Rights of the Child, 1989:** It provides that States Parties shall take appropriate measures to ensure that a child who is seeking refugee status or who is considered a refugee in accordance with applicable international or domestic law and procedures shall, whether unaccompanied or accompanied by his or her parents or by any other person, receive appropriate protection and humanitarian assistance in the enjoyment of applicable rights set forth in the this Convention. For this purpose, States Parties shall provide, as they consider appropriate, co-operation in any efforts by the United Nations and other competent intergovernmental organisations or non-governmental organisations co-operating with the United Nations to protect and assist such a child and to trace the parents or other members of the family of any refugee child in order to obtain information necessary for reunification with his or her family. [36]

IV. NATIONAL LEGAL FRAMEWORK FOR PROTECTION OF REFUGEES

India has attempted to regulate the status and protection of refugees by administrative means as India is not signatory to 1951 Convention. In the absence of a legislative framework, the possibility of bias and discriminatory treatment of refugees cannot be ignored. Owing to the

34. Convention on the Elimination of All Forms of Discrimination against Women (CEDAW), 1979, article 9.
35. The Cartagena Declaration on Refugees, 1984, (July 1, 2019, 2:00 PM), https://www.oas.org/dil/1984_cartagena_declaration_on_refugees.pdf.

absence of specific legislation, the laws relating to the regulation of foreigners are applied to refugees in India with no difference made between foreigners and refugees as a separate class. The primary Indian law relevant to foreigners is the Foreigners Act, 1946 which empowers the Central Government to regulate the entry, presence and departure of foreigners in India. As a result, refugees who have fled persecution are subject to the same rules and regulations as other foreigners entering India for any other purpose, and thus no legislative framework has been developed for identifying and determining refugee status.

The influx of refugees to India is not a recent phenomenon. Refugees started flowing into India during the partition in 1947. Though India is not a party to the 1951 Convention Relating to Status of Refugees and its 1967 Protocol, in the past the Indian Government has always tried to provide prompt relief and rehabilitation to refugees entering India. The relief and rehabilitation process for refugees during the partition of India was based on a very holistic approach and was organised at the highest levels of the Indian Government. Thereafter, refugees started coming to independent India from various neighboring countries as well as the Middle East and Africa. However, the assistance that was provided to refugees during partition, and the protection and rehabilitation extended to the first refugee group in India after independence (namely Tibetans), was not available to the refugees who came later, including those arriving today. It was expected that a country influenced by a rich religious and cultural tradition of hospitality (Atithi Devo Bhava), and governed by the rule of law, would be more proactive in ensuring the rights and protection of refugees in this evolving world of international human rights and protection of vulnerable people.[37]

The United Nations High Commissioner for Refugees (UNHCR) estimates the number of refugees currently present in India at around 2,05,764 of whom only 30,000 are registered with the UNCHR in New Delhi.[38] India chooses to deal with refugee protection through administrative measures coupled with strict laws dealing with the expulsion of foreigners. At the same time, there are several constitutional provisions which affirm the rights of non-citizens in the country, along with India's obligation to uphold international law through various Conventions, Protocols, Resolutions, Declarations, and so forth.[39]

In the absence of specialised statutory framework, India has to rely upon the Registration of

Foreigners Act, 1939, the Passport (Entry into India) Act, 1920 and the Foreigners Act, 1946, which govern the entry, stay and exit of foreigners in India. There are also some provisions of the Citizenship Act, 1955 which deal with granting of citizenship and expulsion of foreigners. The National Register of Citizens (NRC) is a register containing names of all genuine Indian citizens. The Illegal Migrants (Determination by Tribunal) Act, 1983 provides for the establishment of tribunals for the determination, whether a person is illegal migrant or not and to enable the Central Government to expel illegal migrants from India and for matters connected therein.

A. The Constitution of India, 1950

Refugees are entitled to some degree of Constitutional protection in India. These include the protection of the equality clause and the life, liberty and due process provisions of Indian Constitution. Equality before the law and the equal protection of law, classification of persons into separate and distinct classes based on intelligible differentia with a nexus to the object of the classification are allowed. Thus, the executive may distinguish between classes or descriptions of foreigners and deal with them differently.[40]

B. The Foreigners Act, 1946

In the absence of specific statutory framework in India, the chief legislation for the regulation of refugees is the Foreigners Act, 1946[41] which deals with the matter of entry of foreigners in India, their presence therein and their departure therefrom. Under this Act, wide range of powers has been granted to the Central Government. This Act was significant in the drafting of the Foreigners Order, 1948. This Order is an amalgamation of many of the provisions of the Passport (Entry into India) Act, 1920[42] and the Registration of the Foreigners Act, 1939.[43]

C. The Displaced Persons (Compensation and Rehabilitation) Act, 1954

The Displaced Persons (Compensation and Rehabilitation) Act, 1954[44] provides the payment of compensation and rehabilitation grant to displaced persons.

D. The Citizenship Act, 1955

This Act prohibits illegal migrants from acquiring Indian citizenship. To check the

40. The Constitution of India, 1950, art 14.
41. Act No. 31 of 1946.
42. Act No. 34 of 1920.
43. Act No. 16 of 1939.
44. Act No. 44 of 1954.

continuing influx of foreign nationals into Assam and fear about the adverse effect on political, social, cultural and economic life of the State, this Act was amended in 1985 which provide that every person of Indian origin who came on or after the January 1, 1966 but before the March 25, 1971 from territories presently included in Bangladesh and who has been ordinarily resident in Assam ever since and who has been detected in accordance with the provisions of the Foreigners Act, 1946 and the Foreigners (Tribunals) Order, 1964 shall, upon registration, be deemed to be a citizen for all purposes as from the date of expiry of a period of 10 years from the date of detection as a foreigner.[45]

E. The Extradition Act, 1962

This legislation provides some protection to refugees facing extradition by restricting the government's freedom to remove from its territory a particular category of foreigners. This restriction however is so narrowly relevant that it does not provide any real safeguards for the majority of refugees in India whose removal from the territory is most likely to face under the category of expulsion rather than extradition.[46]

F. The Refugee Relief Taxes (Abolition) Repeal Act, 2002

The Refugee Relief Taxes (Abolition) Act, 1973[47] was enacted to give relief to refugees from taxes but this Act was repeal by the Refugee Relief Taxes (Abolition) Repeal Act, 2002.[48]

G. The Asylum Bill, 2015

This Bill[49] was introduced for the establishment of an effective system to protect refugees and asylum seekers by means of an appropriate legal framework to determine claims for asylum and to provide for the rights and obligations flowing from such status and matters connected therewith. But the Bill has not been passed yet in the Parliament.

V. JUDICIAL RESPONSE TOWARDS REFUGEES

In India, the judiciary has played a very important role in protecting refugees. Court orders have filled legislative gaps and in many cases and has provided a humanitarian solution to the

45. Act No. 57 of 1955.
46. Act No. 34 of 1962.
47. Act No.13 of 1973.

49. The Asylum Bill, 2015, (June 2, 2019, 5:00 PM), http://164.100.47.4/billstexts/lsbilltexts/asintroduced/3088LS.pdf.

problems of refugees. Moreover, Indian courts have allowed refugees and intervening non-governmental organisations (NGOs) to file cases before them. Furthermore, the courts have interpreted provisions of the Indian Constitution, existing laws and, in the absence of municipal law, provisions of international law to offer protection to refugees and asylum seekers.

The Apex Court in ***National Human Rights Commission v. State of Arunachal Pradesh***,[50] pointed out that a large number of Chakmas from erstwhile East Pakistan (now Bangladesh) were displaced by the Kaptai Hydel Power Project in 1964. They took shelter in Assam and Tripura. Most of them were settled in these states and became Indian citizens in due course of time. Since a large number of refugees had taken shelter in Assam, the state government expressed its inability to rehabilitate all of them. However, about 4,012 Chakmas were settled in Arunachal Pradesh. They were also allotted some land in consultation with local tribals. The Government of India also sanctioned rehabilitation assistance of Rs. 4,200/- per family. The population of Chakmas in Arunachal Pradesh is estimated to be around 65,000. Later, relations between citizens of Arunachal Pradesh and the Chakmas deteriorated and the latter made a complaint that they are being subjected to repressive measures with a view of forcibly expelling them from Arunachal Pradesh. The Court stated, "we are a country governed by the rule of law. Our Constitution confers certain rights on every human being and certain other rights of citizens. Every person is entitled to equality before the law and equal protection of law (article 14). So also, no person can be deprived of his life or personal liberty except according to procedure established by law (article 21). Thus, the State is bound to protect the life and liberty of every human being, be he a citizen or otherwise, and it cannot permit anybody or group of persons to threaten the Chakmas to leave the state.

The Hon'ble Supreme Court in ***Louis de readt v. Union of India***[51] , held that article 21 of Constitution of India, which protects the life and liberty of Indian citizens is extended to all including aliens in Indian territory and they shall not be deprived of those rights except according to the procedure established by law.

In ***Chairperson, Railway Board v. Chandrimadas***[52] is a landmark judgment of the Supreme

50. (1996) 1 SCC 742 (India).
51. (1991) 3 SCC 554 (India).
52. AIR 2000 SC 998 (India).

Court on protection of human rights of refugees. Here Hanuffa Khatoon, a Bangladeshi national, was gang-raped in the rail yatri niwas of the Howrah railway station. A writ petition was filed and sum of Rs. 10 lakh was awarded as compensation against the Railway Department. The Supreme Court upholding this decision, held that offence of rape amounts to violation of fundamental right guaranteed to women under article 21 of the Constitution, and the victim, though a national of another country, was entitled to be treated with dignity.

In ***Tenzing Choden Sherpa v. Union of India,***[53] the Meghalya High Court held that on interpreting an unambiguous provision such as section 3 (1) (a) of the Citizenship Act, 1955, the petitioners (progeny of Tibetans) are Indian citizens in every respect and thus are entitled to all benefits and privileges available to the Indian citizens who born in India on/after January 26, 1950 and before July 1, 1987.

Dongh Lian Kham v. Union of India[54] is an important ruling by High Court of Delhi dealing with refugees. Two petitioners, Lian Kham and Zel Khan Mang, whose country of origin is Myanmar, have been staying in India under long term visa and mandate refugees since 2009 and 2011 respectively. The petitioners fled from Myanmar and entered India as they apprehended retaliatory attack by the military. Certificates were issued by the United Nations High Commission for Refugees recognising them to be refugees who are required to be protected from forcible return to their country. The High Court of Delhi held that since the petitioners apprehend danger to their lives on return to their countries, so the petitioners cannot be deported from India.

In ***Mohammad Salimullah v. Union of India***[55] , a petition has been filed before the Supreme Court, challenging the decision to deport Rohingya Muslims who have taken refuge in India to escape persecution in Myanmar. The petition has been filed by two Rohingya immigrants, Mohammad Salimullah and Mohammad Shaqir, who challenged the decision of the Central Government to deport 40,000 Rohingyas back to Myanmar, the country of their persecution. The petitioners have claimed that the proposed deportation violates the Constitutional protection of right to equality under article 14, right to life and personal liberty under article 21

53. WP (C) No. 206 of 2015 (India).
54. 2015 SCC Online Del. 14338 (India).

and fostering respect for international law and treaty obligations under article 51 (c). The petitioners also claimed that the deportation would be in contradiction with the principle of non-refoulement, generally considered to be a part of customary international law. This petition is presently pending before the Apex Court, which will decide the fate of 40,000 Rohingyas in India will also clarify the extension of fundamental rights to the case of non-citizens like Rohingyas and the degree to which customary international norms are binding on municipal law.

VI. COMPARATIVE ANALYSIS OF SOUTH ASIAN REGION WITH NORTHERN REGION

Some of the important distinctions between the Northern Region and South Asian Region to the refugee problem would include the following. While the developed countries engage in individual determination by and large, the countries in South Asia engage in the group determination of refugees. In this process of determination, the developed countries have established a variety of administrative, quasi-judicial and appellate mechanisms while the countries in South Asia have not. The developed countries have enacted appropriate domestic legislation to give effect to the international obligations they have undertaken under the 1951 Refugee Convention and/or the 1967 Protocol, while there is no such legal framework in the South Asian countries. While the South Asian countries rely very heavily on the bilateral approach to resolve refugee crises, there is no such reliance placed on it by the developed countries. Again the South Asian countries have at tempted to resolve the problems of 'statelessness' by accommodating large numbers of people of their origin and by providing citizenship to them .[56]

The emergence of joint responsibility in this regard can also be seen in that process of resolving the issues arising out of population movements. The willingness on the part of India in according citizenship to 3,38,000 stateless persons from Sri Lanka and the efforts of the Sri Lankan Government to accommodate the rest of them is to be appreciated. The developed countries in resolving some of the refugee problems have also taken up such joint responsibility. Thousands of refugees from Burma, as indicated earlier, have also been assimilated in India without allowing them to create a refugee problem elsewhere. As far as the rights and liberties of the

56. Veerabhadran Vijayakumar, A Critical Analysis of Refugee Protection in South Asia, The Comparison, (July,26, 2020), file:///C:/Users/hp23/Downloads/22073-Article%20Text-22485-2-10-20180807%20(1).pdf.

refugee are concerned, there seems to be a wide gap between these two schemes. The developed countries have provided a number of rights and liberties as well as extended a number of welfare measures when compared to the countries in South Asia. When the systems present in these two groups of states, one can also identify certain similarities. Both the schemes permit the judiciary to resolve certain specific questions of law arising out of their determination, removal or in safeguarding their rights and liberties. There seems to be an active role placed by the human rights institutions, directly or indirectly, in both groups of countries. An increased number of NGOs are taking keen interest in the protection of refugees. Finally, there is an ever increasing awareness arising out of the 'Human Rights' concept that contribute to better protection of refugees through but the world today. The primary task for the developed countries would be to assist the developing countries to establish the appropriate legal framework in the protection of the refugees.[57]

To sustain this effort, an attempt must also be made to establish the necessary links at two different levels, with the academic institutions of higher learning in these countries for a constant and ongoing interaction with those institutions. Networking of educational institutions within these developing countries in the first place and then linking them with the institutions in the developed countries would certainly enhance the pace of establishing a human rights culture in the developing countries in South Asia. Reliance on a comparative analysis coupled with the perspective on human rights and refugee protection would certainly promote best practices in both the Northern and Southern countries in the years to come.

VII. CONCLUSION

Refugee problem is a tragic phenomenon which has always been a matter of concern at international, regional and national level. The tragedy lies with refugees is that they have to cross the borders of their nations and have to look with bare hands towards other states to let them give some space in their land. However, in the past decade, refugee concerns have moved to centre stage, probably because this period has seen some of the most serious cases of human rights violations and mass displacement. Though the basic human rights instruments have been

57. *Ibid.*

in existence since 1950, the contexts in which they are used today are very different. Compared to the post World War II era, refugee rights are being addressed with new concerns in mind.

India has so far dealt with situations of mass influx without a refugee law but with a continuously enlarging population of refugees and asylum seekers, a large section of who may not be repatriated in the near future, a uniform law would allow the government to maintain its huge non-citizen population with more accountability and order, apart from allowing them to enjoy uniform rights and privileges. A regional treaty can be beneficial in improving ties with its neighbours, but India will be better placed by having its own law owing to the large number of different communities that it hosts, and the unstable relations that it shares with several of its neighbours.

Thus, it is always to be remembered that no one becomes a refugee of his own free will rather when his own homeland becomes mouth of shark then one leaves his home and opts to become a refugee. It is the greatest tragedy of the current century that we are still witnessing the refugee crisis. Refugees are hungry for normalcy in their country so that they can go back and start their life afresh there. At present we need to develop a culture of peace so that the present and upcoming generation becomes symbol of peacemakers. Nations must join together to uphold the rule of law and must respect the basic rights of the individuals. The "Karuna Philosophy" propounded by Justice Krishna Iyer must always be kept in mind while

dealing with refugees. Thus the time at present is to join hands together to carve a new world where there shall be peace and where people are not forced to flee from their motherlands and become refugees.

Keeping into the consideration of national interest and measures needed to protect the rights of refugees in India, following are some suggestions:

- India must enact a specific national legislation for refugees. In order to make a good piece of legislation it is important if international law have a bearing on it.
- The definition given under the present 1951 Convention Relating to the Status of Refugees needs to be amended keeping into consideration the current scenario going on in various parts of the world.
- In the absence of Regional Convention in South Asia and also absence of national laws in countries of this region there is a need that refugee rights groups from South Asian Region must join hands and raise their voice on a regional platform.

- There must be need of some amendments in the Foreigners Act, 1946. Section 2(a) defines foreigner which only states that a foreigner is a person who is not a citizen of India.
- A coordinated effort should be made on the part of Central Government of India, UNHCR and various other non-governmental organizations for protecting the rights of refugees.
- Government can also think to establish a separate department that will deal with the issue of refugees in India. The procedural requirements can be simplified in context of providing them long terms visas etc.

MEN'S SEXUAL HARASSMENT AT WORKPLACE: AN EMPIRICAL STUDY

-Ms Amrita Rathi* & Mr Nishant Tiwari**

INTRODUCTION

Sexual harassment is a blasphemous act of encroaching into a person's private space and exploiting him/her in any manner possible, or embarrassing such person with lewd remarks so as to lead or result to forced sexual intercourse or any favors connected or incidental thereto.

It is not only a derogatory act, but also makes a person feel utterly violated and humiliated. Darkest of all shades, this act leaves a touch with the victim that doesn't go no matter how much rubbed, doesn't lessen no matter how much scratched, and doesn't revive no matter how much mollified it is a malpractice that slowly blemishes the day with the pall of gloom, just like the drop of ink stains *muslin*.

Violative of a hundred rights, as many as we can state, above all, it violates the dignity of a person. It is this when the victim would clench his fists and wish for it to revive. It would be this when he would beg the time to take recourse for once in the history, and sweep back the instant memories. It would be this when no matter how dark the night is, the mind is always darker. It is this when no matter how much vibrant the world is, a *Ravana* still comes into being.

It has been now since time immemorial that sexual harassment has been directly associated with ladies, and men are considered to be the aggressors. The concept of gender neutrality was introduced. Reservations for women were booked in the government institutions and the employment sector. Gender equality includes protection from sexual harassment and right to work with dignity, which is a universally recognized basic human right. The common minimum requirement of this right has received global acceptance.[1]

As Rick Bragg rightly quotes, *"every life deserves a certain amount of dignity, no matter how poor or damaged the shell that carries it is."*

But with the advancement of time, the protection meant for safety has begun to be misused. As the feminism took over the world, the essence of making laws for the defense of women started turning into laws for suppression of men. The idea of feminism spread like wildfire to the

1. State of Vishaka v. Rajasthan, (1997) 6 SCC 241

farthest corners of the world, and the initiative of adulteration of its objective was enthusiastically taken up. Ignorance is bliss, they say. But too much knowledge is no less a fatal thing either.

"Beware of false knowledge; it is more dangerous than ignorance."

–George Bernard Shaw

With the rise of pseudo-feminists, the tables not only turned, but toppled upside down. The balance didn't only come at par, but broke with the shackles of misinterpretation and malicious demands. The justice took another turn. The itinerary of legal system changed. The slogan of "bringing women at par with men" was not the motto anymore, but *"bringing women at power"* was.

In the growing demand of empowerment of women, so that their security is not threatened in the workplace, the Sexual Harassment Act, 2013 was enacted that laid down penalties and safeguards to assure the well-being and welfare of women at their workstations. Apart from defining in black-and-white as to what 'sexual harassment' is, the Act also outlines what is tantamount to any such Act, also chalking down the proper meaning of the term 'workplace'. Now that Act, as the snubs of time corroded its shiny crust, revealed its rough scorching mantle, that if not covered anytime soon, would start flaring up the safety of men community of this nation. And so it happened, the judiciary got all the more burdened with the cases. Initially with the intent to seek aid from law, but later, to seek ulterior motives when men don't budge to the demands. Acts such as this, in the garb of protection to the women, practically in an implied manner defy others the basic right of being 'presumed innocent until proven guilty.'

It is the result of such developments that today in the eyes of law, only dignity of a woman amounts to chastity, dignity of a man means nothing. Not only as a form of sex discrimination, but as a weapon to avenge the mistakes of the past, sexual harassment of men has become one of the biggest unsaid tyrannies of the century.

Roberta Chinsky Matuson[2] has rightly so highlighted the problem, *"Many people mistakenly believe that harassment is limited to females only."*

The immutable statistics just hint at how gruesome the problem has gotten. The PEW Research

2. Human Resource Expert, Florida, United States

of 2014 shows that 25% of women and 13% of men have faced sexual harassment even when online.

By this paper, empowered by deep research and empirical studies, the writers aim to bring into light the urgency of a gender-neutral legislation to protect the dignity of even men from sexual harassment- a vindicatory, inhibitory, and heinous crime in the present era.

MEANING OF SEXUAL HARASSMENT

The definition of 'sexual harassment' has been stated in the Sexual Harassment Act 2013, in line with the Supreme Court's verdict in the Vishaka case, wherein it has been stipulated to be any unwelcome sexually determined behavior (expressed/implied) such as physical contact and advances, demand/request for sexual favors, sexually coloured remarks, exhibiting pornography, or any other unwelcome physical verbal or non-verbal conduct of sexual nature. [3]

CAUSES OF INACTION OF MEN:

Probing into the causes of abuse and the factors that coax the male community to stay silent about the constant blaring violation of their private space and dignity, some of the flagrant ones have been enumerated below:

1. Social Stigma:

Since time immemorial, men have been hailed to be the torchbearers of the traits of valor, power, domination and authority. These characteristics of a "true man" have instead started trampling their rights instead.

First, we progressed from a male dominant society to a comparatively moderate society on the principles of equity. Then we brought the males and females at par with each other. And then the privileges started transitioning into prejudice. In the Indian society, boys are taught not to cry, because a scientific act of releasing toxins is somehow equivalent to exhibit weaker nature of a man. The folkways have had it, a man was always capable enough of protecting his dignity by himself, while the women always needed a man's support to ensure her protection. This notion was aggravated to such an extent where all the possibilities of a man's security getting vulnerable ended. The tunnel was closed, and the "protector" was left susceptible to the unanticipated attacks in the dark.

That today has grown to be a misconception with its oxytocinic roots spread deep into the

3. Section 2(n), The Sexual Harassment of Women at Workplace (Prevention, Prohibition And Redressal) Act, 2013.

societal mentality, where now a man simply cannot be sexually abused. That's not an entrusted belief, that is, rather a pragmatic legacy that is not to be questioned.On the contrary, if a woman accuses a man of sexual harassment, even without any proof the world stands by her believing that this must be so. This is a practical example of the social labelling theory purported by the sociologists in the 1960s.

Just as similar case was of Swaroop Raj, a Genpact Executive who committed suicide over allegations of sexual harassment.[4] He was facing the charges of sexual harassment and without even anything being proven he was socially labelled as a man of corrupt demeanor. He was expelled from his office on the pretext of the case being investigated. The last line of his suicide note stated, *"I am going as everyone will look at me with that eye even if I come clean."*

2. Familial factor

More often than not, the generational gap is so potential amongst the two peer groups that genuine understanding is taken over by the societal pressure of fitting their kinsmen into the predefined brackets of "gender roles". On the contrary, at times this humiliating thing is taken sarcastically by the members of the family. The harassment naturally makes the victim feel humiliated. Then the lax remarks add onto the feeling of disappointment and frustration. This leaves the victim helpless and he keeps bearing all of it.

If the male is married it becomes all the more problematic for him to complain about the issue. The main reason being that there are already properly implemented laws for the sexual harassment of women but none for man. so in case a male does that and the woman accuses him of being sexually assaulting in return, it would not be him who would be at stake but his family. It would shatter into tiny pieces and he would be bitterly distances from his kids. The Hindu Minority and Guardianship Act, 1956, as it is presumes wives to be better custodian of the children, this complaint would add fuel to the fire by maligning his character.

Also, it is possible that the victim is being sexually harassed by the aggressor on the pretext of not harming his family. To save his family's disillusioned *prestige* and *image* in the society, the person decides to suffer through all of this alone. Or it is possible too that the aggressor threatens the victim to agree for sexual favors or else the family would suffer the consequences in terms of false criminal cases or fabricated allegations. All these cases successfully seal the conscience of

4. indiatoday.in/india/story/top-genpact-executive-commits-suicide-in-noida-over-accusations-of-sexual-harassment-1413409-2018-12-20 Accessed pn September 26, 2019

the victim and he decides to self-immolate his dignity for the well-being of his loved ones.

3. Legal hassle

In such a populated country such as India where there is an acute shortage of judges, despite the legal system working on its toes, the desired disposal rate of the cases is still an ideal situation to be achieved. A small case takes a couple of years to be finally decided.

On top of that, the right of judicial remedy (the right of appeal to the higher court) has been grossly misused and there is a grave possibility of the case being lingered on for a decade or so. Often being the sole bread-earner of the family, a man would never readily engross himself with such inscrutable legal proceedings, impliedly subscribing to the Court membership for a minimum of couple of years.

Where he tries to go ahead and file a suit, there most probably the first truck that he gets in his way is the police. There have been instances when the police have refused to lodge cases at once. They have even turned cold-shoulder to the most grievous of complaints, by asking such demeaning questions that would upset the sufferer in return, and to save such embarrassment he would not approach the protectors of justice' at all. They often turn despotic in tendencies.

Not only them, but the cross-questioning in the courts where instead of dispensation of justice, some advocates strengthen their case by taking off-guard the opponent's mental will of fighting and reducing his already-vulnerable personal life to shreds in front of public also makes the victim refrain from seeking legal help.

4. Financial favors

India is a developing nation and the first odd that it is tirelessly fighting against is the widespread poverty. Under the umbrella of unemployment, the more complications are faced by disguised labor and underpaid ones. Due to insecurity of job, or the scope of getting paid or promoted, a man is lured into enduring this mental torture with the semblance of searing grief but generous well-being of his family. He gets into believing that every cloud has a silver lining. And with the passage of time, reduces himself just to become a sex-object for someone at the workplace, while questioning his own self-worth.

5. Gender-biased laws

Talking specifically about the legislations in India, they are mainly connected or incidental to the time when the society was staunchly patriarchal and the women had no rights to safeguard their self-sufficiency. Right to the present 21st century, the laws are still based on that notion that

men always are the wrongdoers. This on the other hand gives blaring powers to the women counterparts, which have been so protected and sealed, that they have started suffocating men's rights in return.

For example, until the striking down of Section 497 of the Indian Penal Code, the offence of adultery was punishable only for the men. An adultery committed by the women wasn't legally guarded for, until and unless a bench led by the Former Chief Justice of India Dipak Misra struck it down. Personal laws although are always preferred to be left untouched and are not normally tampered with but they provide a completely different set of conundrums for the men to deal with.

To quote one, under the Hindu Adoption and Maintenance Act of 1956, the daughter is entitled to get maintenance until she gets married while the son is entitled to get maintenance only until he acquires the age of 18. Even under the Special Marriage Act, secular marriage legislation, only the wife can claim permanent maintenance and alimony, but not a man. Also, under the provisions of Section 375, only a male can be accused for the offence of rape. There is no provision for prosecuting a woman who blackmails a male into the practice until her satisfaction is sought.

For instance, in 2018, a married man committed suicide after finding himself helpless due to being constantly pestered for sex by his co-worker. She was constantly demanding him to enter into an illicit relationship, on the failure of which she would lodge a false criminal case against him.[5] His body was found hanging from his ceiling fan on Monday morning and the hand-written note that he left behind narrated the plight of that poor man.

With such gender-biased laws, the law, instead of appearing as a 'resorting' option, acts as a 'restrictive' option for the aggrieved. Instead of inspiring him to be an icon, rise against the injustice, it tacitly intimidates him to strangulate his right to life and survive in injustice.

'Savior' for one, 'Satan' for the other: The Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013

Enacted in consonance with the Convention on Elimination of All Forms of Discrimination Against Women (CEDAW),[6] this act could be justifiably called the most potent propagator of tyranny of falsified cases by women on the men community. Taking into account the women

5. https://www.timesnownews.com/mirror-now/crime/article/married-man-commits-suicide-as-he-was-continuously-sexually-harassed-by-co-worker-in-maharashtra-metoo-stories-metoo-me-too-stories/299937 Accessed on September 26, 2019
6. Ratified by Government of India on 25-06-1993.

community in specific, the act in order to provide them a safe atmosphere of work provides such a pampered cushion that it doesn't leave a room for exercising of rights by their male counterparts.

First and the foremost, it defies the basic structure of the Indian Constitution enshrined under Article 14 wherein the suprema lex guarantees equality before law to all the people in the territory of India regardless of religion, race, caste, sex, or place of birth. Although under Article 15(3) the Constitution also states that special provisions maybe made for women and children by the Indian Parliament, but certainly by the clause the Constitution-makers meant not at the stake of someone else's rights. The law vouches for the principle of equality, but the doctrine of equity in itself has sprouted the concept of law and justice. Therefore, any principle against equity must be taken to be against the real motive of introduction of law in a state. This act, proving to be one such instrument of colorable legislation, is not at all gender-neutral, to start with. It provides security against sexual harassment only to the women, not the men. Anyway due to the societal barriers a lot of men hesitate to bring such malpractices against their will into light but this act totally wipes off the scope of any such complaints only.

Taking into consideration the Synovate Survey by the Economic Times, the staggering figures of sexual harassment serve as a blaring alarm of the dire need for men to be included in the ambit of laws against sexual harassment. Out of the 527 people who participated in the survey[7] , 19% people admitted to having been sexually assaulted at office. In Bangalore, 51% of the respondents agreed to have been harassed sexually, while in Delhi and Hyderabad the figures rose up to be 31% and 28% respectively. In totality, 38% of the respondents around these seven cities vehemently agreed upon the fact that 'men are just as vulnerable to sexual harassment just as women.'[8]

Further, the Internal Complaints Committee and Local Complaints Committee which find mention under Section 4 and 7 of the Act are blind towards the rule of *nemo in propria judex esse debet* i.e. the rule against bias. It is a doctrine of common law system that bars any party having any personal/pecuniary/proprietary/departmental interest/bias in the case from being a judge in that particular matter/case. As per Sections 4(2)(c) and 7(1)(c), it is mandatory to appoint in such

7. The survey was territorially limited to the seven metropolitan cities of Delhi, Chennai, Bangalore, Mumbai, Pune, Kolkata and Hyderabad.
8. <http://www.lawctopus.com/academike/sexual-harassment-workplace-prevention-prohibition-redressal-act-2013-critical-analysis/> Accessed on August 02,2016

committees the members from any such NGOs that are committed to the "cause of women".

No further detailed analysis of the qualifications has been provided as to what cause or what particular field of working. This would definitely be detrimental to the interest of the defendant party because any such member would be emotionally/professionally inclined towards the traditional notions, forever holding that it is always the man who is the aggressor. "If members of the committee of the adjudicatory committee are to be committed to an ideology, there mental frame will be such that it would give an opportunity for unwelcomed bias and their finding also will be in resonance of their personal commitment."[9]

There is no provision that maintains that there must be an appointment of a person who is 'expert in the field of law'. Only terming 'versed with the knowledge of law' opens up the situation to a plethora of interpretations. Further, roping in non-judicial bodies such as NGOs only aggravates the chances of breach of confidentiality, which is a fatal thing to happen in such sensitive issues involving the image of the man.

Therefore, to sum up, it can be concluded that this Act has marred the basic provisions of rule of law in the country by giving unreasonable power to one community over the other.

EMPIRICAL SURVEY- THE RESULTS[10]

Territorial Limits: India

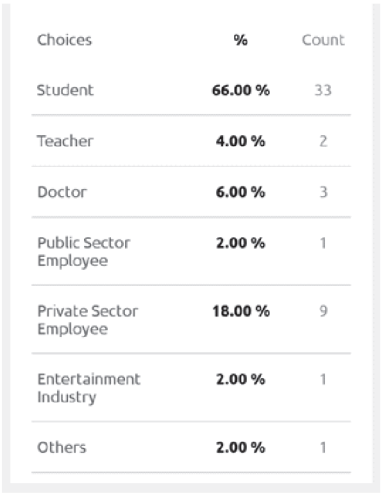
Positive: 12/50 men face sexual abuse

There was an empirical survey conducted by the authors to verify the violating act of sexual harassment of men and reactions to such demeaning act. The authors sent a questionnaire consisting of 13 questions to 50 respondents (all males) within a stipulated time period. All people are from different occupations (in order to verify if sexual harassment prevails over all the major professions in India or not). The frightening results that were received have been stated below:

Question 1: Name (Optional):[11]

This question served dual purpose:

1. By not making it compulsory for the respondents to mention their name or email



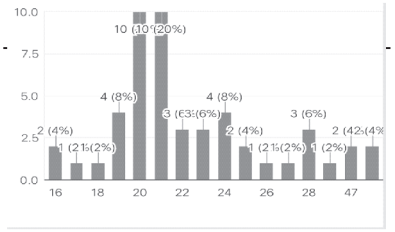
9. M. Pallavi Jane Periera, "Sexual harassment at Workplace in India, Medico Legal aspects", 36 Journal Indian Academic Forensic Medicine (2014).
10. Attached to the Annexure-I
11. *Ibid.*

addresses, the survey gave them a security blanket of their identity not being revealed anyhow.

2. It impliedly chalks out the current scenario regarding the acceptability and openness of the aforementioned heinous crime with respect to men, tacitly telling us the tolerability of such crime in the society and normality/stigma attached to it.

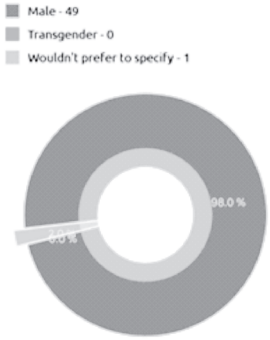
Question 2: Occupation (Required):

The people who participated in this survey belonged to the following fields:



Choices	%	Count
Student	66.00 %	33
Teacher	4.00 %	2
Doctor	6.00 %	3
Public Sector Employee	2.00 %	1
Private Sector Employee	18.00 %	9
Entertainment Industry	2.00 %	1
Others	2.00 %	1

1. Scholars from different arenas of education
2. Academicians
3. Medical experts/practitioners
4. People employed in the public sector of India
5. People employed in the private sector in India
6. Entertainment industry
7. Miscellaneous



The authors assert that the respondents were wantonly not divided uniformly according to their professional background to minimize their intervention in the survey. It went unbridled to the most random people to get a fair idea of the prevalence of the malpractice. By keeping the respondents consistent in representation from different fields, the authors were afraid that would hint at curtailed contamination of the survey, which would negate the entire efforts of the study.

The authors acknowledge that maximum respondents belonged to the student's category and it is grief-stricken meeting with the fact that at this tender age of growing and maturing, nearly 40% of the students had to undergo the torment of facing sexual abuse in their lives. This is not only saddening, but also threatening for the upcoming generation as those who are today the victims, will vent out this frustration tomorrow. This ditches the society into a fatal vortex of anarchy and doom.

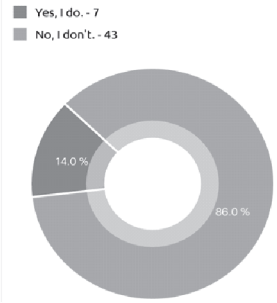
This is not only saddening, but also threatening for the upcoming generation as those who are today the victims, will vent out this frustration tomorrow. This ditches the society into a fatal vortex of anarchy and doom.

QUESTION 3: YOUR AGE? (OPTIONAL)

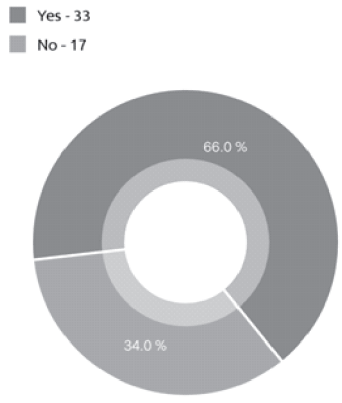
Peopleinvariably from a wide age group participated in the survey with no bar at all. Believing



QUESTION 6: IS CASH (COMMITTEE AGAINST SEXUAL HARASSMENT) FUNCTIONAL AT YOUR WORKPLACE/CAMPUS? (REQUIRED)

As per the Sexual Harassment Act of 2013, the formation of committees against sexual harassment has been made necessary at every workplace for the utter protection of the females at their respective places of work. Even though no provision mentions taking the male counterparts into account, and the committee would lend their precious time of enquiry only for the females, it has failed even to keep them safe, let alone the males.

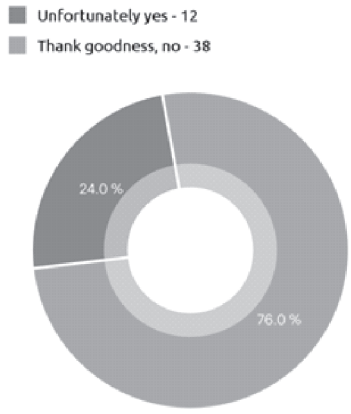
When asked about its existence and efficiency at their respective workplaces or campuses, the respondents got fairly divided into approximate proportion of 50% on each side, which means that every institution/workplace still doesn't have CASH.



QUESTION 7: IF YES, ARE YOU AWARE OF ANY COMPLAINT THAT WAS INSTITUTED WITH THE CASH? (REQUIRED)

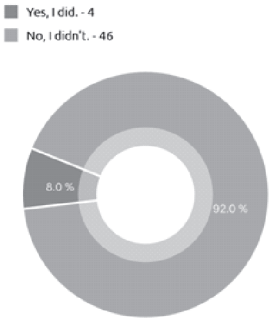
Providing an insight into its fructitiousness, we get an inkling of the productivity of such CASH.

As per the figures obtained, it can be fairly deduced that many people have no idea of any case solved by the CASH or any case instituted with it.



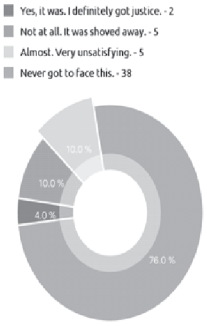
QUESTION 8: HAVE YOU EVER HEARD ABOUT SEXUAL HARASSMENT OF MALES AT WORKPLACE? (REQUIRED)

When asked about this pertinent unspoken issue that still lingers in shade today, the response highlighted the muffled shrieks of men community from underneath the societal pressure and worldly labels.



Out of 50 people, a staggering 33 number of males are acquainted with the existence of this problem but the law still chooses to ignore it.

QUESTION 9: AS A MALE, HAVE YOU EVER FACED ANY SEXUAL HARASSMENT BY A MALE/FEMALE HEAD/COLLEAGUE/MATE AT YOUR WORKPLACE/CAMPUS? (REQUIRED)

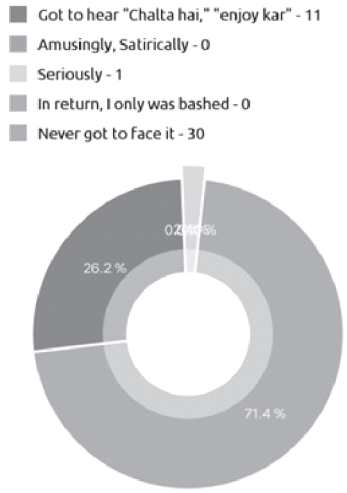


As per the survey, out of 50 men, 12 responded positive to having faced the blatant violation of self-possession. That is a defending percentage of 30 out of 100, and would definitely increase as the student body passes out and starts working in the corporate or the private sector, until the archaic laws change, the notions change, the tables come at equity, and along with the reservation at different levels, the women share the burden of liabilities that men do,

QUESTION 10: IF YES, HAVE YOU COMPLAINED ABOUT IT TO ANYBODY? (REQUIRED)

The gender barriers have always prevented men from telling about such horrendous experience to anyone else.

In previous times the reason was that no one would understand. Today, no one wants to understand. The times have changed, the reason hardly has. Out of 50 men, only 12.5% reported this infringement of rights to their peers or kinsmen, others just gulped down the worng done to them and moved on.

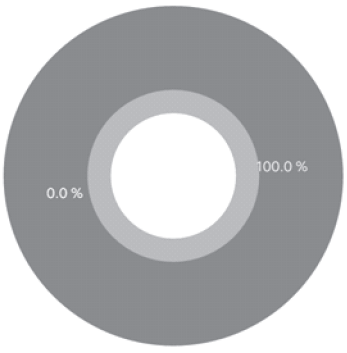


QUESTION 11: DID THAT COMPLAINT EVER GET REDRESSED? (REQUIRED)

For the people who stood up for their rights and merely demanded to be looked upon as a 'human', were rewarded by laughing upon and ignoring the complaints.

Is that what the society has reached to? Are we running in a vicious circle of exiting from the state of nature to protect the rights of man, and then shredding every right into finest fabric so as to return to the state of nature.

The massive figure stated alongside display the number of people who got justice out of the people who faced sexual harassment merely 2 out of 12, which means every 10 men go to bed with the guilt of having been touched inappropriately. Every day 10 out of every 50 men get their day ruined by the choking clouds of helplessness, but the thick dark clouds of lawlessness wouldn't tear apart.



QUESTION 12: HOW DID THE PEERS AROUND TAKE THAT NEWS?

It was always in the theory that the complaints of men being sexually harassed was not taken seriously but the statistics prove the hypothesis so true. With remarks as cruel as *"enjoy"* or *"lucky guy"*, the victim feels all the more suicidal and depressed. Well, this is understood that with his/her dignity flung into air by someone else for some momentary pleasure, does make a person feel dishonored.

This brings into light the sad state of mentality that we have in our country today. A country where by the virtue of being a "man", "dignity" automatically gets eliminated from the itinerary. He also, by the virtue of being a "he", is not entitled to feel the pain or be sad, because he is a "he" and "he" must be therefore equivalent to a skeleton alive who doesn't feel anything.

Such thinking has to be changed and that can be done in the preliminary institutes and schools, wherein the teachers frame basic mindset of children. Compassion can't be bargained for. Inculcating mutual respect and empathy for everyone irrespective of genders and sexuality, will indeed make the circumstances better.

QUESTION 13: DO YOU THINK WE NEED GENDER-NEUTRAL LAWS FOR SEXUAL HARASSMENT NOW? (REQUIRED)

Finally, we had it asked out of *'Yes'* or *'No'* if the males feel a need for a gender-neutral law for men regarding sexual harassment in the 21st century now. Unsurprisingly, all the responses indicated one main thing: the vulnerability and insecurity the men face that makes the need of gender-neutral

pressure and worldly labels.

Out of 50 people, a staggering 33 number of males are acquainted with the existence of this problem but the law still chooses to ignore it.

QUESTION 9: AS A MALE, HAVE YOU EVER FACED ANY SEXUAL HARASSMENT BY A MALE/FEMALE HEAD/COLLEAGUE/MATE AT YOUR WORKPLACE/CAMPUS? (REQUIRED)

As per the survey, out of 50 men, 12 responded positive to having faced the blatant violation of self-possession. That is a defending percentage of 30 out of 100, and would definitely increase as the student body passes out and starts working in the corporate or the private sector, until the archaic laws change, the notions change, the tables come at equity, and along with the reservation at different levels, the women share the burden of liabilities that men do,

QUESTION 10: IF YES, HAVE YOU COMPLAINED ABOUT IT TO ANYBODY? (REQUIRED)

The gender barriers have always prevented men from telling about such horrendous experience to anyone else.

In previous times the reason was that no one would understand. Today, no one wants to understand. The times have changed, the reason hardly has. Out of 50 men, only 12.5% reported this infringement of rights to their peers or kinsmen, others just gulped down the worng done to them and moved on.

QUESTION 11: DID THAT COMPLAINT EVER GET REDRESSED? (REQUIRED)

For the people who stood up for their rights and merely demanded to be looked upon as a 'human', were rewarded by laughing upon and ignoring the complaints.

Is that what the society has reached to? Are we running in a vicious circle of exiting from the state of nature to protect the rights of man, and then shredding every right into finest fabric so as to return to the state of nature.

The massive figure stated alongside display the number of people who got justice out of the people who faced sexual harassment merely 2 out of 12, which means every 10 men go to bed with the guilt of having been touched inappropriately. Every day 10 out of every 50 men get their day ruined by the choking clouds of helplessness, but the thick dark clouds of lawlessness wouldn't tear apart.

QUESTION 12: HOW DID THE PEERS AROUND TAKE THAT NEWS?

It was always in the theory that the complaints of men being sexually harassed was not taken seriously but the statistics prove the hypothesis so true. With remarks as cruel as *"enjoy"* or *"lucky guy"*, the victim feels all the more suicidal and depressed. Well, this is understood that with his/her dignity flung into air by someone else for some momentary pleasure, does make a person feel dishonored.

Such thinking has to be changed and that can be done in the preliminary institutes and schools, wherein the teachers frame basic mindset of children. Compassion can't be bargained for. Inculcating mutual respect and empathy for everyone irrespective of genders and sexuality, will indeed make the circumstances better.

QUESTION 13: DO YOU THINK WE NEED GENDER-NEUTRAL LAWS FOR SEXUAL HARASSMENT NOW? (REQUIRED)

Finally, we had it asked out of *'Yes'* or *'No'* if the males feel a need for a gender-neutral law for men regarding sexual harassment in the 21st century now. Unsurprisingly, all the responses indicated one main thing: the vulnerability and insecurity the men face that makes the need of gender-neutral laws not only the need of the hour to satisfy their protection, but also the fundamentals of equality and fraternity and development of all subjects alike.

The Report of 172nd Law Commission, which recommended that laws such as that of rape shall be made gender-neutral (both for the victim and the offender) must be incorporated into law of the land. The report of Justice Verma Committee suggested neutralizing the law but only for the victim, not the offender, which the aimed to keep gender-specific. Even that wasn't adopted by the Indian Parliament.

The horrifying *Nirbhaya* gang-rape case opened doors to some significant amendments in the criminal law. The laws regarding acid attacks, disrobing a woman, sexual harassment, stalking, trafficking, and voyeurism[12] - all of these gender-specific except the laws related to acid attack.[13] This amendment, in the garb of progressing, is petrifying. It doesn't only presume that men are the only wrong-doers, but also that their safety doesn't need legal sanction. That they can't be attacked at and they can defend themselves. This is blasphemy to the sanctum sanctorum of the Indian Constitution- the fundamental rights of the citizens under Article 14 and 19 and and duties of the state, which dictate the State to take all the steps for development of its citizens and providing them means for them to achieve excellence in all spheres of life.

SUGGESTIONS

1. **Constitution of special courts to deal with sexual harassment of men and women as a whole:** Judiciary has customarily advised the formulation of special Courts, like Special Courts for women, youth, and SC/ST, wherever it so deemed necessary. Vide the power vested by the Indian constitution with the Indian Parliament under Article 323-B, new tribunals must be constituted for the adjudication of the disputes for men and women equally without any bias or prejudice.

Being a court of special nature, whose aim would be to deal with the intricacies of the matter dealing with the accused's character, reputation, custody of children, this court should be given the power to evolve its own rules of procedure. It must be advised to stick by the rules of Civil Procedure Court in the normal course of action, but be flexible enough so as to deal with peculiar matters in a different manner. This would allow a holistic inspection of the matter and would ensure proper disposal of the cases with no haste, parallely lightening the burden of the traditional courts.

2. **Increasing the legal fraternity in the courts:** In order to ensure speedy disposal of cases, not only an increased number of benches are necessary, but what is more important is an elevated cap on the limit of judicial fraternity. More division of labor would guarantee better facilitation of justice. But the irony is that we face an acute shortage of judges.

There are still a large number of vacancies in the subordinate judiciary, being 5,924 as on December 31st, 2017.[14] 24 High Courts have 406 posts vacant, whereas Supreme Court has 6

12. The Criminal Law Amendment Act , Section 354 (2013)
13. The Criminal Law Amendment Act , Section 326 (2013)
14. Ministry of Law and Justice, Government of India, Annual Report 2017-18, 109.

vacancies. The total vacancies, thus combined, are of 6,160 judges. Former CJI T.S. Thakur lamented about the "inaction of government on not increasing the number of judges present from 21,000 to 40,000" to handle the "avalanche in litigation. You cannot shift the entire burden on the judiciary," he complained to the Prime Minister. Increasing the number of judges from 10 per 10 lakh people to 50[15] is an urgent need, he reiterated.

Even the present Chief Justice of India, Mr. Ranjan Gogoi has written to Sir Prime Minister bringing into his attention the crippling effect the inadequacy of the workforce is resulting into. He advised raising the retirement age from current) 62 years to 65 years. Quoting that presently there remains a backlog of 58,669 unsolved pending cases with the judiciary, the Prime Minister must also consider tenure appointments of the retired Judges (of the Supreme Court and the High Courts) under Article 128 and 224A of the Indian Constitution to deal with the huge chunk of cases comparatively with ease. [16]

3. **Make the laws gender-neutral:** The society today has reached at the intersection of equal rights for men and the women. It is time to limit the excessive powers on both men's and women's parts and ensure a balanced state of affairs. This is the zenith of the equilibrium that the legal system and democracy were looking for. Now, after the communities have come at par, the laws must come at par too. If it gets late anymore, the society would steeply fall back into the state of nature. And the increasing number of suicides amongst males is a clue of the same awaiting calamity.

Male suicide at workplaces equates to 4 times more than that of women. Moreover, in 2015, as per data released by the National Crime Records Bureau, a whopping number of 1,33,623 suicides were reported across India, out of which 91,528 (68%) was solely constituted by men, while the women constituted only 32% of the entire record.

Approximately 77 countries, including the United Kingdom, Australia, Denmark, and the United States, have taken a step forward to safeguard human rights by turning all the laws into a gender-neutral state.

What is even more heart-wrenching is the plight of male inmates in the prisons. The People's Union of Civil Liberties states that way back in 1981 in the Tihar, as soon as there entered a young boy, the prisoners would bid up on him. The price was paid in terms of 'bidis,' 'soaps' or

15. Law Commission 1987.
16. June 23, 2019, Page 2, The Hindu

addiction such as 'charas'[17].

India, on one hand desiring to leave its mark at the United Nations and the Security Council, on the other hand is not ready to let go of the clutches of the Victorian laws.

The ambit of gender-specific laws should be broadened to turn them into gender-neutral laws. This would not only serve better the purpose of democracy, but would also warrant the rule of equity.

4. **Ensuring stricter guidelines for the media:** Media is often referred to as the fourth pillar of democracy, owing to the crucial role that it plays in mass-communication and bringing to life the spirit of democracy. But such a powerful source, when gets absolutely unbridled, in the absence of limits can lead to some serious irreversible damage. In the influenceof the air of westernization, media has often needlessly portrayed men as Casanova, easy-going beings who have no feelings and can be trodden as and when needed.

The Save Family Foundation revolted against the same idea of portrayal of men and sent a complaint to the Advertising Standards of India against the Kitply plywood commercial in which the wife slapped her husband because of the creaking bed. The foundation alleged that terming "violence" as "fun" was not justified.

Following the suit, *Indiya Kudumba Pathukappu Iyaakam,* a Chennai-based organization filed two similar complaints: one against a Pond's ad commercial where men were portrayed as terrible wife-beaters, another against the ICICI Prudential Insurance that insensitively displayed verbal and economical abuse against men.[18] From making trolls and memes out of every sensitive and grave situation, men are mocked at on the social media platforms and advertisement plates which makes them an easier target to violate the integrity of, without having to pay much in return.

The gravity of the situation can be better understood with the same ads but reversed roles. Such distorted social message when sent across, simultaneously also fits into the mentality of the people that men can be slapped or beaten up anytime anywhere as they are the only delinquents in the society. This sternly only petrifies men to raise questions about the objectionable touches

17. The Tribune Accessed on September 26, 2019 https://www.tribuneindia.com/news/comment/institutionalise-prisoners-conjugal-visits/790734.html.
18. September 16, 2008, DNA India, https://www.dnaindia.com/india/report-men-s-groups-want-offensive-ad-off-air-1190494 Accessed on September 26, 2019

they are subjected to. Therefore, strict and like guidelines must be maintained to keep media under control.

5. **Efficient hand-in-hand functioning of the judiciary and the legislature:** Lastly, in India we have independent branches of legislature, executive and judiciary, but on the contrary, serving as a purposeful benefit of the parliamentary system of democracy, these don't work separately as water-tight compartments unlike the machinery of the United States of America.

Therefore, in order to deal with the issues of gender-neutrality in a collaborative manner, not only the legislature needs to maintain a modern well- equipped approach of the emerging problems, but an effective judiciary exercising a fair right of judicial activism is just as important. This blend of neutral legislature and impartial judiciary will lead to upliftment of the present dull condition of men in the arena.

CONCLUSION

Sexual harassment is a harrowing crime that doesn't only affect the physical state of a human being but even his mental peace. It is just equivalent to mental torture if the circumstances are properly calculated. Dignity ain't defined by the gender or sexuality; it is defined by the character. And to uphold and safeguard a person's character is the state's foremost duty. Protection by laws is important, but above that is character, and that is an endeared constituent of a human life.

This is the need of the hour that men be included under the legislation prohibiting sexual harassment at workplace to fairly enjoy their right of protection under the state's legal system. And only changing legal provisions wouldn't be enough, but changing mentality would be the end of it. Opening our thoughts to the fact that 'it is not always the male who is the wrongdoer' and entertaining the truth that 'a woman can be the aggressor too' would help us not only grow as a community, but as a country as a whole.

As has been put by Nicole Kidman rightly into words, "imagine a bold plan for a world without discrimination, in which women and men are equal partners in shaping their societies and lives. Let's picture it!"

The acts such as this, whether done by a man or a woman, are as equally as heinous as they make an individual question his/her self-worth, which is quite demeaning in nature. It is high time that we look past the ascribed gender roles to us by the society, come together, share the grief, acknowledge that all of us are made from flesh and bones, we all have emotions and it is okay to cry, to vent it out. And when this happens, we would truly take the first step towards acceptability. Rest, as they say, death with dignity is better than life with humiliation.

MISSING DISCOURSE ON TRIPLE TALAQ AND DEBATE ON MUSLIM WOMEN (PROTECTION OF RIGHTS ON MARRIAGE) BILL, 2019

- Ms Meena Kumari*

"Men think themselves superior to the women, but they mingle that with the notion of equality between men and women. It's very odd".

Jean Paul Satre

INTRODUCTION

The Supreme Court in ***Shayara Bano v. Union of India***[1] declared the triple *talaq (talaq-a-biddat)* unconstitutional and void; further instructed the government to legislate a law with this respect. Thereafter the government had struggled to enact the law which ban and punishes the pronouncement of triple *talaq* in any form. For the first time on December 28, 2017, the then Law minister introduces the bill in Lower house of parliament, which was passed by it but remain pending in upper house of parliament. Later on three Ordinances were promulgated (on Sep. 2018, Jan. 2019 and Feb. 2019) to provide immediate relief to Muslim women.[2] On Jun. 21, 2019 bill was introduced in Lok Sabha, on Jul.25, 2019 bill was passed by Lok Sabha and on Jul. 30, 2019 bill was passed by Rajya Sabha; thus on July 30, 2019 Muslim Women (Protection of Rights on Marriage) Bill, 2019 was passed by both houses of parliamen[t3] after a wrangle debate.

On August 23, 2019 Supreme Court of India agreed to examine the bunch of petitions challenging the Muslim Women (Protection of Rights on Marriage) Act, 2019.[4] According to petitioners the Act is unconstitutional as it only criminalizes what is already declared unconstitutional and void and the objective of the Act is to protect the rights of the women but it not provide any provision with regarding maintenance. This acceptance of petition again reignites the debate on the Muslim personal laws and Muslim women rights.

Although there are arguments that triple *talaq,* polygamy, *nikah halaa* etc. are tools used for suppression and oppression of women but the debate on reformation of Muslim personal laws

generally revolves around the interpretation of Quran, freedom to profess religion, secularism, Uniform Civil Code (UCC) etc without addressing the core issues of women rights, dignity, equality, feminism and patriarchy. The discourse bifurcate the term 'Muslim women'. In all legal discourse- in judgment of the Supreme Court[5] and even the debates in the Rajya Sabha and Lok Sabha the debate is more on 'Muslim' as a religious minority community in India, rather than 'Women'referred as gender and community oriented as the term 'women' involves the feminist approach, difference between sex and gender and dominance of patriarchy.

The research article outlines the brief overview of basic tenets involved in term 'Women' and examine and analyses the ***Shayara Bano*** judgment of Supreme Court and debates of members of parliament on the touchstone of those basic tenets with special reference to Convention on Elimination of All Forms of Discrimination against Women (CEDAW), which is called the Magna-Carta of women rights.

FEMINISM

In 19th century feminism was originated and developed as a women movement. Initially the women movement raised the demand of equality with men in public sphere mainly right to vote and political equality, called the first wave of feminism based on the liberal ideologies demanding equal rights as men had.[6] After achieving the equality at outer sphere still the women was not able to get the real gender-equality, still void was there. This was not sufficient, thus the women movement enter into the second wave of feminism, demanding the equality in inner sphere of family life. According to the second wave of the feminist equal rights are meaningless unless the women enjoy the social equality, which can be realized by the revolutionary process of social change, also referred as radical feminism, which moved beyond the equal rights and gave more emphasis on gender differences in the society- sex and gender; and concept of patriarchy is the main reason of oppression of women, deep rooted in the society and causes inequality.[7] Both concept of patriarchy and difference between sex and gender is provided hereinafter. Twenty-first century see the progression of third wave of feminism, which is not concerning about women in general but a particular category of women- poor women, black women, women of a particular religion or race or region.[8] According to the third wave of

feminism it is not that all the women in general suffers the discrimination but it can be a particular group of women, sometimes of particular race or region or color. To compensate the disadvantage and discrimination suffered by them, those women require special care and treatment.

A Muslim husband has a unilateral power t dissolve marriage by pronouncing *talaq,* sometimes without any reason. No such equal right or power was conferred on Muslim women. Triple *talaq* is the innovation of practice of *talaq* emerged during second century of origin of Islam; whereby a Muslim husband may pronounce three *talaqs* in one go, even in absence of wife, which becomes irrevocable and dissolve the marriage without any scope of reconciliation and reconsideration of consequence of the decision. Thus the practice of talaq causes inequality as well as injustice to Muslim women and such women require special treatment to uphold their dignity and equality.

(a) Patriarchy

The term patriarchy was originated from Medieval Latin and Greek term patriarkhias means 'ruling father'; a mass noun referring *'asystem of society or government in which father or eldest male is the head of the family and descent is recognized through the male line*'.[9]

Patriarchy is a social system where men havethe power, control and dominance over property, political leadership and social institutions.[10] Thus it illustrates the power relationship between men and women and refers to 'male dominance' and 'male supremacy' to describe the gender relations in society.[11] It also refers towards the unequal representation and participation of the women social-public life. It is a systematic, institutionalized and persistent form of power of men.

It was argued by traditionalists that practice of *talaq* upholds the principle of equality and fairness; however it was the notion affected by the concept of patriarchy. Practice of *talaq* was not something introduced by Prophet Muhammad but was already prevailed in pre-Islamic Arabia. It is evident that the attitude of people towards practice of *talaq* was affected by the cultural and social conditions of the society. Early Arabs were among the most violent peoples and such culture of violence affected both men and women; therefore generally men were the accused and the victims of murder, war and revenge but the burden of such violence was suffered

9. Meaning of patriarchy in English, (Sep. 22, 2019) https://www.lexico.com/en/definition/patriarchy.

11. *Supra* note 6, at 231.

by women as transformed into the mean of entertainment for the surviving and privileged men and in such environment the ratio between men and women could be approximately three to one.[12] In pre-Islamic Arabia there is no restraint on the power of the husband to pronounce *talaq* for any number of times, after the advent of Islam these numbers were restricted to three with a procedure; although still it was the prerogative of the Muslim husband. Instead of *talaq* under Islamic law *ila, zihare*tc. are the other options given to them to dissolve the marriage; however it was said that *khoola* provides the right to the Muslim women to dissolve the marriage but in fact it is ultimately the decision of the husband to accept and agree to take compensation to pronounce the *talaq* on wife. Ultimately it is the husband who has to pronounce the *talaq.* No such equal rights were given to the Muslim women. It shows the male dominance and supremacy over the women. It is the systematic and institutionalized oppression of the Muslim women under the patriarchy system.

(b) Sex and Gender

On the basis of above arguments the simple question is why a Muslim woman not given the equal right to utter *talaq.* There is no provision in *Islamic* law enabling a married Muslim woman to obtain divorce, except *khoola* to some extent. In India under British rule in 1939, The Dissolution of Muslim Marriage Act, 1939 provides this right to Muslim married woman by filing an application for dissolution of marriage on certain grounds.

What is the difference between the Muslim men and women, whether she is not able to utter this word? The difference lies in the difference of gender and sex. Sex refers to the biological anatomy and has no social and political significance. Anatomically there is only one major difference between man and woman and that is the reproduction ability of woman. Except this the other differences refers the gender having social, political and economical significance. These gender differences are structured and constructed by society (male dominated),[13] it is right to refer this society a patriarchy society. According to patriarchs, gender division prevailing in society is natural[14]; but in fact it is constructed by them like what a woman should wear, eat and behave, pink refers to women blue to men, how many children and at what time etc. not refer to any natural difference but sociallyconstructed difference.

(c) Approaches of gender justice

There are two main approaches of gender and inequality- sameness and difference approach.[15] According to sameness approach women are same as men, same standard should allotted to women and uphold that men and women are equal before law. Catherine criticized the approach as the standard of equality was the men, scale is men, women is compared with men- refers the male dominance in scaling.According to difference approach sex is the point of differentiation.[16] A woman requires special provision and treatment because of difference of biological anatomy of man and woman. Women should be treated differently (undercover perception may be because women are frail and weak require protection). Catherine criticized this approach as the women are measured at the standard of men. This approach involves a protectionist attitude rather than providing substantive equality.

A new approach of corrective treatment is adopted to provide equal and fair treatment to the women, where women are considered as historically deprived group.Before drafting any legislation or even judgment this approaches and concepts require attention to understand the basic problem from women's sensitivity.

EQUALITY

There are various forms of equality- legal, political and social equality. Conceptually there are two types of equality- Formal and Substantial equality.[17] Legal equality is the key expression of the formal equality i.e. equality before law and equal protection of law.[18] Law treats all equally irrespective of their caste, color, race, gender etc. Article 14 of the Constitution of India titled 'Equality before Law'[19]. Thus, it guarantees formal equality- equality before law. The Formal equality is about the nature of dealing rather than the result of dealing. The test is persons situated similarly should be treated similarly; thus the equal treatment should be given to those who similarly situated and not to persons who by reason of historic and systematic discrimination cannot recognize as similarly situated.[20] On the other hand substantive equality not concern with the equality before law but it considers the discrimination and inequality

suffered by particular person[21]; thus provide special treatment- equality of opportunity and equality of outcome. The idea is to remove the impediments in the way of the personal development by providing the special treatment. Article 16 clause (1) of the Constitution of India titled 'Equality of opportunity in matters of public employment'[22].

Further Article 15 clause (3)[23] of the Constitution of India empowers the State to make special provisions for women and children and thus provides an example of substantive equality to some extent.

The CEDAW also emphasis on State parties to incorporate the equality of outcome as a significant aspect of providing substantive equality to women.

The Muslim women in India thus de *jureentitled* to both legal and substantive equality under the framework of the Constitution but de *factounder* the disguise of personal laws cannot avail any of it. These personal laws are based on the notion of patriarchy and gender differences constructed by the male dominated society.

CONVENTION ON ELIMINATION OF ALL FORMS OF DISCRIMINATION AGAINST WOMEN (CEDAW)

United Nations General Assembly on Dec. 18, 1979 adopted Convention on Elimination of All Forms of Discrimination against Women (CEDAW)[24], which came into force in 1981 as an International treaty after ratified by the twentieth country. It is referred as milestone in women right movement.[25] It is instrumental in bringing to light all the areas in which women denied equality with men.The convention upholds the objectives of United Nation and faith in elementary human rights, dignity and equal rights of men-women. It laid down the meaning of equality, how to achieve it and agenda for action by State party to it. The preamble of the CEDAW provides that"That despite various instrument, extensive discrimination against women continues to exist, Recalling that discrimination against women violates the principles of equality of rights and respect for human dignity, is an obstacle to the participation of women, on equal terms with men, in the political, social, economic and cultural life of their countries, hampers the growth of the prosperity of society and the family and makes more difficult the full

21. *Id.,* at 268-269.

development of the potentialities of women in the service of their countries and of humanity"[26].

CEDAW provides the meaning of the term 'discrimination against women' as"Any distinction, exclusion or restriction made on the basis of sex…which impairing or nullify the recognition…of human rights and fundamental freedoms in the political, economic, social, cultural, civil or any other field."[27]

It further requires the State parties to condemn all forms of discrimination against women and to take appropriate means by establishing legal protection of rights of women and by espousing legislative and other measures including sanction if necessary to prohibiting discrimination to provide effective protection.[28] It requires the State parties to modify or abolish any laws, customs and practices which constitute discrimination against women.[29] Article 4(1) provides that State parties should take up temporary special measure for accelerating de facto equality between men and women.[30] CEDAW compel the State parties to take all necessary measures to remove discrimination against women in all matters relating to marriage and family relations.[31]

Article 24 of CEDAW provides that"State parties undertake to adopt all necessary measures at the national level at achieving the full realization of the rights recognized in the present Convention"[32].

India had signed the CEDAW on July 30, 1980 and ratified it on July 9, 1993.[33] India ratified the CEDAW with two declarations and a reservation.[34] Reservation is with regarding Article 29(1) of the CEDAW, which not affect the core obligation of it.[35] The two declarations affected the basic purpose of the CEDAW as it is with regarding to Article 5(a), 16(1) and 16(2). India declares that it abide by and guarantee the conformity with the provisions of the CEDAW with the policy of non-interference in the personal affairs of any community without the consent of

35. *Ibid.*

the community. Declaration with regarding to Article 16(1) is that India supports the compulsory registration of marriage however it is not practicable in India because of hugeness, customs, religion and literacy.[36] The declaration reveals the rooted patriarchy and cultural identity, whereby the equal rights of the women are lost. Question here arises whether the term 'without the consent of the community' involves the consent of the women or whether community involves women or it refers to male-dominant community. India has signed and ratified the CEDAW, however upholds the policy of non-interference in personal affairs, which make the effect of ratification nugatory. Gender equality become irrelevant to the discourse of personal laws.

Committee on CEDAW time to time laid down the agenda and machinery to achieve its purpose in the form of General Recommendation.General Recommendation no.28 urges the State parties to fulfill the obligation by refraining from making laws which directly or indirectly resulted into the denial of equal enjoyment of civil, political, economic, social and cultural rights.[37] This requires the obligation of means, conduct and result. General recommendation no.29 provides that the inequality in family is the basis of discrimination against women which is warranted for the sake of religion, culture and ideology. It specifically provides that State parties should guarantee equality in economic aspect during the relationship and on the dissolution of marriage and should eliminate exemptions that serve the discrimination. These are the guiding light for all State parties to adopt and acted towards equal and non discriminatory rights of women. Article 51(c) of the Constitution also requires that State shall make efforts to comply and promote respect for international law and treaty obligations.[38]

Shayara Bano v. Union of India*[39] *: The Missing discourse

It is the judiciary who serve as a torch bearer on women right. Judicial pronouncement advances the women right and equality and raises concerns against discrimination. It is not the first time that judiciary declare triple *talaq* unreasonable, arbitrary and void. There were many judicial pronouncements which uphold the women equality and dignity. Guwhati high court in ***Jiauddin vs. Anwara Begum***[40] and ***Mst Rukia Khatoon vs Abdul KhaliqueLaskar***[41] , Kerla high court in

36. UnitedNationsTreatyCollection(Sep.23, 2019)https://www.treaties.un.org/.

38. INDIA CONST. art. 51(c).
39. *Supra* note 1.
40. (1981) 1 GLR 358 (India).
41. (1981) 1 GLR.375 (India).

A. Yousuf Rawther vs Sowramma[42] and ***Mohammed Haneefa vs Puthummal Beevi***[43], Delhi high court in ***Massor Ahmed vs Delhi (NCT)***[44] and in ***Shamim Ara vs State of U.P.***[45] Supreme Court of India already held that that triple *talaq* is a revocable talaq and dissolution of marriage does not take place immediately at the time of pronouncement.

If we analyze the latest judgment of ***Shayara bano***[46] Supreme court analysis all necessary themes with respect to the term 'Muslim'- Prophet Muhammad, religion (Islam), religious book (Quran), traditions and customs *(Sunna and Hadith)* and changes or reforms takes place in other countries. However not consider the themes related to 'Women'- women right movement, feminism, patriarchy; although referred the CEDAW but not to the extent which was required.

Reason of this approach of Supreme Court in most of the family law cases is these laws called personal laws derived from the religion. While enormous codification has been taking place in Hindus and other religious communities but fewer efforts were make to codify the Islamic law because of lack of the political will and insensitivity towards right of the women. Instead of providing equal rights there were examples where judiciary tried to make efforts to eliminate discrimination but legislature overturned it. In ***Shah Bano vs Union of India***[47] Supreme Court uphold the right of the Muslim women to claim maintenance under section 125 Cr.P.C; however was back lashed by legislative action. In ***Daniel Latifi & another vs Union of India*** ultimately the court interpreted the provision in such manner that uphold the constitutionality of provisions as well as uphold the right of the women; although without reference to CEDAW.

Judiciary may uphold the equal rights of the women with the help of the basic themes of feminism, patriarchy, difference between sex and CEDAW in a better way.

Debate in Parliament of India on Muslim Women (Protection of Rights on Marriage) Bill, 2019: The Missing discourse

On June 21, 2019 the Muslim Women (Protection of Rights on Marriage) Bill was introduced by law minister Ravi Shankar Prasad for second time[48] in *LokSabha,* which was passed on July 25, 2019 and thereafter passed by *RajyaSabha* on July 30, 2019 after a wrangle debate.[49]

47. (1985) 2 SCC 556 (India).
48. Earlier bill had introduced in Dec. 28, 2019, which was passed by LokSabha but stuck in RajyaSabha.
49. *Supra* note 3.

For the first time 78 women members are elected in LokSabha ; although the number still nugatory as per the total numbers of seats of *LokSabha*[50] and as per the population of women. Likewise there are 26 women members in *RajyaSabha.* These represents the all the women of country in the parliament but less than ten shared their views on the sensitive matter. The main arguments against the bill in the debate in and *RajyaSabha*[51] and *LokSabha*[52] were as follows: that the bill conflated civil and criminal law by criminalizing the act of triple *talaq,* which is already declared null and void by the Supreme Court; thus framing a law for criminalizing Muslim husband for a void act.It is a class legislation, which is pointed at one community or class thus violated Article 14 of the Constitution.Bill does nothing to improve the status of Muslim women; thus not come under the purview of Article 15 the Constitution.It does not have procedural safeguards, can be easily misused; thus in violation of Article 21 of the Constitution.Bill is in violation of Article 13(2) of the Constitution as it violating the fundamental rights of the citizen under Article 25 of the Constitution. There are only 0.56 percent divorce incident in Muslims 0.56, which is negligible, so no need of any law. There are safeguards under section 498A I.P.C. 1860 and Protection of Woman from Domestic Violence, 2005, which are sufficient to deal with; thus no need of this. This bill is laid for political intention to harass the Muslim men.It provides punishment upto three years, how a husband in jail provides subsistence allowance to wife. Itarouses the communal passion and divides the country and not promotes marital harmony but hatred in relationship.

The arguments in favor of the bill were as follows[54]: that after the Supreme Court judgment in Aug. 17, 2019 345 incidents of triple *talaq* came into light till July 24, 2019; thus it is necessary to provide penal provision for deterrence. Because the Supreme Court urged that the government should legislate on it. Triple *talaq* causes injustice to Muslim women; thus for gender justice and justice to women, law is imperative. Penalization necessary as the idea of triple talaq still symbolize the one-sided end of the marriage. The practice of triple *talaq* is the matter of oppression, exploitation and injustice to Muslim women.

---

50. Women Members in LokSabha, LokSabha(Sep. 24, 2019) http://164.100.47.194/loksabha/members/women.aspx.
51. Women Members in RajyaSabha (Sep. 24, 2019) https://rajyasabha.nic.in/rsnew/member_site/women.aspx.

54. *Ibid.*

Above analysis of the debate shows the missing discourse of feminism; although some women member declares that they are feminist but not support the bill because it might be misused against Muslim husbands or it causes fear in community (not able to understand whether this community includes women or not). Some talking about equality of the Muslim women but compared with women of other community. Some calculated divorce rate and argued that it is negligible but forget that injustice to anyone is danger to justice everywhere. The basic themes of women movement, patriarchy, difference between sex and gender are missing there also.

CONCLUSION

Narrative of the women (of any religion, race, region, color etc.) is incomplete without the concept of patriarchy and the ages of discrimination suffered by her. We cannot understand her story until we discuss the difference between the sex and gender because all the rolls given her to perform were constructed by society (male dominant), having no relevancy to her biology. Irrespective of class, color, race all women shared the common narration; however the poor, black and a specific race or community suffers more therefore the concurrent third wave of feminism is related to their equality.

It is the duty of the Supreme Court as well as the government to uphold not only the legal equality but substantive notion of equality. Bare legal enactments are not sufficient until it also provides a mechanism of equality of outcome, whether women are able to assert and get their due or not. For that purpose CEDAW provides an elaborate action plan. In India, the judiciary played an active revolutionary role to uphold the dignity and worth of women; however without discussing the basic themes and their history of discrimination of centuries. The ***Shayara Bano*** judgment[55] referred the CEDAW but for the sake of reference. The court had the opportunity to elaborately discussed and emphasis on CEDAW as the India is signatory to it.It not only laid down the action plan for substantial equality of opportunity but of the outcome and to analyze the results of the corrective steps taken by the State parties. Without the reference of CEDAW no discussion on women right able to achieve its purpose.

The main argument of the government for introducing and passing Muslim Women (Protection

55. *Supra* note 1.

of Rights on Marriage) Bill, 2019 was for improving the position of Muslim Women and to cure the discrimination suffered by them but in debate in parliament while defending the bill nowhere referred CEDAW, even not a single parliamentarian referred it. On the other hand in debate the concept of patriarchy is also missing although equality (legal) to women was the dominant theme without any emphasis on substantive equality.

The two main branches of government might assert the rights of women forcefully with the help of these themes. The parliament also fails to touch upon these narratives so that they vigorously uphold the right of the women.

Again the Supreme Court has the opportunity (as the petition challenging the Muslim Women (Protection of Rights on Marriage) Act, 2019 is accepted) to decide and the women in hope, looking towards it that there real narrative should be put before.

The discussion on these themes will spread awareness not among the women but to the youths of these countries as a source of inspiration towards the sensitization of gender justice and equality.

NIKAH HALALA: A VIOLATION OF MUSLIM DIVORCED WOMAN'S RIGHT TO DIGNITY

- Dr Raghuvinder Singh* & Ms Arti Sharma**

INTRODUCTION

The concept of human dignity acquired universal importance in the year 1948, when the Universal Declaration of Human Rights came into force. Article 1 of the UDHR proclaims that, "All human beings are born free and equal in dignity and rights".[1] The preamble of the International Covenant on Civil and Political rights, 1966 while highlighting the importance of human dignity, states that the recognition of the inherent dignity and equal and inalienable rights of the human family is the foundation of freedom, justice and peace in the world.[2] Further, it says that the rights enshrined in the covenant derive from the inherent dignity of the human person. In India, right to dignity is neither defined nor specifically provided in the Constitution of India. It is only in the preamble where the word dignity appears. It says, 'WE THE PEOPLE OF INDIA, having solemnly resolved...to secure to all its citizens...FRATERNITY assuring the dignity of the individual...' For this pledge, the Indian Constitutional courts, post Maneka Gandhi case, have not only recognised that right to dignity is inherent and intrinsic in all individuals, irrespective of their status, caste, gender, religion etc., but also 'dealt with the task of assuring and preserving it whenever the occasion arises, for without the right to live with dignity, all other rights may not realise their complete meaning'[3].

In the early development of the jurisprudence relating to right to dignity, the courts have regarded it to be a facet of right to life enshrined in article 21 of the Constitution. As in, ***Maneka Gandhi v. Union of India,***[4] the Supreme Court observed that, "dignity of all, is a sacrosanct human right and sans dignity, human life loses its substantial meaning". But later, it has been considered to be closely connected with liberty, equality, and privacy as well. In ***Francis Coralic Mullin v. Administrator, Union territory of Delhi***,[5] the Supreme Court viewed liberty as closely linked to dignity.[6] Justice Bhagwati, in the instant case, observed that, "…right to life

5. AIR 1980 SC 849.
6. (2017) 10 SCC 1.

includes right to live with dignity and all that goes along with it namely,…facilities for reading, writing, and expressing oneself in diverse forms, freely moving about and mixing and commingling with fellow human beings…". Also, in ***Navtej Singh & Ors. V. Union of India***,[7] the court has closely linked it to liberty. Recently, in ***K.S. Puttaswamy & Ors v. Union of India,***[8] the Supreme Court, has perceived privacy as closely connected with dignity and thus observed that, "privacy of the individual is an essential aspect of dignity…Dignity cannot exist without privacy. Both reside within the inalienable values of life, liberty and freedom which the constitution has recognized". In the instant case, the Supreme Courtwhile holding that the human dignity is an integral part of the Constitution observed that, "Reflections of dignity are found in the guarantee against arbitrariness (Arti.14), the lamps of freedom (Art.19), and in the right to life and personal liberty (Art.21)"[9]. And also, the Supreme Court, in ***Joseph Shine v. Union of India***,[10] observed that sexual autonomy constitutes an inviolable core of the dignity. At this juncture, it can be said that right to human dignity is an umbrella right encompassing and underpinning rights relating to life, liberty, equality and privacy. Violation of right to life, liberty, equality and privacy would result in the violation of right to dignity.

Divorce ends the marital tie and parties are once again free to marry a person of their choice. But, the practice of nikah halala puts an unwarranted restriction on the autonomy of Muslim divorced woman. It requires her to marry someone else in order to marry her former husband and consummate her marriage, while she is in love with her former husband. It gives unilateral power to the second husband to divorce her and secondly, it is only upon her divorce and actual consummation of her marriage with her second husband that she can remarry her former husband. The question here is, "whether such a situation is or is not derogatory to the dignity of the woman as enshrined in the preamble and part III which form the basic structure of the Constitution? Or is this situation not against the principles of equality, liberty and privacy and thus, should it not be considered a violation of her right to dignity?"

Against this background, the present paper will analyse the practice of nikah halala on the touchstone of right to dignity available to Muslim divorced woman and to find out, whether there is a violation of her right to dignity and if so, then this paper would attempt to provide some suggestions.

---

7. *Supra* note 3.
8. *Supra* note 6.

This research paper comprises of five parts. The first part is an introductory part which explains that right to dignity is an umbrella right encompassing and underpinning all other rights of life, Liberty, equality and privacy. The second part deals with the concept of nikah halala and its close relation with different modes of divorce in Islamic law. The third part of this paper examines the essential elements of nikah halala on the touchstone of right to dignity available to a Muslim divorced woman under the Constitution. The fourth part analyse the Muslim Woman (Protection of Rights on Marriage) Act, 2019 and the fifth and the last part of the paper attempts to provide suggestions for the violation of her right to dignity.

NIKAH HALALA

Nikah halala is made-up of two Arabic words i.e. 'Nikah' and 'Halala'. Nikah means marriage, and 'halala' in Arabic means 'halal' and in English it means 'to make something permissible or lawful'. Nikah halala is a practice by which a Muslim divorced woman is made permissible for her former husband, so that, they can remarry each other. To put it in another way, it is a practice by which a Muslim divorced woman repudiated by her husband is required by the Muslim law to undergo the necessary formalities of nikah halala. Fyzee, in his book has described the following formalities of nikah halala:

- firstly, she is required to observe iddat of divorce;
- Secondly, after observing iddat,she is required to marry someone else;
- Thirdly, the second marriage must be consummated;
- Fourthly, the later husband either must divorce her or had died;
- Lastly, the woman is required to observe iddat of this divorce; after the expiry of iddat the couple can lawfully remarry.[11]

And also, Mulla in §336 of chapter XIV says, where the husband has repudiated his wife by three pronouncements [§311(2)and §311(3)(i)] ,[12] it is not lawful for him to marry her again until she has married another man, and the latter has divorced her or died after actual consummation of the marriage.[13] Thus, the common ingredients of nikah halala as described by Islamic scholars can be reduced to:

11. Outlines Of Muhammadan Law, 81, (Oxford University Press, New Delhi, 5th edn – 2008).
12. Principles Of Mahomedan Law, 429(Lexis Nexi, New Delhi, 22nd edn-2017).
13. *Ibid.*

a) Muslim divorced woman is to marry someone else in order to marry her former husband;

b) The second marriage must be consummated;

c) The later husband either must divorce her or died.

Only upon the fulfillment of the above said conditions the marriage between former couple is considered as lawful and the consequences of lawful marriage flow from the union. Now, the question comes whether the concept of irrevocability of talaq necessitates that a wife must perform halala on any form of talaq becoming irrevocable? Before proceeding to answer this question, it is imperative here to understand the concept of divorce.

KINDS OF DIVORCE UNDER MUSLIM LAW

Under Muslim law, the marriage may be dissolved either; by the will of the husband, without intervention of the court called talaq; by the mutual consent of husband and wife, without the intervention of the court; by the decree of the court at the suit of either husband or wife. At this juncture, it is necessary to state that here we are concerned with the first two ways of dissolving the marriage tie, as the issue of nikah halala largely depends on the method the husband uses to divorce his wife.

I. Divorce by talaq

Talaq is when the divorce proceeds from the husband. It is of three kinds i.e. talaq-e-ahsan, talaq-e-hasan, and talaq-e-biddat. Talaq-e-ahsan is a single pronouncement of talaq during tuhr, by the husband, followed by a period of abstinence called iddat.[14] The duration of iddat is ninety days or three months in case the wife is subject to menstruation otherwise three lunar months. If the couple resumes cohabitation or intimacy within the said period the divorce is treated as having been revoked. Conversely, if there is no resumption of cohabitation, then the divorce is considered final and irrevocable, after the expiry of the iddat period.[15]

Talaq-e-hasan is pronouncing the formula of divorce thrice during three successive tuhrs. After the third pronouncement of talaq, if there is no resumption of cohabitation between the couple in any of the three months the talaq is considered final and irrevocable irrespective of iddat. To illustrate if upon first pronouncement of talaq, there is a resumption of cohabitation within a period of one month, the pronouncement of talaq is treated as having been revoked.[16] The same

14. Shayara Bano v. Union of India, (2017) 9 SCC 1.
15. *Ibid.*
16. *Ibid.*

procedure is adopted after the expiry of the first month if the marital ties have not been resumed. And the husband made the second pronouncement of talaq. The first and second pronouncement of talaq may be revoked by the husband either expressly or by resuming cohabitation and talaq pronounced by the husband becomes ineffective, as if no talaq had ever been expressed.[17] But, if first and second pronouncements have not been revoked and the husband pronounces the third talaq it becomes irrevocable and the marriage stands dissolved irrespective of the period of iddat. Where after, the wife has to observe the required iddat and the husband and wife cannot remarry.

Talaq-e-biddat is the third form of talaq pronounced by the husband. It is recognized by Hanafi sect of Sunni Muslims. In talaq-e-biddat one definitive pronouncement of talaq such as, I talaq you irrevocably or three simultaneous pronouncements like talaq, talaq, talaq is uttered at the same time, simultaneously.[18] Talaq-e-biddat becomes effective immediately as soon as it is pronounced without giving a chance to the husband to revoke it. Thus, there is no chance of reconciliation. It becomes irrevocable the very moment it is pronounced. Thereafter, the wife has to observe the period of iddat and the parties are barred to remarry unless the wife performs nikah halala. The practice of triple talaq has been set aside by the Supreme Court on August 22, 2017 by a majority of 3:2.[19]

II. Divorce by Mutual consent

Under this category, the Muslim law prescribes two kinds of divorce i.e., Khula and Mubara'at. Khula is a divorce with the consent and at the instance of the wife, in which, she offers to give or agrees to give consideration to the husband for her release from the marital tie. Once the offer is accepted it becomes talaq-i-bain.[20] Mubara'at is a divorce by mutual consent of both the parties. Herein, the offer may proceed from the wife or from the husband, but once it is accepted it becomes complete and operates as talaq-i-bain.[21]

Now, the present paper shall examine the question, whether the concept of irrevocability of talaq necessitates that a wife must perform halala on any form of talaq becoming irrevocable? The question was answered by the Bombay High court in Mrs. Sabah Adnan Sami Khan v. Adnan Sami Khan[22]. The facts of the instant case are, the appellant (Mrs. Sabah Adnan Sami Khan) and

17. *Ibid.*
18. *Supra n*ote 12 at 343.
19. *Supra n*ote14.
20. *Supra n*ote 12 at 414.
21. *Ibid.*
22. AIR 2010 Bom 109.

the respondent, Adnan Sami Khan were Mahomedans and they belonged to Sunni sect. Both, the respondent and the appellant got married on September 15, 2001 according to Islamic rites. Their marriage was dissolved under the agreement dated April 18, 2004 signed by them and the witnesses. The parties remarried on April 04, 2007 at Jama Masjid, Bandra, Mumbai and got their second marriage registered with the Sub Registrar of Marriage, Bandra, Mumbai on February 02, 2008. Disputes and differences arose between the parties sometime in June and July, 2008, which resulted in execution of reconciliation agreement dated January 01, 2009. The appellant on account of discord filed a complaint under Domestic Violence Act in February, 2009 in the Metropolitan Magistrate Court Andheri. The respondent filed a reply to her application under the Domestic Violence Act. On March 16, 2009, the appellant filed a petition under section 2(viii) the Dissolution of Muslim Marriage Act, 1939 seeking dissolution of the second marriage, along with misc. application for seeking relief under the Domestic Violation Act. The respondent filed reply to application under the Domestic Violation Act, so also, filed a written statement in which for the first time he brought the issue that the appellant did not perform halala formalities before the second marriage and therefore, the second marriage was a nullity. The family court observed that the first marriage was dissolved by mutual consent of the parties and thus, was a divorce by Mubara'at and not by talaq ahsan mode as contented by the appellant. Further, the court held that the appellant had not performed halala formalities before the second marriage thus, the said marriage was held not legal and valid. Thereby, this appeal was filed in the Bombay High court. The court held that merely because talaq in ahsan or khula mode becomes irrevocable does not mean that every irrevocable talaq creates a legal bar to remarriage, necessitating the wife to perform halala. It is only in the case where the husband has repudiated his wife by three pronouncements as provided for in the hasan mode of talaq and in talaq-ul-biddat by three pronouncements, it is not lawful for him to marry her again until she performs halala.

Consequences of re-marrying without performing nikah halala

In ***Saiyid Rashid Ahmed v. Anisa Khatun***,[23] the plaintiffs were the brother and sister of the Ghiyas-ud-din, who would have been the heirs, if respondent's no. 1 to 6 were unable to establish their claim to be widow and legitimate children. The dispute is related to the succession

23. AIR 1932 PC 25.

to the estate of Ghiyas-ud-din, a Muhammadan, who died on April 04, 1920. On September 13, 1905 he pronounced the triple talaq in the presence of the witnesses, though in the absence of his wife. Though, the later received Rs. 1000 as a payment of her dower on the same day for which a registered receipt was produced. There was also prepared a talaqnama, a deed of divorce on September 17, 1905. Anisa Khatun - respondent no.1, challenged the validity of divorce on two grounds that the divorce was pronounced in her absence and second that after divorce Giyas-ud-din and she lived as husband and wife for fifteen years and five children were born to the couple. Thus, Ghiyas-ud-din did not intend to divorce her. The Privy Council held that triple talaq pronounced in the absence of wife by Ghiyas-ud-din was valid and immediately effective. The validity and effectiveness of the talaq would not be affected by Ghiyas-ud-din's mental intention. Further, since the respondent had not undergone nikah halala after divorce, the Privy Council held that she was not legally married to Ghiyas-ud-din and the children born were held to be illegitimate, resulting in rejection of her claim for succession.

Nikah halala: A violation of Muslim divorced woman's right to Dignity

The dignity of the individual encompasses the right of the individual to develop his/ her personality to the fullest of his/her potential.[24] And this development is possible only if an individual has autonomy over fundamental personal choices.[25] Human desire to be intimate with a person of one's choice within marriage or outside comes within these fundamental choices. In ***Joseph Shine v. Union of India***,[26] the Supreme Court observed that human dignity both recognizes and protects the autonomy of the individual in making intimate personal choices as to partner and nature of relationship, and that these choices of an individual cannot obviously be imposed on society and are premised on voluntary acceptance by consenting parties. The court further observed that, "sharing of physical intimacies is a reflection of choice. In allowing individual tomake choices in a consensual sphere, the Constitution acknowledges that even in the most private of the zone, the individual must have the ability to make essential decisions…"

But, Muslim divorced woman is divested to make intimate personal choices as to partner and the nature of relationship as she wishes to pursue. Firstly, because the practice of nikah halala underMuslim personal law requires a Muslim divorced woman to marry someone else while she

24. *Supra* note 6.
25. *Ibid.*
26. *Supra* note 10.

is in very much love with her former husband who has divorced her whimsically, irrationally under zest and anger, without any fault of hers, it requires her to curtail her choice, and thus, it restricts her autonomy in making intimate personal choices guaranteed by the Constitution. She is forced by imposition of law to make choice of someone else over her love. She lives in the fear that if she does not choose to marry someone else before marrying her former husband, her marriage with former husband, if brought to question as in Rashid Ahmed case, would be declared null and void, her children, if born, would be declared illegitimate and she would not be entitled to the benefits of lawful marriage. To avoid such situation if she opts not to re-marry her former husband, it again works like an absolute restriction on her right to make choice of her partner and give free expression to her personality.

In ***Shakti Vahini v. Union of India***,[27] the Court has recognized that the right to choose a partner is a fundamental right under articles 19 and 21 of the Constitution. The court held that "…when two adults consensually choose each other as life partners, it is a manifestation of their choice which is recognized under articles 19 and 21 of the Constitution. Such a right has the sanction of the constitutional law and once that is recognized, the said right needs to be protected..." So also, in ***Shafin Jahan v. Asokan***,[28] the Supreme Court set aside, a Kerala High Court judgment which annulled the marriage of a twenty four years old woman with a man of her choice in a habeas corpus petition instituted by her father, on the ground of denying its citizens the right to intimacy. The court observed that the right to intimacy emanates from an individual's prerogative to engage in sexual relations on their own terms. It is an exercise of the individual's sexual agency, and includes the individual's right to the choice of partner as well as the freedom to decide on the nature of the relationship the individual wishes to pursue. As these rights are available to all individuals, so is also available to Muslim divorced woman, but the practice of nikah halala puts restriction not only on the right to make choice of her former husband as her life partner, but also puts restriction on her freedom to decide on the nature of the relationship she wishes to pursue. As in ***Saiyid Rashid Ahmed v. Anisa Khatun, Annisa Khatoon***[29] kept thinking herself to be the legally wedded wife of Ghiyas-ud-din because the later treated her that way for fifteen years, but after his death when her marriage was put to question in the court, her contention was rejected on the ground that she had not undergone the necessary

27. AIR 2018 SC 1601.
28. AIR 2018 SC 1933.
29. *Supra* note 23.

formality of halala. She wasbereft of her freedom to decide the nature of relationship she wanted to have with Ghiyas-ud-din, and she was also denied the right of inheritance to his property as his wife.

Secondly, the practice of nikah halala, requires a Muslim divorced woman to consummate her second marriage against her wishes, while she is in love with her former husband. Additionally, Radhika Iyengar citing Jurist Moulana Ashraf Ali Thanvi stated that, "if the second husband died or divorced her before sexual intercourse, then it will be of no account and she cannot marry the first husband in such condition."[30] This shows that the consummation of marriage with second husband is utmost necessary condition without fulfilling which she cannot marry her former husband. The Supreme Court in ***Navtez Singh& Ors. v. Union of India***,[31] observed that, "autonomy is individualistic. Under autonomy principle the individual has sovereignty over his/her body. He/she can surrender his/her autonomy willfully to another individual and their intimacy in privacy is a matter of their choice. The freedom of sexual autonomy is also available to a Muslim divorced woman. She has sovereignty over her body. She can surrender her body willfully to a person of her choice, even if her choice is her former husband. It is her prerogative; the law cannot dictate her with whom to engage or not to engage in sexual activity. But, the practice of nikah halala dictates that she cannot remarry her former husband unless she has consummated her second marriage with someone else. Thus, it denudes her of the freedom of sexual autonomy protected by the constitution. In ***Joseph Shine v. Union of India***,[32] the court observed that, "In protecting consensual intimacies, the Constitution adopts a simple principle that the state has no business to intrude into these personal matters. In so far as two individuals engage in acts based on consent, the law cannot intervene. Any intrusion in this private sphere would amount to deprivation of autonomy and sexual agency, which every individual is imbued with." So also, in ***Shafin Jahan v. Asokan K.M. & Ors***,[33] the court observed that, "the law [may] prescribe the conditions of a valid marriage. It [may] provide remedies when relationships run aground. [But] neither the state nor the law can dictate a choice of a partner or limit the free ability of any person to decide on these matters. They form the essence of personal liberty under

30. What Is Nikah Halala, How it was established and where it stands in Modern India, INDIAN EXPRESS (Sept. 09, 2019, 11:15 AM), https://indianexpress.com/article/what-is/what-is-nikah-halala-how-it-was-established-and-where-it-stands-in-modern-india-triple-talaq-4618415/.
31. *Supra* note 3.
32. *Supra* note 10.
33. SCC OnLine 2018 SC 343

the constitution."But, the practice of nikah halala intrudes in the private sphere of the Muslim woman and thus, denudes her from exercising her personal liberty.

Thirdly, the practice of nikah halala requires that Muslim woman can marry her former husband only if the second husband has divorced her or died. By providing so it subverts the equality of spouses. It treats Muslim woman as a possession of her second husband. The Supreme Court, in ***Joseph Shine v. Union of India***,[34] while holding that section 497 is manifestly arbitrary and thus, inconsistent with the ethos of the constitution, observed that, "Marriage in a constitutional regime is founded on the equality of and between the spouses. Each of them is entitled to take decisions in accordance with his or her conscience and each must have the ability to pursue the human desire for fulfillment." Further, in the instant case, the court observed that, "the ability to make choices within marriage and on every aspect concerning it is a facet of human liberty and dignity which the constitution protects."[35] In depriving the wife (Muslim woman) of the ability to divorce and recognizing it in the husband (man), alone, the practice of nikah halala fails to meet the essence of substantive equality, liberty and dignity in its application. Equality of rights and entitlement between parties to a marriage is crucial to preserve the values of the Constitution.[36] The practice of nikah halala offends that substantive equality and is violative of art. 14.

The Muslim Women (Protection of Rights on Marriage) Act, 2019- An Analysis

The Muslim Women (Protection of Rights on Marriage) Act, 2019 was passed; firstly, to abolish talaq-e-biddat by declaring it void and illegal; secondly, to punish its use by Muslim husbands to divorce their wives'; thirdly, to protect the rights of married Muslim women as to custody of children and subsistence allowance for herself and her children.; fourthly, to provide for matters connected therewith or incidental thereto. But, it has not expressly abolished the practice of nikah halala which is closely connected with talaq-e-biddat.

Conclusion and Suggestions

In the end, it can be concluded that, the practice of nikah halala involves the violation of, not just one but, several fundamental rights of Muslim divorced woman namely;

---

34. *Supra* note 10.
35. *Supra* note 10.
36. *Ibid.*

- right to equality,as contained under article 14 and 15; as it offends the substantive equality by depriving the wife from divorcing her second husband;
- right to liberty, as contained under articles 19(a) and 21;as it denudes the Muslim divorced woman to express her choice of the life partner when that choice is her former husband who has divorced her by talaq-e-ahsan and talaq-e-biddat;
- right to privacy; as it is an interference by way of stipulation of law, which restricts her freedom to marry a person of her choice and exercise her sexual autonomy;
- right to live with human dignity; as the violation of her right to equality, liberty and privacy is ultimately a violation of her right to live with human dignity.

Thus, it is suggested that as regards the practice of nikah halala in case of talaq-e-biddat, the Parliament should make an amendment in the Muslim Women (Protection of Rights on Marriage) Act, 2019 to expressly abolish the practice of nikah halala. Since, the practice of talaq-e-biddat is declared void and illegal, consequently, the Muslim wife would not be required by law to undergo the practice of nikah halala even if her husband pronounces triple talaq upon her and latter retreats his step and starts living with her. Secondly, as regards the practice of nikah halala in case of talaq-e-hasan, the legislature should make a law to ameliorate the plight of Muslim divorced women as this practice takes away her right to live with human dignity.

PAID NEWS PANDEMIC: UNDERMINING CONSTITUTIONAL DEMOCRACY

-Dr Bharat*

"It needs little argument to hold that the heart of the Parliamentary system is free and fair elections periodically held, based on adult franchise, although social and economic democracy may demand much more." [1]

Constitutional democracy is the decisive underpin upon which the bravura edifice of India is conceived and construed. The sensitivity of this splendid conception lies in free and fair elections which are based on universal adult franchise.[2] On one hand, the free and fair elections strengthen the democratization of political philosophies & programs; and on the other hand it eggs-on the political liberalization. Mandated by the laudable sovereignty, through the Constitution of India, the Election Commission of India is progressively performing election after elections. With outstanding election management, the Election Commission of India strengthens the Constitutional democracy through its dynamic-direction, crackerjack-control and sterling-superintendence of elections in India to the Parliament and State Legislatures.

Prologue

The freedom of speech and expression not only occupies a 'preferred position in the ladder of the liberty' but it is also christened as 'the very life of liberty'. It is often characterized as the mother of all the other liberties. Moreover, the untrammeled flow of words is the first canon of the Constitutional democracy.

The freedom of press is nowhere recognized as a separate freedom under the Constitution of India in Part III dealing with the Fundamental Rights. Rather, the freedom of press is crinkled within the freedom of speech and expression.[3] Even the Supreme Court of India has described this freedom as the 'ark of the covenant of democracy'. [4]

* Assistant Professor of Law, University Institute of Legal Studies, Panjab University, Chandigarh.

1. Mohinder Singh Gill v. Chief Election Commissioner, (1978) 1 SCC 405, 424, at para 23.
2. The word 'franchise' has its taproot in the French word 'franc' which means free. The phrase 'universal adult franchise' means that the 'right to vote' is available to all the adult citizens of India without any kind of discrimination on the basis of caste, class, colour, region, religion, gender etc.
3. Brij Bhushan and Another v. The State of Delhi, AIR 1950 SC 129; Sakal Papers (P) Ltd. v. Union of India, AIR 1962 SC 305.
4. Bennett Coleman & Co. v. Union of India, AIR 1973 SC 106.

The freedom of the press dishes-up the glory of the right to information between the electorate and the elected. Freedom of the press is undoubtedly indispensable for people to be informed and to participate in a democracy. Through press come beliefs and behavior, dictums and dogma, ideas and information; and hence it is decisive in sustaining the rule of law.

Law is said to be a voyage towards the truth. Being the fourth pillar in a democratic set-up, 'press' plays imperative character in exciting public opinion, revealing corrupt practices, discovering truth, shaping the demand for accountability and responsibility, and above all gearing up for governance.

Despite of the advent of advanced audio, visual, digital and social media; the following bar-chart reflects that there is ever increase in the number of 'registered publications' with the Office of Registrar of Newspapers for India under the Ministry of Information and Broadcasting, Government of India.[5]

5. For details, refer: http://rni.nic.in/all_page/press_india.aspx Last accessed on August 23, 2019.

As on March 31, 2018; 1,18,239 publications (out of which 17,573 falls in the newspaper category and 1,00,666 fall in the category of the periodicals) were registered as against 1,14,820 on March 31, 2017.[6] With this data at the backdrop, India is having every reason to celebrate. But as society advances, new concerns require fresh considerations. Although, technology is expanding our prospects, perspectives and possibilities but it has also brought some novel test along with it. Recent events relating to the news-media, including infringement of privacy, trial by media, fake sting operations, proliferation of social media, pandemic of paid news etc. pretense a set of foreboding.

As Lord Justice Leveson wrote in his path-breaking report on 'Culture, Practice and Ethics of the Press' in Great Britain:

> "With these rights (of press freedoms) come responsibilities to the public interest: to respect the truth, to obey the law and to uphold the rights and liberties of individuals."[7]

The scale and size of media in a democratic set-up becomes predominantly palpable when it comes to challenges confronting media and the elections. While considering the concerns related to electoral reforms, even the Law Commission of India felt the need to address media-related issues associated with free and fair elections, including the pandemic of paid news.[8]

PAID NEWS

As a fourth pillar, media is expected to play a role of building culture and character, society and nation. Free and fair election is not only about exercising the right to franchise in apposite state of affairs, but also about having adequate information about policies, parties, candidates and the election process in itself so that electorates can make a conversant choice. The narration of paid news is as old as the news itself. In the 19th century, US newspapers used to publish "reading notices", which were advertisements presented in the form and format of news.

As such in Indian context, it is easier said than done to pin-down the exact time when the pandemic of Paid News made its entry into the election arena. However, after the 2009 *Lok Sabha* elections, sensing the intense immoral smell from the electoral scene outsized number of

---

6. *Ibid.*
7. Lord Justice Leveson, 'An Inquiry into the Culture, Practices and Ethics of the Press' (Leveson Inquiry Report, London: November 2012).
8. For details refer, Law Commission of India Report No. 255 (2015) on Electoral Reforms.

sensitized people expressed concerns about the need of ethical journalism for the overall vigor of the democracy. Thereafter, this anxiety aiming for preserving, protecting and promoting the constitutional democracy was timely conveyed to the Election Commission of India. There were discussions and deliberations in both the houses of the Parliament of India; debates and diverges poured from the Press Council of India, round of parlances happened within the Government and heated coverage in media circles calling for remedial measures to curb the pandemic of Paid News.

Constitutionally committed to the core for holding free and fair elections, the Election Commission of India initiated its first concrete step against Paid News in the 2010 General Elections so as not to allow any vitiation of level playing vote field and violation of election related laws. Since then, slowly but steadily, the Election Commission of India is trying its level best to fortify the measures and initiatives to keep all stakeholders well informed.

Paid news, defined by the Press Council of India as "any news or analysis appearing in any media (print and electronic) for a price in cash or kind as consideration" is now a common occurrence that poses a serious threat to democratic processes and financial markets. It misinforms audiences and undermines their freedom of choice.

The pandemic of paid news poses a direct threat to the freedom of speech and expression enshrined under Article 19 of the Constitution of India and also to the very fabric of constitutional democracy. News is meant to be fair and flaxen, neutral and non-aligned, independent and impartial. Media as the fourth pillar is one among the mainstay of democracy. But the blurring distinction between 'news' and 'paid news' is undermining the constitutional democracy in India by defeating the very spirit of free and fair elections.

Paid news is a pervasive in nature and bangs the sanctity of the electoral process. The ugly designs of the paid news operate on different principles and philosophy. It may be in the form of editorial write-up, biased opinion coverage, personality features, bewildering political promotion, statistically dubious opinion polls, soft interviews of candidates, obsequious political stories, publishing the press release word to word etc.

The deplorable fact about this pandemic is that neither the call of the Election Commission of India for self-regulation by political parties / media-houses nor the bid to criminalize the paid news in elections has gone well… jeopardize the very essence of constitutional democracy.

CHALLENGE OF PAID NEWS PANDEMIC

The pandemic of paid news in India and also in others parts of the world essentially springs from the verity that most of the media-houses are corporate conglomerates primarily engrossed in profit maximization. The 'fourth pillar' in the world's largest democracy i.e. India often emphasizes commercial considerations rather than exploration for the truth.

Paid news pandemic is prone, partial, partisan and predisposition. At election time, the concerns about the prejudice of the media are at the heart of debates, putting a big question-mark on its role and responsibilities. The open secret that the proprietors of the print and electronic media-houses have active political affiliations, ambitions and agendas which have (un)knowingly made their news-paper / news-channel preface of their respective associations and aspirations. And this interceded marriage accord between media and politics has lead to polarization of media-houses.

Uncalled incentive and undue influence to electorates pose challenge in the conduct of free and fair elections as it affects the level playing field in the political arena by deceiving the mind of the voter. The voter's right to correct and unbiased information needs protection. Another concern is that paid news deludes the ceiling of expenditure which is a key component in electioneering process.

Last but not the least; the desolate fact is that there can't be a fixed set of parameters to identify paid news as generally black-money is involved in this pandemic which is hard to tag, trace and track. For this and other reasons, the inherent deception involved in paid news as news entails a clandestine activity. Its occurrence, thus, can be reliably established by only its participants and that too by acknowledging that they are guilty of violating various election related laws, besides those relating to deception, fraud and non-payment of taxes.

GLIMPSES OF PAID NEWS PANDEMIC

The following table gives the glimpses of the year/election wise reporting of Paid News cases in India:

Year/Elections	No. of Paid News Cases Reported
2010 Bihar Assembly Elections	121
2011 Kerala Assembly Elections	65
2011 Assam Assembly Elections	42
2011 Tamil Nadu Assembly Elections	22
2012 Punjab Assembly Elections	523
2012 Uttar Pradesh Assembly Elections	97
2012 Uttarakhand Assembly Elections	30
2012 Gujarat Assembly Elections	414
2012 Himachal Pradesh Assembly Elections	104
2013 Madhya Pradesh Assembly Elections	165
2013 Karnataka Assembly Elections	93
2013 Delhi Assembly Elections	25
2013 Chhattisgarh Assembly Elections	32
2013 Rajasthan Assembly Elections	81
2014 General Elections	694
2014 Haryana Assembly Elections	212
2015 Delhi Assembly Elections	59
2016 Assam Assembly Elections	18
2016 Tamil Nadu Assembly Elections	17
2017 Uttar Pradesh Assembly Elections	56
2017 Punjab Assembly Elections	80
2017 Uttar Pradesh Assembly Elections	56
2017 Gujarat Assembly Elections	238
2017 Himachal Pradesh Assembly Elections	85
2018 Karnataka Assembly Elections	15
2019 General Elections	647

The year 2010 witnessed 121 cases of paid news in Bihar Assembly Elections. In 2011, 65 cases from Kerala, 42 cases from Assam were reported. The year 2012 recorded whopping cases of paid news as there were 523 confirmed cases in Punjab, 414 in Gujarat, 104 in Himachal Pradesh, and 97 in Uttar Pradesh. Elections to 2014 Haryana Assembly saw 212 cases and for 2017 Gujarat Assembly Elections the number was 238. General Elections are in no way far behind when it comes to pandemic of paid news, as 694 cases were reported in 2014 where as the number of cases in 2019 it was 647.[9]

In 2015, there were seven confirmed cases in Bihar, while in 2013, Madhya Pradesh saw 165 cases, Karnataka 93, and Rajasthan 81. The following table shows the data of the 2016 elections to the different legislative assemblies:[10]

State/UT	No. of Cases Recorded	No. of Notices Issued	No. of Cases Admitted by Candidate	No. of Cases found true by Media certification and Monitoring Committee (MCMC)
Assam	18	16	5	8
Kerala	5	5	0	0
Tamil Nadu	17	17	2	17
West Bengal	2	2	1	1
Puducherry	12	12	0	9

The most recent examples from the run-up to the 2017 assembly elections, Punjab recorded 80 and Uttar Pradesh recorded 56 cases whereas 2018 Karnataka Assembly Elections witnessed 15 cases. [11]

9. The data is compiled from the Election Commission of India.
10. *Ibid.*
11. *Ibid.*

Paid news is a serious electoral malpractice and the pandemic has continued to grow over the years. It leads to circumventing of the election expenditure limits and hampers the voter's right to reliable information.

So far, only few politicians have been barred by the Election Commission of India from contesting polls, on account of paid news. The most prominent among them are former Jharkhand Chief Minister Madhu Koda, and former Madhya Pradesh Minister Narottam Mishra.

The toughest challenge in these cases is to establish that the news is paid because media-houses do not maintain a distinction between news and paid news. Usually circumstantial evidence is there but with a very little proof. It is almost next to impossible to establish whether such transactions have taken place in cash or kind as usually, they are not carried out in black & white and promptly denied by both parties.

PAID NEWS UNDERMINING CONSTITUTIONAL DEMOCRACY

The counterbalancing influences of the doctrine of check and balance between various organs of the Government i.e. legislative, executive and judiciary is inevitable and the effective task of fourth pillar is imperative to achieve this balance in the very interest of free and fair elections. However, the rise of 'paid news' especially during election, has undermined the essence of a constitutional democracy.

> "Freedom of the press affords the public one of the best means of discovering and forming an opinion of the ideas and attitudes of their political leaders. In particular, it gives politicians the opportunity to reflect and comment on the preoccupations of public opinion; it thus enables everyone to participate in the free political debate which is at the very core of the concept of a democratic society." [12]

In contemporary times, media is a conscientious collaborator and the independence of the media endeavors to facilitate accountability and reduce corruption. It is not just the 'fourth pillar' but a 'significant pillar' which supports the Indian society in general and strengthens constitutional

12. Thorgeir Thorgeirson v. Iceland, (1992) 14 EHRR 843; 13778/88; [1992] ECHR 51.

democracy in particular through its sheer vigor and vitality. Media plays an imperative role in building the public opinion as it is an effervescent tool for the gamut of societal fabric.

The ability of the media to bring about precision in the system by playing an adversarial role is compromised because of breeding corruption by means of paid news pandemic. It is undermining the constitutional democracy at three levels. At the first level, the reader or viewer is betrayed by compelling him to believe paid news as news. Secondly, the expenditure incurred on paid news is veiled and it is not reflected as election expenditure violating the statutory provisions of the Representation of the People Act, 1951 and the Conduct of Election Rules, 1961. Lastly, the money received from political outfits is not accounted by the media-houses in their account books violating the provisions of the Companies Act, 2013 and the Income Tax Act, 1961 among other laws.

The news is expected to be independent and objective but the phenomenon of paid news projects a wrong picture and defrauds the electorate. This pandemic goes beyond the corruption of individual journalists and owes its existence to the egregious manifestation of the corporate media-houses. It has become highly planned, structured and organized subverting the fundamental ideal of sanctity of the right to vote. Whenever and wherever media adopts such unethical norms it is bound to abrogate its cloak of trust and faith. This section of corporatized media undoubtedly undermines the processes and structures that are meant to uphold and strengthen the constitutional democracy.

Now that there is a paradigm shift from the era of 'secrecy' to dawn of 'transparency', the pandemic of paid news is nothing less than an assault on the right to know true and correct credentials of those in the electoral fray thereby distorting the essence of whole process. If it is not addressed at this juncture, it will become overt as a normal course of the media's function. It is causing double jeopardy as it has put a big question on the very survival of ethical journalism on one side and on the sanctity of media democracy, electoral democracy and above all constitutional democracy on the other side.

CONCLUSION

Free and fair elections are as imperative as a free and independent press. The endurance of constitutional democracy in India owes a great deal to the freedom and vigor of press.

India's sheer scale and size, diversities and complexities are a big challenge in itself. The pandemic of 'paid news' mocks the electoral process and often reducing it to farce. It is pernicious for constitutional democracy and needs to be addressed holistically as it is a serious electoral malpractice which misleads public, influences voters, hampers the ability of electorates to form correct opinions, stalls the voter's right to trustworthy information and circumvents the election expenditure ceiling limits.

Constitutional democracy envisages protecting, promoting and preserving clean, caliber, capacity and character rather than cash, caste, community and criminality. Election Commission of India, the vanguard of Indian democracy, conducts elections as a matter of great pride & honour and strives every single day to ensure people's firm conviction in democracy sustains. It strongly believes in the concept of free and fair elections and continues to evolve itself time and again to support its stand.

Paid news pandemic had started out as an aberration, went on to become a disease and is now an epidemic. Without doubt, tackling of paid news in elections is still an evolving process and would require support of one and all. An alert citizenry can make a beginning in bringing the pandemic of paid news to an end by joining the hands with the Election Commission of India to break the symbiotic nexus between lawmakers and media-houses. What is at stake is not only the trust of public or role of media but the very foundation of our own Constitutional Democracy…!

RELEVANCY OF LEGITIMACY OF CHILDREN BORN OUT OF LIVE-IN-RELATIONSHIP: A SOCIO-LEGAL CONCERN

-Ms Wazida Rahman*

"Mankind owes to the child the best it has to give."

Preamble, UN Declaration on Child Rights (1959)

INTRODUCTION

"Live-in relationship" in straightforward terms, is a relationship in which both persons cohabit without marrying each other. Without marital responsibilities or accountabilities towards each other, it engrosses an established and undisturbed relationship (as cohabitants) between two partners. In such a situation, no law can make bound the two people who are living together, and they can move or separated at any time whenever they feel so; without any further legal consequences. There are an increasing number of couples entering into live - in relationships, not as a forerunner but rather an alternative of formal marriage institution. Such kind of long - term obligation often includes procreation of children. The live in "by circumstances", the cohabitants may procreate on believe that he/she will become legally married as of now they are 'de facto married' and after procreation they will be 'de jure married'. About the status and rights of such children born out of live in relationship, there are various legal issues arise, in comparison to those born out of marriages. Due to lack of proper legal definition of a live-in relationship, the status of such a relationship is unable to fix legally. So it is an ambiguous and uncertain legal issue to be solved in one go. The laws in India, does not provide suitable civil liberties or obligations to the parties who are in a live-in relationship. The children who are born as a result of such a relationship are not given a clear status that is why the courts have made available an explanation to the concept of live-in relationships through an assortment of judgments in the past few years. The courts have substantially stated that any heterosexual persons who are cohabiting for a long time will be presumed as legally married under the law unless contrary is proved.

In all early families in the society, it is very important in particular to have male progeny for the furtherance of the family as well as for the performance of interment rites and offerings. Thus the

* PhD Scholar, National Law University and Judicial Academy, Assam.

concept of *Aurasa* son was taking very essentially. An *Aurasa* or legitimate son is defined by Manu as one "whom a man begets on his own wedded wife"[1]. The procreation during continuation of a lawful wedlock was essential to represent the son as Aurasa son in the strict sense.[2]

The decision of Privy Council in ***Pedda Ammani v. Zaminder of Marungapuri***[3] that "Hindu law does not require procreation, as well as birth, after marriage to render a child legitimate is binding as law."

LEGITIMACY OF CHILDREN

It is the concept of the past, 'illegitimacy', having origin in Roman law termed as *"Nullius Filius"* and drift to the common law and well entrenched its roots there. However, Muslim law hold it very rigidly but concurrently adopted preventive course to see that all born legitimate child does not befall illegitimate. Thus it introduced the legal concept of *"Acknowledgement of Paternity"* and *"Iddat.*[4]

Under Section 16 the Hindu Marriage Act 1955, it is frequently argued that, the legitimacy of children out of void and voidable marriages, the interpretation and legislation assign a legal status as legitimate in law to children born out of live in relations and create it, a subject to debate regarding their property and maintenance rights. The interpreting analysis of section 16 (3) provides the rights of illegitimate children born from void or voidable marriages only. So it is not possible to legalize the status of children born from a live-in-relation in a reasonable period of time, under section 16 (3) of Hindu Marriage Act 1955. The gist of the provision as we can analyse that a void or voidable marriage is an attempt to enter into a marriage institution, although essential requirements for a valid the marriage could not be fulfilled under Section 5 of the Hindu Marriage Act 1955. However in recent inclination, live-in-relationship does not have any attempt to get married.[5]

The Indian Evidence Act under Section 112 also provides that "the legitimacy of a child is proved only if he/she was born during the continuance of a valid marriage between his/her mother and the father, if consequently they fail to prove the validity of marriage and children

born out of such relationship"[6]. So in India, children from parents who are in live in relationship have been given the status of *"Legitimate in law, Illegitimate in fact".*

In ***S.P.S. Balasubramanyam v. Sruttayan***[7], the SC had said, "If a man and woman are living under the same roof and cohabiting for some years, there will be a presumption under *Section 114* of the Evidence Act that they live as husband and wife and the children born to them will not be illegitimate." This was one of landmark judgements wherein the apex court for the first time recognised live-in relationship and also preserved the legitimacy of the children from such relationship. The court's interpretation in the status of such a child is to be in accordance with the Constitution of India vide *Article 39(f)*, which imposes the State a responsibility of to provide "the children with adequate opportunity to develop in a normal manner and safeguard their interests."

Mohammedan law is a strict personal law relating to recognition of children. So according to it, legitimate children are those children who are the progeny between a man and his legally wedded wife as. Thus children born from a live - in relationship were "illegitimate" in the eye of existing Muslim personal law.

The Andhra High Court in ***S.A. Hussain v. Rajamma***[8], held that "where the paternity of a child cannot be proved by establishing a marriage between the parents, Islamic law recognises 'acknowledgement' as a method whereby such marriage and such legitimate descent can be established as a matter of substantive law for the purpose of inheritance."

The provision under Section16 (3) of the Hindu Marriage Act 1955 required to be amended to bring the social reform, by recognising the status of legitimacy on children born from live in relationship too. But the society always raising questions in live-in-relationship that it is never performed marriage between the cohabitants and further in those relationships which is not confirm to the established factor, the parties will not be recognised as husband and wife and their children will become illegitimate.[9]

The Supreme Court in ***Bharatha Matha & Anr. v. R. Vijaya Ranganathan & Ors.***[10] observed that "thus, it is evident that Section 16 of the (Hindu Marriage) Act intends to bring about social

reforms, conferment of social status of legitimacy on a group of children, otherwise treated as illegitimate, as its prime object. The Courts in India have continued to support this interpretation of law in a manner to ensure that no child is bastardized without a fault of his/her own, as it has been seen in the above case." In this case, the Supreme Court also had held that "a child born out of a live-in relationship may be allowed to succeed in the inheritance of the property of the parents and subsequently be given legitimacy in the eyes of the law."[11]

In ***Tulsa v. Durghatiya***[12] the Supreme Court held that "a child born from a marriage like relationship will no more be considered as an illegitimate child. The crucial pre-condition for a child born out of a live-in relationship to be not treated as illegitimate is that the parents must have lived under one roof and co-habited for a significantly long time for society to recognize them as husband and wife and it should not be a 'walk in and walk out' relationship." In the similar context, the Supreme Court has pointed out its judgment in ***Madan Mohan Singh and Ors vs. Rajni Kant & Anr***.[13]

The Supreme Court held in ***Vidhyadhari v. Sukhrana Bai***[14], that "even if a person had contracted into second marriage during the subsistence of his first marriage, children from the second marriage would still be legitimate though the second marriage would be void." the Privy Council in ***Mohd. Baukar v. Shurfoon Nissa Begum***[15] held that "legitimacy of children of Mohammadan parents may be inferred without any direct proof of marriage, if there is prolonged and continuous cohabitation. Thus in a case where a couple has lived together for a long term, there shall be presumption of marriage and a child born out of that relationship shall enjoy all the rights of a legitimate child."

In the case of ***Haneefa v. Pathummal Beevi***[16] court held that "where in certain circumstances give rise to the presumption of marriage, they also give rise to presumption of legitimacy of the child."[17]

Justice ***C. S. Karnan ruled in Aysha v. Ozir Hassan***[18] that "the petitioner was not entitled to

claim maintenance as the marriage between the petitioner and the respondent was not proved through documentary evidence but the respondent was the father of the two children and required him to pay them each Rs 500 per month."

MAINTENANCE RIGHTS OF CHILDREN

In civil matters it is always explained maintenance as the obligation to afford for another party. It is necessary to mention that it plays a very important rule for a child born out of a live-in relationship. ***The Hindu Adoptions and Maintenance Act 1956***,[19] states, "a legitimate son, son of predeceased son or the son of predeceased son of predeceased son, so long as he is minor, and even after attained majority if such child is by reason of any physical or mental abnormality or injury unable to maintain itself and a legitimate unmarried daughter or unmarried daughter of the predeceased son or the unmarried daughter of a predeceased son of predeceased son, so long as she remains unmarried, shall be maintained as dependants by his or her father or the estate of his or her deceased father." The "right to maintenance during the life time of his or her father or mother" is always the situation with children from live - in relationships. Under Section 125 of the Code of Criminal Procedure maintenance is provided to children irrespective of legitimacy or illegitimacy while they are minors and when they become major, but he/she unable to maintain himself by reason of any physical or mental aberration or injury.[20] In ***Dimple Gupta v. Rajiv Gupta***[21] the right to maintenance of children born from a live - in relationship was upheld. The Supreme Court in this case held that "even an illegitimate child born out of an illicit relationship is entitled for maintenance under Section 125 of the CrPC (Code of Criminal Procedure, 1973) which provides maintenance to children whether they are legitimate or illegitimate while they are minors and even after such a child has attained majority if he/she is unable to maintain himself/herself." Moreover there are handfuls of cases which have upheld the maintenance rights of live-in partners and the interpretation of the statutes are intriguing in a very broad manner to include female live- in partners regarded as "legally wedded wife". The Supreme Court of India in the case of ***Savitaben Somabhai Bhatiya v. State of Gujarat***[22] made an exception that "the live-in partner had assumed the role of a second wife and was not granted

19. Section 2, Hindu Adoptions and Maintenance Act 1956.

22. AIR 2005 SC 1809.

any maintenance, whereas the child born out of the said relationship was granted maintenance."[23]

Under Article 32 of the Constitution of India, the rejection to provide maintenance to a child born out of a live-in relationship can be challenged. This is amounting to a violation of the fundamental rights guarantees under Article 21 as Right to Life and Personal Liberty. Denial of such kind can deprive an individual of his right to live life with dignity. The Kerala High Court upheld the same by the in ***PV Susheela v. Komalavally.***[24] Under Article 14 the Equality before Law is the remedy to the unequal treatment of a child born out of a live-in relationship and a child born out of lawful wedding, though in both the cases are perceived as legitimate in the eyes of law[25]. It can be seen in the legal filtration as a very sensitive and a complex issue.[26]

GUARDIANSHIP AND CUSTODIAL RIGHTS

Custody of a child in live in relationship is very significantly legal obstacle as comparison to married one. When there is a child as a result from such live in relationship without a proper legislation, it is easy to get involved in such relationship, but it is tough decision to get out from it. There is no specific law in regarding to take custody of a child born out of a live-in relationship, so the existing law for children born out of married couple, is also applicable to child born out of a live-in relationship.

In the ***Hindu Minority and Guardianship Act, 1956***[27] clearly states that "the father is the natural guardian of his minor legitimate children and the mother becomes the natural guardian only in the absence of the father; which means when the father is not capable of acting as the child's guardian mother becomes guardian of the minor child." And same has been laid down in the case of ***Gita Hariharan v. Reserve Bank of India***.[28]

In Hindu law, after the marriage of a man to a girl who is a legal minor, the husband is the legal guardian of his wife as a minor and is entitled to her custody. The mere fact that she is a minor will not disentitle her from claiming such custody to the exclusion of her parents. Where the father and the mother are not married to each other and a child is born to such parents, the mother and not the father has the parental responsibility for the child. Section 6(a) of the Hindu Minority

23. *Supra* note 11.
24. (2000)DMC376.
25. Bharata Matha & Ors. Vs. Vijaya Renganathan & Ors (AIR 2010 SC 2685).
26. *Supra* note 23.
27. Section 6, Hindu Minority and Guardianship Act, 1956.
28. AIR 1999 2 SCC 228.

and Guardianship Act 1956 provides "the father as the natural guardian of his minor legitimate children and the mother becomes the natural guardian in his absence" i.e. where he is incapable of acting as the guardian. However, Section 6(b) of the Hindu Minority and Guardianship Act 1956 grants an indirect right to custody of a child born from live in relationship to the mother in the impression of illegitimate relation. While we interpret the law positively, it can reach in the conclusion that, if a break-up happens between the live-in the partners, then by being the natural guardian of a legitimate child, the father can be acquired the custodial rights naturally of the concerned child.

It is the ***Hindu Minority and Guardianship Act, 1956 under Section 13*** of talking about the "welfare of the concerned minor to be of paramount consideration and thereby to negate the effect of previous provisions if they are in contravention of the said section."[29]

In ***Shyam Rao Maroti Korwate v. Deepak Kisan Rao Tekam***[30], it was held that "the word, 'welfare' used in Section 13 of the Act has to be inferred literally and must be taken in its broad sense. Such an interpretation is in unanimity with the development of the child as a capable and independent individual."

The Muslim law always recognises the father, for the legitimate children as the natural guardian, but the mother even for a legitimate child, does not become the natural guardian even after death of the father. Only through case law, guardianship of illegitimate children is given to mother, because Muslim law does not provide guardianship of illegitimate children. Till a minor son attains age of 7 years and a daughter till she reaches puberty mother is the guardian according to the Hanafi school of Law. However under Shia School of Law, till he attains the age of 2 years in case of son and of till attains the age of 7 years in case of daughter; mother is the guardian.

It is the settled law that, deciding a matter on custody; age, sex, welfare of the child, his or her wish to stay with whom, the court takes into account. The welfare of the children must be the paramount consideration. This rule also applies in custody issues of the children from live - in relationships.

RIGHT TO INHERITANCE OF CHILDREN

"An illegitimate child inherits the property of his mother only and not putative father," whereas under Shia law, such a child cannot even inherit from his mother. If children from a live - in

29. Section 13, Hindu Minority and Guardianship Act, 1956.
30. 2010 (10) SCC 314.

relationship are still being considered "illegitimate", they will be barred to inherit from the father's estate. In fact, where the live - in relationship has not been continued for a reasonably long period of time, the courts would not consider a child from such relationship to be legitimate, thereby exclusion from inheritance as well.

The Supreme Court in ***Bharatha Matha & Anr. vs. R. Vijaya Renganathan & Ors***[31], held that "a child born out of a live-in relationship is not entitled to claim inheritance in Hindu ancestral coparcenary property (in the undivided joint Hindu family) and can only claim a share in the parents' self-acquired property."

Under the Hindu Succession Act, 1956, "a legitimate Child means both son and daughter from the Class-I heirs in the Joint Family Property" and "an illegitimate child means who can inherits the property of his/her mother only and not of the putative father."

To get the inheritance rights under personal laws, the precondition affair is legitimacy. Subsequently, the Courts have always made certain that a live-in relationship should be of a reasonable period and any child who is born from live-in relationship should not be deprived of the right to inheritance and this must be in conformity with ***Article 39(f)*** of the Constitution of India.[32] The Supreme Court in ***Vidyadhari v. Sukhrana Bai***[33] granted that "the right of inheritance to the children born from a live-in relationship and ascribed them with the status of 'legal heirs'."

Hindu Marriage Act 1955 under Section 16, sub clause (1) & (2) openly declare that "children born out of void or voidable marriage, should be deemed as legitimate children in the eyes of the law." However, live in relationship neither a void nor voidable marriage to be remedied under the above provision. Therefore, to sort out such conflict and to prevent discrimination against children born out of marriage like relationship, and this may lead to and legally entitled to all the rights in the property of their parents, both self-acquired and as coparcenaries, required an amendment in to this section. Subsequently, in ***Parayan Kandiyal Eravath Kanapravan Kalliani Amma and Ors vs. K. Devi and Ors***[34] Supreme Court held that ***"the Hindu Marriage Act 1955,*** a beneficial legislation, has to be interpreted in a manner which advances the objective of the law."

31. AIR 2010 SC 2685.
32. *Supra* note 26.
33. AIR 2008 SC 1420.
34. (1996) 4 SCC.

If there will be a subsequent amendment of the ***Hindu Marriage Act Act 1955*** relating to Section 16, it will eliminate the dissimilarity between children born out of valid or void or voidable marriages, and children born from any kind of marriage like relationship. This will bring about social reforms and stable social status of legitimacy on innocent children, to whom some restrictions imposed on rights guaranteed under the Section 16.[35] The Supreme Court in ***Revanasiddappa v. Mallikarjun***[36] opined and granted that "the right to inherit the property of the biological father of the four children born from the woman with whom he was a live - in relationship by them 'his legal heirs'." Thus the Court has ensured through many precedents that no child be denied their inheritance right who is born from a live - in relationship of a reasonable period of time.

The Supreme Court had opined in ***SPS Balasubramanyam v. Sruttayan***[37] that "If a man and woman are living under the same roof and cohabiting for a number of years, there will be presumption that they live as husband and wife and the children born to them will not be illegitimate." In this landmark decision the apex court by interpreting the provision in according with Article 39(f) of the Constitution of India and upheld the legitimacy of the children born out of live in relationships and confirmed that "the responsibility on the state to provide children with opportunities to develop in a healthy manner and safeguard their interests." In the case of ***Uday Gupta v. Aysha and Anr***[38] it was held that "if a man and woman are living together for a long time as husband and wife, though never married, there would be a presumption of marriage and their children could not be called to be illegitimate."

STATUS OF CHILDREN BORN OUT OF NON-MARITAL COHABITATION IN OTHER COUNTRIES

Legitimacy is a status conferred by law which has created many issues globally. A child enjoying legitimate status is entitled to full recognition as a member of the family group in question and he or she has all the legal rights which such status involves. The child who does not enjoy such status is illegitimate and will suffer disadvantages as a consequence. In addition to legal disadvantages, there are social consequences which result from being classed as illegitimate, although the stigma attached is not as great as it formerly was. In recent years the general trend in most jurisdictions has been to reduce the consequences of illegitimacy, and some jurisdictions

35. *Supra* note 32.

37. AIR 1992 SC 756.
38. SPECIAL LEAVE PETITION (Criminal.) No. 3390 OF 2014.

have even abolished the status of illegitimacy altogether.

UNITED STATES OF AMERICA

In United States of America, children born out of wedlock have not traditionally enjoyed the same legal protections as children born in wedlock. Such children were historically referred to as "bastards" in a legal context. However, many restrictions on illegitimate children have been repealed in most of the states now. State laws have traditionally prevented unmarried couples from adopting children. Though some states have begun permitting unmarried couples to adopt, these couples still must surmount prejudice and may face other difficulties. Married couples, on the other hand, are permitted to adopt and are usually preferred over unmarried individuals.[39]

In US substantial inroads have been made in abolishing the distinction between legitimate children and illegitimate children. The US Supreme Court has held that discrimination against the illegitimate child violates the equal protection clause in the constitution.[40] In ***Trimble v. Gordon***[41] in 1977 the court by 5:4 majorities held that an Illinois statute which provided that illegitimates could inherit from their mothers but not from their fathers was unconstitutional. Here the child's paternity had been established before death, the father was supporting the child and had acknowledged her as his child. The issue of unconstitutionality on the basis of discrimination against illegitimate child has also arisen in connection with the Social Security Act,[42] various support statutes[43] and immigration laws.[44]

UNITED KINGDOM

The couples living together without marriage in the United Kingdom does not enjoy the status of married couple. They do not have same legal rights and duties as assured to married couples. Though they are free to maintain each other separately, there exists no duty or obligation on anyone of them to maintain other. Though the partners do not have inheritance right over each other property but one is eligible to be maintained where a partner had specifically mentioned the name of other partner in the will. Thus couple in such a relationship is not plainly free from all legal consequences. The state pensions that are available to the wives and civil partners who have legalized their status are not similarly applicable to partners who live together unmarried.

Bereavement allowance that is available to widowed person is also not available to surviving live-in partner if the other dies. However, the law seeks to protect the rights of a child born under such relationships and hence both parents have the responsibility of bringing up their children irrespective of the fact whether they are married or cohabiting'.[45]

FRANCE

Both French tradition and the French law consider the biological parents as the persons most naturally inclined to serve the interests of their children. The right to custody of one's children is included within the scope of parental authority.

A new Article in the Civil Code introduced the principle of equality between legitimate and illegitimate child. This reform allowed an illegitimate child to inherit its father. In case of unmarried parents, same rules apply to cohabiting and non-cohabiting parents regarding establishing filiations.[46] Although in earlier times natural born children inherit only three quarters of the entire estate of their parents, however, now in France a natural child inherits from his parents similarly as a legitimate child does, of course, the estate is divided into equal shares among them and their legitimate siblings, if they exists. More importantly, natural children are now integral parts of their parents' respective families and lineages. Better yet, reciprocal inheritance is now permitted between natural born children and their parents. The central point to grasp with French inheritance laws is that children are specifically protected from being disenfranchised from parent's estate. Parent cannot freely dispose of any part of la réserve, which must be held for children.[47]

The French Civil Code states that the breakdown of a marriage or a relationship does not affect the rules governing the exercise of parental responsibility. Therefore, separated parents continue to exercise joint parental responsibility over their children, which is the general principle provided for by Civil Code.[48]

PHILIPPINES

In Philippines children born outside a marriage are illegitimate.[49] The Family Code of Philippines provides for the legitimization of illegitimate children, however, children of cohabitants having no impediments to marry each other can only be legitimated.[50] Legitimating takes place by a subsequent valid marriage between parents.[51] The effect of legitimating a child retroacts to the time of the child's birth[52] and a legitimated child enjoys the same rights as a legitimate child.[53]

The Philippine Family Code provides that illegitimate child shall use the surname of his/her mother. Such children shall be under the parental authority of their mother and shall be entitled to support in conformity with provisions provided in Family Code of Philippines.[54] The effect of legitimating a child retroacts to the time of the child's birth[55] and a legitimated child enjoys the same rights as a legitimate child.[56] Philippine Civil Code provides that an illegitimate child shall receive a share equivalent to half of the share that will be received by a legitimate child who in turn shall receive a share of half of the value of the whole legitimate.[57]

SCOTLAND

The Family Law (Scotland) Act of 2006 has abolished the discrimination between legitimate and illegitimate child. It provides that no person shall be illegitimate whose status is governed by Scots law; and accordingly, in determining the person's legal status the fact that a person's parents are not or have not been married to each other shall not be taken into consideration; and further, such fact shall be left out of account in establishing the legal relationship between the person and any other relations.[58] Thus it has been made statutorily clear in Scotland that the child born out of wedlock will be legitimate and no person's status shall be illegitimate.

Even if there is no Will, a child of unmarried parents has a legal right to inherit from both parents and the families of both parents like a child born within marriage can inherit automatically from

both parents and the extended family of both parents.[59]

In China couples also sign a contract for live-in relationship. The child born through such relationships enjoys the same succession and inheritance rights as are enjoyed by children born through marriages.[60]

AUSTRALIA

In Australia only when children are involved, de-facto relationships come under the jurisdiction of the Family Law Act, 1975. Although a parliamentary review committee is considering whether the Act should be extended to cover all de-facto relationships, at present it stands that the legal system is inconsistent in the way it deals with these relationships; laws vary between states, between the states and even between government departments.[61] Law grants common-law partners the same fundamental rights as married couples after two years of cohabitation; it casts a light on how common-law couples are treated. The presence of children can significantly affect the way a common-law relationship is viewed in the eyes of law.[62]

ITALY

In Italy, cohabitation is not as common as in other countries of Europe, because of its Roman Catholicism had a historically strong presence. However cohabitation without marriage has increased in recent years. There are significant regional differences in non marital cohabitation can be found, as non-marital unions are more common in the Northern Italy than in Southern Italy.

A survey report was published in 2006, which said that "long term cohabitation was still novel to Italy, though more common among young people."[63] In 2015, the children born outside of marriage were total of 28.7% which was total of 27.6%, in 2014. But this statics was varied in different parts of Italy as follows- Central Italy from 32.8% to 33.8%, Northeast Italy from

31.8% to 33.1%, Northwest Italy from 30.1% to 31.3%, Insular Italy from 22.4% to 24.2%, and South Italy from 19.4% to 20.3%.[64] Urban versus rural living also plays a role in cohabitation arrangements, a 2001 study described cohabitation in Italy as "still rare outside of large cities"[65]. In general, couple's relationships in Italy were characterized by very long engagements.

In 1975, certain fundamental improvements were done in Italian family law. These amended provisions were providing the same right to maintenance to children born out of a valid marriage *(filiazione legittima)* as well as to those born outside marriage *(filiazione naturale)*. Previously, children born outside of a legal wedding had to suffer legal drawbacks. In principle, unmarried parents have the chance to accept parenthood officially. This acknowledgement ensures to the legal validity of rights and duties toward the child. So far, Italy has witnessed no real establishment of legal regulations that regard informal unions. Judgments are basically made on the basis of respective situations. As an independent field of law it has not developed yet.[66]

CONCLUSION

The concept of live-in-relationship is not a new concept in India, although the name "Live-in-relationship" is heard openly in recent times. Avarudh Stris, Maitri Karar, Nata Relationships, Visiting Husband, Polyandry, Dhuka marriage etc.; are the concepts developing in India from the ancient period to existing period of time. There is no legal barricade or need to prevent a man and a woman cohabiting together without entering into the formal marriage in the form of marriage like relationship i.e., "live - in-relationship". The traditional society of India, however, does not endorse such living arrangements as a whole. In the language of Leon R. Yankwich, "There are no illegitimate children – only illegitimate parents." Since there is no specific law that recognizes the status of the couples in live in relationship, hence the law as to the status of children born to the couples in live in relationship is also not very clear. The greatest importance in the protection of child rights parameter is to ascertain the status of such children in law as well as in society. The need of the hour is that it should be the primary agenda of the legislation to ensure the rights of the children born out of marriage like relationships, i.e. live in relationship. The decisions pronounced by the Supreme Court of India hold significant

66. *Supra* note 65.

assessment in dealing with the fact in issues arising to identify the position of the children born out of live in relationship in socio-legal arena. Now it is out of harm's way to conclude that the modern society while fixing the debated issue turns into the well being of the legal circumstances; as a result the child born from a marriage like relationship is bound to face requirement of clarity of legal status in life, the origin and subsequent rights etc. This can lead to instability and insecurity in the child's life both mentally and emotionally. Legalizing live in the relationship means that a totally new set of laws are required to govern the relationship including protection in case of desertion, cheating, maintenance, inheritance, etc. Even courts are also trying to take the live-in-relation under the presumption of marriage. It is not recognised in any judgment independently as live-in-relationship. The harm caused to a "legally wedded wife" and her children and promotion of bigamy is two main arguments opposed to wholly legalize the live-in-relationships in India. To avoid these circumstances, a set of clear laws should be legislated and amendments to the existing ambiguous terms in present laws must be granted clarity on the status and rights of children born in a live in relationship. This will ensure uniformity and security to establish emotional, mental and physical developments to such a child.

RESPONSE OF LEGISLATURE AND JUDICIARY TO CRYONIC LIFE EXTENSION IN CANADA AND INDIA: A COMPARATIVE STUDY

- Dr Supreet Gill*

1. INTRODUCTION

Regardless of dynamic and rapid development in the field of cryonics, with membership statistics showing growth spurt every year, it largely remains an unregulated activity in major jurisdictions across the globe. This can be attributed to the laziness, denial and callous attitude of governments towards its use and regulation. More often than not, the response of any legal system towards advancement in medical field is that of an unrealistic expectation that it will not cause any conflicts in the judicial arena. However, this expectation is far from reality as tragically, neither society nor cryonics advocates have been able to avoid the inevitable. Cryonic life extension has brought with itself a lot of litigation which could have been avoided if effective legal framework were in place to deal with it. However, the ongoing litigation is expected to spark further litigation as judicial officers dealing with these cases lack a sound legislation that they may rely upon when called to adjudicate upon matters related to cryonic life extension. Whatever little assistance they have is only through already decided cases which actually create more problems than they solve, as current case law falls in realm of varied jurisdictions where judges decide on the basis of sensibilities and perception towards cryonics in a given community, which may or may not be in consonance with other jurisdictions or community set up. Owing to absence of significant case law and authoritative inaction, people in general are left with no legislative assurance which will eventually lead to chaos.

2. CANADA

Canada is by far the only jurisdiction which has addressed the issue of cryonic life extension with a direct legislation. However, what would be disappointing for people interested in cryonic life extension is that, the Province of British Columbia has placed a blanket ban on the practice. The reasons as to why this happened can only be understood by searching deeper into the judicial system of the country in respect of presence of cryonic organisations. In Canada, the

* Assistant Professor, University Institute of Legal Studies (UILS), Panjab University, Chandigarh.

presence of cryonic organisations offering preservation facilities is not as wide spread as it is in the United States. There are only a handful of cryonic organisations which are actively involved in cryonic preservation or promotion of it. Two of the organisations involved in cryonic preservation are the Cryonics Society of Canada and the Lifespan Society of British Columbia. A brief description of both the organisations and their role in propelling the cryonics movement in Canada is mentioned as follows:

I. CRYONICS SOCIETY OF CANADA

The Cryonics Society of Canada and its publication titled, Canadian Cryonics News (hereinafter CCN) was founded in 1987 by a psychology student at McMaster University named Douglas Quinn as its President. Quinn was heavily influenced by the cryonics ideology owing to the time he spent in United States[1] and he eventually enrolled as a member at Alcor to be cryopreserved upon death. Quinn took responsibility of publicising cryonics in Canada upon himself and also contacted media for the same. Owing to wide scale publicity by Douglas Quinn, few people enrolled with Cryonics Society of Canada to be cryonically preserved. Over the years Cryonics Society of Canada's outreach became more widespread and more people joined in. When the province of British Columbia banned cryonic life extension in the year 1990, the Cryonics Society of Canada was instrumental in lobbying vigorously against the legislation and since then has been making efforts to get it revoked. The province of Alberta also made similar attempts but to the delight of cryonics supporters such regressive legislation could not succeed.

II. LIFESPAN SOCIETY OF BRITISH COLUMBIA

The Lifespan Society of British Columbia is an organisation dedicated to using scientific methods and technology to promote the quality of life and enhancing lifespans. It is their belief that access to medical technology for expansion of lifespans is a fundamental right of each citizen. They organise conferences and talks in order to educate people in Canada about various technologies presently under development that may be instrumental in expanding lifespans of humans in the near future.

A. LEGISLATIVE RESPONSE: BAN ON CRYONIC LIFE EXTENSION IN BRITISH COLUMBIA

The province of British Columbia is the one and only jurisdiction in the whole world which has enacted specific legislation to ban the practice of cryonic life extension. A lot of research has

1. Douglas Quinn had previously worked at Trans Time in 1987,therefore he knew most people in American Cryonics Society.

gone into tracing the real reason and events which led to the passage of this law. The President of Cryonics Society of Canada has published an extensive account of his conversations with various people who were on the committee which recommended this law, but none of them were ready to take individual responsibility for enactment of this law, neither did they divulge the name of the person who added cryonic life extension in that clause. They maintain that it is a result of collective effort of the ministry. However, there are some people who blame religious thinking behind the passage of this law as the idea of preserving a dead body in cold and waiting for its revival is in complete contrast with principles of Christianity.[2] There are two legislations which deal with ban on cryonic life extension.

1. THE CEMETERY AND FUNERAL SERVICES ACT, 1990.

The law which places this blanket ban on cryonic life extension is the Cemetery and Funeral Services Act, Part 5, Section 57talks about "Disposition of Human Remains." This Act is a result of fourteen years of deliberations and suggestions of Gosse Royal Commission of 1976, a study conducted by a former law professor named Richard Gosse. It was passed by the legislature in April 1990.

The language of the section is as follows,

Sale of cryonics, irradiation and other kinds of arrangements forbidden: No person shall offer for sale or sell any arrangement for the preservation or storage of human remains based on cryonics, irradiation or any other means of preservation or storage, by whatever name called, that is offered or sold on the expectation of the resuscitation of human remains at a future time.

The Cemetery and Funeral Services Act 1989, Part 5, Section 53. (Canada).

The section completely prohibits any commercial activity related to offering services to cryopreserve individuals upon death. Section 129 provides for punishment for contravention of provisions of the above section. The section states that if any corporation is found in violation of Section 57 then they shall be liable to pay fine not exceeding ten thousand Canadian dollars. Additionally, each of the directors and officers of the organisation or company who knew about the offence and permitted or acquiesced it, in addition to the company being convicted, shall be liable to fine of ten thousand Canadian dollars or imprisonment for not more than one year or both.

---

2. Lincoln Cannon, Resuscitation, by Cryonics or Otherwise, Is a Religious Mandate, Institute for Ethics and Emerging Technologies (Jan. 26, 2019, 10:06 AM), https://ieet.org/index.php/IEET2/more/cannon20140811

The Act is very rigid in its wording as well as its penalties for offences related to contravention of its provisions. However, in the opinion of the researcher, the Act leaves a lot of questions unanswered. It is not clear whether there is a ban on cryonic life extension or just the advertisement of it. Also, nothing has been said about situations where citizens living in British Columbia make arrangements for cryonic preservation outside of their jurisdiction and need to apply for transport related procedure in order to be shipped out of the state. The drafters responsible for the legislation have issued some clarifications when questioned about the above. The Cryonics Society of Canada have been trying for long to seek clarification on the above issue and they quote several instances of written correspondence with the bureaucracy wherein different people have expressed different opinions.

In one such conversation, Bruce McCullen, Director of Policy and Planning, once suggested that such citizens will not face any opposition from law authorities if the facility was located outside of British Columbia[3]. He also stated that the reason behind the legislation was mainly based on consumer protection principles and the intention of the legislators was to protect potential clients from consumer fraud as the science behind cryonics has still not been proved in practice[4].

As more people became aware of the idea behind cryonic life extension, there was a lot of lobbying and support for changing the law. In August 1992 a proposal to amend the Cemetery and Funeral Services Act was made by the Directors of Cryonics Society of Canada. Unfortunately, the request was denied. In written correspondence, dated November 1992, Mr. Moe Sihota, Minister, Labour and Consumer Services wrote that, "commercial transactions concerning cryonic life extension are prohibited because the technologies involved in cryonics are as yet unproven."[5] Appeals to review Section 57 were also denied by Ms. Joan Smallwood who succeeded Mr. Sihota as the Minister of Labour and Consumer Services. By the year 1994 the appeal to amend Section 57 had gathered enough support that the ministry was forced to form a Consultation Group to review the provision, but yet again the group denied any change in law as cryonics was still an "unproven science". In a letter dated October 17, 1994, Joan Smallwood clarifies that the present language of the Act does not prevent preservation of

4. *Id.*
5. Letter by Moe Sitoha, Minister, Consumer Labour Services, to Mr. Douglas Quinn dated November, 24 1992. (Jan. 26, 2019, 10:06 AM),http://www.cryocdn.org/BC_Nov92.html

humans or organs but targets the sale or advertisement of a technology which is yet not proved scientifically. She writes that, "The present wording of the Act is intended to be representative of the present state of medical technology and to prevent the possible exploitation of individuals at a vulnerable period in their lives."[6]

However, she assures that as and when this technology is proven, the ministry will consider requests for review. Therefore, she basically implied that they will cross the bridge when they come it to and any speculation preceding to the working proof of this science is uncalled for. Further in a letter dated November 2, 1994 she clarifies that there is no ban on research in the field of cryonic life extension and the ministry in fact will be supportive of any life saving or lifespan enhancing scientific technologies if they are discovered in the future.[7]

History repeated itself two years later when in the year 1996 requests were denied to amend the provision yet again and thereafter no attempts were made to review the Act. However, post the revolution in media and technology after the turn of the century, a need was felt to issue some sort of clarification on cryonic life extension as now more and more people could access information about it and had expressed interest in it. So, in September 2002, Solicitor General R.T. (Rich) Coleman issued a letter[8] to Olaf Henry, (who sought the clarification)and Tayt Winnitoy (Registrar of Cemetery and Funeral Services) clarifying his stand on cryonic life extension. Solicitor General Coleman stated that,

Funeral providers are prohibited from offering cryonics arrangements on the expectation of future revival, but that cryonics businesses are not prohibited from operating and consumers are not prohibited from accessing cryonics services. Although a BC funeral director cannot sell cryonics arrangements, a BC funeral director is not prohibited from preparation and transport for cryonics purposes (to an organization outside of BC, presumably).[9]

In the aftermath of this move, Registrar Winnitoy, who was contacted by the Cryonics Institute situated in U.S., reiterated the fact that a funeral director in British Columbia will not be prohibited from assisting in the preparation of transportation of bodies for the purpose of cryonic preservation out of the state.[10]

2. CREMATION, INTERMENT AND FUNERAL SERVICES ACT, 2004.

In addition to the above Act and the lack of clarity that surrounded it, the legislature of British Columbia enacted another legislation which once again laid down the same provision. Cremation, Interment and Funeral Services Act of 2004 expressly prohibits any sale of service related to cryonics. Section 14[11] prescribes the ban and Section 62[12] lays down the penalty for the same.

Furthermore, penalties provided for in case of contravention of this statute are more stringent than the previous legislation.

Even after this provision was enacted, the officers in bureaucracy, actually in charge of running day to day procedural formalities maintained that the practice of selling cryonic life extension is illegal, but not the act of buying it from outside. So the citizens of British Columbia are free to enter into such contracts with organisations situated outside of the province but, within the province, no cryonics organisation can be set up business. It is to be noted here that language of the section is quite evasive as any reasonable person reading the legislation would understand that the practice of cryonic life extension is completely prohibited.

A valuable suggestion here would be that the legislature should either add an explanation to that effect or add another provision in the statute which clarifies this stand. Since a lot of funeral directors were taking the language of legislation at face value and rebuffing persons interested in cryonic life extension, a fresh campaign to review and amend the Act was launched in the year 2006. Unfortunately, so far cryonics enthusiasts have not had any luck in getting the legislature to shift their stand.

---

11. Section 14 of the Cremation, Interment and Funeral Services Act, 2004 states that,
Section 14: Prohibition on sales, and offers of sale, of arrangements relating to cryonics and irradiation: A person must not offer for sale, or sell, an arrangement for the preservation or storage of human remains that is based on
(a) cryonics,
(b) irradiation, or
(c) any other means of preservation or storage, by whatever name called,
and that is offered, or sold, on the expectation of the resuscitation of human remains at a future time.

12. Section 62 of the Cremation, Interment and Funeral Services Act, 2004 states that,
Section 62: Offence Penalties
(1) an individual who commits an offence under this act is liable to a fine of not more than $10 000 or to imprisonment for not more than 12 months or to both.
(2) a corporation that commits an offence under this act is liable, to a fine of not more than $100 000.
despite subsections (1) and (2), the court may increase a fine imposed under this section by an amount of up to 3 times the court's estimation of the amount of monetary benefit acquired or accrued as a result of the commission of the offence.

B. JUDICIAL RESPONSE

The amount of litigation that was seen in the United States is incomparable to litigation in any other country. This is mainly due to the fact that cryonics movement started and grew in the U.S. and most of cryonic organisations are situated within the United States of America. Canada comparatively has witnessed less need for judicial intervention as they are still struggling with legislative side of it.

There is a singular case which went to court and is still pending in courts. The details of the case are discussed as follows:

LIFESPAN SOCIETY OF BRITISH COLUMBIA

V.

HER MAJESTY THE QUEEN IN THE RIGHT OF THE PROVINCE OF BRITISH COLUMBIA[13]

Background: Canada's province of British Columbia had placed a blanket ban on selling or advertising any service related to cryonic life extension and there are several individuals within that jurisdiction who are interested in seeking cryonic preservation upon death.

Facts: Keegan Macintosh, a citizen of British Columbia signed a contract with the province's only cryonic organisation, Lifespan Society of British Columbia to preserve his body after death. However, owing to the The Cemetery and Funeral Services Act, 1990 and Cremation, Interment and Funeral Services Act, 2004, the sale of cryonics was banned and attracted penal provisions which included imprisonment as well as hefty fines. Nonetheless, Mr. Macintosh as well as members of Lifespan were very keen to go ahead with the agreement pursuant to which they signed a four-page contract. This contract was said to be one of a kind and possibly the first ever contract in British Columbia for such arrangement. Once the contract was signed the Lifespan Society moved the Supreme Court of British Columbia in a civil claim filed on July 14, 2015, with their client Keegan Macintosh as co-plaintiff challenging the constitutional validity of Section 14 of the Cremation, Interment and Funeral Services Act, 2004 (hereinafter CIFSA). The President of Society stated that they had to do so as they were left with no choice.[14]

---

13. Lifespan Society of British Columbia v. Her Majesty, The Queen in The Right of The Province Of British Columbia, November 27, 2014. Case No. 36041.
14. Carrie Wong, Anti-Cryonics Law Challenged by The Lifespan Society of British Columbia, The Lifespan Society of British Columbia, (Jan. 26, 2019, 10:06 AM), https://www.lifespanbc.ca/home/m/5632614/article/3385410. "Lifespan Society has tried in vain for years to get a good explanation from the government of British Columbia for how this archaic restriction came into existence and to get the government to repeal it….We are left with no choice but to commence this lawsuit."

Issues: The Plaintiffs chose to argue this from the constitutional perspective stating that provisions of Section 14, 61 and 62 infringed the following rights under Section 7 of Charter of Rights and Freedoms:

a. Right to Life: As the restrictive nature of CIFSA deprived a person to possibly extend his lifespan by denying him cryonic preservation.

b. Right to Liberty: As individuals who are interested in cryonics can not dispose off their bodies as per their choice.

c. Right to Security: As organisations or persons who are involved in sale of cryonics technology are threatened to be imprisoned.

The Plaintiffs sought the following declarations in the present case:

a. That pursuant to the Constitution Act, 1982, Section 52, the Cremation, Interment and Funeral Services Act of 2004, Section 14 was of no effect or force.

b. Alternatively, Section 14 does not prohibit selling or offering for sale of cryonic services or an arrangement for cryonics services.

Decision: The final decision in this is case is still pending as of this day (October 19, 2018) and the last date of hearing was June 2018. Hon'ble Justice Stephen Kelleher has dismissed the application for striking down Section 14, however he has still not ruled on the constitutional validity of the provision. He has highlighted the absurdity of the case in following words,

> "This case has bizarre aspects. These questions are academic. The court is being asked to act like a law firm to provide advice about possible future business activities ".[15]

The final outcome of the case is going to be very imperative in paving the path for future of cryonic life extension in Canada as now more people than ever are interested in it and they have to make arrangements with U.S. firms for preserving their bodies.[16] A better approach would be to address both the cryonicists' and public's concerns through community discussions, and then use inclusive regulation to achieve regulation on this untamed field. While an absolute denial may ease any social or moral feelings of dread, this will be brief if cryonics is proceeded in any

case, or if the quantity of individuals for cryonic life extension becomes bigger, in which case a noteworthy piece of the populace may have their rights superfluously confined.

3. INDIA

In the year 2016, when this research was started, there were very few cases or people in the country which indicated any interest towards cryonic life extension as a science. The only information about an Indian citizen interested in cryonic life extension came from the Cryonics Institute website which states that so far two Indians have enrolled themselves for the program but due to confidentiality agreements, their identities were not made available to the researcher. In the year 2008, Alcor in its quarterly magazine titled, Cryonics, published an article[17] about an Indian citizen named, Kumar Krishnamsetty, who was a qualified software engineer but later moved to film direction. While working in the United States, he came in close contact with some of the members of Alcor and was fascinated by what the science of cryonics had to offer. Additionally, cryonet has made public, an email dated July 8, 1999 written to Alcor by an Indian citizen named Gurvinder (no Last name stated), who proposed to set up a cryonics facility on the moon given the possibility that Earth may be destroyed in the coming centuries.[18] The email also states that this person was personally in touch with Robert Ettinger before his death and inquired about the possibility of brain suspension. The case of fourteen-year-old JS and the impending judgment by Justice Peter Jackson attracted a lot of attention worldwide. Justice Bhanwar Singh is a former judge of Allahabad High Court who co-authored an article with Dr. N.K. Bahl, a former district judge, Uttar Pradesh, on *India Legal* about the legal predicaments that the judiciary will face in the years to come regarding the practice of cryonic life extension in India.[19] The authors suggested that India should equip itself with a legislation before the storm of cryonic life extension hits us. The authors suggested two possible ways to handle the legal problems arising out of cryonic life extension,

"(i) Prohibition on the use or prospective use of cryogenic preservation. Legislation can be drawn to define the scope of any such prohibition, domestically and internationally.

(ii) A formal acceptance of cryogenic preservation in the country with concomitant regulation of the process and actors involved."[20]

19. Justice Bhanwar Singh, Dr. N.K. Bahl, Dead Yet Alive, India Legal Live, (Jan. 26, 2019, 11:08 AM),http://www.indialegallive.com/special-story/cryogenic-preservation-dead-yet-alive-43878.
20. *Id.*

Additionally, there has been some evidence which supports that the Indian Institute of Science, Bangalore has been engaged in research in the science of cryonic life extension and they have even set up a Centre for Cryogenic Technology where they study the physics of life at very low temperature. The Indian Cryonics Society is another organisation, which is a one man show run by Mr. Lovepreet Singh who is engaged in fundraising for the cause of cryonic life extension.

The year 2018, cryonics saw some development and it would not be wrong to state that the year 2018 introduced metamorphic revolution in the country.

A. CRYONICS RESEARCH INSTITUTE PRIVATE LIMITED, KOLKATA:

In April 2018, India witnessed the establishment of its first cryonic life extension organisation titled, Cryonics Research Institute Private Limited, based in a three-bedroom apartment in Kolkata.[21] The company formally registered itself with the Registrar of Companies on March 15, 2018. There are three directors of Cryonics Research Institute Private Limited, namely Parag Chatterjee,[22] Pijush Kanti Chatterjee[23] and Saibal Mazumdar[24] who are very enthusiastic about establishing a full fledged project in India which is estimated to cost around twelve to fifteen crore Indian rupees. They have expressed their intention to buy land in Gwalior or Agra for the same and are presently engaged in fund raising from various governmental and non-governmental organisation as well as private individuals. Mr. Parag Chatterjee stated that they will not be setting up a facility in Kolkata itself because they cannot predict the span of time for which a body may be under cryonic preservation and therefore they cannot establish a facility in a city like Kolkata which may be prone to being submerged under sea in the coming years. From the above statements it is clear that this company is quite serious about establishing a fully functional cryonic organisation. Also, the directors have been quoted saying that in order to resolve any legal issues that may arise, they have written to the central government through the Medical Council of India for which response is awaited as of April 2019.

22. Parag Chatterjee, 43, one of the three directors and the bra the brains behind the company, is an alumnus of Bengal Engineering College and head of the Department of Computer Science in Engineering at a well known tech-college near the city.
23. Parag Chatterjee's father is a retired government employee.
24. Siabal Majumdar is a schoolteacher in Amtala, South 24 Parganas, Kolkata.

B. INDIA FUTURE SOCIETY:

India Future Society (hereinafter IFS) has been one of the most vocal voices in spreading awareness about cryonics in India. IFS, is a non-profit organisation which campaigns to increase knowledge about the incipient forthcoming technologies for masses and use of technology to enlarge human capacities. Avinash K. Singh is the founder and president of the India Future Society and has played a key role in spreading awareness about cryonics in India. IFS in their mission state that their main focus is on emergent technologies and functional perspectives that can be derived out of it for the benefit of entire human race. They want to attract like minded people who can channel the debate on a number of issues under research namely, mind uploading, simulated/ virtual reality, genetics, nanotechnology, radical life extension and Artificial General Intelligence (hereinafter AGI) that would contribute to the prosperity of our species. IFS had also tried to collaborate with KrioRus but unfortunately nothing could materialise. IFS is also responsible for the establishment of the Transhumanist Association of India (hereinafter TAI) which is a closed group existing on social media[25] with a total of two hundred and forty two members as of February 2019. Transhumanists encourage the use of innovation and hereditary qualities to enlarge human abilities and life expectancies. The TAI also augment an educated and profoundly tolerant discussion on the outcomes of these future progressions, and also other rising innovations.

RIGHT TO BODILY AUTONOMY AND THE CASE OF PRESERVATION OF BODY OF DECEASED GODMAN ASHUTOSH MAHARAJ

In Indian context, the rights of dead bodies find an implied protection under the Constitution of India, under the word and expression 'person' in Article 21, which is interpreted to include a dead person in a limited sense. In the case of ***Mujeeb Bhai v. State of U.P. & Ors.,*** the Allahabad High Court observed that,

The law has not so far defined a person to include a dead person. It, however, has some rights, which cannot be detached from it, even if the body is denuded of the life, which together forms a human being. ….We thus find that the word and expression 'person' in Art.21, would include a dead person in a limited sense and that his rights to his life which includes his right to live with human dignity, to have an extended meaning to treat his dead body with respect, which he would have deserved, had he been alive subject to his tradition, culture and the religion, which he

25. (Jan. 26, 2019, 10.:06 AM) https://www.facebook.com/groups/tranhumanistindia.

professed.

Ramji Singh Mujeeb Bhai v. State of U.P. & Ors., Civil Misc. Writ Petition No.38985 of 2004.

The only case which comes close to cryonic preservation for life extension in India is the infamous case of Ashutosh Maharaj and the preservation of his body by his followers with the hope of his revival. Mahesh Kumar Jha, known as Ashutosh Maharaj, headed a religious sect called Divya Jyoti Jagriti Sansthan (hereinafter DJJS) in Nurmahal town of Jalandhar district who was pronounced clinically dead at Apollo Hospital Ludhiana on January 28, 2014. However, his followers declared that he was not dead but merely in 'samadhi' and will return to life when he wishes. Therefore, they preserved his body in an ice chamber. What followed was a highly publicised legal battle the events of which were no less than a movie plot.

In ***Dalip Kumar Jha & Another v. State Of Punjab & Others***[26] it was held that the right to life of an individual, which includes his right to live with human dignity, shall have an extended meaning, which will include the right to treat a dead body with respect, which a person would have deserved, had he been alive, subject to his tradition, culture and the religion, which he professed.[27] The timeline of events that lead to the first ever judgment being delivered on the issue of cryonic preservation are described as follows:

---

26. Dalip Kumar Jha & Another v. State of Punjab & Others, Civil Misc. Writ Petition. No. 7345 of 2014 & C.R.M. M-9195 of 2014.
27. *Id.*

Date	Detail of Events
January 2014	The godman popularly known as Ashutosh Maharaj was declared dead after he suffered from a fatal heart attack. However, his devotees refuse to accept this fact and declare that their guru is not dead but has merely gone into samadhi and will eventually emerge from it one day and hence they preserve his body in sub zero temperatures similar to that of Himalayan conditions suitable for meditation.
December 2014	1. A person by the name of Pooran Singh files a writ of habeas corpus seeking the release of the godman's body. However, when this writ was rejected by the court he petitioned the court for a post-mortem examination of the corpse. 2. A person named as Dilip Kumar Jha, who claimed to be the son of Ashutosh, also appealed to court, demanding that the body be brought to his home town in Bihar for cremation according to local rituals. The Hon'ble Punjab and Haryana High Court ordered that the last rites for Ashutosh be performed in fifteen days.
February 2015	The above mentioned ruling was later suspended.
July 2017	The Hon'ble Punjab and Haryana High Court granted permission to the followers to preserve his body in a freezer, although it was unclear whether the court had agreed with the sect's argument that its founder was still alive.

As of December 2018, the body of the godman is still being preserved at the premises of the 'dera' and disciples still affirm their belief in his return.

It must be pointed out here that the disciples have merely frozen his body in an ice chamber and

no modern methods of cryonic preservation have been applied to the body. The understanding of the researcher from the medical context is that, since the body was preserved without infusing a cryoprotectant, it is likely that ice crystal formation would have damaged most of the cells in his body.

However, in the tussle between faith and science, things are not always black and white, so one never knows, may be the godman returns to life in the future, true to the faith of his followers.

4. CONCLUSION

Legal problems can never be solved in isolation as law and society are very intimately connected and entangled with one another. Laws cannot be made without weighing its possible consequences on society or the people they intend to govern. It is true that very few legislatures across the world have responded to the problem of cryonic preservation. But the question that needs to be asked before delving into law making is whether our society has progressed to a stage where it is ready for cryonic preservation as an alternative to death. Would it be fair to give some people a second chance at life at the cost of resources of future generations which are not even born yet. Conversely, would it be fair to deny cryonic enthusiasts their chance at second life. Will a blanket ban on cryonic life extension, like the one in Canada give rise to litigation related to curtailment of right to seek medical treatment and right to bodily autonomy? All these questions need to be addressed and fast as the trend of cryonic preservation is catching up in several countries across the globe and if eventually the right to cryonic preservation is granted, it would lead to serious violation of rights of the people who will miss out on it due to lack of regulation. Jurisdictions across the world at least need to make one thing clear; whether they are for or against cryonic preservation, which would practically solve half their problems

RESTITUTION OF CONJUGAL RIGHTS: CRITICAL APPRAISAL

- Ms Jasleen Chahal* & Ms Sunidhi Singh**

INTRODUCTION

As the common belief goes, marital bonds are pure. It is a sacrosanct union of two souls; a union which continues for forth-coming seven lives. This is the traditional perception of marriage in a common household. We have traveled far from the old days when people looked down at marital breakdowns. Rather, people would not come out only to put up their grievances for the sake of their family's reputation. But gone are the days when marriage got associated to and used decided a person's status in society. Today, marriages do come to an end and relationships do die. Staying away from a person with whom you cannot live is only logical.

Restitution of conjugal rights means bringing together two spouses who have parted. Its etymological meaning is to restore matrimonial relationships. Is this practical, owing to the modern state of affairs? Forcing someone to live with a person whom he/she does not want to live with is not right. It is an infringement of our fundamental rights to freedom, liberty and equality.

Restitution of conjugal rights is a foreign concept adopted by India. British brought it to India with them. It was being used by them in ecclesiastical courts.[1] They had jurisdiction to decide over family and religious matters. British left but the concept of restitution of conjugal rights stayed. Before colonization, there was no such concept in India.

Restitution of conjugal rights has been contained in Section 9 of the Hindu Marriage Act, 1955 for Hindus, Section 22 of the Special Marriage Act, 1954 for couples married under the Special Marriage Act, Section 32 and 33 of the Indian Divorce Act, 1869 for the Indian Christians, Section 36 of Parsi Marriage and Divorce Act, 1936 for the Indian Parsis and in the general law for Muslims. The provisions of the essentials of conjugal rights are the same in all the above statutes. In this paper, we will be discussing restitution of conjugal rights concerning Section 9 of the Hindu Marriage Act, 1955.

---

* Assistant Professor of Law, Army Institute of Law.
** BA LLB III year Student, Army Institute of Law, Mohali.
1. HarvinderKaur v. Harmander Singh, AIR 1984 Dell 66.

UNDERSTANDING THE CONCEPT

To begin with, it is of utmost importance that we understand the concept of Restitution of Conjugal Rights first.

Restitution of Conjugal rights means the restoration of marital rights. It is available only for valid marriages. Matrimonial rights are those rights people get after marriage. These marital rights can be of the following broad types:

Right to cohabitation: To cohabit means to live together. After getting married to each other, two people automatically gain the right of living with each other in consortium.

Right to live with dignity and liberty with each other's family: It comes as a part and parcel of a marriage that both the spouses have to live with each other, respect each other's family members and be compassionate towards them.

Right to consortium: Consortium means companionship. It a common belief that in a marital relationship, the felling of oneness is a must. Both the spouses are expected to support each other in all the ups and downs of life.

Restitution of conjugal rights is a remedy provided against desertion. Whenever the aggrieved party applies for this remedy, the court passes an order, when totally satisfied that the plaintiff has been deserted by the spouse, asking the deserting party to resume cohabitation and lead a normal married life. If the deserting spouse refuses to obey the orders of the court, this act amounts constructive desertion and if it continues for the period of one year, this becomes a ground for divorce. When the marriage is voidab initio, this remedy cannot be invoked.

When one of the spouses abandons the other without reasonable cause, the aggrieved party has a legal right to file a petition at the District Court or the Family Court of the appropriate jurisdiction. In this manner, the deserted spouse may actually compel the other person to fulfill his/her conjugal obligations.

Whenever one of the spouses has without any reasonable cause deserted the other spouse and no cohabitation takes place, then, in that case the aggrieved party can approach the court to order the other party start co habitation. It is important that no other remedy should be available with the petitioner and the court is satisfied with the truth of the statements. Essential elements for the filing of a restitution suit are contained in Section 9 of the Hindu Marriage Act 1955.

Following are the essentials for restitution of conjugal rights :[2]

1. Withdrawal from society: For withdrawal to take place, it is important that one of the spouses leaves the other in order to end all marital relations, rights, duties and obligations with them. When the husband deserted his wife and thereafter was totally unresponsive towards her. It was held sufficient to show his withdrawal of society from his wife and therefore, wife's petition for restitution of conjugal rights was allowed.[3]
2. Without any reasonable cause: For this essential to be fulfilled, it is necessary that the desertion should have taken place with no substantial reason supporting it. A reasonable excuse can be an act, omission or conduct on the part of the petitioner which makes it a practical impossibility to live with the person, a sufficiently weighty and grave matrimonial misconduct, cruelty, both physical and mental, failure to perform marital obligations, insanity of the other spouse, remarriage of either of the spouse, ill-treatment by in laws etc.
3. With no other legal remedy available: This essential means that this remedy can be availed against the other party only when the other remedies being like judicial separation and divorce are not available.
4. Court satisfied with the truth of the filed petition: A case can only move forward if the statement in the filed petition if found to be true by the court of law. If the petition is not maintainable, the suit cannot move forward.

While filing the case for restitution of conjugal rights, the petitioner has the capacity to ask for maintenance too. This provision comes in handy when the petitioner does not earn and has no means of livelihood but the deserting spouse does.

Burden of proof is always on the partner who withdrew from the society of the petitioner. But, at first, the petitioner has to prove the truth of his statement. The burden of proof shifts from the petitioner to the respondent during the course of the suit. In the beginning, it stays with the petitioner and then it moves on to the respondent.

The deserting party has to prove the following that there was some reasonable cause behind the party leaving the spouse completely, there was no fault on the deserting party's behalf and

2. Paluck Sharma, Restitution of Conjugal Right: A Comparative Study Among Indian Personal Laws, Indian National Bar Association (September 25, 2019 4:00 pm), https://www.indianbarassociation.org/restitution-of-conjugal-right-a-comparative-study-among-indian-personal-laws/.
3. SushilaBai v. Prem, AIR 1986 MP 225.

circumstances had become such cohabitation and resumption of a marital relationship was next to impossible.

This is the basic concept of restitution of conjugal rights. But even after all this; the court has the authority to only order in favor of cohabitation. There are no harsh penalties as such as to the proper implementation of the order. Under Order 21 Rule 32 of CPC 1908, when a person fails to comply with the decree of restitution of conjugal rights, the court can attach his/her property and sell, it under rule 32(3). This penalty also gets ruled out when the parties own no properties as a vast majority of the population is poor. This defies the basic understanding of justice that justice should not only be done but should also be seen to be done. In this case, it cannot even be seen to be done.

There is one positive thing about restitution. Gender discrimination can be observed throughout the statutes of personal laws but the provisions relating to restitution of conjugal rights were meant to be gender neutral. But that fact alone cannot save it as it is against many provision of the Indian Constitution which is the regarded as the grundnorm and is the source of all authority and laws in India.

This concept was brought in India before the commencement of the Constitution, but afterwards it must have been repealed like it has been in major economies of the world owing to its illogical standing. This can also be confirmed from the fact the long debates were held before restitution of conjugal rights could be ratified in the Parliament.

Honorable High Court has held that the concept of restitution of conjugal rights "is a relic of ancient times when slavery and quasi slavery were seen as natural. This is particularly so after the Indian Constitution came in to force, which guarantees personal liberties and equality of status to men and women alike and further confers powers on the state to make special provisions for their protection and safeguard.."[4]

One cannot be forced to spend his/her whole life with a person with whom he/she cannot live even for a moment.

4. ShakilaBanu v. Gulam Mustafa, AIR 1971 Bom 166.

CONSTITUTIONAL VALIDITY OF RESTITUTION OF CONJUGAL RIGHTS

The constitutional validity of restitution of conjugal rights has been tested mainly in the following three landmark cases:

T. Sareetha v. VenkataSubbaiha[5]

In this case, the petitioner (husband) filed a case of restitution of conjugal rights against the respondent (wife), who was a celebrity. In response the wife gave the contention that right to privacy was guaranteed to her under Article 21 of the Constitution, which confers on a woman, a right to free choice as to whether where, when and how her body is to be used for the procreation of children and by whom her body parts are to be sensed. She contended that this freedom of choice is part of her right to privacy and is guaranteed by Article 21 as part of 'liberty'. By recognizing section 9 of Hindu Marriage Act, the State is violating the fundamental right of liberty. Further. It was also contended to be in violation of Article 14 as it was against the true concept of equality.

Justice P.A. Chaudhary struck down section 9 holding that it violates the right to privacy of wife by compelling her to have sexual intercourse against her will, which will be the ultimate consequence of cohabitation and consortium. He held that since section 9 was in violation of the fundamental rights to live with dignity and liberty, it is ultra vires the Constitution.It was held that decree of restitution of conjugal rights constitutes the grossest form of violation of an individual's right to privacy.State coercion of this nature can neither prolong nor preserve the voluntary union of husband and wife in matrimony.State coercion can neither soften the ruffled feelings nor clear the misunderstanding between the parties.Further, section 9 didn't promote any legitimate public purpose based on any concept of social good, and thus being arbitrary it is in violation of Article 14.

The husband's petition was accordingly dismissed.

HarvinderKaur v. Harmander Singh[6]

In this case the petitioner (husband) had filed a petition for restitution of conjugal rights against his wife (respondent). The Andhra Pradesh Court Judgment was cited in this case to support the invalidity of section 9.

Justice AvadhBihari dissented from the Andhra Pradesh judgment, stating that sexual

5. T. Sareetha v. V. Subbaiha, AIR 1983 AP356.
6. HarvinderKaur v. Harmander Singh, AIR 1984 Del 66.

intercource is only one of the elements of marriage. The Courts do not and cannot enforce sexual intercource. The remedy of restitution of conjugal rights aims at cohabitation and consortium and seeks to uphold the institution of marriage. It enforced not by imprisonment or detention of defaulter, but only by financial sanctions under civil procedure code. Further, it is only a step forward towards divorce. If the decree is not obeyed for one year, the remedy of divorce can be sought to under section 13 (1-A). So, to declare section 9 unconstitutional without giving any regard to section 13 (1-A) would be taking a very narrow view of things.

Validity of section 9 was upheld and the decree of restitution was granted in favor of the husband as the wife could not prove any reasonable cause behind her withdrawal from society. It was observed that the object of restitution decree is to bring about cohabitation between estranged parties so that they can live together in amity in their matrimonial home. Sexual intercourse is one of the elements to constitute consortium and is not the 'summumbonum' (highest good). It is a fallacy to hold that restitution of conjugal rights constitutes the starkest form of governmental invasion of marital privacy. The court further observed that introduction of constitutional law in home is like a bull in a China shop. Restitution was the introduction of the bull in the matrimonial home who will not resist from violation.

Thus, the remedy was held to be intra vires constitution.

Saroj rani v. Sudarshanchadha[7]

In this case, the decree in favor of restitution of conjugal rights was passed by the court. After that, when the wife came to live with the husband she was turned out after 2 months and the husband then filed a case of divorce under section 13 (1-A) of the Hindu Marriage Act, 1955. The wife contended that husband should not be allowed to take advantage of his own wrong.

The court had to decide on two matters, whether the suit of the husband was maintainable and should be allowed? The other question was regarding the Constitutional validity Section 9 of HMA, 1955. The Court discussed that mere non-compliance with a decree of restitution of conjugal rights does not constitute a wrong under section 23. Mere disinclination to agree to an offer of reunion is not serious enough a misconduct to justify denial of the relief to which husband or wife is otherwise entitled [8].It was also approved by the court that a consent decree in all cases could not be said to be collusive decree and where the parties had agreed to pass off a

7. Saroj rani v. Sudarshanchadha AIR 1984 SC 1562.
8. Dharmender Kumar v. Usha Kumar AIR 1977 SC 2298.

decree after attempts had been made to settle the matter[9] . Constitutional validity of restitution of conjugal rights was also discussed. The court held that after considering Section 23 of the HMA, 1955, the suit of the husband was maintainable and upheld section 9 of the Hindu Marriage Act to be constitutional.

CRITICALANALYSIS

1. **Purpose of Restitution of Conjugal Rights does not get fulfilled and there is insincerity of the petitioner in maximum cases:**[10] Even though it has been time and again quoted by the courts that restitution of conjugal rights is a remedy to save the institution of marriage, in reality it has only been used as a legal way of obtaining the decree of divorce. The very fact that the non-compliance of the decree of restitution for one year makes the deserted spouse eligible for filing a decree for divorce makes it a vulnerable rule which has been misused a lot of times. This rule was made in order to promote reconciliation between the spouses but most of such marriages end up in a breakdown. After all, relationships cannot be forced upon anyone.

   In the HarvinderKaur case, Justice Rohtagi has agreed to the fact that the remedy of restitution of conjugal right 'may be outmoded or out of tunes with the time. The restitution decree in the scheme of the Act is apreparation for divorce if the parties do not come together.'[11]

2. It defeats the purpose of fundamental rights guaranteed under the Indian Constitution: Article 21 of the Indian Constitution guarantees the right to life and personal liberty to all the citizens of India. Restitution of conjugal rights as a concept tries to indirectly curtail the rights of both the parties to a marriage by forcing to cohabit in consortium even when their relationship is such that they can't live together. As a consequence, they are forced to live in together, without giving them the option of exercising their right to privacy and right to choose which are vital for a developing society.

   Right to privacy has been held to be an integral part of right to life and personal liberty.[12] It was held that privacy is an essential part of dignity and *'dignity cannot exist without*

12. K.S. Puttaswamy v. Union of India, AIR 2017 SC 4161.

privacy. Both reside within the inalienable values of life, liberty and freedom which the constitution has recognized. Privacy is the ultimate expression of the sanctity of the individual. It is a constitutional value which straddles across the spectrum of fundamental rights and protects for the individual a zone of choice and self-determination.'[13] Forcing an individual to lead a life which is not of their choice defeats the purpose Article 21. When a decree for restitution of conjugal rights is enforced, the spouses are expected to live together in consortium[14] i.e. companionship which is a personal choice of an individual and cannot be forced upon them. It curtails our fundamental right to freedom under article 19 which gives us the freedom of expression and association.

3. **Right to make personal choices gets infringed and a disadvantageous situation for both men and women can be observed:** The word life in Article 21 denotes a life of dignity and not just animal life. It has been established by the Supreme Court of India that right to make choices regarding or privacy is an intrinsic part of the right to live a life of dignity. Whenever court orders in favor of restitution of conjugal rights, the right to self-determination indirectly gets curtailed as neither the husband nor the wife now has the choice of living a life of their choice.[15]

Let's face it that we live in a patriarchal society which has forever been functioning on the guiding principles of Manusmriti which has always looked down upon the weaker sections of the society and women. Women, of all, have had to face quite a lot and have been the victims of the worst of torture. Not stating that men have faced less of anything but women have always been portrayed and thought of as weak and fragile and have been abused to a greater extent. The continuance of this remedy is bound to lead to unwanted pregnancies, which is further an infringement of self-respect and self-fulfillment of women.

For their protection, it has been explicitly mentioned under Article 21 of the Indian Constitution that 'the woman's choice to make reproductive choices is also a dimension of "personal liberty"

13. K.S. Puttaswamy v. Union of India, AIR 2017 SC 4161.
14. Black's Law Dictionary, What is consortium?, Law Dictionary 2nd Ed. (September 26, 2019 3:24 pm) https://thelawdictionary.org/consortium/.
15. Paluck Sharma, Restitution of Conjugal Right: A Comparative Study Among Indian Personal Laws, Indian National Bar Association (September 25, 2019 4:00 pm), https://www.indianbarassociation.org/restitution-of-conjugal-right-a-comparative-study-among-indian-personal-laws/.

as understood under Article 21. It is important to recognize that reproductive choices can be exercised to procreate as well as to abstain from procreating. The crucial consideration is that a woman's right to privacy, dignity and bodily integrity should be respected. This means that there should be no restriction whatsoever on the exercise of reproduction choices such as a woman's right to refuse participation in sexual activity or alternatively the insistence on the use of contraceptive methods.' Agreed, that sexual intercourse is only an element of a marital relationship, but the fact that it is one of the most important elements cannot be denied because if keep the emotional bond at back-foot, the concept of marriage had initially emerged to give legality to the procreation of children who are a very important part of the evolution process, without whom the society cannot move forward and progress. The innocent men should also be allowed to use their right to choose and privacy to protect their dignity. Being men should not be used as a bias against our men. We live in the 21st century now and we know that women are not behind men in misusing legal provisions and gaining unnecessary sympathy. Take the example of the Dowry Act; no law has been more misused than this one in India for private gains.

Right to privacy is an integral part of life. This is a cherished constitutional value, and it is important that human beings be allowed domains of freedom that are free of public scrutiny unless they act in an unlawful manner. So if a spouse withdraws from the society of the other on being ill-treated, he/she should not be told to resume cohabitation despite their estranged relations [16]. They should be given the freedom of choice.

4. **Self-contradictory judgments:** In the Saroj Rani case, Justice SabyasachiMukherji referred to the case of T Sareetha and relying on the decision in HarvinderKaur, case held section 9 to be Constitutional. From Justice Rotagi's judgment, it can be clearly observed that he himself did not totally believe in the effectiveness of the concept of restitution of conjugal rights. Paragraph 78 of his judgment states that 'even the fervent and sincere hope of either of the spouses that there will be reconciliation cannot create a possibility of reconciliation where the other spouse is irreconcilable.

Whatever may be the cause of breakdown of marriage, if there is a withdrawal from matrimonial obligations with the intention of destroying the matrimonial consortium as well as physical separation, there is a clear sign that the marriage is at an end.[17]

On reading the judgments in HarvinderKaur and Saroj Rani case, it seems as if they have been

16. Ram Jethmalani v. Union of India, Writ Petition (C) No. 176 of 2009.
17. HarvinderKaur v. Harmander Singh, AIR 1984 Del 66.

given for the sake of giving since the statute mentioned the concept because in Para 85 and 87 of his judgment, Justice Rohtagi says that 'what has to be remembered is that it is not for the judges to rewrite the statute. It is for the legislature to amend and abrogate the law. As long as it does not change the law, we must learn to live with it.'[18]

5. **Constitution of India is the grundnorm and it has its full application in the private matters of an individual:** It was held in the Harvinder Kaur case that introduction of Constitutional law in home is like a bull in a china shop, but that is not the case. In India, all laws derive its powers from the Constitution and they become enforceable because of the existence of the Constitution. In Addition to that matters of our homes are deeply connected to our privacy and it has been held in the Puttaswamy judgment that 'the individual is the focal point of the Constitution because it is in the realization of individual rights that the collective well-being of the community is determined.

Privacy constitutes the foundation of all liberty because it is in privacy that the individual can decide how liberty is best exercised. Individual liberty and privacy are inextricably linked in a pattern woven out of a thread of diversity into the fabric of a plural culture. Privacy eminently qualifies as an inalienable natural right, intimately connected to two values whose protection is a matter of universal moral agreement: the innate dignity and autonomy of a man.'[19]

SUGGESTIONS:

In today's world, when literacy is growing fast it is impractical to think that any to people would want to consent to living together in cohabitation even after their relationship has worsened. Plus, most of the people now-a-days are not even dependent on each other for maintenance. They are either earning or have some inherited property to take them through the ups and downs of life.

In the poverty stricken sections of the society, restitution of conjugal rights is a far-fetched concept as they have more important problems to tackle first like hunger and thurst. Also, the large amount of money involved in the litigation process is not affordable by many and the awareness regarding State Legal Services Authorities is not yet widespread, let alone the

18. HarvinderKaur v. Harmander Singh, AIR 1984 Del 66.
19. K.S. Puttaswamy v. Union of India, AIR 2017 SC 4161.

awareness of the law.

Instead of forcing people to stay together against their wills, the following solutions can be sought to:

Out of Court Settlements:

People should be given an option of out of court settlements in the form of conciliation and mediation, where the atmosphere is less formal. For family matters it is necessary that things should be looked upon at with a sensitive mind.

Judges should be trained specially to deal with family matters. Even though there is already such provision but it has not been implemented properly. Family matters cannot be and should not be dealt with a firm approach. They constitute the basic unit of a society and a more practical approach should be made towards solving family disputes.

Repealing Old Laws and Formulating New Laws:

The provision of restitution of conjugal rights must be repealed from all the statutes as it is only worsening the marital ties instead of reconciling the fighting couples.

There is strong need for the formulation of pragmatic laws in India as the western influence on our society is growing by the hour which is making the people more prone to easier breakdown of marriages as marriage is a sacramental tie only in India.

Awareness Campaigns:

Awareness campaigning should be done once in a while by the administrative authorities to sensitize the people regarding the importance of marriage and issues revolving around it.

Government Intervention:

No matter how much we believe that no state intervention should happen in personal matters, there has to be some level of intervention because governments make laws and enforce legislations. Without their role, the society would become an uncontrollable crowd of unregulated people doing whatever they want to do.

CONCLUSION:

The concept of restitution of conjugal right is a foreign concept and made its way to India with the advent of the British administration when India was a colony under the crown rule. Somehow, even after the British left India, this concept managed to stay put. While the Hindu Marriage Act and its provisions were discussed before the enactment of the Act there were long

heated debates on whether the section should be included.

The funny thing here is that the countries which propounded the concept and took it further have now repealed all provisions relating to it calling restitution of conjugal rights to be an illogical and futile law. In today's world, when literacy is growing fast it is impractical to think that any to people would want to consent to living together in cohabitation even after their relationship has worsened. Plus, most of the people now-a-days are not even dependent on each other for maintenance. They are either earning or have some inherited property to take them through the ups and downs of life.

In the poverty stricken sections of the society, restitution of conjugal rights is a far-fetched concept as they have more important problems to tackle first like hunger and thirst. Also, the large amount of money involved in the litigation process is not affordable by many and the awareness regarding State Legal Services Authorities is not yet widespread, let alone the awareness of the law.

At the end, it can be concluded that the human society is still growing and so are the intricacies of their relations. Archaic laws must be repealed as soon as possible and new laws should be formulated which can handle all the new complexities with an open thought process and pragmatic view. If repealing is not the solution then at least, logical amendments should be done.

"If we desire respect for the law, we must first make the law respectable."

-Louis D. Brandeis

RIGHTS OF DIFFERENTLY-ABLED PERSON TO ACCESS HIGHER EDUCATION AND EMPLOYMENT: AN APPRAISAL

-Dr Sanjeeve Gowda G S*

1. INTRODUCTION

Every mother do have a confidence that her child would born, grow and lead a hale and healthy life and never fall prey to any kind of physiological or psychological disorder either at birth or thereafter. Many a time almighty do not belie her buoyancy. To our bad luck some children may bear with innate physiological or psychological 'barriers' either on birth or subsequently owing to accident, surgery, medicinal side effect etc., which would cripple him from, effectively and efficiently, participating in societal activities. This eternal disability is undermining their level of confidence as they are being looked down upon. Today it is, most fiery issue, drawing the attention of everyone with a hope of finding resolute means to resolve. An attempt is made herein to unravel gamut of it.

Today, there are millions of people living with one or multiple disabilities. In India, the population with disabilities is around 26.8 million, constituting 2.21% of India's total population, if one goes by the 2011 population census data.[1] There has been a marginal increase in the differently-abled population in India, with the figure rising from 21.9 million in 2001 to 26.8 million in 10 years. In an era where 'inclusive development' is being emphasised as the right path towards sustainable development, focussed initiatives for the welfare of disabled persons are essential.Despite constituting such a significant proportion of the total population, persons with disabilities live a very challenging life. Their 'disability' is often seen as their 'inability' by many and people in general have preconceived notions about their capabilities. There have been many cases where employers have denied a job to a candidate with a disability, citing the usual 'not found suitable'. The main problem lies in the psyche of a significant mass which considers persons with disabilities a liability, and this leads to discrimination and harassment against them and their isolation from the mainstream.

Persons with disabilities[2] face several forms of discrimination and have reduced access to

---

1. Disabled Persons in India: A statistical profile 2016. A report by Ministry of Statistics and Programme Implementation, Govt. of India(Sept. 10, 2019, 10.00 AM), http://mospi.nic.in/sites/default/files/publication_reports/Disabled_persons_in_India_2016.pdf
2. Disabled is now addressed as Divyanginstead of Viklang.The Department of Empowerment of Persons with Disabilities will now be known as 'Divyangjan' SashaktikaranVibhag in Hindi, dropping the word 'viklangjan' from its previous nomenclature.

education, employment and other socio-economic opportunities. Dearth of infrastructural facilities to have access for the physically challenged-ramps, railings and accessible wash rooms – is just one of the reasons which prevent them from pursuing their studies. Trained staff and alternative teaching aides are seldom provided. This would impede differently-abled persons to compete with their peers.

The Constitutional mandate casts obligation on the State machineries to unveil legal measures for the protection and promotion of the interest of Differently-Abled Persons. The Convention on the Rights of Persons with Disabilities, 2006, aims to - empower persons with disabilities, -

a) respect for inherent dignity, individual autonomy including the freedom to make one's own choices, and independence of persons;
b) non-discrimination;
c) full and effective participation and inclusion in society;
d) respect for difference and acceptance of persons with disabilities as part of human diversity and humanity;
e) equality of opportunity;
f) accessibility;
g) equality between men and women;
h) respect for the evolving capacities of children with disabilities and respect for the right of children with disabilities to preserve their identities.

In furtherance of this Convention, being a party, the State promulgated, on 27th December, 2016, the Rights of Persons with Disabilities Act, 2016,[3] to facilitate the Differently-Abled Persons to lead 'barrierfree life[4]. United Nations General Assembly adopted it on the 13th day of December, 2006 and India ratified the said Convention on the 1st day of October, 2007.

2. CONCEPT OF DISABILITY

Disability is complex, dynamic, multidimensional, and contested. A disability is a result of the interaction between a person with a health condition and a particular environmental context. Individuals with similar health conditions may not be similarly disabled or share the same perception of their disability, depending on their environmental adaptations. Disabled people are the people with physical or mental incapacities, Disability generally varies in severity.

3. *Supra* note 1.
4. Right of Person with Disability Act 2016 §2(c).

Disability has been defined based on an evolving and dynamic concept, the nature of disabilities have been increased from existing 7 to 21[5] and the central government will have the power to add more types of disabilities.[6]

3. INTERNATIONAL INITIATIVES

A clamour for the rights of Differently Abled Persons hold its sway in, 1961, international arena with the adoption of Declaration on Social Progress and Development was adopted by the General Assembly of United Nations. A movement was initiated, in 1970s, to consider it as a human right issue. The concern for Differently Abled Persons made the UN General Assembly to proclaim the year '1981' as International Year of Disabled Persons in 1976. Thereafter, the UN declared 1983-1992 as Decade of Disabled Persons. The UN Convention on the Rights of Persons with Disabilities (UNCRPD), 2006 was a big leap towards viewing persons as "subjects with rights" and not "objects of charity".[7] Further, the 2030 Agenda for Sustainable Development pledges to "leave no one behind" urging that persons with disabilities must be both "beneficiaries and agents of change". However, the World Bank states that attitudinal, institutional, and infrastructural barriers remain with the 15% of the world's population who experiences some form of disability and that they "on average, as a group, are more likely to experience adverse socio-economic outcomes than persons without disabilities".

4. SCENARIO IN INDIA

The India society has been moving from charity to welfare and culminating in right based approach for persons with disabilities. Hitherto, thrust has been given to medical model of disability. Now the paradigm shift is made towards social model emphasizing the need to find attitudinal change bring Differently-Abled Persons to the mainstream and to provide them equal opportunities in order to have a perspective change viewing people with disabilities as subjects and not as objects.

---

5. Blindness; Low-vision; Leprosy Cured persons; Hearing Impairment (deaf and hard of hearing); Locomotor Disability; Dwarfism; Intellectual Disability; Mental Illness; Autism Spectrum Disorder; Cerebral Palsy; Muscular Dystrophy; Chronic Neurological conditions; Specific Learning Disabilities; Multiple Sclerosis; Speech and Language disability; Thalassemia; Haemophilia; Sickle Cell disease; Multiple Disabilities including deaf blindness; Acid Attack Victim; Parkinson's disease.
6. The definition of disability as provided by UN Convention on Rights of Persons with Disabilities (UNCRPD) states that "Persons with disabilities include those who have longterm physical, mental, intellectual or sensory impairments which in interaction with various barriers may hinder their fulland effective participation in society on an equal basis with others." But sometimes, disabled persons prove themselves to be "differently abled" by their intellectuality and positive outlook towards the life.
7. India is a signatory to the UNCRPD and ratified it in 2007.

On realizing the significance of Constitutional mandate[8] the Government accorded statutory status to the rights of differently-abled persons has and assured them with equal opportunities in education, health care, employment etc.[9] accordingly, several policies and schemes are unveiled in tune with the policies, of the Government, aiming at inclusive society.[10] National Policy for Persons with Disabilities, 2006, has termed Differently-Abled Persons as valuable human resource of the country and seeks to create an environment that provides equal opportunities, protection of their rights and full participation in society.

In this regard, it is felt that the Rights of Persons with Disabilities Act, 2016, would offer everlasting remedy to protect and to promote the rights of Differently-Abled Persons. This Act is offshoot of Constitutional mandate vis-a-vis United Nations Convention on the Rights of Persons with Disabilities, 2008 (UNCRPD). This has paved the way to attain legitimate expectations of Differently-Abled Persons.

4.1. THE RIGHT OF THE PERSON WITH DISABILITY ACT, 2016

The Rights of Persons with Disabilities Act, 2016, was promulgated on 27th December, 2016 by replacing the Persons with Disabilities (Equal Opportunity Protection of Rights and Full Participation) Act, 1995,[11] and in furtherance of United Nations Convention on the Rights of Persons with Disabilities,2006, and for matters connected therewith or incidental thereto. The object of the Act is to empower person with disability by providing equality in treatment and opportunities, accessibility to general services, non-discriminating behaviour and respect for inherent dignity, individual autonomy including the freedom to make one's own choices, and independence of persons. The Act made a move from 'concessional model' to a 'social one' by adopting 'inclusive policy'. Inclusion of acid-attack victims and people with learning disabilities, Parkinson's disease, blood disorders, speech and language disabilities amongst others. In the process of accomplishing the avowed objectives of the Act provisions are made for reasonable accommodation, accessibility, inclusive education, employment security, research and surveys, proactive measures to contain the issue of disability, protection against violence, legal guardianship, rights to appeal, etc.

---

8. INDIA CONST. art. 14, 16, 21,38, 41, 42, 43, 46, 47, 48, 249 & 253.
9. The Mental Health Act, 1987, the Rehabilitation Council of India Act, 1992, the National Trust for Welfare of Persons with Autism, Cerebral Palsy, Mental Retardation and Multiple Disabilities act, 1999, Protection of Human Rights Act, 1993, Employees Compensation Act, 1923, the Employees State Insurance Act, 1948, and Public Liability Insurance Act, 1991, The Juvenile Justice (Care and Protection) Act, 2015.
10. Accessible Indian campaign or Sugamya Bharat Abhiyan, Deendayal Disabled Rehabilitation Scheme.
11. *Supra* note 1.

The Act was commended as it has increased the number of identified disabilities from seven to 21 and ordained to reserve not less than 4% in employment. Individual with at least 40 % of disability is entitled to get the benefits of Government schemes. It speaks about inclusive education and penalties for offences against Persons with Disabilities (PwDs). The Act also made provisions for the constitution of Special Courts (for speedy trial), national fund and a state fund for persons with disabilities.

PROHIBITION OF DISCRIMINATION

The Persons with Disabilities (Equal Opportunity Protection of Rights and Full Participation) Act, 1995, did not expressly prohibit discriminatory treatment to the persons with Disabilities. Whereas, the Act of 2016, aims to annihilate all forms of discrimination which may include any distinction, exclusion, restriction on the basis of disability with a purpose or effect of impairing or nullifying the recognition, enjoyment or exercise on an equal basis with others of all human rights and fundamental freedoms in the political, economic, social, cultural, civil or any other field and denial of reasonable accommodation[12]. However, the Act strangely makes the clauses on non-discrimination in employment mandatory only in government establishments. Persons with disability[13] have a right to get higher education and not making adequate provisions to facilitate their proper education would amount to "discrimination",

RIGHT TO EDUCATION

In the matter of higher education, the Act provides a strong set of measures to ensure that disabled students have access to Colleges and Universities

RESERVATION IN HIGHER EDUCATION

Education is an all pervasive right of an individual. It cannot be denied on the ground of disabilities. To ensure the rights of Persons with Disabilities to pursue Higher Education it is ordained that - Section 32 -

(1) All Government institutions of higher education and other higher education institutions receiving aid from the Government shall reserve not less than five per cent seats for persons with benchmark disabilities.[14]

(2) The persons with benchmark disabilities shall be given an upper age relaxation of five

12. Right of Person with Disability Act, 2016., § 2(h)
13. Person with Disability: means any person with long term physical, mental, intellectual or sensory impairments which on interacting with barriers hinders effective and equal growth in the society.
14. Persons with benchmark disabilities as those with at least 40% of any of the above-specified disabilities.

years for admission in institutions of higher education."

Albeit,at the outset afore mentioned provisions appears to be attractive in empowering Persons with Disabilities, in fact would give room for self-centric people to take deviation from the enjoined path and deny entitlement owing to lose knitted provisions e.g. recurring clauses like *'within the limit of their economic capacity and development', 'without imposing a disproportionate or undue burden', 'the extension of time depending on their state of preparedness and other related parameters', 'cannot be discriminated on the ground of disability.* Consequently, the goal of empowerment may well remain elusive and undermine the interest of Persons with Disabilities.

All the concerns of the people with disabilities haven't been addressed by the 2016 Act in entirety. Cushioning offered to private establishments is glaring. At first look, the private sector seems to be under the surveillance of the Act. However, it envelops a few areas leaving the rest at their disposition like - barrier-free access at private hospitals and among service-providers, or providing incentives in the case of employment, in which at least 5% of the workforce is made up of or reserved for persons with disabilities and an equal opportunity policy. Today, major players are private sector than public sector. Hence, this vacuum needs to be properly addressed. Trust, Disability Advisory Board would sit in the driving seat in this behalf.

All India Survey on Higher Education conducted by Ministry for Human Resource Development (MHRD) reveals that enrolment of Persons with Disability (PwDs) students in higher education has been increased. Thanks to the Government and University Grant Commission (UGC) has launched many schemes[15] and facilities to enhance the enrolment of the Differently-Abled Students in Higher Education. However, these schemes have not been fully implemented in all the higher educational institutions. The efficiency of the State machineries in providing equal educational opportunities to disabled/differently-able persons in higher education institutions still remains obscure. Thus, it warrants immediate attention to ease-out educational/pedagogical as well as infrastructural barriers that force exclusion of the differently-able persons in higher education.

---

15. Upgradation of existing Polytechnics to integrate the Persons with Disabilities (PwD); Higher Education for Persons with Special Needs (HEPSN); Teacher preparation in Special Education Scheme (TEPSE); Financial Assistance to Visually Challenges Teachers (FAVCT); UGC also provide relaxations to PwDs in the National EligibilityTest; Saksham Scholarship Scheme; Reservation in admissions; Facilitating PwD students under Centrally Sponsored Scheme for Integrating PwDs in the mainstream of Technical and Vocational Education;Expert Committee constituted to identify the courses according to the categories of disabilities

Even institutions of higher education shall come forward on its own to satiate the needs of Differently-Abled Persons. But seldom respond to the call.

RIGHT TO EMPLOYMENT

Everyone is aspiring to, be self-reliant, have an employment to possess independent source of income. No one is bereft of it, whether he is rich or poor, haves or have nots, privileged or under-privileged, abled or disabled. Onus to generate employment is on the shoulder of the Government when an individual fails. Of course one has to imbibe employable traits. Employment is a key factor in the process of empowerment and inclusion of people with disabilities. It is an alarming reality that the disabled people are out of job not because their disability but for social and practical barrier that prevent them from joining the workforce. Resultantly, many disabled people live in poverty and their conditions are deplorable. In corollary, they find hard to make a useful contribution to their own wellbeing and the community.

According to the employment projection given in the Eleventh Plan, in the Chapter 'Employment Perspective and Labour Policy', "58 million job opportunities will be created in the Eleventh Plan period leading to a reduction in the unemployment rate to below 5%. Over the longer period up to 2016–17, spanning the Eleventh and Twelfth Plan periods, the additional employment opportunities created are estimated at 116 million. The unemployment rate at the end of the Twelfth Plan period is projected to fall to a little over 1%."

There is sea difference in, India, the ratio of employment between the people with and without disabilities. This variance cannot be scaled down unless the employment issues of people with disabilities, who constitute about 5-6% of the population, is properly addressed. Government and the Private Sector, in unison, shall go for proactive initiative to ensure berth for Persons with Disability in their establishments.

The appropriate Government owes a duty to constitute an expert committee to identify posts in the establishments suiting to persons with benchmark disabilities[16] to facilitate the Authorities concerned to reserve such posts to the Persons with Disabilities and the same shall be subjected

16. Person with Benchmark Disability:Persons with "benchmark disabilities" are defined as those certified to have at least 40 per cent of the disabilities in Blindness; Low-vision; Leprosy Cured persons; Hearing Impairment (deaf and hard of hearing); Locomotor Disability; Dwarfism; Intellectual Disability; Mental Illness; Autism Spectrum Disorder; Cerebral Palsy; Muscular Dystrophy; Chronic Neurological conditions; Specific Learning Disabilities; Multiple Sclerosis; Speech and Language disability; Thalassemia; Hemophilia; Sickle Cell disease; Multiple Disabilities including deaf blindness; Acid Attack Victim; Parkinson's disease.

to periodic review at an interval not exceeding three years, Section 33. The posts to be reserved shall be not less than *four per cent* of the total number of vacancies in the cadre strength in each group of posts, detailed hereunder, meant to be filled with persons with benchmark disabilities[17]

Sl.No	Particulars	Percent of reservation
(a)	Blindness and low vision	One percent
(b)	Deaf and hard of hearing	One percent
(c)	Locomotor disability including cerebral palsy, leprosy cured, dwarfism, acid attack victims and muscular dystrophy	One percent
(d)	Autism, intellectual disability, specific learning disability and mental illness	One percent
(e)	Multiple disabilities from amongst persons under clauses (a) to (d) including deaf-blindness in the posts identified for each disabilities	

The posts reserved may be carried forward to the succeeding recruitment year and it may be inter-changed too subject to the approval of the appropriate Government. However, an employer may appoint any other person without disability when no person with disability is available for the post in that year.The employers in private sector do get incentives if they employ, minimum of five per cent of their work force, persons with benchmark disability[18].

Private establishments too have statutory obligationstowards employees who are having benchmark disability i.e. setting out of job roles suitable for persons with benchmark disability if it is having 20 or more employees, recruitment process for such roles, trainings provided for these roles, preference in transfer and posting, special leave, assistive devices and measures taken to ensure barrier-free accessibility, appointment of liaison officer, maintenance of records detailing the number of PwDs employed, names, gender and addresses their date of joining, name, gender, addresses, nature of disabilities, nature of work assigned, facilities offered e.g. elevator, ramps, wheel chair, walkways etc. as per standard prescribed, registration of establishment with the Authorities designated and display of particulars/ policy on its official

17. Right of Person with Disability Act, 2016§34.
18. Right of Person with Disability Act, 2016§35.

website if feasible otherwise displaying the same at a conspicuous place of its premises. Failure to comply these statutory obligations enables the Authorities to impose fine, on the erring employers, up to INR 10,000 in the first instance and up to INR 500,000 for subsequent non-compliances.

5. CHALLENGES BEFORE DIFFERENTLY ABLED PERSONS

Differently abled persons, in India, are facing certain challenges owing to their disabilities which are catalogued as under -

a. Inaccessibility- Most of the government buildings or private offices and other infrastructure are inaccessible for disabling population.

b. Low Representation-The Disabled person has a very low representative in fields like government jobs, politics, economy etc.

c. Barriers to Health Care- The lack of appropriate services for people with disabilities is a significant barrier to health care. Affordability of health service and transportation are two main reasons why people with disabilities do not receive needed health care.

d. Attitudinal Barriers- Attitudinal barriers which help in stigmatisation and discrimination deny people with disabilities their dignity and potential and are one of the greatest obstacles to achieving equality of opportunity and social integration.

e. Inaccessible communication systems prevent access to information and knowledge and opportunities to participate. Lack of services or problems with service delivery also restricts the participation of people with disabilities.

f. Institutional Barriers- Institutional barriers include many laws, policies, strategies or practices that discriminate against people with disabilities. Discrimination may not be intended but systems can indirectly exclude people with disabilities by not taking their needs into account.

g. Inadequate Data & Statistics- The lack of rigorous and comparable Data and statics, combined with a lack of evidence on a programme that works, lack of planning, often delay in understanding and actions on disability inclusion.

h. Poor Implementation- Poor implementing policies and plans can prevent the inclusion of people with disabilities.

i. Major barriers identified in higher education and employment

• Environmental Barriers: That is assistive tools/computer software, institutions hesitate

to take up the financial support from UGC and other agencies for helping differently able, personal and interpersonal problems,

- Educational/Pedagogical Barriers: Disabled students face a lot of issues right from the application stage to admission to attending classes to examination and placement. Rigid curriculum frame and rigid methods of teaching.[19]
- Psycho-Social Barriers: lack of support from teachers or the lack of involvement in learning activities.
- Lack of Assistive Devices: Assistive devices are great enablers. They open up opportunities, improve efficiency and enable people with disabilities to work up to their potential. However, majority of disabled people in India have no access to assistive devices.

Physical access is the primary problem in almost all these places. Faculty apathy and under-preparedness to deal with the needs of the students with disabilities including peer insensitivity is a spiteful reality.

Thus, Differently-abled people face many physical and systemic barriers but cognitive and attitudinal barriers are the major concerns. Our society at large, teachers and employers do not expect much from differently-abled people, which hinders them to prove their excellence and worth as any ordinary citizen would normally have. These attitudes keep people away from appreciating and experiencing the full potential of differently-abled. The most pervasive negative attitude is focusing on a person's disability rather than on an individual's abilities.

We need to understand that differently-abled people do not need patronization and the drive to relegate them to low-skill jobs, setting different job standards; one should not expect a worker

19. No Sign language Interpreters in Colleges-"Adarsh College in Chamarajpet, Bangalore has over 10 deaf students and initially provided one interpreter for all of these - who ran from class to class - and then they added another but it did not increase the quality or quantity substantially. Now both have left, as a result of feeling frustrated about not being able to provide good services and the low pay, and so the students have no interpreters. What was especially egregious is that the parents were required to chip in Rs. 2000/- towards the interpreters' pay; Disabled girl refused hostel room in Pune law college-A 17 year-old disabled girl has bagged a seat in a prestigious law college, one among the very few disabled who go in for higher studies in India, but her hopes of becoming a lawyer may be dashed as the college has denied her 'suitable hostel accommodation'; Pooja Sharma, who is crippled below the waist, gained admission in Symbiosis Law College, Pune, one of the top colleges in India. She had scored 71 percent in the Class 12 board examinations. 'As a physically challenged girl, don't I have the right to study like a normal student? Can't I dream big? Can't I ever go out of my city to pursue higher education?' 'I want to become a reputed lawyer and serve my country,' Sharma told IANS. 'The college has backtracked from its promise of giving me a suitable accommodation – a single room in the hostel,' said Sharma, who is a resident of Meerut. She is now in Delhi to take the help of a disabled rights organisation.

with a disability to simply be content by appreciating the opportunity he or she gets to work instead of demanding equal pay, benefits, opportunity and access to workplace amenities.

Access to education and employment will remain a dream for the differently-abled population, even in our strongholds of higher learning, unless we work to break these cognitive and attitudinal barriers.

6. MEANS TO ACCORD HIGHER REPRESENTATION OF PERSONS WITH DISABILITY

Differently abled students have offered certain suggestion to scale down barriers in the institutions they are as under:

1. Mandate physically accessible premises at all public buildings[20]– to accommodate wheel chair users, visual and hearing impaired to use these facilities without impediments. Laws exist even today. What is required is courageous and empathetic implementation.

2. Barriers to accessing the curriculum need to be addressed.Design and implement new inclusive assessment processes. Most of current ones are archaic and obsolete any way.

3. Sensitization of faculty and students on inclusive growth – if they can provide a supportive environment, the students with disabilities will have the strength and courage to face the challenges with more confidence. NGOs can help in this.

4. Monitoring and evaluation of statistics and services for disabled -students also should be streamlined as it will end up purposeful discrimination to the disabled and pave clear pathways for further development.

5. Resource units or help desksare to be provided in the institutions as well as in the hostels

---

20. In Disabled Rights Group v. Union of India, (2018)2 S.C.C. 397(India) The Disability Law Initiative has submitted similar arguments as outlined above. The case was prompted by the inability of a wheel chair bound girl to pursue her education in a law college because of inaccessible campus and classroom facilities.
The petition described the difficulties faced by the girl who was admitted to the law college of a reputed university. Requests for reasonable adjustments, such as modifications in the hostel bathroom and the availability of an assistant when required, were not agreed to by the university, whose position was that for such facilities, the girl would need to obtain accommodation off-campus. As a result, the girl and her family had to give up their aspirations and return to their hometown in frustration. The girl later had to pursue her higher education in a college located close to her town so that her family could provide her the necessary support.
When the matter had earlier come before the Court, DLI argued that the 1995 Disability Act mandated making campuses accessible. Also, the University Grants Commission had schemes to fund colleges for this purpose. The Court summoned the Bar Council of India, the apex body for legal education, which agreed that the concerned university and college had been remiss in fulfilling their obligations to the disabled students as required under the 1995 Act. Thereafter, BCI issued mandatory regulations to all law colleges to make their campuses and courses accessible. DLI further argued that the matter did not stop there, as the matter raised the larger issue of accessible higher education all over India. Following the submissions made by DLI, the scope of the petition has been expanded to include all law colleges and institutes of higher education in India.

for providing help and assistance to the students with disability. Self-help groups with involvement of NSS units can be an easy solution.

6. In many cases, in the case of students from poor social settings, the scholarship amounts are given for the family. Instead, a part of the scholarship of the assistance may be provided in the form of assistive devices which will inevitably help them to become more 'abled'.

7. Current provision for disabled students places too much emphasis on providing them with individual support to overcome institutional barriers, rather than on the more fundamental institutional change. In addition to this, more systematic sustainable changes to make the institutions disabled friendly should be made.

8. Employment in Government & Public Sector:Identification of Jobs- At present, the identification of appropriate jobs for disabled people is done in an ad hoc and arbitrary manner. Only 10% of the jobs are identified for disabled people. Eleventh Five Year Plan states that "There is a need to have this task performed by a professional group with the involvement of Disabled Peoples' Organisations". Government should constitute a task force immediately for revising the job list. The task force should analyse jobs in each department and not occupations or positions. There could be committees department wise, with representation of disabled people, particularly disabled employees of that Department to carry out the task. The concept of 'Identification of jobs' itself has been questioned by many people including the World Bank, which has recommended that it should be dropped. There is a need for developing a system / process which is non-discriminatory and inclusive. Campaign to fill Backlog Vacancies Only 0.44% of all the posts in the Government & public sector companies have been filled by disabled people. Eleventh Plan States, "The backlog of vacancies for persons with disability continues to be large. This backlog should be cleared in a time-bound manner and in a campaign mode." Government should immediately launch a campaign and set clear targets to fill the backlog vacancies for people with disability.

7. CONCLUSION

The Rights of Persons with Disabilities Act, 2016, is, a de-novo effort of the legislature, aiming to ameliorate the conditions of persons with disability and find avenues to enhance prospect of their employability. In furtherance of this object, the Act has underlined the significance of educating persons with disability with higher learning and training. In corollary, the Act enjoins that higher educational institutions shall reserve at least - 5% seats to differently abled students

and 4% of the total number of vacancies in the cadre strength in each group of posts in Government and private establishments. The public/ private institutions vis-à-vis employers owes obligation to offer facilities to Persons with Disability to have easy access. They need to submit compliance report to the Authorities designated. Any failure attracts fine up to INR 10,000 in the first instance and up to INR 500,000 for subsequent non-compliances.

The Legislature, indeed, anticipate untiring efforts from the citizenry to aid Persons with Disabilities to facilitate them to accept the challenges on par with the abled persons. Failing which intent of the Legislature remains only on paper.

ROLE OF ELECTION COMMISSION OF INDIA IN CURBING ELECTORAL OFFENCES UNDER THE REPRESENTATION OF PEOPLE ACT, 1951

-Dr Ajay Ranga & Mr Purushotam

"The Ballot is Stronger than the Bullet"

-Abraham Lincoln[1]

INTRODUCTION

The purity and freedom of elections can be ensured only if the supervisory arrangements for ensuring efficient and impartial functioning of the electoral machinery are done by an independent authority. For that purpose the Constitution[2] provides for an independent Election Commission.[3] The Election Commission (herein after EC) heads the entire election machinery in the country and wields plenary powers for taking appropriate steps to ensure free and fair elections. The Commission enjoys wide executive and quasi-judicial powers; it is described as a reservoir of power.[4] The EC plays a very important role in conducting free and fair elections. There are provisions provided both under Indian Penal Code, 1860 and Representation of People Act of 1951 for maintaining the purity and sanctity of the electoral process. Besides, various corrupt practices to maintain the purity of the election process and conduct of free and fair elections, certain undesirable activities have also been declared as punishable electoral offences. Some of such electoral offences had been introduced into the Indian Penal Code, 1860 in the year 1920, on before the passing of the Representation of the People Act, 1951 and the rest are traceable in the Act itself. Section 8[5] of the Act provides for disqualifications for membership of Parliament and State Legislative Assemblies on conviction for certain offences.

In addition to the corrupt practices at elections, various acts of commission and omission have been termed as 'electoral offences'. While the commission of a corrupt practice, if found proved, might cost the elected candidate his election, the commission of an electoral offence would expose a person who commits it for penal consequences. Further a person committing electoral

5. The Representation of the People Act, Section 8 (1951).

offence is liable to punishment irrespective of the fact whether such act was done by him with the consent of the candidate or not. Electoral offences are contained in Part-VII, Chapter-III in sections 125 to 136 of the Representation of People Act of 1951. The electoral offences under sections 125, 133 and 135-A, are also corrupt practices under section 123 of the Act. The following acts are regarded as electoral offences:[6]

PROMOTING ENMITY BETWEEN CLASSES IN CONNECTION WITH ELECTION:

Article 19of the Indian Constitution provides the freedom of speech and expression to the citizen of India as a Fundamental Right. But this right is provided subject to some restrictions. Apart from section 125 of the RP Act of 1951, section 153A of IPC penalizes 'promoting of enmity between different groups on the grounds of religion, race, place of birth, residence, language, etc, and doing acts prejudicial to maintenance of harmony.' Supreme Court of India in the case of ***Brij Bhushan v. State of Delhi***[7] held that "Public order was allied to the public safety and considered equivalent to security of the State.' The object of the provisions is to establish peace and harmony in the society. If any person is found guilty of the offence under section 125 of the Act, then the provisions provides the punishment for imprisonment which may extent to 3 years, or with fine or with both.

Filling False Affidavit:

Section 125A[8] provides for punishment for giving false information as directed under section 33A of the Act by furnishing an affidavit. This sub-section was inserted in 2002.In the case of ***Union of India v. Association for Democratic Reforms***,[9] the Supreme Court directed the Election Commission to call for an affidavit by issuing necessary order in exercise of its power under Article 324 from each candidate seeking election to Parliament or a State Legislature as a necessary part of his nomination paper, furnishing therein, certain information in relation to his/her candidature.[10]

After the issuance of directions by the Election Commission the President of India promulgated an Ordinance named Representation of the People (Amendment) Ordinance, 2002[11] by which sections 33A, 33B and 125A were inserted in the Act. Later the ordinance was replaced by

6. The Representation of the People Act, Section 125 to 136,(1951).
7. AIR 1951 SC 129.
8. The Representation of People Act, Section 125, (1951).
9. 5 SCC 294 (2002).
10. *Ibid.*
11. The Representation of the People (Amendment) Act, 2002.

Representation of the People (Third Amendment) Act, 2002.Section 33 of the Act provides for the presentation of nomination paper and requirements for a valid nomination and the newly inserted section 33A clarifies that along with the information required to furnish with the nomination paper the candidate has to furnish information about his past criminal record if any.[12] It is important that the section is an important one and rightly placed under the Act since the information furnished through an affidavit by a candidate about his past deeds is displayed for public at large and a voter may make up his mind about to whom he or she should vote for. The EC verifies the contents of the affidavit filed by the candidate and takes strict action in case of the information is not correct given.[13]

PROHIBITION REGARDING PUBLIC MEETINGS DURING THE SPECIFIED PERIOD:

The election propaganda in the form of public meetings in the polling area is to end 48 hours before the hour fixed for the conclusion of the poll for any election. It is not merely the convening or holding of a public meeting during this prohibited period which is barred; but attending to any such meeting is equally an offence. Any person who contravenes the above provisions of law is liable to be punished with fine which may extent to rupees two hundred and fifty. Section 126[14] of the Act prohibits the holding or attending any public meeting during period of forty-eight hours ending with hours fixed for conclusion of poll. If any candidate or the political party violates the provisions of section 126 of the Act, the EC can recommend registration of First Information Report against such candidate.[15]

BAN ON EXIT POLL:

Section 126A[16]prohibits regarding publication by means of print or electronic media any result of any exit poll without the permission of EC. The sub-section was inserted in the Act by 2009 Amendment as the electronic media has gained so much power to influence the voters when the election is in process. On 14 May 2019 the Election Commission of India (herein after ECI)issued notice to three media houses for displaying poll surveys predicting results of Lok Sabha elections.[17]

16. The Representation of People Act,Section 126-A, (1951).
17. The Indian Express 3, 15 May 2019.

If the offence of section 126B[18] of the Act is committed by a company the person who is the in charge of and was responsible for the conduct of the business of the company and also the company shall be liable to proceed against and be punished accordingly. Predications by astrologers, tarot readers and political analysts on results cannot be published or broadcast by the media, bypassing the Representation of the People Act provision that bars exit polls during the conduct of elections, according to an EC advisory issued on 30/03/2017. The Election Commission observed that "despite its notification prohibiting exit polls from February 4 till March 9 evening, some T.V. channels aired programmes projecting the number of seats likely to be won by political parties in the recently concluded Assembly elections."[19]

DISTURBANCE AT ELECTION MEETINGS:

Disturbance at an election meeting is prohibited and it is an electoral offence to do so. Any person who at a public meeting of a political character acts, or incites others to act, in a disorderly manner for the purpose of preventing the transition of business for which a meeting has been called commits an electoral offence and is liable for punishment with fine which may extent to rupees two hundred and fifty. Public meetings which are held between the date of issue of notification calling the election and the date on which such election ends only are covered by the above prohibition.[20] The disturbance caused at election meetings during the other periods would be governed by the general law. If the Chairman of an election meeting reports to any police officer about any person acting in disorderly manner at the meeting, such police officer may require that person to declare to him immediately his name and address and if that person refuses or fails to declare his name and address or if the police officer reasonably suspects him of giving a false name or address the police officer may arrest such person without warrant.[21]

Section 127[22] of the Act cautions regarding disturbing at an election meeting. It prohibits any person who incites other and prevent the transaction of the business of the meeting shall be punished for imprisonment of six months and a fine of two thousand rupees or both. It is pertinent to note that the punishment was enhanced to the present limits by amending the section in the year 1996 and by the same amending Act sub-section 1-A was inserted to make the offence a cognizable one. If any candidate or his supporters violates the provisions of the section the EC

18. The Representation of People Act, Section 126-B, (1951).

21. *Ibid.*
22. The Representation of People Act, Section 127, (1951).

recommends the registration of FIR against such candidate or persons involved in such activities.

RESTRICTION ON PRINTING OF PAMPHLETS OR POSTERS:

The election law imposes certain restriction on the printing and publication of posters, pamphlets, etc. by any person. These restrictions have been imposed with a view to establishing the identity of publisher and printer of such documents so that if any such document contains any matter or material which is illegal or objectionable like appeal on ground of religion, race, caste, community or language or character assassination of any opponent etc, necessary punitive or preventive action nay be taken against the persons concerned. Therefore every election pamphlet or poster must bear on its format the name and address of its publisher as well as its printer. Election pamphlet or poster would cover any printed pamphlet, hand-bill or other documents distributed for the purpose of promoting or prejudicing the election of a candidate or group of candidates or any placard or poster having references to an election. However, any hand bill, placard merely announcing the date and time, place and other particulars of an election meeting or written instructions to election agents or workers does not come within the purview of the above restrictions. Any process of multiplying copies of a document, other than copying it by hand would be treated as printing.

The printer of any such document must obtain from the publisher a declaration (in duplicate) as to his identity signed by him and attested by two person to whom the publisher is personally known. Further the printer is also required to send, within a reasonable time of the printing of such documents, one copy of the declaration of the publisher together with one copy of the printed document to the Chief Election Officer where such printing is done in the capital of a State, or to the DM of the District in which it is printed in any other case. Any contravention of the aforesaid provisions is punishable with imprisonment for a term which may extent to six months, or with fine which may extent to rupees two thousands or with both.[23]

Section 127-A[24] of the Act lays down special requirements for printing any pamphlets or posters in connection with election and provides for punishment with imprisonment for six months or fine up to two thousand rupees or both for violation of the requirements. In the case of ***Amolak Chand v. Bhagwandas***,[25] it was held that the requirements for section 127-A, are as follows:

---

23. *Ibid.*
24. *Id,* Section 127-A.
25. AIR 1977 SC 813.

(1) It must exhibit the names and addresses of the printer and the publisher,

(2) The publisher must deliver to printer a declaration in duplicate about his identity attested by two person to whom he is known personally,

(3) The printer must send within a reasonable time after printing, one copy of the declaration with a copy of the document printed, to the Chief Electoral Officer if the printing is done in the capital of the State and in any other case to the District Magistrate.[26]

The provisions of the section are attracted to any process of duplication. However, if, the document does not seek to promote or prejudice the prospects of election of a candidate, the provisions of the section are not applicable. One of the most common methods of carrying out the election propaganda is printing and distributing pamphlets, posters, handbills and leaflets among other forms of printed material. It is also common at election times to malign the image of the prospective rival candidates by using offending printed election propaganda materials. Therefore it becomes the bounden duty of law to protect the interest of all the parties chasing victory in elections, Section 127-A has been inserted by the Legislature to serve the same goal. In case of violation of the provisions of the section strict action is taken by the EC against such printer, publisher, political party or a candidate.

MAINTENANCE OF SECRECY OF VOTING:

Section 128[27] of the Act provides that any officer appointed by the Election Commission while performing his duty has to maintain the secrecy of the voting except in the case of election of seat of council of state. Any violation of the provision of the section shall attract the punishment of imprisonment three months as well as fine or both. The Supreme Court in the case of ***Sashi Bhushan v. Balraj Madhok*** [28] observed that:

A general inspection should not be permitted until there is satisfactory proof in support of those allegations. If the learned judge comes to the conclusion that the matter should be further probed into, he may take evidence on the points in issue including evidence of expert witnesses. Thereafter, it is open to him to direct or not to direct a general inspection of the ballot papers. But in doing so he will take care of maintain the secrecy of the ballot. In an election petition, the right

26. *Ibid.*
27. The Representation of People Act, Section 128, (1951).
28. AIR 1972 SC 1251.

of inspection of ballot paper is limited to rejected ballot papers and notes thereof. Unless a strong prima facie case is made out, the order for inspection cannot be granted.[29]

There is section 94[30] in the Act, which also provides for the secrecy of voting. The section says that no witness or other person shall be required to state for whom he has voted at an election. If fact section 94 covers a separate field. It gives the voter a free choice to disclose or not to disclose for whom he voted. There is no provision which would expose him to any penalty if a voter voluntarily chooses to disclose how he voted or for whom he voted. For maintenance of secrecy at the polling station the EC makes the necessary arrangements, so that the right to vote can be exercised in a free and fair manner.[31]

PROHIBITION ON OFFICERS TO ACT FOR CANDIDATE OR INFLUENCE THE VOTERS:

Section 129 castes a duty on officers etc, at elections not to act for candidate or to influence voting. Every officer or the member of police who is performing the election duty must be impartial and any type of favour to any candidate during the process of election is prohibited under the Act. In case of violation of the above stated provision the person shall attract the punishment of imprisonment of six months or fine or with both.[32]

In the case of ***P.R. Belagali v. B.D. Jatti*** [33]Supreme Court observed that:

> "Election must be freely and fairly conducted and the police and Government officers should not create even an impression that they are interfering for the benefit of one or the other candidate."[34]

PROHIBITS REGARDING CANVASSING IN OR NEAR POLLING STATIONS:

Section 130[35]of the Act provides the provisions regarding the prohibition on canvassing within hundred meters of the polling station on the date of poll. The Act further provides the punishment of fine of two hundred and fifty rupees in case of violation of the above stated provision.

In the case of ***G. Panneerselvam v. Narayanaswami***[36] it was held that;

"Wearing of a badge with the inscription of the name of the candidate would amount to

29. *Ibid*.
30. The Representation of People Act, Section 94, (1951).
31. Raghbir Singh Gill v. S. Gurcharan Singh Tohra, AIR 1980 SC 1362.

34. *Ibid.*
35. The Representation of People Act, Section130, (1951).
36. 46 ELR 36.

canvassing of votes for the particular candidate and the wearing of any such badge within the polling station or within a radius of 100 meters thereof would be violation of section 130 of the Representation of People Act, 1951."[37]

DISORDERLY CONDUCT OR MISCONDUCT AT OR NEAR THE POLLING STATION:

On the date of poll, using or operating, within or at the entrance of the polling station or at any public or private place in the neighborhood of a polling station, any apparatus for amplifying or reproducing the human voice, such as a megaphone or a loudspeaker is prohibited. So that no annoyance is caused to any person visiting the polling station for the poll or that not interference is made with the work of the officers and other persons on duty at the polling station. Likewise shouting or otherwise acting in disorderly manner within or at the entrance of a polling station or in any public or private place in the neighborhood of a polling station is also prohibited. Any person who contravenes or willfully aids or abets the contravention of the above provisions of law is punishable with imprisonment extending to three months or with fine or with both. Section 131 provides the penalty for such conduct.[38]

Section 132[39] of the Act provides for the penalty for doing misconduct at the polling station. For the smooth conduct of poll at the polling station, it is necessary that no person should be allowed to misconduct himself at the polling station during the hours fixed for the poll and every person should be required to obey the lawful directions of the Presiding Officer. The Presiding Officer is empowered to see that if any person misconducts himself or fails to obey the lawful directions of the presiding officer such person may be removed from the polling station by the presiding officer or by any police officer on duty or by any person authorized in this behalf by the presiding officer.[40] The above power is, however, to be exercised by the Presiding Officer with restraint and should not be so exercised as to prevent any elector who is otherwise entitles to vote at the polling station from having an opportunity of voting at that polling station. The EC deploys police and forces to avoid any disturbance at the polling station.[41]

40. *Id,* Section 132(1).
41. *Id,* Section 132(2).

FAILURE TO OBSERVE PROCEDURE FOR VOTING:

Section 132-A[42] of Act provides for penalty for failure to observe procedure for voting. This section was inserted by Act 4 of 1986. It says that if any elector, to whom a ballot paper has been issued, refuses to observe the procedure prescribed for voting the ballot paper issued to him shall be liable for cancellation. Here the clarification about the uses of voting machines is needed because such machines are being used at large scale in place of ballot papers. Explanation to section 61-A of the Act (Voting machines at elections) which says that for the purposes of section 61-A, "voting machines" means any machine or apparatus whether operated electronically or otherwise for giving or recording of votes and any reference to a ballot box or ballot paper in this Act, or the rules made there under shall, save as otherwise provided be construed as inculcating a reference to such voting machine wherever such voting machine is used at any election.

BREACH OF OFFICIAL DUTY IN CONNECTION WITH ELECTION:

If any person belonging to any of the specified categories is, without reasonable cause, guilty of any act of omission or commission in breach of his official duty in connection with elections, he commits Section 134[43] of the Act made the breach of official duty in connection with elections a punishable offence.[44]

PENALTY FOR GOVERNMENT SERVANT IN CASES HE/SHE ACTS AS AN ELECTION AGENT:

Section 134-A[45] makes it an offence for Government servants to act as election agents, polling agents or counting agents. It says that if any person in the service of the Government acts as an election agent or a polling agent5 or counting agent of a candidate at an election, he shall be punishable with imprisonment for a term which may extend to three months, or with fine, or with both.[46]

PROHIBITION OF GOING ARMED TO OR NEAR A POLLING STATION:

Section 134-B[47] prohibits going armed to or near a polling station other than polling officer or the returning officer on the polling day. It provides 2 years imprisonment or fine or both in case of

---

42. Penalty for failure to observe procedure for voting – If any elector to whom a ballot paper has been issued, refused to observe the procedure prescribed for voting the ballot paper issued to him shall be liable for cancellation.
43. The Representation of People Act,Section134, (1951).
44. Ali Rehan, The Working of the Election Commission 44 (Jnanda Prakhashan, 2001).
45. The Representation of People Act,Section134-A,(1951).
46. *Ibid.*
47. *Id,* Section134-B.

violation or the provisions of the present section. The present section was inserted by Act of 1996 to carry out the electoral reforms proposed by the Election Commission and others considered by the committee on electoral reforms in 1990. Before every general election or bye election, the EC issues the directions and ensures that the licensed arms deposit in the concerned police station or with the arms dealer.

PENALTY FOR EMPLOYER IN CASE OF NOT PROVIDING PAID HOLIDAY ON THE DAY OF POLL:

Section 135-B[48] provides for penalty if any employer fails in granting paid holiday to employees on the day of poll. This section was inserted by Act 21 of 1996. It provides that the day of poll shall be granted as holiday and no deduction of his wages will be allowed. If employer contravenes the provisions than he shall be punished with a fine of five hundred rupees.

BAN ON SELLING OR DISTURBING OF LIQUOR ON THE DAY OF POLL:

Selling, giving or distributing liquor on polling day is a punishable offence under section 135-C[49] of the Act. This provision was inserted by Act 21 of 1996. This provides six months punishment of fine of two thousand rupees or both in case of violation of the provisions of the section. The step of curbing of evils produced out of consuming liquor has been taken in right direction since it is said that "the liquor is the root of many problem". Illiterate population does not think about the importance of voting and its process. The provision may prove helpful to some extent in controlling the activities of the persons having vested interests who disturbs the smooth sailing of the election process.Recently the police on the directions of the EC acting on a tip-off, the Dirba police raided a godown on the Kohriya road and seized illegal liquor worth Rs 9.5 lakh.[50]

CONCLUSION AND SUGGESTIONS:

Indian democracy is the world's largest democracy and it can continue its present status only through free and fair elections. The ECI from time to time issues necessary directions to the poll penal, political parties and candidates. The EC comes into action from the issuance of the election notification and remains in the picture till the announcement of the final results of the

48. *Id,* Section 135-B.
49. *Id,* Section 135-C.
50. The Tribune, January 30, 2017, p. 3.

elections. But sometimes allegations are made that EC is doing its work according to the directions of the government of the day and sometimes it is true. The biggest reason for the allegation of the discrimination is the appointment of the Chief Election Commissioner (herein after CEC) by the government of the day. The provisions relating to the appointment of the CEC need to be reconsidered. It should not be done only by the government of the day. It was the CEC (as he then was) T.N. Seshan, who showed the teeth to the political parties. Before him the EC was called 'toothless tiger'. The Election Commission of India is doing its duties according to the provisions provided for but sometimes it faces the difficulties. The implementation of Model Code of Conduct is the biggest challenge before the EC. The law relating to the use of religion for political benefit is not clear. Even the Supreme Court of India has also interpreted the law from time to time but till now there is no clarity. For example if the third person uses the religion for the political benefit of any candidate and without consent of such candidate, then against whom action can be taken. There should be clear and well defined law on the electoral offences. There is need of enhancement of punishment for the commission of electoral offences because in some cases the provided punishment is only a fine of five hundred rupees only. The punishment should be such which create a deterrent effect on the general public and the political parties.

ROLE OF EXPERT OPINION UNDER INDIAN CRIMINAL JUSTICE SYSTEM

-Ms Panchampreet Kaur*

INTRODUCTION

Crime has existed since the origin of civilization. Where there are conflicting minds there are bound to be conflicts and crimes. Crime occurs due to various factors including greed , poverty , need , enmity etc.

The existence of law is based upon the existence of crime. With the advancement in science and technology, the rate of crime has increased and its execution has changed in many ways. Technology is being used in committing crime as well as in solving the mystery behind it. The police and the courts can no longer rely on old methods of solving the crime. This is where forensic science and expert opinion come in. The development in forensic science has immensely helped the courts in detection of crime.

The word "Forensic" has been derived from the Latin word *Forensis,* meaning "belonging to the market place or forum." In ancient Rome the "forum" or public meeting place was where legal cases were tried & pleaded. The term Forensic Science means the application of the scientific methods for the purposes of law & justice.[1] Scientific method refers to the body of techniques for investigating phenomena, acquiring new knowledge, or correcting & integrating previous knowledge. It is based on gathering observable, empirical & measurable evidence subject to specific principles of reasoning.[2] The term includes the application of all sciences such as physics, chemistry, & biology. It may appear odd at the first instance, but almost all branches of science can help in the administration of justice.[3]

'Forensic science' can be defined more broadly as that 'scientific discipline which is directed to the recognition, identification, individualization, and evaluation of physical evidence by the application of the principles and methods of natural sciences for the purpose of administration of criminal justice'[4]. The term includes the application of all sciences such as physics, chemistry,

& biology. It may appear odd at the first instance, but almost all branches of science can help in the administration of justice.[5] Forensic reports play a major role in both criminal and civil justice system. The important thing that is to be taken care of is that all important physical evidences must be procured in time, so that the experts can run tests on such physical evidences and furnish reports based on them.

HISTORICAL PERSPECTIVE

In India , the oldest evidence of use of science in law can be traced back to Kautilya's 'Arathshastra' where the investigation of murder was laid down.

The institution of forensic science in crime investigation in the contemporary sense can be traced in India in the middle of 20th century with the establishment of chemical examiner's laboratories created by Britishers at Madras , Calcutta , Agra and Bombay in the years 1849, 1853, 1864 and 1870 respectively. These laboratories worked upon general chemical analysis and toxicological work.

The operation of science & technology to the discovery & investigation of crime & administration of justice is not new to India.[6] Though not known to our ancestors in its present form, scientific methods in one way or the other seem to have been obeyed in the investigation of crime. Its particularised source is found in Kautilya's Arthashastra, which was written about 2300 years ago. Indians studied varied designs of the papillary lines, thousands of years ago. It is presumed that they knew about the continuity & individuality of fingerprints, which they used as signatures. Additionally , Chinese records have proved the use of fingerprints in an ancient kingdom of southern India. The Indians knew for long that the handprints, known as the 'Tarija', were matchless. The use of fingerprints as signatures by illiterate people in India, introduced centuries ago, was considered by some people as conventional only, till it was scientifically proved that identification from fingerprints was unerring [7].

MEANING AND CONCEPT OF AN EXPERT

An expert is a person who has a thorough command in a subject that can be relied upon. Opinion of an expert is considered valuable in various fields and it also holds significance in law. An

expert's opinion is admissible in many legal systems throughout the world. With time, the concept of expert opinion has evolved in Indian legal system. The need for an expert's opinion is no longer limited to the field of doctors or engineers, rather now the Courts seek expert opinion in every field.

In other words it can be inferred that an expert opinion is evidence given by experts i.e , the persons who has special skill and knowledge on a particular subject which does not come within the knowledge of the court.[8]

Lawson and Roger have made an attempt to define the term expert. Lawson[9] defines expert as a person who has a special knowledge and skill in the particular calling to which an enquiry relates. Roger gives special emphasis regarding the special knowledge as sciences, art and trade . Thus an expert is a person who dedicates his time and study to a special branch or learning and is especially skilled in those matters on which he is asked to state his opinion. So his evidence on such matters is admissible in the court of law to come into satisfactory conclusion.

The advancement in science and technology and the increase in the crime rate renders Courts helpless whenever a technical issue is in question. So, whenever such a technical issue arises that the Courts cannot contemplate on their own and is beyond their field of expertise and knowledge, opinion of a person who is an expert in that issue is sought.

The Indian Evidence Act, 1872 defines experts as, "When the court has to form an opinion upon a point of foreign law or of science or art, or as to identity of handwriting or finger impressions, the opinions upon that point of persons specially skilled in such foreign law, science or art, or in questions as to identity of handwriting or finger impressions are relevant facts. Such persons are called experts.[10]

APPLICATION OF FORENSIC SCIENCE IN LAW

The application of forensic science is required at various stages. The evidentiary value of forensic science is based on the following steps:

- Step-1 – Relevancy of Scientific Evidence

The first step covers the relevancy of scientific evidence. Evidence deduced with the help of scientific techniques must be relevant enough to be considered as evidence in the court of law.

8. From Wigmore statement.
9. Lawson , Evidence Rule 2 , Section 440.
10. The Indian Evidence Act, 1872 , S 45.

This is due to the fact that forensic science being new to the rules of evidence, may or may not be stringently in accordance with the provisions of the statutes. Thus, the first rule is to consider the relevancy of scientific evidence in the criminal justice court.

- Step-2 – Reliability of Scientific Evidence

The second step covers the reliability of the relevant scientific evidence. Various factors such as its authenticity, its use, its results are the base for the reliability of scientific evidence. Furthermore, it is based on the scientific technique. Certain tests and guidelines which are given by the courts and statutes helps in determining the reliability of scientific evidence.

- Step-3 – Admissibility of Scientific Evidence

The third step covers the admissibility of such relevant and reliable scientific evidence as provided by the law. What evidence has to be admitted is the discretion of a judge, what can be admissible or what cannot be is generally determined by long drawn tests and the provisions of the statutes.

- Step-4 – Credibility of Scientific Evidence

The fourth and the last step covers the credibility of the relevant, reliable and admissible evidence in the court of law. Basically the credibility of scientific evidence is laid down in the case laws where there are generally two types of evidences as scientific and conventional. It is the duty of the courts to take an equipoised view and seek that evidence whose credibility cannot be put to question.

RELEVANCE OF FORENSIC SCIENCE IN JUSTICE DELIVERY SYSTEM

The use of science in the field of law is called forensic science. It contains collection, preservation and analysis of physical as well as biological evidences. A Forensic Scientist is an expert in Biology (DNA expert),Chemistry (identification of explosives) and other fields of science . Various civil and criminal cases use forensic science for securing jutice. New techniques are being developed by the forensic scientists for the collection of evidences. Polygraph, brain fingerprinting and narco analysis are the techniques in this direction. In order to develop new techniques, the scientists should be afforded with sufficient funds and

excellently equipped laboratories. U.S. Federal Bureau of Investigation (F.B.I) has the largest laboratory in the world.[11]

The principle of the Criminal Justice System is to protect the innocent from wrong conviction and punishment and this can be done only by search of truth of the matter and justice. The following points based on scientific aspects help to follow the principle of Criminal Justice System:

1) Scientific evidence cannot lie and a decision arrived at by such an evidence is said to be justice through science.
2) To elicit truth from suspect scientific methods like narcoanalysis , brain mapping and lie detector tests used by law enforcement agencies are proving more authentic , accurate and reliable.
3) The principle based on advanced scientific technique, e.g. DNA testing says that every person of this world can be traced at a molecular level except of monozygotic twins.
4) Criminal behaviour of accused is determined by Forensic Psychology.
5) These days advanced science is boon for investigating agencies. These are powerful detective tool to detect crime and criminal.
6) It has also been seen that when there is no way for the court to reach at a point or to arrive to a correct decision, science helps the court to find out the truth and provides aid to the concerned justice .[12]

LEGAL FRAMEWOEK AND JUDICIAL INTERPRETATION RELATED TO EXPERT OPINION IN INDIA

Criminal trials in India are governed by the Criminal Procedure Code & Indian Evidence Act 1872, whereas the Criminal Procedure Code lays down the procedure from the point of taking cognizance of crime by appropriate judicial magistrates till the discharge of final order of conviction or acquittal or any appropriate order looking into the fact of the case. Indian Evidence

Act is restricted in its scope of leading evidences in civil or criminal cases either by the prosecution or defendant, applicant or respondent. Act also deals with variety of evidences & relevancy of any fact which can be brought as evidence in any case.[13]

- **The Indian Constitution, 1950**

The constitution of India gives the rights of the accused under Articles 19, 20 and 21. It also provides for free legal aid under Article 39 A of the Constitution. The most debated amongst these is Article 20 (3) which is discussed below. The admissibility of forensic evidence in courts is based upon the manner of collection of evidence. India, follows a strict procedure while taking evidence as in it is the follower of adversarial system. Thus, destroying privacy or taking incriminatory evidence against the will of a person is violative of fundamental rights provided under the constitution.

In ***Nandani Satpathy v. P. L. Dani,***[14] the appellant, a former Chief Minister of Orissa, was given a direction to appear at the Vigilance police Station, Cuttack, for being examined in connection with a case which was registered against her under the Prevention Of Corruption Act, 1947 and under section 109, 161, 165 and 120-B of lndian Penal Code, 1860. 0n the strength of this first information report, investigation was commenced against her (only a suspect at that stage). The Supreme Court in this case held that section 160 (1) of Code of Criminal Procedure, 1973 which barred the calling of woman to a police station was violated in this case. Moreover, it was ruled that Article 20 (3) extended back to the stage of police investigation not commencing in court only, since such inquiry was of accusatory nature and could end in prosecution. It follows that the protection in Article 20 (3) is also available at the stage of police investigation. Further, it was stated that the right of silence guaranteed by Article 20 (3) is not limited to the case for which the person is examined but also extends to the other offences pending or imminent, which may deter him from voluntary disclosure of incriminatory matter. It was also held that the protection could be claimed by a suspect also.

The protection contained in Article 20 (3) is against compulsion “to be a witness". In **M.P.Sharma v. Satish Chandra**[15] a wide implication was given by the Supreme Court, to the expression “to be a witness" so as to include oral, documentary and testimonial evidence.

---

13. Karan Ghelot, Forensic Crime Scene Investigation, 4(6), Indian Journal of Research (2005),(Sep.18,2019,9:00PM),http://worldwidejournals.com.
14. AIR 1978 SC 1025.
15. AIR1954 SC 300.

- **The Indian Evidence Act, 1872**

The provisions for relevancy and admissibility of evidence in courts are laid down in the Indian Evidence Act, 1872 . The evidence related to scientific techniques and electronic evidence are mentioned in the act. Where the evidence given by expert and related to handwriting already existed, the provisions related to admissibility of electronic evidence were incorporated in 2005. "When the court has to form an opinion upon a point of foreign law, or of science or art, or as to identity of handwriting (or finger impressions), the opinions upon that point of persons especially skilled in such foreign law, science or art, (or in questions as to identity of handwriting) (or finger impressions) are relevant facts. Such persons are called experts."[16]

The statutes of India do not provide any particular guidelines for the requirements of the expert testimony. The courts have taken distinct factors considering various facts, but, in ***Romesh Chandra Aggarwal v. Regency Hospital, 2010***[17] the Supreme Court detailed the requirements for allowing expert testimony. These are

1. Expert must be within a specialized field of expertise.
2. Evidence must be grounded on reliable principles
3. Expert must be competent in that discipline.

It also enumerated the following factors on which expert testimony maybe thrown out of court or which should become inadmissible.

1. Scientific finding in the question has no relevance with respect to issue in question.
2. Conclusions arrived by the expert are not based on scientific reasoning but speculation.
3. Scientific process was not reliable for want of accuracy or want of better method.
4. On the basis of tampering of expert report.

In ***Ram Narain V. State of UP***[18], the Supreme Court held that there is need of corroboration of expert opinion of finger impression if it is truthful. In this case, DVA J. himself compared the hand-writing in question with the person handwriting of the accused and satisfied himself and held that no corroboration is necessary .

In the case of ***M.S. Ushman Koya v. C.S. Santha***[19] , the Supreme Court rightly observed that an expert can certify only probability and not with 100% certainity. It should be corroborated either

16. *Supra* note 8.
17. Civil Appeal No. 5991 of 2002.
18. AIR 1973 SC 2200.
19. AIR 2003 SC Ker 191.

by direct evidence or by circumstantial evidence .It is the sole discretion of the court whether to admit the forensic report of an expert.

Reference may be given to the case of ***Krishan Chand v. Sita Ram,***[20] wherein in a conflict of expert opinion, it was held that it is the Court who is competent to form its own opinion with regard to signatures on a document. It entirely depends upon the facts & circumstances of the case, & the opinion of the courts, which varies consequently. Though there is no provision in the Indian Evidence Act, which expressly mandates corroboration of expert opinion, but in practical terms, it is the courts which consider it highly unsafe to convict a person on the basis of sole testimony of an expert.

- **The Criminal Procedure Code, 1973**

For collection of blood samples Section 53 of the CrPC is wanted which goes with the marginal heading "Examination of the accused by Medical Practitioner at the request of the Police." This section covers the examination of the accused by a medical practitioner at the request of the police officer, if there are reasonable grounds for accepting that an examination of a person will give evidence as to the commission of offence. So it shall be lawful for a registered medical practitioner at the call of the police officer not below the rank of sub-inspector & for any other person acting in bona fide in his assistance & under his direction, to make such an examination of the person arrested as is reasonably required in order to ascertain the facts which may give such evidence & to use such force as is reasonably necessary. It is nowhere mentioned in this section that the police officer shall be entitled to personally collect semen, blood, hair root, urine, vaginal swab etc. for the purpose of investigation.[21]

Sec. 54 of the Criminal Procedure Code, 1973 further deals with the examination of the arrested person by the registered medical practitioner at the request of the arrested person. The Law Commission of India in its 37th report stated that to facilitate efficient investigation, provision has been made which authorizes an examination of arrested person by a medical practitioner, if from the nature of the alleged offence or the circumstances under which it is alleged to have been committed, there are reasonable grounds for accepting that an examination of the person will give evidence either supporting the allegation or disproving it.[22]

Moreover, Section 293 of the CrPC exempts certain government scientific experts from

20. AIR 2005 P&H 156.
21. NAYAN JOSHI, ,MEDICAL JURISPRUDENCE & TOXICOLOGY, (3ed. Kamal Publishers2014).
22. Law Commission of India, Thirty Seventh Report, Ministry of Home Affairs (1967).

personal appearance before a court of law. The legislative importance behind this provision is to give some immunity to the higher officials in Forensic Scientific Departments. This immunity is given considering their qualifications, experience & work load in their respective fields. But this immunity is not given to the scientists occupied in Private Laboratories. By invoking Section 293, court can admit any report under the hand of

(a) any Chemical Examiner or Assistant Chemical Examiner to government;

(b) the Chief Inspector of Explosives;

(c) the Director of Fingerprint Bureau;

(d) the Director or Deputy Director or Assistant Director of a Central Forensic Science Laboratory or a State Forensic Science Laboratory;

(e) the Director of Haffkeine Institute, Bombay &; (f) the Serologist to the Government.[23]

- **The Identification of Prisoners Act, 1920**

In the Identification of prisoners Act it is provided that before a prisoner is admitted into the prison his measurements as to height, weight, color etc must be taken under sec 5 of the Act. 'Measurements' include fingerprints and footprints as well. The controversy regarding keeping the measurement of voice is still not resolved by the courts. The purpose for taking these measurements is to keep a record in case there is an escape or repeated offence. This helps in identification of the accused.[24] The sections 2, 3, 4, 5 & 6 of the Act deal with the expert evidence. They provide with the legal sanctions which are required for obtaining specimen evidence from the suspects or accused or convicts once they enter the jail.[25]

CONCLUSION

Forensic science has radically changed the process of criminal investigation and justice administration systems. Various techniques such DNA Profiling, Brain fingerprinting, Brain Mapping, Narco-Analysis, Polygraph test, Forensic photography and so on are being used by the investigating agencies and police organizations worldwide to detect and solve such crimes. Still, even the forensic science is not free from deficiencies & issues. The problems dealt with scientific evidence are investigative, scientific & legal in nature.

---

23. Code of Criminal Procedure, 1973, S 293.
24. The Identification of Prisoner's Act,1920.
25. *Supra* Note 6.

Firstly, during the phase of investigation, authenticity of evidentiary clues is collected from the crime scene, the vehicle used, the home of victim or accused & other places, all these abovementioned should be proved beyond reasonable doubt by at least two independent witnesses. Lack of knowledge, dearth of time & corruption in police officers preferably means that much of the valuable evidence is lost or its integrity is tampered with.

Secondly, if regard is taken to scientific problems, forensic science is not a science in exact terms. The definite determination of criminality is not merely difficult but impossible to provide. Forensic science works on Law of Probability. Real lacunae in the presentation of forensic evidence are increasing and thus there is a need for standardizing tools & techniques, accreditation of institutions & demand for statistical data.

Lastly, the most essential legal issue relating to forensic evidence in the propagation of justice is a general belief that scientific evidence is weak evidence. Track evidence, though reliable as any other identification is still regarded as fundamental science. The difference must be drawn between charlatan & real expert.

So it is hereby suggested & recommended that the expert from the medical field should be inspired to undertake medico-legal work. The government should come up with more institutes which are particularly specialized in various fields of forensic science. According to the Malimath Committee,forensic science should be used exhaustively in the investigation of crime. The DNA experts should be considered & included in the list of experts as mentioned in the Code of CrP.C, 1973. The Malimath Committee Report has further suggested creation of a DNA database at national level to help in fighting terrorism. So, various efforts must be taken to create awareness among the prosecutors, the judges, the police machinery & the general public. The establishment of well-equipped laboratories are required to handle DNA samples & evidence. Also, an enactment of specific law in the light of framing & giving guidelines to the police machinery is required so as to set up uniform standards for obtaining genetic information and also the creation of adequate safeguards to prevent misuse of the same.

Criminal Judicial System in this country is at cross-roads, many a times, reliable, trustworthy, credible witnesses to the crime seldom come forward to depose before the court & even the hardened criminals get away from the clutches of law. Even the reliable witnesses for the prosecution turn hostile due to intimidation, fear & host of other reasons. Investigating agency has, therefore, to look for other ways & means to improve the quality of investigation, which can

only be through the collection of scientific evidence. In this age of science, we have to build legal foundations that are sound in science as well as in law. Practices & principles that served in the past, now people think, must give way to innovative & creative methods, if we want to save our criminal justice system. Emerging new types of crimes & their level of sophistication, the traditional methods & tools have become outdated, hence the necessity to strengthen the forensic science for crime detection. Oral evidence depends on several facts, like power of observation, humiliation, external influence, forgetfulness etc., whereas forensic evidence is free from those infirmities. Judiciary should also be equipped to understand & deal with such scientific materials. Constant interaction of Judges with scientists, engineers would promote & widen their knowledge to deal with such scientific evidence & to effectively deal with criminal cases based on scientific evidence. We are not advocating that, in all cases, the scientific evidence is the sure test, but only emphasizing the necessity of promoting scientific evidence also to detect & prove crimes over & above the other evidence.[26]

Forensic science indeed is a great help for the Indian legal system. Where the changing scenario has changed the notion of crime, there comes the forensic technology which has helped in investigating the toughest of these crimes where no eye-witnesses were found and it was only the scientific technology which comes to the rescue of investigating agencies and the judiciary. In India it is still growing at a rapid stage. Many statutory provisions have been interpreted in the light of scientific technology and evidence, many new provisions have also been added to the statutes but still, some problems remain unattended. The issues arising in the proper application of forensic science are as under.

ROLE OF LAW IN POVERTY ALLEVIATION: AN ANALYSIS

Mr Sajandeep Kinra*

INTRODUCTION

Poverty can be regarded as the single most universal phenomenon forming an unvarying and uniform thread that transcends all boundaries and nations. A whole gamut of complexities is encompassed by the single word 'poverty'. Poverty is the mother of many evils.[1] Poverty is the lack of basic human needs, such as clean water, nutrition, healthcare, education, clothing and shelter because of one's inability to afford them.[2] According to World Bank, India accounted for world's largest number of poor people in 2012 using revised methodology to measure poverty, reflecting its massive population. However, in terms of percentage, it scored fairly lower than other countries holding large poor populations. In July 2018, World Poverty Clock, a Vienna-based think tank, reported that a minimal of 5.3% or 70.6 million Indians living in extreme poverty compared to 44% or 87 million Nigerians. Till 2019, Nigeria and Congo surpassed India in terms of total population earning below $1.9 a day. Although India is expected to meet United Nation's Sustainable Development Goals on extreme poverty in due time, a very large share of its population lives on less than $3.2 a day, putting country safely into category of lower middle income economies. In contrast, the international poverty line as updated in October 2015 by the World Bank stands at US$1.90 per day. In 2011, 21.2% of the total population in India was estimated to be living below this poverty line, as per the World Bank data. India is home to over one-third of poor people in the world. If we add the poor of Pakistan and Bangladesh into it, we find that almost half of world.[3]

As per Tendulkar Committee methodology, the national poverty line (in Rs per capita per month) for the year 2011-12 was calculated at Rs 816 for rural areas and Rs 1000 for urban areas. Using this methodology, the National Sample Survey Organisation estimated poverty at 21.9% of the population (269 million) in 2011-12 was poor. That means in the category of poor fell the

people whose daily income was less than Rs 27 a day in villages and Rs 33 a day in cities.[4] On the other hand, the subsequent Rangarajan Committee pegged the poverty line at Rs 32 in rural areas and Rs 47 in urban areas. On this basis, the number of poor living below the poverty line in India in 2011-2012 was revised to 29.5% of the population (363 million).[5]

MEANING AND DEFINITION OF POVERTY

Poverty is a major roadblock in the path of development of a nation. Development signifies reduction in poverty and law is the tool or mechanism which enables a State to frame policies for poverty reduction and towards development of society. In simplest terms, poverty can be described as the state of being poor. Poverty is an age-old social malaise and global problem.[6] There are various aspects and dimensions of poverty like absolute poverty, relative poverty, asset poverty, economic aspect and social aspect of poverty etc.[7] There are different causes of poverty in India—population explosion, illiteracy and unemployment, inadequate investment and low capital formation, major stress on farm sector and its output affected by floods and droughts, rampant corruption and leakages in delivery of public schemes and programs etc. According to Goddard, "Poverty is insufficient supply of those things which are requisites for an individual to maintain himself and those dependent upon him is his health and vigour."[8]

Schubert saw poverty as either absolute or relative or both. Absolute poverty being that which could be applied at all time in all societies, such as the level of income necessary for bare subsistence, while relative poverty relates to the living standard of the poor to the standards that prevail elsewhere in the society in which they live.[9]

According to the United Nations Committee on Economic, Social and Cultural Rights, "poverty is a human condition characterised by sustained or chronic deprivation of the resources, capabilities, choices, security and power necessary for the enjoyment of an adequate standard of living and other civil, cultural, economic, political and social rights."[10]

INTERNATIONAL EFFORTS FOR POVERTY ALLEVIATION

Through Resolution 47/196 adopted on December 22, 1992, the General Assembly declared 17thOctober as the International Day for the Eradication of Poverty. Various efforts have been made to reduce poverty at international level which are as follows:

A. Agenda 21 (Rio 1992) also deals with the issue of combating poverty. It promotes international cooperation to address the root causes of poverty. It provides that the governments with the assistance of and in cooperation with appropriate international, non-governmental and local community organizations should establish measures that will directly or indirectly generate remunerative employment and productive occupational opportunities.[11]

B. United Nation Commission on the Status of Woman, 1993 also plays role to achieve its objectives and action in the critical area of poverty. The Commission recommended that in formulating strategies to eradicate poverty, Member States take into account the specific requirements of women living in poverty, in both rural and urban areas, in order to enable them to fully exercise their social, economic, cultural, civil and political rights, as well as to maximize their resources and to increase their productivity.[12]

C. Fourth World Conference on Women, Beijing, 1995 is also concerned with women and poverty. This Conference states that more than 1 billion people in the world today, the great majority of whom are women, live in unacceptable conditions of poverty, mostly in the developing countries. The gender disparities in economic power-sharing are also an important contributing factor to the poverty of women. In order to eradicate poverty and achieve sustainable development, women and men must participate fully and equally in the formulation of macroeconomic and social policies and strategies for the eradication of poverty. The eradication of poverty cannot be accomplished through anti-poverty programmes alone but will require democratic participation and changes in economic structures in order to ensure access for all women to resources, opportunities and public services. [13]

D. United Nation Commission on Social Development was established in 1996 which deals with strategies and actions for eradication of poverty.The object of the Commission is to work in coordination with States and people for eradicating poverty in order to decrease the disparities in standards of living and better meet the needs of the majority of people of the world. The Commission also urges governments to formulate policies and programmes that ensure

access to basic social services for all children and young people, in particular those living in poverty.[14]

E. Habitat II, Istanbul, 1996 is an international Convention deals with eradication of poverty. Governments at the appropriate levels, including local authorities, in partnership with all relevant interested parties, including workers' and employers' organizations should stimulate productive employment opportunities that generate income sufficient to achieve an adequate standard of living for all people, while ensuring equal employment opportunities and wage rates for women and encouraging the location of employment opportunities near and in the home, particularly for women living in poverty and people with disabilities. Also to ensure that people living in poverty have access to productive resources, including credit, land, education and training, technology, knowledge and information, as well as to public services, and that they have the opportunity to participate in decision-making in a policy and regulatory environment that would enable them to benefit from employment and economic opportunities.[15]

F. Earth Summit II (1997) provides for sector and issues relating to women, land and poverty. It states that governments, at their regional level, should frame policies to ensure universal access to basic social services, including basic education, health care, nutrition, clean water and sanitation. Efforts of individual governments and international cooperation and assistance should be brought together in a complementary way to eradicate poverty.[16]

G. The 2030 Agenda for sustainable development calls for an end to poverty by 2030. It seeks to ensure social protection for the poor and supporting people affected by climate-related extreme events. This agenda also ensure that all men and women, in particular the poor and the vulnerable, have equal rights to economic resources, as well as access to basic services, ownership and control over land and other forms of property, inheritance, natural resources, appropriate new technology and financial services.[17]

NATIONAL LEGAL EFFORTS FOR POVERTY REDUCTION

India as a welfare State is committed to the development of its people. The Constitutional responsibility is reflected via legislations and development policies. It is realised that a collaborative measure of emphasis on accelerated growth and direct interventionist-safety net

procedure is the proper approach to optimise the control strategies. Furthermore, it needs to be ensured that the institutions executing these measures complement the policy stance.

A. The Constitution of India, 1950

The concern for the poor is reflected in the various provisions of the Constitution of India. The Preamble, Fundamental Rights, Directive Principles of State Policy and other provisions could be perused in this regard.[18] The Preamble of the Constitution of India resolved to secure to all its citizens justice; social, economic and political and equity of status and of opportunities. The Constitution provides that State shall not deny to any person right to equality before the law or the equal protection of the laws within the territory of India.[19] The Constitution also provides the fundamental rights including the protection of life and personal liberty.[20] The State shall secure that operation of legal system promotes justice, on a basis of equal opportunity and shall in particular provide free legal aid, by suitable legislation or schemes or in other way to ensure that opportunities for securing justice are not denied to any citizen by reason of economic or other disabilities.[21]

Recently in January, 2019, the benefit of reservation has also been extended to economically weaker sections of the society by amending articles 15 and 16 of the Constitution. It provides ten percent reservation in jobs and education to economically weaker sections. The economically weaker sections will be determined on the basis of value of assets and their annual income of the person. It is also an initiative for poverty alleviation.[22]

B. The Code of Civil Procedure, 1908

The Code of Civil Procedure[23] protects the bonafide claims of indigent persons. The Code exempt indigent person or his dependent to pay court fee for filing suit and assign a pleader, where he is not represented by a pleader.[24] The free legal aid will be provided in case of appeal by any indigent person.[25]

23. Act No. 5 of 1908.
24. The Code of Civil Procedure, 1908, order XXXIII.
25. Id., order XLIV.

C. The Advocates Act, 1961

The Advocates Act[26] assigns functions to the Bar Council of India to provide legal aid or advice to the poor in accordance with the rules made in this behalf. This Act also assign State Bar Council to organize legal aid in the prescribed manner.[27]

D. The Code of Criminal Procedure, 1973

The punitive arm of the legal order is criminal law. It effects the life and liberty of human being. Therefore, special attention is to be given at the time of administration of criminal law. Justice Krishna Iyer rightly mentioned that to sensitize the criminal process to the wavelength of the poor is the strategy.[28] The legal process without legal aid to the poor may be a guarantee of anarchy and not of order. To hands and feet, we need are efficient means and method to carry out justice in every case in the shortest possible time and the lowest possible cost.[29] The Code of Criminal Procedure[30] provides a pleader to the accused who has not sufficient means for his defence at the expense of the State. The Code also empowered High Court to provide facilities to such pleader for the defence of such accused.[31]

E. The Legal Services Authorities Act, 1987

The main objective of this Act[32] is to constitute legal services authorities to provide free and competent legal services to the weaker sections of the society to ensure that opportunities for securing justice are not denied to any citizen by reason of economic or other disabilities. The authorities were constituted at national, state and district level i.e. National Legal Services Authority, State Legal Services Authority and District Legal Services Authority.[33]

F. The Mahatma Gandhi National Rural Employment Guarantee Act, 2005

This Act[34] was introduced with an aim of improving the purchasing power of the rural people, primarily semi or unskilled work to people living below poverty line in rural India.[35] This Act provides a guarantee for one hundred days of employment in every financial year to adult

members of any rural household willing to do public work-related unskilled manual work at the statutory minimum wage.[36]

G. The Right of Children to Free and Compulsory Education Act, 2009

This Act[37] was enacted to provide free and compulsory education to the all children of age of six to fourteen years. This Act is also an initiative for anti-poverty programme.

H. The National Food Security Act, 2013

This Act[38] introduced to provide food and nutritional security in human life cycle approach by ensuring access to adequate quantity of quality food at affordable prices to people to live life with dignity. This Act also provides every person belonging to priority households to receive five kilograms per person per month at subsidized prices.[39] The Act entitled pregnant woman and lactating mother to receive meal free of charge during pregnancy and six months after birth of child. The Act also ensured to entitle maternity benefit of Rs. 6,000 to pregnant woman.[40]

ANTI-POVERTY PROGRAMMES

Many poverty alleviation programmes have been started. The Integrated Rural Development Project was introduced in 1978-79 to provide assistance to rural poor in the form of subsidy and bank credit for productive employment opportunities.[41] National Rural Employment Programme (NREP) formulated district level or block level employment plan for skilled or unskilled work and prepared projects for each block.[42] Rural Landless Employment Guarantee Programme (RLEGP, 1983) aimed to eradicate poverty, unemployment and under employment among rural landless. It guaranteed employment to at least one member of every landless labourer household for 80 to 100 days.[43]

The NREP and RLEGP were merged in April, 1989 under Jawahar Rozgar Yojana (JRY). Jawahar RojgarYojna was meant to generate meaningful employment opportunities for the unemployed and underemployed in rural areas through the creation of economic infrastructure and community and social assets.[44] On April 1, 1999, the IRDP and allied programmes were

merged into a single programme known as Swarnajayanti Gram Swarozgar Yojana (SGSY)[45] . The SGSY emphasises on organizing the rural poor into self-help groups, capacity-building, planning of activity clusters, infrastructure support, technology, credit and marketing linkages. The Indira Awaas Yojana (IAY) programme aims at providing free housing to below poverty line (BPL) families in rural areas and main targets would be the households of SC/STs.[46]

Sampoorna Gramin Rozgar Yojana (SGRY) Scheme,2001 was introduced with the objective that the scheme continues to be the generation of wage employment, creation of durable economic infrastructure in rural areas and provision of food and nutrition security for the poor. It is the skill and placement initiative of Ministry of Rural development.[47] It is a part of National Rural Livelihood Mission (NRLM)–the mission for poverty reduction is called Ajeevika, 2011. It evolves out the need to diversify the needs of the rural poor and provide them jobs with regular income on monthly basis. Self help groups are formed at the village level to help the needy.[48] The Pradhan Mantri Awas Yojana (PMAY) Scheme was launched by the Government of India to boost the affordability of houses against an inflated real estate sector. The scheme aims to achieve its objective of housing for all by March 31, 2022, the 150th birth anniversary year of Mahatma Gandhi, by constructing 20 million houses across the nation. The scheme will progress in three phases. In first phase, 100 cities were covered in select states and UTs between April 2015 and March 2017, in second phase, 200 additional cities covered between April 2017 and March 2019 and in third phase the remaining cities will be covered between April 2019 and March 2022.[49] Various scholarship schemes run by Central Government and State Government of Punjab like Post Matric Scholarship Scheme for Scheduled Caste students, Post Matric Scholarship Scheme for other backward classes, Post Matric Scholarship Scheme for Minority students and Central Sector Scheme of Rajiv Gandhi National Fellowship for providing Scholarships to Scheduled Caste students to pursue programmes in Higher Education such as M.Phil, Ph.D etc.[50] Central Sector Interest Subsidy Scheme by State Bank of India provides educational loan on subsidised interest rates for the benefit of all categories of students

belonging to economically weaker sections of the society for pursuing professional or technical courses from accredited institutions in India.[51]

In Punjab, Mid Day Meal Scheme started for the students of first to eighth class. They are served with mid day meal in the school. The main objective of this scheme is to increase enrolment retention and to tone up the learning abilities of the beneficiaries, especially of the children belonging to poor and down trodden sections of the society.[52] The State Government of Punjab has also initiated Shagun Scheme for providing financial assistance of Rs.15,000 to Rs. 21,000 to the girl's marriage under the Department of Welfare of scheduled caste and backward class in the state. The Shagun Scheme is also named as Aashirwad Scheme by the government. This scheme is only for the girls of economically weaker families.[53] In 2011, Mai Bhago Scheme has also started by the State Government of Punjab in order to uplift the condition of women especially in women and the women who belong to the urban poor category.[54] Recently on August 20, 2019, Punjab Government has introduced Punjab Sarbat Sehat BimaYojna under Aushman Bharat Scheme which provides free medical treatment upto Rs. 5,00,000 to the people who have cards of below poverty line.[55]

NALSA (EFFECTIVE IMPLEMENTATION OF POVERTY ALLEVIATION SCHEMES) SCHEME, 2015

The National Legal Services Authority (NALSA) has been constituted under the Legal Services Authorities Act, 1987. This Authority has formulated a scheme for effective implementation of poverty alleviation schemes. The main objective of this Scheme is to ensure access to basic rights and benefits afforded to socially or economically weaker sections of the society and to strengthen the legal aid and support services at the national, state, district and taluka levels for persons belonging to socially or economically weaker sections in accessing poverty alleviation schemes.[56]

NITI AAYOG

NITI Aayog recommended that the strategy for combating poverty must rest on two legs: sustained rapid growth that is also employment intensive and making anti-poverty programs effective. NITI Aayog further suggested that making anti-poverty programs such as the Public Distribution System (PDS), Midday Meal Scheme, MGNREGA and Housing for all more effective represents the second leg of the strategy to eliminate abject poverty.[57]

REPORTS OF COMMISSIONS AND COMMITTEES

Reports of Law Commission of India: Law Commission of India is an important body in the legal system of India. Its aim is to ensure law keeps up with the times the society live in so as to ensure and maximize justice. Law Commission has made efforts in respect of poverty alleviation. Following are the various reports on poverty alleviation:

The Law Commission of India in its Report suggested that legal aid will have to be first given to person accused of crime, particularly crimes of serious nature. Members of scheduled castes and scheduled tribes who generally are without means will have to receive preferential consideration. Legal aid will have next to be extended to really poor persons and then gradually made available to persons of moderate means who are unable to bear the cost of litigation.[58]

The Law Commission of India has also stated in its Report that every man and woman has the human right to a standard of living facility for health and well being, to food, clothing, housing, medical care and social services. These fundamental human rights are defined in our Constitution. The right to be free from poverty includes the human right to an adequate standard of living, right to live in adequate housing, right to be free from hunger, right to primary health care and medical attention in case of illness. Thus, poverty is a human rights violation.[59]

RANGARAJAN REPORT ON POVERTY, 2014

Expert Group under the chairmanship of Dr. C. Rangarajan to review the methodology for measurement of poverty in the country constituted by the Planning Commission in June 2012 has submitted its report on June 30, 2014. As per the report, poverty line is estimated as Monthly Per Capita Expenditure of Rs. 1407 in urban areas and Rs. 972 in rural areas. The Expert Group

59. Law Commission of India, 223rd Report on Need for Ameliorating the lot of the Have-nots: Supreme Court's Judgments, (April, 2009).

(Rangarajan) has recommended that the poverty line should be based on certain normative levels of adequate nourishment, clothing, house rent, conveyance and education, and a behaviorally determined level of other non-food expenses.[60]

JUDICIAL ATTITUDE TOWARDS POVERTY IN INDIA

The judiciary has kept an intense scrutiny and ensured that Constitutional mandate is properly enforced and any friction between the legislature and the executive is eased. Building upon article 21, the judiciary has adopted an expansive interpretation bringing within its ambit almost all facets of poverty – direct or indirect.

Against the backdrop of the foregoing and in a scathing indictment on the denial of legal services to the poor and in a bold attempt to make courts accessible to the poor, the Supreme Court of India in ***People's Union for Democratic Rights v. Union of India,***[61] observed thatthe rule of law does not mean that the protection of law must be available only to a fortunate few or that the law should be allowed to be prostituted by the vested interests for protecting and upholding the status quo under the guise of enforcement of their civil and political rights. The poor too have civil and political rights and the rule of law is meant for them also, though today it exists only in paper and not in reality. The courts are praised for their boldness and courage and their independence and fearlessness are applauded and acclaimed. But if the fundamental right of the poor and helpless victims of injustice is sought to be enforced by public interest litigation, the so called champions of human rights frown upon it as a waste of time of the highest court in the land which according to them should not engage itself in such small and trifling matters.

The Indian Judiciary in ***Olga Tellisand Ors v. Bombay Municipal Corporation and Ors case,***[62] has also come forward in favour of poor people and the right to life was widened enough so as to bring the 'right to livelihood' within the purview of 'right to life' under article 21 of the Constitution. The Apex Court has justified eviction of slum dwellers that the respondents (Bombay Municipal Corporation) must provide with alternative shelter or accommodation to the slum dwellers before eviction from the pavements.

In an another case, ***People's Union for Civil Liberties v. Union of India,***[63] the Apex Court agitated over the issue of starvation deaths in Rajasthan despite excess grain being kept aside for famine. Various schemes for food distribution throughout India were also non-functional. The

60. Planning Commission, (July 14, 2019, 7:00 AM), http://planningcommission.nic.in/reports/genrep/pov_rep0707.pdf.
61. AIR 1982 SC 1473 (India).
62. 1985 SCC (3) 545 (India).
63. (2003) SCR 1136 (India).

Supreme Court, noting the right to life, stated "would the very existence of life of those families which are below poverty line not come under danger for want of appropriate schemes and implementation." The Court found failure on the part of government to implement various food schemes and the Court directed for more specific measures to be effected.

In ***M.R. Balaji v. State of Mysore,***[64] the Supreme Court held that two tests should be conjunctively applied in determining backward classes; firstly they should be comparable to the schedule castes and schedule tribes in the matter of their backwardness and secondly they should satisfy the means test i.e. the test of economic backwardness laid down by the state government in the context of the prevailing economic conditions.

The Apex Court in ***J. P. Parimoo v. State of Jammu & Kashmir***[65] said that if poverty is the exclusive test, a large population in our countrywould be socially and educationally backward class of citizens. Poverty is evident everywhere and perhaps more so in educationally advanced and socially affluent classes. A division between the population of our country on the ground of poverty that the people in the urban areas are not poor and that the people in the rural areas are poor is neither supported by facts nor by a division between the urban people on the one hand and the rural people on the other that the rural people are socially and educationally backward class.

The Hon'ble Supreme Court in ***Jarnail Singh v. Lachhmi Narain Gupta***[66] decided that reservation should be based on income. The Apex Court stated that reservation in promotions does not require the state to collect quantifiable data on the backwardness of the Scheduled Castes and the Scheduled Tribes, yet makes the creamy layer in either group ineligible for the benefits.

CONCLUDING REMARKS

The Government of India and the State Governments have been implementing several programmes (IRDP, JRY etc) for poverty alleviation in India. While the objectives of these programmes may be commendable,they are based on a belief that spending of money is in itself a necessary and sufficient condition for povertyalleviation. This belief under-plays the role of non-monetary policies and the impact they have on the lives ofthe people. It has been the

64. AIR 1963 SC 649 (India).

experience of many grassroot workers that often certain government policiesharm the poor much more than any benefit that accrues to them through money-oriented schemes like theIRDP.Strong localgovernance such as expected from Panchayati Raj Institutions – responsive to the needsof beneficiaries, one which encourages mobilisation of the rural poor and is open tosocial audit -- promises better delivery system of the poverty alleviation programmes.It is now a recognised fact, that poverty is a multi-faceted phenomenon going beyond the realms of lack of adequate income; it must be viewed as a state of deprivation spanning the social, economic and political profile of the people that precludes their effective participation as equals in the development process. This recognition has resulted in restructuring and reorganization of various poverty reduction programmes. The formidable challenge faced by India at the time of independence was in the form of a large subgroup of its population being poor. This was an institutional outcome as well as the colonial legacy. During the last seven decades, India's tryst with poverty has met with chequered responses. It is quite obvious that the institutional interface dictated the performance. It would be incorrect to say that all poverty reduction programmes have failed. The growth of the middle class that was earlier virtually non-existent indicates that economic prosperity has indeed been promising in India, but the distribution of wealth has been extremely uneven. The responsibility of mitigating poverty cannot be that of the Government alone; it requires the cooperative efforts of the civil society. Optimization of the strategies should be such that the policies function in an atmosphere of both interdependence and independence simultaneously, thus creating a synergy for yielding better functional linkages and collaboration.

SEXUAL HARASSMENT OF WOMEN: A STUDY WITH REFERENCE TO EDUCATIONAL INSTITUTIONS IN CHANDIGARH

- Dr Babita Devi* & Mr Deepak Thakur**

INTRODUCTION

Man is born out of woman and the word 'Man' included in the word 'woman'. But this slice or part has assumed the proportion of the whole by reducing woman to an appendage of life, a parasite, a domestic pleasure, a pleasure of resort. This is the story of man- made civilization where lies the birth of tragedy of woman. Sexual harassment is an offence, which can destroy human dignity and freedom and confidence of the victim.[1] The term sexual harassment came to be used in the public media only from the year 1975 onwards. Till then no term existed to describe what is now universally called sexual harassment, though the phenomenon itself was well known to women. The term sexual harassment in a legal sense was first coined in the United States of America and subsequently exported from there to other industrialized countries in Western Europe. In India, the term sexual harassment was first defined in a formal legal sense in the year 1997 by the Supreme Court in ***Vishaka v. State of Rajasthan.***[2] Other terms used to describe this malady are 'unwanted intimacy' in the Netherlands, 'sexual molestation' in Italy, 'sexual blackmail' in France and 'sexual solicitation' in the state of Canada.[3]

Sexual harassment may be best conceptualized as one manifestation of the way in which sexual violence against women is committed in society. In the rape – prone culture, women are socialized to expect violence in their everyday lives, and such violence is treated as normal. Sexual violence is the most graphic and visceral tool of women's subordination and sexual harassment is a tool of oppression. Even those women who do not experience any direct form of sexual violence, experience fear which invade nearly all aspects of their public and private lives.[4] Sexual harassment must be understood to exist on the continuum of sexual violence against women.[5] Sexual violence is a violation of the rights of girls, threatening their right to

achieve an education, and injuring their psychological and physical well-being. Many countries do not use the term sexual harassment, but rather use other terms such as sexual bullying, gender-based violence, sexual abuse, and sexual violence among others.[6]

SEXUAL HARASSMENT AGAINST WOMEN IN CHANDIGARH

As per National Crime Records Bureau in Chandigarh under section 354 IPC i.e. assault on women with intent to outrage her modesty 21 incidents were reported in 2011, 45 incidents were reportedin 2012, 136 incidents were reportedin 2013, 87 incidents were reportedin 2014, 76 incidents were reportedin 2015,29 incidents were reportedin 2016, 102 incidents were reportedin 2017 and97 incidents were reported in 2018.[7]

As per National Crime Records Bureau in Chandigarh under section 509 IPC i.e. insult to the modesty of women, 12 incidents were reported2011, 25 incidents were reportedin 2012, 25 incidents were reportedin 2013,2 incidents were reportedin 2014, 10 incidents were reportedin 2015, 13 incidents were reportedin 2016, 12 incidents were reportedin 2017and 5 incidents were reportedin 2018.[8]

The above mentioned data has been reproduced in tabular form for brevity and clear understanding the number of incidents and percentage variation of crime under sections 354 and 509 IPC. Table A shows figures relating to crime against women under section 354 and 509 IPC from year 2011 to 2018 and percentage variation of crime rate from year 2017 to 2018.

Table A

Crime Head	2011	2012	2013	2014	2015	2016	2017	2018	% Variation between 2017 and 2018
Section 354, IPC	21	45	136	87	76	29	102	97	4.90%
Section 509, IPC	12	25	25	2	10	13	12	5	58.33%

MOLESTATION (SECTION 354 OF THE INDIAN PENAL CODE)

Adecrease of 4.90% has been observed in such cases as 97 cases were reported during the year 2018 as compared to 102 in the previous year (2017).

Eve-Teasing (Section 509 of the Indian Penal Code)

6. Vol. I,Michele A. Paludi, Feminism and Women's Rights Worldwide, 187-88 (Praeger, 2010)
7. http://www.chandigarhpolice.gov.in/crimecht.html (Sept. 20, 2019, 17:30 PM)
8. *Ibid*

A decrease of 58.33% has been observed in such cases as 5 cases were reported during the year 2018 as compared to 12 in the previous year (2017).

After the Criminal Law (Amendment) Act, 2013, four new offences have been inserted in the Indian Penal Code from Section 354A to 354D dealing with sexual harassment, assault on women with intent to disrobe, voyeurism and stalking.In Chandigarh in the year 2014, 31 incidentsof sexual harassment were reported, 3 incidentsof assault on women with intent to disrobe were reported, 2 incidentsof voyeurism were reported and 10 incidentsof stalking were reported. In 2015, 22 incidentsof sexual harassment were reported, 2 incidentsof assault on women with intent to disrobe were reported, 1 incidentof voyeurism was reported and 13 incidentsof stalking were reported.In 2016, 26incidentsof sexual harassment were reported, 4incidentsof assault on women with intent to disrobe were reported, 2incidents of voyeurism were reported and 15 incidentsof stalking were reported. [9]

SEXUAL HARASSMENT AT EDUCATIONAL INSTITUTIONS IN CHANDIGARH

In executing the field work, the data was collected with the help of three sets of questionnaires including one set of females, one set for males and one set common for females and males which were distributed among females and males of different age groups at eight different educational institutions around Chandigarh viz. Panjab University, Sector 14, Panjab Engineering College (PEC) Sector 12, PGIMER Sector 12, Government College for Men (GCM) Sector 11, Government College for Girls (GCG) Sector 11, GGDSD College Sector 32, Dev Samaj College (DSC) Sector 45 and MCM DAV College Sector 36. The three sets of questionnaires had similar questions and were distributed among females and males respondents in the above mentioned educational institutions to the tune of 60 per institution.

The data reveals that generally males and females do take care of their behaviour in public especially in front of persons of opposite sex. This shows that in society males and females generally take care of their conduct. There is also similarity of opinion among the female and male respondents as to their outlook towards sexual harassment in our society and the majority has acknowledged that sexual harassment is prevalent in our society since long which satisfies the main objective of the research which is to measure the incidence and prevalence of sexual harassment among women. Thus, it can be seen that sexual harassment existed in our society since time immemorial and the same has been acknowledged by the respondents.

---

9. http://www.data.gov.in/catalog/crime-committed-against-women (Sept. 20, 2019, 17:30 PM)

On being asked about the reasons for the sexual harassment of women in our society, 19% of female and 26% of malerespondents said patriarchal system is the reason; 16% of femaleand 20% of malerespondents said low status of women in the society is the reason; 13% of femaleand 12% of male respondents said women being an easy prey is the reason and 52% of female and 42% of malerespondents said women have been considered as an object of pleasure only which leads to sexual harassment of women in our society. This shows that majority of the female and male respondents are of the view that women have been sexually harassed in our society for reason being considered as an object of pleasure only, followed by the patriarchal system prevalent in the society which only leads to low status of women in the society. However, women being an easy prey has been least opined by both the female and male respondents for being sexually harassed in our society.

An important factor which is considered as a major reason behind sexual harassment is dressing of women. The data collected shows that 4% of female respondents and 24% of malerespondents think that dressing of women is a common cause to attract sexual harassment whereas 28% of femalerespondents and 8% of malerespondents do not think that dressing of women is a common cause to attract sexual harassment and 68% of female and male respondents think that it's the men's mentality that should be changed. The responses of the female and male respondents clearly shows a difference of opinion as very few percent of female said that dressing of women is a common cause to attract sexual harassment though quite high percent of male respondents are of the view that dressing of women does invite sexual harassment. Although majority of both female and male respondents are of view that there is a need to change the mentality of men which depicts that sexual harassment has nothing to do with the dressing of women rather the outlook of men is required to be changed.

The data collected shows that 90% of female respondents are of the view that the present condition of crimes against women is increasing while 10% of female respondents said that it's decreasing. On the other hand 74% of male respondents are of the view that the present condition of crimes against women is increasing while 26% of male respondentssaid that it's decreasing. It thus shows that though both female and male respondents are of opinion that crimes against women is increasing but this perception of female respondents is on the higher side as compared to the male respondents. On the other hand the perception of male respondents is on the higher

side as to the decreasing trend relating to crimes against women as compared to female respondents. Thus it can be said that the opinions of females and males differ as to the increasing or decreasing trend relating to crimes against women.

The data shows that 40% of the female respondents said that they have experienced non-verbal sexual harassment (e.g. looking someone up and down in a sexual way) whereas 56% of female respondents said that they have experienced oral sexual harassment (e.g. dirty jokes being sexual in nature, sexual comments etc.) and only 4% of female respondents said that they experienced physical sexual harassment (e.g. pulling someone's clothing, inappropriate touching, kissing etc.). The above data shows that females feel it difficult to reveal as to what type of sexual harassment they experienced.

The data collected shows that majority of victims of sexual harassment tends to talk about such incidents however most of them feel comfortable to discuss it with their peer groups followed by family members and most likely to the head of the institution if they want to seek redressal. The data collected also reveals that majority of persons have advised the female respondents to file a complaint against the harasser with the police. This reveals that if female becomes the victim of sexual harassment then society in general want to punish the culprit through legal process for such incidents are presumed to be normal by the other members of society.

On being asked as to what would they do in case sexually harassment, 8% female respondents said that they don't know what to do in such a situation whereas 4% of female respondents said that they would remain silent and would not speak about the incident and 88% of female respondents said that they would complain about sexual harassment. The data thus shows that the majority of women will come forward to report the matter to the police or to the institutional machinery in case of any incidence of sexual harassment and very minimal percent of women would remain silent or would not speak about such incident. This shows that women in the present day context are not afraid of any social taboo and will come forward to bring the culprit behind the bars for the offence of sexual harassment. This perception of females matches with that of society in general as gathered from the previous question observation wherein also maximum numbers of persons advised the victim to file a complaint against the harasser with the police.

The data collected shows that 82% of femalerespondentsare aware of laws protecting women from sexual harassmentwhile 18% of femalerespondentsare not aware of laws protecting

women from sexual harassment. On the other hand 81% of male respondents are aware of laws protecting women from sexual harassment while 19% of male respondents are not aware of laws protecting women from sexual harassment. The chart shows that there is similarity of opinion among female and male respondents as to the knowledge relating to laws protecting women from sexual harassment. This shows that female and male are proportionately aware or unaware respectively about the laws protecting women from sexual harassment, however, majority of both the respondents have shown their knowledge regarding such laws.

The data shows that 3% of female respondents and 9% of male respondents think that laws for the protection of women from sexual harassment are properly implemented whereas 32% of female respondents and 49% of male respondents think that such laws are not properly implemented. Further, 35% of female respondents and 36% of male respondents feel that such laws are rarely implemented whereas 30% of female respondents and 6% of male respondents are of view that rights/laws are there but none cares for such laws. Thus, general perception of respondents is that laws made for the protection of women from sexual harassment are either not properly implemented or rarely implemented. Marginal faction of respondents also thinks that no one cares about such laws even if they are enacted. The data thus reveals that there is lacking in the commitment of state agencies in enforcing or properly implementing the laws made for the protection of women from sexual harassment.

The data collected shows that 46% of femalerespondents see effective role of police in curbing crimes against women while 54% of femalerespondentsthink it's ineffective. Similarly,46% of male respondents see the role of police in curbing crimes against women as effective while 54% of malerespondentsthink it's not effective. The data shows that both the respondents see the role of police in curing crimes against women proportionately effective and in-effective respectively, however greater is the proportion of respondents with opinion that police's role is ineffective in curbing crime against women. This shows that role of protective agencies is not satisfactory while dealing with crimes against women.

The data collected shows that 43% of female respondents think that there are enough drives/campaigning by Chandigarh police regarding safety of women from sexual harassment whereas 57% of femalerespondents think that there are not enough drives/campaigning by Chandigarh police regarding safety of women from sexual harassment. On the other hand 37% of male respondents think that there are enough drives/campaigning by Chandigarh police

regarding safety of women from sexual harassment whereas and 63% of male respondentsthink that there are not enough drives/campaigning by Chandigarh police regarding safety of women from sexual harassment. Thus, the majority of female and male respondents are of the view that Chandigarh police's effort in curbing sexual harassment is lacking which in turn becomes one of the reasons in the increase of crime of sexual harassment which relates with the research hypothesis and shows that the role of protective agencies is lacking in dealing with such crimes.

On being asked if there are adequate number of women police personnel in Chandigarh, 47% of female respondents think that there are adequate numbers of women police personnel in Chandigarh while 53% of female respondents think that there are not adequate numbers of women police personnel in Chandigarh. The nature of crime against women requires reporting of incidents to women police personnel which if lacking will result in less number of complaints since it will be difficult for an aggrieved woman to reveal the information before a male police personnel.

The data collected shows that 82% of femalerespondentsthink that there is less deployment of women police personnel during night hours in Chandigarh whereas 18% of femalerespondents think that there is not less deployment of women police personnel during night hours in Chandigarh. Similarly, 82% of male respondentsthink that there is less deployment of women police personnel during night hours in Chandigarh whereas 18% of male respondents think that there is not less deployment of women police personnel during night hours in Chandigarh. The data thus suggests that majority of respondents are of the view that there is less deployment of women police personnel during night hours in Chandigarh which can be a major cause of insecurity among women because if sexually harassed woman victim may not feel comfortable to report the matter to male police personnel and that too during night hours fearing more harassment at the hands of male police personnel.

The data collected shows that 70% of female respondents said that they would avail late night dropping service started by Chandigarh police whereas 30% of female respondents said that they would not avail late night dropping service started by Chandigarh police. This shows that majority of female respondents have shown faith and trust on the Chandigarh police for dropping them during late night at their respective places rather than availing any other source of transportation. It reflects that females are afraid of using other modes of transportation during

night hours for fear of sexual harassment or other grave crimes. It is pertinent to mention here that recently in 2017 the Chandigarh police have also started late night picking and dropping of ladies.

The data collected shows that 90% of female respondents think that there should be notice board/banners prohibiting sexual harassment at educational institutions while 10% of femalerespondents think that there should not be notice board/banners prohibiting sexual harassment at educational institutions. On the other hand 93% of malerespondentsthink that there should be notice board/banners prohibiting sexual harassment at educational institutions while 7% of male respondents think that there should not be notice board/banners prohibiting sexual harassment at educational institutions. The chart shows that highlighting the prohibition of sexual harassment through notice board/banners will be a welcome step as a very high percentage of both the respondents were of this view. Since majority of people are unaware of laws prevalent in the country and sexual harassment has been taken up as a non-serious or casual incident without giving attention to the victims, such highlighting through notice/banners will regulate the behaviour of people and make them think before committing any such act.

The data collected shows that 58% of femalerespondents and 60% of malerespondents are of the view that imposing stringent punishment will help in the implementation of the Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013 whereas 42% of female respondents and 40% of malerespondents are of the view that sensitizing the society will help in the implementation of the Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013. The data thus shows that the views of female respondents and that of male respondents are nearly proportionate for the implementation of the Sexual Harassment Act. However, imposing stringent punishment has been more opined than sensitizing the society for the implementation of the Act.

To see as if the provisions of the Act have been implemented by the educational institutionsinformation was sought under the provisions of Right to Information, Act from eight educational institutions which are the subject matter of the present research. As to the query regarding the number of complaints of sexual harassment dealt with by such institutions on yearly basis from 2006 to 2017, a total of 28 complaints during the period February, 2014 to May, 2017 in Panjab University, none in GGDSD College, in MCM DAV College there was one

complaint in 2016 and one complaint in 2017, in Dev Samaj College no such complaint has been received, in GCM there was one complaint during 2014-15, two complaints during 2015-16 and one compliant during 2016-17, in Government College for Girls no complaint has been received relating to sexual harassment, in PGIMER a total of 14 complaints, have been received.

As to the query,whether the complaintsrelating to sexual harassment were sorted out by the Committee itself or were referred to police under the provisions of Indian Penal Code, Panjab University replied that it depends upon the nature of the complaint, GGDSD College replied that in negative for reason that no documents are available, MCM DAV College replied that the matters were sorted out at the level of committee itself, Dev Samaj College and Government College for Girls replied in negative since no such compliant relating to sexual harassment has been received there, GCM College replied that all complaints were settled by the committee itself, PGIMER only revealed that no complaint has been referred to police.

It has been observed that bigger institutions like Panjab University and PGIMER have received more complaints of sexual harassment and all such complaints have been dealt with by the Complaints Committee only and no police case has been referred in such events. This tends to show that the problem of sexual harassment is more prevalent in bigger institutions as compared to smaller ones. However, these bigger institutions have not replied in spirit as to the query put to them that if the matter was sorted by the Committee then what punishment was given to the guilty person as Panjab University replied that the Committee recommended different punishments in different complaints keeping in view the nature of complaint andPGIMER replied that the findings of the Committee were sent to the concerned authorities for further action. Thus, what type of punishment was given to the harasser by the Committee or what were the findings of such Committee could not been unearthed. This could inadvertently imply that the provisions or procedures for dealing with sexual harassment complaints have not been properly implemented or applied by many educational institutions.

On the basis of information received through RTI from Chandigarh police, it has been observed that a total of 574 numbers of cases were registered under section 354 IPC during the period from 2006 to 2016 in Chandigarh, out of which 49% cases resulted in acquittal of the accused persons and only in 15% of cases the accused persons were convicted. Also, under section 509 IPC a total of 120 numbers of cases were registered during the period from 2006 to 2016 in Chandigarh, out of which 46% of cases resulted in acquittal of the accused persons and only in

18% of cases the accused persons were convicted. Rest 36% of the cases in both the categories are either pending in courts, or are untraced, or are pending investigation, or have been quashed. The above data thus shows that in cases involving sexual harassment of women, the rate of conviction is very less and the rate of acquittal is very high. This shows that there is some procedural lacuna with which the women victims of sexual harassment face a lot of hardship while dealing with their cases in the courts which results in acquittal of the culprits and ultimately in the failure of justice. Thus, the remedial mechanism lacks in providing appropriate relief to the victims of sexual harassment and defies the sufferings and humiliations of the victims.

CONCLUSION AND SUGGESTIONS

The Constitutional mandates as enshrined in the Preamble, Fundamental Rights and Directive Principles of State Policy aims at establishing an egalitarian society in which women can enjoy the same dignity as men. Although the Constitution of India guarantees to every citizen the equality before the law or the equal protection of law, the true equality has not been achieved even after so many years of independence. The Constitution of India assures for all freedom and right to dignity but has been systematically denied to women. In recent past, there has been so persistent and frequent commission of crimes in different shape and size violating their basic rights and outraging their dignity and modesty.

Article 29(2) of the Constitution of India provides that no citizen shall be denied admission into any educational institution maintained by the State. Education is the most effective tool for empowerment and human development. Negative parental attitudes toward educating daughters are a barrier to the girl's education since parents see their daughters' education as a waste of money because she will eventually live with her husband's family. As education helps a person grow cognitively, intellectually and emotionally and enables a person to take right decisions on the basis of logic and reasons. Women are empowered and their human rights are protected and promoted in India if our society concentrates on educating the girl children who are often discriminated against and whose rights are relegated to background in comparison to those of the male children. Hence, it is suggested that education being the most powerful weapon to bring about equality and to prevent the menace of sexual harassment, compulsory and free education should be given to girl children as fundamental right upto 12th standard. With better

education Indian women will try to get all the benefits and come forward to object any objectionable and uncomfortable behavior of men without caring any social taboos.

Students must learn about sexual violence, female equality, good communication skills, boundaries, and respect of gender differences. More female teachers and teacher's assistance should be hired for colleges, universities where most teachers are male. Curriculum development about gender equity, sexual harassment, and effective forms of discipline, among others, should be required in all college teacher education. Colleges should develop, disseminate, and publicize effective sexual violence policies and procedures, as well as monitor their effectiveness. Teachers who sexually abuse a student of any age should be fired and referred to the police.

Though plethora of legislation exists, due to ineffective enforcement, women are exploited by the male dominated society. Male dominated society has found ways to circumvent the provisions of the Act and act as a blockade against women empowerment. Due to the failure of the legislations to protect women, judiciary has come forward to protect women. In protecting the women, the Indian Judiciary has removed all the procedural shackles and has completely revolutionized constitutional litigations. The judiciary has encouraged widest possible coverage of the legislations by liberal interpretationof the terms. The Court has shown greater enthusiasm in granting the constitutional provisions for all women.

Women's cells/women police stations have been set up as special mechanisms to cope with violence against women. The number of women cells /women police stations should be increased and should be given adequate powers, funds and staff. There is also need ofreforms in the police department; often the police are unaware of the police safeguards for women and the amendments to laws relating to such safeguards. Thus, reforms in the police department for quick action, immediate disposal of the case, non-consideration of influence and helping hand to the women victim must be made available. There should be the movement of police control room vehicles within and around the workplaces which will create panic in the minds of doer of sexual harassment.

There is need of framing the National Media Policy and Mass Media like TV and films that do not simply reflect but subtly and indirectly help in shaping social reality. The indecent representation of women in the media is a social evil, which corrupts the young minds and encourages violence against women. Hence, the media should prevent the commoditization of

women. Channels, which spoil the minds of people, should be stopped immediately. Media must highlight the ideas and thoughts relating to human values which develop a social change. The media should give more coverage to sexual harassment issues and should follow up the cases and the public can be informed about the successful conviction of the perpetrators. So that, more women can come out to report sexual harassment incidents.

It is suggested that cases involving sexual harassment of women should be decided in a summarily manner and the courts should not follow the normal procedure of examining of victims/witnesses time and again in the court rooms rather the evidences be taken by way affidavits. This will reduce the time for deciding the cases and also the victims/witnesses will be saved from further mental and physical harassment arising out of the lengthy and cumbersome court's procedures.

Last but not least there is need of an effective implementation law to control and prevent the menace of sexual harassment.

THE SOUTH CHINA SEA DISPUTE: GENESIS, LEGAL ISSUES AND NEW DEVELOPMENTS

-Dr Ajaymeet Singh ?& Mr Ankit Malik ??

"National greatness is inextricably associated with the Sea; with its commercial usage in times of Peace and its control in times of War".

-Rear Admiral Alfred Thayer Mahan (United States Navy)[1]

INTRODUCTION

Rear Admiral Mahan highlighted the importance of sea in these words way back in the year 1890. However, his statement still holds immense significance even in the twenty first century. It is because of the reason that even after the invention of aircraft and aerial transport, 90% of the international trade is carried out via sea.[2] The South China Sea is a marginal sea near the Pacific Ocean, which is spread over an area of around 3.5 million square kilometers. It is a hotly contested maritime area between many countries because it is abundant in oil and natural gas reserves.[3] Apart from being rich in natural resources, the South China Sea is a very vital trade and maritime route as well. The South China Sea Dispute is a maritime conflict pertaining to sovereignty over Spratly and Paracel islands in the South China Sea and the surrounding sea territory. China, Taiwan and five ASEAN (Association of South East Asian Nations) countries, i.e., Vietnam, Philippines, Malaysia, Brunei and Indonesia are involved in this dispute. The exclusive economic zones of these countries also overlap in this area.[4] The dispute involves several complicated issues relating to the interpretation of the UN Convention on Law of the Sea, 1982.[5]

GENESIS AND BRIEF HISTORY OF THE DISPUTE

The South China Sea was very calm in the beginning of the 20th century because China and its neighboring States were focused on other global conflicts like World Wars I and II. In fact, at the end of the Second World War in 1945, no country possessed any island in the entire South China

Sea. It was in 1946 that China took possession of a few islands in the Spratly chain of islands. [6] The interest of various countries like China, Taiwan and Philippines in the South China Sea grew by leaps and bounds over the next 50 years. Between 1955 and 1956, China and Taiwan permanently occupied many islands in this area. But there was no dispute in this area for the next 15 years. However, by the early 1970's, the claimants became active again in order to wrest control of the disputed area because they came to know that there were significant crude oil reserves in the South China Sea. China and Philippines forcibly occupied several islands. The Battle of Paracel Islands was fought between the Naval forces of China and South Vietnam in January 1974. China emerged victorious in this battle and wrested control of several islands from South Vietnam. In this battle, several sailors and officers of the Vietnamese Navy were killed. After this battle, North and South Vietnam fortified their remaining positions in the South China Sea. They also took control of several unoccupied islands. Thereafter, tensions between these countries de-escalated for some years. However, disputes arose again in 1995 because Beijing built several underground bunkers in order to consolidate its position above the Mischief Reef.[7]

SOUTH CHINA SEA DISPUTE IN THE TWENTY FIRST CENTURY

In 2002, ASEAN (Association of South East Asian Nations) countries and China came together and held discussions to resolve the conflict in South China Sea. The discussions culminated in the Declaration on the Conduct of Parties in the South China Sea, 2002. The Declaration motivated the concerned countries to lay down a Code of Conduct for the use of resources of South China Sea. The parties promised not to use armed forces against each other in this

---

Occasional Paper, 2013, National Security College (April 3, 2019, 5:45 PM),http://nsc.anu.edu.au/documents/occasional-5-brief-1.pdf. The UN Convention on Law of the Sea may contribute to a solution, but it has also contributed to the scramble for maritime territory and resources. UNCLOS allows each littoral state to claim an Exclusive Economic Zone of 200 nautical miles, and a Continental Shelf, and specifies that islands can generate their own EEZ's or continental shelves. However, what the claimants may be entitled to by asserting sovereignty over islands will be limited by UNCLOS, since not all islands can generate EEZ's or continental shelves. In Article 121(3), UNCLOS distinguishes between islands and rocks or reefs, which cannot generate EEZ's or continental shelves, but which are entitled to a 12 nautical mile territorial sea. Islands may not be entitled to full maritime zones in certain situations where they are close to continental land masses. Coastline length may be used to determine entitlement to the maritime zones of occupied islands, in which case the Philippines and Vietnam would benefit more than China. UNCLOS does not significantly benefit China in this matter, which has sought alternative ways of validating its claim to the area.

7. David Anderson, Some Aspects of the Regime of Islands in the Law of the Sea, 32(2) INTERNATIONAL JOURNAL OF MAINE AND COASTAL LAW 320 (2017).

maritime area and agreed to solve their conflicts in an amicable manner. Over the next few years, the claimants refrained from provoking each other and did not occupy any other islands in the region. The concerned countries did not use force against each other. However, they started troubling each other by repeatedly sending demarches[8] and notes verbales.[9] Malaysia and Vietnam forwarded a joint memorandum to the Commission on the Limits of the Continental Shelf in May 2009, putting forth their claims in the South China Sea.[10]

China responded to the joint memorandum by submitting a map in which their notorious "nine dash line" was published. This line encompasses the entire South China Sea. China maintains that on the basis of its historical rights, it has unrestricted sovereignty over the islands in the South China Sea as well as the superjacent waters. Ever since the nine dash line was published, other countries interested in the South China Sea have been worried and intimidated by China's nefarious designs in the South China Sea. In 2012, Beijing snatched Scarborough Shoal away from the Philippines. Since then, Philippino boats have not dared to enter the waters of this shoal. [11]

Over the past 9 years, Chinese Navy has become very aggressive in the South China Sea. China has started an extensive land reclamation program in the entire South China Sea by constructing artificial islands. China has also prepared an airstrip on one of the large islands in this zone. Civilian as well as military aircraft are capable of landing on this airstrip. Till date, China has reclaimed over 2000 acres of land in the South China Sea. The other claimants in this region have vehemently condemned this land reclamation. In 2014, US President Barack Obama warned China and asked it to "stop throwing elbows and pushing people out of the way in pursuit of its interests."But unfortunately, China has not adhered to such warnings and requests till date.[12]

ISSUES INVOLVED IN THE DISPUTE

Both economic and strategic issues are involved in this maritime dispute. These issues are explained below:

1. Oil and Gas Reserves: Oil is the backbone of the economy of every country. Malaysian

8. Demarche is a formal diplomatic representation of the official position, views, or wishes on a given subject from one government to another government or intergovernmental organization.
9. Note Verbale is a diplomatic communication drafted in the third person and unsigned.
10. *Supra* note 6.
11. *Ibid.*
12. *Ibid.*

company Petronas is the major oil producer in this region. In 2011, it produced half a million barrels of crude oil per day. Apart from crude oil, it also produced 600 billion m3 of natural gas per year. Vietnamese company Petro Vietnam is also active in this area. With the passage of time the demand for crude oil has increased. As a result, the existing crude oil reserves have depleted. Therefore, both Petronas and Petro Vietnam are looking for new reserves in order to stay afloat in the market. This has irked China because it imports 55% of its crude oil and does not want any other country to explore the resources of the South China Sea.[13]

2. Fish Stocks: Fishing is the main source of earning livelihood for the people residing along the coastal areas. China has a very long coastline and the South China Sea is very rich in fish stock. But unfortunately, the fish stock of this region has been over exploited because of population explosion. As a result, both the quality and quantity of fish in this area has declined considerably. Some recent clashes which have taken place in this zone have been because of fisheries. Many countries have been sending naval and coast guard vessels in this zone for the purpose of supporting and protecting their fishermen. This has resulted in several tense incidents and close shaves.[14]

3. Strategic Value: The busiest sea lanes of the world pass through the South China Sea. It connects North East Asian countries like Japan, Philippines, Taiwan and South Korea with the South Asian countries like Malaysia, Sri Lanka and India. Most of the North East Asian countries import crude oil through the South China Sea because this trade route further extends to the Middle East countries which have abundant reserves of oil. Around 50 percent of the world's maritime trade and commerce is carried out through this area. Therefore, it holds immense strategic significance for North East Asian and South Asian countries. China can very easily hold these countries to ransom by blocking access to this vital trade route. Therefore, the major maritime powers like USA and Japan have always strived to maintain freedom of navigation through the area, which means preventing control over the South China Sea by one power, particularly a potentially hostile one.[15]

So far as China is concerned, it imports 80 percent of its crude oil through the South China Sea. In addition to it, 40 percent of China's entire trade and commerce is carried out through this zone. China is having an apprehension that in case the conflict in this zone aggravates, the US

13. *Supra* note 5.
14. *Ibid.*
15. *Ibid.*

Navy and the Indian Navy may join hands together in order to block China's oil imports and thus bring China down to its knees. Therefore, in order to protect its strategic interests, China has developed a very strong naval force which also includes an Aircraft Carrier and a few nuclear submarines capable of operating even in the Indian Ocean region. It is important to mention here that the US Navy has invited the Indian Navy many times for conducting joint patrolling in the South China Sea, but India has till date refrained from doing so, fearing Chinese aggression.

UNCLOS VERSUS CHINA'S HISTORICAL RIGHTS

China's claims to sovereignty over the South China Sea are based on 'historic rights' supported by imperial maps of the Ming dynasty, which date back to the 13th century.[16] The Chinese put forth the view that their historical notions of sovereignty predate and prevail over Western International Law and should be recognized as valid ab initio. China further argues that the United Nations Convention on Law of the Sea, 1982, is not applicable to the South China Sea because China had indisputable sovereignty over this area even before the coming into force of

16. Abhishek Pratap Singh, South China Sea Arbitration: An Analysis, Eurasia Review(April 5, 2019, 7:00 PM), http://www.eurasiareview.com/16052016-south-china-sea-arbitration-analysis/.

the UNCLOS, 1982. In the above mentioned image, the red line depicts the area claimed by China in the South China Sea. It is notoriously known as "The Nine Dash Line."

However, the Chinese claim of sovereignty over the entire South China Sea on the basis of historical records is not in consonance with modern International Law.[17] Justice Max Huber's test laid down in the ***Island of Palmas Case (United States of America vs. The Netherlands)***[18] *provides that "any rights obtained from history may be lost if they are not maintained in accordance with the changes brought about by the development of modern International Law."*[19]

Legally, most of the provisions of UNCLOS, 1982, are binding on all nations because it has codified pre-existing international customs related to maritime law. This is irrespective of the fact whether they have signed this Convention or not. As of December 2019, 167 countries and the European Union have ratified this Convention. USA is the only major maritime power which has not ratified the UNCLOS. In the ***Case concerning the Continental Shelf of Libyan Arab Jamahiriya/Malta,***[20] decided on 3rd June 1985, the International Court of Justice observed that: *"It cannot be denied that the 1982 Convention is of major importance, having been adopted by an overwhelming majority of states. Hence, it is the duty of this Court even independently of the reference made to the Convention by the parties, to consider that in what degree any of its relevant provisions are binding upon the parties as a rule of customary International Law."*[21]

THE PHILIPPINES VERSUS CHINA ARBITRATION CASE

International Court and Tribunals generally assume jurisdiction on the basis of mutual consent of the parties to the dispute. However, once a State has signed and ratified the UNCLOS, 1982, it has to settle all its disputes pertaining to the Convention by either one of the four methods mentioned in the Convention itself. Such disputes can be brought before the International Court of Justice (ICJ) or the International Tribunal for Law of the Sea (ITLOS). They can also be submitted for Arbitration under Annexes VII and VIII of the Convention. Thus, one of the disputant States can sue the other State or States in either of these forums for resolving a

maritime dispute if the terms and conditions of the UNCLOS, 1982, are fulfilled.[22] Aggrieved by China's aggressive stance in the West Philippine Sea, which is overlapping with the South China Sea, Philippines brought forth arbitral proceedings against China at the Permanent Court of Arbitration, the Hague on 22nd January 2013, having recourse to Annexure VII of the UNCLOS, 1982.[23] ***In The Republic of Philippines vs. The People'sRepublic of China,***[24] the Philippines challenged the legality of the U shaped line (Nine Dash Line) claimed by China and the legal regime of several other features in the South China Sea. China refused to appear before the arbitral tribunal. It asserted that as per the treaties signed between China and Philippines, territorial disputes have to be settled by mutual negotiations only. The Chinese government further stated that as per the terms of "The Voluntary Declaration on the Conduct of Parties in the South China Sea," signed in 2002 between China and ASEAN (Association of South East Asian Nations) countries, border disputes have to be settled by bilateral or multilateral negotiations. China accused Philippines of violating this Declaration.[25]

China also challenged the jurisdiction of the arbitral tribunal to try the case, citing certain provisions of the UNCLOS, 1982.[26] China further claimed that the dispute settlement

24. Case No. 19/2013.
25. *Supra* note 22, at 74.
26. *Ibid.* UNCLOS, 1982, provides for optional exceptions for excluding the jurisdiction of dispute settlement forums provided in the Convention. As per Article 298, States may exclude several types of disputes by a declaration, among others, including disputes concerning maritime delimitation or historic title. China made such a declaration in 2006. Article 298(1) provides that when signing, ratifying or acceding to this Convention or at any time thereafter, a State may declare in writing that it does not accept any one or more of the procedures provided for in section 2 with respect to one or more of the following categories of disputes: (a) (i) disputes concerning the interpretation or application of articles 15, 74 and 83 relating to sea boundary delimitations, or those involving historic bays or titles, provided that a State having made such a declaration shall, when such a dispute arises subsequent to the entry into force of this Convention and where no agreement within a reasonable period of time is reached in negotiations between the parties, at the request of any party to the dispute, accept submission of the matter to conciliation under Annex V, section 2; and provided further that any dispute that necessarily involves the concurrent consideration of any unsettled dispute concerning sovereignty or other rights over continental or insular land territory shall be excluded from such submission; (ii) after the conciliation commission has presented its report, which shall state the reasons on which it is based, the parties shall negotiate an agreement on the basis of that report; if these negotiations do not result in an agreement, the parties shall, by mutual consent, submit the question to one of the procedures provided for in section 2, unless the parties otherwise agree; (iii) this subparagraph does not apply to any sea boundary dispute finally settled by an arrangement between the parties, or to any such dispute which is to be settled in accordance with a bilateral or multilateral agreement binding upon those parties; (b) disputes concerning military activities, including military activities by government vessels and aircraft engaged in non-commercial service, and disputes concerning law enforcement activities in regard to the

mechanism provided under the UNCLOS applies only to the Convention's application or interpretation. Therefore, the parties cannot avail its dispute settlement mechanism for settling their territorial sovereignty disputes. However, just one week before the deadline set by the arbitral tribunal for the submission of a counter memorial, China published a position paper highlighting its case on 7th December 2014.[27] It is important to mention here that China's decision of not participating in the arbitral proceedings cannot prevent the arbitral tribunal from proceeding with the case. Vietnam also submitted its position paper in the capacity of an interested third party, supporting the stand taken by the Philippines. In response to China's claim, Philippines clarified that all arguments put forth by it before the tribunal do not deal with territorial sovereignty only. It has only requested the arbitral tribunal to decide the legality of the U shaped line (Nine Dash Line) claimed by China and the legal status of several other islands in the South China Sea, notwithstanding the fact that who has sovereignty over them.[28]

The hearing of the case began on 7th July 2015. It was attended by observers from Indonesia, Malaysia, Japan, Thailand and Vietnam. The first issue before the Court was pertaining to jurisdiction. On 29th October 2015, the Court held that it has the jurisdiction to hear the case. However, it agreed to take up only 7 out of the 15 submissions put forth by Philippines. Two of these submissions related to the Scarborough Shoal and the Mischief Reef, which is a low tide zone. The issue was whether the shoal and the reef can be considered as islands.

In a landmark verdict delivered on 12th July 2016, the UN Arbitral Tribunal held that *"Philippines has exclusive sovereign rights over the West Philippine Sea (South China Sea). The Court also declared China's Nine Dash Line as invalid. The Court concluded that there is no legal basis for China to claim historic rights to resources in the sea areas falling within the nine dash line. It further observed that China has violated Philippine sovereign rights in the West Philippine Sea."*[29]

POST JUDGMENT DEVELOPMENTS

After the delivery of the judgment by the UN Arbitral Tribunal on 12th July 2016, China

---

exercise of sovereign rights or jurisdiction excluded from the jurisdiction of a court or tribunal under article 297, paragraph 2 or 3; (c) disputes in respect of which the Security Council of the United Nations is exercising the functions assigned to it by the Charter of the United Nations, unless the Security Council decides to remove the matter from its agenda or calls upon the parties to settle it by the means provided for in this Convention.

29. Matikas Santos, Philippines Wins Arbitration Case vs China Over South China Sea, Global Nation (April 12, 2019, 8:30 PM), http://globalnation.inquirer.net/140358/philippines-arbitration-decision-maritime-dispute-south-china-sea-arbitral-tribunal-unclos-itlos.

declared that any decision by the UN Arbitral Tribunal which forces it to compromise with its territorial sovereignty is unacceptable to it. Chinese Foreign Ministry spokesperson Hua Chunying remarked that "on the issues of territorial sovereignty and maritime rights and interests, China will never accept any imposed solution."[30] On the very same day, China threatened to declare an "Air Defence Identification Zone (ADIZ)" over the disputed waters of the South China Sea. Liu Zhenmin, Chinese Vice Foreign Minister remarked that "if our security is being threatened, we have the right to demarcate an air defence identification zone."[31] If such an ADIZ is actually imposed, China would enjoy the right to require every aircraft entering the designated airspace to identify itself, failing which, it could be shot down. In November 2013, China declared an ADIZ over the disputed islands in the East China Sea and named it as "East China Air Defence Identification Zone." Both USA and Japan condemned this move by China. It resulted in the escalation of tensions between these three countries. USA immediately responded by sending two fully loaded B-52 Bombers of the US Air Force in this ADIZ and refused to identify them to China. However, the Chinese did not dare to shoot them down, fearing retaliation by the American forces. USA might respond in a similar manner if the Chinese declare an ADIZ over the South China Sea.[32] But till date, China has refrained from doing so.

On 28th July 2018, China for the first time sent a search and rescue ship to be permanently stationed at one of its manmade islands in the disputed Spratly chain of the South China Sea. China has also built several military outposts on the disputed islands of the South China Sea. It has always maintained that these facilities are for defensive purposes only. However, such moves could actually help to bolster China's claim of sovereignty over the disputed islands.[33]

On 5th July 2020, the US Navy deployed two aircraft carriers, i.e., "USS Nimitz" and "USS Ronald Reagan" in the South China Sea for conducting military exercises. This was done with

the objective of mounting pressure on China to stop its expansionist activities.[34] In response, the Chinese Army conducted maritime attack drills and the Chinese Navy deployed warplanes in the South China Sea.[35]

INDIA AND SOUTH CHINA SEA

South China Sea holds vital significance for India because 55 percent of India's maritime trade and commerce is carried through the Malacca Strait, which is connected to the South China Sea. The aggressive posture of China in this maritime zone can be detrimental to India's economy as well as national security. If the South China Sea dispute takes a violent form and results in the outbreak of a War between the disputing States or between China and USA, the security of the entire Indian Ocean region would be jeopardized. Such a situation might disrupt India's trade with its South East Asian neighbours. Therefore, India needs to adopt a defensive strategy by entering into military alliances with its South East Asian neighbours in order to counter China's aggressive maneuvers in the South China Sea. Such a strategy has become imperative for India as the Chinese Navy has already established a foothold in a few critical Indian Ocean States like Myanmar and Cambodia.[36]

Although India is not a party to the ongoing conflict in the South China Sea, it needs to keep a keen eye on the dispute in order to maintain peace in the Indian Ocean region. China has poked India several times by stating that the Indian Ocean is not India's Ocean. But no one can deny the fact that India has the largest Navy in the South Asian region and is duty bound to maintain the Indian Ocean as a zone of tranquility. Therefore, India is interested in the South China Sea dispute primarily for three reasons, i.e.,

i) Firstly, to maintain and strengthen its maritime security,

ii) Secondly, to develop close ties with ASEAN countries to fulfill its 'Look East Policy' and

iii) Thirdly, to counter China in the Indian Ocean region.[37]

36. Abhijit Singh, India and the South China Sea Dispute, The Diplomat (Sept. 22, 2019, 12:23 PM), https://thediplomat.com/2016/03/india-and-the-south-china-sea-dispute/.
37. *Ibid.*

However, till date, India has maintained a pragmatic position on the dispute. India has not favoured any particular country in the ongoing dispute. But it has always stressed upon the freedom of navigation for all countries. It has also advocated the peaceful resolution of all international disputes in accordance with the well settled principles of International Law.[38] So far as the decision of the arbitral tribunal on the South China Sea dispute, delivered in 2016 is concerned, India has urged all the disputing States to accept the verdict.

CONCLUSION

In the twenty first century, the South China Sea dispute is indeed a boiling point which could trigger a Nuclear War between USA and China in the hotly contested waters and beyond. The Chinese Navy and the US Navy often make aggressive overtures against each other in this sea. Although the South China Sea Dispute has its roots in history, it has assumed greater significance in the twenty first century. This is so because the South China Sea is a major shipping and trade route, it is rich in oil and gas reserves and fish stocks, and has a great strategic and military value. Apart from these factors, the advancement of science and technology has made it possible for China to reclaim land in the South China Sea by constructing artificial islands, which is a cause of concern for the other countries involved in the dispute. China's claim to the whole of the South China Sea on the basis of its nine dash line (U shaped line) cannot be justified by any stretch of imagination. The Chinese claim is in clear cut violation of the United Nations Convention on Law of the Sea, 1982, as well as customary international law. Such an extensive and usurping claim cannot be sustained on the basis of historical rights alone. No country should be allowed to usurp the exclusive economic zone of other countries on the basis of its historical rights. China is trying to aggressively dominate its small and weak maritime neighbors involved in the dispute as they cannot match the manpower and firepower of the mighty Chinese Navy. China is thus hell bent to prove that "might is right." The Chinese claim has been vehemently condemned and opposed by the other countries involved in the dispute as well as by neutral countries like India, Japan and USA.

SUGGESTIONS

In order to settle the South China Sea Dispute permanently, it is suggested that all countries involved in the dispute should whole heartedly accept the verdict of the Arbitral Tribunal

38. *Supra* note 33.

delivered in the case of ***Philippines vs. China.*** For the promotion and sustenance of international peace and security, it is imperative that the dispute should be settled at the earliest, once and for all, on the basis of a liberal and extended interpretation of the United Nations Convention on Law of the Sea, 1982, which is virtually a "Constitution for the Oceans."All countries bordering the South China Sea should bring their maritime claims in conformity with the provisions of the UNCLOS, 1982. This approach seems to be the best for dealing with the underlying sovereignty and maritime disputes in the South China Sea.[39] If China fails to abide by the UNCLOS, it would be a serious violation of International Law. Moreover, it will tarnish China's reputation and will become a hurdle in its quest to become a global leader. [40]

It is further suggested that China must be encouraged to resolve the issue of its claims in the South China Sea in a spirit of mutual cooperation, regional harmony and peace. Unnecessary belligerence and assertiveness will only vitiate the atmosphere and harm its own long term interests. Joint development of the region and sharing of natural resources will be for the common good of the region, as against an attempt to corner them for use by one country flexing its military muscle.[41]

It has been very aptly remarked that *"where the limits of the law are exhausted, it is for the diplomacy to mend friendly relations so that the desired results may be achieved."*[42]

THE TRANSITIONAL SHIFT FROM THE HUMAN RIGHTS OF THE 'MENTALLY RETARDED' TO THE HUMAN RIGHTS OF THE PERSONS WITH INTELLECTUAL DISABILITIES- THE DISABILITY OFTEN IGNORED

-Nidhi Sharma*

"…The Disabled too are equal citizens of the country and have as much share in its resources as any other citizen. The denial of their rights would not only be unjust and unfair to them and their families but would create larger and grave problems for the society at large. What the law permits to them is no charity or largesse but their right as equal citizens of the country."[1]

Justice Aftab Alam.[2]

INTRODUCTION

Human Rights are considered as those natural rights which portray the existence of every human being in this society and also accord the right to lead a life of dignity and self-worth. These rights are considered to be inherent to the human survival and have been recognised as well as advocated since the last many centuries. Starting from the rights such as the right to life and right to self-preservation to providing the rights for every human which forms a part of this society, the concept of Human Rights has undergone a lot of evolution. At present, the movement of human rights has reached a point where they are not considered to be a choice but have been made mandatory for the well-being of the citizens of every country. All the national and domestic laws of the countries have these rights embedded within their Constitutions and there are proper remedies available for the violation of the same.

When we talk about the concept of Human Rights it must be seen that it is made up of two important words, Human and Right. The term 'right' which has its genesis in the Latin term 'rectus' i.e. rectify or correct, means something which is 'just.' It must be remembered that a 'Human' without 'Rights' is not a free man and is equivalent to a slave. Thus, all the doctrines and the ideologies as propounded by various writers and authors which talk about the protection of human freedom or upholding their dignity always presuppose the existence of the human

rights. Harold Laski has rightly observed that, 'every state is known by the rights that it maintains'[3]. Even the writers and philosophers existing in the Vedic period were of the view that human rights are those essential rights without which we cannot be accorded with the true status of being a 'human'. According to them these essentials help us to grow and develop in the best possible manner. One of the other important things that they pointed out was that these rights are universal in nature and shall apply to one and all without any kind of discrimination.

Disability is regarded as that component of human existence which results due to the impairments that affect a person's social outlook. There is a lack of ability to take part in the societal affairs at an equal level with others. All human beings in this world are born free and are equal in terms of equal dignity and rights. 'Right' as we understand is nothing but an entitlement which a person may claim either on moral or legal grounds. The specially abled people whom we often regard as 'disabled' persons are considered to be a weaker section of the society and at times sub-human due to which they are at a risk of violence whether physical, mental or sexual in nature.

The concept of disability has been discussed by various thinkers and jurists who have not only tried to define the term but also accorded a viable interpretation to it over the years. When we use the term 'disability' we equate it with some form of incapability or deficiency to perform a physical or mental activity. In other words, disability can be expounded as the lack of ability and opportunities to compete with the world at large standing at the equal pedestal. Persons with disabilities have always been considered as the soft targets of abuse, inequality and charity in our society. For centuries they have been considered nothing but subjects of charity and pity which requires a change.

Even the texts of religious scriptures do not exempt the disabled from being regarded as the weaker and lower section of the society. The religion considers them incapable to perform the religious duties and ceremonies. The importance of rights for persons with disabilities is essential to their struggle for equality and social participation.[4] Before we discuss the shift in the terminology it would be imperative to first get an understanding of the terms 'disability' and 'intellectual disability'.

4. Jayna Kothari,The Future of Disability Law in India: A Critical Analysis of the Persons with Disabilities (Equal Opportunities, Protection of Rights and Full Participation) Act, 19952 (Oxford University Press, 2012).

DISABILITY- MEANING

Even though the concept and types of disabilities have been recognized around various cultures, the definition of the term disability is subjected to various socio-cultural considerations and the extent to which the persons with disabilities are acknowledged or discriminated varies from culture to culture.[5] Therefore, it would be correct to say that the notion and perception of disability varies according to the customs and culture which shape the attitudes of people living there. Disability is not just confined to the health condition rather covers a wide range of impairments. In order to attain a better clarity of the term disability, it would be imperative that we tend to focus on the various definitions and meanings attributed to it.

To frame a proper legal definition of disability is not exempted from debate itself. The definition of disability varies across the globe. A study which was conducted on the definitions of disability in various European Union countries depicted that the definitions vary not only from country to country but also in different cultures within a country.[6] To articulate and confine the word disability to a single definition is not an easy task since it contains within itself a number of impairments in the mind and the body. To sum it up the boundary between an abled and a disabled persons seems to be unclear.For example in the case of intellectual disability the ability to understand pictures but not words or numbers results in a disability regarded as dyslexia. Therefore, it is difficult to encompass the various impairments of conditions of mind in one single definition. Moreover, we often encounter a change in the definitions of disability with the developments in the field of science and medicine.

Nevertheless, there are some definitions mentioned in the legal instruments which speak about the rights of the disabled persons. The Preamble to the Convention on the Rights of Persons with Disabilities, 2006[7] not only acknowledge that disability is an evolving concept but also stresses that disability is the result of interaction that occurs between a person under an impairment and his environmental and attitudinal barriers. It also stresses that such barriers often hinder their active and full participation in the society. Therefore, to define disability as an interaction means that disability is not an attribute of a person.

Disability has often come to be understood as an existing difficulty in performing one or more

activities which in accordance with age, sex and other social factors are generally accepted as an essential basic component of daily living.[8] It is very essential that the meaning of disability is clarified at the very outset so that there persists no ambiguity in the future. Therefore, the terms such as impairment, disability and handicap are not be used synonymously as it will only lead to ambiguity. The World Health Organization has attempted to make a distinction between these three terms.[9] According to WHO impairment refers to the loss of physical or sensory working of any particular organ of the body, while disability means an inability or a limitation to cope up with the normal routine in an equal manner with the others. Handicap on the other hand is an entirely different concept which is nothing but a situation which results from the impairment or disability clubbed along with the response coming from the society.[10]

The definition of disability can be viewed from two perspectives, one being the medical definition and other being the social or legal definition. The legal definitions of disability vary according to the legal purposes that it attempts to fulfil. A law which talks about the social welfare of the disabled shall carry a definition which provides benefits in the society rather than an anti-discrimination law. This debate about the medical definition versus the social or legal definition has had a larger impact on disability studies, as it leads to a shift from the charity oriented understanding to a rights based understanding of the term disability.[11]

While the medical perspective only focuses to reintegrate the person with disability into the mainstream society, the social model defines disability with regard to the social, environmental and attitudinal barriers rather than the lack of ability. The concept of discrimination is the main attribute in the social definition, which focuses on the point that the disabled people do not face disadvantage because of their impairments but experience discrimination in the way a society is organised.

By placing emphasis on human dignity, respect and the right to equality, rather than the simple bio-medical condition the social approach recognises that the attitudes of society and its members often contribute to the idea or perception of a handicap and in fact a person may have limitations in everyday activities other than those reportedly created by prejudice and stereotypes. Since the research paper deals with one important aspect of disability i.e.

Intellectual Disability, it is quite imperative that the term needs to be understood and subsequently the paradigm shift in the concept and terminology from'mental retardation'to 'intellectual disability'will be discussed.

INTELLECTUAL DISABILITY

The meaning and definition of the term intellectual disability has always remained a topic of debate since the times when classification of disorders relating to brain was being done.[12] Since the last decade, the term intellectual disability is more often used instead of the term mental retardation. Esquirol referred to intellectual deficits overall as conditions of incomplete mental development based on known or unknown biological or environmental issues.[13] The Convention on the Rights of the Persons with Disabilities, 2006 does not define the term disability per se, but rather talks about it as an outcome of the interaction between an impairment and the environment. Such a definition highlights the heterogeneity of experiences, life chances, choices and preferences of adults and children with disabilities shaped by a range of socio-economic, cultural and other factors rather than focusing on a condition. Therefore, in line with the Convention, the World Report on Disability[14] defines the term intellectual impairment as:

> "A state of arrested or incomplete development of mind which means that the person can have difficulties understanding, learning and remembering new things and in applying that learning to new conditions. Also known as intellectual disabilities, learning disabilities and formerly as mental retardation or mental handicap."[15]

The American Psychiatric Association[16] also defines Intellectual Disability as something which involves general mental abilities that affect the functioning in two areas i.e the intellectual functioning involving activities like learning or solving problems, etc. The Diagnostic and Statistical Manual[17] defines Intellectual Disability as an inability in the cognitive aspect of the brain and an intelligence quotient below 70. Apart from that the definition also covers the

inability to cope up in three areas i.e. conceptual (reading, writing, reasoning etc.), social and practical (taking up job responsibilities, take care of one's own self, etc).

At the national level, The Persons with the Disabilities Act, 2016[18] under its Schedule[19] clearly mentions that intellectual disability includes a disability in the intellectual functioning (reasoning, learning, problem solving) and in adaptive behaviour (every day, social and practical skills, including specific learning disabilities)[20] and autism spectrum disorder.[21] Specific Learning Disability means the condition where there is a deficit in processing language, or difficulty to comprehend, speak, read, write, spell or do mathematical calculations and also includes perceptual disabilities, while Autism Spectrum Disorder is a neuro-developmental condition that appears in the first three years of the life of a person. It affects a person's ability to communicate, understand relationships and relate to others.

Therefore, in the opinion of the researcher, intellectual disability may be defined as a significantly reduced ability to understand new or complex information, to learn new skills and a reduced ability to cope independently i.e. impaired social functioning. A person's mental capacity, the ability to make decisions can vary depending on the environmental or social factors; however, the legal capacity is "a universal attribute inherent in all the persons by virtue of their humanity and can therefore not be stripped of it."[22]

The Conceptual and Terminological shift from the Human Rights of the 'Mentally Retarded' to the Human Rights of the Persons with'Intellectual Disability'

As mentioned earlier, nowadays the term intellectual disability is used instead of mental retardation by the medical practitioners, psychiatrists, counsellors, lawyers and other sections of the society. The question that often arises in our mind is what necessitated or led to this change in the terminology of mental retardation. The laymen in our society often tend to use the term mental retardation whenever they meet any persons suffering from a disability connected to mind. There is a lack of awareness as well as knowledge whereby people fail to understand that a mere learning disability cannot be equated to a severe form of mental disorder. Organizations such as the American Association on Intellectual and Developmental Disabilities and the

International Association for the Scientific Study of Intellectual Disabilities have brought this change in the terminology.

The major question that has been addressed by the researcher is that as to why the term intellectual disability has been given preference as compared to mental retardation since the disability includes the same patients who were prior to this shift diagnosed with mental retardation. The only difference is that the ambit has been made wide and also includes the learning and developmental disabilities as well. Moreover, it has become the need of hour that the people have to be made aware that the illness resulting from psychological impairments also do not amount to intellectual disability.

Since time immemorial the society has equated the terms such as idiocy, mental illness, depression, bipolar disorders, epilepsy or simply a feeble mind with mental retardation. The people suffering from mental illness need mental health care and other therapies. In India, the Mental Healhcare Act, 2017[23] talks about the rights of the persons with psychological disorders which constitute 'mental illness' as a part of mental disorder, which also finds place in the Schedule attached to the 2016 Act.[24] The reason for doing so is that the disability that they are suffering from is not permanent in nature and they can live independently when the mental health is stable. On the other hand, in intellectual disability there is an actual impairment due to which it is difficult to cope up with the basic routine activities. If the disability is mild in nature they can live independently but not without support. But, if the disability is severe in nature the persons require a long term medical help and in most cases they remain specially abled for their entire life. Nevertheless, the fact remains that the persons suffering from both intellectual disability and mental disability are the victims of same prejudices and attitudes from the society.

In 1959 the American Association on Mental Retardation, at that time called the American Association on Mental Deficiency, published a definition of mental retardation according to which, mental retardation refers to subaverage general intellectual functioning which originates during the developmental period and is associated with impairment in adaptive behaviour. The definition was revised in 1961 which specified the meaning of the term subaverage general intellectual functioning in a manner that was to have considerable impact on the field of mental

23. The Mental Healthcare Act, 2017, No. 10, Acts of Parliament, 2017 (India).
24. Part 3 to the Schedule attached to the Rights of the Persons with Disabilities Act, 2016.

retardation. One standard deviation below the mean on an intelligence test was delineated as the point at which intellectual functioning should be considered subnormal. In 1992 the definition was again revised which said that mental retardation refers to a particular state of functioning that begins in the childhood in which the limitations in childhood coexist with related limitations in adaptive skills.[25]

Subsequently, with the emergence of intellectual and developmental disabilities, the name of the association was also changed to American Association on Intellectual and Developmental Disabilities (AAIDD). According to the definition given by the association, intellectual disability is a disability characterized by significant limitations in both intellectual functioning and in adaptive behaviour, which covers everyday social and practical skills. This disability originates before the age of 18.[26] But in defining and assessing intellectual disability, the AAIDD stresses that additional factors must be taken into account, such as the community environment typical of the individual's peers and culture. Professionals should also consider linguistic diversity and cultural differences in the way people communicate, move, and behave.[27] Thus, the term or name for condition we know today as intellectual disability has changed over the time; most recently the condition was primarily known as mental retardation. Although the name has changed, for more than 50 years the three essential elements for all US-based definitions for this condition limitations in intellectual functioning, behavioural limitations in adapting to environmental demands, and early age on onset have not substantially changed.The fifth edition of the Diagnostic and Statistical Manual of Mental Disorders replaced the term mental retardation with intellectual disability and the same was done in consonance with the terminology which was used by the World Health Organization's International Classification of Diseases.[28]

In the earlier times, persons were identified as patients of mental retardation since they were not able to adapt in the environment and suffered various developmental and learning impairments. However, with the coming of medicine there came a shift in the approach whereby the symptoms were identified and later it was designated as a mild, moderate or severe type of

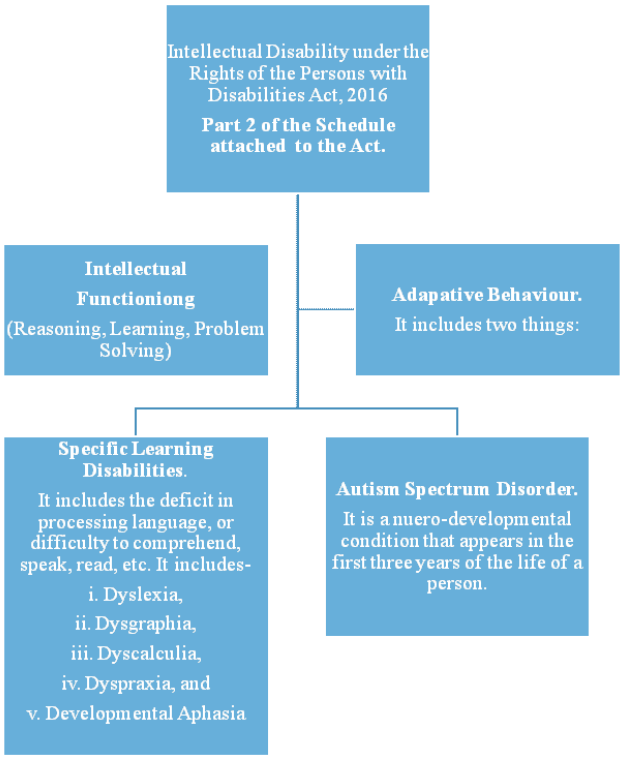
disability. For example dyslexia or dyscalculia is also included within the definition of intellectual disability and autism is also a part of the list. The causes, effects and consequences of both these categories are different but they have an impact on the social and cognitive functioning of an individual so they are referred to be a part of intellectual disability.

With the emerging trend of intelligence being regarded as an important aspect, the concept of IQ emerged and then the hidden forms of intellectual disability came to be recognised. This further led to the IQ-based statistical norms to define and classify the categories of intellectual disability. Moreover, the advocates for persons suffering from intellectual disability are of the view that the term mental retardation has somewhat a negative impact and tends to be degrading to people. Further, due to lack of understanding about the nature and type of disability people tend to confuse even a learning disability as mental retardation. Therefore, it would not be wrong to say that the term mental retardation is still in use in many settings, including by some clinicians, and is found in legal and public policies that determine eligibility for support; however, the use of the term intellectual disability as a direct substitute for mental retardation is increasing.



INTELLECTUAL DISABILITY – CHANGE IN TERMINOLOGY IN INDIA

In India like in most of the countries the concept of mental retardation has received a backseat and the term has been replaced by intellectual disability. The 1995 Act[29] on persons with disabilities used the term mental retardation and recognised it as a condition of arrested or incomplete development of mind usually identified by sub normality of intelligence.[30] However, after the coming of the new legislation for The Persons with Disabilities Act in 2016 the term intellectual disability has replaced mental retardation. The schedule attached to the Act as mentioned before refers to the specific disability i.e. the intellectual disability. This particular part gives us various form of disability which are included within the umbrella of intellectual impairments. It includes the limitation not only the intellectual functioning of a person but also the deficit in the adapting to the social environment. Apart from this learning disabilities which are specific in the sense that there is a difficulty in processing language or difficulty in

29. The Persons with Disabilities (Equal Opportunities, Protection of Rights and Full Participation) Act, 1995, No. 1, Acts of Parliament, 1996.
30. Section 3(r) ofThe Persons with Disabilities (Equal Opportunities, Protection of Rights and Full Participation) Act, 1995.

understanding or reading and writing. The disabilities with regard to perception such as dyslexia, dysgraphia, dyscalculia and dyspraxia are also included in the terminology of intellectual disability. Lastly, the definition also includes autism spectrum disorder.

For a better clarity of the concept of intellectual disability, the researcher has prepared a flowchart (please refer to the next page) which depicts the various specific learning disabilities as enumerated under the national law. Thus, after a perusal of the legislation we get to know that at present nowhere the term mental retardation has been used. Therefore, the shift though late in time has successfully reached in our country as well through the legislation. The Act provides for various rights given to the persons suffering from intellectual disability in India. This particular aspect of disability therefore, contributes greatly to view various forms of human ability and the capability of the brain in conceptualizing this ability.

CONCLUSION

After a complete perusal of the concepts of 'mental retardation' and 'intellectual disability' it can be aptly concluded that this transition and terminological shift was the need of the hour since the application of the word 'mental retardation' for the specially abled persons was considered to be derogatory as well as against the principles and human worth. Moreover, the human rights should be made a prerogative and not a choice when it comes to the persons with intellectual disabilities. The discrimination and the wrath of the society as well as the ignorance of the government against them has never been a healthy scene to encounter. Apart from this, addressing them as 'mentally retarded' and casually using this term required a change and bringing this conceptual change was nothing but a necessity. The efforts that began in the Western and other European countries has also led to a fruitful result in India.

The transition and the journey from the definition of 'mental retardation' under the 1995 Act to now addressing it as 'intellectual disability' and a form of specific disability with its different realms has received a wider connotation in the field of Human Rights. Therefore, this shift has been a tremendous step taken up at the international as well the national levels and led to the recognition of the rights of the specially abled persons who have certain intellectual deficits.In the end the researcher would like to quote Albert Einstein while stressing the need to respect and provide proper dignity to the intellectually specially abled persons. In his words-

'Everyone is a genius. But if you judge a fish by its ability to climb a tree, it will live its whole life believing that it is stupid.'

TRANSGENDERS UNDER INDIAN LEGAL SYSTEM: AN ANALYSIS

- Dr Gurpreet Pannu*

I. INTRODUCTION

When a child is born, at the time of birth itself, sex is assigned to him/her. A child would be treated with that sex thereafter i.e. either a male or a female. Some persons may born with bodies which incorporate both or certain aspects of both male or female physiology. It may also happen that though a person is born as a male, because of some genital anatomy problems his innate perception may be that of a female and all his actions would be female oriented. The position may be exactly the opposite wherein a person born as female may be have like a male person.[1]

Etymologically the term transgender is derived from two words, namely 'trans' and 'gender'. 'Trans' is Latin word which means 'across' or 'beyond'. The grammatical meaning of transgender is across or beyond gender. The 'transgender' term is used for the persons whose identity, gender expression or behaviour does not match with the sex to which they were assigned at birth. Gender identity refers to a person's internal sense of being male, female or something else; gender expression refers to the way a person communicates gender identity to others through behaviour, clothing, hairstyles, voice or body characteristics.[2]

Transgender is a term referring to when one's gender and sex are not always or even equivalent. This is a broad term that includes transsexual (pre/non or post-operative), non-gender, bi(tri and multi) gender, androgynes, etc.[3] Transgender is defined by Oxford Dictionary as "denoting or relating to a person whose self-identity does not conform unambiguously to conventional notions of male or female gender."[4] The Transgender Persons (Protection of Rights) Bill, 2019 defines 'transgender' as a person, whose gender does not match with the gender assigned to that person at birth and includes trans-man or trans-woman (whether or not such person has undergone Sex Reassignment Surgery or hormone therapy or laser therapy or such other therapy), person with intersex variations, genderqueer and person having such socio-cultural identities as kinnar, hijras, aravanis and jogtas.[5]

5. The Transgender Persons (Protection of Rights) Bill,2019, Section 2(k).

Justice Radhakrishnan defines transgender as "an umbrella term for person whose gender identity, gender expression or behaviour does not confirm to their biological sex."[6] Transgender may also take in persons who do not identify with their sex assigned at birth, which include hijras/eunuchs who, describe themselves as "third gender" and they do not identify as either male or female. Hijras are not men by virtue of anatomy, appearance and psychologically, they are also not women, though they are like women with no female reproductive organ and no menstruation. Since hijras do not have reproduction capacities as either men or women, they are neither men nor women and claim to be an institutional "third gender". Among them, there are emasculated (castrated, nirvana) men, non-emasculated men and inter-sexed persons (hermaphrodites). Transgender also includes persons who intend to undergo Sex Re-Assignment Surgery (SRS) or have undergone SRS to align their biological sex with their gender identity in order to become male or female. They are generally called transsexual persons. There are persons who like to cross-dress in clothing of opposite gender, i.e transvestites. Resultantly, the term "transgender", in contemporary usage, has become an umbrella term that is used to describe a wide range of identities and experiences, including but not limited to pre-operative, post-operative and non-operative transsexual people, who strongly identify with the gender opposite to their biological sex i.e. male and female.[7]

Transgender people are individuals of any age or sex whose appearance, personal characteristics or behaviours differ from stereotypes about how men and women are supposed to be. Transgender people have existed in every culture, race and class since the story of human life has been recorded. Only the term 'transgender' and the medical technology available to transsexual people are new. It is a wider term which encompasses anyone whose identity or behaviour falls outside of stereotypical gender norms. [8]

The contemporary term 'transgender' arose in mid 1990s from the grassroots community of gender different people. In the contemporary usage, transgender has become an umbrella term that is used to describe a wide range of identities and experiences, including but not limited to transsexual people; male and female cross dressers (sometimes referred as transvestites, drag queens or drag kings); intersexual individuals and men and women, regardless of sexual

orientation, whose appearance or characteristics are perceived to be gender typical. It includes people who do not self-identify as transgender, but who are perceived as such by others.[9]

II. CAUSES FOR TRANSSEXUALISM

In this regard there is no consensus even among medical, psychological, psychiatry, genetical and the other scientific communities. A cursory reading of the subject would reveal that there are a number of theories about the cause for transsexualism. Biologists claim that it is because of the chromosomal aberrations. It is well known that if an individual has XX chromosomes, she is a female and if an individual has got XY chromosomes, he is a male. However, there are also persons with XXY and XYX chromosomes. These are chromosomal aberrations. Some people by physical characteristics maybe females though they may have XY chromosomes indicating male characters. Similarly, there are people who are males by physical characteristics, but they have XX chromosomes indicating female characters. According to the medical community, these biological differences cause transsexualism. There are other theories which say that imbalances or fluctuations in hormones or use of certain medications during pregnancy may cause transsexualism. There are also theories to say that transsexualism is, pure and simple, a psychological disorder. The Brain Bank in Netherlands Studies say that there is a "brain sex" difference between men and women and transsexual people have the brain sex of the gender to which they identify themselves. Thus, it is manifest that there is no consensus among various theories as to how the transsexualism happens in human beings. Similarly, there is no recognised or universally accepted mode of drawing a line differentiating transsexuals from the other sexes.[10]

III. CLASSIFICATION OF TRANSGENDER

There is wide range of transgender related identities and cultures which are generally as follows:

a) Hijras

Hijras are biological males who reject their 'masculine' identity in due course of time to identify either as women, or 'not-men', or 'in-between man and woman', or 'neither man nor woman'. Hijras can be considered as the western equivalent of transgender/transsexual (male-to-female) persons but hijras have a long tradition/culture and have strong social ties formalised through a

---

9. *Ibid.*
10. I.Jackuline Mary v. Superintendent of Police,available at:indiankanoon.org/doc/144523857 (Visited onMarch 1, 2015).

ritual called "reet" (becoming a member of hijra community). There are regional variations in the use of terms referred to Hijras.

b) Eunuch

Eunuch refers to an emasculated male and intersexed to a person whose genitals are ambiguously male-like at birth, but this is discovered that the child previously assigned to the male sex, would be recategorized as an intersexed as a hijra.[11]

c) Aravanis and Thirunangi

Hijras in Tamil Nadu identify as Aravani. Tamil Nadu Aravanigal Welfare Board, a state government's initiative under the Department of Social Welfare defines Aravanis as biological males who self-identify themselves as a woman trapped in a male's body. Some Aravani activists want the public and media to use the term 'Thirunangi' to refer to Aravanis.[12]

d) Kothi

Kothis are a heterogeneous group. Kothis can be described as biological males who show varying degrees of 'femininity' — which may be situational. Some proportion of Kothis have bisexual behaviour and get married to a woman. Kothis are generally of lower socio-economic status and some engage in sex work for survival. Some proportion of hijra-identified people may also identify themselves as Kothis. But not all Kothi people identify themselves as transgender or hijras.[13]

e) Jogtas/Jogappas

Jogtas or Jogappas are those persons who are dedicated to and serve as a servant of goddess Renukha Devi (Yellamma) whose temples are present in Maharashtra and Karnataka. Jogta refers to male servant of that Goddess and Jogti refers to female servant.[14] One can become a Jogta (or Jogti) if it is part of their family tradition or if one finds a Guru (or Pujari) who accepts him/her as a chela or shishya (disciple). This term is used to differentiate them from Jogtas who are heterosexuals and who may or may not dress in woman's attire when they worship the Goddess.

---

11. *Ibid.*
12. *Ibid.*
13. *Ibid.*
14. Who is referred as Devdasi.

f) Shiv-Shakthis

Shiv-Shakthis are considered as males who are possessed by or particularly close to a goddess and who have feminine gender expression. Usually, Shiv Shakthis are inducted into the Shiv-Shakti community by senior gurus, who teach them the norms, customs, and rituals to be observed by them. In a ceremony, ShivShakthis are married to a sword that represents male power or Shiva. Shiv-Shakthis thus become the bride of the sword. Occasionally, Shiv-Shakthis cross- dress and use accessories and ornaments that are generally/socially meant for women. Most people in this community belong to lower socio-economic status and earn for their living as astrologers, soothsayers, and spiritual healers; some also seek alms.[15]

IV. PROBLEMS OF TRANSGENDER PERSONS

Indian law recognises binary genders, i.e. male and female based on the sex of a person assigned by birth. There is no mention of third gender or transgender under Indian legal system. Due to this they become victim of discrimination, abuse and exploitation. Despite constitutional guarantee of equality, the transgender people have to face discrimination in all spheres of society. They are extremely vulnerable to harassment, violence and sexual assault in public places, at home, in jail and in the custody of police. Sexual assault, including molestation, rape, forced and oral sex, gang rape and stripping is being committed with impunity. They have to face extreme discrimination especially in the field of employment, education, health care etc. They face humiliation in access to public spaces, the restaurants, cinemas, shops, malls etc. Access to public toilets is another serious problem they face quite often. As, there is no separate toilet facilities for these persons, they have to use male toilets where they are prone to sexual assault and harassment.[16]

Transgender people are deprived of social and cultural participation which results into eclipsing their access to education and health services. It is not even easy for such a person to take a decision to undergo SRS procedure which requires strong mental state of affairs. During hormone therapy these persons also suffer from depression, schizophrenia and transverses.[17]

15. *Ibid.,* at 32.
16. *Supra* note 1.
17. Katherine M. Frank, The Central Mistake of Sex Determination Law: the Disaggregation of Sex from Gender89 (2010).

The other major problems that the transgender people face in their daily life are lack of education facilities, lack of medical facilities, homelessness, unemployment, depression, hormone pill abuse, tobacco and alcohol abuse and problems related to marriage and adoption. Transgender people are generally excluded from the society and people think transgender as a medical disease. Much like disability, it is considered as illness.

The transgender communities face several sexual health issues including HIV and they face barriers in accessing treatment services. HIV prevalence among male transgender was 7.4% against the overall adult HIV prevalence of 0.36%. The estimated size of men who have sex with male and male sex workers population in India (including hijras and transgenders) is 23, 52,133 and 2,35,213 respectively.[18] Rate of HIV infection among transgender female sex workers is 27.3% which is nine times higher than other such workers.[19]

V. LEGAL RIGHTS OF TRANSGENDERS IN OTHER COUNTRIES

Many countries have enacted laws for recognizing rights of transsexual persons, who have undergone either partial/complete SRS, including United Kingdom, Netherlands, Germany, Australia, Canada, Argentina, etc. Detail of these laws is given below:

a) United Kingdom

United Kingdom has passed the Gender Recognition Act, 2004. The Act is all encompassing as not only does it provide legal recognition to the acquired gender of a person, but it also lays down provisions highlighting the consequences of the newly acquired gender status on their legal rights and entitlements in various aspects such as marriage, parentage, succession, social security, pensions etc. One of the notable features of the Act is that it is not necessary that a person needs to have undergone or in the process of undergoing a SRS to apply under the Act. Reference in this connection may be made to the Equality Act, 2010 (UK) which has consolidated, repealed and replaced around nine different anti-discrimination legislations including the Sex Discrimination Act, 1986. The Act defines certain characteristics to be "protected characteristics" and no one shall be discriminated or treated less favourably on grounds that the person possesses one or more of the "protected characteristics". The Act also

18. *Supra* note 10.
19. *Ibid.*

imposes duties on Public Bodies to eliminate all kinds of discrimination, harassment and victimization. Gender reassignment has been declared as one of the protected characteristics under the Act, of course, only the transsexuals i.e. those who are proposing to undergo, is undergoing or has undergone the process of the gender reassignment are protected under the Act.

b) Australia

In Australia, there are two Acts dealing with the gender identity, (1) Sex Discrimination Act, 1984; and (ii) Sex Discrimination Amendment (Sexual Orientation, Gender Identity and Intersex Status) Act, 2013. Act of 2013 amends the Sex Discrimination Act, 1984. Act of 2013 defines gender identity as the appearance or mannerisms or other gender-related characteristics of a person (whether by way of medical intervention or not) with or without regard to the person's designated sex at birth.

It prohibits discrimination on the ground of sexual orientation,[20] Discrimination on the ground of gender identity[21] and discrimination on the ground of intersex status.[22]

c) United States of America

In United States of America some of the laws enacted by the states are inconsistent with each other. The Federal Law which provides protection to transgenders is the Hate Crimes Prevention Act, 2009, which expands the scope of the 1969 United States Federal Hate-Crime Law by including offences motivated by actual or perceived gender identity. The federal government recognises all same-sex marriages legally authorised under state law. Transgender people have all the legal rights e.g. rights to life, right to work, right to health, right to marry, right of equality, right to social security etc. Around 15 States and District of Colombia in the United State have legislations which prohibit discrimination on grounds of gender identity and expression. Few States have issued executive orders prohibiting discrimination.

d) South Africa

The Parliament of South Africa in the year 2003, enacted Alteration of Sex Description and Sex Status Act, 2003, which permits transgender persons who have undergone gender reassignment or people whose sexual characteristics have evolved naturally or an intersexed person to apply to the Director General of the National Department of Home Affairs for alteration of his/her sex description in the birth register, though the legislation does not contemplate a more inclusive

20. Sex Discrimination Amendment (Sexual Orientation, Gender Identity and Intersex Status) Act, 2013, Section 5A.
21. *Ibid.,* Section 5B.
22. *Ibid.,* Section 5C.

definition of transgenders. Same sex marriage is legal since Civil Union Act came into force in 2006. Discrimination on the basis of gender expression and identity against TGs in prohibited.

e) Argentina

The Senate of Argentina in the year 2012 passed a law on gender identity that recognizes right by all persons to the recognition of their gender identity as well as free development of their person according to their gender identity and can also request that their recorded sex be amended along with the changes in first name and image, whenever they do not agree with the self-perceived gender identity. It is not necessary that they seemed to prove that a surgical procedure for total or partial genital reassignment, hormonal therapies or anyother psychological or medical treatment had taken place. Article 12 deals with dignified treatment, respecting the gender identity adopted by the individual, even though the first name is different from the one recorded in their national identity documents. Further laws also provide that whenever requested by the individual, the adopted first name must be used for summoning, recording, filing, calling and any other procedure or service in public and private spaces.

f) Germany

In Germany, a new law has come into force on 5th November, 2013, which allows the parents to register the sex of the children as 'not specified' in the case of children with intersex variation. According to Article 22, Section 3 of the German Civil Statutes Act reads as follows:

"If a child can be assigned to neither the female nor the male sex then the child has to be named without a specification"

This law has also added a category of X, apart from "M" and "F" under the classification of gender in the passports. Transgenders have right to marry to a person of their choice. Registered life partnerships have been instituted since 2001 before the enforcement of this Act. Thus, transgenders enjoy freedom and State protect their legal rights. Transgenders have right to equality, right to work, right to health, right to security and other benefits etc.

g) Malta

The State of Maltaenacted the Gender Identity, Gender Expression and Sex Characteristics Act, 2015. The Act confers certain rights regarding gender identity, such as all the persons being citizens of Malta have right to the recognition of their gender identity; the free development of their person according to their gender identity; be treated according to their gender identity and

to be identified in that way as documents providing their identity and bodily integrity and physical autonomy etc.[23] such persons shall not be required to provide proof of a surgical procedure for total or partial genital reassignment, hormonal therapies or any other psychiatric, psychological or medical treatment to make use of the right to gender identity.[24]

h) Asia

There is no specific law in any of the Asian countries. Transgender have to face discrimination in their social and daily life, at school and at work place. In Asia, the society distinguishes between male and female, the lack of clear-cut gender puts great limitation on a person's social space. China, Nepal, Pakistan, India and other Asian countries have no specific law for the transgenders. China acknowledge the right of individuals to undergo gender reassignment surgery, but has never enacted formal laws to protect the rights of transgender people, it only allows gender alternation in documents like birth certification, student rolls or academic records etc. There is no law regarding the ability of transgender persons to marry, nor does it place any articulated restrictions on this right. These countries do not allow same sex marriage.[25] Transgenders have to live with heavy stigma directed against their person, their life style, often their chosen profession and their chosen identity. They are routinely marginalised and suffer from severe prejudice and violence at home and in society. Due to this many transgender people get themselves engage in sex-industry and they work as sex workers. Their vulnerabilities to HIV and other infections increases.[26]

VI. Historical Aspect and Position of Transgenders in India

Transgenders are a part of society from the very beginning. It comprises of hijras, eunuchs, kothis, aravanis, jogappas, shiv-shakthis etc. and they, as a group, have got a strong historical presence in our country in the Hindu mythology and other religious texts. The concept of tritiya prakrti or napunsaka has also been an integral part of vedic and puranic litratures. The word 'napunsaka' has been used to denote absence of procreative capability.[27] There are number of references of them in the religious books, which are as:

---

23. The Gender Identity, Gender Expression and Sex Characteristics Act, 2015,Section 3(1).
24. The Gender Identity, Gender Expression and Sex Characteristics Act, 2015, Section 3(4).
25. "My Life is Too Dark to see the Light"- A Survey of Living Conditions of Transgenders Female Sex Workers in Beijing and Shanghai, 26. (January 2015)
26. *Id.,* at 45.
27. Sarena Nanda, Gender Diversity: Cross cultural Variations 42 (1999).

Lord Rama, in the epic Ramayana, was leaving for the forest upon being banished from the kingdom for fourteen years, turned around to his followers and asked all the 'men and women' to return to the city. Among his followers, the hijras alone did not feel bound by this direction and decided to stay with him. Impressed with their devotion, Rama sanctioned them the power to confer blessings on people on auspicious occasions like childbirth and marriage, and also at inaugural functions which, it is believed set the stage for the custom of badhai in which hijras sing, dance and confer blessings.[28]

Another reference is from the Epic Mahabharata, where Aravan, the son of Arjuna and Nagakanya, offers to be sacrificed to Goddess Kali to ensure the victory of the Pandavas in the Kurukshetra war, the only condition that he made was to spend the last night of his life in matrimony. Since no woman was willing to marry one who was going to be killed, Krishna assumes the form of a beautiful woman called Mohini and marries him. The Hijras of Tamil Nadu consider Aravan their progenitor and call themselves Aravanis.[29]

Jain Texts also make a detailed reference to transgenders which mentions the concept of 'psychological sex'. Hijras also played a prominent role in the royal courts of the Islamic world, especially in the Ottaman empires and the Mughal rule in the Medieval India.[30]

VII. TRANSGENDER PERSONS UNDER INDIAN LEGAL SYSTEM

Indian law only recognizes the paradigm of binary genders of male and female, based on a person's sex assigned by birth, which permits gender system, including the law relating to marriage, adoption, inheritance, succession, and welfare legislations. We have no legislation in our country dealing with the rights of transgender community. Due to absence of suitable legislation protecting the rights of the members of transgender community, they are facing discrimination in various areas.[31] Detailed analysis of historical aspect and legal treatment of transgenders is discussed below:

(i) During British Period

Though historically, hijras/transgender persons had played a prominent role, with the onset of colonial rule from the 18th century onwards, the situation had changed drastically. During the

28. *Supra* note 1, Para 13.
29. *Supra* note16 at 36.
30. Gayatri Reddy, With Respect to Sex: Negotiating Hijra Identity in South India 21 (2006).
31. *Supra* note 1, Para 49.

British rule, a legislation was enacted to supervise the deeds of hijras/TG community, called the Criminal Tribes Act, 1871,[32] which deemed the entire community of hijra persons as innately criminal and addicted to the systematic commission of non-bailable offences. The Act provided for the registration,[33] surveillance and control of certain criminal tribes and eunuchs and had penalised eunuchs, who were registered, and appeared to be dressed or ornamented like a woman, in a public street or place as well as those who danced or played music in a public place.[34] Such persons also could be arrested without warrant and sentenced to imprisonment up to two years or fine or both. Under the Act, the local government had to register the names and residence of all eunuchs residing in that area as well as of their properties, who were reasonably suspected of kidnapping or castrating children, or of committing offences under section 377 of the IPC, or of abetting the commission of any of the said offences.[35] Under the Act, any act of keeping a boy under 16 years in the charge of a registered eunuch was made an offence punishable with imprisonment up to two years or fine. The Act also denuded the registered eunuchs of their civil rights by prohibiting them from acting as guardians to minors, from making a gift deed or a will, or from adopting a son. The Act has, however, been repealed in August 1952.

(ii) Constitution of India

Article 14 provides that State shall not deny to "any person" equality before the law or the equal protection of the laws within the territory of India. Equality includes the full and equal enjoyment of all rights and freedom. Right to equality is declared as a basic feature of the Constitution and treatment of equals as unequal or unequal as equals will be volatile to basic structure of the Constitution. It is a positive obligation on the State to ensure equal protection of laws by bringing in necessary social and economic changes so that everyone including transgender may enjoy equal protection of laws and nobody is denied such protection. Article 14 does not restrict the word 'person' and its application only to male or female. Transgender, who are neither male nor female, fall within expression person and are entitled to legal protection of all the laws in the sphere of State activity.[36]

---

32. Act no. XXXVII of 1871, passed by the Governor General of India in Council.
33. Criminal Tribes Act, Section 24 (1871).
34. *Id.,* Section 26.
35. *Id.,* Section 24 (a) & (b).
36. *Ibid.,* Para 54.

Articles 15 and 16 prohibit discrimination against any citizen on certain grounds including the ground of 'sex'. Both of the articles prohibit all forms of gender bias and gender-based discrimination. Article 15 states that the State shall not discriminate against any citizen on the ground of sex, with regard to (a) access to shops, public restaurants, hotels and places of public entertainment or (b) use of wells, tanks, bathing ghats, roads and places of public resort maintained wholly or partly out of State funds or dedicated to the use of the general public.[37]

The requirement of taking affirmative action for the advancement of any socially and educationally backward classes of citizens is also provided in this Article.

Article 16 states that there shall be equality of opportunities for all the citizens in matters relating to employment or appointment to any office. No person shall on grounds only of religion, race, caste, sex, descent, place of birth, residence or any of them, be ineligible for, or discriminated against in respect or, any employment or office under the State.[38]

Sex discrimination in public employment is prohibited under Indian Constitution. Article 19 assures the right of freedom of speech and expression.[39] This right also includes one's right to expression of his self-identified gender which can be expressed through dress, words, action or behaviour or any other form. A transgender personality can be expressed by transgender's behaviour, presentation, mannerism or clothing.[40]

Protection of life and personal liberty is available to everyone under article 21 of the Constitution. Right to life is one of the basic fundamental right and not even the State has authority to violate or take away that right. It protects the dignity of human life, one's personal autonomy, has been recognized to be an essential part of the right to life and access to all persons on account of being humans.[41]

In ***Francis Coralie Mullin v. Administrator, Union Territory of Delhi***[42] , the Apex Court held that the right to dignity forms an essential part of our constitutional culture which seeks to ensure the full development and evolution of persons and includes "expressing oneself in diverse forms, freely moving about and mixing and commingling with fellow human beings". Similarly, recognition of one's gender identity lies at the heart of the fundamental right to dignity. Gender

37. Constitution of India, Article 15(2).
38. *Id.,* Article16 (1) and (2).
39. *Id.,* Article 19(1) (a).
40. *Supra note* 1 Para 66.
41. *Id.,* Para 67.
42. (1981) 1 SCC 608 (Para 78).

constitutes the core of one's sense being as well as integral part of a person's identity. Legal recognition of gender identity is part of right to dignity and freedom which is guaranteed under our Constitution. Thus articles 14, 16, 19 and 21 of Constitution do not exclude transgender community from its ambit, but Indian law on the whole recognise the parading of binary genders of male and female, based on one's biological sex. Binary notion of gender reflects in Penal Code e.g. sections 8, 10 etc. and also in the laws relating to marriage, adoption, divorce, inheritance, successionand other social welfare legislations like MGNAREGA, 2005 etc. Non recognition of identity of third gender in various legislations denies them equal protection of law and thus they face wide spread discrimination.[43]

(iii) The Transgender Persons (Protection of Rights) Bill, 2019

The demand for a specific legislation was being raised by number of social activists since long. Supreme Court of India dealt with this issue in detail by its historical verdict[44] and declared number of rights of transgender. Then a Private Member Bill was introduced by a DMK Member of Parliament, Shiva Triuchi regarding the issues relating to certain basic rights of the third gender in India. On April 24, 2015 the Rights of Transgender Persons Bill, 2014 was passed by the Rajya Sabha. A new Bill, the Transgender Persons (Protection of Rights) Bill, 2016 was introduced to protect the rights of transgenders, but it was not passed by the Parliament and it lapsed. The Transgender Persons (Protection of Rights) Bill, 2019 was introduced in the Lower House during Monsoon Session and was passed on July 19, 2019.

This Bill prohibits the discrimination against transgender persons, including denial of service or unfair treatment in relation to education; employment; healthcare; access to or enjoyment or use of any goods, facilities, opportunities available to the public; right to movement; right to reside, rent or otherwise occupy property; opportunities to hold public or private office; access to a governmental or private establishment in whose care or custody a transgender person is.[45] Chapter III of the Bill deals with recognition of identity of transgender persons. A transgender person may make an application to the District Magistrate for a certificate of identity, indicating the gender as 'transgender'. A revised certificate may be obtained only if the individual undergoes surgeries to change his/her gender either a male or a female.[46] The Bill also ensures

43. *Supra* note 1, Para 75.
44. National Legal Service Authority v. Union of India, AIR 2014 SC 1863.
45. *Id.*, Section 3.
46. *Id.,* Chapter III, Sections 4 to 7.

that the government will take measures to ensure the full inclusion and participation of transgender persons in society. The appropriate government must also take steps for their rescue and rehabilitation, vocational training and self-employment, to formulate welfare schemes and programmes that are transgender sensitive, non stigmatising and non-discriminatory.[47]

Right of residence has been assured under section 12 of the Bill. It provides that no child shall be separated from parents on the ground of being transgender. If the immediate family is unable to care for the transgender person, the person may be placed in a rehabilitation centre, on the orders of a competent court. The government is duty bound to take steps to provide health facilities to transgender persons including separate HIV surveillance centers and sex reassignment surgeries. The government shall review medical curriculum to address health issues of transgender persons and provide comprehensive medical insurance schemes for them.[48] This Bill imposes duty on educational institutions, funded or recognized by the appropriate government, to provide inclusive education, sports and recreational facilities for transgender persons, without discrimination.[49]

The Bill recognizes certain offences against transgenders like: forced labour (excluding compulsory government service for public purpose), denial of use of public places, removal from household and village, physical, sexual, verbal, emotional or economic abuse. Penalties for these offences vary between six months to two years and fine.[50]

The Bill also proposes for the constitution of National Council for Transgender Persons to advise the Central Government as well as to monitor the impact of policies, legislation and projects with respect to transgender persons. It will also redress the grievances of transgender people.

VIII. ROLE OF INDIAN JUDICIARY IN PROTECTING THE RIGHTS OF TRANSGENDER PERSONS

There is no specific enactment to protect the rights of transgender persons in India. Indian judiciary has protected the rights of transgenders from time to time.

---

47. *Id.,* Section 8.
48. *Id.,* Section 15.
49. *Id.,* Section 13.
50. *Id.,*Section 18.

In the case of I. ***Jackuline Mary v. Superintendent of Police***,[51] the petitioner, who identified herself as a, transgender was terminated from service by labeling her as a transgender. The petitioner was recorded as a female child in her birth certificate. She passed her graduation and applied for a job in police department. She cleared all the tests and recruited in Tamil Nadu police. When she was undergoing training, she appeared for medical test. On examination, the medical officer made a mark in the Out Patient slip of petitioner as transgender and medical officer opined that petitioner should go for the tests of biological determination. Then she was declared as transgender by birth. She had to appear for various tests, due to which she was on medical leave and could not complete her training. Ultimately, she was terminated. Then she filed this petition in Madras High Court. The Court observed that, "By compelling an individual to undergo medical examination to declare her as transsexual is violation of right to life. There is no social recognition of transgender. Even many of the parents do not treat such children well. They are thrown out of the families. The agonies suffered by them are unimaginable."

The Court held and declared:

(i). Petitioner is declared as a female for all purposes to retain such identity.

(ii). Petitioner has liberty to choose a different sexual/gender identity as third gender.

(iii). The impugned order of termination from service issued by Superintendent of Police is hereby set aside.

The judiciary again protected the rights of a transgender as an ordinary citizen in Aslam Pasha urf Chandini v. State of Karnataka,[52] the petitioner, who is a transgender field this petition requesting the Court to issue a direction to the respondents to provide reservation of posts to transgender class of persons by the issue of a writ of Mandamus. Court held that the Apex Court has already issued several directions for taking steps by the Central and State Governments to safeguard the interests of transgender under Part III of Constitution of India and laws made by Parliament and State Legislature. So, it is duty of the Government to protect the rights of transgender in the society.

The Apex Court of India gave landmark, judgement ***National Legal Service Authority v. Union of India,***[53] and thus came forward to protect the rights of transgender people. C.K.S. Radhakrishnan, J. observed about the condition of transgender as, "Seldom, our society realises

51. Indianknoon.org/doc/144523857.
52. Judgmenthck.kar.nic.in.
53. AIR 2014 SC 1863.

or cares to realise the trauma, agony and pain which the members of transgender community undergo nor appreciates the innate feelings of the members of the transgender community, especially of those whose mind and body disown their biological sex. Our society often ridicules and abuses the transgender community and in public places like railway stations, bus stands, schools, workplaces, malls, theaters, hospitals, they are sidelined and treated as untouchables, forgetting the fact that the moral failure lies in the society's unwillingness to contain or embrace different gender identities and expressions, a mindset which we have to change."[54]

The Court ordered to treat transgender as third gender for the purposes of safeguarding and enforcing their rights guaranteed under the Constitution and gave following directions:[55]

1. Hijras, Eunuchs, apart from binary gender, be treated as "third gender" for the purpose of safeguarding their rights under Part III of our Constitution and the laws made by the Parliament and the State Legislature.
2. Transgender persons' right to decide their self-identified gender is also upheld and Centre and State Governments are directed to grant legal recognition of their gender identity such as male, female or as third gender.
3. Centre and State Governments to take steps to treat them as socially and educationally backward classes of citizens and to extend all kinds of reservation in cases of admission in educational institutions and for public appointments.
4. Centre and State Government to operate separate HIV surveillance centers since Hijras/Transgenders face several sexual health issues.
5. Centre and State Governments should seriously address the problems being faced by Hijras/Transgender such as fear, shame, gender dysphoria, social stigma, etc. and any insistence for SRS for declaring one's gender is immoral and illegal.
6. Centre and State Government should take proper measures to provide medical care to TGs in the hospitals and also provide them separate public toilets and other facilities.
7. Centre and State Governments should also take steps for framing various social welfare schemes for their betterment.

---

54. *Id.,* Para 1.
55. *Id.,* Para 129.

8. Centre and State Government should take steps to create public awareness so that TGs will feel that they are also part and parcel of the social life and be not treated as untouchables.
9. Centre and State Governments should also take measures to regain their respect and place in the society which once they enjoyed in our cultural and social life.

In ***Arun Kumar v. The Inspector General of Registration and Others***[56] , the Madurai Bench of Madras High Court came forward to declare the marriage solemnised between a male and a trans woman as valid under section 5 of the Hindu Marriage Act, 1955. The Court held that he registrar of marriage is bound to register a marriage of a male and a trans woman.

IX. CONCLUSION

Transgenders people have to face various types of problems at home, in the society, at schools, at workplace etc. They are discriminated at various stages of life. They are humiliated socially and publically. They usually become victim of molestation, rape, forced oral and anal sex, gang rape etc. They have to face humiliation at public places e.g. bus stands, restaurants, cinemas, shops etc. There are no separate public toilets for them. They are deprived of education, employment and health care. Following are the suggestions to improve the position of transgender people:

- Transgender persons must be properly documented in census. There is need for statutory reservation in education, elections and employment in both public and private sectors.
- They need to be empowered and uplifted by facilities for higher education and vocational training to upgrade their earnings and status in the society and to promote their acceptability in the society.
- As transgender people are prone to health risks and infections, they need to be provided proper medical facilities, including health insurance and clinics, where free or subsidised treatment should be made available.
- The word 'rape' in section 375 IPC should include all sexual crimes against women, men, children and transsexual/eunuchs, as eunuchs are often the targets of some of

56. WP (MD)No.4125 of 2019, available at:http://www.judis.nic.in (Visited on July 16, 2019).

worst sex crimes.

- There is need to change the mindset of the society. Government should take appropriate and effective steps to regain their respect and place in the society.
- Government should provide special social welfare schemes for the upliftment and betterment of transgender people.
- Problems of transgender people must be tackled properly. Counselling centers should be established at every level to give psychological therapy to transgenders.
- Government and non-governmental organisations should create awareness among the masses that transgender people are also human beings like us and have right to lead their life with dignity and respect.
- There is urgent need for legal and constitutional safeguards to prevent human rights violations of transgender community as well as institutional mechanisms that can address the specific concerns of transgender people.
- There should be an amended column of gender in every type of forms for admission or employment with a new entry of third gender along with male or female.
- Government should develop mechanisms for the facility of loans at concessional rates for transgenders for self-employment. Government and local authorities should initiate programmes of rehabilitation particularly in the area of health, education, employment etc.
- Government must sponsor and encourage regular information campaigns and sensitization programmes to ensure that rights of transgenders recognised by existing statutes must be protected and respected.
- There must be amendments in the existing laws relating to marriage, adoption, inheritance, etc. to avail equal rights to transgenders in India.

The paper would end with a note of hope:

"We need a world where our families no longer disown us, where society treats us as equal, and where governments guarantee our rights; a world that understands the transgender identity."

WOMEN ENTREPRENEURSHIP: A MEANS OF ACHIEVING GENDER JUSTICE

-Dr Jai Mala* & Shivanshi Thakur**

"The idea of perfect womanhood is perfect independence"

~Swami Vivekananda

1.1 INTRODUCTION

The above mentioned quote was given by swami Vivekananda, a true Indian intellectualist, spiritualist and scholar. He considered the downfall of Indian society as the result of neglect of masses and women subjected to subjugation from centuries. Relying on his theory, we consider the education, liberation and empowerment of women as the only key to achieve gender justice.[1] Independence of women consist not only the social liberation but also her financial freedom, and for its accomplishment women entrepreneurship can be a suitable path. Then only women can be fully independent, subject to no dominance and exploitation. In last few decades, the notion of entrepreneurship has evolved as a significant focus of attention.

Entrepreneurship being synonymous with Innovation and creativity is claimed as an economic panacea for some serious problems like lopsided development and unemployment. It is basically a dynamic process which is created and managed by a person called the entrepreneur, who strives to utilize the economic innovation for the creation of a new value in the market for accomplishing a definite goal.[2] As a vital tool for social transformation, entrepreneurship needs to be balanced between both the genders of the society for better economic growth. For achieving gender justice in the society, men and women need to be placed at equal footings, the essence of which lies in the economic empowerment of women.

The relationship between gender impartiality, growth and progress outcomes is multifaceted and there is no automatic 'win-win' among them.[3] Achieving gender equality involves measures to reimburse for existing disadvantages that avert equal opportunities from being offered to both men and women.[4] India being a developing Nation needs entrepreneurs. Our country needs to

utilize and mobilize fully all its resources which include human resources as well.[5] But the Indian women have usually been assumed as home-makers with slight to do with financial system or trade. They have not been vigorously involved in the conventional development, even though they symbolize equal proportion of the populace and labor force. Principally women are the resources of survival of their families, although are generally unrecognized and underestimated, being placed underneath the pile. It may be noted, that in a country like India, majority of females take entrepreneurship not as a career opportunity but because of economic compulsions or otherwise. Financial viability is the basis of social, political and psychological supremacy in the society. Entrepreneurship can help women's economic freedom and perk up their social status. Automatically, the women get empowered once they accomplish economic independence.[6]

Entrepreneurship has been considered as a male-dominated phenomenon from the very early age, but time has changed the circumstances and brought women as today's most unforgettable and inspiring entrepreneurs.[7] Despite this fact, there are numerous areas where women are still lacking such as: right to use resources, impartiality at the workplace, entrepreneurship development, executive powers, and the settlement of work and family responsibilities.[8] The constitution of India has the provision to provide gender equality, which can be seen in the five year plans having the socio-economic as well as legal empowerment of women as the main goal.Women's financial empowerment is a transformational process, where by women gainaccess and power over economic assets &decisions, which results in economic empowerment of women, which is a step towards gender justice.

1.2 CONCEPT AND DEFINITIONS OF ENTREPRENEURSHIP

1.2.1 Defining An Entrepreneur: In its most simplest sense "an entrepreneur" is defined as a person, who is the creator of an enterprise. And the process of creation and action taken by an entrepreneur for the establishment of his Enterprise is known as "entrepreneurship". The term entrepreneur is derived from a French word "enterprendre" which means "to undertake". Some eminent definitions of an entrepreneur are given below :

---

5. Charantimath, *supra*, 55.
6. Dr Shefali Raizada, Women's Entrepreneurship Development and Gender Equality, (Sept. 19, 2019, 3:45 PM),http://www.internationalseminar.org/XV_AIS/TS%203/2.%20Dr.%20SHEFALI%20RAIZADA.pdf.
7. S. Saidapur, Women Candle Entrepreneurs in Gulbarg District: A Micro analysis, 4 Spect. J. Multi. R. 7, 17 (2012).
8. UNECE, *supra*, 5.

The word entrepreneur is derived from a Sanskrit word called "Antaraprerana" stated by Poornima charantimath.

"Entrepreneurs are people who have the ability to see and evaluate business opportunities, together with the necessary resources to take advantage of them and to intimate appropriate action to ensure success" by International Labour Organisation (ILO).[9]

The word entrepreneur was taken from the French verb "enterprendre" which means 'to Undertake'. In the earlier part of 16th century, the French men who organised and led military expeditions were referred to as entrepreneurs. The French tradition regarded an entrepreneur as a person who changes a profitable Idea into a productive activity. Also, the Architects and contractors of public works, back in 1700, were called entrepreneurs. Quensnay recognised a rich farmer as an entrepreneur, who manages and makes his trade profitable by his Intelligence and capital. In early 16th century, the entrepreneurs were signified as dealers who bought an article at a certain price & sold it at uncertain price, building profit.[10] By this we understood that although the word entrepreneur is not of Indian Origin but if we look into the history we can surely form an idea that the process of entrepreneurship has not emerged in this century but is of late origin.

Entrepreneurship is a catalyst of trade and fiscal development. The social and financial forces of entrepreneurial activity subsistedprior to the new millennium. In fact, as noted, the entrepreneurial spirit is linked with humanity's achievements. Eventually all this proposes the role of entrepreneur as the "driving force of change," the force that instigates and implements material development. Today, we identify that the agent of revolution in mankind has been and possibly will persist to be the entrepreneur.[11]

Pandit Jawaharlal Nehru rightly said that "when a woman moves forward, the family Moves, the village moves and the nation moves". The socio-economic status of women is perceived as an indication of the budding stage of a society. A considerable amount of academic attention has been gathered by the concept women entrepreneurs in recent years. It is becoming a primary focus for practitioners, policymakers, and even Scholars worldwide who are interested in entrepreneurship as well as small business management.[12] "Women Entrepreneurship" means

an act of trade ownership and business creation that empowers women economically increases their economic strength as well as position in society. A female who accepts the demanding role in society, to meet her personal desires by becoming economically independent is known as a "Women Entrepreneur". A powerful desire to do something impressive in a positive manner is an inbuilt feature of entrepreneurial women, who is competent of contributing values in her family and social life as well.[13]

Women became more occupied in the business world simply when the idea of females in business became pleasant to the general public; nevertheless, this doesn't show that there were no female entrepreneurs until that period. Dutch colonists, who came to nowadays New York City in the 17th century, functioned under a matriarchal culture. In this society, loads of women inherited wealth and lands, and through this heritage, became business proprietors. Margaret Hardenbrook Philipsewas one of the most victorious women of this time, who is believed to be a ship owner, a merchant and was also occupied with the trading of commodities. Evidences show that during the middle of 18th century, it was common for women to be the owner of certain businesses like shops, taverns, brothels, and alehouses. The majority of these businesses were not alleged to have good reputations, because, they were measured as shameful acts for women engaging in these occupations. During the 1900s, because of more progressive means of thinking & the augment of feminism, female entrepreneurs commenced to be a widely established term. Although, these entrepreneurs served mostly female consumers.

With the easy accessibility of technology and constant support from different institutions, there is a constant expansion in popularity of business women. Still, female entrepreneurs today are struggling and are confronting a number of challenges and barriers. One such major challenge for women entrepreneurs is to cope up with traditional gender-roles which are structurally internalized by our society. Entrepreneurship is still regarded as a field dominated by males, and it might be difficult to outshine these conventional views, except if women entrepreneurship is boosted by government to achieve real gender justice in the society.[14]

---

13. Ranbir Singh, Dr. Nisha Raghuvanshi, Women Entrepreneurship Issues, Challenges And Empowerment Through Self Help Groups: An Overview Of Himachal Pradesh, 2 I. J. M. R. Rev. 81, 82 (2012).
14. Female Entrepreneurs, Entrepreneurship (Sept. 19, 2019, 12:05 PM), https://en.wikipedia.org/wiki/Female_entrepreneurs.

There are certain factors influencing women entrepreneurs such as-

- equivalent status in the social order
- More mobility & freedom
- financial viability
- Motivation
- set up their own creativity and individuality
- Achievement of distinction
- Enhancing risk taking ability
- Building self-reliance and confidence[15]

1.3 ENTREPRENEURSHIP AND GENDER JUSTICE

Since the enactment of our law of the land, the gender equality principle is enshrined in the Constitution of India, in its Preamble[16], Fundamental Rights[17] , Fundamental Duties[18] and Directive Principles[19] . The Indian Constitution not only grants impartiality to women, but also authorizes the State to adopt actions of positive discrimination in women's favour.[20] Apart from these provisions, The Constitution gives every citizen, including women free right to trade and commerce in India[21], but subject to certain reasonable restrictions[22]. All these provisions empowers sate to boost female empowerment, which can be best achieved through entrepreneurship because an entrepreneur is a master of his own and when there will be more females in entrepreneurial field, then there will be economic, social and political empowerment of women in true sense.

The enforcement and protection of intellectual property rights has also received greater attention these days because they also play an important part affecting victorious female entrepreneurship. The intention of IP rights is to promote and expand innovation and creativity, which in return helps perk up the value of our lives. In general views, IPR is associated with inventions in scientific, engineering, technological or mathematical fields but IP exits beyond patented innovation and also includes other exclusive rights like, trademarks, geographical indications, copyrights, industrial designs, so-called traditional knowledge, are few to mention. To enhance entrepreneur spirit, patents provide protection to novel inventions for 20 years[23] , whereas in terms of literary and artistic sector, copy rights protect the work for the entire life of author and additional 60 years.[24] Similarly, trademarks protect the distinguished ability of brands[25], further promoting entrepreneurial development.[26]

We consider women's entrepreneurship development to be a significant channel of women's economic empowerment and also a pillar on the path to sustainable development. By setting up their own ventures, women can transform their prospects to gain economic independence, defeat poverty, and improve their wellbeing. Throughout this process women can become riders of change and obtain a long-term perception accounting for the consequences of actions for our generations in order to safeguard better future. The question, why are actions needed may arise in the minds of many. Women entrepreneurs encounter a range of obstacles in locating up and then running their own establishments due to lack of/restrictions concerning access to resources, which tied together with gender-neutral policies, may put women at a inconvenience in this field. An allowing and supportive environment is fundamental to remove the obstacles & barriers to equal involvement across the different stages within entrepreneurship development.

Within the structure of a democratic republic, our policies for development, various laws, programs and planning processes have always aimed at women's progress in different spheres. The central issue in shaping the status of women is acknowledged as the empowerment of women in recent years. Starting from the 5th 5 Year Plan (1974-1978) there has been a noticeable shift in addressing women's issues from wellbeing to development. It put emphasis on training of women, who needed income and protection and also coincided with International

23. The Patents Act (1970).
24. The Copyright Act (1957).
25. The Trade Marks Act (1999).
26. UNECE, *supra,* 25.

Women's Decade &the preparation as well as submission of report explaining status of women in India. Under this plan only, Women's Welfare &Development Bureau was set up in 1976, under the Social Welfare Ministry. The 7th 5Year Plan (1985-1990) laid the emphasis on gender equality and need for empowerment. During this period, stress was upon qualitative aspects, like generation of awareness with respect to rights, skill training and inculcation of self-confidence for better employment[27]. After these remarkable steps taken by the Government, The National Commission for Women set up by a statute of Indian Parliament in 1990, was established to safeguard the rights along with lawful entitlements of women.[28] The 10th 5 Year Plan (2002-2007) aimed at empowering women through interpreting the newly adopted National Policy for Empowerment of Women. This policy was launched in the year 2001 by Indian govt., with following specific objectives:

Further, The National Policy for Empowerment of Women In order to make women develop & realize their potentials, creating an environment full of positive socio-economic policies.

- Establishment of an atmosphere for enjoyment of all the fundamental freedoms and human rights by women alike with men in all spheres like civil, political, social, economic, and cultural.
- Giving equal access to contribution and decision making power of females in the polity, society and economy of India.
- Providing equal right to health care of women, career and vocational guidance, quality education at all stages, equal remuneration and employment, occupational safety and health, civic life and social security as well.
- Strengthening legal arrangements aimed at eradication of all kinds of discrimination against women.
- Altering societal attitudes and the public practices by active involvement of both the genders.
- Mainstreaming a gender viewpoint in the transformation process.
- Abolition of discrimination &violence (physical, mental, social) against females and

the girl child.

- Constructing and amplifying partnerships with communal societies, principally women's organizations.[29]

One such women oriented organization or agency is The Ministry of Women and Child Development which functions as the nodal agency for every matter pertaining to benefit, growth and emancipation of women, which means that its one hidden objective is to establish gender justice through over all women development. It has developed a lot of schemes and programmes for women's assistance. These plans extend to a very wide spectrum like as women's call for food, shelter, safety, justice, physical, mental and maternal health, nutrition, legal aid, information, etc, along with their need for economic nourishment through education, skill development and access to finance and marketing.

1.3.1 ADDITIONAL SUPPORT TO WOMEN ENTREPRENEURS THROUGH VARIOUS INSTITUTIONS:

- **National Research Development Corporation of India:** This is a government of India enterprise (a non-profit organization) constituted under sec. 8 of the companies Act, 2103and established in the year 1953. Specifically designed for the development and full exploitation of indigenous know-how, patents, processes and inventions originating from all research and development institutions of India.
- **Central Social Welfare Board:** Established in 1953, the board runs vocational training courses for needful and poor women of rural areas in order to provide better employment prospects and acquire leadership qualities.
- **Small Scale Industries Board:** It was constituted in 1954 to advice on improvement of small scale industries in India. Now it's the apex advisory body to make advice on all matters concerning development of small scale industries.
- **Small Industry Development Organisation:** It was also set up in 1954, for the development of all the small scale units in various areas. This nodal agency works for identifying needs and promotion of small scale industries by way of entrepreneurship development, training and consultancy etc. It also provides comprehensive common facilities, marketing assistance and technological support to emerging entrepreneurs.

- **National Small Industries Corporation:** Constituted in 1955, this public sector undertaking provides financial assistance for purchasing raw materials by small scale industries and also helps in providing various other inputs.
- **Khadi and Village Industries Commission:** It is a statutory body established in 1957 and works for the sake of rural development. It engages in preparation, promotion, organisation and execution of programmes for the khadi and various other village industries.
- **National Alliance of Young Entrepreneurs:** It was specially established in 1975 for encouraging women entrepreneurship. Having its wings in 5 states, and in other states by affiliating women through it, it has become most representative association of women entrepreneurs in India.[30]
- **Federation of Indian women entrepreneurs:** This oraganisation was instituted in 1993 and is India's leading institution for entrepreneurship development. Having branches in different states, it aims at providing networking platform, industrial research, skill trainings to women entrepreneurs of the country.[31]
- **National Bank for Agriculture and Rural Development:** NABARD came into existence in 1982, and being an Autonomous financial institution offers liberal credit to women entrepreneurs, especially of rural areas.
- **International Centre for Entrepreneurship and Career Development:** It works as a registered trust founded in 1986, and is involved in training of women entrepreneurs for MSME development at large scale and has also extended its operations internationally to support women entrepreneurs.[31]

On the event of International Women's Day, Women Entrepreneurship Platform was launched on 8th March 2018, by Hon'ble Prime Minister Shri Narendra Modi. Although, the idea of WEP came at the annual Global Entrepreneurship Summit 2017, in Hyderabad combinely by the NITI Aayog and government of USA. This is the first platform which will work with public and private sector to enable the sharing of best practices of entrepreneurship and promote evidence based policy makings by compliance support, Incubation and Acceleration of Entrepreneurship

Skilling, funding assistance etc.[32]

1.3.2 STEPS TAKEN FOR WOMEN ENTREPRENEURS AT INTERNATIONAL LEVEL

On the occasion of World Youth Skills Day in 2016 ie.15th July, in an event held at UN, New York, "Global Coalition of Young Women Entrepreneurs" was launched in order to promote young women's entrepreneurship and innovation. Many experiences and recommendations were shared by prominent young entrepreneurs and leaders from all over the world. The panel stated that economic empowerment and skills development are the main pillars of United Nation's Youth and Gender Equality Strategy.[33] International Labour Organisation initiated a programme in 2002 on Women's Entrepreneurship Development and Gender Equality (WEDGE) which is a project funded by Ireland and North American Aerospace Defense Command. In furtherance of which a strategy was adopted by ILO in 2008 in Geneva which identifies hurdles that women entrepreneurs face in initiating and rising their business. By means of economic empowerment, it aspires to contribute to enhanced gender equality and more employment opportunities for women.[34]

All the above mentioned laws, institutions, policies and programmes contribute towards achieving the goal of gender justice by making women stand on equal footing as like men. Similarly, various schemes of the Ministry like Swayamsidha, Swawlamban, Swashakti and STEP enable economic empowerment of women in India. Where Working Women Hostels & Creches offer support services, the Short Stay Homes and Swadhar provide safety and rehabilitation to women in hard circumstances. The Ministry also aids autonomous bodies like Central Social Welfare Board, National Commissionand Rashtriya Mahila Kosh whodo continuous efforts for the welfare and improvement of women. Areas upon which Ministry has special focus include financial sustenance of women through skill enhancement, education as

well as access to marketing & credit.[35]

1.4 CHANGING SOCIO-ECONOMIC STATUS OF WOMEN

The status of Indian women has been changing due to growth in urbanization, industrialization, spatial mobility and social legislations. Since the century turn, most of the women are going for higher education in manners of professional and Technical Education. Even their proportion in labour force has also seen increasing. With the changing scenario women is shifting from kitchen, handicrafts and some traditional cottage industries to the non-traditional in the higher level of economic activities. The decade of international Women's year (1970's), efforts were made to promote the self employment of women which gathered greater attention from various Government and Non governmental agencies, as discussed above. Indian government new industrial policy has laid emphasis on the need to organise special entrepreneurial programs for training of women for enabling them to start their own Ventures.[36] The following data helps in analyzing the present status of women entrepreneurs in India.

- **Proportional allocation of Enterprises in rural and urban areas :**

Sector	Male	Female	All
Rural	77.76%	22.24%	100%
Urban	81.58%	18.42%	100%
All	79.63%	20.37%	100%

- **Proportional distribution of Enterprises by Male/Female :**

Category	Male	Female	All
Micro	79.56%	20.44%	100%
Small	94.74%	5.26%	100%
Medium	97.33%	2.67%	100%
All	79.63%	20.37%	100%

35. Namit k Srivastava, Women Empowerment in India, Women Empowerment (Sept. 14, 2019, 2:40 PM), https://www.indiacelebrating.com/social-issues/women-empowerment/.
36. Charantimath, *supra*, 105.

From the above extracted data, we find that male dominance in ownership has been more pronounced for Small and Medium enterprises being owned by them, as compared to Micro enterprises owned by males.[37] We also find that the southern States of Andhra Pradesh, Karnataka, Kerala and Tamil Nadu, along with West Bengal, have the highest number of women entrepreneurs in the country with a majority in small- and medium-sized businesses, according to a study. The report on the State of Women Entrepreneurship in India by she at work, a knowledge hub for women entrepreneurs, attributes this to the high literacy rate, along with overall women's empowerment in these States. However, in terms of offering the maximum number of schemes for women entrepreneurs, Goa, Jammu & Kashmir, Karnataka, Rajasthan and West Bengal have emerged as the top five States in the country. The focus of schemes for women entrepreneurs is primarily on financial aid followed by training and skill building of such entrepreneurs. The education sector sees the maximum number of women entrepreneurs followed by financial services, insurance, livestock, forestry and lodging. Further, almost 80% of women entrepreneurs opt to self-finance their businesses with little utilisation of various government schemes that provide financial aid to women entrepreneurs. Incidentally, the north eastern states of Arunachal Pradesh, Meghalaya and Nagaland have lesser number of women entrepreneurs though the ratio of male to female entrepreneurs strongly favours women.[38]

According to the female entrepreneurship and development index of 2015, our country ranks below the 20th percentile in female entrepreneurship index. It is a matter of great worry not only because this rank is below the developed economies like US and UK but also below the developing Nations like Nigeria and Brazil. The Google and Bain &company also reported that the women enterprises in India consist of 20% of all the enterprises in the nation. In the last decade it was 14 %, and despite this growth, we find several constraints restricting women from reaching heights. It is also to be noted that the maximum women oriented business in India is owned by the females only on documents. A Report published during 2019, states that funding raised by a female team in 2018 was an abysmal 0.63 % of the total 13 billion dollars raised by entrepreneurship in the ecosystem. Women also faced constraints in terms of investment where they experienced sexist comments, intrusive questions and lot of investor bias. Such kind of

37. Annual Report, Micro, Small and Medium Enterprise, (2018-19).
38. Business women score high in south : Study, The hindu (Sept. 26, 10:00 AM), https://www.thehindu.com/business/businesswomen-score-high-in-south-study/article20627605.ece.

instances proves it right that women face a tough time getting funding than their male counterparts.[39]

Historical evidences indicate that the women entrepreneurship has evolved from the push factors to the pull factors turning women towards entrepreneurship for fulfilling their aspirations both socially and economically. The number of women entrepreneurs increased especially during 1990's.Their emergence as entrepreneurs and the emergence of women owned firms have significant contribution, which is very much visible in India. However, in future it would be possible for Women entrepreneurs to work from home and also manage work and home with flexible timings. It is crucial to formulate Strategies and policies to support, invigorate and sustain women's efforts in the right direction as they are capable of contributing much more and their business possesses great potential.[40] In developing countries like India, earlier marriage was the only career for most women. Women were restricted to selected professions such as teaching, nursing and office work. Over the years, more and more women are going in for higher, technical and professional education.[41] Empirical evidences demonstrate that the primary entrepreneurial activity of women is mainly focused on small and medium enterprises sector. They widely work in sectors ranging from trade and services to beauty parlors, printing, tailoring, catering etc for which they require small amount of financial assistance. So, in the views of researcher, this may be considered as a root step for their financial independence, but with changing need of time they need more support to establish big ventures so that they could stand on the same place as that of men and thus, establish a just society where men and women are treated equally. If women entrepreneurship is accelerated with all the possible efforts, it can lead to creation of more than 30 million women owned enterprises. This will potentially transform the employment sector in the country with new jobs and economic growth. International labour organisation, provides with a data which showed that 77% of women in India who are of working age are not out of the labour market resulting in a tragic waste of human talent and resources. As stated by IMF, by making these women participate in the national workforce, our biggest democracy would be 27% Richer.[42]

1.4.1 MOST INFLUENTIAL WOMEN ENTREPRENEURS OF INDIA

Starting with one of the most widely recognized female entrepreneur of India, Indra Nooyi CEO of the Pepsi Co. India, was awarded "Padma Bhushan" in the field of business and leadership. Indu jain is the chairperson of Bennet, Coleman and Co. Ltd, which is one of the largest media group in the country. She was also awarded "Padma Bhushan" in the year 2016. Kiran Mazumdar Shawwho is the Managing Director of Biocon Ltd., which is India's one of the leading pharmaceutical company, was also awarded with Padma Shri in 1989 and Padma Bhushan in 2005 by the Government of India. Chanda Kochchar, Managing Director and CEO, ICICI Bank Ltd., has been awarded with prestigious Padma Bhushan in the year 2011 and has been over and over again ranked in the record of 'The most powerful women in the World' by the Forbes magazine. Ekta Kapoor the creative head of Balaji Telefilms and the daughter of veteran Actor Jeetendra is also an influential entrepreneur of the Tele industry. She bagged the Hall of Fame award in the Indian Tele awards 2006. [43] The founder of VLCC, Health Care Ltd., Vandana Luthra, was also facilitated with "Padma Shri" in 2013 for her outstanding contributions in the field of business. Falguni Nayar is a well-known and flourishing women entrepreneur who started a multi-product beauty store called "Nykaa". It is an e-commerce store which deals in wellness and beauty products from leading brands like Lakmé, L'Oreal Paris, Kaya Skin Clinic etc.[44] Women entrepreneurs engaging in small foundries and workshops in Maharashtra, manufacturing solar cookers in Gujarat, and T.V. capacitors in Orissa have already proved beyond suspicion that given the chance, they can surpass their male counterparts. Smt. Yumutai Kirloskar (Mahila Udyog Limited), Smt. Sumati Morarji (Shipping Corporation), Smt. Neena Malhotra (Exports) and Smt. Shahnaz Hussain (Beauty Clinic) are only few exemplary names of talented, flourishing and successful women entrepreneurs in our country.[45]

These females may be considered as exemplary figures by Government in order to achieve gender justice in each section of the society. Entrepreneurship as discussed in the paper, results not only in financial but also in over all development of women at large scale. By promoting women entrepreneurship, gender justice can be achieved easily and speedily, which is one of the foremost needs of the country.

44. Swati Mittal,10 Most Successful Female Entrepreneurs in India,Jagran Josh (Sept. 28, 2019, 9:00 AM),https://www.jagranjosh.com/articles/10-most-successful-female-entrepreneurs-in-india-1520423806-1.
45. Ranbir Singh & O.P. Monga, Changing Status of Women Entrepreneurs in Himachal Pradesh, 2 Eu. Acae. R. 5723 (2014).

1.5 CONCLUSION

It may be concluded in the end that a women is the reflection of a society but in India she is still considered to be a part of weaker section. Many statutes have been enacted so far to uplift the status of women in the patriarchal society of India and also at a global level. But only the economic independence of women can lead to their overall development. We know that the population of women is almost equal to men, yet their active participation in economic development did not seem to be significant till 1990. Indian women did not enjoy social freedom so that they could mingle freely with the nation building activity by realizing their full potentials. That is why a drastic change is required in the mindset of men folk towards general women and working women in particular. So finding remedies for the problems of women entrepreneurs becomes a great necessity for the society as well as government. Many steps have been taken to solve the problems of women entrepreneurship by the central and state governments and the non-governmental organizations but some special incentives and subsidies are yet to be provided.[46]

Earlier, woman used to work out of compulsion and to fulfill the basic needs of her family, but as the time is changing this mind set is also changing. Now they are ready to compete with men in every field, be it politics, business, home-making, fashion, television, sports or agriculture, females are seen everywhere. This is how gender justice is being done to women by promoting their financial stability. Most people will believe that women as compared to men have innate capacities and tactics to utilize resources to maximum and make surplus profits, with huge savings. In the Oriental societies it can be observed that the women are born risk seekers. They intended to grow up with the feeling of risk management and adaptation with the environment change. This talent in women makes her superior to men up to some extent. More the women entrepreneurs, more the human resources contributing in economic growth of the nation, further resulting in empowering the better half of the population. Now is the time that a little effort is made to boost the economic participation of women through entrepreneurship, so that appropriate justice is done to this gender of the society and it no longer remains a weaker section.

ARTIFICIAL INTELLIGENCE IN HEALTHCARE- A BOON OR BANE

- Ms Aishwarya Jagga*

"Everything we love about civilization is a product of intelligence, so amplifying our human intelligence with artificial intelligence has the potential of helping civilization flourish like never before – as long as we manage to keep the technology beneficial."

- Max Tegmark, President of the Future of Life Institute[1]

INTRODUCTION

The contemporary world is growing at such a rate of knots that with every passing hour the entire world witnesses a technology which is smarter than the former prevailing technology. Artificial intelligence and machine-learning algorithms are the focal-point of many exciting technologies currently in development. From self-driving Tesla's to in-home assistants such as Amazon's Alexa or Google Home, artificial intelligence is swiftly becoming the hot new focus of the technology industry[2].

NITI Aayog has given five sectors that are envisioned to benefit the most from artificial intelligence in solving societal needs :[3]

a) Healthcare: increased access and affordability of quality healthcare,

b) Agriculture: enhanced income for farmers, increased productivity of farms and declining wastage,

c) Education: education with improved access and quality,

d) Smart Cities and Infrastructure: efficient and connectivity for the mushrooming urban population, and

e) Smart Mobility and Transportation: transportation which is smarter and safer

There is no definition of artificial intelligence which has been collectively agreed upon . It was in the mid-1950s that McCarthy, recognized as the father of Artificial Intelligence coined the term

"Artificial Intelligence" which he defined as "the science and engineering of making intelligent machines"[4]. Artificial intelligence generally refers to computing technologies that are analogous to processes associated with human intelligence, such as reasoning, learning and adaptation, sensory understanding, and interaction. A formal definition of Artificial Intelligence would read as "a field of science concerned with the computational understanding of what is commonly called intelligent behavior, and with the creation of intelligent agents that exhibit such behavior"[5]. Artificial intelligence in healthcare and research artificial intelligence is not new, but there have been rapid advances in the field in recent years.

ARTIFICIAL INTELLIGENCE VIS-À-VIS HEALTHCARE

Though artificial intelligence like robots and computers have sneaked into all walks of life but they will never be able to completely substitute the work of doctors, nurses, and other hospital staff members, but there are no two ways about the fact that artificial intelligence is changing the healthcare industry. From productivity at workplaces to treating patients, high tech technology has the potential to improve diagnosis, predicting patient outcomes and creating a more bespoke patient care experience. Artificial intelligence in medicine can be dichotomized into two subtypes[6]:

a) VIRTUAL - virtual part ranges from applications such as electronic health record systems to neural network-based guidance in treatment decisions and

b) PHYSICAL - physical part deals with robots assisting in performing surgeries, intelligent prostheses for handicapped people, and elderly care.

The latest example of artificial intelligence in the healthcare industry is of IBM's Watson which has received substantial attention in the media for its spotlight on precision medicine, particularly cancer diagnosis and its treatment. Watson employs a combination of machine learning and natural language process (NLP) capabilities. However, the early enthusiasm for application of this technology took a back seat as customers realised the difficulty of teaching Watson how to concentrate on particular types of cancer and of integrating Watson into care

processes and systems. Watson is not a single product but a set of 'cognitive services' provided through application programming interfaces (APIs), including speech and language, vision, and machine learning-based data-analysis programs.[7]

HISTORY OF ARTIFICIAL INTELLIGENCE IN HEALTHCARE

The use of artificial intelligence in the field of healthcare and medicine is a natural corollary to the advent of artificial intelligence in the contemporary world. The same has no element of surprise as the system of artificial intelligence clearly intends to replicate the functioning of the human brain.

In the year 1970, William B Schwartz, a physician interested in the use of computing science in medicine, published that computing science will probably exert its major effect by augmenting and, in some cases; it will replace the intellectual functions of the physician.[8] It was realized by the 1970's that the conservative computing techniques were not appropriate for solution of the complex medical phenomenon. A better computational model that stimulated human cognitive processes, known as Artificial Intelligence was required for solving the clinical problems.

The earliest use of Artificial intelligence in medicine was comprised of setting up of the rule-based systems to help with medical reasoning. However the serious clinical problems were too complex to be dealt with simple rule based problem solving techniques. Problem solving was then sought by computer programs based on models of diseases[9].

In 1976, Gunn a Scottish surgeon used computational analysis to diagnose acute pain in abdominal region. This was achieved through clinical audits of structured case notes through computers, whereby diagnosis through this route proved to be 10% more accurate that the conventional route[10].

By 1980, artificial intelligence was well established all over the globe but especially in learning centers in the United States where, there was use of novel and innovative artificial intelligence approach to medical diagnoses which was majorly based on the expert system methodologies.

10. *Id.*

By the end of the 1990's, research in the field of medical artificial intelligence had started to use novel techniques like machine learning and artificial neutral networks to support clinical decision-making.

APPLICATION OF ARTIFICIAL INTELLIGENCE IN HEALTHCARE

Artificial intelligence today is being employed for the three classical medical tasks: diagnosis, prognosis and therapy but most importantly in the area of diagnosis.

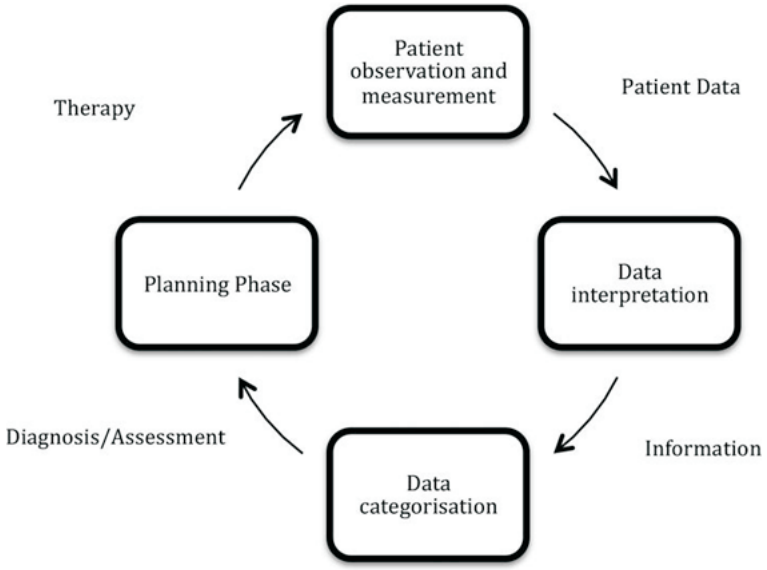

Figure 1

Figure 1 depicts the medical diagnosis cycle which involves observation and examination of the patient, collection of patient data, interpretation of data using the clinician's knowledge and experience and then formulation of a diagnosis and a therapeutic plan by the physician. This concept in the realm of artificial intelligence is replicated by the physician being the intelligent agent, the patient data being the input and the diagnosis being the output.[11]

Artificial intelligence is not a single technology, but rather a compilation of them each of which have inevitable and immediate relevance to the healthcare field. Some particular artificial intelligence technologies of high importance to healthcare are below-

11. Sandeep Reddy, Use of Artificial Intelligence in Healthcare Delivery, eHealth- Making Health Care Smarter, Thomas F. Heston, IntechOpen, (March 14, 2020. 5:52 p.m.) https://www.intechopen.com/books/ehealth-making-health-care-smarter/use-of-artificial-intelligence-in-healthcare-delivery

1. MACHINE LEARNING

Machine learning is a statistical technique for fitting models to data and to 'learn' by training models with data. There are following versions of machine learning in healthcare-

a) Precision Medicine- This is the most common application of traditional machine learning which predicts the best suited treatment for the patient.[12]

b) Neural Network – This is a more complex technology used for categorization applications like determining whether a patient will acquire a particular disease. It resembles to the way neurons process signals, but the analogy to the brain's function is relatively weak.

c) Deep Learning/ Neural Network Models - This is the most complex forms of machine learning with many levels of features or variables that predict outcomes. A widespread application of deep learning in healthcare is recognizing potentially cancerous lesions in radiology images. Deep learning is being applied to radiomics more and more, or for the detection of clinically relevant features in imaging data beyond what can be perceived by the human eye.

2. NATURAL LANGUAGE PROCESSING

Natural Language Process includes applications like speech recognition, text analysis, translation and other such objectives related to language. In healthcare, the dominant applications of NLP involve the creation, understanding and classification of clinical documentation and published research. NLP systems can analyze unstructured clinical notes on patients, prepare reports (for instance- on radiology examinations), transcribe patient interactions and conduct conversational artificial intelligence.[13]

3. RULE-BASED EXPERT SYSTEMS

Expert systems are based on collections of 'if-then' rules. In healthcare, they are being widely engaged for 'clinical decision support' purposes.[14] Expert systems require human experts and knowledge engineers to build a series of rules in a particular knowledge domain. However, when the number of rules is large (usually over several thousand) and the rules begin to conflict

12. Su-In Lee, Safiye Celik, B A Logsdon, et al. A machine learning approach to integrate big data for precision medicine in acute myeloid ¬leukemia. Nat Commun 2018 (March.15, 2020, 2:14 p.m.) https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5752671/
13. Thomas Davenport and Ravi Kalakota, The potential for artificial intelligence in healthcare, Future Healthc J. 2019 Jun (March.15, 2020, 2:30 p.m.) https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6616181/#CIT000
14. *Id.*

with each other, they tend to break down. Moreover, if there is change in the knowledge domain, bringing about a change in the rules can be difficult and time-consuming. They are slowly being replaced in healthcare by more approaches based on data and machine learning algorithms.

4. PHYSICAL ROBOTS

Physical robots are well known to perform pre-defined tasks like lifting, repositioning, welding or assembling objects in places like factories and warehouses, and delivering supplies in hospitals. They are also becoming extra intelligent, as other artificial intelligence capabilities are being implanted in their 'brains' (that is, their operating systems). Surgical robots, originally approved in the United States of America in the year 2000, endow 'superpowers' to surgeons, advancing their skill to see, craft clear-cut and minimally invasive incisions, stitching wounds and so forth.[15] Crucial and significant decisions are forwarded only by human surgeons, however. Common surgical procedures using robotic surgery include gynecologic surgery, prostate surgery and head and neck surgery.[16]

5. ROBOTIC PROCESS AUTOMATION

Robotic process automation (RPA) doesn't in actual fact involve robots as the name suggests but includes only computer programs on servers. It relies on an amalgamation of workflow, business rules and 'presentation layer' integration along with information systems to operate like a semi-intelligent user of the systems. In healthcare, they are applied for recurring tasks like prior authorization, updating patient records or billing. When combined with other technologies like image recognition, they can be materialized to dig out data from, for example, faxed images so as to input it into transactional systems.

These technologies are mostly individual ones, but increasingly they are being pooled and integrated; robots are getting artificial intelligence supported 'brains', image recognition is being integrated with Robot Process Automation . Perhaps in the upcoming years these technologies will be so intermingled that composite solutions will be more likely or feasible.

ARTIFICIAL INTELLIGENCE IN HELTHCARE – A BOON

"What all of us have to do is to make sure we are using artificial intelligence ina a way that is for the benefit of humanity, not to the detriment of humanity."

- Tim Cook, CEO of Apple[17]

Artificial intelligence in healthcare today is gaining more and more importance for the following reasons-

1. ARTIFICIAL INTELLIGENCE EXCELS AT WELL-DEFINED TASKS

Research has focused on tasks where artificial intelligence is able to effectively demonstrate its performance in relation to a human doctor. By and large, these tasks have evidently helped define inputs and a binary output which is easily validated.

2. ARTIFICIAL INTELLIGENCE IS SUPPORTING DOCTORS, NOT REPLACING THEM

Machines invariably lack human qualities such as sympathy, empathy and compassion, so it becomes necessary that patients perceive that consultations are being led by human doctors. Furthermore, patients cannot be expected to immediately trust artificial intelligence a technology shrouded by mistrust.[18] Therefore, artificial intelligence commonly handles tasks that are essential, but narrowed down in their scope so as to leave the primary and key responsibility of patient management with a human doctor. There is an ongoing clinical trial using artificial intelligence to calculate target zones for head and neck radiotherapy more accurately and way more quickly than by a human being. An interventional radiologist is still ultimately responsible for delivering the therapy but artificial intelligence has a significant background role in protecting the patient from harmful radiation.[19]

3. ARTIFICIAL INTELLIGENCE SUPPORTS POORLY RESOURCED SERVICES

A single artificial intelligence system is capable of supporting an enormous population and

18. Oppenheim M. Stephen Hawking: artificial intelligence could be the greatest disaster in human history. Independent. Oct,2016 (March 14,2020 6:03 p.m.), http://www.independent.co.uk/news/people/stephen-hawking-artificial-intelligence-diaster-human-history-leverhulme-centre-cambridge-a7371106.html
19. Varun H Buch, Irfan Ahmed, Mahiben Maruthappu, Artificial intelligence in medicine: current trends and future possibilities, Br J Gen Pract. 2018 Mar (March 14, 2020 6:06 p.m.) https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5819974/

therefore it is ideally suited to situations where human expertise is a scarce resource, such as in the developing nations. In many Tuberculosis prevalent countries there is a shortage of radiological expertise at remote centers. By means of artificial intelligence, radiographs uploaded via these centers could be understood by a single central system; one of the recent study shows that artificial intelligence precisely diagnoses pulmonary Tuberculosis with a sensitivity of 95% and specificity of 100%. Furthermore, under-resourced tasks where patients are experiencing unsatisfactory waiting times are also attractive to artificial intelligence in the form of triage systems.[20]

Thus, tele-medicine has proved to be a boon in the contemporary world.

ARTIFICIAL INTELLIGENCE IN HEALTHCARE- A BANE

"Success in creating artificial intelligence would be the biggest event in human history. Unfortunately it might also be the last, unless we learn how to avoid the risks."

-Stephen Hawking, Theoretical Physicist [21]

As the use of artificial intelligence in the healthcare sector rises and advances, the legal front will also face issues, particularly with the blooming attention and unique application of customary regulatory principles which are not as of now attuned and accustomed to artificial intelligence. Though there is potential and scope for artificial intelligence to transform healthcare ethical, legal, and cultural factors need to be considered by developers, practitioners, and policy makers when designing, using, and regulating artificial intelligence-

1. DATA PRIVACY AND SECURITY –

Artificial Intelligence applications in healthcare make use of data that many would consider to be sensitive and private[22]. These are subject to legal controls. Patient privacy is a key concern affecting how artificial intelligence is developed and tested.[23] The data of patients should only be used in compliance with patient's expectations as to their usage and requirement. Artificial intelligence could be materialized to detect cyber-attacks and protect healthcare computer systems. However, there is the potential for Artificial Intelligence systems to be hacked to gain

20. *Id.*
21. https://www.forbes.com/sites/nicolemartin1/2019/06/27/13-greatest-quotes-about-the-future-of-artificial-intelligence/#637512e63bdf (retrieved on 14 March, 2020 7:42 p.m.)
22. https://www.nuffieldbioethics.org/assets/pdfs/Artificial-Intelligence-AI-in-healthcare-and-research.pdf (Retrieved on March 15, 2020. 6:34 p.m.)

access to sensitive data, or spammed with fake or biased data in such ways that might not easily be detectable and will jeopardize the security and safety of vital information of the patients.

In 2016, there was hacking of a Mumbai-based diagnostic laboratory database which led to the leaking of medical records (including HIV reports) of over 35,000 patients. This database was holding the records of patients throughout Indian Territory, and many were oblivious that their details and particulars have been exposed. This database had been victim of multiple hacks sometimes even up to three times in a week. However, no action was taken by the laboratory to secure the data.[24]

2. RELIABILITY AND SAFETY

Reliability and safety are primary and principal issues where artificial intelligence is used to control equipment, deliver treatment, or make decisions in healthcare sector. Artificial intelligence could make errors and, if an error is difficult to detect or has knock-on effects, this could have serious implications.[25] The reason for the fallacy can be because patients may react differently to injuries and secondly, an underlying problem in one artificial system might result in injuries to thousands of patients in sharp contrast to the physical presence of a professional. For example, in a clinical trial in 2015, an artificial intelligence application was exercised to predict which patients were expected to develop complications subsequent to pneumonia, and henceforth should be hospitalized. This application erroneously directed doctors to send home patients with asthma due to its failure to take contextual information into account.

3. EFFECTS ON HEALTHCARE PROFESSIONALS

The ethical obligations of healthcare professionals towards individual patients might be affected by the use of artificial intelligence decision support systems, given these might be guided by other priorities or interests, for instance cost efficiency or widespread public health apprehensions. As with many new technologies, the introduction of artificial intelligence is likely to denote that the skills and expertise required of healthcare professionals will change. This could ease up health professionals to splurge more time engaging directly with the patients.

---

23. Mary H. Stanfill and David T. Marc, Health Information Management:Implications of Artificial Intelligence on Healthcare Data and Information. Yearb Med Info 2019, (March 15, 2020. 6:10 p.m.) https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6697524/
24. ENS (2016, December 3), Maharashtra website hacked: Diagnostic lab details of 35,000 patients leaked, (March 15, 2020. 5:55 p.m.) http://indianexpress.com/article/india/diagnostic-lab-detailsof-35000-patients-leaked-hiv-reports-4407762/
25. https://web.stanford.edu/class/cs240/old/sp2014/readings/therac-25.pdf (Retrieved on March 15, 2020. 6:34 p.m.)

However, there are concerns that the introduction of artificial intelligence systems might be used to justify the engaging of less skilled staff. This could be problematic if the technology is unsuccessful and staff is not able to recognize faults or carry out necessary tasks without computer guidance. A related concern is that artificial intelligence could make healthcare professionals complacent, and less likely to check results and challenge errors.[26]

4. LEGAL LIABILITY:

In case of error in diagnosis, malfunction of a technology or applying inaccurate or inappropriate data the question crops up as to on whom should the liability fall upon – the doctor or the software developer(artificial intelligence). In cases of medical negligence in India, medical professional are held liable, and can further be prosecuted under civil and criminal law of the country. Since software and codes is not technology agnostic, many believe that the creator of the software should be an agent that can be regulated.

Additionally, how does one settle the level of accountability and liability of the doctor in a scenario where he provides the erroneous treatment or diagnosis on account of a glitch in the system or a mistake in data entry? Even though he may not be at fault, liability will fall on him instead of the technology that he relied upon. As a result of such issues of trust and liability and the current capability of artificial intelligence, completely replacing medical professionals with artificial intelligence (that is active assistance by artificial intelligence) is unfeasible at present.[27]

Consequently in light of these disadvantages artificial intelligence should be used cautiously.

POSSIBLE SOLUTIONS

There is a need of responsible and ethical artificial intelligence to make sure that patients are the utmost priority. To combat the problems in the arena of artificial intelligence in healthcare following solutions can be helpful-

1. DATA GENERATION AND AVAILABILITY -

Several risks in Artificial intelligence healthcare exist as to the assembling high quality data in line with the protection of privacy. One set of solutions is provision by government for infrastructural resources for data, varying from setting standards for electronic health records to

---

26. https://towardsdatascience.com/the-dangers-of-ai-in-health-care-risk-homeostasis-and-automation-bias-148477a9080f?gi=c7ad6d3ac013 (retrieved on March 15, 2020. 6:24 p.m.)
27. Yesha Paul, Elonnai Hickok, Amber Sinha , Udbhav Tiwari. Artificial intelligence in the healthcare industry in India, the Centre for internet and society, India (March 15, 2020 6:52 p.m.) https://cis-india.org/internet-governance/files/ai-and-healtchare-report

directly providing technical support for high-quality data gathering efforts in the healthcare system that otherwise are not available. Another option is direct investment in the creation of high quality data-sets. Reflecting in this direction, both the United States of America's initiative and the United Kingdom's BioBank aim to assemble comprehensive health-care data on enormous numbers of individuals. Ensuring these effective privacy safeguards for large-scale data-sets is essential to ensure patient trust and participation.[28]

2. QUALITY OVERSIGHT-

Oversight of artificial intelligence system will assist addressing the risk of patient injury. Increased oversights efforts by health systems and hospitals, professional organizations like the American College of Radiology and the American Medical Association, or insurers may be necessary to ensure quality of systems that fall outside the Food and Drug Administration's regulatory authority[29].

3. PROVIDER ENGAGEMENT AND EDUCATION -

The integration of artificial intelligence into health system will undoubtedly change the role of the healthcare professionals. On one side the professionals will be enabled to provide more-personalized and better care, more time to interact with their patients on the other hand the professionals would struggle uninterruptable predictions and recommendations from completing algorithms. In either case medical education would be required to evaluate and interpret the artificial intelligence systems in healthcare.

4. PRIORITY TO PATIENT-

Parallel to the traditional clinical activity, patient safety must remain paramount and artificial intelligence ought to be developed in a regulated way in partnership between clinicians and computer scientists. However, regulation cannot be permitted to asphyxiate innovation.

5. TRANSPARENCY

External critical evaluation and transparency of technology companies is indispensable for clinicians to be in no doubt that the tools they are providing are not dangerous to use. In many respects, artificial intelligence developers in healthcare are not poles apart from pharmaceutical

---

28. W.Nicholson Price II, Riska and remedies for Artificial Intelligence in Health Care, The Brookings Institution's Artificial Intelligence and Emerging Technology (AIET) Initiative (March 15, 2020. 11:30 p.m.) https://www.brookings.edu/research/risks-and-remedies-for-artificial-intelligence-in-health-care/
29. *Id.*

companies who comprise of a similar arms-length relationship with care providers. This is a practical parallel and could serve as a guide. As with the pharmaceutical industry, providing license and post-market surveillance are vital and such methods should be advanced that ensure full-proof safety.

Thus for better functioning the above solutions can prove to be a step towards better use of artificial intelligence in the healthcare industry.

ARTIFICIAL INTELLIGENCE IN HEALTHCARE- INDIAN PERSPECTIVE

India presently is in a unique position to be a driver in the artificial intelligence and healthcare space for national and international companies. With large amounts of data and a burgeoning startup community, India has the opportunity to address many health care related problems through the use of artificial intelligence. In its quest for India to join the artificial intelligence revolution, the government has also undertaken a number of initiatives to drive the adoption of artificial intelligence across the country. Yet, many obstacle still stand in the approach to widespread adoption and implementation, arising out of a lack of regulatory clarity on issues of data, design and certification and lack of reliable and ethical collection of data and the processing systems. A robust open data policy, a comprehensive privacy legislation, greater investment in artificial intelligence research and development, robust national infrastructure, equipping labour forces with the necessary skills to adopt artificial intelligence and to be prepared for the changes that artificial intelligence could bring, and a regulatory framework that ensures transparency and accountability but does not hinder innovation, are some of the measures required for the establishment of a flourishing artificial intelligence healthcare ecosystem in India[30]

CONCLUSION

Artificial Intelligence will become the stethoscope of the 21st Century provided there is a high level of co-operation between the law, technology and the medical community. Legal systems around the world will soon be faced with fundamental decisions regarding artificial intelligence systems. These systems will be prone to encountering liability for their decisions in relation to the treatment of patients; in the way similar to doctors who treat their patients.

---

30. Yesha Paul, Elonnai Hickok, Amber Sinha , Udbhav Tiwari. Artificial intelligence in the healthcare industry in India, the Centre for internet and society, India (March 14, 2020 8:52 p.m.) https://cis-india.org/internet-governance/files/ai-and-healtchare-report

Watson and other similar artificial intelligence systems are already so well entrenched in, and relied upon by medical practitioners, that the option of imposing an outright ban on such systems has already passed. The only alternative at hand is that the legislators all over the globe enforce a prudent form of regulation of such systems to safeguard the rights of thousands of patients who will be exposed to the diagnosis and therapies put forward by their artificial intelligence systems.

Therefore, it is submitted that to encourage the safe and sound use of the skills these systems undoubtedly have, a new legal action which is based on enterprise liability. Regulations and laws need to be created, which shall also encompass all relevant aspects of medical malpractice, products liability and vicarious liability. Certainty, stability and accountability through far sighted and appropriate legislation will stimulate and entrench this vital new asset within the medical profession.

ARTIFICIAL INTELLIGENCE: LEGAL PERSONALITY AND LIABILITY

-Mr Mayank Sharma*

"It is the year 2023, and for the first time, a self-driving car navigating city streets strikes and kills a pedestrian. A lawsuit is sure to follow. But exactly which laws will apply? No-one knows." [1]

INTRODUCTION

Such legal conundrum is no more theoretical. Technological advancement has led to the rise of intelligent machines, capable of imitating human like intelligence, referred to as Artificial Intelligence (AI). The term Artificial *Intelligence* was coined by John McCarthy in 1956 to describe computer programs which seemingly exhibit intelligence, that is, computers perform tasks which when performed by humans require them to be intelligent.[2] Simply put, AI is a collection of technologies that combine data, algorithms and computing power to perform tasks that would require human intelligence, such as learning, reasoning, analysing, socialising etc. A distinction is made between Artificial Narrow Intelligence (ANI) which is designed to accomplish a specific task and Artificial General Intelligence (AGI) capable of all sorts of general intelligent actions. All the AI systems available today are 'narrow'. Nevertheless such intelligent machines are ubiquitous and exists in various forms such as computers, chat-bots, digital assistants, robots, autonomous vehicles etc.Over the past few years, the availability of big data, cloud computing and the associated computational and storage capacity and breakthroughs in an AI technology called "machine learning" (ML), have dramatically increased the power, availability, growth and impact of AI.[3] All this is transforming communication, businesses, healthcare, medicine, safety, transport, finance, banking, and every other aspect of human life for better. However there must be some safeguards in place to prevent the harm that these machines may cause. For example, autonomous vehicles[4] would be freely

2. V. Rajaraman,JohnMcCarthy — Father of Artificial Intelligence, 19 Reson, 198–207 (2014).
3. OECD, ARTIFICIAL INTELLIGENCE IN SOCIETY, (2019) available at: https://doi.org/10.1787/eedfee77-en.
4. Google's driver-less cars have been test-driven on public roads for several years and have logged hundreds of thousands of miles under the brand name WAYMO.

running on roads without human aids in a few years, the trials for which are already underway and robot assisted diagnosis and surgeries are already being performed in hospitals. Today, mankind stands on the threshold of an era where AI is set to unleash a new industrial revolution, which will pervade every aspect of human life and therefore it has become imperative for the legislatures to consider its legal validity, implications and effects, without suffocating research and development.

Intelligence makes humans special among other species because it gives them the ability to think and perform various action. Each individual is responsible for their own actions because their each action is intelligently calculated and they can foresee the consequence of their actions and they are recognised in the eyes of law as persons capable of possessing rights and liabilities. For example, if a person commits a murder, he himself will be liable for his act. However, law makes an exception in case of minors and lunatics who are unable to utilise this intelligence. When it comes to machines operated by humans, liability arising out of any damage or harm caused by machines, is imposed on operator or the manufacturer depending upon the cause. This is essentially the case in, for example, car accident. But what happens in case of machines which operates with their own intelligence without any human aid. Who bears the liability in case damage is caused due to operation of such a machine? This is the case, for example, where an autonomous vehicle[5] causes an accident. Who shall be held responsible: the driver, the car owner, the manufacturer, the programmer or the AI itself? A similar problem arises in case a robot assisted surgery goes wrong. Who shall be held liable: the doctor, the hospital, the manufacturer, the programmer or the robot itself? Therefore, the Author shall, in absence of any specific law on AI, investigate the position of AI in eyes of law by comparing it with that of legal personality of corporation, ship, idol and animals and then explore the contours of liability arising out of any wrongful act or omission by AI.

LEGAL PERSONALITY: A FICTION OF LAW

The foundational principle of a legal system is that it must recognise the subjects it seeks to govern. This is done by the law recognising distinct legal units or "legal persons"[6]. The concept of legal personality constitutes an important subject matter in law, for there cannot be rights and duties without a person. To be a legal person is to be recognised by the law as a subject which

5. Autonomous vehicle refers to the vehicle being driven with the use of an AI without or minimum human interference. Such cars are commercially available such as the Tesla and Google's Waymo.
6. M. Siddiq (Ram Janmabhumi Temple) v. Suresh Das, (2020) 1 SCC.

embodies rights, entitlements, liabilities and duties.

The word "person" is derived from the Latin word *"persona"*. Literally it meant a mask worn by actors in a play to personify God, however later on it was extended to refer to the role played by humans in legal proceedings concerned with rights and liabilities. However human beings and legal person have never been synonymous. Neither all humans were legal persons nor were all legal persons humans. What or who is a legal person has changed with changing time and place. Legal person and legal personality are artificial creations of law with their own distinct features. Salmond has defined a *"person"* as, *"Any being to whom the law regards as capable of rights or duties. Any being that is so capable, is a person whether human being or not and nothing that is no so capable is a person even though he be a man."*[7]

A person in the eyes of law may be a 'natural person' or a 'legal person'. A natural person is a living human being who is a subject matter of rights and liabilities. On other hand, legal persons are 'artificial or juristic person', real or imaginary, who are treated as humans in greater or lesser degree and in whom law vests rights and duties and thus attributes personality by way of fiction. The very words "juristic person" connote recognition of an entity to be in law a person which otherwise it is not. When a legal system confers legal rights and obligations on an entity, it has determined to treat that entity as though it were a person in fact. It is a kind of pretence in which legal systems can decide to engage, regardless of whether an entity really is a person.[8] What law recognises as a legal person depends upon the prevailing social and political conditions. Roscoe Pound has rightly observed, *"In civilised lands even in the modern world it has happened that all human beings were not legal persons. In Roman law down to the constitution of Antonius Pius the slave was not a person. He enjoyed neither rights of family nor rights of patrimony. He was a thing, and as such like animals, could be the object of rights of property."*[9] On the other hand, ancient animals were regarded as subject of legal duty. Under Ancient Jewish Law, if an ox gored a human being to death, it was to be stoned and by way of further punishment its flesh was not to be eaten. Modern system of law, however give no countenance to the theory that animals can be subject to legal duties."[10] The development and advancement of societies demanded the

need to recognise other entities as juristic person. In this regard Supreme Court observes, *"Where an individual's interaction fell short of cooperation, a larger circle of individuals was necessitated and therefore institutions like corporations and companies were created, to help the society in achieving the desired result.*[11]*"* Under the Indian law corporations [12], deities[13], idols[14] , mutt[15], mosque[16] and animals[17] are recognised as legal persons.

NECESSITY AND CONVENIENCE AS THE BASIS FOR LEGAL PERSONALITY.

The concept of legal person is an innovation of law that has expanded beyond natural persons due to historical circumstances, legal necessity or adjudicatory convenience. Conferring legal personality is an artifice, a pretence, a trick of speech or a cloak draped around entities for them to be recognised in eyes of law. For the purposes of recognising a legal person, the relevant inquiry is the purpose to be achieved by such recognition. To subject an entity to legal personality is to make it a subject of rights and liabilities. However such rights and liabilities are neither unlimited nor equivalent to those of natural purpose. Since legal personality is a creation of law to fulfil some person therefore law confers only limited rights and liabilities to such fictitious person relevant to the said purpose. The author shall enquire and analyse this purpose for conferring legal personality to corporation, ships, idols and animals and then juxtapose it with that of an AI and make a case as to why conferring legal personality would not serve any purpose.

CORPORATIONS AS A LEGAL PERSONALITY.

Corporation is a classic example of artificial legal person that gives us a great understanding of how legal recognition of an artificial person is useful for the society and a convenience for law. A corporation is a group of individuals which is treated in law, for the purpose of identification, as a single unit.[18] A corporation is a legal person having separate identity apart from its members, capable of rights and liabilities of its own and endowed with the potential of perpetual succession.[19] It can sue or be sued and can sell or buy property in its name. But a corporation is

not merely an institution recognise by law, but a legal device for the attainment of social, political or economic ends.[20] An association in form of a corporation helps individuals to achieve what they can't by themselves. For example, a new business venture through a corporation helps in raising capital and mitigating the risks and liability. Legal personality enables corporation to enter into almost all legal relations with other persons. This has simplified the legal proceedings. In a dispute with a corporation a person proceeds against corporation only and not the number of individuals who are the members. However such immunity is not unlimited as the courts lifts the corporate veil to fasten the liability on human agents such as directors and managers when legal personality of corporation presents obstructions in protection and enforcement of public and private rights. This is because the corporation has no will of its own, will of its human agents is the will of the corporation. Corporations also help in continuous operation of trade and commerce since transfer, resignation or death of a member does not affect the functioning of the corporation. There is also a clear distinction between the assets of the Corporation and that of its members. As a result it can shield its own assets from the intervention of its owners or their personal creditors, because company's creditors are given priority over investors, this is called 'entity shielding' and it helps in ensuring investments which promotes growth.[21] Thus, legal personality of corporation serves a great utility.

This discussion leads us to the question that, what benefits could be derived by conferring AI with legal personality. The significance and utility of AI in present and the near future can hardly be disputed. AI will completely revolutionize human life providing them with better standard of living. Thus it can be argued that separate legal personality of AI, similar to that of a corporation, will limit the liability of human agency operating behind AI in form of its owner, manufacturer or programmer. This would promote research and development and application of AI in varied fields, which will provide enormous utility to humans. Once conferred with such a status of a legal person similar to the extent of a corporation, AI can be sued for its actions and the liability arising thereof just as in case of a corporation. However such a suit would not help secure any relief to the plaintiff since civil liability will requires AI to hold assets and thus the claims would fail. In case of corporate liability the court lifts the corporate veil to determine will of the human

20. E.S. MASON,CORPORATION IN MODERN SOCIETY, (2nd ed. 1967).
21. Henry Hansmann et al.,Law and Rise of Firm, 119 Harv. L. Rev. 1335 (2005-2006).

agents behind it. But such piercing of immunity would not be possible in case of AI because its actions are based on intelligent calculation and its decision is its own and not that of a manufacturer or the programmer. Moreover, the manufacturers or the programmers would often escape from their liability by blaming it on the AI. And therefore a personality similar to that of a corporation would not serve any purpose for AI to be conferred with legal personality.

SHIP AS A LEGAL PERSON

A more relatable example is that of conferment of legal personality on a Ship. Under Admiralty Law, jurisdiction can be exercised either in *persona* i.e. against the individual or the corporation responsible or in *rem* i.e. by proceeding against the ship as a legal person directly in case of any damage. Having been regarded as entirely independent from the action in persona, the action in *rem* is the action against the ship, or, more appropriately against other properties such as cargo and freight but most significantly not against its owner.[22] Jessel M.R. has aptly described the action in rem as, *"You may in England and in most countries proceed against the ship. The writ may be issued against the owner, and the owner may never appear and you get your judgment against the ship without a single person being named from the beginning to end. This is an action in rem, and it is perfectly well understood that the judgment is against the ship."*[23]

The law confers legal personality to ship for adjudicatory convenience. Conferring the ship with a legal personality allows for actions to be taken independent of the presence of ship's owner who may be in another part of the world.[24] Moreover, since most of the admiralty litigation involves international trade, the ship and the accompanying cargo and freight are highly mobile and an action against the ship serves as a security for the claim. After proceedings are initiated against the ship it is arrested, so that it does not move outside the court's jurisdiction. If no person appears in court to defend, the proceeding will continue against the ship and eventually, the ship may be sold by court order to satisfy the claim.[25] In this way conferring legal personality ensures convenience to law and effective adjudication of disputes.

Similar purpose for conferring personality on AI does not seems to provide similar convenience. A ship or its cargo are valuable assets and therefore they can be easily sold out and claims can be

22. CHRISTOPHER HILL, GUIDE TO MARITIME LAW 100 (6th ed.2003).

satisfied. AI would lose its utility as well as its value in case of any act or an omission resulting in an injury. It would lose out on the trust of people and subsequently its goodwill and it will find no buyers and claims would remain unfulfilled. Thus, the purpose which serves basis of legal personality of a ship finds no use in case of AI.

IDOL AS LEGAL PERSONS

An idol refers to a statue created and worshipped by humans. In India, legal personality has been conferred upon Hindu idol. Legal personality vests in the idol however it does not personify the divinity behind the idol which is indefinite, limitless and omnipresent in Hinduism. Legal personality exists for the underlying pious purpose and moving or destroying the idol has no effect on its legal personality.[26] It is a result of historical process whereby the rulers and emperors donated property to Hindu shrines and as a result such shrines came to hold large area of land owned, managed and cultivated by *shebaits* and *mohunts* who were not the owner of this property. This situation presented a problem to colonial rulers and British courts and for this reason the legal concept of the Hindu idol as a juristic entity owning land evolved.[27] The legal personality of idols provided the courts with a conceptual framework within which to practically adjudicate disputes involving competing claims over disputed property endowed to or appurtenant to Hindu idols. However this purpose can't support the claim for legal personality of AI since it would not hold any property, instead it will itself be a property. Property is donated to Hindu shrines for religious and spiritual gains but there is no reason as to why someone will donate property in the name of AI. And therefore the purpose which serves as basis of legal personality of idols cannot provide similar basis for legal personality of AI.

ANIMALS AS LEGAL PERSONS

In the recent judgment in ***Karnail Singh v State of Haryana***[28] the Punjab & Haryana High Court held that the entire animal kingdom including avian and aquatic as legal entities having corresponding rights, duties and liabilities of a living person. All the citizens throughout the State of Haryana were held to be persons in *loco parentis* as the human face who could approach for the welfare of the animals. The reason for conferring legal personality is promotion of general welfare of animals, protection of threatened species of animals and their habitat. The

26. Ram Jankijee Deities v. State of Bihar,(1999) 5 SCC 50.
27. Gautam Patel, Idols in Law, 45 E&P W, 49 (2010).
28 2019 SCC OnLine P&H 704.

court held that, *"Article 21 of constitution protects 'life' which means something more than mere survival or existence or instrumental value for human beings, but to lead a life with some intrinsic worth, honour or dignity. All the animals have honour and dignity. Every species has an inherent right to live and is required to be protected by law. The rights and privacy of animals are to be respected and protected from unlawful attacks. Their Lordships have evolved the term 'species best interest'."*

Animals are an integral part of our environment. There is an increasing need to protect wildlife and ecology as more and more species are becoming threatened due to deteriorating environment. Animals share common qualities like intelligence, emotion and self-awareness, language, memory, culture, cooperation and altruism with humans.[29] Animals also play a significant role in different cultures and religions and thus are part of common heritage of humans which needs protection. Thus conferring animals with legal personality has made them subject of right rather that as objects. Animals can be directly represented in court through humans and can be a party to legal action. This would help their conservation and protection and prevent their abuse.

Similar arguments however, finds no relevance in conferring legal personality on AI. Though AI possesses intelligence however it does not share other qualities such as emotions, culture, language or altruism. It can neither experience pain nor pleasure. It is often argued that development in technology will lead to machines being self-aware, however as of present it is only a theory and remains a distant possibility. Moreover, neither AI faces any threat from humans nor it can be abused as in case of animals. Thus arguments based on human like qualities or conservation find no relevance in case of AI.

LIABILITY FOR AI

Conferring legal personality to AI seems no way out and therefore we shall explore the liability of AI under present civil liability laws. The contours of civil liability arising out of act or omission by an AI under present legal framework can be explore in two ways – firstly when AI is used as a product and secondly when AI is used as a service.

AI AS A PRODUCT

Product liability is the main basis of manufacturer's liability. A manufacturer of goods may be

29. DAVID R. BOYD, THE RIGHTS OF NATURE: A REVOLUTION THAT COULD SAVE THE WORLD,(1st ed.2017).

held liable to the person injured due to his product either on violation of a statute imposing duty on the manufacturer or under broader principles of law such as negligence and strict liability. In the absence of any statute imposing duty on manufacturer of AI, manufacturer's liability can be explored under the principle of strict liability and negligence.

Strict Liability of manufacturer

Under the theory of strict liability it is the wrongful act alone which makes a person liable, guilty mind, innocent mind or a negligent mind is immaterial. The wrong may have resulted in spite of all the care and caution exercised yet the person is held liable. Any fault or imperfection in the quantity, quality, purity, potency or standard required under law in force amounts to defect.[30] Manufacturing defects arises when a given product does not meet the standards and specifications laid down by the manufacturer.[31] For plaintiff to impose liability on manufacturer it must be proved that the product does not conform to specifications irrespective of any negligence.[32] In case of autonomous vehicles, plaintiff can proceed by proving that the product did not worked as specified by the manufacturer. For example, if an autonomous vehicle fails to detect nearby vehicles and collides then the plaintiff should be able to recover from manufacturer. Under the malfunction doctrine, a variation of the manufacturing defect doctrine, a plaintiff can show a manufacturing defect without specifically proving how it was defective.[33] A plaintiff must prove that:

(1) the product malfunctioned,

(2) the malfunction occurred during proper use, and

(3) the product was not altered or misused in such a manner so as to cause a malfunction.[34]

This can be proved by circumstantial evidence which makes manufacturer strictly liable for the defects in the products.

Negligence

A person who sustains injury to his person or property by the use, storage or consumption of a product may recover damages from the manufacturer under the principle of negligence.[35] Negligence is absence of care. A claim of negligence against the manufacture arises because

30. Consumer Protection Act, 1986.

34. *Id.*
35. *Id.*

there is duty of care. The theory of negligence is not to be found in the state of mind but in the conduct of person which is to be derived from his external behaviour. The plaintiff in a products liability case may recover damages if he can establish the three essential elements of negligence liability:

(1) there was a duty on the manufacturer,

(2) manufacturer failed to the discharge that duty; and

(3) resulting injury or damage had proximate connection with the breach of duty.[36]

The plaintiff may bring an action against manufacturer for failure to carefully design, manufacture, process, inspect, test, disclose known defects, warn of known dangers, or adequately instruct in the use of the product.[37] Therefore, the manufacturer can be proceeded against in case of damaged caused due to manufacturing defects in AI, under the law of negligence. The manufacturer owes duty of care not only to the consumers but also third parties since privity of contract does not holds good and manufacturer is liable to every person injured as a natural and probable cause of its use.[38] At the same time operators will also have to discharge a range of duties of carerelate to the choice of technology, in particular in light of the tasks to be performed and the operator's own skills and abilities, the organisational framework provided, in particular with regard to proper monitoring and maintenance, including any safety checks and repair.[39] Failure to comply with such duty would trigger liability against operator similar to the liability of operator in case of traditional machines.

AI AS A SERVICE

Vicarious Liability of Master

Under the principle of vicarious liability, for the wrongful acts on one person, another can be held liable. Based on this principle masters are liable for the acts of their servants done in the course of their employment. The legal basis is that a servant carries on the business of master with his express or implied authority and agrees to abide by the lawful orders and direction of the master in respect of certain work to be done.[40] Therefore what follows is that if someone can be

36. Donald M. Jenkins, The Product Liability of Manufacturers: An Understanding And Exploration, Akron Law Review 4 (1971).
37. *Id.*
38. Donoghue v Stevenson, [1932] UKHL 100.

40. Dr. VEENA MADHAV TONAPI, TEXTBOOK ON JURISPRUDENCE, (2nd ed. 2010).

held liable for the wrongdoing of some human helper, why should the beneficiary of such support not be equally liable if they outsource their duties to a non-human helper instead, considering that they equally benefit from such delegation?[41] Thus when an AI is employed by the employer to do certain task any liability arising out of the wrongful act shall fall upon the employer who derives benefits from the servant. For example, a company employing autonomous vehicles for cab services shall be held liable for any accidents that may happen during course of employment. The basis of such a liability lies in the following principles:

(1) *Qui facit per alium facit per se:* it means that the one who does an act through others is said to have done it himself. A servant is engaged by the master and it is the master who decides what to be done and how it is to be done.

(2) *Public Policy:* Master's liability rests on public policy which demands that there ought to be some remedy for the injury caused and since the master is in a better position, the liability falls on him.

Therefore it seems reasonable that in case the AI is provided as a service than any liability arising out of any wrongful act to the consumer or any third party shall fall upon the master under the principle of vicarious liability for he derives the benefit from the work of such servant and is in better position to pay the damages.

CONCLUSION

AI has the potential to change our societies and economies for better. It will completely revolutionize the way we interact with machines. This will lead to a number of legal, moral and ethical dilemmas. And therefore we must prepare for the challenges that we will be faced with in the near future. Our legal systems were designed to regulate human conduct but now we need laws to regulate the conduct of intelligent machines. These machines cannot be a subject of rights and duties and cannot be recognised as a legal person because neither can damages be recovered from them nor can they be prisoned. Thus we will need to broaden our principles of liability to make the human agents behind machines liable. Strict liability of manufacturer under the product liability regime should provide plaintiff with damages for the defects in the AI. Once

41. *Ibid.*

harm is proved by the plaintiff the burden of proof falls upon the manufacturer to show that required level of safety standards were maintained. Similarly under the law of negligence the operator should be held liable for failure of duty of care in terms of maintenance, safety checks and repairs and the manufacturer should be held liable for failure to carefully design, manufacture, process, test, disclose known defects, or adequately instruct in the use of the product. Consider an autopilot system for airplanes manufactured by X and sold to Y. The autopilot system will lead to crash if not turned off in certain circumstances. Here X has the duty to inform Y of risk and the design and will be held liable for any injury caused. At the same time Y has the duty to carefully operate the system and arrange for proper training for pilots and in case of failure of this duty it shall be strictly liable. If harm is caused by AI when used in a way similar to that of human help, the liability for making use of the AI should fall upon beneficiary similar to existing vicarious liability regime of master and servant. The standards to assess the performance of AI should be same as that in case of a human servant however once AI outgrows human intelligence then the standard should be determined by comparing it to similar available AI. Consider a hospital performing surgery using an AI driven robot. Even if hospital fulfils the reasonable duty of care, for any harm caused by the robot which many not have been foreseeable, the hospital should be liable as per the principle discussed.

Both Civil and Criminal legal system will be faced with a number of challenges with the further development of technology. We will have to redefine our legal principles so as to accommodate for machines of the future or will have to come up with new principles. Whichever is the case, the law and the legal system is sure to undergo drastic changes.

LAWS VS. LAWS: MAPPING AUTONOMY OF KILLER ROBOTS*

- Mr Omvir Singh*

INTRODUCTION

"Change is the law of life, those who look only to the past or the present are certain to lose the future."

- John F. Kennedy

Human history has been a witness, time and again, to the deftness of the iron-clad combat fighter sitting confidently on a horse driving the army with armed subordinates into the battleground. Though, with the passage of time, the interminable and catastrophic annals of war operations acclimated themselves to the progressively advancing nature of the battle, which led to gradual increments in the mechanization along with increased effectiveness attributable to elevated mechanization. In the long run, the scrabble of combat supremacy was lost by the horse warrior anddeftly surpassed by ranged weapons which could inflict perilous injuries over larger distances in comparison to the hand-to-hand confrontations. These projectile instruments of assault changed over period from out-dated spears and bows and arrows to the new-age firearms that came into existence after the invention of gunpowder.[1] Consequentially, war at distancebecame a reality with the arrival of these ranged weapons.

In recent times, the world has in reality been experiencing a weapon revolution wherein combatis becoming increasingly covert, atleast in the method of its operational command, if not with respect to its visibility on the battle front. This continuum phase of mechanical and technological advancement in the weapons has fomented several imperativeethical, political, social, and legal debates. For quite a while, the discussion on military technologies was transcendently centred on armed drones which seem to operate regularly all around the air spaces of Afghanistan, Yemen, and other countries irrespective of the host State's consent.[2] With the increasing investments in the innovation of weapons, the genesis of the next phase of unmanned warfare—lethal autonomous weapon systems (LAWS)—has become certain, unless an embargo can be placed on their developmentor they can be controlled in the very least

through global measures in the near future. The self-determination characteristic of LAWS' in the vital functions of choosing and striking targets collaborated with concordant machine learning helps in distinguishing them from armed drones. Furthermore, the manifestation of unpredictable circumstances in battle zones makes upfor a possibilityfor LAWS to act in a manner which cannot be anticipated, thereby making themthe weapons of extreme contention.While debates on defining LAWS are augmenting, they still cannot seem tobe limned by a universal definition.[3]

DEFINTION OF AUTONOMOUS WEAPON SYSTEMS

An attempt was made by U.S. Department of Defence in its 2012 mandate to define Autonomous Weapon System (AWS), wherein AWS was defined as "a weapon system that, once activated, can select and engage targets without further intervention by a human operator. This includes human-supervised autonomous weapon systems that are designed to allow human operators to override operation of the weapon system, but can select and engage targets without further human input after activation."[4] They are otherwise called 'Robotic Weapons or Killer Robots.[5]' Basically, in order for the weapons to be classified as LAWS they must correspondto the two-fold criteria of being autonomous and de-facto out-of-the-loop in their vital functions,after they have been actuated through human interference regardless of whether humans actually remain on-the-loop in the master plan.[6] Therefore, a weapon can be categorized as autonomous, if the depiction of its tasks is expansive and estimatedand it has the capability of using its computerized artificial intelligence (AI) while deciding on independent courses of action which include a weapon's vital functions after gathering and processing information from its operational environment.[7] Interestingly, technology used in LAWS resembles with the technology that is being currentlyused for the development of autonomous cars using AI.[8]

TECHNOLOGICAL SHIFT TOWARDS 'LAWS'

"Technology is always a two-edged sword. It will bring in many benefits, but also many disasters."

- Alan Moore

With the technological advancement towards LAWS, the countries are moving from near-autonomous defensive systems to offensive systems. Autonomous Defensive Systems do not effectively seek out targets but rather respond to preordained dangers, whereas, weapon systems which are Offensive in nature, conversely, can be deployed and used anywhere and do not necessarily shield an object or target. Offensive weapons systems can "hunt, recognize and detect a target without human intervention"[9]. It is a belief of the policymaker that LAWS as Artificial Super Intelligence (ASI) empowered machines are going to affect all aspects of the human experience 'from medicine to driving automobiles.[10]' This march towards greater autonomy therefore seems to be irreversible. This introduction of advanced AI has led to the increasing likelihood that winning the AI race might end up being incompatible with using any safety method which causes a deferral or limits performance.[11]

IMPACT AND CHALLENGES OF 'LAWS'

The debate with respect to LAWS generally revolves around a few propositions: ethical and legal issues bolstered by NGO's; military debate in relation to keep up prevalence in the battle front by countering the enemy's autonomous weapons; political debate relating to the abatement of losses during an armed conflict; and debate encompassingtechnological restrictions as AI is not completely developed at this point;[12] and following all these,there is another important issue of cost.

ETHICAL AND LEGAL ASPECTS

The debate on ethical and legal terms about weapons is not in reality any new. There is discourse going on about these within the international community from the period of Spartan Army's objectionof long-range weapons to the usage of submarines and chemical weapons in recent times. The international community either acknowledges or wants to prohibit yet another new

12. Rodney Brooks, Artificial Intelligence is a Tool, Not a Threat, RETHINK READNESS BLOG (Nov. 10, 2014, 10:04 AM), http://www.rethinkrobotics.com/blog/artificial-intelligence-toolthreat/123323158.html.

technology depending on the assertions mentioned underneath. The argument for restricting LAWS is based on the main concern thatethical and legal principles cannot be developed by a machine or machine programme. The subsequent concernis that if humans will be excluded from the system, then in that case it will turn next to impossible to hold anyone accountable, which is ethically wrong. In simpler terms, a machine can never be trusted entirely owing to its inability to comprehend the value of human life. Another hugeconcern is that the possibility of loss of lives of fewer soldiers might actually bring about more wars or clashes. The expansive usage of drone strikes in Afghanistan by the United States is a valid example. In April 2013, a United Nations (UN) special report affirmed that there is a need for the member states to step up to the occasion in prohibiting these weapons,[13] and that they should not get involved in the development or deployment of these weapons since the weapons are violative of the 'Principle of Distinction' (jus in bello) and 'Principle of Proportionality' *(jus ad bellum)*.[14] Further, it is contented that LAWS should notbe usedirrespective of their ability to meet the requirements of International Humanitarian Law (IHL). The principles of distinction, proportionality and military necessity are used by IHL while governing armed conflict, which have already laid human judgement as a prerequisite through an obligation on states to not designate the capacity to initiate the usage of lethal force to unaided machines or automated processes.

Article 35 of the Additional Protocol to the Geneva Conventions (hereinafter, Additional Protocol I) aims at prohibiting the usage of weapons that 'are of a nature to spawn widespread injury or unnecessary suffering.'[15] Likewise, it bans weapons which are planned, or might be anticipated to cause sweeping, long-term and serious damage to the environment. Therefore, this rule prohibits weapons that owing to their character might cause wide-spread,unpredictable and unclassified harm or through their 'expected' use might have long-haul aftermath.

Further, the deployment of a weapon generally determines its legitimacy as well. In regards to this, Article 36 of the Additional Protocol I to the Geneva Convention of August 12, 1949 provides the legal framework for assessing a new weapon, which is largelysubject to two rules. The first one is to analyse if the weapons are indiscriminate or not. The next assessment will be to determine whether they would inflict unnecessary pain or not.[16] Basically, the primary

alludes to the prerequisite that the general population and military targets must be recognized and distinguished during the onset of an armed battle. Whereas the subsequent one is pertaining to the limits which a military can be allowed to cross in order to achieve its aims –though, civilian loss is ought not to transcend the military gains. Moreover, the weapon systems and their usage are required to meet the 'dictates of public conscience', in accordance with a provision in the First Protocol, known as the Martens Clause.[17] Accordingly, numerous scholarscontend that in warfare, an embargo should be put on LAWS permanently and their deployment ought to be limited since machines can never build up the degree of empathy which human beings have as machines intrinsically lack with the capacity of having such emotions.

Many countries cite Ottawa Treaty which is a Convention on the Prohibition of the Use, Stockpiling, Production and Transfer of Anti- Personal Mines and on their Destruction, otherwise called the Mine Ban Treaty as the precedent for pre-emptive limitation on LAWS. Moreover, many NGO's working on the legal aspects of AWS lobby for the total prohibition on these weapons.[18] EvenInternational Committee of Red Cross (ICRC) has indicated that these systems come under the IHL's legal umbrella; even though, some LAWS-specific regulations are still required.

POLITICALASPECT

LAWS can be hacked just like all other computer systems, which would further make it immeasurably difficult to quantify or decide with respect to who ought to be held liable for the harm inflicted since it would not be evident who was verily or effectively handling the machine. Additionally, the world would not become peaceful after the possibility of a 'riskless' war. The other difficulty with LAWS lies in the steps to taken up by the policy development. After taking into consideration the time required for consultations and accord building, it might be safe to presume that it might take a couple of years by the policy makers, before materialising and coming into effect with any regulatory instrument. This implies that AI revolution which will promote the proliferation of LAWS is most probably not going to happen at a rate that policymaking might be able to keep up a pace with. Contrarily, people backing LAWS set forward numerous assertions with regards to giving reasons which makes their development

17.Rupert Ticehurst, The Martens Clause and the Laws of Armed Conflict, INT. REV. OF RED CROSS 317 (1997).

inevitable. Deployment of drones in Afghanistan by the USA is the most cited example. With the general publicgetting more careful about conflicts, states are becoming hesitant on a constant basis to send their people to strife zones for harmony building and other objectives. Besides, soldiers are regularly getting accused of carrying out atrocities such as war crimes, specifically rape and sexual assault[19]- the LAWS would not commit these unlawful acts. Hence, such autonomous systems are constantly being viewed as a mature innovation, hanging tight for their final-stage development in AI.

SECURITY ASPECTS

The most usually referred security concerns find theirbase in the argument that these autonomous weapons come with the added prospect to augment the acceleration of warfare and the possibility ofpatronizing the war, largely because of the guarantee of considerably decreased military casualties in the war. The weaponsmight ignite and promote races for arms development. Moreover, these weapon systems can be attained and operated by non-state armed groups, including terrorist organisations or rogue states. Additionally, existing laws on warfare, controls, guidelines and regulations are been sabotaged by these systems. No particular hard-to-create materials are required by LAWS, unlike the nuclear and atomic weapons, which makes their monitoring even more strenuous. There are predications that owing to their easy accessibility, 'autonomous weapons of today will turn into the Kalashnikovs of tomorrow.' We have already seen an example of this in the war on the Islamic State of Iraq and Syria (ISIS), where Russia, Iraq, US, Turkey, and Syria used semi-autonomous weapons like drones.[20] Consequentially, the evolution of LAWS would ultimately prompt advancements in unsymmetrical warfare attributable to clear-cut benefits to the user. A report on 'LAWS under International Law', made by the Geneva Academy focuses on the necessity for leaders to consider the balance between advantages and disadvantages of using LAWS for a given operation. Potential advantages involve "the absence of emotions like fear, vengeance, or self-interest which may prompt results that are generally less harmful." However, lack of emotions may be detrimental in certain circumstances since "autonomous weapon systems lack positive

human emotions, such as compassion or mercy."[21]

ECONOMIC ASPECTS

Contrasting aggregate costs of armed force troops to LAWS is hard. For this, we can take the case of United States of America wherein multiple general patterns exist, like that of 2012, when the Under Secretary of Pentagon, Robert Hale shared that a regular soldier in Afghanistan costs nearly USD 850,000 per year.[22] In 2012, the Military Retirement Fund paid a total of USD 51.7 billion a year to a soldier.[23] It is estimated that if any armed force replaces individuals with robots, then the expense might be reduced.Back in 2002, the expense incurred in selecting and preparing a Marine trooper was USD 44,877[24]. This expense addresses the value point for acquiring LAWS that will go on to specially replace individuals in the armed forces. Additionally, military workforce has enrolment, training, pay, rewards, housing, and clinical costs which are collected on a yearly base. Moreover, when a soldier leaves the military, there is an expected expense of handicap along with retirement pay. In case if a soldier loses his life, there are internment, security, and stipend instalments to be paid as well. The primary expenses that are traded over in the case of induction of LAWS into the military would involve basic preparation or production, feeding (gas or electric power), and clinical (support). Further, robots have addedhigh costs ofinventive work for upgrades that are not required in case of a human soldier. The real-time opportunity cost for exchanging robots with human beings could be better comprehended with the help of an intensive research about the expenditures. Though, in this regard it can be concluded that an exhaustive report taking a gander at the costs comparisons between a robot and individualmight highly tilt the discussion in favour of LAWS.

RECOMMENDATIONS & SUGGESTIONS

A varied set of complex issues have been identified particularly with the developmental, operational, legal, and ethical aspects of LAWS. A significant number of these issues are already

on the plates of competent government, industrial organizations and several NGO's. This segment offers recommendations to facilitate the evolutionary way for the future of certainkey issues influencing the usage of LAWS.

POLICY REQUIREMENT

UN and the ICRC should work towards making a LAWS policy which shouldaim at the inclusion of all unarmed and unmanned platforms capable of causing damage to people or property in case they happen tobreakdown or malfunction or on the off chance, their command and control interface-link is lost. Further, the policy should forsake discrete definitions which pigeonhole systems into classes of autonomy and should rather define the characterization of autonomy. Accordingly, a framework should be laid which considers the autonomous elements of a system and how they may change over the time-span of a given mission. Hence, it is increasingly important to clearly distinguish when autonomous functioning of the unmanned system is planned to occur (intentionally autonomous) along with as to how and when it can occur unintentionally or accidentally (either through normal malfunction, obstruction, or attack by the enemy on the system or its links).

The policy should continue to require measures which permit the exercise of human judgment and control in the operations and tasks of LAWS. This requirement should be further expanded to incorporate greater accentuation for commanders and planners to consider the manner in which the extent of such human control may differ during a given operationalong with the possible strategic implications of any fully autonomous mission segments. Additionally, the development community of LAWS should likewise underline how there is scope for autonomy and human control to differ during operations and design systems that are fault-tolerant incorporating 'fail safe' or 'safeguard' modes for all mission segments, and not only for those which are designated as'intentionally autonomous'. An ethical code of conduct for work on LAWS comparable in nature to that proposed by NGO's such as Human Rights Watch and International Human Rights Council (IHRC) should be developed and promulgated by the development community. All parties who are involved with the development and operation of LAWS should be required to guaranteethat the human dimension is unequivocally emphasized and observed in doctrine, organizations, and procedures. Leaders and planners ought to be

careful enough to guard against any kind of the 'Jupiter Complex' (similar to World War II) which may arise at the strategic level. Preparations should be made by the developers and operators in order to guard against any unfortunate disengagement at the strategic and operational levels.[25]

STATE RESPONSIBILITY

The policy recommendation was in regards to risk management and harm prevention; another important recommendation which needs to be considered is what will happen if something goes wrong on the battle front. According to the general principles on state responsibility,[26] only the liability for all such violations of IHL can be imposed on a state which can be attributed to it. Basically, state liability is imposed based on two essential elements, namely, the attribution of conduct and a violation of international law.

a. Attribution of conduct

There are no specific legal challenges which exist regarding the attribution of acts which are committed by LAWS. Liability can be decided based on the clearly established rules of attribution, till the time the decision pertaining to their deployment has been made by the individuals.[27] It is an age-old and widely-accepted rule in the customary international law (CIL), which was laid down under Article 3 of the 1907 Hague Convention (IV) and reiterated again in Article 91 of the Additional Protocol I of the Geneva Convention which enunciates that states are liable for their state organs, including the liability for "all acts committed by persons forming part of its military". This rule applies by lieu of CIL as affirmed in the ICRC Customary Law Study,which has indicated that "a State is liable for violations of IHL attributable to it, includingviolation(s) committed by the state organs, including its armed forces.[28]" Hence, supposedly if a member from the military, which is a state organ, of state X takes a decision to deploy an AWS for a combat mission, all the activities which will be carried out by that system are going to be attributed to the State X. The mere fact that the system is working under its autonomous capacities does not have any effect on this evaluation.

b. The commission of an internationally wrongful act

26. Articles on Responsibility of States for Internationally Wrongful Acts, Report of the International Law Commission, 53rd Session, UN Doc. A/56/10 (2001), 43–59 (noted in GA Res. 56/83, 12 December 2001, UN Doc.A/RES/56/83 (2001)).
27. *Id.*
28. ICRC Customary Law Study, Rule 149.

Rules of IHL are considered to be violated when their objective prerequisites are met with. According to the Commentary of theInternational Law Commission (ILC), whenever any particular prerequisite of a mental element with respect to the primary obligation is absent, then in that case, it is only the act of the State which matters, entirely independent of anymens rea.[29] In such instance, no specificissues emerge. This can foster a conclusion that whenever an AWS violates such a rule and the act can be attributed to a state, the state liability sets in. In this way, establishing state liability for the improper conduct of AWS will turn out to be a moderately simple and clear exercise,irrespective of one's opinion that all or most of the prohibitionsprovided in IHL do not comprise of such an 'intent' or 'fault' element. For instance, in relation to Additional Protocol II of the Geneva Convention, it was as of late held that: "there is no 'intent' requirement in relation to the restriction under APII, implying that State responsibility is to be evaluated 'objectively' instead of 'subjectively': the intent or advertence of pertinent State authorities or agents is not relevant to an appraisal of whether a violation of APII has taken place."[30]

Though, an element of 'fault' (negligence, recklessness, or intent) is required as a prerequisite by some primary rules of IHL in order to be considered violated. In such an event that the rule in question happens to be a rule which mandates an element of 'fault', it might in reality become extremely troublesome to establish the state liability for the robotic activity 'violating' that rule. Even these scenarios will not pose any form of hardships in certain specific situations, such as in a case wherein the military commander has acted with the definite *mens rea* to break a rule established by the IHL.Hence, if during an armed combat a military commander deliberately programs the AWS to assault civilians, it is more than obvious that the commander shall be held individually liable for perpetrating a war crime.Similarly, the State for which the commander was acting as a State-organ shalllikewisebe held liable for the violation of the laws of armed conflict.[31] Basically, no distinction should be made between a member of the military shooting a civilian or an individual soldier programming an AWS to shoot at civilian or non-military personnel.

31. *supra* note 26.

STRICT LIABILITY REGIME

A liability regime which does not need any proof of 'fault' ('strict liability') or which does not alter the burden of proof('presumed liability') should conceivably be designed effectively for LAWS. Strict liability would basically withdraw that the element of 'fault' (intent, negligence, orrecklessness) from consideration. As soon as the risks integral in unpredictable system behaviour are realised, the responsibility is triggered consequently. The 'thought' of programmer, operator, and officer in chargeor state behind the operation or their 'expectation' of what the system may actually do becomes immaterial, under such a strict liability regime. Only the action of the LAWS matters in such situations. It becomes entirely irrelevant whether this was due to technical glitches of its sensors, unexpected or external impedance, ever-changing ecological conditions, programming faults, any other flaws, or the autonomously determined outcome of the system's algorithms.

It is very common to find strict liabilityregimes whilehandling processes involving high intricacies andhazardous activity which makes it intrinsically hard to distinguish and prove what precisely went wrong. Product liability regimes mostly include strict liability on the domestic levels. The relevant examples are regulations such as the ILC Draft Principles on the Allocation of Loss in the Case of Trans-boundary Harm Arising out of Hazardous Activities,[32] the Outer Space Treaty, 1967 and the Space Liability Convention,1972. Article VII of the Outer Space Treaty imposes a liability on each State Party that dispatches an object into outer space for damage that is caused to other State Parties. The contemplations which prompted for this liability regime to be adoptedwith regards to Outer Space Treatyare in lot many mannerslike the contemplations with respect to LAWS. During the 1960's, when the Outer Space Treaty was been drafted and adopted, the outer space technology was viewed as incompletely understood and was considered to be a high-risk and highly complex undertaking with possibly unpredictable results. It is argued that the very same case applies to LAWS at the present time. Further, the civil usages of Autonomous Technologies are presently being examined under the strict liability regimes domestically. One of the recent examples is that of the Swedish

32. ILC Draft Principles on the Allocation of Loss in the Case of Trans-boundary Harm Arising out of Hazardous Activities, Principle 4 (2004).

automaker Volvo which has vowed to be 'entirely responsible' for any mishaps which will be brought about by its self-driving innovation.

A strict international liability regime would not only help with overcoming particular accountability challenges in relation to the high-risk, uncertain and profoundly complicated activity, but would also create strong incentives to deploy LAWS warily. Additionally, it would open up opportunities for them to take weapons surveys and strides towards risk minimisation and damage prevention more seriously. Further, it would also help in programming LAWS 'conservatively', and in domestic implementation of strict product liability regimes.

LAWS would require a more nuanced liability regime than Outer Space Treaty explicitly customized for the setting of a military conflict. Eventually, the causation of specific damages, for instance a military target's annihilation, is unmistakably permissible amidstwarfare and fails to fosterstate liability of any kind. One could hence imagine an increased liability regime wherein presumed or strict liability can be imposed in some specific situations or with regards to some specificprinciples. Though, this cannot be done in all situations and not in terms of the general causation of harm and destruction, or comparable to the whole assemblage of rules containing the laws of warfare. Such an increased liability regime which consolidates strict liability with different types of liability might be most appropriate in order to give response to the variousrisks and unpredictability's ingrained in LAWS that may be deployed in immeasurably various contexts.

CONCLUSION

Even though machines are already used in the military operations of the present day, still it is extremely hard to conceptualise the dangerous effect of these LAWS.It is almost certain that after the up-gradation of present day's 'war machines' to entirely autonomous ones, leaders may get increasingly inclined towards the usage of lethal force. Henceforth, it is important to get answers to the critical, legal, moral and ethicalquestions pertaining to fully autonomous weapon systems before letting anyone develop them. These questions should also review the possibilities of changes which might be required to be made in the military conventions in accordance with the development and advancement of LAWS. In addition, leaders shouldactually request more research into theconceivablerepercussions that might arise owing to the deployment of LAWS. Armies should also think about the effect of deploying LAWS on the battlefront, particularly, with regards to civilians.

There is undoubtedly huge potential in innovation to make conflicts more secureand reduce blood-shed, which can altogether change the nature of weapons which are used in armed conflicts. Notwithstanding, this potential must becapitalized on only for such duration for which a pledge can be made on our part to adequately regulate new weapons. LAWS must be used to only serve humanitarian purposes and assurances should be made that these machines would not be moved to be used for military purposes. A comprehensive global consensus is required for the same. It has become a common practice for states to pursue their self-interest only in matters of international affairs. Regardless of international law, countries keep on developing nuclear weapons to achieve their various objectives such as security, political and military goals. Likewise, LAWS also grant major states a high ground in conflict, which will make the countries to continue with their development. Therefore, their materialization may in reality cause an application and responsibility gap as discussed above in the paper, but it is indeed bridgeable with the innovative application of the laws that we have now alongsidethe emergence of new, progressively refined and the pertinent ones.

EDITORIAL MESSAGE

2020 has been a year of revisiting our priorities. The Corona pandemic has brought health, hygiene and environmental issues back to the fore. As we usher in 2021, with the rolling out of the vaccines, we also realise that hope will surmount darkness and despair, no matter what the odds are.

For the Indian police it has been a year of realising again that public service is its raison de etre. As corona warriors, our police forces have shown that they are committed to the public. I pay homage to the Police officers who made the supreme sacrifice of laying down their lives in the service of the nation. I am proud of the name earned by police in winning the hearts of the public while fighting the pandemic together. The BPR&D has published a compendium of good police work during the corona pandemic.

As always, it is a pleasure to introduce the latest edition of the IPJ. Our eminent contributors have authored several well research articles on various subjects and I am happy to introduce them.

The article on "Effects of covid-19 lockdown on psychological health", touches upon many aspects of policing as frontline corona warriors in khaki. It elaborates upon how a number of health care and clinical institutions have opened online to provide services for affected people to battle the deadly virus.

In the article "Ways of coping and mental health among male and female police constables", Dr. Rinki and Dr. Nitesh Kumar Jha focus on how the constabulary is struggling with mental health issues and challenges.

The article "Changing forms of cyber violence against women and girls", explains how cybercrimes are continuing in changed forms and the required police response to contain them.

The article, "Online radicalization: Threats, challenges and proactive measures", provides deep insights into the factors of poverty, disadvantage, social exclusion, extremist influences and access to online resources, which lead to vulnerability and conversion to extreme views and radicalisation.

Arul Verma expounds the important role of police in curbing the drug menace among children utilizing provisions of Juvenile Justice Act.

In a well-researched article, DG NCRB, Shri Ramphal Pawar & his colleague Sanjay Mathur, and Dr. Prasoon Gupta explain the "Crime Multi-Agency Centre", a platform to share information on crime and criminals on a real-time basis.

I hope that you will find these articles useful and would also continue contributing your valuable suggestions for further raising the standards of the IPJ.

I wish the readers, a very Happy New Year and hope that the year 2021 brings joy, success and good health.

Happy Reading!

ABSTRACT

The Cri-MAC application is designed and developed by an in-house team of NCRB to enable smooth online sharing of crime and criminal data in the form of real-time alerts among various disjointed police units across the country, keeping in mind the ease of use.

KEYWORDS

Cri-MAC, crime alert, real-time alerts, crime prevention, Hue and Cry Notices, jail breaks, broadcast crime information, high alert, police communication

INTRODUCTION

Detection of crime is one of the important functions of the police. Criminals adopt new technology and techniques of committing crimes. Gathering clues from the scene of crime without any delay and dissemination of relevant information to the neighboring police stations plays a very important role in detection and apprehension of criminals. Conveying information to other states in case of a possible involvement of an interstate gang is also extremely important. Crime and Criminal Network & Systems (CCTNS) is a key e-governance project of Government of India. It facilitates entry of data related to crime reported at police stations in CCTNS including details of scene of crime, accused involved, property seized, and final report filed in the court. Under CCTNS project, search facility for searching person of interest and property of interest has been provided at the state level as well as the national level. NCRB has played a very important role in the implementation of this project. As on 31st May 2020, out of 16050 Police stations, CCTNS has been implemented in 15214 Police stations in the country. CCTNS has created a backbone for sharing Crime and Criminal related information across the country.

Taking one step forward, NCRB has recently launched Cri-MAC application for flashing alerts on important matters of crime and for inter-unit communication among disjointed police units across the country. The concept

Author's Intro:

1. Director, National Crime Records Bureau, National Highway - 8, Mahipalpur, New Delhi - 110037.
2. Joint Director (CCTNS), National Crime Records Bureau, National Highway - 8, Mahipalpur, New Delhi - 110037.
3. Deputy Director(C-II), National Crime Records Bureau, National Highway - 8, Mahipalpur, New Delhi - 110037.

of Cri-MAC was coined during the DGsP/IGsP Conference held at Tekanpur (MP) in January, 2018 on the lines of Multi Agency Centre (MAC) of the Intelligence Bureau. It has been integrated with the CCTNS application at the backend so that related FIR details can be fetched directly from the system on click of a button. The application can be accessed securely through a link provided in the national Digital Police Portal (https://digitalpolice.gov.in) by Police and Prison officials by using ICJS user credentials already existing with them.

There are seven scrolling windows for sharing information on important and critical crime events such as jail breaks, major heinous crimes, important seizure and recoveries, jail releases of notorious criminals, major human trafficking cases, information on wanted/arrested notorious criminals and High Alerts like Hue and Cry Notices (Screenshot1). Police officers can upload information by selecting a crime category (window), simply by entering relevant information (gist) available with them (Screenshot2). They can also upload attachments such as photographs and other documents.

There is a provision to make searches - FIR-based (Screenshot3) and text-based (Screenshot4) – in different windows over legacy data. Further, for operational or logistic communication needs, the application offers two modes of communication: E-mails (Screenshot6) can be sent to any Police Station along with attachments after selecting state, district and police station names from the drop-down menu; and SMSs (Screenshot7) can be sent to any police personnel after selecting state, district and police station names from the drop-down menu.

SALIENT FEATURES

Using the Cri-MAC application, a user can view alerts, generate new alerts, search for an alert and communicate with others through e-mail and SMS.

a) The application can be accessed by using ICJS user credentials already existing with the Police and Prison officers.

   Police Stations are able to directly export and broadcast important information under various identified crime heads. The exported information is displayed on the application's dashboard (Screenshot1).

   Alerts can be generated about a particular crime category, simply by entering relevant information in the application's upload data module (Screenshot2).

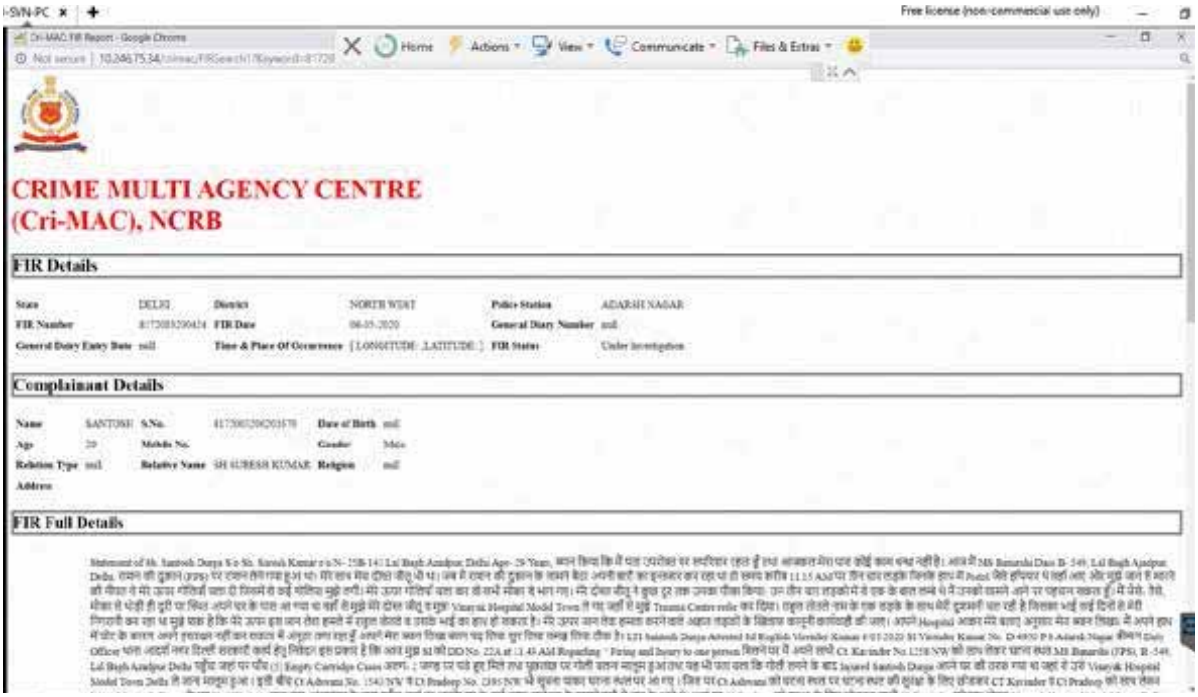
b) Two types of searches can be performed on legacy data under any/all the windows:

   Search based on FIR number (Screenshot3)

   Search based on crime category or any keyword (Screenshot4)

Screenshot1. The Cri-MAC Dashboard

Screenshot2. Generating Alerts (uploading data)



Screenshot3. FIR number based search

Screenshot4. Crime category/keyword based search

In each alert, a link to the case details is given, clicking on which will fetch the related FIR details from the CCTNS/ICJS database (Screenshot5).

Screenshot5. FIR Details

c) Police officers can communicate with each other using any of the two modes of communication provided in the application:

E-mails can be sent to any Police Station along with attachments after selecting state, district and police station names from the drop-down menu (Screenshot6).

Screenshot6. Communicating through E-mail

SMS: SMSs can be sent to any police personnel after selecting state, district and police station names from the drop-down menu (Screenshot7).

Screenshot7. Communicating through SMS

TECHNOLOGIES USED

NCRB has developed the Cri-MAC application as a web-application using the following technologies/ tools:

i. Programming language: Java (Springboot Framework)

ii. Database: My SQL

iii. Other technologies/tools used: HTML, jQuery, Javascript, CSS, Bootstrap

iv. The application runs on browsers such as Google Chrome, Internet Explorer, Safari, Firefox, etc.

It has backend integration with CCTNS for the purpose of fetching FIR data.

SECURE APPLICATION

Being a software application, thorough IT Security Audit for Vulnerability Testing and Certification was performed by CERT-In empanelled vendor and a certificate was obtained therein. A built-in counter keeps track of the footfalls into the application, emails/SMSs originated through the App and number of searches made as well as FIR button clicked for seeing the corresponding FIRs.

BENEFITS TO POLICE

a) The Cri-MAC is a user friendly application

which requires very little training for use.

b) The application utilizes the existing CCTNS network at police stations, without any extra infrastructural demands.

c) Being a web-based computer application, it puts minimal strain on logistics and finance.

d) Security of application and data remains a priority. Police Stations, Prison offices and other higher offices can securely access this portal by using already existing ICJS user credentials with them.

e) Using the alert generation feature for incidents like Jail Breaks and for Hue and Cry Notices, the sensitive and urgent information can be disseminated quickly.

f) Using the built-in communication module and pre-existing email IDs and Mobile Nos. of PSs in the application, the time required for operational and logistic communication would be minimized.

g) The application can also be used to refer to previous incidents of a particular type through search from the legacy data earlier uploaded on Cri-MAC portal.

ADOPTABILITY AND SCALABILITY

a) The Cri-MAC application is adopted and currently being used by 28 States/UTs.

b) Currently, the application is accessible to nearly 12000 police stations across the country.

c) At present, the application can be used for following types of crimes:

   i. Major Heinous Crime
   ii. Major Human Trafficking
   iii. Jail Breaks
   iv. Jail Releases
   v. Important Seizures and Recoveries
   vi. Notorious Criminals (Arrested / Wanted)
   vii. Hue & Cry Notices (PAN India)

GOING FORWARD

NCRB is open to suggestions and improvements and the same would be reviewed and incorporated in subsequent versions. The following features are being incorporated in the next version:

a. A user will see data, by default, related to his district alone. There will however, be an option to click the State or Country level filter as well. High Alert (Red Window) will however, show the entire country's data at all times without any filter in order to show national high alerts.

b. There would be a facility with the state to upload/update email addresses and phone numbers for the users, to reflect changes, if any, from time to time.

c. The application response time will be further reduced for enhanced user experience.

d. Report on the usage of application will be developed.

EXPECTATIONS FROM THE STATES|UTs

a. Submission of updated email-ids and mobile numbers of police stations for communication

b. Opening access of Cri-MAC application to its police stations. As of now, 29 States|UTs

have provided access. Arunachal Pradesh, Bihar, DD&DNH, Manipur, Nagaland, Sikkim and Uttar Pradesh have to facilitate the Cri-MAC access to their police stations.

c. Enhance the usage experience of Cri-MAC application by sharing and viewing the alerts as well as communicate over e-mail and SMS.

CONCLUSION

Earlier, there was no formal system of sharing of alerts on crime and criminals in real-time basis across various disjointed police/jails units across the country. It used to be shared through unsecure channels like PSTN lines, police wireless, or personal emails etc. Using Cri-MAC Application features now, generation of alerts and online sharing of information can be efficiently done. This would help in better and faster coordination leading to early detection and prevention of crime across the country.

The Politics of Punishment

Umesh Sharraf*

The Indian Police Journal
@BPRD, MHA
BPRD Publication
www.bprd.gov.in

ABSTRACT

This paper examines the politics of how penal laws get framed. The retributive as well as reductive consequences of punishment are discussed. It is shown how sometimes the optics of lawmaking takes precedence over extant social realities and the capabilities of the State for enforcement of the said laws. To illustrate the anomaly, the morality and the utility of corporal punishment are examined by juxtaposing it with the death penalty. The paper suggests that reform in the Penal system is essentially a political question and needs a suitable political discourse along with building of a social discourse and capability of the State before a proper Penal reform can happen.

Key words: Reductivism, Retributivism, Corporal Punishment, Death Penalty

INTRODUCTION

Lant Pritchett (2009) has called India a flailing State[1]. A flailing state is what happens when the principal cannot control its agents. The flailing state cannot implement its own plans and may have its plans actively subverted when its agents work at cross-purposes. To explain the mismatch between the Indian state's ambitions and its abilities, some economists blame premature demands by Indian elite for policies more appropriate to a developed country. Some of them state that in order to satisfy external actors, the Indian state and other recipients of foreign funding often take on tasks that overwhelm state capacity, leading to premature load bearing[2].

On the other hand, some of these writers feel that the cause for inappropriate imitation is that the Indian intelligentsia—the top people involved in politics, the bureaucracy, universities, think tanks, foundations, and so forth—are closely connected with Anglo-American elites, sometimes even more closely than they are to the Indian populace. As a result, the Indian elite initiates and supports policies that appear to be normal even though such policies may have little relevance to the Indian population as a whole and may be

wildly at odds with Indian state capacity[3]. Incidentally, these writers do not assert that this kind of mimicry of what appear to be the best Western policies and practices is necessarily ill intentioned. It is simply one by-product of the background within which the Indian intellectual class operates.

This paper will attempt to show that a similar dynamic appears to be operating in the process of enactment of penal law as well. It will do so by examining in detail the paradoxical way in which corporal punishment is viewed in our country today, at least officially, and compare it with the largely accepted public discourse on Capital punishment- in the larger perspective of the purpose for which punishment is imposed on the individual. It will also argue that building up of a proper social discourse and State capacity are necessary precursors to penal reform.

THE TRIGGER

The premature release of Manu Sharma on June 1, 2020 has once again highlighted the deeply ambivalent nature of the society's outlook towards the Penal System (for which, incidentally, the presently correct terminology is the Correctional System). Manu Sharma had shot dead Jessica Lal, a model working as a barmaid for the evening, in the early hours of April 30, 1999, in a posh party in Delhi, for refusing to serve him alcohol. The trial court acquitted him in February 2006, causing an outrage which manifested itself in widespread condemnation, candle vigils and protest marches. During the trial, the accused was granted bail quite a few times. It was only in November 2003 that the Delhi High Court put an end to this, and the Supreme Court (SC) too dismissed his special leave petition.

The High Court took the case on 'fast track' and delivered the judgement in December 2006, convicting him and awarding him life imprisonment, besides terming the trial court judgement "an immature assessment of material on record." The SC upheld both the conviction and life sentence in 2010. The sentence review board (SRB) rejected his plea six times for premature release, against which he went to the High Court, which ordered that detailed reasons may be recorded for rejecting his plea and that it should be heard on the next date. Now, the SRB, headed by the state home minister, recommended the release of the prisoner on grounds of "good conduct" after having served a term of 16 years, 11 months and 24 days.

During the prison term, he was on parole and furlough a number of times. This was a topic of much coverage in the media during Mrs. Sheila Dikshit's tenure as the Delhi CM. During parole, his fight with a police officer's son in a pub was also well-publicised, as well as his visits to a hotel in Janakpuri. For the last two years, he was awarded open jail facilities implying he was out the whole day working with an NGO and then back to his cell at night. As expected, questions were raised as to whether such facilities are given to other prisoners too or only to those who have the resources to apply so many times for paroles, remissions and other facilities. Civil society strongly protested the release, specially the women activists asking that in a country which witnesses so many heinous crimes

3 Shruti Rajagopalan and Alexander Tabarrok, Premature Imitation and India's flailing State, The Independent Review, v. 24, n. 2, Fall 2019, ISSN 1086– 1653

against women at regular intervals, what kind of message is sent by such premature releases.

The SC in 2012, noticing the trend of the state governments pardoning prisoners on important occasions or granting remissions en masse, had observed that life imprisonment means prison term for life. The state governments can reduce sentence under Section 432 CrPC but not less than 14 years as stipulated under Section 433A CrPC. Premature release of a lifer amounts to commutation of sentence u/s 433 CrPC for which the opinion of the trial judge is not required. For remission of sentence u/s 432 CrPC, opinion of the trial court may be taken as prescribed in section 432(2) CrPC.

In the legalistic and moralistic debate, one loses sight of the fact that the real questions should be about the fundamental assumptions about that how a society punishes crime. It is about what that society considers right and what it considers wrong- it is about Ethics- it is about the norms of human conduct- it is about priorities- and therefore it is essentially a political question!

THE MORAL JUSTIFICATIONS FOR PUNISHMENT

Human societies have always sought to reduce the frequency and severity of crime and all societies evolved different techniques for dealing with crime. The first technique is to ensure that the potential criminal understands that he has far more to lose than to gain from committing the crime. This is basically disincentivising the act of crime which may also be called as *deterrence*. The second method would be to *incapacitate* the criminals by sending them to jail, executing them, sending them away from the places they commit a crime in (externment) or otherwise make it impossible for them to commit a crime. The third method would be to *persuade* the criminal not to take action by rehabilitation, re-education or shaming him and convincing him that his action is wrong.

All these methods have different overlaps. Punishment, per se, may have features of incapacitation or deterrence or even reform but if one was to cite a moral justification for punishment, it can be broadly classified into two categories: *Retribution* justifies punishment on the ground that it is deserved by the offender whereas *Reductivism* justifies punishment on the ground that it helps to reduce the incidence of crime.

Reductivism is a forward looking or consequentialist theory. It seeks to justify punishment by the so called future consequences. It is hoped that with punishment the incidence of crime will be less than what it would be if there was no punishment. These ideas are also utilitarian in the sense that those actions which produce the greatest happiness of the greatest number of people have moral worth. But does punishment really reduce crime? If *individual deterrence* did work and if we had a new kind of harsh punishment, the offenders who underwent the new harsh punishment would be less likely to reoffend than similar offenders who underwent more lenient penalty. This was the logic behind the introduction of the concept of 'Short Sharp Shock Detention System' for young offenders by the UK Government in the early 1980s[4].

4 https://thatchercrisisyears.com/2013/01/14/short-sharp-shock-

However, these centres with the new harsher penalties were no more successful than detention centres with unmodified regimes in terms of recidivism rates of their ex-inmates. In fact, some other research suggests that offenders who suffer more serious penalties are more and not less likely to reoffend.

This may appear to be contrary to intuition but it is not difficult to understand. Overall, punishment has other effects which cancel out the effects of deterrence. These are known as labelling effects. Catching and punishing offenders labels and stigmatizes them as criminals and very often this acts as a self-fulfilling prophecy which makes it more difficult for them to conform to law abiding life in future. Our jails are notoriously known as schools for crime where offenders meet each other, learn criminal techniques and enter into a criminal subculture. Harsher penalties in particular, could foster a tough macho self-image in young men who predominate in criminal statistics.

The other deterrent effect is known as general deterrence. This is the idea that once the criminal is punished it may send a signal to the rest of the society that it does not pay to commit the crime. There is some evidence that general deterrence can be improved if potential criminals' perceived likelihood of punishment is increased. But there is little evidence that more serious punishments can deter any better than more lenient ones. Hence, general deterrence might well form the basis of a plausible general justification for having a system of punishment. But there is no justification to argue that the amount of punishment is justifiable by only deterrent considerations.

Consistent finding in research is that increases in the certainty of arrest and punishment demonstrate a significant deterrent effect. Perception about the certainty of arrest, for example, may counter the 'present bias'[5] and reinforce the potential cost of committing a crime.[6] Certainty and not the severity of punishment is the chief deterrent for most crimes. However, homicide is influenced by severity, possibly reflecting the differences between homicide and other crimes.[7]

The next reductive purpose of punishment could be *reform* or rehabilitation. The idea that punishment can reduce the incidence of crime by improving the individual offender's character or behaviour and make him/her less likely to reoffend in future is still highly popular in India. Many proponents of reform including the heavily influential positivistic theorists of crime favour this ideal called the 'treatment' model. This views criminal behaviour not as 'freely willed' action but as a symptom of some kind of mental illness that should not be punished but be treated like an illness. However, modern research has suggested that penal measures intending to reform offenders are no more effective in preventing recidivism than sheer punitive methods.

The present wisdom about reform in many quarters is that 'nothing works'[8] and that

thatcher-takes-on-the-wayward-youth/

5 The 'present bias' refers to the tendency of people to give stronger weight to payoffs that are closer to the present time when considering trade-offs between two future moments

8 Lipton, Douglas, R. Martinson, and J. Wilks, The Effectiveness of

whatever you do to offenders makes no difference. However, this might be an exaggeration as there are examples of reformative programmes which seem to work with certain groups of offenders[9]. The ambivalence of society, especially about young criminals, also shows itself in pendulum swings between retribution and reform. The retributive social outrages after Nirbhaya[10], Shakti Mills Rape case[11] [12] or the Ryan school murder[13] also got countered by sentimentality over 'children in trouble'[14].

The next reductive purpose is incapacitation which simply means that the offender is usually physically prevented from reoffending by the punishment imposed either temporarily or permanently. The practice in some societies of chopping off the hands of thieves has this kind of incapacitatory effect! Similarly, one of the few obviously valid arguments in favour of capital punishment is that executed offender can never reoffend afterwards. Lesser penalties can also have some incapacitatory effects. Disqualification from driving does something to prevent motoring offenders from repeating their crimes! It is therefore, certainly a plausible claim that incapacitation could be a justification for certain kinds of punishments.

The *retributivist* principle that wrong doers should be punished because they deserve it is in many ways the complete antithesis of reductivism. Where reductivism is forward looking, retributivism looks backwards in time- to the offence. It is the fact that the offender has committed a wrongful act which deserves punishment, not the future consequences of the punishment, which is important to the retributivist. Retributivism therefore advocates a 'tariff' of punishments of varying severity matched to crimes of varying seriousness: punishment should fit the crime in the sense of being in proportion to the moral culpability shown by the offender in committing the crime. It should be noted that our Penal Code is retributive, in this sense.

Retributivism also has consonance with the fundamental principle of justice that like cases should be treated alike and that offenders have rights. Reductivist theory has always found it difficult to encompass the notions of rights even when it comes to providing

Correctional Treatment: A Survey of Treatment valuation Studies, Praeger Press, New York.

10 In July 2014, Minister of Women and Child Development said that the Govt. was preparing a new law which will allow 16-year-olds to be tried as adults. She said that 50% of juvenile crimes were committed by teens who thought that they get away with it. She added that changing the law, which will allow them to be tried for murder and rape as adults, would scare them. This culminated in the JJ Act 2015.

11 The Shakti Mills gang rape refers to the incident in which a 22-year-old photojournalist was gang-raped by five people, including a juvenile. The incident occurred on 22 August 2013, when she had gone to the deserted Shakti Mills compound, in South Mumbai, with a male colleague on an assignment. Later, an eighteen year old call centre employee reported that she too had been gang-raped, on 31 July 2013 inside the mills complex. On 20 March 2014, a Mumbai sessions court convicted all five adult accused in both cases on 13 counts. On 4 April 2014, the court awarded the death penalty to the three repeat offenders. For the other two accused, one was awarded life imprisonment while the other accused turned approver in the case. Two minors, one in each case, were tried by the Juvenile Justice Board separately. They were convicted on 15 July 2015, and sentenced to three years (including time in custody) in a Nasik reform school.

12 After being sent to a correction home in Nasik for three years for the gang-rape Akash Jadhav, then 17 years old, by 2018, had formed an underworld gang and was arrested in 3 offences subsequently. His repeat offences put paid to expectations that he would emerge a reformed man from the Nasik home.

13 Pradyuman Thakur was a student at Ryan International School, who was found murdered inside a washroom on 8 September 2017 in Gurgaon. On 8 November 2017, the CBI arrested a class XI student aged 16 from the same school for the murder.

14 Child Rights Activists and Women Rights Activists called the JJ Act 2015 a regressive step. Many experts and activists viewed post 'Nirbhaya' responses as creation of media sensationalisation of the issue, and cautioned against any 'regressive' move to disturb the 'momentum of Juvenile Justice Legislation' in the Country which was so far purely rehabilitative and reformative.

entirely innocent people with a right not to be punished. For example, if you could achieve the desired reductive consequences by punishing an innocent person and if these effects are all that is needed to justify punishment, there should be nothing wrong with punishing the innocent! Retributivism has no such problem as it follows automatically that it is wrong to punish non-offenders, nor do we need to punish criminals to a greater extent than their crimes deserve. This is the reason why retributivism fits well with our common sense intuitions and this has been the most resilient idea when dealing with crime and punishment. Hence, often when people talk of 'justice', what they really mean is 'retribution'.

TYPES OF PUNISHMENT

Section 53 of the Indian Penal Code of 1860 provides for five forms of punishment-death; imprisonment for life; simple and rigorous imprisonment for a period; forfeiture of property and fine - there is nothing intervening between imprisonment and fine. The Indian Penal Code (Amendment) Bill, 1972 had provided for sentencing alternatives. With the restrictive use of the death penalty ('in the rarest of the rare cases', as the Supreme Court has prescribed) and a limited infrastructure for probation-sentencing, imprisonment was the only punishment available in a wide variety of cases. This created problems of resource, and it led the Executive to look for noncustodial alternatives.

The Indian Penal Code Amendment Bill of 1972 suggested three new forms of punishment: externment, compensation to victims and public censure. The Bill was sent to a select committee of Parliament, and in 1978 the committee rejected the proposal for externment as a form of punishment, having regard to its constitutional ramifications. The subsequent Indian Penal Code Amendment Bill of 1978 proposed four forms of punishment: community service, compensation to victims, public censure and disqualification from holding offices in certain types of cases, for example, white-collar crimes. But the 1978 Bill never saw the light of day. (W.r.t. compensation, Section 357 A inserted into Cr.P.C. with effect from December 31, 2009, provides for "victim compensation scheme". Similar provisions have also been made under Section 5 of the Probation of Offenders Act, 1958).

The sentence of forfeiture of property was abolished for certain offences *(e.g.* Sections 121 and 122) by Act XVI of 1921 but can be imposed for certain other offences *(e.g.* Sections 126 and 127). The sentence of penal servitude which could be awarded against Europeans and Americans in lieu of transportation was abolished by Act XVII of 1949. Act 26 of 1955 abolished the sentence of transportation and Act 44 of 1955 which repealed the Whipping Act, 1909, abolished the sentence of whipping which could be imposed in lieu of or in addition to other punishments. The Reformatory Schools Act, 1897, provided for "youthful offenders" *(i.e.,* offenders below the age of 15 years) sentenced to imprisonment being detained in a Reformatory School instead of being sent to Jail.

Imprisonment is comparatively a modern method of dealing with offenders. Although there had been a practice of imprisoning the

wrong doers for a particular period of time, those places were not the concrete structures meant for keeping the offenders. Such places could be part of a palace, a church or any other place declared as prison by the rulers at that time. Prison was initially regarded as temporary holding den rather than a primary institution of punishment and rehabilitation. Imprisonment was used to compel the offender to pay the fine imposed on him, or to spend the period between arrest and trial or between the conviction and its execution.

Penal philosophies usually undergo a development from retaliation to brutality, to restraint, to deterrence, to treatment and to rehabilitation. Penal philosophies also differed widely between East and West. This difference was primarily attributable to the fundamental differences between the two cultures in social values. In Eastern societies, the cause of crime was linked to the neglect of the natural order. Man's action was regarded as part of the complex network of causal filaments within the Universe. Any social violation was interpreted as an ominous disturbance of the natural order, and thus subject to punishment by heaven through designated agencies such as the family, clan or state. In India as well, traditional penal philosophies were more retributive than reductive. As our present Criminal Justice System is derived from the English, it would be instructive to examine the trajectory of the penal philosophy in our country, since the English, by looking at the trajectory of Corporal Punishment.

THE POLITICS OF CORPORAL PUNISHMENT

As already stated supra, in Indian law today, there is nothing intervening between imprisonment and fine. However, this wasn't always so. The Abolition of Whipping Act, 1955 repealed the Whipping Act, 1909; and omitted 'whipping' from sections 32 & 396 & deleted sections 390-395 of Cr.P.C. of 1898. It would be instructive to have a look at the discussions in the Rajya Sabha on 24th August 1955[15] when the then Union Home Minister Sri Govind Vallabh Pant introduced the Act. The UHM had said, "…Our entire outlook towards crime and criminals has undergone a far-reaching and almost categorical change. The age when punishment was inflicted out of a spirit of vindictiveness is gone. No longer do we think of an eye for an eye or a tooth for a tooth. On the other hand, punishment is inflicted more with a view to reforming and rehabilitating the person who is subjected to some sort of penalty by the State. The State is interested in the reform and rehabilitation of the so-called criminal, and also in the protection of society. The triumph of a penal system lies in converting a criminal into a useful and clean citizen. The sentence of whipping does not conduce towards that end. It, in fact, aggravates the tendency towards desperation. It embitters one and makes him all the more callous. So, from whatever angle one may look at it, it serves no wholesome purpose, and no remedy short of its complete eradication and elimination can suffice."

In reply Prof A.R. Wadia had said, "…It seems to me that after all whipping is not resorted

15 http://164.100.47.5/Official_Debate_Nhindi/Floor/10/F24.08.1955.pdf

to normally by our magistrates. It is there. No magistrate is compelled to impose whipping as a form of punishment. Along with two other forms of punishment it is there. And it should be there, because human nature is very complex, and although I fully share the enthusiasm of the Home Minister that criminal law should be used as an instrument for reforming a criminal, I am afraid, there are certain types of criminals who cannot be reformed... It is impossible for any person to enter a prison and to leave it without being coarsened- exactly the expression that the Home Minister used. Well, perhaps it is so. But that is hardly an argument for abolishing imprisonment altogether. If human beings choose to do a wrong, they must face the consequences…I think even whipping would be useful in connection with those people who are really bullies at heart, absolutely depraved individuals who deserve very little sympathy from respectable citizens, and in the case of such people, a timely whipping would do a lot of good and would serve to reform them really much more effectively than perhaps a long term of imprisonment, or even a very heavy fine…I think the fear of whipping would be a useful deterrent in several cases. And, if it is there, it is the business of the magistrates to make use of it or not. If a magistrate feels that in a particular case whipping would be the right type of punishment, I think, his hands should not be fettered, and he should be given the liberty of imposing that type of punishment."

Dr. P.V. Kane had added, "…If you want to abolish entirely this punishment of whipping, why don't you abolish the death sentence? I know as a lawyer that there have been miscarriage of justice and the wrong man being sentenced to death and the right man being found out afterwards. You inflict the death sentence and there is no question of reforming the man. You simply hang him. Unless you reform the whole system, such piecemeal legislation is bad in the first place…"

The discussions had fascinating contributions from Sri Rajendra Pratap Sinha, Smt. Mona Hensman, Sri H.P. Saksena, Sri Akbar Ali Khan & Sri Devakinandan and the rich debate shows that the members were well aware of the retributive as well as reductivist ideas of penology. However, the winds of change and the desire to align with 'modern' understanding of penology carried the day.

THE TRAJECTORY OF CORPORAL PUNISHMENT

The formal application of flogging, caning, birching, whipping, strapping or spanking as an official sentence by order of a court, as laid down for specified offences under the law of the country concerned is called the Judicial Corporal Punishment (JCP). Earlier it used to be common in many countries, but it has now been abolished in nearly all the Western world. It still remains a standard penalty in some Asian, African and Middle Eastern countries. Many countries, which were not under the British colonial rule or are Islamic, use whipping as a punishment. Other countries that were neither British nor Islamic that have used JCP in the past include the USA (it was last used in 1952 in Delaware), China, Germany, Korea, Sweden and Vietnam. Flogging as a punishment, of both men and women, used to take place in public in

England. This seems to have had its origin in the Common Law coming from the medieval times. However, there were no laid down rules about the offences for which whipping was to be administered, the number of strokes or the modus operandi of whipping. The public whipping of women was abolished in 1817. Public floggings were discontinued altogether in the 1830s.

One of the aims during the Industrial Revolution was to do things more efficiently and cheaply and the solution was to make a machine for everything. During this period, the use of whipping was so widespread in England that Jeremy Bentham gave a detailed suggestion on how to make a machine which could perform the task of whipping several persons simultaneously and more efficiently and thereby cutting down the cost of whipping per person and saving time and energy[16]! Between 1861 and 1863, under various legislations, provision for JCP was restricted and regularised by statute law. Ordinary local courts lost their common-law right to order whippings. Thereafter only the higher courts in England and Wales were empowered to order corporal punishment for adults, and these too for a narrowly defined range of offences - mostly robbery with violence, treason and certain vice-related crimes[17]. Corporal punishment as a judicial penalty was abolished in England, Wales and Scotland in 1948. However, the 1948 abolition did not affect the ability of a prison's visiting justices to order flogging for prisoners committing serious assaults on prison staff. This power was abolished in 1967.

Singaporean law even today allows caning for over 30 offences, including robbery, gang robbery with murder, drug use, vandalism, and rioting. The maximum number of strokes that can be awarded in Singapore is 24. Caning is also a mandatory punishment for certain offences such as rape and drug trafficking, and for visiting foreigners who overstay their visa by more than 90 days, a measure designed to deter illegal immigrant workers. Judicial caning is clearly intended to be a humiliating experience. Former Prime Minister Lee Kuan Yew, founding father of modern Singapore, introducing mandatory caning for vandalism in 1966, told Parliament :"If the offender knows he is going to get three of the best, I think he will lose a great deal of enthusiasm, because there is little glory attracted to the rather humiliating experience of having to be caned[18]. The Singapore's official punishment of caning was widely discussed when an American teenager Michael P. Fay was sentenced to six strokes of the cane for vandalism in 1994. Subsequently, the sentence was reduced from six lashes to four in an attempt to "accommodate" a personal appeal for clemency from the then President Bill Clinton of the USA. However, in a speech to an international conference of lawyers in Singapore, Shunmugam Jayakumar, Singapore's Minister of Law and Foreign Affairs, defended the decision to carry out the caning: "If today we are told that we are not entitled to cane, then tomorrow we will be told that we cannot enforce the death penalty and some other day, that we cannot enforce some other law," he said[19].

THE ANOMALY

Interestingly, in India whipping continues on the statute for prisoners in most states! There are two Central Acts on Prisons in India - The Prisons Act, 1894 and the Prisoners Act 1900. The former, deals with prisons in India and rules for their regulation. The latter deals with the law relating to prisoners confined by order of a court. "Prisons" is a State subject under List II of the Seventh Schedule to the Constitution and Prison Administration is the responsibility of the State Governments. The provisions of the Prisons Act, 1894 and the Jail Manuals framed by State Governments provide a framework for the prison administration. Chapter XI of the Prisons Act 1894 deals with prison offences and their punishments. Section 45 gives a long list of 16 acts which are prison offences. Section 46(12) prescribes punishments for jail offences and states that whipping will be one of the punishments provided that the number of stripes shall not exceed 30. Only the following 7 States have, by amendments, omitted this section in so far as their respective States are concerned - Andhra Pradesh, Assam, Bihar, Gujarat, Madhya Pradesh, Maharashtra and West Bengal. The Punjab Jail Manual 1996 has omitted whipping as one of the punishments for prison offences.

Article 5 of the Universal Declaration of Human Rights states that, "No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment." Article 7 of International Covenant on Civil and Political Rights, which was adopted and opened for signature, ratification and accession by General Assembly resolution 2200A (XXI) of 16 December 1966 lays down that "No one shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment." India ratified the Covenant in 1979. "Standard Minimum Rules For The Treatment Of Prisoners" were adopted by the First United Nations Congress on the Prevention of Crime and the Treatment of Offenders, held at Geneva in 1955, and approved by the Economic and Social Council by its resolutions 663 C (XXIV) of 31 July 1957 and 2076 (LXII) of 13 May 1977. Rule 31 states that 'corporal punishment, punishment by placing in a dark cell, and all cruel, inhuman or degrading punishments shall be completely prohibited as punishments for disciplinary offences.' Hence, it is evident that despite being party to these international covenants, India has not amended its law regarding punishment applicable to prisoners, enough!

It should also be noted that the Prevention of Torture Bill, 2018 which was brought before the Lok Sabha on 9th February 2018 (The Prevention of Torture Bill, 2010 was introduced in the Lok Sabha to give effect to the provisions of the UN Convention against Torture. The Bill was passed by the Lok Sabha on May 6, 2010. Rajya Sabha referred the Bill to a Select Committee which had proposed amendments to the Bill. However, the Bill lapsed with dissolution of the 15th Lok Sabha. Again in 2017, the Bill was introduced as a private member bill in Rajya Sabha and then again in 2018, in the same form in Lok Sabha. The latter has lapsed due to dissolution of the 16th Lok Sabha) dealt with the unauthorised use of violence by public servants against an individual whereas both the Whipping Act and the Prisons Act deal with punishments as authorized by law. This anti-Torture Bill was

not considered seriously, it is said, because it was felt that the western standards of human rights did not apply to India. Thus, it is clear that when it comes to treatment of prisoners or of people in custody, there appears to be insufficient moral imperative in our country to ensure that corporal punishment is not imposed, whereas JCP itself appears to beyond the pale.

THE MORAL IMPERATIVE

JCP is called out in our discourse as 'unusual' or 'inhuman' punishment. However, if Corporal Punishment is termed as 'inhuman' or 'unusual', what about the death penalty? Death penalty is a subject of great debate not only in India but in the world over. There are two Constitution Bench judgments on the death penalty rendered by the Supreme Court. The first case relates to Jagmohan Singh. It was held that capital punishment was not 'unusual' or 'inhuman' as it had been followed since ancient times.

Earlier, when a person was convicted for murder under Section 302 IPC, the punishment was either death or imprisonment for life. Section 367 (5) of CrPC provided that normal punishment for murder was death, while a lesser punishment of life imprisonment was to be given after giving special reasons. When Jagmohan's case came up, Section 367 (5) was deleted by an amendment in 1955. It was left to the courts to hang or give life imprisonment. CrPC was amended, yet again, after the judgment and Section 354(3) was inserted. It stated that when a man was convicted for murder, special reasons should be given for imposing the death penalty. This was a shift from the earlier stand when death penalty was the norm. In the case of Bachan Singh, the constitutionality of the death penalty was again upheld, though death was to be awarded in the 'rarest of the rare' case.

Another important case which led to the evolution of the death penalty jurisprudence in India is that of Machchi Singh. Justice Thakkar, delivering the judgment, said persons like Machchi Singh should be hanged. The court, while upholding the penalty of death, laid down certain guidelines. A person was to be hanged only when murder was grotesque, diabolical and shocked the community. There was a sort of moratorium on the death penalty till the Supreme Court decided to hang Dhananjoy Chatterjee. The rape of a 14-year-old innocent and defenceless girl by a security guard fell within the ambit of the 'rarest of the rare', said the court. There was widespread protest when he was ultimately hanged. Human rights organizations claimed that the death penalty was too harsh in India's imperfect judicial system where the poor were hanged and the rich got away.

This view was supported in Santosh Kumar Bariyar's case wherein it was observed, "What is sorely lacking in most capital sentencing cases is information in relation to socio-economic background of the offender. This issue was also raised in the 48th report of the Law Commission." The court observed further, "The truth of the matter is that the question of death penalty is not free from subjective element and the commutation by this Court depends a good deal on the personal predilection of the judges constituting the Bench." This view was also taken in the case of Sangeet and Another vs. State of Haryana wherein it was observed, "It appears to us

that even though Bachan Singh intended "principled sentencing," sentencing has now become "judge centric" as highlighted in Swamy Shraddananda and Bariyar."

Hence, it is clear that the SC hasn't found the death penalty to be either 'inhuman' or 'unusual'; what the concern has been is the judicial vagary. The absence of statutory sentencing guidelines to assist judges in discharging this duty has left a vacuum in the machinery of justice dispensation in India. Often, in cases that capture the public imagination and create a groundswell of opinion, even the trial can get affected[20]. The Malimath Committee Report on Criminal Law Reform (2003) had recommended an incorporation of sentencing guidelines for aiding the judiciary in deciding an appropriate sentence. The Law Commission of India in its 262nd report on Death Penalty had recorded this disparity in sentencing on account of personal leanings of judges, as one of the factors amongst others to recommend abolition of death penalty in all crimes except terrorism related offences.

We need to bend our heads around the fact that if judicially ordered death is not 'inhuman' or 'unusual', it should logically follow that JCP too is not! Dr. P.V. Kane's advice in the 1955 Rajya Sabha debate about the futility of piecemeal legislation now appears prescient.

ISSUE OF IMPRISONMENT

The National Policy on Prison Reforms & Correctional Administration[21] of 2007 had accepted that "the main problem of prison administration has been related to prison overcrowding. Prisons in most countries, including India, face dearth of resources to provide for proper accommodation, health care and constructive activities for prisoners, leading to overcrowding and neglect of schemes for reformation and offender rehabilitation. Prison overcrowding adversely affects the justice system and has repercussions on the safety and health of society. Even construction of new prisons to accommodate the increasing prison population is an unsustainable solution, as there is a limit to provision of public funds for this purpose. However, imprisonment is costly in terms of not just financial expenditure, it also has social costs. It damages people socially and psychologically making the process of reintegration difficult and challenging."

The same policy had suggested alternatives to imprisonment at all the three stages: pre-trial, sentencing and post sentencing. The Pre-Trial alternatives suggested were liberal Bail, Imposing time limits on Pre-Trial Detention, Plea Bargaining, Free Legal Aid, Compounding of Offences, Decriminalization of Offences, Diversion from criminal justice process and redirection to community support service and Administrative fines / non penal fines. The suggestions at the Sentencing stage were for Fines and other monetary penalties, Admonition/Absolute discharge/Conditional discharge, Compensation, Probation and community-based sentencing. Suggestions for the post-sentencing stage included liberal use of Parole, Pardon, Remission of Sentence, Temporary Release Mechanisms and Open Prisons.

21 https://bprd.nic.in/content/196_1_NPPRCA.aspx

The point to be noted here is that the above policy did not even discuss JCP. All the above suggestions were made towards reducing the load on Imprisonment- showing an implicit assumption that Imprisonment is the only possible method of Punishment and Penal reform implies reform in Imprisonment. The possible utility of JCP diverting the penal load away from Imprisonment did not even figure as a possibility. Failure of this piecemeal approach towards reform based on Western experience is exemplified, for instance, in the fate of 'plea bargaining'[22]. The public disquiet over Manu Sharma's pre-mature release is at odds with the correctional ideologies behind the same. This tension between the public mood and lofty legal ideals in our country comes into sharper focus every time in cause célèbre cases. The Rule of Law, that our polity is based on, is what our legislature- as the voice of the people- decides or is it something more?

VOX POPULI, VOX DEI?

Does the concept of Rule of Law find its fulfilment by the mere enactment of a law, or is it also concerned with the content and quality of the law? There is a certain core component without which a government cannot really be said to be based on the Rule of Law. That core component is respect for the basic human rights of the people and for human dignity. Otherwise commission of atrocities and gross violation of human rights could be justified by pointing to the mere existence of a law. Most of the actions of the Nazi State were carried out under laws made by law makers. Therefore, law should satisfy at least the prerequisite that it guarantees basic human rights and ensures their implementation by due process through an independent judiciary exercising power of judicial review. But what is the right way to generate Law? Is it the voice of the people as expressed through the Legislature? If so, how do we prevent creation of unjust Law, as described supra? Is Judicial Review a sufficient bulwark against this? But we have seen how even Judicial Review may suffer from Sectoral myopia. Or is the right way by an elitist rule making- by the 'enlightened'? Then how to prevent 'Rule by Law' instead of 'Rule of Law'?

Law requires the Police to enforce all criminal laws all the time. Police discretion to enforce a criminal law or not to enforce it is not envisaged in law. Yet, full enforcement of many laws will never be tolerated. Selective enforcement of *mala prohibita* laws relating to social vices or bad practices like child marriage, dowry etc. is well known but what about neglect of laws enacted for maintenance of public order? Say, for instance, 'The Religious Institutions (Prevention of Misuse) Act of 1988'?

In conclusion, therefore, we need to see that many of the problems in our Criminal Justice System flow from the fact that as a society we did not develop enough self-confidence so far to determine what are the basic human rights, which we will uphold- without reference to western paradigms. As pointed out earlier, we failed to develop our own system of Ethics- our own ideas of Justice, because we failed to do this. We see this permanent tension between the public mood and the Law. We have therefore adopted the 'way of the hypocrite' where the law enforcement agencies are allowed to operate beyond the pale of law

22 Sharraf, Umesh, The Chimera of Plea Bargaining, Indian Police Journal, January-March 2017

to meet public expectations, while the State pretends that such action is without sanction. If at all genuine reform in the Correctional/ Penal System is desired, then a reform of the entire Criminal Justice System is required. A build up of a proper social discourse and a concomitant build up of the capacity of the state to administer the law without fear or favour is therefore a necessary precursor to penal reform. And that - is a Political question!

The Doctrine of Approver: A Complex Evidentiary Process

"Discovering witnesses is just as important as catching criminals". -Simon Wiesenthal

ABSTRACT

Heinous offences warrant extraordinary evidentiary tools to punish offenders especially in the modern era of advanced technologies helping criminals to escape from the cusp of law. The archaic battery of evidence sometimes fails to provide cogent proof to complete the chain of conspiracy in order to establish guilt beyond reasonable doubt. In common law jurisdictions, the doctrine of tender of pardon provides an extraordinary evidentiary provision to fill the void in the chain of crime events by disclosing uncharted mystery and role of main culprits behind a crime by an accomplice. However, the approver testimony per se may be a slippery slope and have the potential to frustrate the purpose of justice. The judiciary must use this tool with utmost diligence only in exceptional and extraordinary cases to facilitate justice. In the recent past, the doctrine of approver has extensively been used in criminal cases of significance; but this legal precept is least explored by the academia, which ignited the quest to deliberate the subject in this article.

KEY WORDS

Approver, accomplice, tender of pardon, investigation, trial, revocation of pardon, criminal justice system.

INTRODUCTION

Justice is the quintessence of the right to life with dignity. In criminal justice administration across the globe, proving culpability beyond a reasonable doubt by the prosecution is an essential prerequisite for punishing guilty and for securing a conviction. In the modern era of 'smart criminals' equipped with the latest technology, proving the infallible chain of events in commission of crime becomes a daunting task. It further necessitates additional evidentiary tools to strengthen the judicial system ensuring that criminals may not slip from the clutches of the legal process.

The doctrine of approver, as additional testimonial evidence, permits an accomplice[1] to realise and timely disclose his guilt to facilitate and assist the investigation and judicial process to ensure justice. In the Code of Criminal Procedure, the term 'approver' is neither defined nor used, however, sections 306 to 308 of the Code deal with tender of pardon to an accomplice. In this article, attempts have been made to deliberate upon legal requirements for making an approver, its reliability and efficacy; and to delve into the global perspective of this extraordinary evidence in criminal administration. The apex court in Ravinder Singh vs State of Haryana[2] has succinctly described the nature and scope of an approver in the criminal justice process:

An approver is a most unworthy friend if at all and he having bargained for his immunity, must prove his worthiness for credibility in court. This test is fulfilled, firstly, if the story he relates involves him in the crime and appears intrinsically to be a natural and probable catalogue of events that had taken place. The story if given of minute details according to reality is likely to save it from being rejected brevi manu. Secondly, once that hurdle is crossed, the story given by an approver so far as the accused on trial is concerned, must implicate him in such a manner as to give rise to a conclusion of guilt beyond reasonable doubt. In a rare case taking into consideration all the factors, circumstances and situations governing a particular case, conviction based on the uncorroborated evidence of an approver confidently held to be true and reliable by the court may be permissible. Ordinarily, however, an approver's statement has to be corroborated in material particular bridging closely the distance between the crime and the criminal. Certain clinching features of involvement disclosed by an approver pertaining directly to an accused, it reliable by the touchstone of other independent credible evidence, would give the needed assurance for acceptance of his testimony on which a conviction may be based.

Sections 306, 307 and 308 under Chapter XXIV of the Code of Criminal Procedure, 1973(hereafter 'the Code') deal with granting and revocation of pardon to an accomplice. The corresponding provisions for tender of pardon to accomplice were enshrined under section 337 to 339 of the Code of Criminal Procedure, 1898.[3] A comparative account of the provisions for tender of pardon under the Code, 1898 and the Code, 1973 reveals that they are, in all germane respects, in *parimatetria*, and the provisions for granting pardon under the Code, 1898 would also apply, *mutalis mutandis*, to sections 306 to 309 of the Code, 1973.[4] The Prevention of Corruption Act, 1988 has enabling provisions under section 5 for tender of pardon to facilitate justice in graft cases.[5] In the recent past, the issue of approver has been in the limelight in some significant cases like the INX Media graft case[6] and the August Westland case[7] warranting in-depth discussion on this procedural legal dogma.

AN ACCOMPLICE

An accomplice, after a tender of pardon becomes approver, however, term approver nowhere defined under the Indian laws. In ancient English law, an approver may also be called as probator, an accomplice in felony,

who to save himself confesses to the fact and charged or accused any other person as principal or accessory, against whom he is aware of the secrets behind a crime. Every approver may be called an accomplice, but all accomplices cannot be termed as the approver. The apex court in *R.K. Dalmia* v. *Delhi Administration*8has succinctly explained an accomplice as under:

An accomplice is a person who participates in the commission of the actual crime charged against an accused. He is to be a particleboard. There are two cases, however, in which a person has been held to be an accomplice even if he is not a *particepscriminis*. Receivers of stolen property are taken to be accomplices of the thieves from whom they receive goods, on a trial for theft. Accomplices in previous similar offences committed by the accused on trial are deemed accomplices in the offence for which the accused is on trial, when evidence of the accused having committed crimes of identical types on other occasions be admissible to prove the system and intent of the accused in committing the offence charged.

PURPOSE OF TENDER OF PARDON

It is essential to understand the purpose of granting pardon to an accused enshrined the procedure code before entering into nature and scope of the canon of law. Public policy and public interest are the baseline for sanctioning tender of pardon.[9] In general, investigative agency necessitates the course of tendering pardon for making an approver, firstly, when the perpetrators of a felony are more than one and they have committed a crime in pursuance of criminal conspiracy but chain of evidence with regard to establishing conspiracy is not in sequence; secondly when investigating agency feels that without taking an accused as an approver, it is difficult to prove guilt beyond reasonable doubt against all other accused or the mastermind or main accused. The Kerala High Court in *Asokan* v. *State of Kerala10* has succinctly observed that "the object of the provision for tendering pardon to an accomplice is to get evidence in cases involving grave offences alleged to have been committed by several persons under circumstances making it difficult to get any evidence otherwise. Sometimes, expert offenders leave no clue or trace of the offence or there may be vital gaps in the chain of crime events to connect crime with the perpetrators. The dominant purpose of pardon is that the culprits behind such heinous crimes do not go unpunished if a co-participant of the crime comes forward offering to make a clean breast of his complicity as also the complicity of other offenders."*In re ArusamiGoundan*,11 the Madras High Court has observed:

Let us examine the reason of the matter. Occasionally when grave offences are committed the law finds it necessary to enlist the assistance of some of the offenders in order that the rest may be brought to justice. This happens when one of several persons who have committed a crime makes a confession which is believed to be true and which is considered would help to secure a conviction of the rest.

The Procedure Code now insists that accomplices who have been tendered a pardon must be examined both in the Committing Court and in the Court of Session. This provision is inserted in the interests of justice and is not intended for the benefit of

the approver. Its purpose is to ensure that all the evidence obtained from the accomplice is placed before the court so that justice may be done as between the State and the persons placed in their trial. It is not an ordeal through which an approver has to pass before he can win to safety.

So far as the approver is concerned, he is given a pardon on condition of his making a full and true disclosure of the whole of the circumstances within his knowledge relative to the offence and to every other person concerned, whether as principal or abettor, in the commission thereof. The condition of the pardon is that he must make a full and true disclosure, and, if, he wilfully conceals anything essential or gives false evidence, he would have failed to comply with the conditions on which the pardon was granted to him.

Thus, the inherent objective of tendering pardon is to serve the larger interest of justice, since it additionally helps to cogently stitch a crime with the criminals.

INGREDIENTS OF SECTION 306 OF THE CODE

The procedural laws in India empowers the court to ensure justice despite having adversaries and otherwise deficit of cogent evidence. Section 306 of the Code empowers the Magistrate for tender of pardon to an accused. The main ingredients of these legal provisions include:

- The application for seeking pardon must be filed before Magistrate of the First Class by the investigating officer (IO) or by the accomplice [s. 306(1) CrPC].
- Tender of pardon may be considered by the Magistrate at any stage of investigation or enquiry; or the trial of the offence [s. 306(1) CrPC].
- The person must have been directly or indirectly concerned in or privy to the offence in question [s. 306(1) CrPC].
- This legal provision applies to any offence triable exclusively by the Court of Session or by the Court of Special Judge [s. 306(2)(a) CrPC], or the offence punishable with imprisonment which may extend to seven years or with a more severe sentence [s. 306(2)(b) CrPC].
- The Magistrate shall record his reason on application for tendering a pardon [s. 306(3) CrPC].
- In case a tender of pardon is accepted, the accomplice shall be examined as a witness [s. 306(4)a) CrPC]; and he shall, unless already on bail, be detained in custody until the termination of the trial [s. 306(4)(b) CrPC].
- Where a person has accepted a tender of pardon made under section 306(1) and has been examined under section 306(4), the Magistrate shall, without making any further inquiry, commit it for trial either to the Court of Session [s. 306(5)(a)(i) Cr.PC], or to a Court of Special Judge [s. 306(5)(a)(ii) Cr.PC], or in other case make to the Chief Judicial Magistrate [s. 306(5)(b) Cr.PC].

Authority of the court to grant a pardon is a judicial function, but cannot be exercised *suo motu.*12 It is conditioned upon the request

of either prosecution or the accused person because the court can have no interest whatsoever with any party or in the final decision of the case.The apex court held that while proceeding and considering of granting pardon, co-accused has no right to be heard.13

PROCEDURE FOR A TENDER OF PARDON

The inculpatory statement of an approver is voluntary admission of guilt in addition to disclosure of the role of the co-accused in commission of the crime. Sections 306 and 307 of the Code empower the court to tender pardon under different circumstances. The powers conferred for granting pardon can be exercised at any stage after the case is received for trial and before its conclusion. There is nothing in the language of the section to show that an application must be moved by the prosecution. The court may consider a request by the prosecution and also from an accused. The Supreme in *CBI* v. *NK Amin*,14 has referred the *Lt. Commander Pascal Fernandes* case15 to explain procedure and nature for granting pardon:16

To determine whether the accused's testimony as an approver is likely to advance the interest of justice, the Special Judge must have material before him to show what the nature of that testimony will be. Ordinarily it is for the prosecution to ask that a particular accused, out of several, may be tendered pardon. But even where the accused directly applies to the Special Judges he must first refer the request to the prosecuting agency. It is not for the Special Judge to enter the ring, as a veritable director of prosecution. The power which the Special Judge exercises is not on his own behalf but on behalf of the prosecuting agency, and must, therefore, be exercised only when the prosecution joins in the request. The State may not desire that any accused be tendered pardon because it does not need approver's testimony. It may also not like the tender of pardon to the particular accused because he may be the brain behind the crime or the worst offender. The proper course for the Special Judge is to ask for a statement from the prosecution on the request of the prisoner. If the prosecution thinks that the tender of pardon will be in the interests of a successful prosecution of the other offenders whose conviction is not easy without the approver's testimony, it will indubitably agree to the tendering of pardon. The Special Judge (or the Magistrate) must not take on himself the task of determining the propriety of tendering pardon in the circumstances of the case.

An accused can approach the court with a request for the recording of his confessional statement as an approver, however in that situation, the magistrate has to ensure his identity as the accused and also the fact that investigation in that offence is currently underway, otherwise such statement shall not amount to a statement 'in the course of investigation' and therefore not a valid statement within the meaning of Section 164 of the Code.[17] Procedures are different for tendering pardon under section 306 and section 307 of the Code.[18] Section 306 is invokable at the pre-committal stage whereas section 307 is applicable at the post-committal stage. The person granted a pardon under section 306 may have to be examined twice; such a contingency may not arise

under section 307. First stage proceedings under section 306 held in the Magistrate Court in the absence of suspect at any stage of the investigation or inquiry into or at the stage of taking cognizance; whereas in the second stage the court is also empowered to tender a pardon during the trial.

The examination of the approver, as per the scheme under section 306(4) of the Code is ex-facie, mandatory. Thereafter, the proceeding may follow one of two paths; the trial of main offence continues, in the absence of any infraction, and the approver is liable to be arraigned therein as a prosecution witness. On the other hand, if the public prosecutor certifies that the approver is breaching any condition of tender of pardon, by concealing material facts or tendering false evidence, the approver is arraigned as accused liable to be tried separately under section 308.

On the other hand, the power to grant pardon under section 307 is exercised after the commitment of case under section 209 of the Code usually to the Court of Session, but before the judgment, intending to obtain evidence from a person supposed to have been directly or indirectly concerned in, or privy to, any such offence. Thus, after the commitment of a case for trial, the Session Court or the court trying the case also equipped with the power to examine the approver at the first instance after expressing intention and qualifying the object under section 307, without any limitation of section 306(4)(b) of the Code, since after commitment an accused has the right to participate in all the proceedings conducted in open court. Thus, by invoking section 307, the court may exercise power to grant a pardon as a trying court in the original jurisdiction

The multiplicity of proceedings in granting pardon as well as a dual examination of intended approver is also curbed under section 307 of the Code to avoid possibilities for elimination or influencing the intended approver. However, the drawback of section 307 is that prosecution also loses its right to claim the privilege under section 173(6) of the Code[19] in a case section 307 has opted during open proceedings after the committal of a case. This legal conundrum of procedural duality was challenged before the apex court in *M. Chhagganlal* v. *Greater Bombay Municipality*[20] on the strength of violation of Article 14 of the Indian Constitution. The apex court turned down the contentions by observing:[21]

It is, therefore, clear from these decisions that where there are two procedures for determination and enforcement of a liability, be it civil or criminal or revenue, one of which is substantially more drastic and prejudicial than the other, and they operate in the same field, without any guiding policy or principle available from the legislation as to when one or the other procedure shall be followed, the law providing for the more drastic and prejudicial procedure would be liable to be condemned as discriminatory and void. This principle has held that field for over twenty years and it is logically sound and unexceptionable. The arbitrary choice of two alternative procedure is, therefore, not given to the same authority and there is accordingly no violation of Article 14. This contention of the respondents is in our opinion, having regard to the substance of the guarantee of equality, untenable and cannot be accepted.

It proceeds on a misconception of the true principle on which this Court has struck down laws providing for special procedure which is substantially more drastic and prejudicial than the ordinary procedure.

There is another provision under section 5(2) of the Prevention of Corruption Act, 1988, which empowers the Special Judge to tender pardon to obtain evidence of any person who directly or indirectly concerned in an offence for the purpose of sub-sections (1) to (5) of section 308 of the Codedeemed to have been tendered pardon under section 307 of that Code. However, Section 5(2) of the Act, 1988 does not affect invoking provisions of section 306 of the Code by the court. Consequently, the Special Judge of PC Act enjoys dual power as the warrant trial magistrate and the Session Judge. Thus, the powers under sections 306 and 307 of the Code are vested in the court notwithstanding the provision of section 5(2) of the Act, 1988.[22]

RECORDING THE STATEMENT OF PROPOSED APPROVER UNDER SECTION 164 OF THE CODE

It is pertinent to understand the need to record the statement under section 164 of the Code. The object of the recording of such statement before the Magistrate is twofold; firstly, to deter a witness from changing his version subsequently;and secondly, to get over the immunity from the prosecution concerning information given by the witness under section161 read with section 162 of the Code. The other reason of recording statement of a witness by the Magistrate is to minimize the chances of turning volte-face by a witness during the trial due to fear of being found involved in perjury, or under duress or intimidation by the perpetrators. The statement recorded under section 164 is the public document according to section 74 of the Evidence Act and does not require any formal proof. Such a statement is admissible in evidence under section 80 of the Evidence Act. Hence, summoning of the Magistrate by the Sessions Court to prove the contents of the said statement is improper.[23]

The statement recorded by the Magistrate under section 164 of the Code is not a substantive piece of evidence, however, it may be used only for contradiction or corroboration made in the Court in the manner provided under sections 157 and 145 of the Indian Evidence Act. A confession is a substantive evidence against its maker, provided it has been duly recorded and suffers from no legal infirmity, it would suffice to convict the accused who has confessed. Further, as a matter of prudence, the Court may expect some corroboration for establishing the guilt of other accused beyond a reasonable doubt, in addition to a disclosure made by an approver.

The confessional statement of an accused under section 164 of the Codefor considering him as an approver is not mandatory to be recorded,[24] but it is a prevalent prudent convention for getting recorded his confessional version by the Magistrate to arrive at a logical conclusion before considering to grant tender of pardon.[25] It is suggested that the Magistrate must emphasize corroboration of facts disclosed by the proposed approver and advanced digital technology like videography must be used for examination of approver to take judicial

notice of gestures and body language of the witness, which is relevant under sections 8, 14 and 119 of the Evidence Act.1872 of the Evidence Act. It becomes more relevant in case the approver is deaf or dumb or not in a state to tender oral statement.[26]

EXAMINATION OF THE APPROVER

Section 306(4)(a) of the Code entails that the person accepting a tender of pardon made under sub-section (1) shall be examined as a witness in the court of Magistrate taking cognizance and during the subsequent trial. As such, there are two occasions to be examined the approver once by the magistrate while taking cognizance, and before the trial court. The question arises whether the approver is to be cross-examined while examining pre-cognizance by the Magistrate and the defence has the right to cross- examine twice on both stages. The examination of the approver by the Magistrate taking cognizance is similar to the examination of a witness under section 202(2) of the Code. It is a settled law upheld by the apex court during the course of an enquiry under section 202, the accused neither has right to cross-examine the accused, nor has a claim to participate in such proceedings; even the Magistrate has not to put any question to the witnesses at the instance of the accused.[27] Earlier, different views on this legal issue have been expressed by the High Courts.

The High Court of Andhra Pradesh in *Uravakonda Vijayaraj Paul* v. *Stateof Andhra Pradesh*[28] held that mere recording of the statement of an approver does not amount to examination as a witness unless the accused are allowed to cross-examine the approver and that the provision of section 306(4) of the Code is mandatory. Kerala High Court in *In ReChief Judicial Magistrate* v. *Unknown29*has observed that examination under section 306(4) would be even before issuing process, and at that stage no inquiry is involved and accused will be nowhere in the picture, therefore, there is no question of the accused being permitted to cross-examine the approver at that stage and he has no right to participate in the examination. The apex court in a plethora of judgments has illuminated this legal riddle by not permitting the accused, at this stage, to cross-examine a proposed approver.30

An analytical examination of law safely deduced that examination of the approver by the Magistrate taking cognizance is a mandatory requirement but his cross-examination by the accused is not the statutory obligation, and the accused would get an opportunity to cross-examine the approver only during trial proceedings. Nevertheless, the offences under the Prevention of Corruption Act are to be tried before the Special Judge who has got original jurisdiction on a par with the Magistrate and if pardon tendered by the Special Judge, the approver is to be examined only during the trial and not before taking cognizance.

JUDICIAL CUSTODY OF THE APPROVER

Section 306(4)(b) of the Code necessitates that after accepting a tender of pardon under section 306(1) he shall, unless he is already on bail, be retained under judicial custody till termination of the trial. Illuminating the constitutional validity of section 306(4)(b), the apex court in *Suresh Chandra Bahri*v. *State*

*of Bihar*31has observed that there is no doubt that Clause (b) of section 306(4) directs that the approver shall not be set at liberty till the termination of the trial, and the provision is based on the principle of public policy and public interest, and violation of the statutory provision would invite stringent action against hostile approver under section 308. Sections 437 and 439 of the Code may not be applicable to the case of approver since after granting a pardon his status is as a witness of the prosecution and these sections deal with granting of bail to the accused lodged under judicial custody. It is a well settled principle of law that general provisions shall give way and bow before the special provisions.[32]

However, a question was raised before various High Courts, whether notwithstanding section 306(4)(b), provisions under section 482 of the Code may be invoked within the ambit of the inherent power of the High Court to grant the bail to the approver. Various high courts of India have observed that there is nothing to fetter the power of the High Court under section 482 and in exceptional and reasonable matters a High Court is empowered to enlarge an approver on bail; or if proven circumstances to suggest that his detention is longer.[33] In these judgments of high courts, the observations of the apex court in *Sunil Batra* v. *Delhi Administration*[34] and *Hussainara Khatoon* v. *State of Bihar*[35] have been referred, wherein section 482 of the Code has been made applicable to the approver for releasing him on bail for preserving the spirit cherished under Article 21 of the Indian Constitution. It appears befitting that in case an approver being in jail has complied all conditions of a tender of pardon to the satisfaction of the court and the public prosecutor has no objection to the disclosure of all facts of crime, then there must be a provision in law enabling the trial court to release the approver immediately.

EVIDENTIARY VALUE: 'DOUBLE TEST' FOR DETERMINING THE RELIABILITY OF AN APPROVER

In *Mahla* v. *Crown*[36] the High Court of Lahore observed that "The fact, however, that an approver appears to the court to be an untrustworthy witness does not absolve the court from complying with the statutory provisions." The apex court of India, in *Sarwan Singh* v. *State of Punjab*,[37] held that "The appreciation of an approver's evidence has to satisfy a double test. It must show that he is a reliable witnessand that his evidence receives sufficient corroboration".[38] The Magistrate, while recording the statement of proposed accomplish under section 164 of the Code for considering as approver, must ensure that "the mind of the accused person should be completely free from any possible influence of the police and he must be sent to jail custody and given adequate time to consider whether he should confess at all. Ordinarily, he must be given at least 24 hours to decide."[39] The court must evaluate two interconnected and inseparable aspects, firstly considering the evidence of the approver with the corroborated piece of testimony, and secondly, reject it if appears to be untrustworthy. The court must ascertain that confession is purely voluntarily and discloses true facts of commission of the crime. It is essential to compare the disclosure with the rest of evidence and probabilities of chain of incidence.

In *R* v. *Baskerville*,[40] the King Bench held that "It has been a rule of practice at common law for the judge at the trial of a person for a criminal offence to warn the jury of the danger of convicting the prisoner on the uncorroborated evidence of an accomplice." It is not necessary that the accomplice provides every detail of the crime with direct evidence, it is sufficient if the evidence is merely circumstantial in nature. The United Kingdom Courts in *R.* v. *Atwood and Robbins*,[41] and *R.* v. *Jones*[42] held that an accomplice is a competent witness, and, if the jury found testimony worthy of credit, the verdict fulfil requirements of law.[43] Lord Ellenborough, in *R* v. *Jones*[44] held that "Judges in their discretion will advise a jury not to believe an accomplice unless he is confirmed, or only in as far as he is confirmed, but, if he is believed, his testimony is unquestionably sufficient to establish the facts to which he deposes. It is allowed that he is a competent witness, and the consequence is inevitable that if credit is given to his evidence it requires no confirmation from another witness." In *Ram Narain* v. *State of Rajasthan*,[45] Dua, J. while speaking for the apex court on the nature of approver has observed:

An approver who is admittedly guilty of the crime is an accomplice who has betrayed his associates and has apparently sought pardon for saving his own skin. In other words, he has purchased complete immunity for his prosecution at the expense of his associates by agreeing to give evidence against them for the prosecution. He is, therefore, presumed not to be a man of high character or a fair witness. His pardon being conditional, to please the prosecution he may well weave some false detail into the true details of the prosecution story and may also falsely involve some innocent person. There is thus a real danger of his telling a story true in general outline but containing some untruth which he can easily work into the story. It is for this reason that the courts as a matter of prudence and caution anxiously look for some corroboration to satisfy their conscience that the approver's testimony which is clearly admissible is also worthy of belief credit. One can of course visualise an accomplice who is genuinely repentant for the commission of his crime and truly desires to make a clean breast of the whole affair by way of penitence. But even in such cases the court has to judicially determine the extent to which his uncorroborated can be considered as trustworthy by looking to the other relevant material and the attending circumstances on the basis of which the accused can be safely convicted. The rule which seems to emerge from the foregoing discussion and judicial decisions is that the necessity of corroboration as a matter of prudence except when it is safe to dispense with such corroboration must be clearly present to the mind of the judge.

In *Narayan Chetanram Chaudhary* v. *State of Maharashtra,*[46] the apex court held that a conviction based on the uncorroborated testimony of an approver is not illegal since no distinction can be made between an accomplice who is an approver and who is not. However, courts as a matter of prudence and practice do not usually accept the testimony of an approver without corroboration in material particulars.In reference to evidential value of approver,

provision under section 133 and illustration (b) of section 114 of the Indian Evidence Act, 1872 need to be analysed. Section 133 contemplates that an accomplice shall be a competent witness, and a conviction is not illegal merely because it proceeds upon the uncorroborated testimony of an accomplice. However, as per illustration (b) of section 114, an accomplice is unworthy of credit unless he is corroborated in material particulars. These provisions seemingly appear contrary, but in a true sense, these are complementary to each other. The constitutional courts have deliberated and approved the legal issue of conviction based on the uncorroboratedsole testimony of the approver.[47] Section 134 of the Indian Evidence Act contemplates that no particular number of witnesses shall, in any case, be required for proving an act, and an approver is akin to a witness. Hence, it would be befitting to deduce that a conviction cannot be illegal merely due to non-corroboration; however, his evidence is examined and evaluated with due care and copious caution.

NON-COMPLIANCE OF CONDITIONS OF A TENDER OF PARDON

Once an accused is granted a pardon under the provision of the Code and is made approver, his status changes from the accused to a prosecution witness, and he is duty- bound to speak 'truth' to facilitate the process of justice. Violation of conditions of tender of pardon by an approver, irrespective of the pardon granted under sections 306 or 307 of the Code, meets the same fate as envisaged under section 308 of the Code. Section 308(1), enables the judge to conduct the trial of a person not complying with the conditions of pardon, if the Public Prosecutor certifies that in his considered opinion such person has, either by wilfully concealing anything essential or by giving false evidence, not complied with the condition on which the tender was granted, or for any other offence in which he appears to have been guilty in connection with the same manner, and also for the offence of giving false evidence.[48]

After the public prosecutor filed such certificate under section 308(1), the inexorable and inevitable consequence would be that the approver would cease to be an approver, and would become an accused. Consequently, the approver-turned-accused could never be regarded as a witness for the prosecution during the core trial. The apex court has observed that in case the Public Prosecutor has not taken any step to proceed against the approver, the High Court itself has inherent powers to proceed against the approver in case he is wilfully suppressing material facts or is giving false evidence.[49]

In *State (Delhi Administration)* v. *Jagjit Singh*,50 the apex court held that grant of pardon has nature of a contract between the State and the accused in exchange for full disclosure of facts on the part of accused and granting pardon by the State. The court further observed that". It is because of this mandate, the State cannot withdraw the pardon from the approver nor the approver can cast away the pardon granted to him till he is examined as a witness by the prosecution both in the Committing Court as well as in the trial court. The approver may have resiled from the statement made before the Magistrate in the Committing Court and may not have complied with the condition on

which a pardon was granted to him, still the prosecution has to examine him as a witness in the trial court".[51] Commenting on the role of the Public Prosecutor in criminal proceedings and the provisions under section 308 of the Code, the High Court of Delhi has observed:[52]

I do not deem it necessary to examine the authority, of the Public Prosecutor, to "peep into" the investigation, and the evidence garnered therein. It is obviously not possible to hold that the Public Prosecutor should remain a stranger to the investigative process, which constitutes the terminus a quo, wherefrom the entire proceeding emanates. Suffice it, therefore, to state that the certificate, under Section 308 (1) of the Cr PC, to be issued by the Public Prosecutor, is required to be based on the examination, of the approver, under Section 306 (4), or any other evidence adduced by the approver during trial, whether prior to committal or thereafter.

The approver is entitled to plead that he had complied with the condition on which tender of pardon was made. The approver shall not be tried for the offence of giving false evidence except with the permission of the Hon'ble High Court. Section 308(2) also contemplates that any statement of such person accepting the tender of pardon, recorded by Magistrate under section 164 or by a court under section 306(4) may be used as a piece of evidence against him during the trial.53 In case, during separate trial of the approver-turned-accused, the trial court observed that he has complied the conditions of pardon, judgment of acquittal shall be passed under section 308(5) of the Code.

REVOCATION OF A TENDER OF PARDON DURING INVESTIGATION: A LEGAL CONUNDRUM

Recently Delhi High Court has deliberated upon the interplay between section 306 and section 308 of the Code of Criminal Procedure, 1973.[54] The petitioner law enforcement agency, in this case, had moved an application before the Special Judge to revoke the tender of the pardon granted to the approver on the ground that he has wilfully concealed true facts and essential information during the ongoing investigation and had deleted relevant data from his laptop. The special court held that the application is not maintainable being premature and implying contention of the approver that pardon granted to an accomplice can be invoked at any stage is untenable; consequently, the application was dismissed. The legal conundrum arose before the high court whether the concept of 'revocation of pardon' does exist under the Indian legal lexicon. The issue was also raised before the court as to whether pardon once granted be revoked, cancelled or withdrawn at the stage of investigation and before recording the statement of an approver under section 306(4) of the Code.

The "concealment" of something "essential", or the tendering of "false evidence" has to be relatable to the statement of the approver, recorded under section 306(4), and not independent thereof. Delhi High Court dismissed the petition by observing that an inclusive and conjoint reading of sections 306 and 308 reveals an "inexorable sequence", whereby the most obligatory step is the examination, of the approver, as a witness, mandated under section 306(4). The high

court further held that issuance of a certificate under section 308(1) had to be necessarily preceded by recording of the statement of the approver as enshrined under section 306(4). However, the court refrained from entering into a debate as to whether "revocation of pardon" exists as a concept in law or not. 55 This remained a vital legal challenge, which needs to be deliberated by the constitutional courts of India. In view of the authors, the legislature or the apex court may consider to introduce legal provisions for revocation of a tender of pardon, if approver is wilfully not disclosing true facts, which may likely to help other accused. This amendment may compel the approver to abide by the conditions of pardon and to cooperate during the process of evidence collection, which is the baseline for fair trial.

CONCLUSION

The approver is an extraordinary legal dogma to punish the heinous criminals, otherwise they may have escaped from the clutches of the legal process. However, it is a slippery slope especially when the prosecution builds a case predominately on an edifice of sole testimony of the approver, without credible corroboration. The judge must be extra cautious about holding guilty, since in Indian social milieu false allegations due to extraneous factors like personal enmity cannot be ruled out. This legal provision may be considered for extraordinary cases like terrorism, big-ticket corruption and economic offences, or diabolic and gruesome bodily crimes. Further, admission of guilt by a proposed approver may be corroborated in terms of recovery of vital items related to crime such as case property or documents or weapon etc. under section 27 of the Evidence Act, 1872 or any significant disclosure which otherwise remained unknown during investigation or trial. Indeed, an approver is a double-edged sword, which must be used by the court with due attention and utmost caution.

Arul Varma*

Thou shalt not be a victim, thou shalt not be a perpetrator, but, above all, thou shalt not be a bystander."

- Yehuda Bauer

ABSTRACT

A pivotal duty is discharged by the police in combating the drug menace, as it has the mandate, and requisite machinery to implement supply reduction techniques. Supply reduction techniques essentially involve taking preventive measures, identification of source of drugs, containing drug peddlers, taking steps to initiate legal action by registering FIRs against the drug peddlers, and conducting effective investigation with a focus to secure convictions. To equip the police in this endeavour, the Parliament in its wisdom introduced Juvenile Justice (Care & Protection of Children) Act, 2015 (JJ Act) which also contains provisions for tackling drug peddlers. Section 77[1] is a formidable tool, a '*Ram Baan*', which prohibits and penalizes the supply of various categories of drugs and psychotropic substances to children. The intent of the legislature is that if drug pushers are kept at bay and the sale of drugs and intoxicating fluids is regulated, the proclivity of children to fall prey to addiction would reduce drastically. The extirpation of the source of these drugs and fluids is a sustainable solution to stop the malaise of addiction, and the path to ameliorate the condition of these hapless children of India. This paper seeks to guide the police in this direction. The experiences shared in this paper are chiefly from Delhi but can be replicated with equal force across the country.

I. Introduction

It is trite that addiction to drugs and other substances induce children to commit crimes to purchase fluid/drugs in order to satiate their cravings. Significantly,

1 77. Penalty for giving intoxicating liquor or narcotic drug or psychotropic substance to a child.—Whoever gives, or causes to be given, to any child any intoxicating liquor or any narcotic drug or tobacco products or psychotropic substance, except on the order of a duly qualified medical practitioner, shall be punishable with rigorous imprisonment for a term which may extend to seven years and shall also be liable to a fine which may extend up to one lakh rupees

Author's Intro:

* Chief Metropolitan Magistrate, Central Delhi.

there is a direct relationship between consumption of intoxicating substances and increase in crime rate. In a study titled **'Substance Use and Criminality among Juveniles-under-enquiry in New Delhi'** published in Indian J Psychiatry, 2016 AprJun:58(2): 178-182 it was concluded that 'Out of 487 juveniles-under-enquiry booked under different crimes, 86.44% of the sample had a history of substance use.' The study and statistics essentially bring to the fore the deleterious effect such substances have on children. This is the age where their susceptibility to start consuming drugs is also at the peak, and thus intervention by the police must be made on a war footing.

II. Section 77, Juvenile Justice (Care & Protection of Children) Act, 2015 and other relevant provisions

Albeit least invoked, this provision is the most potent weapon in the arsenal of law enforcement authorities. To combat the burgeoning issue of drug proliferation amongst children, this stringent provision i.e. Section 77 penalizes the offering of (i) narcotic drugs, (ii) psychotropic substances, (iii)tobacco product or (iv) intoxicating liquor to a child below the age of eighteen years. The section makes the offence punishable with rigorous imprisonment upto seven years, and a fine extendable up to as high as rupees one lakh. Section 78[2] is equally effective, and it penalises whosoever uses a child, for vending, peddling, carrying, supplying or smuggling the above four categories of substances. Both the sections are cognizable, and non-bailable. Further, Rules 56[3] & 57[4] of the Juvenile Justice (Care & Protection of Children) Model Rules, 2016 (JJ Rules) provide for the procedural

2 78. Using a child for vending, peddling, carrying, supplying or smuggling any intoxicating liquor, narcotic drug or psychotropic substance.—Whoever uses a child, for vending, peddling, carrying, supplying or smuggling any intoxicating liquor, narcotic drug or psychotropic substance, shall be liable for rigorous imprisonment for a term which may extend to seven years and shall also be liable to a fine up to one lakh rupees

3 56. Procedure in case of offence under section 77 of the Act.- (1) Whenever a child is found to be under the influence of, or in possession of intoxicating liquor or narcotic drugs or psychotropic substances or tobacco products, including for the purpose of sale, the police shall enquire as to how the child came under the influence of, or possession of such intoxicating liquor or narcotic drugs or psychotropic substances or tobacco products and shall register an FIR forthwith. (2) The child who has been administered narcotic drugs or psychotropic substances or is found under the influence of the same may be produced either before the Board or the Committee as the case may be, and the Board or the Committee shall pass appropriate orders regarding rehabilitation and de-addiction of the child. (3) In case of a child found to be addicted to intoxicating liquor or tobacco products, the child shall be produced before the Committee which shall pass directions for rehabilitation including de-addiction of the child and transfer the child to a fit facility identified for the purpose. (4) In case any child is found to have been administered intoxicating liquor or narcotic drugs or psychotropic substances or tobacco products in a Child Care Institution, the child shall be produced immediately before the Board or the Committee, except in such cases where the child is not in a position to be produced before the Board or the Committee and requires immediate medical attention. (5) The Board, shall on its own or on complaint received from the Committee, issue directions to the police to register an FIR immediately. (6) The Board or the Committee shall also issue appropriate directions for inquiry as to the circumstances in which such product entered the Child Care Institution and reached the child and shall recommend appropriate action against the erring officials and the Child Care Institution. (7) The Board or the Committee may also issue directions for transfer of the child to another Child Care Institution as the case may be. (8) Any shop selling intoxicating liquor, tobacco products, must display a message at a prominent place on their shop that giving or selling intoxicating liquor or tobacco products to a child is a punishable crime with up to seven years of rigorous imprisonment and a fine of up to one lakh rupees. (9) All tobacco products and intoxicating liquor must display a message that giving or selling intoxicating liquor or tobacco products to a child is a punishable crime with up to seven years of rigorous imprisonment and a fine of up to one lakh rupees. (10) Giving or selling of intoxicating liquor, narcotic drugs or psychotropic substances or tobacco products within 200 meters of a Child Care Institution or any other home registered or recognized under the Act, or the office of a Committee or a Board shall be deemed to be an offence under section 77 of the Act.

4 57. Procedure in case of offence under section 78 of the Act.- (1) Whenever a child is found to be vending, carrying, supplying or smuggling an intoxicating liquor, narcotic drug, or psychotropic substance, the police shall enquire how and from whom the child came into possession of the intoxicating liquor, narcotic drug, or psychotropic substance and shall register an FIR forthwith.(2) A child who is alleged to have committed an offence under section 78 of the Act shall be produced before the Board, which may transfer the child to the Committee, if the child is also in need of care and protection.

mechanism to give teeth to the above sections.

A perusal of the individual childcare plans or social investigation reports of any of the children lodged in drug de-addiction centers reveal that many children have dependency inter alia on inhalants. As narrated by their parents, these children regularly consume whiteners, diluters, thinners and solution/sulochan. It is writ large by observing the plight of such children that consumption of the aforementioned addictive substances has played havoc with their physical and mental health. It would be further revealed that addiction of the child is due to the nefarious activities of drug peddlers, and even unscrupulous chemists, who are operating in the area and who are responsible for proliferation of such substances.

III. Interpretation of Section 77 JJ Act, 2015

Four categories of substances have been explicitly mentioned in the section. However, what was not mentioned, was a seemingly innocuous but potentially deadly substance, sale of which was essentially unregulated, and its ease of availability ensured sustained doses of addiction. The said substances are different species of inhalants or volatile solvents viz. correction fluids, whiteners, thinners etc. As per the **Report on Magnitude of Substance Abuse in India, 2019**, issued by the Ministry of Social Justice and Empowerment, GOI 'at the national level, an estimated 4.58 lakh children and 18 lakh adults need help for their problematic inhalant use'. The Juvenile Justice Board, Delhi, was grappling with the issue of children taking inhalants and committing crimes, and was bestowed with an occasion to meaningfully interpret this provision to include inhalants within its ambit, under the category of ' intoxicating liquor' It is pertinent to note that according to the **25th Report of the Standing Committee on Social Justice and Empowerment, December 2015** titled "Persons Affected By Alcoholism & Substance (Drug) Abuse, Their Treatment/Rehabilitation And Role Of Voluntary Organizations", the Committee observed that early prevention and early intervention are an integral part of the treatment and rehabilitation programme for drug addicts. Early prevention necessitates keeping children away from drugs and other psychotropic substances. Prohibiting the sale of such substances that are easily available would be a positive step towards attaining this objective.

Duty of the State

It is the duty of the State as enshrined in Article 47, Part IV of the Constitution of India to raise the level of nutrition and the standard of living and to improve public health. It is mandated that the state shall regard the raising of the level of nutrition and the standard of living of its people and the improvement of public health as among its primary duties. Further, the State shall endeavour to bring about prohibition of the consumption, except for medicinal purposes of intoxicating drinks and of drugs which are injurious to health. At the time when the process of framing of our country's Holy Document was underway, one of the members Sh A.V Thakkar had remarked during the debate on the aforementioned Article held on 24.11.1948 :

"There is another matter. All Adivasis do not want to drink: they want prohibition.

I am talking of the Bhils in Gujarat, in Maharashtra, in West Khandesh and in the Central Provinces. I am talking of the Gonds also of the Central Provinces. I have asked hundreds and thousands of them whether they want drink or whether they want prohibition. Their decided answer to me has been: ''Thakkar, you are talking of prohibition; you are talking of doing away with drinks. **You are placing these enticements in our path and you are still asking for our opinion. For God's sake have the liquor shops closed and then ask us. We are enticed to go to drink; otherwise we will not.**"

Thus, the focus has to be on removal of supply chain.

Order of the JJB

The JJB surmised that the meaning of the term 'intoxicating liquor' in Section 77 cannot be confined to mean only beer, wine, etc., as understood in common parlance. It's meaning would be expanded to inhalants too. These inhalants contain inter alia solvents like toulene, methylbenzene, trichloroethylene, etc. which are alcoholic, and produce the same effects on the body as an alcohol does. Inhalants are highly addictive, like alcohol and are often the first drug children experiment with because of their widespread and easy accessibility. To mitigate the menace caused by inhalants, the quest that the Board embarked upon was to ascertain whether inhalants like correction fluids/whiteners, thinners and vulcanising solutions/sulochans can be covered within the ambit of the term 'intoxicating liquor' as mentioned in section 77 of the JJ Act,2015. The answer was held to be in the affirmative.

Govt Notification

Pursuant to the Order of the JJB, the Delhi govt issued a notification, having far reaching ramifications, which would eventually be for the benefit of lacs of children of Delhi This notification will serve as an efficacious tool to curb the menace of drugs, as it is inhalants that are 'stepping stones' into the world of drugs. The prohibition vide the above said notification, on the sale of inhalants to minors, would eventually reduce their usage and dependency by minors: It would be a stupendous strategic and tactical move in the war against drugs.

High Court verdicts

The above interpretation of Section 77 JJ Act was referred to, and upheld in *Aasha vs State*[5], *Akshay Chadha vs State*[6], two verdicts of seminal importance in this field. Both the judgments held that inhalants fall in the category of intoxicating liquor, and thus their sale to minors is punishable under Section 77 JJ Act. Taking a cue from Delhi High Court, The Uttarakhand High Court in Shweta *Mashiwal Vs State of Uttarakhand*[7] *relied on Aasha's* judgment and also banned the sale of inhalants in Uttarakhand, punishable under Section 77 JJ Act.

IV. Prevention

Surveillance

Criminal history is replete with examples where persons with previous convictions or involvements are unable to extricate themselves out of the vicious cycle of crime, and pursue it as an avocation. The experience in Delhi reflects that a lot of drug peddlers had a prior involvement especially with NDPS cases, but they unabashedly continued with their

5 WP (Crl) No 2401 of 2017 (Delhi High Court)

6 Bail Application No. 334/2018 (Delhi High Court)

7 2018 SCC OnLineUtt 736

nefarious activities while they were out on bail. It is this lot which needs to be monitored. In *Asha's* case (supra), the High Court instructed the Delhi Police to mount a constant vigil and surveillance on such persons. Further, externment proceedings ought to be initiated against bad characters (BC) against whom NDPS and Excise cases have already been registered, as they, more often than not, indulge in drug peddling to children

Awareness & distancing

Next, steps should be taken for removal of sources of allurement. As per Rule 56(8) of the JJ Rules, any shop selling intoxicating liquor, tobacco products, must display a message at a prominent place on their shop that giving or selling intoxicating liquor or tobacco products to a child is a punishable crime with up to seven years of rigorous imprisonment and a fine of up to one lakh rupees. This alone would deter the owner of the shop. Further, as per Rule 56(10) giving or selling of intoxicating liquor, narcotic drugs or psychotropic substances or tobacco products within 200 meters of a Child Care Institution or even the office of a Child Welfare Committee or a Juvenile Justice Board shall be deemed to be an offence under section 77 of the Act. Carrying out a survey to ensure that there is no violation of Rule 56(8) and 56(10) of the JJ Rules would be a constructive step toward reducing the supply of these contraband items. Further, invoking powers vested under Section 144 CrPC, senior police officers may get directions issued for putting such display boards in all betel shops.

Action against unauthorized shops

Further, a lot of these stalls operate without licenses. Their removal may entail loss of livelihood, and it may be a law and order problem. However, when such unscrupulous elements sell tobacco products and alcohol to children without any compunction, then steps must be initiated for their closure under Section 268 or 283 IPC. Similarly, it is a known phenomenon that stolen items are usually sold to goldsmiths, scrap dealers, many of them which are unauthorized. Removal of unauthorized *kabadi* shops which do not have licenses is another step that needs to be taken along with invoking Sec 411 IPC i.e. the charge of receiving or retaining stolen property must be invoked against such elements.

Special Units

Setting up of Task Forces or Special Units, as mandated by the NALSA (Legal Services to the Victims of Drug Abuse and Eradication of Drug Menace) Scheme, 2015. The Special Units, apart from coordination and spreading awareness, can also help in destruction of illicit opium and cannabis cultivation[8].Cue can be taken from Delhi where, vide a Govt. Notification[9], setting up of District Task Force comprising the

8 9. Destruction of illicit cultivation: The SLSAs shall coordinate with the State Governments for the destruction of illicit cultivation of cannabis and opium as well as any other plant used to derive Narcotic and Psychotropic Substances. The SLSAs may also urge the State Government to include such destruction as admissible work under MNREGA Scheme. This will pave the way for the destruction of illicit plants on a large scale besides, encouraging community involvement in the entire campaign.

9 Government Notification F.No.7(15)/2012/Misc/DHS/SHS/Pt.file-III/1229-1239 dated 28.07.2017 issued by the Department of Health and Family Welfare,Govt of NCT of Delhi

Deputy Commissioner (Revenue) and the Deputy Commissioner of Police has been envisaged for monthly monitoring of sale of inhalants.

V. Taking the Initiative

Identification of source and registration of FIRs under Section 77 & 78 JJ Act

Experience suggests that most of the FIRs under Section 77 & 78 JJ Act came to be registered pursuant to the orders of Juvenile Justice Boards(JJBs). The JJBs take a proactive approach, inquire from the children as to the source of drugs, and by exercising powers under Sec 8(3)(k) of the JJ Act, direct the police to register FIRs against drug peddlers. However, the need of the hour is *suo moto* registration of FIRs under section 77 and 78 JJ Act by the police. It is imperative for the police to develop credible intelligence network for the said purpose. The most reliable sources for tapping information are Children's Homes, Observation Homes and Drug De-addiction Centers. There are Narcotics Anonymous Centers too.[10] Senior Police Officers should make regular visits to these centers and interact with children. Do not begin by asking *whether* the child takes drugs, as invariably the child will be in denial. Instead, ask from him *where* does he buy his stuff, from *whom* does he buy and at what price. Show that you know. The presence of staff of these centers, including counsellors, who have already established a rapport with these children, would be imperative. Once the trust of a child is earned, he or she will easily divulge all the necessary information.

Eliciting information through persuasion

The above information can, and ought to be elicited by the Child Welfare Police Officers (CWPO)[11] too. Rule 2(xvi) of the Juvenile Justice (Care & Protection of Children) Model Rules, 2016 mandates the preparation of Social Background Report (SBR) of the child. The most vital utility of preparation of a Social Investigation Report has been laid down in the Rules, wherein it has been elaborated that Social Investigation Report should provide for risk assessment, including aggravating and mitigating factors highlighting the circumstances which induced vulnerability such as traffickers or abusers being in the neighbourhood, adult gangs, drug users, accessibility to weapons and drugs, exposure to age inappropriate behaviours, information and material. The report prepared by CWPOs can give a description of drug peddlers in the following format, and the police can initiate action suo motu thereafter.

10 https://naindia.in/na-meetings-in-india/delhi-area-meetings/

11 107. Child Welfare Police Officer and Special Juvenile Police Unit.—(1) In every police station, at least one officer, not below the rank of assistant sub-inspector, with aptitude, appropriate training and orientation may be designated as the child welfare police officer to exclusively deal with children either as victims or perpetrators, in co-ordination with the police, voluntary and non-governmental organisations. (2) To co-ordinate all functions of police related to children, the State Government shall constitute Special Juvenile Police Units in each district and city, headed by a police officer not below the rank of a 42 Deputy Superintendent of Police or above and consisting of all police officers designated under subsection (1) and two social workers having experience of working in the field of child welfare, of whom one shall be a woman. (3) All police officers of the Special Juvenile Police Units shall be provided special training, especially at induction as child welfare police officer, to enable them to perform their functions more effectively. (4) Special Juvenile Police Unit also includes Railway police dealing with children

Name & Description of suspected drug peddler	Other details viz. address, family members etc.	Area of operation	Time of operation	Type & price of drugs sold

Protocols

It would be vital to formulate a Standard Operating Procedure (SOP) qua investigation of cases under section 77 and 78 JJ Act. In Delhi, the police have been so mandated vide orders passed in *Akshay Chaddha's* case. This progressive order makes it incumbent upon CWPOs to prepare the above chart while preparing SBRs.

Anti-Narcotic Squads

The necessity of specialized task forces, of law enforcement agencies, to curb street peddling was recognized by the High Court of Delhi in *Aasha's* judgment. The Commissioner of Police, Delhi has approved to constitute a Anti-Narcotics Squad in each district, which shall be supervised by an Inspector rank Officer, who in turn shall work under the supervision of ACP Operations. Each Squad shall have manpower of two Upper (S.I/ASI) and eight subordinates (HCt./ Ct.). Another step that ought to be taken is immediate operationalization of Anti-Narcotics Squads. Further, these Squads should have sufficient women officers, so as to allay the apprehension of counter allegations of sexual harassment on male police officers, as many drug peddlers are women.

Ending illegal community practices

It has been a trend that certain sections of society/communities indulge in bootlegging, of carrying trade in illicit liquor. They brazenly carry out this 'trade' with total impunity, on the pretext that it is their 'family' or 'community' business. By involving children in these activities, they jettison the future of children of their own community. This cannot give them a *carte blanche* to violate the law, and the police must step in, and not baulk at invoking Section 78 of the JJ Act, along with the provisions of relevant Excise laws.

Ban on sale of loose cigarettes

Another major area of concern is the easy availability of loose cigarettes in the hands of children. An overwhelming 70% of the cigarettes sold in India are loose. Banning sale of loose cigarettes would be an important step: The ban on loose cigarette sale would be in consonance with the WHO Framework Convention on Tobacco Control (FCTC), which India signed and ratified in February 2005. Article 16(3) of FCTC states: *"Each Party shall endeavour to prohibit the sale of cigarettes individually or in small packets which increases the affordability of such products to minors.* Further, interpretation of Rule 3 & 4 of the Cigarettes and Tobacco Products (Packaging & Labelling) Rules, 2008 would make it explicit that selling loose cigarettes would defeat the purpose of Rule 3, and is a violation of Rule 4

Crime Review Meetings

Include Section 77 JJ Act in Crime Review

meetings /Statistics along with the *de rigueur* theft, murder etc statistics to keep a check on nefarious activities.

Helpline number

Having a helpline number/ WhatsApp Number like NCB has (for uploading images of illicit cultivated areas of opium[12].Further, State Police website and Facebook page should have a mechanism for reporting sale of illicit drugs and intoxicants.(with an assurance to the informer that the user will not be prosecuted). There should be Reward Policy like NCB has- rewards to be paid to informants as well as officers.

VI. Investigation

Mindset

There is a mindset to take action only when a 'big' recovery would be effected. Quantity should not be a factor to be taken into consideration. A drug peddler sells small 'purias/piece/packet' at one point in time, but at the end of the day, it is a 'big' quantity that has been ultimately sold.

Effective Investigation

All pending investigations should be immediately transferred to specialized task forces or the Anti-Narcotics Squad in each District. Uttarakhand has emulated Delhi by setting up Anti-Narcotics Squad, and other States can follow suit too. Further, it must be ensured that surveillance and trap technique is adhered to, as straightaway arrests, without recovery, botch up the cases. Further, to ensure videography during raids, smart body worn cameras can be put on the body of decoy or stock witnesses. Further, directions should be given under Section 144 CrPC for installing CCTVs at liquor vends and betel stalls, to keep a vigil and prevent sale to minors.

Bringing unscrupulous chemists to book

In case of sale of medicines without prescription to children, bills and registers of chemists should be seized so that investigation can be done qua stock actually received and items disposed off. In case of sale of habit forming drugs (Alprazolam, diazepam etc which are Schedule H 1 drugs) to children without prescription, action should be taken not only under the Drugs & Cosmetics Act but also under the NDPS Act as these substances fall under the category of psychotropic substances too. This will effectively deter unscrupulous chemists. Focus should be on registration of FIRs u/s 18(1) read with Section 27(b)(2) of the Drugs & Cosmetics Act, 1940 instead of merely cancelling/revoking licenses under Rule 65&66 of the Drugs and Cosmetics Rules, 1945.

Safeguards whilst recording statement of child victim

It must be borne in mind that a child in conflict with law who is a substance abuser, is also a child in need of care & protection[13]. Since the child is a victim, recording of Statement under section 164 CrPC of the child witness must be scrupulously in adherence to Rule 54 of the JJ Rules. Thus, the child shall be produced before a Magistrate to get the statement recorded as expeditiously as

12 WhatsApp No : 9868505002 for uploading of images of illicit cultivated area of opium and poppy by general public

13 Section 2(14) "child in need of care and protection" means a child— (viii) who has been or is being or is likely to be abused, tortured or exploited for the purpose of sexual abuse or illegal acts; or (ix) who is found vulnerable and is likely to be inducted into drug abuse or trafficking;

possible, the child should be accompanied by a support person, the child should be examined in the Vulnerable Witness Deposition Rooms and must not be brought face to face with the accused. With the safeguards, truthful testimonies would be elicited, which will go a long way towards securing convictions.

VII. Prosecution

Witness Protection

We have always lamented the rate of low convictions. To secure a higher conviction rate, especially under Section 77 JJ Act cases, it is of vital importance to protect our vulnerable witnesses. Identity of child witnesses needs to be concealed and they need to be protected in terms of the Witness Protection Scheme, 2018 and directions laid down in *Mahender Chawla vs Union of India*[14]**.**If child witnesses are threatened, appropriate action u/s 195A IPC be initiated

Opposing bails

Bails need to be opposed vociferously by the IOs through the Prosecutor, along with previous NCRB or SCRB dossiers of the accused, if any. The Courts also grant bail wherever investigation is slipshod. There is a need to invoke Section 41(1)(b)(ii) of the CrPC at the time of making arrests and in opposing bail applications so as to meaningfully adhere to the mandate of *Arnesh Kumar vs State of Bihar*[15]. Threats to child witness, commission of offence again by the accused are reasons that can be put forth, as per the said section.

Challenging bail orders

Bail cannot denigrate into a passport for commission of crimes. To go a step further, the bail orders granted should be challenged wherever warranted, through the office of the Chief Prosecutor, especially in cases where the accused, who has previous involvements, comes out and commits an offence during his bail term. Also, grant of anticipatory bail does not *ipso facto* entail in grant of a regular bail, as laid down in *Sat Pal Singh vs State of Punjab*[16], wherein the Apex court highlighted the difference between section 438 and 439 CrPC.

Thorough chargesheets

Prosecutors need to be trained or Special Public Prosecutors may be appointed in the Courts of Metropolitan Magistrates where cases under Section 77 and 78 will be tried. Checklists/Standard points qua objections to being raised at the time of scrutiny need to be developed by the Directorate of Prosecution and the same be disseminated amongst all prosecutors, and then only charge-sheets be filed in courts. Forwarding authority i.e. ACsP be directed to strictly comply with objections raised during scrutiny, and to get lacunae in investigations rectified

The Bait

Section 64 A NDPS Act should be invoked by Prosecutors to grant immunity from prosecution. This provision can be used as a bargaining chip to elicit information on main suppliers/ traffickers. Further, Courts can be persuaded to invoke Section 39 NDPS Act, for accused persons cooperating with the investigation. This avant garde measure needs to be explored and implemented.

14 (2019) 14 SCC 614

15 (2014) 8 SCC 273

16 (2018) 13 SCC 813

VIII. Coordination

With Drug Inspectors

The State Police cannot work in isolation to tackle this menace. In Delhi, Standing Order No. 435/2018 of the Delhi Police ensures that the police liaisons with the Drug Inspectors/office of the Drug Controller. Drug Inspectors must make complaints, requesting the Delhi Police to register FIRs under the NDPS Act too. The police should keep a check on chemists whose licences have been suspended / cancelled by office of the Drug Controller. For this, it is imperative that the data should be shared by both agencies.

With NCB

Deputation of one officer from NCB for a period of time to the Anti Narcotic Squad. Distribution of Drug Detection/Precursor Testing kits by NCB to these Squads.

SIMS & SIEN

Giving access to the State Police to SIMS(Seizure Information management System) as information needs to be shared. Further, police need to be added to SIEN- Secure Information Exchange Network- a platform for an online exchange of intel and info.

With CEIB

The CEIB(Central Economic Intelligence Bureau) has data of illicit cultivation of cannabis and opium, which they obtain by using satellite images. For effective identification, steps should be taken towards procuring latest digital maps of affected areas in each State, so that steps can be taken to destroy illicit crops. It must be noted that the Special Units set up under NALSA Scheme, 2015 have also the mandate to take steps to destroy illicit cultivation[17].

IX. Training

The theme for International Day against Drug Abuse and Illicit Trafficking 2020 is *'Better Knowledge for Better Care'*. The title is apt, for it is only sharing of knowledge and best practices of police forces across the country that can lead to concerted efforts to contain this menace.

Manual

It is imperative that local police get training in drug law enforcement by the officers of Narcotics Control Bureau, as it as an area of their expertise. NCB can help the State Police to make a booklet of Dos and Don'ts, similar to their own The National Academy of Customs, Excise & Narcotics (NAECN), Faridabad can also play a vital role in disseminating information. The COVID pandemic has forced us to adopt technology, and we can make use of this opportunity to prepare online modules and impart classes online.

Sensitization Courses

The course content should focus on imparting knowledge about the JJ Act and the Rules. Further, police personnel should also be taught how to deal with peddlers who themselves are addicts. It is important for the police to regularly have meetings with the judiciary and

17 Supra Note 4

the prosecution department. As per directions of Supreme Court in *Sampurna Behrua vs Union Of India*[18], *the District Legal Services Authority conduct sensitization programmes for police officers.*

X. Monitoring & Evaluation

The efforts of all agencies need to be continuously monitored and reviewed by one Nodal organization or Steering Committee. In Delhi, a suggestion was mooted to make the Juvenile Justice Committee as the Steering Committee, as it routinely holds meetings comprising stakeholders including the police. Further, in Delhi there is an Intersectoral Coordination Committee which discusses and attempts to resolve issues pertaining to drug addiction. It would be in the fitness of things to have 'District Task Forces' or 'Special Units' working and reporting to the above. The work done can be encapsulated in the form of a **Quarterly Reporting Format** given at the end of the paper.

XI. Conclusion

It is common knowledge that inhalants and psychotropic substances pharmaceutical combinations (like alprazolam diazepam etc.) are widely and easily available. Focus and priority of law enforcement agencies need a paradigm shift. It is inevitable that there would be diversion of manpower & resources, which are insufficient. However, a concerted effort for a relatively short period of time, a '*blitzkrieg*' so as to say, might help in the elimination of these anti-social elements and would ensure a drastic reduction in the overall crime rate. It would be an act of supererogation to highlight the nexus between drug proliferation among children on the one hand, and the rising spate of crimes on the other. Children are increasingly being lured and used by unscrupulous adults. The bait is drugs, be it in the form of inhalants, narcotic drugs such as ganja, psychotropic substances such as smack, pharmaceutical products like Nitrovite (10 number) etc. We need to urgently tackle the core issue and take the bull by the horns, to be able to break the vicious cycle of crime, perpetrated using youngsters, by adults pursuing their nefarious designs.

It is with a sense of urgency that we need to understand that children need to be insulated from the scourge of substance abuse, which has proliferated deep in our societal structure. The UN Secretary General Kofi Annan had once remarked *"there is no trust more sacred than the one the world holds with children. There is no duty more important than ensuring that their rights are respected, that their welfare is protected, that their lives are free from fear and want and that they can grow up in peace"*. It is upto us to zealously safeguard their rights. We need to act on a war footing.

18 (2011) 9 SCC 801

EVALUATION FORMAT (QUARTERLY)

S. NO.	ACTION TO BE TAKEN	DEPARTMENT	DETAILS OF WORK DONE	SHORTFALL, IF ANY & REASONS THEREOF
1.	No. of cases registered u/s 18 read with Sec 27 Drugs & Cosmetics Act, 1940 qua unauthorized sale to minors	Drug Controller		
2.	No. of licenses suspended or cancelled under Rule 66 Drugs & Cosmetics Rules,1945.	Drug Controller		
3.	No. of personnel in Anti-Narcotics Squad	Police		
4.	No. of women personnel in Anti-Narcotics Squad	Police		
5.	No. of Bad Characters externed	Police		
6.	No. of FIRs registered u/s 77 JJ Act,2015	Police		
7.	No. of FIRs registered u/s 78 JJ Act,2015	Police		
8.	No. of unauthorized kabadi shops challaned u/s 283 IPC	Police		
9.	No. of authorized/unauthorized kabadi shops challaned u/s 411 IPC	Police		
10.	No. of betel stalls/khokas and liquor vends in the area.	Police		
11.	No. of betel stalls/khokas and liquor vends in the area complying with Rule 56(8) JJ Rules,2016	Police		
12.	No. of areas where exercise to conduct mapping of distance has been conducted under Rule 56(10) JJ Rules,2016	Police		
13.	No. of areas where exercise to conduct mapping of distance has been conducted under Section 6 COTPA	Police		
14.	No. of areas where exercise to conduct mapping of distance has been conducted under Rule 51, Delhi Excise Rules,2009	Police		

S. NO.	ACTION TO BE TAKEN	DEPARTMENT	DETAILS OF WORK DONE	SHORTFALL, IF ANY & REASONS THEREOF
15.	No. of illegal liquor vends removed, including ones running in houses.			
16.	No. of cases where statement of child was recorded under Section 164 CrPC as per Rule 54(13) JJ Rules,2016. (include number of days within registration of FIR within which statement was so recorded)	Police		
17.	No. of cases where TIP applications were moved immediately after arrest of drug peddler, include number of days within registration of FIR within which statement was so recorded)	Police		
18.	No. of CCTVs installed u/s 144 CrPC in vulnerable areas viz. betel shops, liquor vends etc.	Police		
19.	No. of hot spots in the area	Police		
20.	No. of hot spots removed and declared to be 'Drug-free' Zones.	Police		
21.	No. of visits made by DCP/SP to Drug-de addiction centers and to NAs (Source)	Police		
22.	No. of cases investigated where videography was not used, and reasons thereof.	Police, NCB & Drug Controller		
23.	No. of cases investigated where recovery was not effected, and reasons thereof.	Police, NCB & Drug Controller		
24.	No. of cases qua sale of habit-forming drugs, where in addition to Drugs & Cosmetics Act, the NDPS Act is also invoked	Police NCB & Drug Controller		
25.	No. of cases where SBRs (Social Background Reports) prepared by CWPOs give a description of drug peddlers (as per chart)	Police		

S. NO.	ACTION TO BE TAKEN	DEPARTMENT	DETAILS OF WORK DONE	SHORTFALL, IF ANY & REASONS THEREOF
26.	No. of meetings of Drug Disposal Committee and details of contraband incinerated/destroyed.	Police		
27.	No. of meetings of Drug Disposal Committee and details of contraband incinerated/destroyed.	NCB &Police		
28.	No of WhatsApp messages received on 9868505002 (for uploading of images of illicit cultivated area of opium and poppy) by general public	CEIB & CBN		
29.	Details of illicit opium etc. destroyed	CBN		
30.	No. of cases where destruction of illicit crops has been carried out after receiving intel from Delhi Police and NCB	CBN		
31.	No. of cases where steps have been taken under Chapter V & V-A, NDPS Act for confiscation and forfeiture of property derived from, or used in illicit traffic	NCB &Police		
32.	No. of Field Testing Kit(standard sized ND detection kit, Precursors chemical detection kit, Ketamine Detection kits) and Electronic Weighing machine at every PS	NCB &Police		
33.	No. of recipients, and details of rewards given as per reward policy	NCB &Police		
34.	No. of cases in which police sent intimation to the MCD so that unauthorized structures/illegal encroachments of drug peddlers can be demolished or removed	Police		
35.	No. of officers against whom action taken for failure to comply, as per addendum dated 22.03.2018 to S.O 453/2018 issued by the Delhi Police.	Police		

Forensic Examination of Unaccustomed Handwriting in Hindi Script: A Case Study

ABSTRACT

Disguise may be accomplished by writing with opposite hand from that habitually used for writing i.e. unaccustomed hand writing. Many anonymous communications such as extortion letter, threatening letter, obscene missive, defamation letter etc. are sent by post and usually disguised using unaccustomed hand to avoid identity. The detection of writing characteristics of unaccustomed hand writing is a challenging task for Forensic Document Examiners. One of such cases in Hindi writing produced by unaccustomed hand was successfully reported in the laboratory. The present case study lays emphasis on the extraction of characteristic features of the writing in a threatening letter executed with unaccustomed hand and its comparison with sample writing written with both accustomed and unaccustomed hand are discussed here along with the silent points leading to the identification of the writer.

Keywords: Disguised Writing, Unaccustomed Handprinting, Accustomed Handwriting, Anonymous Communication, Forensic Document Examiner.

INTRODUCTION:

In India, Hindi language is country's official language [1]. Hindi language is an effective medium of communication in India and generally used for committing crimes. The modus operandi [2] has the potential of attracting criminals using Hindi language for committing crimes by writing threatening letter, extortion letter and anonymous letter causing social and mental harassment. Criminals while engaging in criminal activities have the mind-set of hiding his or her identity and thereby execute disguise writings. In disguise writings the writer intends to impart an appearance of writing which is unlike his own habitual writing and yet maintain a significant level of legibility of the disguised writing [3, 4, 5, 6].

A case was reported and opined successfully related to an anonymous handprinted letter (threatening letter) that was written by the

3 Scientist 'B', CFSL- Pune
4 Forensic Professional, CFSL- Kolkata

unaccustomed hand in Hindi Language. There are a few materials available related to work on examination of unaccustomed handprinting in Hindi language. The available materials are facilitating the points related to examination in English Language but none is available in Hindi language.

James VP Convey, discussed in his book "Evidential Documents" [7] regarding the left and right hand writing which states that the naturally right-handed writer who resorts to his left hand under abnormal writing condition, may adopt awkward counter-clockwise ovals and circles and clumsy left hand uncertainty may be apparent at the turns and upstrokes of the upper and lower loop letters in various English letters.

The essential resemblance between the writing of the two hands is not surprising when it is realised that developed handwriting is substantially the unconscious product of the mind; it is only reasonable to conclude that if a man is blessed with an artistic ability which is expressed in the adoption of a well-proportioned hand-writing, it is unlikely that this quality will be suppressed merely by changing the hand which has acted as the servant of the brain [8].

G.A. Dawson [9] presented a case study on unaccustomed left handprinting in English script. Jannine Zimmerman [10] presented his paper in 1991, ASQDE meeting in Orlando, Florida, titled "Handwriting Identification Based on An Unaccustomed Hand Standard". Several Document Examiners have worked in this context using English as the language and have generated similar results [11,12]. Team could not locate any research paper in reference to Hindi Script.

DETAILS OF CASE

The present case forwarded by the authority to the laboratory was comprised of disputed writings marked as Q1 (Figure 1) and specimen writings marked as S1, S2, S3 & S4. The disputed handwriting was legible. The specimen writings marked S1 & S2 were written by accustomed or practiced hand which shows smooth line quality and the letters are formed smoothly and shows directness in strokes, gradation of pressure, flying commencing and terminating strokes. These were indication of free natural writing and full control on the writing instrument (Figure 2). The specimen writings marked S3 & S4 were executed by unpractised or unaccustomed hand as shown by the irregular movement of the strokes, sudden change in the direction of strokes which affects the skill level of the writing (Figure 3). These effects were due to the unfamiliarity of the writing hand to execute the letters.

Figure 1: A view of questioned document (Threatening letter) marked as Q1.

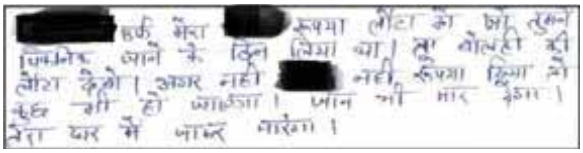

Figure 2: A view of Accustomed Handwriting Sample

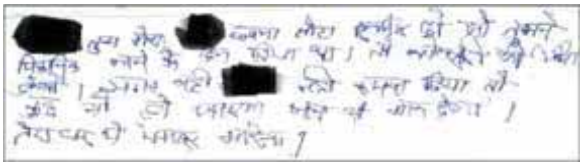

Figure 3: A view of Unaccustomed Handprinting Sample

EXAMINATION OF THE CASE

It was observed that the disputed writings were executed which show painful and laborious strokes. Some important noticeable features of the disputed writings were as follows:

A) Slow in writing speed, movement (finger movement), show poor line quality, tremulous, irregular size of ovals, change in curvatures of the strokes, abrupt change in pen pressure, erratic motion, lack of coordination and rhythm, disconnections of letters and more spacing between the letters in the words.

B) A noticeable loss of pen or muscular control that was evident in execution of curves and loops of letters viz. 'v', 'अ', 'घ', 'ज', 'त', 'ल, 'ब, 'भ', 'द', 'ह' etc., erratic turns, abrupt directional changes, wavy nature of overhead stroke in words.

C) The inability to maintain consistency and quality of letters forms, letters sizes, alignments, terminations and movements (finger).

D) The inability to maintain consistency in the slope of the particular letters in writing.

E) More consciousness in execution of punctuation marks and vowel signs.

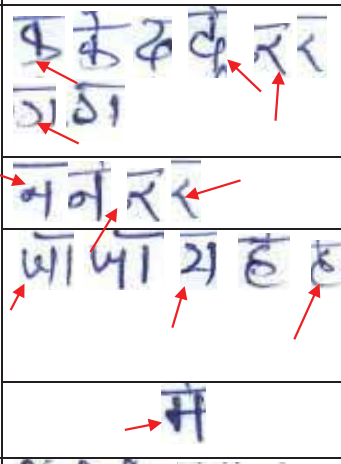
F) Some simplifications of complex letters, hesitations and pen stops, uncertainty in succeeding movements of next character.

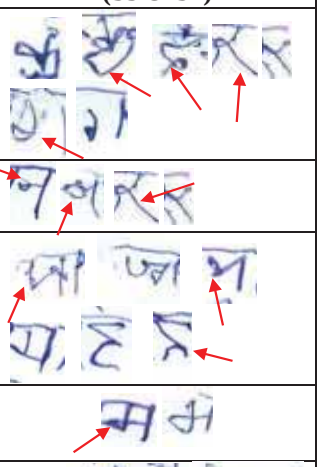
All these characteristics indicate that the disputed writings were written by unaccustomed hands [13].

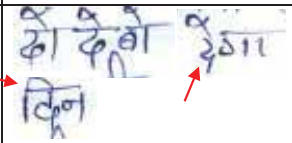
The supplied specimens were written by both unaccustomed and accustomed hands. Similar texts of standard writings were supplied. The letters and words were repeated in both accustomed and unaccustomed writings make a suitable standard for detecting the inconspicuous details of the characters for comparison. The specimen written by an unaccustomed hand shows a laborious effort in the construction of letters as they were executed with an untrained hand. The writings were written by slow speed that affects the line quality, movement, pen pressure, rhythm, alignment and slant with a noticeable loss of pen control that dramatically changes the pictorial appearance of the texts. The specimen writings written with both hands show inter-se consistency among themselves (Table 1).

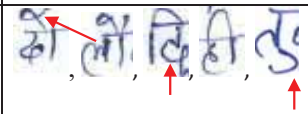
3.1 Comparison of characteristics similarities between Handwriting of both Left and Right Hand in specimen writings

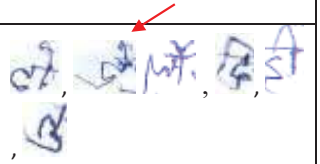
The handwriting of both accustomed and unaccustomed hands shows similarity between each other. The letters executed by the unaccustomed hand are larger with zig-zag movements, hesitation, lack of directness of strokes but they show inconspicuous characteristic similarities with accustomed handwriting in execution of letters, nature of commencement and termination of strokes, their movements, relative size and proportion of letters as well as spacing in writing as shown in Table 1.

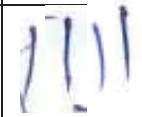


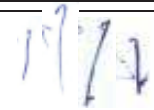






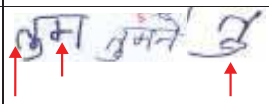


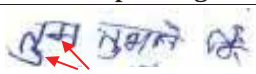


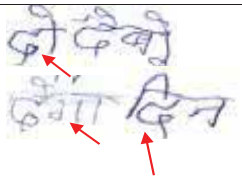


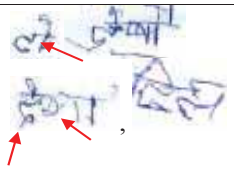
S. No.	Characteristic Similarities	Accustomed Handwriting Sample (S1 & S2)	Unaccustomed Handprinting Sample (S3 & S4)
1.	The basic pattern and execution of various strokes in Hindi letters viz क,ग, ज, द,न,म,य,र,ह etc a) Termination of strokes of letters 'क', 'द', 'र' and loop of letter 'ग'. b) the location of commencement of letters 'न' and 'र'. c) Curvature of curved body parts of letters 'ज', 'य'and 'ह'. d) execution of letter 'म'.		
2.	The shape of body curve of letter 'द' in words'दो', 'देबो'and'देगा'.		
3.	The manner of execution of u-kar "ु" and degree of curvature in body curve of 'त' in 'तुम'.		
4.	Similar manner of execution of vowel signs viz. o-kar "ो", ou-kar, e-kar "ि",ee-kar "ी ", u-kar "ु".		
5.	Manner of execution of full stop "।" (Purnaviram in Hindi script).		

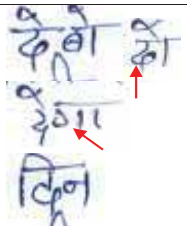
Table 1: The comparison of characteristic similarities in between Unaccustomed and Accustomed handprinting.

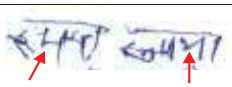


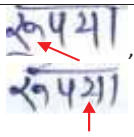


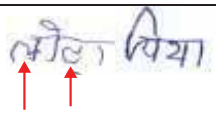


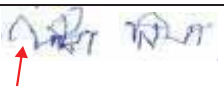


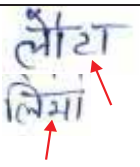


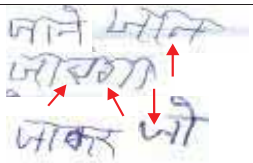


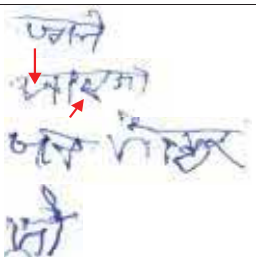


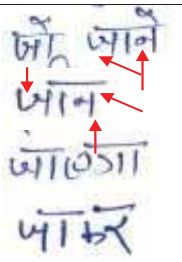


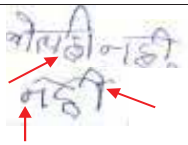


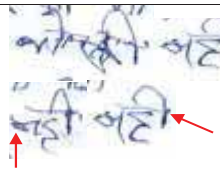


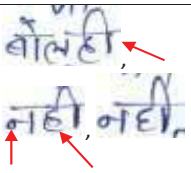


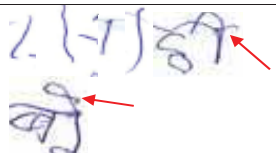


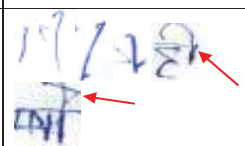


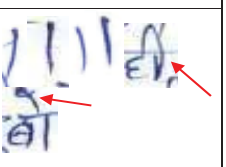












S. No.	Characteristics	Disputed Writing	Known Samples	
			Unaccustomed Handprintings	Accustomed Handwritings
1.	The manner of execution of u-kar "ु" and degree of curvature in the body curve of 'त' in 'तुम'.			
2.	Shape of body curve and termination of letter 'द' in words 'दो', 'देबो'and'देगा', etc.			
3.	Manner of execution of letter 'रू'; angularity in body curve of letter 'य'; shape of bowl of letter 'प ; upper curvature and termination of 'र'.			
4.	Nature of body curve and termination of letter 'ल'; connecting stroke with the curved body part in 'त'; retrace in commencing stroke of vowel sign e-kar "ि" in word 'लिया'.			
5.	Shape of bowl of letter 'ज' and wavy nature of upper head strokes in words 'जो','जाने', 'जान'and'जाएगा', etc.			
6.	Shape of body curve of letters 'ह'; relative location of commencement of loop in letter 'न'.			
7.	Manner of execution of full stop "।" (Purnaviram in Hindi script). Manner of execution of vowel signs viz. o-kar "ो" and ee-kar "ी ".			

Table 2: Showing characteristic similarities between disputed and known Specimen Handwritings (unaccustomed and accustomed hand).

The letters produced by an unaccustomed hand are generally larger in size than accustomed handwritings counterparts and show the difference in shift of slope (leftward). The vertical strokes are curved, wavy and generally written in haphazardly manner. The writer could not alter the writing habits on the change of hand except uncoordinated and erratic movement of strokes.

CONCLUSION

Although writings executed by unaccustomed hand appears awkward and clumsy but due to graphical maturity of writer the basic patterns of the letters remain the same. Above case study shows that it is possible to express opinion on an unaccustomed hand writing, if collected samplers are suitable and sufficient in quality. In criminal investigation, steps should be taken to obtain request writings of suspects(s) executed with both hands. Once the graphical maturity is achieved by the writer, it is extremely difficult to adapt to new letter formation. The developed writing is the product of unconscious mind and it is unlikely that this quality will be merely suppressed by changing the hand. Writing habits are neurologically fixed and it is difficult to change these to maintain the disguise thus making it possible for the Forensic Document Examiner to conduct examination and arrive at conclusion

Online Radicalization- Threats, Challenges and Proactive Measures

The Indian Police Journal

Manoj Kumar[1]
Dr. Manu Chaudhry[2]

ABSTRACT:

The paper discusses the challenge of radicalization in context of internet and possible solution which might be helpful in keeping control on spreading of radicalization through internet. The radicals and political extremists have chosen internet as their favorite tool for spreading their propaganda and recruitment purposes. The internet sans the national and international boundaries has started to affect even the developed nations in continents like Europe and Asia. There is a need to have an international solution in form of international regulatory framework for identification and prosecution of such perpetrators who originates such radical content on internet. Counter narrative is an important factor in de-radicalization, it is also suggested that whenever identified radical content is searched then it can be made possible that counter narrative will be consequently uploaded for the search contents. International organizations, NGOs and corporations may also make collaborative efforts in checking menace of online radicalization.

Keywords: Internet, Radicalization, Counter narrative, Transnational, Online, Website.

We've only begun to think about the strategic implications of how a connected world changes the balance of power among states and we need to put a lot more thought into how to manage that, just as we did after the invention of chemical weapons, nuclear weapons, and drones.

DAVID SANGER, NEW YORK TIMES JOURNALIST.

In the last decade the internet has become an integral part of our life, nearly every group or social entity which forms any important ingredient of our life is now represented online. This will not come as a surprise that political and religious radicals and terrorists also have used the internet in reaching out to people across different geographical regions. Extremists and radicals are using the internet tools for radicalization and recruitment purposes. "The Internet provides a great opportunity for terror groups to radicalize youth as it is an inexpensive way to connect, communicate, validate by finding out that the thoughts are widely shared and create a collective identity

Author's Intro:

2 Assistant Professor, Govt. Agriculture Management College, Chakur, Maharastra

transcending national culture and ethos". [1]

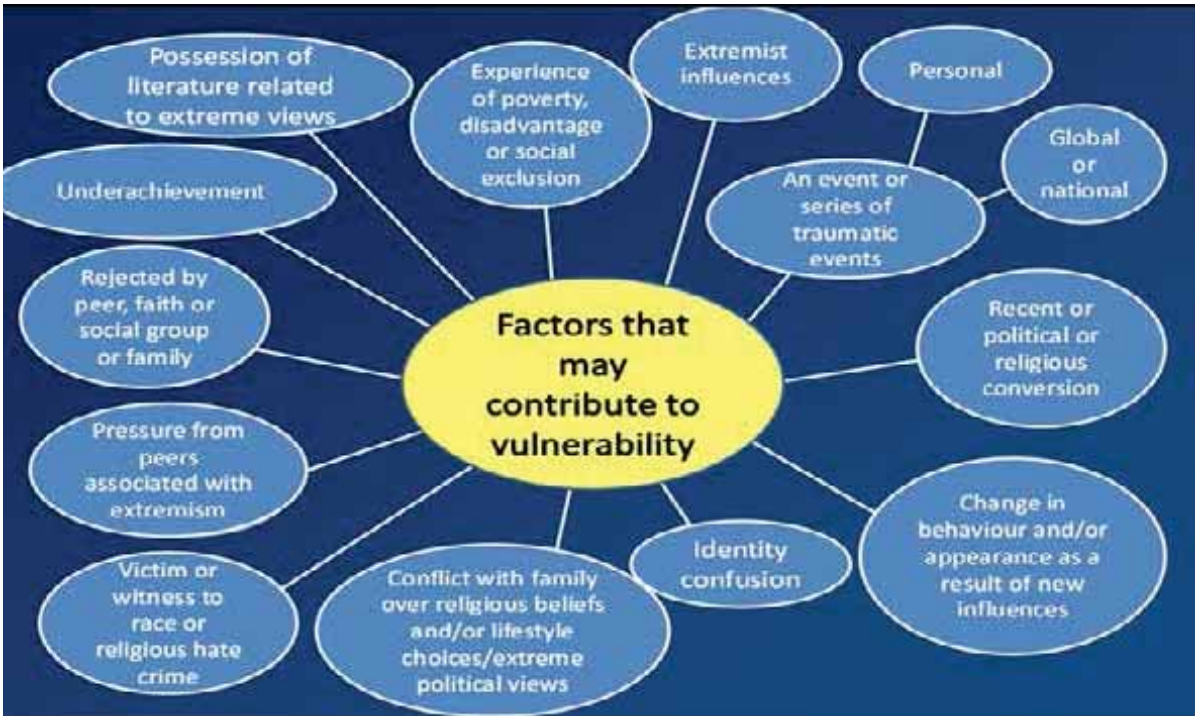
Many federal agencies are focusing their efforts on removing and blocking radicalizing data from the internet, but the efforts require multidisciplinary efforts involving various stakeholders which include the Internet Service Provider (ISP) companies, government institutions, NGOs and the users therewith.

There has been various versions what 'on line radicalization stands for',"Online radicalization to violence is the process by which an individual is introduced to an ideological message and belief system that encourages movement from mainstream beliefs toward extreme views, primarily through the use of online media, including social networks such as Facebook, Twitter, and YouTube". [2] "On the other hand, online radicalization may be defined as the set of strategies that are being jointly applied by radical violent groups to consolidate and maintain a transnational audience of supporters. From this perspective, online radicalization is to be understood as a paradigmatic shift likely to explain how individuals become exposed to radicalization in the digital age". [3]

Generally, as individuals immerse themselves in online extremist content, they begin to develop a skewed sense of reality in which their views no longer seem radical. Online interactions with like-minded individuals can substitute for an individual's physical community and create an online social environment similar to that of a gang in which deviant behavior and violence are the norms. Consumers of online extremist content can also develop or increase feelings of superiority, moral outrage, and desensitization to violence, and willingness to commit acts of violence in furtherance of a particular cause. [4]

While the Islamic State conducts most of its operations in the physical realm, hacking networks like 'Anonymous' rely predominantly on digital capabilities. Despite 'Anonymous' having little, if any, centralized command structure, the group (or individuals claiming to be affiliated with the group) has successfully attacked government agencies, major international corporations, and political figures. Anonymous and the Islamic State both demonstrate a central feature of the digital age: Even decentralized non-state actors can wield considerable power through the acquisition and deployment of cyber capacity. We should expect this trend to intensify quickly. [5]

INTERNET ROLE IN RADICALIZATION



The reason for use of internet by radicals and extremists is the same as the importance is for a normal citizen, the overarching reach of internet with minimum efforts which sans the geographical barriers makes it the favourite tool of radicals. A comprehensive inventory of online activities, therefore, can be said to be relevant and beneficial to extremist/ radical organizations.

Based on the analysis of benefits of internet over conventional methods of radicalization, there are three aspects of the internet which can be thought of as particularly problematic in the context of radicalization and recruitment described in policy report by International Centre for the Study of Radicalization and Political Violence (ICSR): [6]

- The internet can be used by extremists to illustrate and reinforce ideological messages and/or narratives. Through the internet, potential recruits can gain near-instantaneous access to visually powerful video and imagery which appear to substantiate the extremists' political claims.
- The internet makes it easier to join and integrate into more formal organizations. It provides a comparatively risk-free way for potential recruits to find like-minded individuals and network amongst them, enabling them to reach beyond an isolated core group of conspirators.
- It creates a new social environment in which otherwise unacceptable views and behavior are normalized. Surrounded by other radicals, the internet becomes a virtual 'echo chamber' in which the most extreme ideas and suggestions receive the great encouragement and support.

Having described the comparative benefits of internet over the other conventional methods of radicalization and subsequent recruitment for the purpose of extremist and violent activities, the following diagram describes the individual vulnerability factors which make susceptible to availability of radical literature on the internet. The diagram identifies the factors of individual in the sociological context and best described as distortions in social harmony at the level of family and society. These factors may even lead to social withdrawal symptoms and crisis of identity, for which a person will long for association and identification with something worthwhile.

Figure: 1

Source: https://www.sheffield.ac.uk/ssd/safeguarding/prevent/radicalisation

In European context the digital radicalization is the context of identity crisis and the search for identity politics. The 'online radicalization' is a symptom of 'internal threat' for most of the European States since the governments are witnessing evidence of radicalization from within and they have started to apply self-criticism and reflect on some local, regional and national issues. "In Europe, recruitment of foreign fighters has raised particular concerns with regard to the way second- or third-generation immigrants within local Muslim communities, as well as young individuals recently converted to Islam, are facing a form of identity crisis. As a result, the issue of radicalization in Europe often relies—explicitly and implicitly—on a broad range of debates relating to immigration, cultural integration, and the relationship between secularism and democracy. Over the last two to three years, commentators have ironically faced with a more challenging task when evaluating these parameters, as the debate on radicalization has introduced a trend towards identity politics from which many parties and political leaders have considerably benefited. The European case shows that anticipating radicalization cannot only be achieved by acknowledging existing identity concerns, but also by preventing all political actors from capitalizing on a resultant identity crisis". [7] "The root of radicalization lies in the sociopolitical alienation of a vulnerable individual and according to available literature goes through four stages: what is happening is not right; it is not fair; laying the blame on or demonizing the perceived enemy". [8]

The radicals are offering to target audiences a 'counter culture' and claim to offer an alternative to Western model of democracy with the option of political theological system. These subjects are mainly vulnerable and are target top online radicalization. The role of 'human interaction' in first person has been replaced by online material with target audiences, though this is also true that at times internet fails to provide the answers to many questions which arise in the minds of target audiences. "The reason for the absence of self-radicalization and self-recruitment online is that real-world social relationships continue to be pivotal. Many experts who have studied the problem have concluded that the internet can support and facilitate but never completely replace direct human contact and the ties of friendship and kinship through which intense personal loyalties form". [9]

METHODS TO CHECK INTERNET BASED RADICALIZATION

Network-Level Filtering

"Filters are specialized software programmes that can restrict access to entire websites, types of online services, specific pages or content within websites, or web pages containing specified keywords". [10] State-mandated filtering is usually carried out by ISPs and can be required as one of the conditions of a company's operating license in a jurisdiction. The state may also install centralized filtering mechanisms through internet exchange points that serve as gateways for internet traffic between different jurisdictions and to - and from - the networks operated by different ISPs. Private or local institutions such as schools and libraries can deploy filters on their own local networks to

block access to certain content. Filters can also be installed at the household level – most commonly by parents seeking to control what content their children can access. [11]

When content or a URL within a specific website it is filtered at the level of network, then only will the users reach the unfiltered part of the website. But when an entire website is filtered at the level of network, the user cannot reach any part of that particular website. Under the second exercise, it is strongly possible that even legal content is also rendered inaccessible to the user. "Depending on the legal context, ISPs can receive requests, recommendations, and orders for filtering from the government, private third parties, and/or regulatory organizations. Such orders can be communicated on a case-by-case basis directly to the ISP, or in the form of a general 'blacklist'. ISPs can also offer individual users the option of applying filters to their home and office networks. Freedom of expression can be affected by the reasons for filtering, the practical implementation of the filtering, and the transparency by government and companies about how and why the filtering occurs". [12]

Figure: 2; represents various methods of preventing objectionable contents on internet.

MEASURE	METHOD	ASSESSMENT
	Removing	
Takedowns	Government tells hosting company to 'take down' content of website.	Hosting company needs to be located in same jurisdiction.
Domain name deregistration	Government tells domain name provider to deregister domain name.	Top-level domain (e.g. '.uk') needs to be operated by national registry.
Denial of service attack	Overloading servers or networks with communication requests.	Illegal and, at best, a temporary means of disruption.
	Filtering	
Internet protocol (IP) filtering	Requests for blacklisted IP addresses are intentionally dropped.	Cheap, but blocks all services hosted by a web host ('overblocking').
Content filtering (dynamic filtering)	Filtering software 'sniffs' all information packets for blacklisted keywords.	Expensive. Also requires 'white listing' of permitted websites.
Domain name tampering	During IP 'look-up', requests for banned domain names are dropped.	Cheap, but problems with overblocking. Also, easy to circumvent.
Proxy filtering	Proxy filters decide whether to allow requests for individual webpages.	Expensive. May slow down traffic unless substantial investments are made.
Hybrid IP and proxy filtering	Combines IP and proxy filtering: proxy filtering only for blacklisted IP addresses.	Technically effective. But, like other methods, relies on blacklisting and fails to capture dynamic content.
	Hiding	
Search engine filtering	Search engines drop requests for certain webpages and keywords.	Requires active collaboration of search engine provider.
'Black hat' search engine optimisation (SEO)	Manipulating search engines to boost or reduce websites' page rank.	Widely frowned upon. Utility may be limited.

Source: Countering Online Radicalization: A Strategy for Action (ICSR), p.22

NARRATIVES AND COUNTER NARRATIVES ON INTERNET

Extremist narratives and online radicalization; the Internet is a convenient propaganda tool for extremists for the following reasons. First, online media ranging from video web to interactive forums and social media could cater to different kinds of personality and cultural background. IS propaganda, for instance, consists of varying mixtures of humanitarian and violent elements, depending on the targeted audience. Messages that stress the humanitarian element of the Syrian conflict appeared to be more successful when targeting Western audience as opposed to the Arab one that could relate more to the violence dimension. Second, extremists have managed to establish resilient, multi-lingual online networks by combining various online and social media platforms. "A certain Indonesian Twitter user who translates and re-tweets IS' Arabic and English tweets in Bahasa Indonesia has over 11,000 followers. These networks enable uninterrupted campaigns and constant reproduction of materials to a wider audience. Consequently removing online extremist materials would be a pointless exercise. While many studies have been done on extremist narratives and how they are being propagated, the influence of such propaganda on the audience is often less understood. For example some people who consumed extremist materials online became radicalized but not others". [13] The mechanism and tipping point for violent extremism could vary among different individuals. In fact, individuals actively try to understand the information they receive, and the way they interpret extremist narratives is largely influenced by their context. For instance, the extremist master narrative that emphasizes injustices on Muslims and the need for revenge might resonate more with someone who has personally experienced discrimination or had difficulties integrating within Western society. Therefore, it is instructive to understand the contextual factors and social milieu that could allow extremist narratives to find resonance.

The study based on role and use of internet by extremists which was undertaken jointly by Digitalis and the Centre on Religion and Geopolitics, explains the function of the search engine has been a blind spot that has been remained neglected for those seeking to measure and counter extremist messages on the internet.

'The findings came in the wake of a spate of attacks in Germany and France, some undertaken by young people radicalized on the internet. The study was entitled "A War of Keywords: How extremists are exploiting the internet and what to do about it," says the most popular search words used were crusader, martyr, kafir (non-believer), khilafa (a pan-Islamic state) or apostate'. [14]

'The study also discovered that from the extremist content accessible through the specific keyword searches, 44% was overtly violent, 36% was non-violent and 20% was political Islamist in context, the last being non-violent but circulated by known Islamist groups with political aims. The study is one of the first to expose the role of the search engine rather than social media in drawing people to extremist jihadi material on the web. It argues the role of the search engine

– a field dominated by Google – has been a blind spot that has been missed by those seeking to measure and counter extremist messages on the internet'. [15]

While the Internet posed new challenges to counter-terrorism, it could also provide some of the solutions. Available analytics tools such as big data and profiling techniques could help gather a large amount of data from social media and extremist online forums that are essential to support any theory on online radicalisation. Long-term solution to online extremism, however, requires more preventive measures through a concerted online and offline efforts. To this end, the role of civil society is indispensable given the significant influence of social context on individual radicalisation. Grassroots initiatives such as youth engagement programmes through sport and arts might be more effective to reach out to young people. Ultimately, education is vital in preventing the spread of extremist ideology. The education system in many countries does not prioritise critical thinking skills. The role of educators, family and civil society organisations in promoting critical thinking is needed to encourage youth to question and challenge assumptions, especially in the current information age.

Finally, counter-narrative remains the key to confronting online extremism. This could be improved through three elements: the message, messaging and messenger. The message promoted in counter-narratives should be positive and not just reactive, such as by promoting the ideology of peace. Counter-strategists could learn from extremist online campaigns to come up with creative messaging methods that appeal more to the audience. A positive message and appealing campaign strategy would not work well without a credible messenger. Local religious and community leaders have a considerable role in this regard. To move forward, there is a need to bring out more terrorism victims' voices in order to show the harm inflicted by terrorists to the lives of common people. [16]

In a condemnation of government efforts it finds very little of this content is challenged online. Analysing 47 relevant keywords, the search-engine analysis found counter-narrative content outperformed extremist content in only 11% of the results generated. For the search term khilafah, which has 10,000 global monthly searches, the ratio of extremist content to counter-narrative is nine to one. [17]

Developing, communicating, and publicizing an inclusive counter-narrative to violent extremism is a crucial and tough assignment. It demands international cooperation between the United Nations, governmental bodies, and dedicated expertise. It further requires comprehensiveness, credibility, and extensive accessibility. An inclusive counter-narrative must be able to cover the major aspect of the violent extremist context in question, like the political, historical, socio-psychological, and theological dimensions. It needs to be communicated, promoted, and purported by reliable messengers. For making counter narrative more appealing governments can also involve people who themselves once used violent or extremist means against state authorities. "The current moment is unique; for the first time in the history of Jihadism we are provided with a "critical mass" of former

militants who rebelled, not only against the current jihadists' behaviour but also against the ideology that motivated them. Their message to the younger generations of potential sympathizers and recruits is quite powerful: we were the pioneers of Jihadism and the authors of a large part of its literature. Here are our experiences and here is what went wrong."[18] "In addition, due to the behavior of violent extremists, multiple other independent, credible messengers have emerged to speak out against the violent behavior and the ideologies promoting it. Those messengers include respectable and independent religious clerics, academic scholars, former officials, and civil society organizations". [19] "The challenge for the United National and for governments worldwide will be how to capitalize on that unique moment and how to employ the messages, the messengers, and the proper media outlets to create and promote a comprehensive, credible counter-narrative to violent extremism. This article sketches a broad framework for a counter-narrative strategy". [20]

The role of media in counter narrative is still underutilized. The internet which has taken shape of mass media can be exploited for disseminating the counter narrative versions. The media dimension of the counter-narrative strategy will require multiple tasks: [21]

1. The first task is to analyse the counter-narratives available and highlight their sources of strength, appropriateness for the audience in question, and evaluate the potential impact.
2. The second task is to translate (if required), summarize, and sometimes simplify the existing and, hopefully, the forthcoming counter-narrative(s). In addition to texts, multi-media forms (for example online videos and audios) should be utilized as propagating tools.
3. The third task is introducing the messengers, their background, and their experiences.

SEARCH ENGINES ADAPTATIONS

Google also tested on a pilot programme that would divert British users searching for words linked to religious extremism to material prepared to counter radicalization. In 2016 Anthony House, Google's senior manager for public policy and communications, told British lawmakers in a parliamentary committee hearing about the pilot initiative, which is targeted at reducing the online influence of groups like ISIS. "We should get the bad stuff down, but it's also extremely important that people are able to find good information, that when people are feeling isolated that when they go online, they find a community of hope, not a community of harm," House said. [22]

"What was referenced is a pilot Google AdWords Grants program that's in the works right now with a handful of eligible nonprofit organizations," spokesman William Fitzgerald stated in an interview. "The program will enable NGOs to place counter-radicalization ads against search queries of their choosing." [23] Hence such adaptations may also be experimented and subsequently launched for worldwide usage.

EMPOWERING REGULATORY FRAMEWORK IN CYBERSPACE

Whenever users send complaints to the service provider about the content which is not suitable or breaches the internal policies, national or international laws, the user has to depend upon the prudence and discretion of ISP. "Most file-sharing and social networking sites have internal reporting mechanisms which allow community members to flag offensive or potentially illegal content as well as material which contravenes the sites' own community guidelines". [24] Although the Code of Practice adopted by the Internet Services Providers Association (ISPA) addresses issues such as legality and decency – including the hosting of 'material inciting violence, cruelty or racial hatred'. [25] Considering the factors mentioned there is need of International body of regulators having intercontinental jurisdiction for such to redress private and national complains in context of objectionable material present on internet.

HOW PREPARED INDIA IS TO TACKLE THIS MENACE?

There have been instances in India where young people are getting radicalized through internet sources and this event is not only evident in people who are technically aware but also there are people who were having basic knowledge of use of internet. Shutting down of internet for some time is the best method used by security agencies for the past few years but it is proving to be counterproductive as it affects the other activities like banking, education, communication etc., so this method typically targets all and affects all adversely.

One main problem is the location of search engines due to which tracking of source is very difficult and security agencies have to depend upon Internet Service Provider (ISP) or the source country where servers are located. The most challenging problem has been posed by use of WhatsApp which used end to end encryption where the chats and other material exchanged among individual is difficult to track and decipher, although after incidents of lynching where the main provocation was spread through this media only Indian government has successfully persuaded to modify the appliance to restrict the number of options for forwarding of messages but the service provider is still not ready to compromise on encryption issue. There is no more problem of tracking of source of messages and photographs sent through WhatsApp for reason that every time any message is forwarded it changes the digital characteristics. So apart from YouTube these appliances which are freely available on internet with strong encryption features are facing stiff challenges to security forces.

India does have some good research and academic institutions like Gujarat Forensic Science University and National Institute of Criminology and Forensic Science where practitioners and researchers are there who are constantly working on such kind of issues but what is expected from such exemplary institutions is collaborate with international institutions of updating and advancement of digital forensics. The knowledge from such institutions is to be disseminated further to the level of district police.

There have been isolated cases of de-radicalization programmes that are being

run by police officers at some jails but these kind of programmes need to be expanded horizontally in society also by taking help of NGOs, counselors, academic institutions etc,. India still has to learn from best practices of de-radicalization programmes that are being run in countries like Germany and some South-East Asian countries. It is also important that there has been some kind of social taboo has also attached with de-radicalization programme which needs to be reformed and parents of such targeted young people may be motivated to send their wards voluntarily for such programmes.

CONCLUSION

Any effective strategic effort to counter the online radicalization where the production, launch and reception of such kind of material is made more difficult technically and psychologically less convincing, which includes the following process to be followed;

The production of such online material to be made more difficult, the prosecution of those who are involved to be made more effective by international cooperation and creation of such international investigative organizations having transnational jurisdiction.

Framing code of conduct for Internet Service Providers corporations and devising software for their servers which can block the identified programmes responsible for online radicalization.

The counter narratives are to be made more appealing, like discussed earlier in the paper the counter narratives may be made to get uploaded whenever any website for radicalization is searched also the counter narratives are to be authored and produced by empirical evidence of persons like theologians, radicals and extremists themselves.

Empowering the users plays a very important role in de-radicalization, in today's world socially connected through internet can be termed as 'internet social and academic community' in which the content audit, deletion and corrections is done by either ISP corporations or web site managers. Like the example of Wikipedia, "Nowhere is this more obvious than in the case of Wikipedia, the online encyclopedia, whose 12 million entries have all been written by volunteers from across the world and can be edited by any registered user. Wikipedia has been criticized for inconsistencies and for being susceptible to acts of online vandalism, though academic studies have shown that such aberrations are usually corrected within minutes". [26]

Indeed, the power of the user-driven model lies precisely in its ability to detect anomalies, self-correct and, over time, build collective institutional memory.[27] In addition to it the reporting mechanism to the service provider and the prompt action therewith in identification of objectionable content and the accountability identification can help the internet communities for bringing down the radical content online. "Most file-sharing and social networking sites have internal reporting mechanisms which allow community members to flag offensive or potentially illegal content as well as material which contravenes the sites' own community guidelines". [28] also the , " Code of Practice adopted by the Internet Services Providers Association (ISPA) addresses issues such as

legality and decency – including the hosting of 'material inciting violence, cruelty or racial hatred". [29] But with these provisions strong international mutually agreeable legal framework is required for cyber domain.

The internet transcends the national and geographical boundaries and the online radicalization content are now meant for transnational communities, in addition to technical solutions like censorship, blocking and surveillance we require international regulatory body for policing and prosecuting the offenders. The international organizations like United Nations, and Non-Governmental Organizations and foundations should also be involved in keeping a check on contents available on the internet to check spread of radicalization.

ABSTRACT

Representation of photograph tells the story behind the mysterious layers of crime scene. Forensic photography is the most imperative feature of any crime scene investigation as it encloses the power to secure the crime scene in the form of pixels. This could help the prosecution and defense to refresh and reinvestigate the crime scene over and over again.

Forensic photography is the amalgamation of both science and art. The prospective of depiction of crime scene and the technology which could visualize latent evidence secures a very important place in crime scene investigation. The advancements in image editing software's and digital photography have explored various applications in the field of forensic sciences.

The use of UV, IR and oblique lighting in the questioned document examination had been described in many studies. The development of latent pattern with non-destructive photographic methods using excitation filters has given a new dimension to latent evidence development science. Moreover, different types of image processing softwares and instruments can help in better understanding of the crime scene. Therefore, recognition and knowledge of recent advancements in the field of forensic photography is the need of the hour. The present review has been conducted to explain technical aspects utilized to capture multivariate attributes present at the scene of crime.

Keywords: Forensic science, Crime scene photography, Forensic Photography, Crime scene investigation, Criminalistics.

Introduction: Crime rate is increasing day by day, as a result new methodologies and techniques of investigation are also developing to exonerate the innocent and to provide justice to the victim. Modern Forensic photography for the very first time was reported in 1851 in Belgium and had been further utilized to secure crime scene permanently since 1870s. In 1859, united state supreme court gave ruling for the very first time to use photograph for forensic purposes and the images will be admissible

Author's Intro:

in court trials. Afterwards, the advancements in the technology has given more power to photography as forensic tool to secure and stretch its wings in the science of criminal identification as well [1] Smith in 1970 said the photographer is expected to produce "something which will convey to the eye of the viewer an accurate reproduction of the scene as it would appear if the viewer actually saw the scene" [2]. By using modern technology, the investigator could attain photographs by means of different range of wavelengths that are in general obscured from normal human vision. These have been used to reproduce arson, accidental crime scene with the help of lens [3]. The use of Alternative light sources, Ultraviolet, Visible and Infrared light source photography for the examination, processing of latent fingerprinting, detection of seminal stains, bloodstains, wound detection, and bite mark analysis had provided new vision to forensic scientist with non-destructive technology[4,5]. The present review highlights the use of necessary equipment used to archive a crime scene and the advancements in the field to produce high definition evidence photographs. The following table represents the items required in a photography kit to study a crime scene:

ITEMS	USE
Camera	35mm digital camera with ten megapixel image sensor for crime scene & evidence photography.
Wide angle lens	28 mm wide angle lens for 35 mm camera . For photographing in space -constricted areas such as in small rooms.
Normal lens	50 mm lens for 35mm camera for most of the photographs.
Close-up accessories	For photography of small items. It includes 1:1 adapters, extension tubes, close-up filters.
Tripod	Used in still & motion photography to prevent camera movement & gives stability.
Filters	For photographing through glass & water. Color filters for photographing with black & white film.
Electronic flash	For lightning evidence & for indoor, outdoor photography at night.
Scale & tape measure	6 to 36 inches scales for photographing of various evidence. Long tape measures for large items.
ABFO#2 scale	For photography of injuries.
Angle finder	For positioning of camera.
Color charts	In injury photography.
18% gray card	As an aid for getting accurate exposures.
Flash light	Helps to see in dark areas.
Photo log , notebook & pen	For recording information of the photographs taken on a crime scene.
Film speed (ISO)	Medium speed film is mostly used i.e. 400 ISO.
Devices for positioning evidence and Scales	Blocks of woods, clamps for positioning evidence 7 in close-up photography.

Techniques used in Forensic Photography

1. **Alternate light sources (ALS):** Photography ALS involves lasers, blue or green lights and colored filters that detect processed latent fingerprints

or other hidden and unnoticeable evidence. In forensic investigation, there is an enormous growth in the use of alternate light imaging for both locating and photographing the latent evidence. Serological fluids such as blood, semen, saliva, different types of ink that used to counterfeit documents, bruises or other pattern injuries left on the human body throughout the crime scene could be detected without difficulty with the help of utilization of ALS. A tunable multi wavelength emitter is used to emit a specific wavelength of light. The light of specific wavelength selected should be able to result in peak fluorescence of the background of the image to be captured whereas the suitable filters are placed in front of the lens to filter the light emitted, so that the area of focus will be enhanced by emission of lower frequency of light. ALS light sources are used in the analysis and identification of bite marks, fingerprints, serological fluids and identification of white restorative materials such as composites [4]

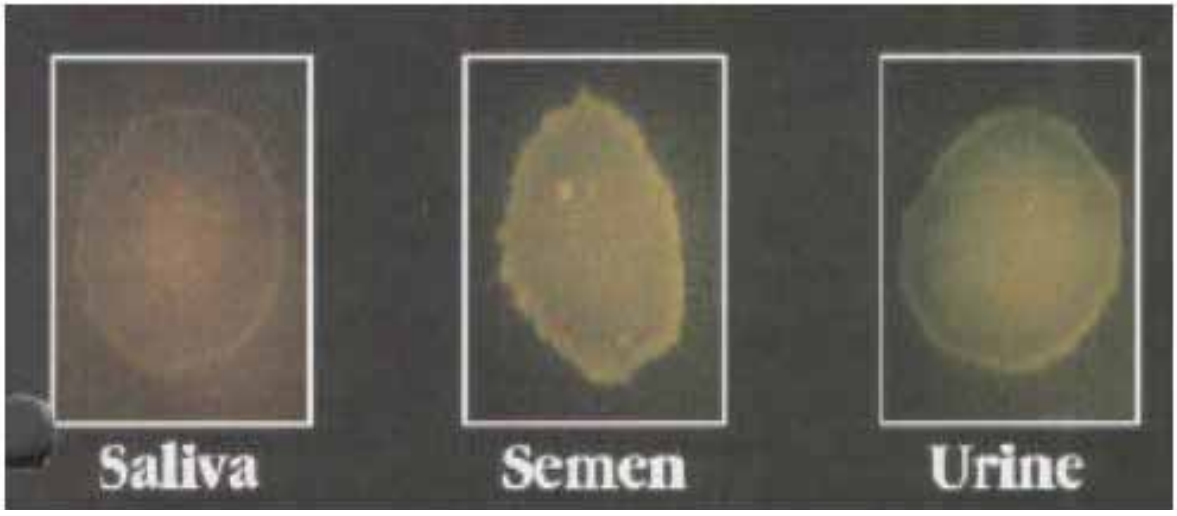

Fig 1 showing latent biological fluids visualized with the help of alternate light sources. After non-destructive visualization, the evidence can be collected from forensic science laboratories for further analysis. Image is cited from https://dps.mn.gov/divisions/bca/bca-divisions/forensic-science/Pages/forensic-programs-crime-scene-alt-light.aspx

2. **Oblique light technique:** This technique utilizes one or more lights that are positioned at different angles. If there is only use of one light then a white or silver reflector can be placed on the opposite side of the evidence in order to reflect some of the light back toward the evidence. It helps in reducing the shadows. The main objective of oblique lighting is to clearly demonstrate the 3 dimensional features of the evidence with high contrast to showcase relevant depth[6]

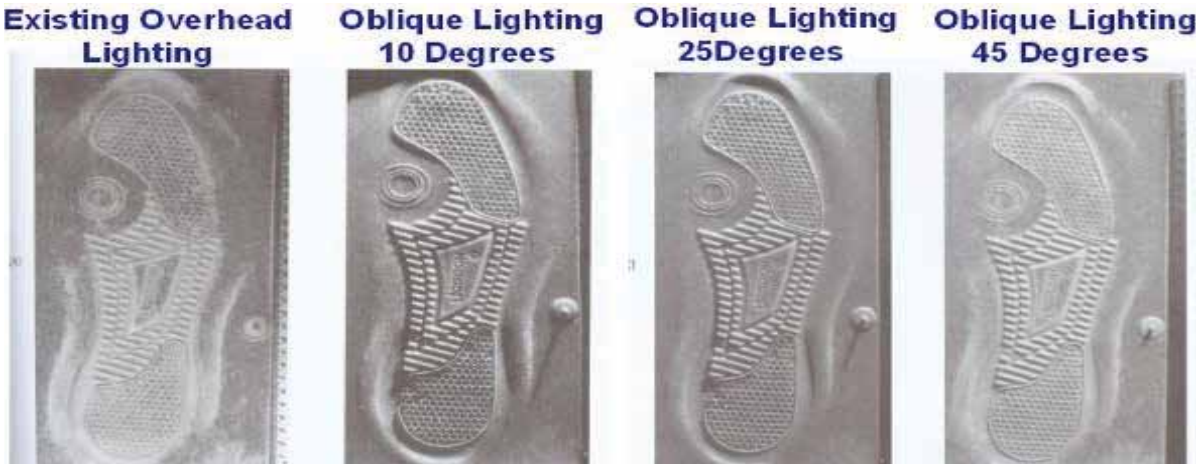

Fig 2 showing the contrast of footprint evidence photographed using oblique light technique overhead, 10°, 25° and 45° angles. Image is cited from https://tinyurl.com/sl5hv35

3. **Diffused lighting:** Diffused lighting is generally used for photographing evidence with shiny or reflective surfaces. In diffused lighting, an opaque material is placed between the light source and the subject to soften the light. It results in even lighting with reduced reflections and hot spots. The opaque material used can be as simple as a section of a white bed sheet or an empty water bottle, or it can be a commercial device which is designed for laboratory photography[7]

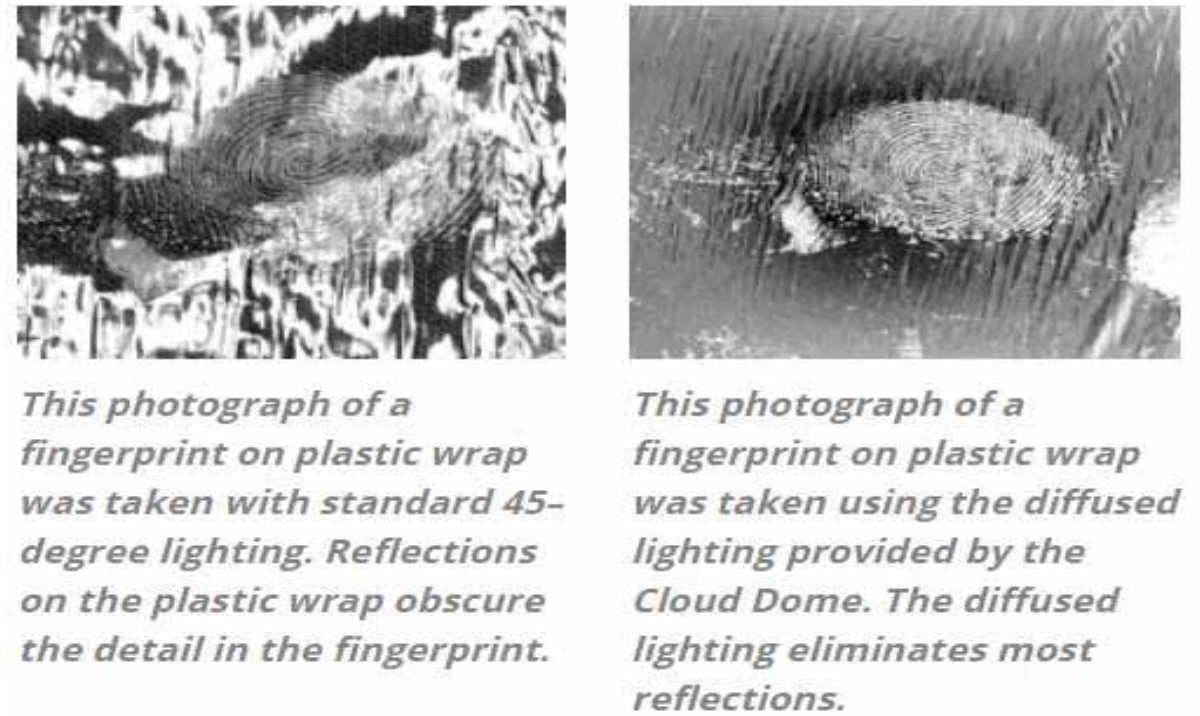

Fig 3 showing diffused light photography in comparison to oblique light photography. The diffused light photography (right) was able to procure the details better as compared to oblique lighting (left). Image cited from https://www.crime-scene-investigator.net/closeup.html

4. **Ultraviolet photography** is used to capture fingerprints and body fluids such as blood, semen, sweat etc on multicolored surfaces. The ultraviolet photography is usually carried out in three regions i.e UVA (315-400), UVB (280-315) and UVC (100-280). There are some materials that absorb ultraviolet, while others reflect these radiations. A source of ultraviolet is directed at the subject which then reflects this radiation back into the camera. With this technique, it is important to fit an ultraviolet transmission filter over the lens to prevent any visible radiation from impinging on the standard black-and-white film. In this, a filter is used that absorbs all visible light but allows to pass ultraviolet light [4].

5. **Infrared photography** is used to reveal the contents of documents such as charred documents, obliterated writings and biological evidence could be captured more effectively with IR photography. This photography is also beneficial to detect health problems like breast tumors, acute abdomen, early diagnosis of severity of burns etc. Photography of gunshot residues on clothing is also done by IR [14, 15]. For, Infrared photography, infrared light is used for image sensors or film. The image sensor is sensitive to infrared light. In infrared photography, wavelength ranges from about 700 nm to about 900 nm. Infrared photography is used to take the photographs of evidence that are invisible to the naked eye. The infrared is longer therefore, it penetrates up to 3 mm below the surface of the skin. Infrared (IR) Light Sources involves Flash Units, Tungsten Lamps, Quartz-halogen lamps[8]

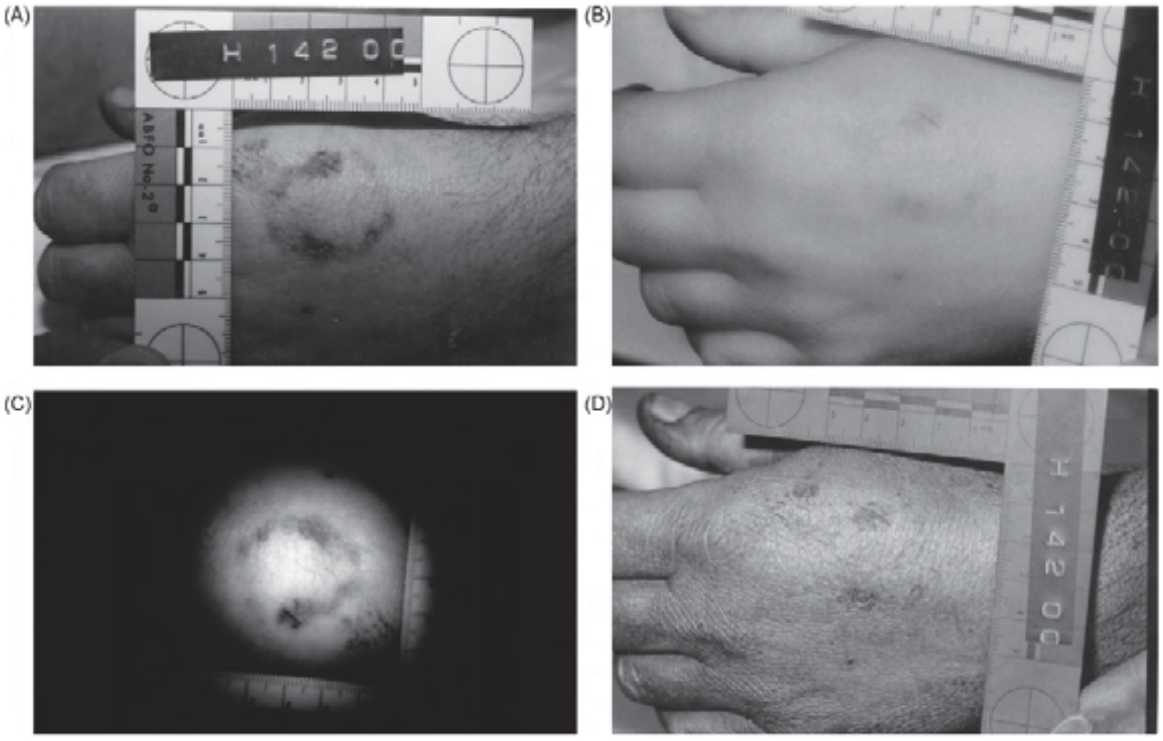

Fig 4 showing (A) Black and White image of bite mark (B) Infrared light photography of same bite mark (c) All images of the same bite mark (D) Uv photograph of bite mark[16]

RECENT ADVANCEMENTS IN FORENSIC PHOTOGRAPHY

The technical names given to drones are unmanned aerial vehicles (UAV), unmanned aerial systemM̂ (UAS), remotely piloted vehicle (RPV), etc. They are developed in a wide variety of size, shape and functions. They are radio controlled planes or multi-rotor copters. Their programming may be managed either by remote or control systems from the ground. A drone is a sophisticated and an advanced tool in the field of robotics, aeronautics and electronics. The technical names given to drones are unmanned aerial vehicles (UAV), unmanned aerial system (UAS).

1. **DRONES:** In drones, LIDAR (Light Illumination Detection and Ranging) technology is embedded which could be utilized to digitally map the whole crime scene by emitting highly coherent laser light that hits the surface of evidence and crime scene. The programming of drones can be managed either by remote or control systems from the ground. Investigator has to face so many problems while doing the crime scene investigation due to the complicated nature of crime scene such as crime scene on hilly areas, secondary crime scenes & evidence may be on lower hilly areas. So, in such cases, drones are used for doing photography. The technical names of drone are unmanned aerial vehicles (UAV), unmanned aerial systems (UAS), remotely piloted vehicles (RPV) etc. Evidence are photographed without disturbance such as in lakes, mountains, ponds, slopes etc. It can be flown to a considerable height in rural areas, forest region or over the water bodies. The programming of drones can be managed either by remotes or by the control systems from the ground[9].

2. **CAD** programme could be useful for forensic scientists in the crime scene documentation to produce 2-D drawings of crime scene to scale sketching in digital format. CAD can help to reconstruct path of bullets and can also be used to construct a 3D-image of an object [10].

3. **Amped software**: This software is used for the analysis, enhancement and the authentication of images and video for forensic security, investigative and military applications. The application is used for the purpose of authentication and detection of any kind of alteration. It basically helps in examining whether the image is unaltered or in an altered stage. Depending upon the state, whether the photograph can be used in court of law or not [11].

4. **Forensically:** is a kind of magnifying glass that involves the free set of tools for digital image forensics. It is useful to see the hidden information and details. It involves clone detector that detects whether manipulation has been done with the photograph, the picture or not. It detects and highlights copied regions within an image, noise analysis that included the utilization of a super simple separable median filter to separate the noise. It is beneficial to examine certain types of manipulations for example airbrushing, deformation, warping and perspective corrected cloning[12].

5. **JPEG Snoop** is a window application which is utilized to examine the source of an image to check its authenticity. It examines and decodes the internal particulars of JPEG and photoshop files. A digital photo contains some hidden information and JPEG Snoop used to expose those details[13].

6. **Ghiro** is a software used for digital photo and image forensics .The forensic analysis is a fully automated, report data that can be searched in different perspective. It involves an error level analysis that is to detect an image if edited or not[14].

7. **Izitru**- It is basic photo forensic software that gives out true or false answer. It verifies the digital photo authenticity. Whenever an image is uploaded to izitru, standard tests determine whether it is an unmodified original from a digital camera[14].

8. **Fotoforensics** tool utilizes an error level analysis to identify areas of different compression level within an image. It performs the evaluation process. It helps to understand whether the picture has been edited or not. It highlights the artifacts and details that may not be able to identify by human eye[14].

9. **Adobe Photoshop:** The software can be used as work station to analyze fingerprints in juxtaposition for easy comparison without manual loops. Various tools available in the software can help in counting, measuring distances and forming presentable evidence for court room trials [15].

CONCLUSIONS:

The primary standard of crime scene recording is to give visual and permanent record of an accident or crime scene. Forensic photography helps to know the bit and pieces of a scene of crime with exact measurement of sites and evidence. In Forensic photography helps to link the suspect with the scene of crime by analyzing the captured images of evidence and it aids in demonstrating the corpus delicti and modus operandi in certain cases. Forensic photography helps to establish the whole story of any case and to exonerate the innocent. Utilization of forensic photography to its full potential while maintaining a chain of custody can help Indian judiciary system to understand and resolve cases rapidly and more accurately.

Public Interest Litigation and Social Change in Society - An Overview

The Indian Police Journal
@BPRD, MHA
BPRD Publication
www.bprd.gov.in

Dr. Inderpreet Kaur*

ABSTRACT

Public Interest Litigation is the need of the hour and a weapon in the hands of public to protect their rights whether fundamental or human. And through PIL, courts can also improve their image because everyone is reluctant to approach courts due to its lengthy procedure according to a famous saying that ' Justice delayed is justice denied and justice hurried is justice buried.' So it is a benevolent piece of justice but it should be used in right perspective only because some persons abuse it for achieving their own missions under the veil of social purpose.

KEYWORDS

Public Interest Litigation, Constitution, Writs, Legal rights, Fundamental rights, administration, Habeas Corpus, Mandamus, Quo-Warranto, Certiorari, Prohibition, Judicial system, Social change, Society.

PRELUDE-

Public interest litigation broadly defined as 'Litigation for the protection of public interest'. Its unambiguous purpose is to pull apart the suffering of all those who have borne the brunt of insensible dealing at the hands of follow human being. Eloquence in public life is a fair judicial action is the right answer to check increasing risk of infringement of legal rights. It develops a new jurisprudence of the responsibility of the state for Constitutional and legal violations adversely upsetting the interest of the weaker elements in society. The courts in India, in a series of creative steps, responded to the clarion call for justice to be done. They relied on the wide power in the constitution and other sources such as the Directive principles, in India to develop a proper method to advance and protect fundamental rights and use this power to promote a public interest litigation system to fulfil the constitutional promise of social and economic orders based on equality. Energetic and intellectual members of the judiciary exercised their insight into rebalancing the distribution of legal resources, increase access to justice for the disadvantaged and permeate formal legal guarantees with a substantive and positive content. This trend shows austere difference between the

traditional justice delivery system and the modern informal justice system where the judiciary is performing administrative judicial role[1].

The marvellous efforts of justice P.N Bagwati and Justice V.R. Krishna Iyer were instrumental in justice revolution of the eighties as a result any citizen of India or any consumer groups or social action groups can approach the apex court of the country for seeking legal remedies in all cases where the interests of general public or a section of public are at stake. Public interest cases could be filed without the investment of heavy court fees as required in private civil litigation.

The charter in its preamble has solemnly resolved to secure to all of us social justice and in its Article 38 has commanded the state to service to promote the welfare of the people by securing and protecting a social order in which social justice reform all institutions of our national life. The main and only focus of such litigation is only 'Public Interest'.[2] Public interest litigation can be filed when the following conditions are fulfilled there must be a public injury and public wrongful act or omission of the state or public authority.[3]

MEANING OF PIL

The term Public Interest litigation is made from two words Public Interest and litigation the word Public Interest an expression which indicates something in which the general public or the community at large has some pecuniary interest or some interest by which their legal rights or liabilities are affected. The world litigation on the other hand means a legal action including all legal proceedings initiated in a court of law with the purpose of enforcing a right or seeking a remedy'.4 'Public interest' means an act beneficial to public in general. It connotes action necessarily taken for public interest.5

Simply, Public Interest litigation means any public spirited citizen can approach the court under Article 32 of the constitution or the High court under Article 226 of the Constitution or before the court of magistrate under Section 133 of the code of criminal procedure 1973.[6] Public Interest law does not define a body of law or a legal field the term was adopted to define whom the public Interest lawyers were expressive rather than what matters they would work on. A significant current in public interest lawering has always emphasized the need to provide legal services to those living in poverty. A large community of lawyers practices public interest law in the form of providing legal assistance free of charge to those who cannot afford to pay for it.[7] As per Ramanatha Iyer's, Law Lexicon *pro bono* is defined as litigation for the public good for the benefit of the community as a whole. (*Pro bono* public) constitutes a significant place in dispensation of justice in the present judicial system.[8]

Public Interest Litigation has been playing a vital role in safeguarding the rights of

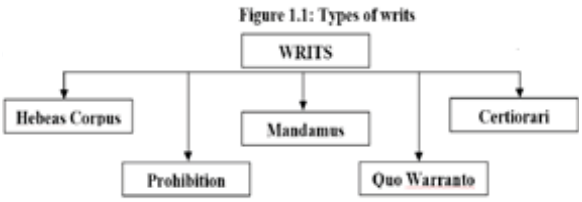
a common man, especially women and children. The other matters relating to PIL are normally against pollution, disturbance of ecological balance, drugs, abuse of food adulteration act, against maintenance of heritage and safeguarding culture, forest and wild life and other matters of public importance. Public Interest Litigation is an important mechanism of social variation. It is working for the welfare of the needy living in society. In the traditional adversarial system, the poor, indigent or illiterate person could not enforce the rights given to them by law because of poverty or ignorance nor could they afford to move the court particularly against the living in society rich, mighty or resourceful adversaries. It was so because prior to the herald of PIL in India during 1980 only the aggrieved party could move the court and seek redress for his grievance. In other words, any other person not personally affected could not knock the doors of justice excepting the victim or the aggrieved party himself because only the affected party had the *Locus standi* and persons not affected had no *Locus standi* to do so.[9]



TREATING LETTER AS A WRIT PETITION

In the early stages of liberalization of *locus standi* the court often has said that the procedure being a handmaiden of justice cannot stand in the way of access to justice to the weaker sections of society. Court would not insist on a regular Writ petition. The letter has been converted into Writ petitions on the logic that Article 32(1) of the constitution does not say as to 'Who' shall have the right to move the Supreme Court nor does it say by 'What' proceedings. The word 'appropriate proceedings is too wide and so moving the court through a letter can be an appropriate proceeding because it would not be right to except a person substitute *pro bono publico* to acquire expenses for having a regular writ petition arranged by a lawyer. It has to be appropriate not in terms of any particular form, but appropriate with reference to the purpose of the proceeding.[10] In ***Sunil Batra vs. Delhi Administration,***[11] The court accepted a letter written to the court by Sunil Batra, a prisoner from Tihar jail, Delhi complaining of inhuman treatment meted out to fellow prisoners. Court treated the writ petition, allowed the petition and issued directions to the authorities concerned.

There are mainly five types of writs.[12]

- Habeas Corpus.
- Mandamus.
- Quo-Warranto.
- Certiorari.
- Prohibition.

Figure 1.1: Types of writs

Summary- Above figure 1.1 shows the five types of writs. The writ jurisdiction of the Supreme Court and High Court under Articles 32 and 226 respectively has played an important role in development of Public Interest Litigation in India. The writ jurisdiction of higher courts is invariable

9 Supra note 4.

invoked requesting the court to issue necessary orders directing the executive or the Legislative authorities to desist from continuing its unconstitutional act or perform its Constitutional obligation which it has omitted or neglected to do.

1. **Habeas Corpus–** literally means "you may have the body". The writ is issued in the form of an order issued by the High Court calling upon a person, by whom another person is detained, to bring the detenu earlier the court and to let the court know by what ability he has detained that person. The object of the writ is to give a quick and immediate remedy to a person for his release from an unlawful detention. In ***Kanu Sanyal* vs. *District Magistrate, Darjeeling,***[13] the court ruled that in writ of habeas corpus under Article 32, the production of the body of the detenue before the court was not compulsory for hearing besides disposing of the writ petition by the court.

   The General rule is that an application for the writ of habeas corpus can be made by a person who is legally detained. However, a friend or a relative or an advocate of the detenue may also file an application for Habeas corpus.

2. **Mandamus**– The term mandamus means "the order". The writ of mandamus is thus a command issued by the court, asking a public authority, to perform a public duty belonging to its office. It is an order issued by a court commanding a public authority to do some particular act which appertains to its office and is in the nature of a public duty. In the case S.M. Borkar vs. State of Karnataka,14 Mandamus is issued only when a legal duty is imposed on a public authority in the performance of which the petitioner has a legal right. The writ cannot be issued just like that. The petitioner must have a judicially enforceable right as well as legally protected right. In Union of India vs. Kishan K. Sharma,15 the Apex Court ruled the High Court could not issue a writ of mandamus directing the central Government to grant a scale of pay in favour of the respondents.

3. **Quo warranto–** means "What is your authority" or "Warrant your authority". The writ of Quo warranto is issued against the holder of a public office calling upon him to show with what authority he holds that office. The writ is issued to oust a person from an office to which he is not entitled. It is issued against the usurper of an office. The object to confer jurisdiction upon the judiciary to control the executive action in making the appointment to public offices and also to protect the public from usurpers of public offices. In ***J.D. Karkare* vs. *T.L. Shavade,***[16] the court issued the writ of Quo Warranto against the Advocate General of the State, who was found not qualified to hold that office. In ***P.L. Lakhanpal* vs. *Justice A.N. Ray,***[17] the petitioner challenge the appointment of Justice A.N. Ray, who was junior to three judges of the Supreme Court, as the Chief Justice of India. Earlier, the court could decide the writ, the persons senior to him had resigned from office; as a result, the respondent became the senior most judge of the Supreme Court. The writ was refused as it had become futile.

4. **Prohibition–** The term prohibition means "to prohibit". The writ is issued primarily

to prevent an inferior court or tribunal from exceeding its jurisdiction or acting contrary to the rules of natural justice, and to keep them, within the limits of their jurisdiction. The writ commands the court or tribunals to whom it is issued to refrain from doing something which it is about to do, which is not within its jurisdiction or power. The writ of prohibition is a jurisdictional writ and is issued in both cases, i.e., where there are excess of jurisdiction and where there is want of jurisdiction. In the case ***Sewpujanrai I. Ltd.*** **vs.** ***Collector of Customs,***[18] it might happen that the proceedings of an inferior court to tribunal are partly within and without jurisdiction. In that case, prohibition will lie against doing what is an excess of jurisdiction.

5. **Certiorari–** means "to certify" The writ of certiorari is an order issued to an inferior court or tribunal to transmit to it the record of proceedings pending with them for scrutiny and it is necessary, for quashing the same. The writ of certiorari may be issued whenever anybody of persons having legal authority to determine question affecting the right of subjects, acts in excess of their authority. In ***State of Bihar*** **vs.** ***Ganguly,***[19] the writ of Certiorari lies against Judicial or quasi-judicial authorities. It is issued only if the act done by the inferior body or authority is a "judicial" act which term includes the concept of "quasi-judicial" act.

SOCIAL ISSUES AND PUBLIC INTEREST LITIGATION

There are some social issues in society. Some issues are major problems in society. These problems are protected through the PIL.

1 Child Labour and PIL
2 Environment and PIL
3 Corruption and PIL
4 Public health and PIL

PIL MUST PROMOTE GOOD FAITH AND MAINTENANCE OF SOCIAL BALANCE

So the courts must do justice by promoting good faith, and stop law from crafty invasions. Courts must sustain the social stability by prying where obligatory for the sake of justice and reject to restrict where it is beside the social interest and public good.[20] The PIL proceedings of superior courts not only assure enforcement of fundamental rights of the citizens but also make sure that the government and its officials or authorities discharge their constitutional functions. The non-governmental organizations and social activists, through PIL petitions bring to the notice of the court the matters which are of vital public importance with a view to ensuring socio-economic justice to all sections of society irrespective of their social or economic status thereby re-affirming people's faith in the rule of law.[21]

IMPORTANCE OF PIL IN A WELFARE STATE

India being a welfare state, there are several provisions in the Constitution which have led to the origin and development of the concept of public interest action in India. The preamble of the Constitution seeks to secure all its citizens to socio-economic justice, liberty of thought, expression, belief, faith and worship; fraternity and dignity of the individual and unity and integrity of the nation. Article 38[22] of the Constitution directs the states to

18 AIR 1958 SC 845.

19 AIR 1958 SC 1018.

20 Ibid.

21 Ibid.

22 State to secure a social order for the promotion of welfare of the people (1) The State shall strive to promote the welfare of the people by securing and protecting as effectively as it may a social order in which justice, social, economic and political, shall inform all the institutions of the national life. (2) The State shall, in particular, strive to minimize the inequalities in income, and endeavour to eliminate inequalities in status, facilities and

ensure every citizen socio-economic and political justice. Similarly Article 39[23] provides for distributive justice so that citizens may enjoy their natural rights and live with dignity. Article 39-A[24] further directs the state to provide free legal aid to poor and indigent persons so that they are not deprived of their right to seek justice through a court of law. Public Interest Litigation cover approaches a novel command of human rights by giving a broader elucidation to the right to equality, life and personal liberty guaranteed under part III[25]of the Indian Constitution[26].

Some of the human rights developed as a result of public interest litigation are; Right to education, Right to live with dignity, Right to clean environment, Right to free legal aid and speedy trial, protection against sexual harassment at work place etc. Public interest litigation has announced new categories of remedies or reliefs under Writ jurisdiction such as Interim compensation to the victim. Public interest litigation also purposes as a device for social change in a developing country like India PIL functions as an effective device for the social welfare.[27]

DYNAMIC APPROACH- PIL

The Traditional rule of *locus standi* that a petition under Article 32[28] can only be filed by a person whose fundamental right is infringed has now been considerably relaxed by the Supreme Court in its recent rulings. The Court now permits Public Interest Litigations or Social Interest Litigations at the instance of 'Public Spirited Citizens' for the enforcement of Constitutional and other legal rights of any person who because of their poverty or socially or economically disadvantaged position are unable to approach the Court itself.[29]

SOCIAL CHANGE AND PUBLIC INTEREST LITIGATION

Professor Upendra Baxi, former Vice-Chancellor of Delhi University and a well-known legal academician as also a social activist prefers to call 'public interest litigation' as 'social action litigation' because these cases are generally brought to the notice of the court by social activists or organizations who are working for the welfare of society. It must be stated that public interest litigation involves cases relating to welfare of the poor and marginalized sections of society by protecting social, legal and Constitutional rights and interests. Thus the Public Interest Litigation has played an important role in bringing courts nearer to the people and therefore, earned sufficient validity and credibility over the years. The decisions of the courts in PIL cases have been highly praised by one and all being in the interest of the public welfare and socio-economic development of the nation. For example, the dispute between the state of Tamil Nadu and Karnataka over the Cauvery river water was

opportunities, not only amongst individuals but also amongst groups of people residing in different areas or engaged in different vocations.

23 Article 39 of Constitutional law provides. Certain principles of policy to be followed by the State: The State shall, in particular, direct its policy towards securing; (a) that the citizens, men and women equally, have the right to an adequate means to livelihood; (b) that the ownership and control of the material resources of the community are so distributed as best to subserve the common good; (c) that the operation of the economic system does not result in the concentration of wealth and means of production to the common detriment; (d) that there is equal pay for equal work for both men and women; (e) that the health and strength of workers, men and women, and the tender age of children are not abused and that citizens are not forced by economic necessity to enter avocations unsuited to their age or strength; (f) that children are given opportunities and facilities to develop in a healthy manner and in conditions of freedom and dignity and that childhood and youth are protected against exploitation and against moral and material abandonment.

24 39A. Equal justice and free legal aid-The State shall secure that the operation of the legal system promotes justice, on a basis of equal opportunity, and shall, in particular, provide free legal aid, by suitable legislation or schemes or in any other way, to ensure that opportunities for securing justice are not denied to any citizen by reason of economic or other disabilities.

25 Part III of the Costitution contains long list of fundamental rights.

settled by Public Interest Litigation wherein the mighty and powerful chief Minister of the state of Tamil Nadu Miss Jai Lalitha had to ask the court for an unconditional pardon for raising this prolonged dispute with the neighbouring state of Karnataka.[30]

Social change is the necessity of any society. In India it is complete through Public Interest Litigation. The Jurisprudence of PIL is essential to appreciate the nature of PIL in India. PIL is working as an Instrument of social change. It is working for the safety of each unit of society. It's the sword of every one used only for seeking justice. The modernisation of this legitimate gadget proved beneficial for the developing country like India. PIL has been used as an approach to combating the atrocities prevailing in society.[31] PIL puts emphasis on law as influential and purposive– a site and vehicle for assessing and matching official prerogatives and limits to state policy. The idea of the rule of law/ legal system as an agent of social change and development is contested terrain.[32] The rule of law to the extent that it guarantees human freedoms, has an intrinsic valve independent of its effect on various other measures of development. By interpreting parts III[33] and IV[34] of the constitution together it has created a normative foundation for establishing a linkage between law and social change.

The court has also evolved new remedies to induce an affirmative action on the part of the state, better enforce constitutional or statutory guarantees that specifically promote developmental goals, and to set the direction for change and monitor its implementation.[35] The Court now permits Public Interest Litigations or Social Interest litigations at the instance of 'Public spirited citizens' for the enforcement of their poverty or socially or economically disadvantaged position are unable to approach the court for relief. Under the Indian scenario, this is an effective remedy available to an ordinary person, to seek redressal for the harm suffered. As an effect of this broad view of *locus standi* permitting Public Interest Litigation or social action Litigation.[36]

30 Ibid.

31 Available at: www.ngosIndia.com/article8/3/2015 (Last visited on 16/3/2018).

32 In one view, Ghai (1991) sees law as a dependent and not an independent variable, a reflection of underlying socio- economic realities and legal change is not viewed as a fruitful way of effectuating social change. In another view, Brenner (1990) argues that economic problems emanate from a weak tradition of law generally and the rule of law specifically and that the legal system should be accorded a high development priority. He assumes that the legal system can play a transformatory role, despite the pervasiveness of social/economic /cultural forces antithetical to such a role. An intermediate position is taken by Cooter (1994, 1995, 1996) states that developing countries should rely less on "top-down" statutory and regulatory law and more on judicial and statutory codification of selective existing social norms that are conducive to efficient forms of cooperation rather than appropriation. (Trebilcock, "What makes poor countries poor?". Tamanaha holds that modern law is necessary, though not sufficient for economic development. Legal reform was important because the world market system was gradually resulting in a global homogenization of commercial laws. To partake in this system required a minimum infrastructure of the laws and institutions necessary to enforce them. He also feels that the quality of life of developing countries will improve if they develop their own variant of the minimum content of the rule of law– such as ensuring that the government acts according to the rules produced in the political arena and respects the civil rights of citizens, and that there is a judicial body to resort to that embodies the ethic of treating all cases before it neutrally and fairly. (Brian Tamanaha, "The lessons of law and development Studies") Carothers finds that rather than mere enactment of laws, considerable investment in changing the conditions for implementation and enforcement of laws and government compliance with laws are necessary. (Thomas Carothers, "The rule of law revival"). Trebilcock concludes that incremental reform in the interstices of institutional structures/subsystems of developing countries is likely to be more effective than promoting changes in entire regime types. He asserts along with Tamanaha and Carothers, that a minimalist, procedurally oriented rule of law is a necessary, albeit not sufficient, condition for a just legal system. He finds that there are important connections between legal institutional reform and political reform since the effectiveness of legal institutions are contingent upon the effectiveness of a number of other institutions. (Trebilcock, "What makes poor countries poor?").

Table 1.1: Changes under the society by writs pre-position through the PIL

S. no.	Name of cases	Citation	Pre-position	After position
1	Sunil Batra vs. Delhi Administration	AIR 1980 SC 1579	Inhuman treatment meted out to fellow prisoners	The court observed prisoners are persons not animal as such their fundamental right to do not cease to exist, however certain reasonable restrictions may be imposed on them. Court issued direction, allowed the petition and issued direction to the authorities concerned.
2	Bandhua Mukti Morcha vs. Union of India	AIR 1984 SC 802	Inhuman, intolerable, Miserable conditions of Labourers, unfortunately the workers who are emplaced as bonded labourers at as distant place deprive of their fundamental rights.	The Letter was written by a dedicated organization and was that the worker in the petition, Bandhua Mukti Morcha, is an organization dedicated to the cause of release bounded labourers. The petitioner conducted a survey of some of the quarries in Faridabad district near the city of Delhi. Proper implementation of Bonded Labour System (Abolition) Act, 1976
3	Vishakha vs. State of Rajasthan	AIR1997SC3011	Sexual harassment of women at workplaces. Gang rape of Social Worker in village of Rajasthan.	Guidelines issued by Supreme Court in all work places for the Preservation and enforcement of the right to gender equality of the working women.

S. no.	Name of cases	Citation	Pre-position	After position
4	M.C, Mehta vs. State of Tamil Nadu	AIR1997SC669	Child working in match factories	The Apex Court held that children cannot be employed in match factories. Article 39(f) of the Constitution provides that the state should direct its policy towards securing that children are given opportunities and facilities to develop in a health manner and in conditions of freedom and dignity and that childhood and youth are protected against exploitation and against moral and material abandonment. Article 45 meant to be subjected to free and compulsory education until they complete the age of 14 years.
5	Mukesh Advani vs. State of Madhya Pradesh	AIR1985 SC 1363	Children work in hazardous places like mines construction.	The Apex court held that children cannot be employed within the meaning of Child Labour Act 1986.
6	Sheela Barse vs. State of Maharashtra	AIR 1983 SC 1213	Custodial violence against women prisoners	`The court issue guidelines for the safety and security of women suspect or prisoners. The term life in Article 21 covers the living conditions of the prisoners prevailing in jails. The prisoners are also entitled to the benefit of the guarantees provided in the Article 21 subject to reasonable restriction.

S. no.	Name of cases	Citation	Pre-position	After position
7	M.C. Mehta vs. Union of India	AIR1988 SC 2963	IT Involved in violation of the right of the citizens to pollution free water and air for enjoyment of life.	The court observed that despite comprehensive law on prevention of water pollution and protection of environment. There are water pollution controls Act 1986 for the protection of environment. The Supreme Court ordered immediate closure of those tanneries of Jajamhow, near Kanpur which had filed to treat their dirty water before discharging it into the river of Ganga.
8	Hussainara Khatoon vs. State of Bihar	AIR1979 SC 1360	In this case, the attention of the court on the Incredible situation of undertrial in Bihar. The court expressed grave concern at the distressing conditions of under trials in jails of Bihar and observed that incarceration of under trials that had virtually spent their whole period of sentence was clearly illegal and a blatant violation of their fundamental right guaranteed under Article 21 of the Constitution.	The court not only proceeded to make the right to a speedy trial and passed the order of general release of close to 40,000 under-trials who had undergone detention beyond such maximum period. The court held that Speedy trial is a constitutional mandate and the state cannot avoid its constitutional obligation by pleading financial or administrative inability.

S. no.	Name of cases	Citation	Pre-position	After position
9	Parmanand Katara vs. Union of India	AIR1995SC2039	Newspaper report concerning the death of a scooterist after an accident with a speeding car	Supreme Court held that preservation of human life is a paramount importance. Every doctor at a government hospital or otherwise has the professional obligations to extend his/her services to protect life.
10	ADM vs. Shivekant Sukla	AIR 1976 SC	Fundamental right case	Supreme Court held that the right of citizens to move the court for violation of Article 14, 21 and 22 would remain suspended during Emergency.
11	Laksmi Pandey vs. Union of India	AIR 1984 2 SCC 244	Adoption of Indian children they were subject to harassment and abuse in that country	Supreme Court issued the directions to government and various social- service agencies dealing with the matter to follow these guidelines as it was their constitutional obligation under Article 15 (3) and Article 39 (c) and (f) to ensure the welfare of children who were being adopted by foreign parents in order to protect them against any possible exploitation.

S. no.	Name of cases	Citation	Pre-position	After position
12	Delhi Democratic Working Women Forum vs. Union of India	AIR 1995 1 SCC 14	Realising the psychology and mental torture of victims of Sexual exploitation	Supreme Court issue the guidelines. The court observed that the National Commission for women should frame scheme for compensation and rehabilitation in order to ensure justice to rape victims. Thereafter, the Union Government should implement the scheme drawn by the national commission for women.
13	D.K. Basu v. State of W.B.	AIR 1997 SC 610	PIL filed against custodial torture or inhuman treatment by the police.	Supreme Court issued the guidelines for preventing the custodial violence and not to deprive the prisoners of human rights.
14	People Union for Civil Liberties vs. Union of India	AIR 1997 SC 1203	Fake encounter by the police is violation of Article 21 of the Constitution	Court held state may be directed to pay compensation and the state shall not be allowed the plea of sovereign immunity
15	Indian Council for Environment Legal Action vs. Union of India	AIR 1999 SC 1502	Pollution case	Supreme court gave directions for the prevention of Industrial pollution
16	M.C. Mehta v. Union of India	AIR 1998 SC 2963	Vehicle pollution case	Supreme Court issued direction for checking vehicle pollution
17	Mohan Lal Sharma vs. State of UP	AIR 1989 2 SCC 609	Petitioner sent a letter to Supreme Court alleging that his son was murdered by the police in the lock-up and the police were trying to hush–up the case.	Supreme court treated this telegram as a writ petition and ordered a CBI Investigation in the case.

S. no.	Name of cases	Citation	Pre-position	After position
18	Sushila Gothala vs. State of Rajasthan	AIR 1995 RAJ.90	Child marriage case	The High court of Rajasthan held that there is no point in issuing fresh directions to government to prevent such marriages. The court noted that child marriage is a social evil. There is already existence of child marriage Restraint Act, 1929. There is need to implement properly.
19	Bharatlar Kumar vs. State of Odisha	AIR 1989 SC 1793	Case of sexual exploitation of a girl student	The court gave the suitable directions for rescue and rehabilitation of the prosecutes and children of fallen women
20	Gaurav Jain v. Union of India	AIR 1997 SC 3048	Case of women and children rights	The court issued directions for rescue and rehabilitation of 2 prosecutes and children of fallen women.

Source; Supreme Court cases

The table no. 1.1 exhibits the social change in society through PIL. This table is based on only 20 landmark case laws which are taken on a random basis. Further, it is divided into two major heads i.e. pre-position and post position of society after filing PIL. There are number of cases through which power of PIL can be noticed such as Bandhua Mukti Morcha, Sexual Harassment of women in the workplace, D. K. Basu Case, M.C. Mehta Case (related to pollution). In these cases, mostly the Supreme Court had issued the guidelines for the protection of human rights and had appealed for humane behaviour of them irrespective of their class whether they belong to labour class, women, prisoners, children etc.

SUGGESTIONS

Thus, the introduction of Public Interest Litigation in India in the late seventies was indeed a new technique, but later on the pit-falls and shortcomings of the PIL system came to be noticed. As everything has its pros and cons. The courts found that it was being misused by the so called social service organizations and publicity minded social workers. So it has some flaws but can be cured by following precautionary measures as 'Prevention is better than cure.' Some suggestions are as follows:

1. Need of Government Corporation check on filling of false and frivolous PIL Petitions.

2. There being no codified Law on Writ jurisdiction of Higher Courts, the field of PIL particular, has remained wholly unregulated.
3. To expand the sphere of old rights rather than creating new rights according to the need of social change.
4. Established NGOs to provide knowledge about fundamental rights.
5. To make stringent laws which prevent and punish the persons who wasted the courts by misusing these benevolent provisions.
6. To impose heavy fine on the person who files a frivolous PIL.

CONCLUSION

Thus, it may be stated that the PIL proceeding of superior courts not only give surety enforcement of fundamental rights of the citizens but also make sure that the government and its official or authorities release their constitutional functions properly. The non- government organisation and social activists, through PIL petitions bring to the notice of the court the matters which are of vital public importance with a view to ensuring socio-economic justice to all society irrespective of their social or economic status thereby re- affirming people's faith in the rule of Law. Social changes play a vital role in development of growth of Public Interest Litigation.

ABSTRACT

Worldwide the COVID-19 pandemic has posed a very serious challenge to humanity with the virus infecting and causing the death of millions across 215 countries and damaging the economy to inconceivable levels. In India, the virus has caused havoc as the number of infected and causality cases continue to increase with every passing day. A nationwide lockdown with strict preventive measures are imposed by the Indian government. Within this backdrop, the present study was planned to examine the efficacy of precautionary measures and psychological health related consequences on respondents who are confined in their dwelling environment during this emergency lockdown. Furthermore, how male and female respondents of different age groups, marital status, education level, employment status respond to the lockdown and what are its social and psychological health related consequences are also investigated. The data was retrieved from the questionnaire prepared using Google Forms. Of the total sample of 489 respondents, 196 males and 293 females located in 70 cities covering 19 states of India volunteered to participate in the survey. The data collected on these participants was subjected to descriptive and inferential statistical analyses. The results revealed that an overwhelmingly large percentage of respondents have understood and have strictly abided by the precautionary and preventive guidelines issued by the government. Most of the respondents have reported that they are facing problems during the lockdown while a sizeable percentage of respondents were moderately involved in various educational, social and household activities in their residential environment. Finally, approximately fifty percentage respondents reported that they have never and rarely experienced any psychological health problems. In contrast, twenty percentage respondents have often and very often reported psychological health related problems. Implication of the results with special reference to police personnel is highlighted.

Keywords: COVID-19, Pandemic, Lockdown, Quarantine, Preventive measures, Residential Activities, Psychological Health.

Introduction:

A pandemic is an epidemic overstretching its reach across nations and continents. The world has witnessed a number of pandemic cases such as smallpox and tuberculosis. Before COVID 19,the most devastating pandemic was the Black Death or Plague which killed an estimated 75–200 million people in the 14th century. Other notable

pandemics that appeared were Influenza (1918), H1N1 (2009) and HIV/AIDS. In the past, pandemics have adversely affected the physical and psychological health and caused death and causalities to a large number of people. However, for the first time in hundred years, humanity has witnessed a very strange and an invisible enemy; the novel COVID-19 (coronavirus) which got noticed at the end of 2019 from the sea food market of the Wuhan province of China (WHO, 2020). It is currently spreading at a fast pace around the world, eliminating hundreds and thousands of humans besides continuously threatening, the psychological well-being of millions. This highly contagious virus, which has the potential to cause severe respiratory disease, has quickly impacted governments and public health systems. The WHO declared COVID-19 as a pandemic in March 2020. Across the world different countries have initiated various measures to prevent the contagion and limit its outbreak.

To deal with the pandemic, a large number of health care, clinical, academic and social service institutions have opened online platforms to provide services for affected people. However, it seems very likely that both the physical and mental health of COVID-19 patients (including confirmed patients, patients with suspected infection, quarantined family members, and health care workers) has been adversely affected. From the social and psychological perspective, millions of lives across the world have been significantly altered. Professional counseling, positive health and well-being enhancing protective measures are needed to combat this ongoing crisis.

Visualizing this threat, the Government of India has adopted extraordinary measures to prevent its transmission and minimize casualties. Addressing the nation, Prime Minister Modi urged the citizens to initiate a disciplined fight against an invisible enemy by locking themselves inside their residential settings and abiding by social distancing norms. To start this comprehensive fight,the PM in his address asked all people across India to follow "Janta Curfew" on March 22 from 7 A.M to 9 P.M. Subsequently, on March 23, an unprecedented lockdown of 21 days was imposed. The PM stressed "Samyanam and Sankalp" or restraint and resolve to deal with this global crisis. Proactive measures like travel restrictions, community surveillance, contact tracing, social distancing, rapid clinical care and self- quarantine were planned and implemented. The central government, statutory bodies and subsequently the state governments have issued comprehensive advisories and emphasized the precautions to be taken like social distancing, washing hands at periodic intervals, wearing a mask while going out, sanitizing all items purchased and so forth to flatten the exponential growth curve of infection. To educate the masses, awareness campaigns were launched by the Ministry of Home, Health, Police departments, educational institutions, NGOs and all the public and private sector institutions which got comprehensive coverage by media.

This pandemic has posed a challenge globally. The WHO in its dashboard reported on May 11, 2020 that the virus had infected (confirmed cases) 4013728 people and caused the death of 2,78,993 in more than 215 countries. The real damage, both in terms

of loss of lives and economic loss, is expected to be much more than what is being observed at present (who.int/emergencies/disease/novel-Coronavirus-2019). In India, almost all states and Union territories have faced the brunt of the problem to varying degrees. On May 12, Indian COVID-19 dashboard had reported approximately 46008 confirmed cases of which approximately 22454 people have recovered and 2293 died. (mygov.in/Covid-19, 2020)

REVIEW OF LITERATURE:

The recent Lancet review, conducted by Brooks, Webster, Smith et.al (2020) based on the 24 most quoted studies, has broadly concluded negative psychological effects of quarantine. Some of the major adverse effects include post-traumatic stress symptoms, confusion and anger. Furthermore, a few common symptoms found in the people during quarantine include fear, sadness, numbness, insomnia, anger, depressive symptoms, low mood, irritability, emotional disturbance and exhaustion. Some other studies have reported that quarantine has contributed to the increase in feeling of loneliness, social isolation, alcohol and substance abuse, entrapment and relationship breakdown. (O'Connor & Kirtley, 2018)Psychological researches conducted during the outbreak of SARS indicated that quarantined individuals experienced immediate and short term psychological consequences (Hawryluck et. al. 2004). The result of one study reveals that social isolation was found to increase the feeling of isolation and depression. The study conducted by Hawryluck et al (2004) found that 29% of the people felt that other people avoided them after they had been in quarantine which indicates attachment of social stigma which further contributed to the increase in mental distress following quarantine.

A large number of empirical studies have unequivocally reported the negative effects of stress on health (Schwarzer, R., & Gutierrez-Dono, B, 2000). However, to reduce the adverse effects of stress on health, social support, coping strategies and perceived feeling of control are found to be helpful (Lazarus &Folkman, 1984). If people are provided some control to terminate the stressor, the adverse effects on psychological health are very likely to reduce. (Dalal, &Ray., 2005., Nagar, 2006). To reduce or overcome the adverse effects of stressors supportive relationship with friends, family and acquaintances is beneficial (Baron & Kerr, 2003) and has been linked to different aspects of health and wellness. Research has also shown the correlation between high social support and reduction in consequences of trauma induced disorders. The effect of social support has been linked to boosting the immune system which further decreases the stress experienced by people or reduce the amount of health risks involved (Uchino, et a;, 2012). The findings of relatively similar studies indicate that social support is connected to favorable health outcomes due to beneficial physiological effects produced by it and adhering to the possibility of better health behavior (Uchino,2009).

The COVID-19 pandemic has dramatically changed the way we live and is causing major interruptions and disruption in our routine life style. This interference coupled with the threat of contracting the potentially deadly virus is leading many people to experience

stress, anxiety, depression and other mental health challenges. Against this backdrop, the major objectives of this research is to examine the social, psychological and health related consequences of respondents who are confined in their dwelling environment during this emergency lockdown. Furthermore, how male and female respondents of different age groups, marital status, education level, employment status respond and cope with it and what are its consequences on psychological health have also been investigated.

METHODOLOGY

The final draft of the present survey, entitled as "Novel COVID 19: A Psychological Survey on Lockdown" was designed after analysing the results of the pilot study conducted on ten participants. Based on the results, some items were revised or deleted. Minor changes were made in the instructions to enhance the clarity and eliminate errors. The data collection of the survey started during the remaining last few days of the first lockdown declared by the government of India. An online platform was used and the survey was sent to various WhatsApp groups three days before the first lockdown period was over. During the remaining days of the end of the first lockdown, an overwhelming number of 489 responses were received. A brief discussion of the methodology is given below:

Sample and Design: The sample comprised 489 respondents. Of the total sample, 196 males and 293 females located in 70 cities covering 19 states of India participated in this survey. Furthermore, the sample consisted of 207 married and 282 unmarried respondents.

Measures: A brief four page questionnaire involving five sections was designed by the investigators using Google forms. Through this survey, personal and demographical information about the respondents was collected. Information about the respondent involvement in various activities in their dwelling environment, precautions for protecting one from infection, problems faced and assessment of psychological health during the lockdown period was noted. A brief description of the measures is given below:

Demographical information: In the first section, personal details of the respondents like age, gender, educational qualification, marital status, employment status, number of occupants residing under one roof and information about any existing medical illness were obtained.

Assessments of preventive measures: The third section constitutes eight items based on the major precautions that had to be followed by the people during lockdown. The items were focused on measuring the degree to which the respondents washing their hands with soap, sanitizing the goods which are delivered from outside, covering their mouth and nose while sneezing or coughing and throwing the tissue or mask in a closed bin immediately after using. Some of the items also dealt with restricting oneself to their residences, maintaining more than 1 meter distance from others while moving outside for needful purchases and washing the hands properly after returning from outside. The score on this scale ranged from

8 to 40 with the high score indicative of high level of compliance on precautions taken by the respondents during lockdown.

Assessment of Problems Encountered: The fourth section encompasses 12 items depicting problems faced by the people during the lockdown period. This section attempts to assess the respondents financial loss, adverse effects on regular studies, health facilities and unhealthy lifestyle. The items also dealt with increase in the urge to consume alcohol. Finally, other items were related to the perceived fear of administrative action if norms pertaining to lockdown were broken, fear of isolation from society and fear of judgement by society in case they contact the virus. The section also deals with likelihood of respondents to warn the neighbours if someone arrives from outside the city and seek medical help for them. The total score on this scale ranged from 12 to 60 with the high score indicative of more problems faced by respondents during lockdown.

Assessment of Residential Activities: The second section comprised 20 items which tapped a range of major activities being performed by individuals in their home environment. The respondents were required to rate their involvement in these activities on a 5 point Likert type rating scale ranging from never to very often. The high score is indicative of the respondent's high involvement in activities at home during the lockdown. The score on this scale ranged from 20 to 100 where high score is indicative of more involvement of respondents in various major activities in their home setting.

To reduce the number of items exploratory Factor analysis with varimax rotation was performed. The item loadings with a minimum cut-off of 0.50 were used to retain the items for the formation of subscales. Results of factor analysis indicated presence of seven distinct factors labelled as online entertainment, watching news and spiritual TV shows, working online, household activities, chatting with friends, engaging in hobbies and physical activity. Two items which showed low loadings were dropped from the final analysis. The seven subscales together explained 69.28 percentage of variance. A brief description of these subscales is given below:

Online Entertainment: The scores on four items which showed high factor loadings were summed up to form the subscale. The items included in this scale dealt with watching web series and movies through online streaming, playing indoor and online games. The scores on this scale ranged from 4 to 20 where high score is indicative of more entertainment.

News and Serials: The three items which showed high loading for the formation of subscale were related to watching news and serials and reading newspapers. The scores on this subscale ranged from 3 to 15 where high score is indicative of more involvement in watching and reading news and light entertainment.

Working Online: The two items which formed this subscale were focused on working from home and attending online classes. The score on this scale ranged from 2 to 10 where high score is indicative of more involvement with working online.

Household activities: The two items which formed this subscale were focused on cleaning up the uncluttered places and investing time in doing household activities. The score on this scale ranged from 2 to 10 where high score is indicative of more engagement in doing household activities.

Chatting with friends: The two items which formed this subscale were focused on having a heartfelt conversation and chatting with friends on the mobile phone. The score on this scale ranged from 2 to 10 where high score is indicative of more involvement in interacting with friends on mobile.

Hobbies The two items which formed this subscale were focused on pursuing hobbies and learning to cook new dishes. The score on this scale ranged from 2 to 10 where high score is indicative of more investment in pursuing hobbies and interest.

Fitness activities: The two items which formed this subscale were focused on doing yoga/meditation and investing time in physical activity. The score on this scale ranged from 2 to 10 where high score is indicative of more involvement mental and physical activities.

Assessment of Psychological Health: The fifth section composes 20 items related to assess the health of the participants currently put under lockdown. The respondents were required to rate the items on a five point Likert type rating scale. The score on this scale ranged from 20 to 100 where low score indicates good psychological health.

All the twenty items belonging to psychological health were subjected to exploratory factor analysis with varimax rotation. For the formation of subscales the item loadings with a minimum cut-off of 0.50 were used to retain the items. The results of factor analysis indicated evidence of three subscales which were labelled as emotional health, social health and cognitive health. Only one item which showed low loadings was dropped from the final analysis. The subscales together explained approximately 70% variance. Brief descriptions of these subscales are given below:

Emotional Health: The thirteen items which formed this subscale dealt with anxiety, unable to control worry, sleep disturbance, irritation, aggression, hopelessness, depressive thoughts and so forth. The score on this scale ranged from 13 to 65 where low score is indicative of good emotional health.

Cognitive Health: The three items which formed this subscale were focused on checking news updates about virus, believing unforeseen circumstances will be tackled and overwhelmed by watching news. The score on this scale ranged from 3 to 15 where high score is indicative of good cognitive health.

Social Health: The three items which formed this subscale were focused on measuring connectivity with family, enjoying with family and feeling energetic and rejuvenated. The score on this scale ranged from 3 to 15 where high score is indicative of good social health.

Procedure: The survey instrument designed was transferred in the google form format. A general instruction was written to appraise the respondents about the objective and purpose of the survey. The confidentiality of

the responses given by the participants and their identity was assured. The respondents were asked for their consent to participate in the survey. For each section, separate instructions were written which focused on the major theme covered while describing the procedure to record the response. The investigators used their contact list and forwarded the survey to various individuals and WhatsApp groups and other online forums to participate in the survey. The responses submitted by the participants were copies in Excel and subsequently after cleaning the data was transferred to SPSS for analysis. The participants were thanked for their cooperation.

RESULTS AND DISCUSSION:

To analyse the results on major demographical and outcome measures for the total sample descriptive statistics including means and percentages was used. However, to examine the means differences of major predictor variables like age, gender, marital status, education and employment status on outcome measures pertaining to precautions taken to deal with the possibility of infection, activities performed by respondents at their residence and psychological health, analysis of variance was used. Major results are systematically presented below:

Demographical Findings: The demographical information revealed that 51% of respondents were pursuing their graduation and were below the age of 25 while 49% of respondents belonged to the remaining three age groups with only 3.8% respondents were above 56 years. With regard to gender, sixty percentage of female and forty percentage of male participated in the present survey. A slightly more than eighty percentage of respondents were either pursuing their under graduation or were holding the UG degree with only 6.4% were pursuing their PhD degrees. Of the total sample, 41% of the respondents were unemployed while 34% of the respondents were employed. House makers and businessmen shared a very small percentage of 8.2% and 7.5% respectively. During the period of lockdown 65% of the respondents were residing with 2 to 5 members, 10% of respondents were residing alone while the remaining 25% respondents were living with more than 5 family members in their dwelling environment. With regard to pre-existing disease, 81% of respondents were physically healthy while 19% had a history of major diseases including diabetes and health. The major demographical information reveal that a very high percentage of respondents were young, educated, physically healthy with no prior history of major disease. More than 90% respondents were residing with their family members during the period of lockdown.

Involvement in Residential Activities: The descriptive analysis of the activities performed by the respondents in their home environment during lockdown period indicated that 34.7% of the respondents often watched news but 1.3% never watched the news which indicates that most people are aware and updated about the happenings around the world. TV Serials like Ramayana and Mahabharata are viewed by 54. 8% while 22.4% of the respondents avoid watching these serials. Online streaming platforms like Netfilx, Hotstar, Amazon Prime, etc

has been quite in demand with 58% of the respondents viewing it while 22.4% reported never using these platforms. The results further illustrate that a large percentage of respondents reported watching more comedy and positive content based serials on the media. The results reveal that 55.2% of the respondents are reading newspapers, magazines or books as a way to spend their time. Around 32% of the people went through their old photos and albums and a large number of 38.4% of respondents de-cluttered their houses. The period of lockdown has definitely given more time for the people to pursue their hobbies and around 50% spend their time in kitchen learning to cook new dishes. During prolonged lockdown 69% respondents spend their time chatting with their friends. The results further indicate that 38.2% respondents are attending online classes. In contrast, 50.2% of respondents are devoting their time to self-study. During lockdown domestic help in not available thus 67.9% of the respondents are helping their family members in the household chores. Interestingly, while respondents are spending time at home yet 35.6% are not often playing online games. In contrast 37% respondents are playing indoor games. Finally, 30.1% and 31% of the respondents are doing yoga and meditation.

The major results on home activities clearly suggest that more than fifty five percentages of respondents spend their time watching spiritual serials, news and were using online streaming platforms like Netfilx, Hotstar, Amazon Prime. Furthermore, the results indicate that during lockdown overwhelmingly high percentage of respondents were spending their substantial amount of time interacting with friends and helping their family in household chores. Finally, around fifty percentage respondents have reported spending their time in pursuing their hobbies and involving themselves in self-study.

Assessment of Precautions: The results of the survey based on guidelines and precautions are comprehensively presented in table 1. The result reveals that of the total respondents 54.4% very often,38.5 often, 6.5%sometimes and 1% rarely washed their hands with soap at regular intervals. More or less the same trends of results are seen on other seven items on precautions. For instance, 58.5% of the people are vigilant and sanitize all the products they get from outside while only 2% of the respondents declared that they never sanitized the products being purchased. The results further reveal that over 60% of the people are frequently following the orders and guidelines provided during the lock down period. Even after strict instructions by the administration, there are 14% of the respondents who are going outside their homes without any urgent purpose. Physical distancing norms prescribed by the government are clearly maintained by respondents as over 75% of the participants stated that they maintained more than 1 metre distance norm while stepping out of their houses. Finally, 91.3% of the respondents reported that very often, 7.3% often and 1% sometimes wash their hands after returning home from outside. Thus, the results clearly indicate that the massive awareness campaigns initiated nationwide relentlessly particularly by the

health, police and education departments have proven to be very effective with regard to spreading awareness to the masses about the precautions to be taken to protect themselves from viral infection. Most of the respondents have overwhelmingly abided by the precautions and guidelines issued by the government. In other words the results clearly indicate that the awareness campaign launched by the Government was highly successful.

Table1: Percentages depicting respondents adhering to precautionary measures for protection against Covid -19 infection.

Precautionary measures taken by	Never	Rarely	Sometimes	Often	Very Often
Washing hands with soap regularly	0	1%	6.5%	38.1%	54.2%
Sanitizing all items	2%	2.6%	8.7%	28.4%	58.2%
Covering mouth & nose while coughing or sneezing	1%	3.2%	6.1%	24.9%	64.7%
Discarding tissue immediately after coughing	4.3%	4.3%	5.5%	25.8%	60.2%
Avoiding eyes, ears & nose touch	0.6%	6.9%	19.7%	34.1%	38.7%
Avoiding outside movement during lockdown	3.2%	3.4%	4.3%	14.4%	74.6%
Maintaining 1 meter distance	0	1%	3.7%	20.1%	75.1%
Washing hands after getting back from outside	0	0	1%	7.3%	91.5%

Problems encountered: The major results on problems encountered by respondents reveal that during the complete lockdown, only 7.4% of the respondents suffered financial losses and 29.6% stated that they did not suffer any loss at all. However, 39% of the respondents stated that they paid more money for essential goods. The result clearly indicates that 40.6% of the respondents reported that their own studies or their children's studies have suffered. Furthermore, 37% of the respondents feel that regular health facilities have been affected due to the lockdown. While during lockdown the alcohol supply was shut down completely but only a very small percentage of respondents reported any urge to consume alcohol. The results show a positive outlook on the lifestyle of the respondents as 34.9% state that there has been no increase in an unhealthy lifestyle even after the lockdown. Fear of administrative action and public harassment is not felt by 32.1% of the respondents and most of the respondents did not fear being isolated from society during quarantine. The results indicate that 42.1% of the respondents are very much likely to warn the neighbours if someone arrive their house from outside the city and 50.8% claimed that they would seek medical help for the same. The analysis of the responses also indicate that 11.1% of the participants were worried about being negatively judged by society if they get infected by the virus which is more than the

fear of administrative action taken against them and remaining in isolation. The overall results seem to suggest that on average more respondents have reported about the various problems they have faced during the lockdown.

Psychological Health: Inspection of table 2 reveals psychological health of the respondents on all the nineteen items individually and on the three subscales dealing with emotional, cognitive and social health. The results reveal that 29.62, 21.83 and 29.21 percentage of respondents never, rarely and sometimes perceived emotional health related problems. Furthermore, 11.44 and 7.9 percentage respondents often and very often perceived emotional heath related problems during lockdown. The results further reveal that on average approximately 9.7, 11.8, and 33.3percentages of respondents never, rarely and sometimes perceived cognitive health related problems. Furthermore, 26.6 and 18.47 percentage respondents often and very often perceived cognitive health problems. Finally, the results reveal that approximately 10.8, 11.5, and 25 percentages of respondents never, rarely and sometimes perceived cognitive health related problems. Furthermore, 28 and 25 percentage respondents often and very often perceived cognitive health related problems.

Table 2: Percentages depicting respondents Perceived Psychological health during lockdown

Factors	Never	Rarely	Sometimes	Often	Very Often
Emotional Health					
Nervous & Anxious	26.4%	21.1%	37.1%	9.5%	5.9%
Unable to control worrying	30%	21.1%	33.9%	10.8%	4.3%
Trouble Relaxing	30.8%	22.3%	32.3%	9.3%	5.3%
Difficulty in Sleeping	37.1%	17.4%	27.4%	9.1%	8.9%
Afraid of something bad might happen	27.4%	25.4%	33.1%	8.5%	5.7%
Irritated	21.7%	24.5%	33.1%	11.6%	9.1%
Lonely	38.1%	20.5%	22.5%	8.9%	9.9%
Angry	25.8%	27.2%	27.6%	10.1%	9.3%
Hopeless	46.2%	19.5%	21.1%	6.9%	6.3%
Depressive thoughts	35.2%	23.3%	29.2%	6.3%	5.9%
Difficulty adjusting indoor	10.1%	13%	25.8%	33.9%	17.2%
Unable to concentrate	27.2%	23.1%	29.6%	12.6%	7.5%
Stressed	29%	25.4%	27%	11.2	7.5%
Average Emotional Health	29.62%	21.83%	29.21%	11.44%	7.9%
Cognitive health					

Factors	Never	Rarely	Sometimes	Often	Very Often
Check updates related to Covid – 19	4.5%	7.3%	24.3%	29.4%	34.5%
Feeling unforeseen circumstances could be tackled	8.3%	6.1%	37.7%	34.7%	13.2%
Overwhelmed by watching news & media	16.4%	22.1%	37.9%	15.8%	7.7%
Average Cognitive health	9.7%	11.8%	33.3%	26.6%	18.47%
Social Health					
High connectivity with family	4.5%	9.3%	22.5%	38.3%	25.4%
Enjoying family time	2.4%	7.1%	19.7%	31.6%	39.1%
Feeling energetic and rejuvenated at home	25.4%	18.1%	32.9%	13.4%	10.3%
Average Social Health	10.8%	11.5%	25%	28%	25%

The major descriptive results on demographical characteristics reveal that during lockdown all the precautionary measures were taken by the respondents to protect themselves from infection. The awareness campaign aggressively initiated by various implementing agencies of the government was very successful in changing the attitude and behaviour of respondents. A large number of respondents have taken the lockdown in a very positive manner and have invested their time engaging themselves in various activities ranging from investing time meaningfully with family members, interacting with friends, utilizing their time in household activities and so forth. All these factors have probably contributed to a reasonable good psychological health for a reasonably big number of respondents. However, over one-fifth of respondents did report problems pertaining to psychological health.

The analyses of variance results of major predictor variables pertaining to age, gender, marital status education, occupation on major outcome measures are presented.

Main effect of Age Groups on Major Outcome Measures: Mean difference on outcome variables with regard to five age groups are presented in table 3. Inspection of the table reveals that respondents of all age groups were taking all precautions to keep themselves away from infection. However, the results do suggest that respondents who were from the age group of 36 to 45 were taken slightly more precautions than their counterparts. The respondents who were youngest were found to be spending significantly more time in online activities and were spending more time playing games than their counterparts who were in the senior age brackets. Furthermore, very modest but significant difference was found on work related activities with respondents who were under 25 and those who were aged in between 36 and 45 exhibited spending significantly more time in work related activities related to their counterparts

particularly those who were from the senior age groups. No significant difference was found on the remaining components of social activities. Finally, respondents belonging to higher age groups reported better emotional health. In contrast, the young respondents reported better cognitive and social health.

Table 3: ANOVA results depicting Mean differences on outcome measures and health as a function of age groups

Outcome measures	Age Groups					
	Under 25	26 to 35	36 to 45	46 to 55	Above 55	F(4,484)
Precaution taken	35.71	35.84	37.02	35.63	33.76	3.41*
Problem encountered	23.68	23.56	23.84	23.52	21.0	1.09
Residential Activities						
Online entertainment	13.14	10.87	10.26	9.58	7.95	37.12**
News and Serials	10.46	9.87	10.36	10.43	10.85	.90
Working Online	6.61	5.68	6.21	5.62	4.05	6.25*
Household activities	4.60	4.00	4.27	4.25	4.66	1.35
Chatting with friends	10.76	10.59	10.91	10.34	10.24	.35
Hobbies	7.38	7.22	7.40	6.64	6.80	1.35
Fitness activities	2.15	2.50	3.45	2.70	2.15	5.10*
Psychological Health						
Emotional health	33.73	31.56	28.18	27.47	28.0	7.03**
Cognitive health	9.56	8.92	8.69	8.93	8.90	4.57*
Social health	7.17	6.74	5.90	6.49	7.23	5.70**

Main effects of Gender and Marital Status on Major Outcome Measures: Mean difference on outcome variables with regard to Gender and Marital status are presented in table 4. Inspection of the table reveals that female respondents were taking significantly more precautions to keep themselves away from infection than their male counterparts. The results further reveal that female respondents reported significantly more involvement in work related activities, online chatting with friends and interaction with family members relative to their male counterparts. In contrast the males reported significantly more engagement in yoga and physical exercise than females. No significant difference across gender was found on other major activities like watching news, online games, performing household work. Finally, males reported significantly better emotional and social health than females. However, no difference was found across gender on cognitive health.

No significant difference between married and unmarried respondents was found on precautions taken to deal with infection and problems encountered by respondents during lockdown. However, as compared to married, the unmarried respondents significantly reported playing more online games and reported spending more time

in doing yoga and physical activities. No significant differences was found on remaining five activities been performed by respondents in their dwelling environment during lockdown between married and unmarried respondents. Finally, significantly better emotional, cognitive and social health was reported by unmarried respondents relative to their married counterparts.

Main effects of Education on Major Outcome Measures: A close inspection of table 5 reveals that post graduate respondents reported taking slightly better precautions than their counterparts. Respondents pursuing graduation are significantly more involved in various online activities and games. Furthermore, very small but significant differences were seen in other activities being carried out by respondents with students pursuing graduation reporting more involvement in work related activities, chatting with friends, interacting with family members and doing physical exercises and yoga relative to their counterparts. Finally, post graduate and Ph.D. respondents reported significantly better emotional health whereas those pursuing graduation reported better cognitive health and social health than their counterparts.

Table 4: ANOVA result depicting Mean differences on outcome measures and psychological health as a function of gender and marital status

Outcome measures	Gender		F (1,487)	Marital Status		
	Male	Female		Married	Unmarried	F (1,487)

Main effects of Employment Status on Major Outcome Measures: The mean difference across five types of occupational status on outcome variables is presented in table 6. No significant difference was noticed on precautions taken to deal with viral infection and problems encountered during lockdown among respondents differing on occupational status. The students and housewives were significantly more involved in online activities and games than their counterparts. The students and unemployed were significantly more involved in work related activities while respondents doing business reported more involvement in physical activities and yoga relative to their respective counterparts. Finally, respondents who were doing business reported significantly better emotional health than their counterparts. In contrast, students who were pursuing their graduation reported better cognitive and social health relative to other group members.

Table 6: ANOVA result depicting Mean differences on outcome measure and health as a function of employment status

Implications of the Study for Police Personnel

Police personnel are required to coordinate their duties with doctors, paramedical staff and health officials who are all at the front line while dealing with this unprecedented and strenuous exigency. While undertaking these formidable responsibilities, they find themselves at a greater risk of exposure and infection. Police officials are tasked with explaining and enforcing preventive measures such as social distancing, isolation, quarantine, travel restrictions, contact tracing so as to protect the masses, contain the spread of infection and maintain public order.

Police officials are required to continuously do patrolling in "containment zones" and hot spots to ascertain that the citizens abide by the safety norms to reduce the spread of the viral infection. Given the person-to-person spread of COVID-19 through respiratory droplets, law enforcement officers are at heightened risks of exposure due to their close contact with members of the public. Thus, the police personnel are likely to be over-exposed to the infection and are likely to be stressed. Evidence exists that during the pandemic a large number of police personnel were not only being infected but also losing their lives while discharging their duties. In addition to this, because of an acute shortage of police personnel, the existing staff has to work beyond their duty hours even without any weekly break in highly risky conditions to maintain law and order. There have been several instances when the crowd defying lockdown attacked, pelted stones and injured the police personnel in many Indian states including Maharashtra, Punjab, Madhya Pradesh and Delhi. All these factors are very likely to generate stress which subsequently may adversely affect the mental health of police personnel. A large number of studies

conducted before the ongoing pandemic have consistently reported that occupational stress have contributed to mental health problems in police personnel (Nagar, 2007). Thus, it is very likely that during heightened stress conditions emanating from COVID-19 mental health problems are very likely to increase.

The nation was not professionally equipped and prepared for the vast effects of COVID-19. After being exposed to the pandemic for several months, the leadership and executive authorities have gained a lot of experience to deal with medical emergencies and handling of law and order situations. To protect the police officials from infection, personal standard protective equipment (PPE), masks etc. are also not always available in adequate numbers. The overburden of work accompanied with the fear of infection might result in poor psychological health. To overcome this burden, a few crucial steps need to be taken. Provision of proper PPE and psychological aid in the form of counseling or workshops to help the stressed personnel cope better with these stressful conditions can lead to the betterment of the physical and mental health of these policemen. Online capsule training.

SUMMING-UP

The distinctive feature of the sample is its representativeness across nineteen states of India with a large percentage of respondents being young, educated and sharing their home with more than one family member during the nationwide lockdown. The result revealed that during lockdown almost all the respondents have taken adequate precautions to minimize the possibility of the infection. Thus, it can be concluded that the forceful, emotional and emphatic appeal of the Honorable Prime Minister Modi during the start of Janta Curfew and lockdown and subsequently the Government of India's awareness campaign for educating and convincing the masses to adopt preventive and precautionary measures to minimize the possibility of viral infection has proven to be very successful.

The results further indicate that the respondents have explicitly stated the problems which they have faced. However, they moderately engaged themselves in a wide range of activities like watching news and spiritual episodes, working online, playing online games, doing household chores, interacting with friends and family members and revisiting their hobbies in their residential settings. Finally, approximately half of the total respondents reported that they never or rarely faced any psychological health related problems. In contrast, thirty percent reported that they had sometimes while the remaining twenty percentage respondents felt that they often and very often faced psychological health related problems during lockdown. The respondents who belonged to the younger age group reported relatively more emotional health problems than their older counterparts. In contrast, the young respondents perceived better social and cognitive health relative to the ones in the older age groups. The result on psychological health seems very understandable. The young respondents are mostly students who are under the age group of twenty five and usually spend

considerable amount of time attending their universities/ colleges besides many students also attend prolonged hours of coaching largely because they are on the threshold of building their career. The students might have perceived the sudden lockdown of prolonged duration as an impediment to their career. Further, the educational institutions were also not professionally prepared to deal with the challenge of delivering the educational inputs effectively online through e-learning platforms. While a large number of educational resources are available free of charge online but the educational atmosphere of the classroom setting is missing and cannot be substituted by monotonous online lectures. All these factors might have contributed to emotional health related problems for students. However, the availability and accessibility of laptops and mobiles have made the communication easy and that students are connected to their friends. Even the feeling that everyone in the same boat might has provided social and cognitive health related relief to the students. Currently, the number of infected cases is on the increase both in India and across many countries of the world. It is very plausible that people have to change their life styles and have to take all precautions to minimize the possibility of infection till some permanent medical solution is achieved. Educational institutions should now prepare themselves professionally to create online learning platforms so that the teaching and learning process is made more students centric, lively and interesting. A proper mix of online education and classroom driven lectures may be worked out to reduce the presence of number of students at one point in time. In a similar vein both government and private sectors work may be shifted from off line to online to reduce the density of people in service centered organizations. Online marketing and shopping is gradually picking up. People have to restrict themselves more and more to their residential settings and will have to take extra precautions while leaving their premises at least till a concrete and permanent method for the eradication of this virus is devised.

The programmes of short duration on stress management, counselling and emotional intelligence with special reference to enhancing their adversity quotient may equip the police personnel to enhance their wellness indicators.

Changing forms of Cyber Violence against Women and Girls

The Indian Police Journal
@BPRD, MHA
BPRD Publication
www.bprd.gov.in

Dr Kanika Panwar[1]
Vikas Kr. Sihag[2]

Abstract: The problem of violence against women is pervasive, ubiquitous and widespread, It is assuming new dimensions with the changing forms of society globally. The new forms of violence against women are equally alarming as the old ones, with an exponential rise in the former. Cybercrime is the new age crime of knowledge and information society which is taking hideous proportions. Women and children both are the most vulnerable group due to the high chances of anonymity in cybercrimes. It is a myth that online crimes are a problem of the developed world and the rest of the world is immune to it. The present paper is an attempt to understand the changing forms of cyber violence against women prevalent in society and the vulnerability of women to this form of crime. This paper digs deep into the menace of cyber violence against women and girls by exploring the magnitude and types of cybercrime against women. It moves on to discussing the existing legal provisions in India to combat cybercrime against women and girls and then concludes with suggestions to counter and prevent cyber violence.

Keywords: Cyber violence, Online violence, Violence against women, Crime against women, Changing forms of crimes, Legal provisions, Cyber Stalking, Cyber Bullying, Hate Speech, Doxxing.

Online crimes were believed to be a problem of the First world only, but penetration of the Internet has driven it to third world countries as well. In the early days of the emergence and development of the Internet, it was believed that away from the social discriminatory inequalities of society it would be a platform to provide equal opportunities for all sections. But over time, the nature of the Internet is also becoming unequal, offensive and scandalous like real-world. Most women face multiple forms of misconduct from their infancy to death in the physical world which is reflected in the cyberspace as well. Along with technological progress, the nature of violence and crime has further evolved. In the era of the social internet, when the mobile phone is a medium to make instant contacts, it is difficult to stay away from online communication and network, making

women easy prey for online criminals.

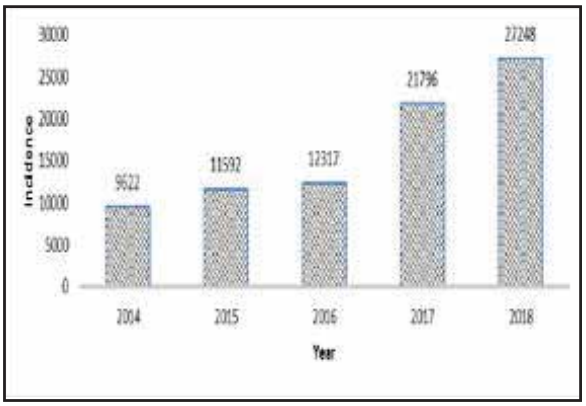
Many incidents that have surfaced recently, such as making objectionable comments in social media, broadcasting obscene pictures, using threatening words and/or threatening to intimidate women all have been designated in the category of cyber violence against women and girls by the United Nations. Cyber Violence against Women and Girls includes hate speech (publishing a blasphemous libel), hacking (intercepting private communications), identity theft, online stalking (criminal harassment) and uttering threats. It can entail convincing a target to end their lives (counselling suicide or advocating genocide). The Internet also facilitates other forms of violence against women and girls including trafficking and sex trade[1]. According to United Nations Declaration on the elimination of violence against women, violence against women is, any act of gender-based violence that results in, or is likely to result in, physical, sexual, or mental harm or suffering to women, including threats of such acts, coercion or arbitrary deprivation of liberty, whether occurring in public or private life."[2] Giving the extension of this definition, cyber violence has also been included, which encompasses acts like trolling, hacking, spamming and harassment [3]. According to a report of the United Nations "Combating Online Violence against Women & Girls: A Worldwide Wake-up Call"[4], the Internet is being used for violent behaviour and harassment against women and girls. Due to this, the physical and emotional health of women is at stake. This report has been broadcast in the context of Wake up Call. As per data, every third woman in the world faces violence in her life [5], but this report takes this fact a step further, reveals that approximately 73% of women aged 18 - 24 years have faced online violence and crime.

Cyber violence is as harmful as physical violence to life and health of women and girls. Under-Secretary-General (UN Women) Phumzile Mlambo-Ngcuka had equated death due to cyber violence with death by physical violence. Incidents of suicides committed by teenagers due to provocation by "Blue-Whale" an online game or cyber bullying, trolling supports her view.

According to an estimate, only 1 per cent of the population of the world was connected to the Internet in 1995, this number has increased to 40% now out of which 25% of users are women [6]. In India, it is reported that a total of 143 million women use the internet which is 30% of the total user base in India, with rural areas witnessing a growth of 14.11% [7]. It highlights the importance to understand the vulnerability of women towards cyber crimes in India.

To cause direct or indirect harm to the people using telecommunication and electronic devices such as computers, mobile, internet etc. comes under the category of cybercrime. According to the National Crime Record Bureau 2016 figures a total of 7.7% of cases of cybercrimes in India, including the cases of cyber violence against women and girls were registered [8]. The number of cybercrimes increased dramatically in 2017 as compared to 2016, and nearly every fifth cybercrime in 2017 was committed against a woman, as shown by official data for that year released

by the National Crime Records Bureau (NCRB). A total 21,796 instances of cybercrime were recorded in 2017, an increase of 77% over the previous year's number of 12,317[9]. The total number of cybercrime in India has reached to 27248 in 2018 with more than 22% (6030) cyber crimes directed towards women. During 2018, 55.2% of all cyber-crime cases registered were for the motive of fraud (15,051 out of 27,248 cases) followed by sexual exploitation with 7.5% (2,030 cases) and causing disrepute with 4.4% (1,212 cases). Figure1 illustrates the rise in the cases of cybercrime in India during the last five year. From 9,622 cases in 2014, it has risen to 27248 cases in 2018 with a rise of more than 180% in less than a decade[10]. This is only a tip of the iceberg, as most of the cases still go unreported. This rise is also due to the increased awareness of citizens toward reporting them.



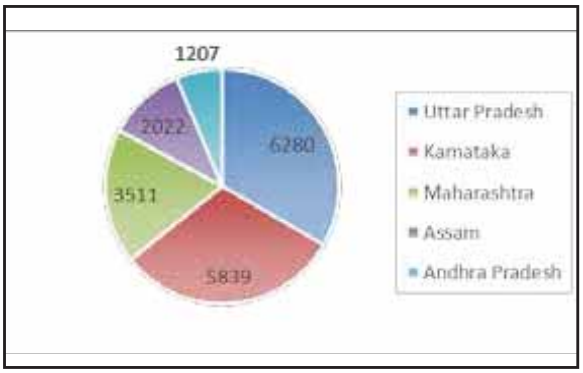


Figure 3: Rise of cyber crime in India

Uttar Pradesh tops the chart with 6280 cases of cyber crimes reported followed by Karnataka (5839) and Maharashtra (3511) as shown in figure 2. Among the metropolitan cities having a population of more than two million, the highest number of cybercrimes are reported in Bengaluru (5253) followed by Mumbai(1482) in 2018 [11].

If we consider the specific cyber crimes against women the picture is no better. Table 1presents data reported in Crime in India in 2017 and 2018 under various categories of blackmailing, pornography, stalking/bullying, fake profile and other crimes. These categories are together reported as online crimes against women. A comparative analysis reveals that there is a sharp escalation in the number of cases as reported from 2017 to 2018. Maharashtra reports the highest number of cyber crimes against women in both 2017 and 2018, with majority crimes under "Other crimes" subheads. A large number of cases are also reported in the category of "Stalking and bullying" which are constantly on a rise, clearly showing the vulnerability of woman and girls to online stalking.

It can be seen in table no.1 that cases of pornography (172) and Fake profile (94) were reported in a big number in Assam during the year 2018. Both these categories had reported only 76 and 21 cases in 2017, respectively. All the data discussed until now clearly reveals that cybercrime against women in India has already taken monstrous dimensions.

	Blackmailing		Pornography		Stalking/Bullying		Fake Profile		Other crimes		Total	
	2017	2018	2017	2018	2017	2018	2017	2018	2017	2018	2017	2018
Maharashtra	8	5	15	31	304	398	9	13	809	815	1146	1262
Assam	70	29	76	172	12	18	21	94	199	357	380	670
Telangana	12	10	24	42	27	18	3	12	130	254	196	336
Uttar Pradesh	5	2	18	11	6	24	6	6	233	217	268	340
Andhra Pradesh	11	12	1	5	48	82	3	16	110	96	173	217

Table 2: Online crimes against women and children in top 5 states of India

The cases of cyber stalking and bullying are also witnessing a steady rise in almost all the states in the country led by Maharashtra, followed by Andhra Pradesh and others.

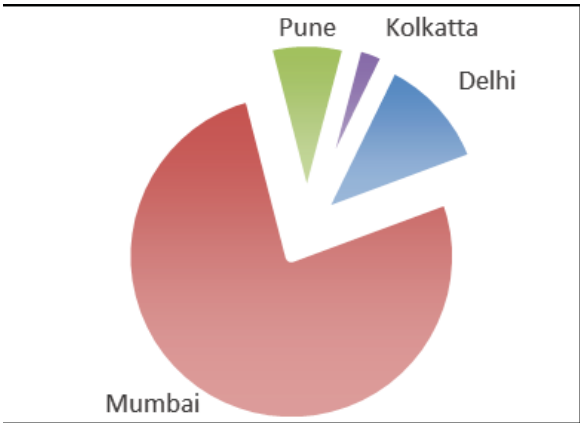

Figure 3: Reported cyber stalking and bullying cases against women & children in four major cities (2018).

When the individual categories of Cyber stalking and bullying against women are considered in Metropolitan cities, Mumbai can be seen to top the charts with 171 cases followed by Delhi with 27, Pune with 18 and Kolkata with 7 cases as reported in 2018[11].

As far as cyber crimes against women and children are considered, data show Mumbai topping the charts in the majority of categories. The data discussed herewith leads us to the finding that there is an exponential rise in cyber crimes in India over the past decade and it has led to an equal escalation in cyber crimes against women.

Types of cybercrime against women: Many types of cybercrimes can be marked in India, including crime against an individual, the crime against an organization and the crime against society. While the abusers use different tactics and means, the goal remains the same: embarrassing, humiliating, scaring, threatening and silencing women. Following are types of cybercrime against women, which are required to be discussed for assessing the gravity of the situation:

Sexist hate speech: Council of Europe defines it as "expressions which spread, incite, promote or justify hatred based on sex"[12]. These are typically the threats of rape, death and torture that women and girls can receive because they carry the stereotypes enforced by the culture of rape and patriarchy

Tactics: Attacks women who assert their opinions online.

Habitat: Offline public places, Comments section, Reddit, dedicated websites, social networks.

Cyber bullying: Cyber bullying is the use of technology to bully a person or group with the intent to hurt them socially,

psychologically or even physically [13]. Cyber bullying is defined by Smith et al. as an "aggressive, intentional act carried out by a group or individual, using electronic forms of contact, repeatedly and overtime against a victim who cannot easily defend himself or herself"[13]. It takes place over digital devices like cell phones, computers, and tablets. Cyber bullying can occur through SMS, Text, and apps, or online in social media, forums, or gaming where people can view, participate in, or share content. Cyber bullying includes sending, posting, or sharing negative, harmful, false, or mean content about someone else. The Global Youth Online Behaviour Survey conducted by Microsoft ranked India third in cyber bullying, with 53% of the respondents, mainly children admitting to having experienced online bullying, falling behind only China and Singapore[14]. Suicide cases related to cyber bullying have increased significantly in the last decade. The seriousness of cyber bullying came to the forefront after Amanda Todd, a 15-year-old schoolgirl from Canada committed suicide because of being continuously cyber bullied and posted a video of her story. Freedom House and Feminism in its report "Violence Online In India: Cyber Crime Against Women and Minority on Social Media 2015"[16] has reported that about 58% of respondents in India face cyberbullying, trolling and other forms of harassment online.

Tactics: Repeatedly sends hurtful messages and start rumors to shame and humiliate.

Habitat: Social networks, communication applications.

Cyber Harassment*:* It is harassment by means of email, text (or online) messages or the internet. It can take many forms, including but not limited to: unwanted sexually explicit online messages; inappropriate or offensive advances on social networking websites or internet chat rooms; threats of physical and/or sexual violence by online messages; Hate speech, de-meaning language that denigrates, insults, threatens or targets an individual based on her identity (gender) and other traits (such as sexual orientation or disability).

Tactics: Targets women who assert their opinions online.

Habitat: Comments sections, forums, chat rooms.

Cyber stalking is the act of online spying, fixing or compiling somebody's information and communicate with them against their will. This is one of the most popular crimes in the online world.

Tactics: Spies, fixates on and compiles information about women online to scare them and sometime blackmail them.

Habitat: Social network

Doxing refers to the online researching and publishing of private information on the internet to publicly expose and shame the person targeted.

Tactics: Researches and publishes private information online as to publicly expose, out, and shame victims.

Habitat: Victim's social networks profiles, google searches

Digital voyeurism or Creep shots: "Creep

shots consist of perpetrators surreptitiously taking photos or videos of women's private areas for the purpose of sexual gratification. In some cases, the act of taking the image without the victim's knowledge, and the subsequent violation of their privacy and agency, is what provides the sexual gratification". Creep shots are then posted on the web, sometimes with hash tags such as #up skirting.

Tactics: Photographs women and girls without their consent and publishes their photos online

Habitat: Offline public places, Reddit, dedicated websites, social networks

Revenge porn: Revenge porn has been defined by the government as "the sharing of private, sexual materials, either photos or videos, of another person without their consent and to cause embarrassment or distress"[17]. Additional personal information will often be included with the published images or videos. This combination may leave a person vulnerable and may endanger them. It is psychologically harmful to the victim at least. The numbers speak for themselves: in January 2017 alone, Face book had to evaluate 54.000 potential cases of revenge porn and close more than 14.000 accounts [17].

Tactics: Posts private pictures or videos of a sexual nature to shame and humiliate the victim. Extension of intimate partner violence.

Habitat: Social networks

Online impersonation is the use of someone else's name or identity with the intention of harming, defrauding, intimidating or threatening anyone. The impersonation can be used to discredit targeted women with their social and professional peers or for criminal purposes similar to theft of offline identity.

Tactics: Uses new technologies and a propaganda tool to steal online identities

Habitat: Social networks

Legal provisions to combat cyber crimes against women and girls

Most cybercrimes are not covered by existing laws in the country. The perpetrators are booked under various sections as understood to be appropriate by the police personnel. Table 2 presents various legal provisions for combating cyber crimes against women in India[19, 20, 21].

Cyber crime type	Legal provisions applicable
Sexist Hate Speech	• The Indian Penal Code, 1860: Section 124A; Section 153A, Section 153B, Section153 C, Section 295A, Section 298, Section 505(1) and (2) (penalizes promotion of enmity between different groups and people on grounds of race religion, place of birth, residence, language and disturbing harmony) • The Representation of the People Act, 1951: Section 8; Section 324; Section 123(3); 123(3A) and Section 12 (Prohibits promotion of enmity between different groups and people on grounds of race, religion, place of birth, residence, and language in relation to elections) • The Protection of Civil Rights Act, 1955: Section (penalizes un touchability through the word; spoken written, symbols or otherwise)
Cyber bullying	• IT act 2000: Section 67, 70 and 72 (publishing or transmitting obscene/sexually explicit material against women and children) • The 2013 Criminal Law Amendment Act: 354, 354 A, 354 B, 354 C & 354 D (Criminal force against woman outraging her modesty)
Cyber Harassment	• IT act amendment 2008: 67A to C (publishing or transmitting of material containing sexually explicit act and child pornography in electronic form.) • IPC: Section 292A (printing or publishing grossly indecent or scurrilous matter or matter intended to blackmail), Section 509 (uttering any word or making any gesture intended to insult the modesty of a woman)
Cyber Stalking	• IT act 2000: Section 72 (remotely for breach of confidentiality and privacy) • IPC: Section 441(Criminal trespass) and • Section 509(Outraging the modesty of women)
Doxing	• IPC Section 354C(Voyeurism) and D(Stalking), • Section 292(Obscene content) • Section 499(Defamation) and IT act amendment 2008

Cyber crime type	Legal provisions applicable
Digital Voyeurism	• IT act amendment 2008: Section 66E (Capturing, Publishing or transmitting the image of the private area without a person's consent or Knowledge) • IPC Section 292 (sale, hire, distribution of obscene content)
Revenge Porn	• 67 A of IT act 2000 (publishing or transmitting obscene/sexually explicit material against women), • Section 354C, IPC (Voyeurism), Section 66E, IT Act (violation of privacy) and Section 509, IPC (harming the modesty of women).
Online Impersonation	• IPC Section 464 (forgery), Section 465 (making false documents), Section 468 (forgery for purpose of cheating), Section 469 (reputation), Section 471 (using as genuine a forged document), and Section 474 (possession of a document known to be forged and intending to use it as genuine) • IT act 2000, Section 43(damage to computer systems without permission of the owner) Section 66 (sending offensive messages through the electronic device), 66B-D (dishonestly receiving stolen computer resources, cheating by personating by using computer etc.)

Suggestions to counter Cyber Violence and Cyber Crime

Crime on the Internet can be financially, physically, and emotionally harmful to any person. To avoid this, the following measures should be taken while using the Internet[22].

The user must keep her security settings in an active state. A friend request from an unknown person should not be accepted.

User should not share personal information on the Internet. If necessary, keep the setting private.

Keep privacy settings for your photos, personal information, locations, on your online account, so that only user's friends can see them.

User should never respond to messages by an unknown person and avoid flirting and arguing with an unknown person.

Avoid using provocative screen names or email addresses.

Protect online information using a password. The password should always be a combination of digits and special symbols, such as # &%, with upper and lower case letters. Change

the password from time to time and do not share this password on unknown websites.

Avoid using the same password in many places.

Use computer and laptop safely. Be cautious about using a cyber cafe etc. Always close the website by signing out or log out.

Do not open an anonymous email as far as possible.

Do not click on the attached attachments and do not try to delete it by the removal link provided in it.

If a user faces any kind of cyber violence even after the above caution, then family members must be involved and informed. User should contact the police in case of any online threat listed earlier. One can also approach various institutional mechanisms set up by the government to deal with such crimes. These institutional mechanisms may be helplines, one-stop centres or cyber cells of police, or any website established to counter cyber violence.

In sum, it can be said that according to the United Nations report there are 3 ways to prevent and prevent cyber violence. First, Sensitize: giving information about cyber violence to society, there is a need to be sensitization to prevent such behaviour. Second, Safeguard: To make all sections of women and society aware of cyber violence and ways to prevent and protect them. And last, Sanctions, violence cannot be allowed in civil societies, so the laws which prohibit cyber violence are required to be constituted and be strictly adhered.

Conclusion

The cyber-violence abnormity can be controlled only by ensuring the participation of the individuals, society and government. Thus, it can be concluded that the magnitude of cyber violence against women and girls is rising at an alarming pace. A closer look at this augmentation can lead us to state that it is expected to grow further in future with the advent and progress of latest technological devices. In this paper it was attempted to illustrate the forms of violence against women and girls are evolving in form of cyber stalking, cyber bullying, trolling, hate speech and online sexual solicitation. The physical forms of violence against women and girls are increasingly combined with cyber violence against women and girls giving birth to hybrid violence. As far as the existing legal provisions for online violence are concerned, there is a great deal which needs to be done at the level of not only social media platforms but also police and the individual user as well. It is worth mentioning here that the National Crime Records Bureau of India has recently started segregating gender based data on cyber violence and further categorization still to be done for specifics. It is need of the hour to recognize the severity of cyber violence against women and girls and treat it with the same intensity as any physical form of violence is done.

India ups the ante on Money Laundering: Consequences and Countermeasures

The Indian Police Journal
@BPRD, MHA
BPRD Publication
www.bprd.gov.in

Prof. (Dr.) Raghuvinder Singh[1]
Daizy Thakur[2]

ABSTRACT

Money laundering is the process by which criminal proceeds earned from illegal sources are laundered and disguised by making it appear as it has been derived from a legitimate source. Globalisation has made it into a menace which is not confined to any specific country and India is no exception to it. Money laundering is not only against our country's economic growth but also undermines the rule of law. This article focuses on the far reaching impact money laundering has on our economy and recent countermeasures taken against the crime in India with special focus on 2019 amendment to Prevention of Money Laundering Act.

KEYWORDS: Money laundering; Economy; Anti Money laundering regime; KYC Guidelines; Proceeds of Crime;

INTRODUCTION

Money laundering is the process by which criminal proceeds earned from illegal sources are laundered and disguised by making it appear as it has been derived from a legitimate source (The United Nations Office on Drugs and Crime, n.d.). The term "money laundering" has originated from the United States, Where the mafias and criminals laundered their illegally earned money into lawfully earned money. With globalisation and developments in technologies money laundering has become a global menace (Mehanathan, 2017, p.3) which is no longer confined to any specific country. And our country is no exception to it rather India serves as a lucrative destination for launderers (Retharekar, n.d.). The plain meaning of launder is to wash or clean dirty clothes and the term Money Laundering is used for cleaning the illegally earned dirty money by disguising or concealing its origin and presenting it as rightfully earned legal money. The extent, magnitude and intricacies of money laundering have evolved significantly. The modes and methods of operation keep changing with changes in technological development, techniques and policy approaches (Mehanathan, 2017, p.3).

Money laundering let the criminals encash the profits of their crimes and illegal activities, and bestow them with power, influence and

Author's Intro:

2 PhD, Research Scholar, Department of Law, Himachal Pradesh University, Shimla

stature in society. (Mehanathan, 2017,p.2). These crimes not only threaten the economic stability but also hamper government's role of delivering basic facilities and services for the public (Brown, 2018). Money Laundering is a crime not against a specific individual, but against countries, their governments and rule of law (The Associated Chambers of Commerce and Industry of India, n.d., p.7). Though in recent years India has intensified the fight against money laundering to ensure financial stability of the country but the battle is far from over. India needs to be consistent and more vigilant in its commitment to combating money laundering.

HOW MONEY LAUNDERING WORKS

Although Money laundering is a single process but it is divided into three stages named Placement; Layering and Integration, which are explained below:

1. **Placement**- In this stage illegally earned money is positioned in to the financial system. This stage is the riskiest as placing huge amounts of cash into the system may attract suspicion of the authorities and they might get caught. So it is mostly done by placing smaller amounts to evade unnecessary attention from the law keepers (Mehanathan, 2017, p.21).

2. **Layering**- This stage disguises the true origin of the illegally earned money. Layering cuts off the link of unlawful money from its illegal source. It involves multiple financial transactions to baffle authorities. During this stage, the money may be transferred through different accounts within the country or to different countries or money may be converted into financial instruments like money orders, insurances, stocks, bonds etc, Electronic Funds Transfer (EFT) is also very popular and many other modes are used to disguise the trail of money (Mehanathan, 2017, p.23).

3. **Integration**- The last and final stage of money laundering is integration. In this stage the money arrives back to the criminal from a legitimate looking source. For example money is received from any business, trade etc bought with the laundered money and is following all rules and regulations and carrying on a legitimate lawful purpose. So, technically the money coming from a lawful business or source following all laws and regulations is lawful money. This way money can be used by criminals for any purpose and can be integrated into the economy without violating any laws (The United Nations Office on Drugs and Crime, n.d.).

CONSEQUENCES OF MONEY LAUNDERING IN INDIA

Money laundering strikes at the very foundation of a society and deeply impacts so many aspects of economic development as well as law and order in a country deteriorating the social fabric and values of nation. The so called cleaned or laundered money gives criminals that needed power and stature in a society making them even stronger. They use this laundered money to further expand their criminal activities (Mehanathan, 2017, p.1,2) not only which jeopardizes not only security but also national interests, as the illicit proceeds of laundering are invested in

criminal activities like drug trafficking, arms dealing, supporting terrorist groups and funding them, human trafficking (Jamal, 2018) smuggling etc. Money laundering also impacts the government revenues and fills up loss of revenue because of untaxed money, the tax rates go up, which has direct bearing on honest taxpayers, increasing their burden (McDowel,2001,p.7,8). Money laundering assists the rise in crime and corrupt practices, which hampers the economic sustainability and depresses the growth, discourages foreign direct investment (Bartlett, 2002, p.22,24), also causes instability of inflows and outflows of capital, damages the reputation of financial institutions and the country associated (The International Monetary Fund,2019, p.6). Money laundering harms the private sector by offering products at low prices as their aim is not profit but laundering the money making the competition difficult and negatively impacting the legitimate businesses. Instability of exchange rates, unstable financial markets leads to financial crisis in the country. This way the economic power shifts from government and economy to criminal masterminds, which can be devastating for any country. Hence the smooth functioning of financial sector of a country is crucial for its prospering economy (Financial Intelligence Unit -Republic of Mauritius, n.d.). The impacts of money laundering are manifold and are summed up into following:

- Loss in Government Revenue
    - Weakens economy
    - Increase in crimes like terrorism, drug trafficking etc
    - Discourages foreign direct investment
    - Unfair competition in private sector
    - Instability of financial markets
    - Financial crisis owing to unstable economy
    - Damages reputation of a country internationally

COUNTER MEASURES: ANTI MONEY LAUNDERING (AML) REGIME IN INDIA

The Prevention of Money Laundering Act, 2002 (PMLA), together with the rules, is the primary legislation dealing with money laundering in India. Act criminalises money laundering with imprisonment up to 10 years and provides for confiscation of tainted properties acquired from proceeds of money-laundering. It defines Money laundering as the process of cleaning criminal proceeds earned from illegal criminal activities and making it appear as it has been gained from a legitimate source. The PMLA mandates banking companies, financial institutions and intermediaries to keep account of transactions, verify details of all its clients and report all doubtful transactions or transactions above a specified value to Financial Intelligence Unit-India (FIU-IND). Financial Intelligence Unit-India has power to impose fines on all reporting entities .i.e. banking company, financial institution, intermediary for not complying with provisions of the act. It also empowers Enforcement Directorate (ED) to investigate the offence, arrest an accused and attach tainted property involved in money laundering without seeking any permission from court or government (The Prevention of Money Laundering Act, 2002).

With increase in the number of financial crimes and scandals the Central Government amended the Prevention of Money Laundering Act, 2002 through Finance Act, 2019 by inserting explanations to sections and cleared the ambiguities existing in the act and made the provisions stricter to contain money laundering in India. By these amendments the scope of the "*proceeds of crime*" has been expanded and now (a) Concealment (b) possession (c) acquisition (d) using (e) projecting /claiming tainted property as untainted property in any manner shall be guilty for the offence of money-laundering under section 3. It has also been made a continuing offence by the amendment as the offence will continue till the time the person enjoys the benefits of laundered money in any way.

The 2019 Act deletes the proviso of Sections 17 (1) and 18 (1) and gives power to the ED to conduct search and seizure without pre existing FIR or permission from court. *Proviso* inserted under Section 44(1)(b) of the PMLA for submitting Closure Report to the Special Court when upon investigation no offence is determined. Amended Section 45(2) also clarifies that offences under the Act are cognizable and non-bailable offences, independent of anything contained in The Code of Criminal Procedure, 1973 (CrPC). Hence, the accused can be arrested by authorised officers without a warrant, subject to the fulfillment of conditions under Section 19. Section 12AA, which compels every Reporting Entity to increase monitoring and due diligence for any doubtful transactions and take all necessary due steps mentioned under the act (Amendment in PMLA by The Finance Act, 2019). The amendments to the PMLA gives clarity on various ambiguous aspects of money laundering and brings in more reporting obligations for the reporting entities for detecting and foiling suspicious money laundering attempts (Kumar,2019). Apart from Prevention of Money Laundering Act the RBI KYC Master Directions, the SEBI AML Guidelines, IRDAI AML Guidelines based on Anti-Money Laundering standards (Anti-Money Laundering Forum, n.d.) and recommended by the Financial Action Task Force (FATF) are instrumental in fighting money laundering in India and are updated from time to time. This way making the anti-money laundering regulations in India stricter and updated for the current scenario.

FEW MAJOR RECENT MONEY LAUNDERING CASES IN INDIA

INX Media Money laundering case

The 2019 amendments to Prevention of Money Laundering Act, 2002 will bring more troubles to former finance Minister P Chidambaram. He was arrested in the INX Media money-laundering case on charges of irregularities in a Foreign Investment Promotion Board approval to the INX Media group for receiving ₹305 crore in 2007 as overseas funds during Chidambaram's tenure as finance minister. Currently CBI has filed a chargesheet against former Union minister P Chidambaram, his son. With new amendments now scope of section 3 has been expanded and other explanations added to existing sections in the act will strengthen position of Enforcement Directorate and CBI in the case against Chidambaram.

Vijay Mallya Money laundering case

Vijay Mallya is wanted in India over alleged ₹ 9,000 crore frauds and money laundering charges. He was the first person declared a fugitive economic offender under the Fugitive Economic Offenders Act 2018 after he fled India avoiding prosecution. Currently he is set to be extradited to India soon after losing appeal against India's extradition demand in UK Supreme Court in 2020.

Nirav Modi fraud and Money laundering case

Nirav Modi is involved in biggest fraud in banking history of India. He defrauded Punjab National Bank of ₹11,400 crore by fraudulently acquiring letters of bank guarantees and laundered the proceeds of the funds using his fake companies. Nirav Modi and his relatives fled from India to United Kingdom in early 2018 and is the second person declared a fugitive economic offender under the Fugitive Economic Offenders Act, 2018. In the ongoing extradition case, he is contesting his extradition to India. The Indian government submitted further evidence in the London court in May 2020.

Apart from the Prevention of Money Laundering Act, 2002 the main bodies responsible for enforcing and regulating anti-money laundering framework in various other sectors in India are:

Financial Intelligence Unit - India (FIU-IND)**:** at https://fiuindia.gov.in/. Financial Intelligence Unit – India is an independent body, set up on November, 2004 by the Government of India. It is responsible for collecting, analyzing, processing and sharing the information regarding suspicious financial transactions. FIU-IND reports directly to the Economic Intelligence Council of India headed by the Finance Minister and work towards strengthening efforts, intelligence and measures to combat money laundering in India.

Enforcement Directorate (ED): Enforcement Directorate at http://www.enforcementdirectorate.gov.in/index_home.html?p1. can exercise special powers regarding investigation, prosecution of cases and also attachment of the property under the Prevention of Money Laundering Act 2002.

Reserve Bank of India (RBI): at https://www.rbi.org.in/. RBI, the central bank of India regulates financial institutions like banks and various financial markets and sets anti-money laundering guidelines and policies and has regulatory powers to combat money laundering in India.RBI also updates KYC rules from time to time as per recommendations made by the Financial Action Task Force (FATF) and directions by government of India.

Securities and Exchange Board of India (SEBI): at https://www.sebi.gov.in/. SEBI regulates intermediaries and investors in the securities market to curb money laundering.

Insurance Regulatory & Development Authority of India (IRDAI): at **http://www.irdaonline.org/.** The IRDA regulates the insurance sector and ensures compliance with Anti-Money Laundering guidelines applicable to certain insurers.

CONCLUSION AND SUGGESTIONS

Money laundering has become a matter

of grave concern not only for India but for the world as well. It not only dampens the productivity of an economy but also spoils the image of the nation which adversely affects the economic growth .For an effective implementation of Anti-Money laundering regime, the government should make sure that all concerned institutions comply with anti money laundering rules and laws, follow the KYC Policy .i.e. "Know Your Customer", immediately report doubtful transactions (Sarigul,2012, P.299), strict Customer Due Diligence must be applied which includes proper identification and verification of clients and keeping proper records of them (The International Monetary Fund, n.d.). The stern enforcement of laws and stronger penalty for non compliance are the most effective measures to fight money laundering (Bartlett, 2002, p.33). Clearly, money laundering cannot be contained and controlled by a single country but collective efforts and cooperation in technologies, information sharing and strategies among countries is the need of the hour (Shah et al., 2006, p.1127). Mere enactment of Anti-Money Laundering Laws and regulations are not suffice, keeping pace with new technologies, techniques and ways is imperative (The Associated Chambers of Commerce and Industry of India,2013), as money launderers keep on finding new modes and methods to launder money and bluff authorities.

Dermatoglyphics of Criminals and Effects of Social Environment: A Study

The Indian Police Journal
@BPRD, MHA
BPRD Publication
www.bprd.gov.in

Indira Sudha P[1]
Dr. Jyoti Singh[2]
Dr. G.S.Sodhi[3]

ABSTRACT

Intro —Dermatoglyphics start developing in the human fetus from third month of pregnancy and are formed fully by the sixth month and are genetic in nature. Mental retardation, schizophrenia, leprosy were observed on the basis of dermatoglyphics. It can act as a predictor tool of criminal tendency as the youth displaying the tendency were found to have low IQ. It is opined by researchers that criminal behavior is influenced both genetically and environmentally. Aim: The present study's objective was to determine the role of dermatoglyphics in detection of the genetic criminal tendency. Method & materials: 100 hand prints of criminal and control were obtained and digital parameters and palmar dermatoglyphics were studied. Result: PII, Furuhatta's indexes were low and Whorl patterns were more prominent in criminals than control group, and palmar creases and ABRC, Mean at dangle were found statistically significant.

Keywords—Criminal tendency; Dermatoglyphics; genetics; Low IQ; Social Environment; Delinquency

INTRODUCTION TO DERMATOGLYPHICS

The analysis of epidermal lines on the palmar and plantar surface is termed dermatoglyphics. The term Dermatoglyphics, a Greek word, was coined by Cummins which meant skin carvings. Historically, fingerprints in ancient culture were used for adornment or as a signature on documents. Fingerprints were also found on clay seals, clay tablets and pottery in Babylon. Malphigi observed presence of spirals, ridges in fingerprints. J.C. Meyer was the primary to ascertain the distinctiveness of fingerprints. Later the work was taken up many researchers like J.E.Purkinje, Sir William Herschel, Dr. Henry Faulds, Sir Francis Galton, Cummins, Henry and others. Two Indians pioneers, Azizul Haque and Hem chandra Bose worked with Henry to arrive at the present classification system.[1]

Faces change with time but dermatoglyphics never change as they are formed within the intrauterine life of a foetus and are permanent

Author's Intro:

1 DySP (NCRB) & Research scholar, pursuing Ph.D., Institute of Forensic Science, Amity University, Noida (UP), India.
2 Assistant professor, PhD, Department of Forensic science, Amity University, Noida (UP), India.
3 Associate Professor, Ph.D, Forensic Science Unit, S.G.T.B. Khalsa College, University of Delhi, Delhi, India.

and individualistic. They are epidermal friction lines fused with sweat pores. The ridged skin is found on all primates and also the main function of it is creating traction and forming an interface between the object and the hand. Now, it is being used by investigators to ascertain the identity of an individual, especially at the scene of crime.

Dermatoglyphics has always interested scientists as having link to syndromes and diseases. Researchers studied medical disorders as down syndrome, mental retardation, Schizophrenia, epilepsy, diabetes, Leprosy, TB and many others. [2]-[8] Student counsellors with observation and experience found that talent of a student can be explored by the study of dermatoglyphics.[9].

Bali and chaube [10] applied dermatoglyphics to study criminal tendency and it was found that Palmar flexion creases, ATD angle on palm and patterns on hypothenar showed variation in experimental group to control group. With the advancement of technology, the character of crimes and therefore the number of criminals are increasing. New methods are required to predict criminals in the early stages and stop growth of criminal tendency. Large numbers of studies were conducted in various fields linking dermatoglyphics but not much research has been done in the detection of criminal tendency using dermatoglyphics as a predictor tool. Researchers derived that dermatoglyphics are inheritable and genetic in nature [11]-[12], so the possibility of inheriting criminal behavior exists.

The aim of the present study was to investigate qualitatively and quantitatively, dermatoglyphics as predictor tool of criminal tendency, by applying various digital and palmar parameters. The obtained information can often be employed in forming an information database. The delinquent children, who are at a risk and are prone to anti-social behavior and violence, can be detected from the database and taken care of by providing suitable and safe environment.

DIGITAL DERMATOGLYPHICS

A fingerprint is the reproduction of the ridges of the first phalange portion of a digit. It comprises elevations and depressions, as in a crop field. The elevations and the depressions, termed ridges and furrows respectively, tend to create a pattern. The central part of a pattern is named 'core' and the external edge is termed the 'delta'. There are different patterns formed but the only three are most important and they are Arch, Loop, and Whorl. [13].

Arches: The ridges run from end of the finger to the other end and called a plain arch. Sometimes, a tent like formation is found in the centre and is named as tented arch.

Loops: The ridges recurve and exit from the same side of entrance. There are two types. Radial and Ulnar loops, depending on the point of origin and exit of the hand. If the exit is from Ulnar bone side, they are called Ulnar loop and if the exit is from radial bone side, they are called Radial loop.

Whorl: In this pattern, the ridges appear either in concentric circles, spiral formation, combination of two loops or a mixture of two patterns within the central area. The variations are termed i) concentric whorls, ii) spiral whorls, iii) Double loop whorls, iv)

central pocket whorls v) Accidental whorls. Figure 1 exhibits common patterns.

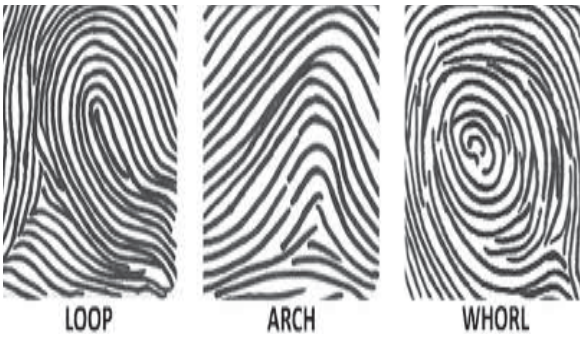

Fig:1. Common Fingerprint patterns (courtesy Research gate)

PALMAR DERMATOGLYPHICS

The palm is larger in area than a finger and has more characteristics. It is divided into three areas: Hypothenar, Thenar and Triradiate / Inter digital area. The palm has triradii, Palmar flexion creases, atd angle, a-b ridge count(ABRC) as some parameters for study. A triraidus is a meeting of three ridges stepping into three different directions, mostly at 120^0 to each other. The triradil occur below the index finger, middle finger, ring finger, and the little finger and are marked as 'a","b","c' and 'd'. One more triradius is found at the base of the palm and is called axial triraidus 't'.

ABRC: The number of ridges between the triradii 'a & b' are counted by drawing an imaginary straight line from a-b points.

ATD angle: It is obtained by drawing a line from the digital 'd' triradius to axial 't' triradius and from there to 'a' triradius in the ID area. The angle so formed is measured by keeping centre of protractor at T. The position of 't' changes and accordingly it is given values as (t', t").

Palmar Flexion Creases: The palmar lines are folds of the epidermis. They are called Heartline, Headline and Life line. They are again classified into SRBC, DRBC, TRBC based on the point of origin on the Radial side of the palm: Single Radial Base Crease (SRBC), Double Radial Base Crease (DRBC); and Triple Radial Base Crease (TRBC). Figure 2 exhibits palmar parameters.

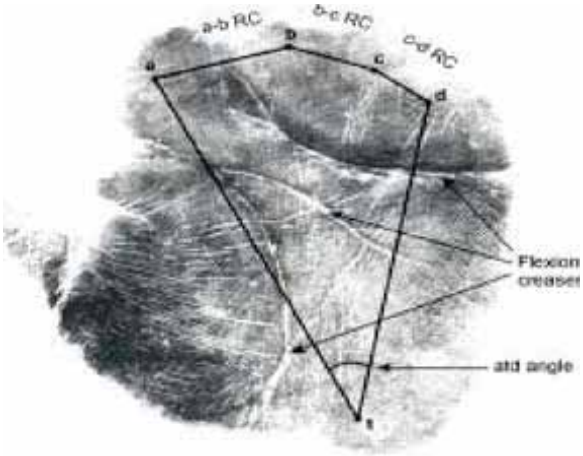

Fig:2 Palmer parameters..ATD, AB,Creases *(courtesy Research gate)*

Fig:2 Palmar Parameters

Abbreviations
ABRC: a-b ridge count
RH; Right hand
LH: Left hand
DTC: Distal Transverse crease
PTC: Proximal Transverse crease
RLC: Radial Longitudinal crease
ATD: atd angle
PII: Pattern Intensity index
F I: Faruhatta's index
DI : Dankmeijer's Index

METHODS AND MATERIALS:

For the study, a convenient sample study of 100 criminal and control group was selected. 100 clear hand print slips of RH & LH of criminals were obtained from fingerprint department, National Crime Records Bureau, India. The prints so obtained were sought

for clarity of details through light source and magnifier. Hand prints of control group were obtained from willing normal individuals known to author in the age group of 18-70. The materials used were finger and palm inking system, Standard black printers ink, roller, LCD magnifier, sheets of paper and cleaning solution.[14]

INCLUSION CRITERIA: REGISTERED CASES OF CRIMINALS WITH THE BUREAU

Exclusion criteria:

1. Deformed fingers and palm
2. scars and burns on palms
3. Partial and incomplete handprints

Procedure: Dermatoglyphics were taken by manual method suggested by Cummins. To get hand prints, the subjects were asked to scrub their hands well with soap and water. Little amount of ink was taken and spread evenly on the plate. The subjects then placed their palms facing down on the plate and inked their palms and fingers by pressing them hard. The inked hand was then placed on fingerprint sheets and hand prints were recorded. The names and sex details were noted down.[15]

Data handling: The information of criminals and control was entered within the excel sheets. The criminal group hand prints were given a separate serial number and the control group was given a separate serial number. Employing a 5 X magnifier and a light source, the hand prints were analyzed and the data found was entered against their allotted number.

Statistical analysis: The digital and palmar parameters were analyzed and tabulated. Calculations were done to find observed values as well as expected values. Statistical tools as arithmetic mean, Chi square were applied wherever necessary.

QUALITATIVE ANALYSIS:

i) Fingertip patterns: Arches(A), Loops(L), Whorls(W) frequency was studied

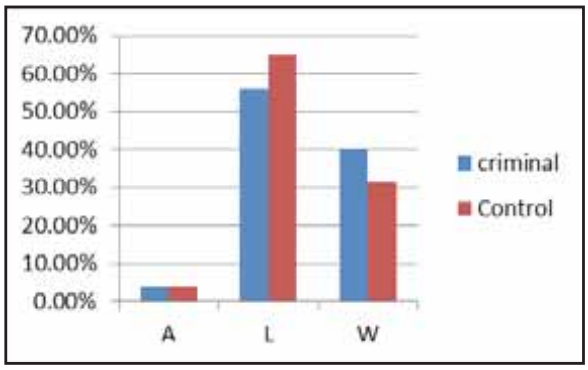
ii) Palmar analysis: Presence of triradii a,b,c,d & t was observed. Similarly the nature of origin of palmar lines was noted.

QUANTITATIVE ANALYSIS:

i) Pattern Intensity Index=
2x whorls+ loops
N(where n= total number of samples)

ii) Furuhatta's Index= $\frac{\text{Whorls X100}}{\text{Loops}}$

iii) Dankmeijer's Index = $\frac{\text{Arches X100}}{\text{Whorls}}$



iv) ATD angle: Values obtained through geometric measurements

v) ABRC: Values obtained by counting ridges between a-b triradii

RESULTS & DISCUSSION

Digital parameters:

a) FP Patterns: Whorls were found more in criminals and less in controls (40.29% : 31.22%). Loops and arches were more frequent in control groups than study group (loops 65%: 56.05% & arches 3.77%: 3.66%). Chi square values were statistically significant @0.05 level of significance. Detailed distribution of Fingerprint patterns is shown in Graph.1 below.

Graph1. Distribution of Fingerprint patterns in both the groups

b) Pattern Intensity Index: The mean PII values of criminal group (13.67) were found to be higher than Control group(12.74).

c) Furuhatta's Index: The mean values of whorl-loop index for criminal (72.02) were found to be more than control group (48.03).

d) Dankmeijer's Index: The values of arch-whorl index for criminal (9.09) were found to be less than control group (12.09). Table.1.shows values of digital Dermatoglyphic indices.

Table:1 Digital Dermatoglyphic indices

Index	Criminal group	Control Group
PII	13.67	12.74
F I	72.02	48.03
D I	9.09	12.09

PALMAR PARAMETERS:

a) **ABRC:** It had been observed that the mean values for ABRC in criminal group (36.40 with SD 5.4)were higher than control RH (35.27 with SD of 5.6) and mean AB-RC on left hand of control group (37.21 with SD 6.42) was marginally beyond LH criminal group (37.07 with SD 5.01). The chi square values for both hands were found to be statistically significant @0.05 level of significance.

b) **Creases:** Single radial base creases were found more in criminals than non-criminals groups. SRBC shows higher values in criminals (8.34%) as compared to the Control group (0%) whereas Double Radial Base Crease (DRBC) & Triple Radial Base Crease (TRBC) show greater values in control (86.1%) & (13.9%) than criminals group (78.33%) &(13.3%). The Chi-square values are significant for both right and left hand @ 0.001 and support crease association with criminality.

c) **ATD angle:** It was observed that ATD angle was in right hand was @ 41.56 with SD 7.37 and left hand @ 41.90 with SD 7.53 in criminal group whereas RH of control was @39.63 with SD 5.40 and LH @ 39.90 with SD 5.34. The value of chi square. was statistically significant @0.01 level of significance. All the palmar dermatoglyphic values are displayed in Table 2.

Table:2. Different Dermatoglyphic Parameters						
S. no.	Parameter	Control		Criminal		X2 Value
		RH	LH	RH	LH	
1	FP Pattern (Whorl only)	31.98%	30.46%	44.62%	35.96%	Significant @0.05
2	ATD angle	39.63 with SD 5.40	39.90 with SD 5.34	41.56 with SD 7.37	41.90 with SD 7.53	significant @0.01
3	A-B RC	35.27 with SD of 5.6	37.21 with SD 6.42	36.40 with SD 5.4	37.07 with SD 5.01	Significant @0.05
4	Flexion Crease	SRBC -0% DRBC-86.1% TRBC-13.9%		SRBC- 8.34% DRBC-78.33% TRBC-13.3%		significant @0.001

DISCUSSION

In the present study, whorl pattern was found as the more frequently occurring pattern among criminals. It had been observed by Madhumitha et al, [16] that the whorl patterns of finger prints were found more in low intelligence quotient group. The results of our study were in accordance to the studies conducted by some researchers who found whorls more common than loops and arches. [17] -[19]

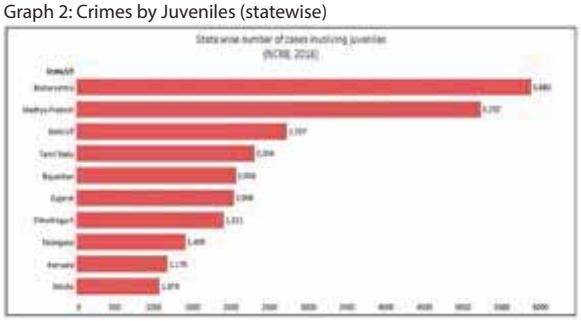
Pattern intensity index (PII) indicates presence of triradii in the sample group. Arch doesn't possess triradii, so it had not been considered. Increased value of PII indicates higher number of triradii, which occur more in whorl patterns. Within the present study, criminal group exhibited higher values of triradii than control group.

Higher values of Furuhatta's Index (whorl-loop index) in criminal group indicated more number of whorl patterns and fewer numbers of loops within the study group. Lower values of Dankmeijer's Index in criminal group indicated less number of arches and higher number of whorls in study group than control group. The current study is in accordance with the study done by Biswas, [17] Banik et al.[18]

The mean values for ABRC were found to be were higher in RH of criminal group than control. Madhumitha et al observed that intelligence inversely varies with ABRC and reduces with increase in values of ABRC. [16]. Palmar flexion creases when studied, showed that single radial base creases were more prevalent in criminals than Double Radial Base Creases & Triple Radial Base Creases. Bali & Chaube observed the same in their study [10].

Table:3 ATD Values for Criminal and control group				
ATD	Criminal	Criminal	Control	
	RH	LH	RH	LH
<30	1	2	1	0
51-55	4	5	2	2
56-60	1	2	0	1
61-65	2	2	0	0
66-70	2	1	0	0

It had been found [3] that standard values of ATD are between 30^0-60^0 and ATD values <30^0 and >60^0 revealed mental retardation and also that if the value of ATD is smaller and in the range of 30^0-60^0, brain responded faster. In the present study it was observed that in criminals the atd values exhibited <30 and >60 were more in number than in the control group, as shown in Table.3. It was observed by Madhumitha et al that ATD angle was highest in low IQ group [16].



It can be corroborated by the above results that IQ and criminal tendency are related. Karestan C. Koenen et al [20]observed in his study that low IQ results in anti social behavior. The anti social behavior becomes a criminal act when it harms others.

SOCIAL ENVIRONMENT AND EFFECTS ON CRIMINAL BEHAVIOUR

Most violent behavior shown by juveniles is behavior witnessed either at home or school. As per statistics of 'Crime in India 2018'

published by NCRB, 31,591 crimes were committed by juveniles and Maharashtra & Madhya Pradesh topped the list as shown in Graph.2.[21] and also that 99.3% of the juveniles were boys within the age group of 16 to 18. Early childhood exposure to violence increases the danger of violent behavior by an adolescent. It had been observed that about 1% of the juveniles, as per statistics, were below 12 years. Majority of the crimes by juveniles were offences affecting human body and property.

Graph 2: Crimes by Juveniles (statewise)

REASONS FOR JUVENILE CRIME:

1) **Home environment**: Family has a stabilizing or disturbing influence on an individual. It either teaches children to care for others, respect their needs and rights or teach to be aggressive, anti-social and not caring. Children who grow up in homes, with conflicting parents, poor family management, excessive discipline by parents, high family mobility, mal-nourishment, no emotional attachment towards any parent or maltreatment, the child develops negative behavior as a way of life. A child who has grown up in happy family surroundings learns to develop positivity as a way to unravel problems. Positive parenting helps and acts as a buffer to forestall development of delinquent behavior. A child of law abiding parents has greater likelihood of becoming a law abiding citizen than a child with criminal parents.[22]

2) **School environment:** School is sort of a second home for the child. He comes to school to flee the monotony of the house and also to sharpen his skills. But because of high student/teacher ratio, excessive syllabus and other work pressures, teachers tend to ignore children who are underachievers. As a result, the child is on his own to deal with bullying, harassment

by peer group and hence, stays less attached to the school. [23]

3) **Poverty**: A powerful association had been found between poverty and crime. Children grown up in poor atmosphere find disharmony within the family, a daily feature. Parents lack time to bond with children and are inattentive to their emotional and physical needs. Income inequality is alleged to be the mother of crime. [24]

4) **Neighborhood / Community**: High levels of crime within the neighborhood, easy availability of arms and ammunition, poor housing, lack of mentors are a number of the factors contributing enhancement of deviant behavior. Limited education, lack of coaching/ training, less job opportunities pushes the youth towards violent behavior to survive.[23]

CONCLUSION

With the assistance of dermatoglyphics, the criminal behavior can often be predicted within the early stages of life of an individual. The growth of the criminal tendency is related to the available environment. Emotional and behavioral disorders (EBD) coupled with learning disabilities, poor problem-solving skills, poor social skills were enhancers of criminal behavior. The cumulative effect of the social environment and the higher the risks to which a child is exposed, the greater is the influence on the criminal behavior.

Prevention is the most plausible strategy to curb delinquency of children.[25]-[26] Children, who are at-risk for delinquency may be detected with the assistance of the predictor tool .In the present study, though absolute proof could not be obtained because of small sample size but results do support the hypothesis that dermatoglyphics plays a role in detecting criminal tendency. Dermatoglyphics could be a preventive, non-invasive tool to explain, compare and contrast, and predict events. Conducting additional studies involving larger samples of dermatoglyphics can give the required outcome.

ACKNOWLEDGEMENT

The authors are grateful to all the individuals for their co-operation in giving hand prints. In addition, authors are grateful to National Crime Records Bureau, India for providing support in making available hand prints slips of criminals.

Lying and Lie spotting: Can brain waves detect lying and whether the use of EEG for theta band analysis is proficient in catching liars?

Harshawardhan Kuruganty*

ABSTRACT

Some people can lie confidently and never get caught, but a few are gifted with abilities to catch such people. The exciting question, asking how people are even capable of doing such things is explored in this research. In experiment-1 of the study, 40 students participated in an experiment where their skills to lie and catch liars was explored; an effort was made to relate them to their personalities. In experiment-2, 10 students were asked to lie while they were equipped with an EEG apparatus. Results confirmed that it is not necessary for a liar to be a lie spotter in all the cases and that the presence of a video teaching how to catch a liar could not affect the natural abilities of a person. An idea of relating a human's short term memory to the theta brain waves was highlighted and then the results were compared to verify the presence of the same particular band while lying.

Keywords: Deception, Personality, lie spotting, Brain signaling, Electroencephalography

INTRODUCTION

We have several decades worth of studies and theories on lie detection and related fields. Listening and analyzing speech, observing behavioral cues are widely used to try and detect lying and deception. But from the score of knowledge present, we can come to a conclusion that these tests are not reliable and do not form the basis for irrefutable conclusions. Do lies often remain undetected because people never even attempt to uncover it? Do they even know what to look for if they do try? An aptly named phenomenon, the *ostrich effect* (Vrij, 2008a) by Paul Ekman (1985/2001), suggests much the same. It is again emphasized that certain so-called wizards have extraordinary lie spotting skills but others don't (O'Sullivan and Ekman,2004). The objective of this present work is an attempt to know whether people can be trained to do so and even more importantly if they can relate this to extraversion or similar common personality traits?

Author's Intro:

* Indian Institute of Technology, Kharagpur, INDIA.

According to Gonza et al.(2001) people are expected to be good actors if they are likely to lie every day and be successful in doing it. They made a reasonably justifiable hypothesis that the personality constructs of *Acting, Manipulativeness, Anxiousness, Impression Management and Sociability* could have an effect on how people may lie, and was supported to a certain extent. The correlation between personality and deceptive ability is proven by well-documented works which go back up to the late 80s (Riggio et al., 1988) by a simple 16 personality test. The stratification of personalities and their relationship with deception can be observed with ease if one has more scales (16 in this case) to point them out. It was conclusive on correlating guilt (O scale) and self-control (Q3 scale) but failed to comment on the more common *extraversion* and reserved scales. An old research relating to '*extraversion and detection of deception*' (Bradley and Janisse, 1980) concluded that extroverts were more likely to be identified whether they are innocent or guilty as compared to introverts who were equally sensitive to past and present crime related events, unlike extroverts.

A videotape experiment carried by Johnson et al. (2005) was done on premature actors throws some interesting light on the *theory of mind,* concluding that individuals with high self-awareness were more effective in deceiving others. This particular finding verifies the results of Riggio et al. (1988), but had the same drawback, one of relating deception to a more common trait (like extraversion or neuroticism) as pointed out by Gudjonsson (1982) on the findings of Bradley and Janisse (1980). Vrij et al. (2010) suggested that pitfalls and opportunities in nonverbal and verbal lie detection were more than a guide on deception and more over they excellently bridged the gap that had come between the present generation and Paul Ekman's study with a pervasive domain. Much earlier the same researcher in (2007), tried to explain the facilitation of cognitive load using the techniques of recalling an event in reverse order and explored it adequately.

Gudjonsson (2011) reasonably argues that the personality traits like suggestibility, compliance and acquiescence have an observable amount of correlation with deception, irrespective of whether it is done by you or to you. This is interesting as his traits were more general, but their capabilities to catch a liar was untouched. Explored in Ein-Dor et al. (2017) with the help of two experiments, the "*Bullshit*" game and a study which checked whether a partner catching an extramarital affair had any affair before, is the age old cliché "*it takes a thief to know a thief*". This begs the question whether it is really so, in a general sense?

Discovery of brain waves shook the conventional lie detecting and it has been argued that one could detect deception by studying brain activity. As of now, revolutionary and conclusive literature findings are not eminent on deception and brain activity in a more suggestive and definite way. A very recent article (Khadelwal et al., 2016), which points out various different existing and upcoming deception detection techniques and technologies. These include the famous *Polygraph testing, Functional magnetic resonance imaging, Heart rate variability, Radar based lie detection and*

*finally EEG (electroencephalogram)***.** Out of all these techniques, only a few like EEG do not depend on non-specific physiological vectors (e.g., heart rate) and the doubt is certain that people having *Dark Triad* personalities would challenge the accuracy of existing Polygraph or any other techniques that have come to rely on non-specific physiological vectors for detection of deception though studies like Lykken, (1978) beg to differ.

Hence, there is a need to understand a simpler and reliable cue in brain activity when a person is deceiving, similar to the way a person sneezes during a cold. Just from the idea that lying demands more of our cognitive attention than does truth telling (Vrij et al., 2008), it would be reasonable to hypothesize that the formulated lie is dealt by the short-term memory in the liar's mind. This assumption of short-term memory related to lying may lead to more scope of future research if proven, as there are at least a few articles which talk about the relationship between *theta* waveband and short term memory like (Vosskuhl et al., 2015). An exciting work had been already shown by Kubo & Nittono (2009), where using EEG and P300 it was shown how the intention to conceal has a huge impact on deception detection.

The first experiment of this study focuses on relating both the lying and lie-spotting abilities of a person to his personality using the more common and famous test, the *Big Five Personality* questionnaire. As one can see many findings illuminate on the abilities to lie or deceive but the findings do not say much on the lie-spotting skills of a person. Hence, further relation to their personality and lie-spotting ability is out of the question. Whereas, the second experiment of this work tries to explore the presence of *theta waveband* in the EEG tests done on a lying subject.

METHOD

Experiment 1

In Experiment 1, we tried to analyze and understand a pattern between the personality of a person and deception using more common traits like extraversion. The ability of a person to lie and catch liars was equally explored using the experiment which aptly designed to achieve the aim. The early studies by Riggio et al. (1987) and Gudjonsson (1981) discuss this aspect, but later many other studies like the videotape experiment by Johnson et al. (2005), facilitation of cognitive load using the techniques explained in the literature review by Vrij et al. (2007) and the experiments of Ein-Dor et al. (2017) all of these point to the fact that there indeed exists a certain pattern, a correlation between the personality of a person and deception. The experiment design also challenges the findings of the study (Ein-Dor et al., 2017), whether it is true that it takes an insecure liar to catch another liar. For that, we took a subject pool, randomly divided them into two groups, control and experimental, verified how well they could lie or catch a lie in the presence and absence of a helping agent.

Participants

The participants were 40 students from the Indian Institute of Technology located in Kharagpur, West Bengal, India. They were the undergraduate and post graduate students

who belonged to the age group of 19-28, (M = 19.54, SD = 1.324). They volunteered to participate in the study with proper consent.

Materials and procedure

The students were at first given a *Big Five Personality* questionnaire for personality assessment. We have selected *Big Five* not just because it is widely used. It also directly concludes the scores of the required personality traits (i.e., *extraversion, agreeableness, neuroticism, openness and conscientiousness)* as we aimed.

Students from both the control and experimental groups were given serial numbers and were paired with each other after completing the questionnaire. Instructions were given to the students about how to proceed with the experiment. They were given a set of 8 questions each and were clearly instructed that they needed to ask and answer the same. The condition present was that odd serial numbered students would lie for the odd numbered questions and even serial numbered students to the even questions. It was made sure that all the participating students were not aware of this control condition. The experimental and control groups were separated; the control group was taken to a separate room where they continued the experiment, whereas the experimental group was shown a video (10 min) that instructed them on how to spot liars and were paired to complete the experiment.

RESULTS AND DISCUSSION (EXPERIMENT 1)

The scores from the *Big Five personality test* are calculated and the means and standard deviation for all the personality traits are estimated as follows: *Extraversion* (M = 18.70, SD = 7.154) , *Agreeableness* (M = 26.12, SD = 6.734) , *Neuroticism* (M = 22.12, SD = 4.675) , *Openness* (M = 16.52, SD = 5.67) *and Conscientiousness* (M = 24.7, SD = 6.454).

Later on, these scores and the number of uncaught lies told and lies caught were correlated to arrive at various inferences. From **Table 1** it can be seen that there was a significant negative correlation between lies told and lies caught. It implies that more is the ability to lie, less is the ability to catch lies. This is totally in contrast with previous studies (Ein-Dor et al. 2017). Secondly, the lies caught and uncaught lies told by each person is observed and noted. Briefly speaking, in a nut shell, we know which person was asked to lie for which particular question and if he was successful doing that he is a better liar and if he wasn't there the other person was a better lie spotter. The individuals who were able to lie or catch liars at least 75% of the time were separated and analyzed.

Table 1

Correlation among Personality traits, Lies uncaught and Lies caught (N=40) (Experiment 1)

Correlation	Uncaught Lies	Lies caught
Extraversion	-0.222	0.049
Agreeableness	-0.207	0.019
Conscientiousness	0.020	0.058
Neuroticism	-0.003	-0.275
Openness	0.020	-0.002
Uncaught Lies Told	1	-0.475**
Lies caught	-0.475**	1

**p <0.01

A minute increase of 1% was seen in the

experimental group as a whole while lying when compared with the control group. Whereas in lie spotting, surprisingly control group showed an increase of 1% than the experimental group. The peculiar result which was seen among the people who succeed in lying for at least 75% of the question is that few subjects (59 % among the class of 40) in the experimental group have used the video for better lying than lie spotting.

To test the significance of the difference between the two groups in terms of the effect of priming by the video on the ability to lie as well as spot lies, Mann-Whitney U test was performed. The results clearly showed that there was no significant effect of the video on the ability to either lie well or to catch a lie well, as there was no difference between the two groups.

The entire results of experiment 1 were as follows: Out of 11 participants who did lie perfectly 75% of the time, only 2 had very low scores on the scale of Extraversion (below 15 from a maximum of 40). Out of 9 participants who caught lies 75% of the time, only 1 had a low score on Extraversion scale while 3 of them scored very high (above 30). It might be an indication that extroverts are better liars and lie-spotters than introverts.

An interesting observation made was that 7 out of 20 students of the experimental group (30% approximately) were better at lying than spotting a lie (they lied 75% of the time), whereas there were only 4 in the other group who did better lying than spotting a lie. The video, in this case, might have acted as an agent to increase the ability to deceive well. Does this show the importance of one's self-concern about hiding their facts well more than to check the same in others?

EXPERIMENT 2

The second experiment of this article tries to explore the presence of *theta waveband* in the *EEG (electroencephalogram)* tests performed on a lying subject. Though lie detection using EEG is not a novel idea but the study of *theta waves* for the same is not as familiar compared to the former. The experiment was aimed to search for any possible and new observational methods for lie detection. The possible connection between *theta* wavebands and short-term memory was also explored by many others like Vosskuhl et al. (2015). An exciting work had been shown by Kubo and Nittono (2009), where using EEG and P300 it was shown how Intention to conceal has a huge impact on deception detection. The recent work by Khandelwal et al. (2016), also points out that in upcoming techniques on deception detection an EEG will be very useful.

PARTICIPANTS

The sample comprised 10 participants (5 men and 5 women), who were the undergraduate and post graduate students between the age group of 20 and 25 years, (M = 25.45, SD = 2.477). They volunteered with proper knowledge of the experiment and consent.

INSTRUMENTS

An electroencephalogram (EEG) was used to find the electrical activity of the brain and data were collected from 64 scalp sites. The sampling rate was 256 Hz. The data from each participant was recorded with the help of a computer.

MATERIALS AND PROCEDURE

The experiment was designed to mimic the present day's polygraph test, but was never aimed at catching liars. As the study of how *theta waveband* is directly related to short term memory of a person is not yet quite strong, none can say that the presence of *theta waves* can be fully indicative as to whether the person is only using his short term memory or lying as a matter of fact.

The participants were equipped with the EEG apparatus and they were provided with two sets of questions. Utmost care was taken in keeping the participant unaware of the questions until the apparatus was installed. The experiment was quite simple, in that the first set of questions they were asked were simple questions. For example, " do you believe that the earth is flat? ", " do you believe in God? ". The second set consisted of more personal questions like "No offense!, Are you a virgin?"," would you hit your children in future?" and so on.

The only instruction given to them was to lie in every alternate question starting from the first one in the first set and select any four questions which they preferred in the second set. As there were 8 questions in each set the total number of truths and lies told were equal in each and every case. Sufficient gap was given between set one and set two, and participants were requested to restrict their movement. The questions were answered in only Yes and No, so that later it could be easy to analyze the data without significant noises or artifacts.

The sample rate was 256Hz and as *theta band* exists only within 4-7 Hz, the current results were evaluated for the presence of the same. For the first set, it was known that for which questions the participant was lying and the choices were ticked on the paper by the participant for the second set. As declared earlier, we were only interested in observing the presence on the assumed band when the person was lying so the result for the rest of the questions was ignored.

RESULTS AND DISCUSSION (EXPERIMENT 2)

The experiment roughly took 2-3 minutes for each participant. We had at least 30,000 data points to analyze and so Wavelet Analysis was used given the sampling rate of (256 Hz). The purpose of this Wavelet analysis was to analyze and compress a signal. In this process, the signals were first analyzed and representations of simplified versions were produced in MATLAB. The data were reconstructed with approximations at given levels and the data were clustered for comparing with each question. As removal of the noises was unavoidable, it was done much before the entire analysis for accuracy.

Once the *theta band* was separated, the data was approximated with higher order polynomial fitting and partitioned into two sets of 8 questions each and then compared to the choices made by the participant.

The probability of congruence of the choices made and the presence of the *theta waveband* was at least 50% in all the cases and 75% for 8 out of 10 participants with (mean= 2.9, SD= 0.567). But the possibility of occurrences of false positives was inevitable and was at least 1 in each case and went up to 3 for one subject whose (mean= 1.5 and SD= 0.707). A sample data and analysis are shown in **fig 1**

for a brief idea.

Fig 1: Comparision of the results from the choices given by the individuals.

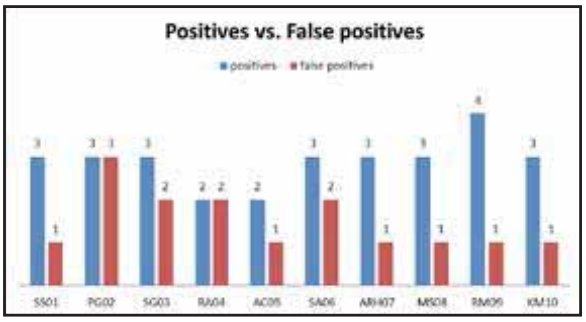

Fig. 2: Plot showing Positives and False positives observed among the subjects (N=10) (Experiment 2)

The idea of the experiment was never to read EEG for clues of deceit rather understand why the participant was anxious or in this case using his short term memory. If at all the answer to the question was decided well in advance it should be in his long term memory. Though this particular experiment was built on the basis of some infant findings we believe that there would be a huge scope of future study along this perspective. From **Fig. 2,** one can see that just the idea of why the false-positives present in the first place itself are definitely fascinating and thought-provoking.

Discussion

No appropriate connection was found between a liar and a lie spotter which was repudiating the discoveries of Ein-Dor et al, (2017), as his research was more on a concise topic, where people either know each other or the game very well. Our first experiment gave equal chance to each and every individual to show whether the participant got skills to lie well or catch a liar. The act of using the lie-spotting tips for better lying rather than catching suggests that one's self-awareness comes way earlier than any motivation to understand or suspect others.

The article on *Dark Triad and deception* by Azizli et al. (2016) helped reasonably to gain a perspective but was relatively incongruent with our study as we were not specific on personality standouts. Individuals who used their instincts performed equally well compared to those who were educated before at lie-spotting. Concluding that both lying and lie-spotting are mostly based on natural instincts and cannot be easily taught, would be as presumptuous as commenting that the nature of a person is more prominent than nurture in the above context.

As expressed earlier, the desire of the investigation in experiment 2, was never to peruse EEG for pieces of information of double dealing rather comprehend why the member was on edge or for this situation utilizing his short-term memory. On the off chance that at all the response to the inquiry was chosen well ahead of time it ought to be in his long term memory and simply, why the false-positives exhibited in any case are certainly entrancing and interesting.

ACKNOWLEDGEMENTS

The author is very grateful to M. K. Mandal, Rishabh Rai, A. Routray and N. Datta for their constructive comments on the earlier draft of this article. He would also like to express his sincere gratitude to people like S. Chakraborty

and A. Basu from the Department of Electrical Engineering and to people like K. Mishra and S. Goswami from the Department of Humanities and Social Sciences, IIT Kharagpur.

ILO Convention on the Elimination of Violence and Harassment in the World of Work: A Much Awaited Step

The Indian Police Journal
@BPRD, MHA
BPRD Publication
www.bprd.gov.in

V. K. Ahuja*

ABSTRACT

The Convention on the Elimination of Violence and Harassment in the World of Work was adopted on 21 June 2019 with non-binding guidelines to make the "world of work free from violence and harassment". The Convention has been drafted in a comprehensive manner in terms of the meaning of violence and harassment, worker, world of work, etc. A workplace which is free from violence and harassment ensures equality, respect, dignity, non-discrimination, etc. A robust system regarding workplace at a national level will help States to fulfil their human rights obligations under human rights treaties.

KEY WORDS

Violence and harassment, victims, world of work, domestic violence, vulnerable groups, ILO, workers, Convention, Recommendation, workplace policy, awareness

INTRODUCTION

"What we have adopted today is a roadmap, a compass to take us forward in the future of this Organization, because the future of work is the future of our Organization".

-Guy Ryder
ILO Director-General

The increasing reaction from international community against "violence and harassment in the world of work" made it clear that international action in the form of a legally binding instrument was imminently required as a safe workplace ensures equality and dignity among other things. According to an estimate, women are not protected from sexual harassment in the workplace in 59 countries. Further, legal protection is lacking for them in 70% of economies in the "Middle East and North Africa, half in East Asia and the Pacific, and one-third in Latin America and the Caribbean". About 500 million women have been potentially affected around the world.[1]According to another estimate, 35%

Author's Intro:

1 Professor, Faculty of Law, University of Delhi, Delhi – 110007.

of women over the age of 15 years have experienced "sexual or physical violence at home, in their communities or in the workplace."[2] It was realized that higher level of protection was needed to women workers than what has been provided under various treaties on human rights more particularly the International Covenant on Economic, Social and Cultural Rights (ICESCR) and the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW).

With an objective to make the workplace "free from violence and harassment", the ILO took a concrete step in 2009 by publishing its special report on "Gender Equality at the Heart of Decent Work". The Report called for the prohibition of violence and harassment at workplace. Subsequently, many reports were adopted at ILO to end violence and harassment for all the workers. It was decided by the Governing Body of ILO in October 2015 to bring on the agenda of the 107th Session of its Conference the item "Violence against women and men in the world of work". The Conference was scheduled to be held in the month of June 2018.

The ILO published a *Brown Paper* report on "Ending Violence and Harassment in the World of Work" in August 2018. The report included the "proposed texts of the Convention and its complementing Recommendation". Comment and feedback were invited on the report by the ILO member States. After receiving comments and feedback, the second discussion on Convention took place in June 2019 and the Convention on the Elimination of Violence and Harassment in the World of Work was adopted on June 21, 2019.[3]

At the same General Conference of ILO, it was decided to adopt certain proposals in the form of Recommendation. The provisions of "Violence and Harassment Recommendation, 2019" so adopted was to supplement the Convention. In other words, the Recommendation "*should be* considered in conjunction" with the Convention. It is however to be noted that Convention is *legally binding* instrument that may or may not be ratified by States, whereas Recommendation serves as *non-binding guidelines*.[4] In other words, Violence and Harassment Recommendation which is non-binding in nature and accompanies the Convention provides guidance only on the Convention's obligations.[5]

The Preamble to Convention recognizes the "right of everyone to a world of work free from violence and harassment, including gender-based violence and harassment". It also recognizes that such violence and harassment which can "constitute a human rights violation or abuse" and is also a "threat to equal opportunities", is "unacceptable and incompatible with decent work".

Members are responsible "to promote a general environment of zero tolerance to violence and harassment". The Preamble acknowledges that "gender-based violence and harassment disproportionately affects women and girls" and also recognizes that "an inclusive, integrated and gender-responsive approach" is required to end such violence and harassment.

DEFINITION AND SCOPE OF CONVENTION

The term "violence and harassment in the world of work" is defined in the Convention to mean "a range of unacceptable behaviours and practices, or threats thereof, whether a single occurrence or repeated, that aim at, result in, or are likely to result in physical, psychological, sexual or economic harm, and includes gender-based violence and harassment".[6] A pragmatic approach has been adopted in the Convention while defining the term *violence and harassment*. The definition will cover *inter alia* "physical abuse, verbal abuse, bullying and mobbing, sexual harassment, and threats and stalking."[7]

The Convention gave a comprehensive meaning to the term *violence and harassment* which need not be *gender-based* in all the cases. The term, however includes "gender-based violence and harassment". Further, "gender-based violence and harassment" is defined to mean "violence and harassment directed at persons because of their sex or gender, or affecting persons of a particular sex or gender disproportionately, and includes sexual harassment".[8] The "gender-based violence and harassment" may also target the transgender as the term includes *sex* or *gender*.

The Member States are required to bring their national laws in conformity with the Convention provisions. The definitions of "violence and harassment in the world of work" and "gender-based violence and harassment" are to be included in the national laws to comply with Article 1. The Convention however, provides that the aforesaid definitions in national laws "may provide for a single concept or separate concepts".[9]

The scope of Convention is very wide as *inclusivity* is the central point of it. In other words, the Convention protects each and everyone who works, whatever his status may be, and irrespective of the sector - whether "public or private"; kind of economy - whether "formal or informal" and the areas - whether "urban or rural", in which he works.[10]

According to Article 2, the persons who are protected by the Convention are "workers and other persons in the world of work, including employees, persons working irrespective of their contractual status, persons in training, including interns and apprentices, workers whose employment has been terminated, volunteers, jobseekers and job applicants, and individuals exercising the authority, duties or responsibilities of an employer". The persons who are entitled for protection under the

8 Article 1 (b), ILO Convention, 2019.

9 Id., Article 1 (2).

10 Shauna Olney, "ILO Convention on Violence and Harassment: Five Key Questions" available at https://www.ilo.org/global/about-the-ilo/newsroom/news/WCMS_711891/lang--en/index.htm last visited on 12 June 2020.

Convention include those persons also who are not a part of the organization yet such as job seekers as well as job applicants. The provision therefore has been drafted in the most comprehensive manner to rule out any possibility of misinterpretation of provision.

The Convention is applicable to "violence and harassment in the world of work" which occurs in the course of work; which is linked with the work; or which arises out of the work - (i) "in the workplace"; (ii) "in places where the worker is paid, takes a rest break or a meal, or uses sanitary, washing and changing facilities"; (iii) "during work-related trips, travel, training, events or social activities"; (iv) "through work-related communications, including those enabled by information and communication technologies"; (v) "in employer-provided accommodation"; and (vi) "when commuting to and from work".[11]

The Convention thus, is applicable to violence and harassment which occurs in the "course of work"; which is "linked with the work"; or which arises "out of the work". Not only that, the Convention is also applicable to violence and harassment which takes place "during work-related trips, travel, training, events or social activities". Realizing the fact that work need not necessarily take place at a physical workplace and there may be work through virtual platforms, the Convention has rightly covered "work-related communications, including those enabled by ICT".[12]

CORE PRINCIPLES

Each Member is required to "respect, promote and realize the right of everyone to a world of work free from violence and harassment". In this regard, Members are also obligated to adopt "*aninclusive, integrated and gender-responsive approach*" in accordance with their national law and "in consultation with representative employers' and workers' organizations". The approach which will be so adopted, is to take into account violence and harassment involving "third parties", e.g. "clients, customers, service providers and patients" because they can also be "victims as well as perpetrators".

The aforesaid approach is to include - (i) "prohibiting violence and harassment in law"; (ii) ensuring that "violence and harassment" are addressed by relevant policies; (iii) "adopting a comprehensive strategy in order to implement measures to prevent and combat violence and harassment"; (iv) "establishing or strengthening enforcement and monitoring mechanisms"; (v) "ensuring access to remedies and support for victims"; (vi) "providing for sanctions"; (vii) "developing tools, guidance, education and training, and raising awareness, in accessible formats as appropriate"; and (viii) "ensuring effective means of inspection and investigation of cases of violence and harassment".[13]

The Violence and Harassment Recommendation, 2019 suggests that "in adopting and implementing the *inclusive, integrated and gender-responsive approach*" as aforesaid, the Members should, where appropriate, "address violence and harassment in the world of work in labour and employment, occupational safety and health, equality and non-discrimination law,

11 Article 3, ILO Convention, 2019.

12 Shauna Olney, "ILO Convention on Violence and Harassment: Five Key Questions" available at https://www.ilo.org/global/about-the-ilo/newsroom/news/WCMS_711891/lang--en/index.htm last visited on 12 June 2020.

13 Article 4, ILO Convention, 2019.

and in criminal law".[14]

The Convention thus, obligates Members to adopt a comprehensive approach to ensuring a "world of work free from violence and harassment". The approach not only includes prohibiting violence and harassment, access to remedies and support for victims, provisions for sanctions, inspection and investigation, but also "education and training, raising awareness in accessible formats". *Accessible formats* means in an alternative manner or alternative form. By using the words, in *accessible formats*, the Convention has also taken care of the *visually impaired people*(VIP). The Marrakesh Treaty to Facilitate Access to Published Works for Persons Who are Blind, Visually Impaired, or Otherwise Print Disabled, 2013 (Marrakesh VIP Treaty) defines *accessible format copy* as "a copy of work in an alternative manner or form which gives a beneficiary person access to the work, including to permit the person to have access as feasibly and comfortably as a person without visual impairment or other print disability …".[15] The term may include various formats such as Braille, talking books, Daisy, digital formats, large print, etc.[16]

In addition, Article 5 also requires Members to "respect, promote and realize the fundamental principles and rights at work, namely freedom of association and the effective recognition of the right to collective bargaining, the elimination of all forms of forced or compulsory labour, the effective abolition of child labour and the elimination of discrimination in respect of employment and occupation, as well as promote decent work."

The Violence and Harassment Recommendation, 2019 provides that it should be ensured by Members that all employers and workers that are "more exposed to violence and harassment", should fully "enjoy freedom of association and the effective recognition of the right to collective bargaining consistent with the Freedom of Association and Protection of the Right to Organise Convention, 1948 (No. 87), and the Right to Organise and Collective Bargaining Convention, 1949 (No. 98)". In other words, the Recommendation suggests that Members of this Convention should also take into account the provisions of aforesaid Conventions of 1948 and 1949 irrespective of the fact whether they are parties to these two Conventions or not. Since the Violence and Harassment Recommendation, 2019 is not a binding instrument as such and only recommendatory in nature, therefore Members are at liberty to accept or not to accept the provisions of the Recommendation.[17]

In addition to above, as per Recommendation, Members should "promote the effective recognition of the right to collective bargaining at all levels as a means of preventing and addressing violence and harassment". They should also mitigate "the impact of domestic violence in the world of work". They should also support such type of collective bargaining; and for this purpose they should disseminate all relevant information, trends and practices of collective agreements.[18]

17 Provision 3, Violence and Harassment Recommendation, 2019.

18 Id., Provision 4.

The Members also have the obligations to ensure through their laws and policies, "the right to equality and non-discrimination in employment and occupation, including for women workers", as well as for workers belonging to vulnerable group(s).[19] It is recommended by Provision 13 of Violence and Harassment Recommendation, 2019 that "the reference to vulnerable groups and groups in situations of vulnerability" should be interpreted "in accordance with applicable international labour standards and international instruments on human rights". Vulnerable groups may include e.g. migrant workers, disabled persons, transgender, old age person who are working.

The Recommendation further adds that instruments of the ILO on *equality and non-discrimination* should be taken into consideration by Members in their national legal regime. These ILO instruments may include the Equal Remuneration Convention (No. 100) and Recommendation (No. 90), 1951, and the Discrimination (Employment and Occupation) Convention (No. 111) and Recommendation (No. 111), 1958.[20]

PROTECTION AND PREVENTION

Article 7 of the Convention requires Members to "adopt laws and regulations to define and prohibit violence and harassment in the world of work, including gender-based violence and harassment".

Appropriate measures for preventing violence and harassment in the world of work are required to be taken by Members. The aforesaid measures to be taken by Members will include:

(i) To recognize for public authorities the important role in the case of informal economy workers;

(ii) To identify the sectors/occupations and work arrangements in which workers as well as other concerned persons are more exposed to violence and harassment[21]; and

(iii) To take measures to protect such persons effectively.[22]

The Convention obligates Members "to adopt laws and regulations"which will require "employers to take appropriate steps commensurate with their degree of control to prevent violence and harassment in the world of work, including gender-based violence and harassment". The employers shall also be required to do certain acts to the extent reasonably practicable - (i) to adopt and implement a "*workplace policy* on violence and harassment"[23]; (ii) to take into account "violence and harassment and associated psychosocial risks in the management of occupational safety and health"; (iii) to "identify hazards and assess the risks of violence and harassment"[24] and "take

19 Article 6, ILO Convention, 2019.

20 Provision 5, Violence and Harassment Recommendation, 2019.

21 As far as identification of sectors/occupations is concerned, this has to be done in consultation with the organizations of employers and workers concerned. Provision 9 of the Violence and Harassment Recommendation, 2019 recommends that appropriate measures should be adopted by Members for those works in which there is likelihood of more "exposure to violence and harassment". These works may include "night work, work in isolation, health, hospitality, social services, emergency services, domestic work, transport, education or entertainment".

22 Article 8, ILO Convention, 2019.

23 This is to be "done in consultation with workers and their representatives".

24 Regarding "workplace risk assessment" Members should take into consideration factors that "increase the likelihood of violence and harassment, including psychosocial hazards and risks". The emphasis should be on the "hazards and risks" that - (i) "arise from working conditions and arrangements, work organization and human resource management"; (ii) "involve third parties

measures to prevent and control them"; and (iv) to "provide to workers information and training" on the "identified hazards and risks of violence and harassment and the associated prevention and protection measures".[25]

Regarding *occupational safety & health*, the Recommendation suggests that the "occupational safety and health instruments" of the ILO, such as the "Occupational Safety and Health Convention, 1981 (No. 155), and the Promotional Framework for Occupational Safety and Health Convention, 2006 (No. 187)" should be taken into consideration by Members in their national legal regime.[26]

Regarding the *workplace policy*, Members should encourage by specifying in their national laws that workers as well as their representatives should participate in the "design, implementation and monitoring" of such policy. The policy should – "(a) state that violence and harassment will not be tolerated; (b) establish violence and harassment prevention programmes; (c) specify the rights and responsibilities of the workers and the employer; (d) contain information on complaint and investigation procedures; (e) provide that all internal and external communications related to incidents of violence and harassment will be duly considered, and acted upon; (f) specify the right to privacy of individuals and confidentiality, while balancing the right of workers to be made aware of all hazards; and (g) include measures to protect complainants, victims, witnesses and whistle-blowers against victimization or retaliation".[27]

Measures, legislative or otherwise, should be taken by Members for the protection of migrant workers from violence and harassment, regardless of "migrant status, in origin, transit and destination countries". Further, in order to prevent and address "violence and harassment in the informal economy", resources and assistance should be provided by Members to "informal economy workers and employers, and their associations". Measures adopted by Members to prevent violence and harassment should not result "in the restriction of the participation" of women and the other vulnerable groups "in specific jobs, sectors or occupations".[28]

ENFORCEMENT AND REMEDIES

Article 10 requires Members to take certain appropriate measures regarding enforcement of laws regarding violence and harassment in the world of work and remedies with respect to their violations. Appropriate measures are to be taken first of all to "monitor and enforce national laws and regulations" in this regard.

Further, in cases of violence and harassment, Members are required to ensure "easy access to appropriate and effective remedies and safe, fair and effective reporting and dispute resolution mechanisms and procedures". Such mechanisms and procedures include - (i) complaint and investigation procedures, and "dispute resolution mechanisms at the workplace" where appropriate; (ii) "dispute resolution mechanisms external

such as clients, customers, service providers, users, patients and members of the public"; and (iii) "arise from discrimination, abuse of power relations, and gender, cultural and social norms that support violence and harassment". See Provision 8, "Violence and Harassment Recommendation, 2019".

25 Article 9, ILO Convention, 2019.

26 Provision 6, Violence and Harassment Recommendation, 2019.

27 Id., Provision 7.

28 Id., Provisions 11 and 12.

to the workplace"; (iii) courts or tribunals; (iv) "protection against victimization of or retaliation against complainants, victims, witnesses and whistle-blowers"; and (v) "legal, social, medical and administrative support measures for complainants and victims".

Members are required to protect the privacy and confidentiality of the individuals who are involved and also to ensure that "requirements for privacy and confidentiality are not misused". Where appropriate, sanctions are also to be provided in violence and harassment cases.

Members are also obligated to provide that "victims of gender-based violence and harassment" have "effective access to gender-responsive, safe and effective *complaint and dispute resolution mechanisms*, *support, services and remedies*".

Members shall also recognize the *domestic violence effects* and "mitigate its impact in the world of work" to the extent reasonably practicable. It is therefore noteworthy that under the Convention, States are required not only to recognize the "effects of domestic violence", but also to "mitigate its impact on the world of work"; and for this purpose, the Recommendation provides that "measures to mitigate the impact of domestic violence" may include – (i) "leave for victims of domestic violence"; (ii) "flexible work arrangements and protection for victims"; (iii) "temporary protection against dismissal for victims"; (iv) "inclusion of domestic violence in the workplace risk assessments"[29]; (v) a "referral system to public mitigation measures for domestic violence"; and (vi) "awareness-raising about the effects of domestic violence".[30] The domestic violence is a worldwide problem and therefore this is really a welcome provision in the Convention in the sense that the effects of domestic violence on work have been taken care of and obligations have been created for the Members in this regard.

The Convention secures the workers the right "to remove themselves from a work situation which presents an imminent and serious danger to life, health or safety due to violence and harassment, without suffering retaliation or other undue consequences". They are however, required to inform management in this regard.

The labour inspectorates/relevant authorities,[31] in Member States must be empowered to deal with such violence and harassment. They should also have the power to issue"orders requiring measures with immediate executory force, and orders to stop work in cases of an imminent danger to life, health or safety". An appeal however, may be made against such an order to a judicial/ administrative authority.

The remedies under Article 10 may include – (i) the right of resignation with compensation; (ii) reinstatement; (iii) compensation which is appropriate for damages; (iv) discontinuation of certain conduct or change in policies or

29 Workplace risk assessments is extremely important as it "can take into account factors that increase the likelihood of violence and harassment (such as gender, cultural and social norms)".

30 See Provision 18, Violence and Harassment Recommendation, 2019.

31 It is recommended that Labour inspectors and other officials should undergo "gender-responsive training" so that they could identifying and address inter alia "psychosocial hazards and risks, gender-based violence and harassment, and discrimination against particular groups of workers". Further, "violence and harassment in the world of work" should be covered in the "mandate of national bodies responsible for labour inspection, occupational safety and health, and equality and non-discrimination, including gender equality". See id., Provisions 20-21.

practices; and (v) legal fees as well as costs. Further, compensation should be provided to victims in cases of "psychosocial, physical or any other injury or illness which results in incapacity to work".[32]

As far as the "*complaint and dispute resolution mechanisms*" is concerned, it should include measures such as(i) "courts with expertise in cases of gender-based violence and harassment"; (ii) "timely and efficient processing"; (iii) "legal advice and assistance for complainants and victims"; (iv) "guides and other information resources"; and (v) "shifting of the burden of proof" in proceedings but excluding criminal proceedings.[33]

The "*support, services and remedies*" for "victims of gender-based violence and harassment" as obligated by Article 10 should include measures *inter alia* - (i) "support to help victims re-enter the labour market"; (ii) counselling & information services; (iii) 24-hour hotlines; (iv) emergency services; (v) "medical care and treatment and psychological support"; (vi) "crisis centres, including shelters"; and (vii) "specialized police units or specially trained officers to support victims".[34]

The Recommendation states that "perpetrators of violence and harassment" should be held "accountable and provided counselling or other measures" with a view to preventing "the reoccurrence of violence" and to facilitate "their reintegration into work".[35] The statistics should be collected and published on "violence and harassment in the world of work".[36]

GUIDANCE, TRAINING AND AWARENESS-RAISING

The Convention also emphasizes the need of providing due guidance, training, etc. to "employers and workers, their organizations, and relevant authorities". This has to be done in accessible formats, so that the visually impaired persons also get the benefit of the same. The Convention thus, requires Members to ensure that in their national policies, particularly "those concerning occupational safety and health, equality and non-discrimination, and migration", the issue of violence and harassment is addressed. The Members are also required to provide to "employers and workers, their organizations, and relevant authorities, with guidance, resources, training or other tools, in accessible formats, on violence and harassment" including gender-based violence and harassment. Further, it will also be ensured by Members that "initiatives, including awareness-raising campaigns, are undertaken".[37]

The Recommendation states that with respect to the issue of violence and harassment in the world of work, Members should "fund, develop, implement and disseminate" - (i) programmes on various aspects of the issue; (ii) "gender-responsive guidelines and training programmes" for judges and all other officials concerned, employers, workers, and organizations; (iii) "model codes of practice and risk assessment tools" on the issue; (iv) "public awareness-raising campaigns in the

34 Id., Provision 17.

35 Id., Provision 19.

36 Id., Provision 22.

37 Article 11, ILO Convention, 2019.

various languages" on various aspects of the issue; (v) "gender-responsive curricula and instructional materials" on the issue; (vi) "materials for journalists and other media personnel"; (vii) "public campaigns aimed at fostering safe, healthy and harmonious workplaces free from violence and harassment".[38]

The Recommendation has rightly guided Members to "fund, develop, implement and disseminate" the guidance programmes, training programmes and awareness programmes in their territories to sensitize judges, law enforcement officials, employers and public at large.

THE PREVENTION OF SEXUAL HARASSMENT OF WOMEN AT WORKPLACE IN INDIA

India has a robust system for the prevention of the sexual harassment of women at workplace. In order to give effect to the provisions of Convention on the Elimination of all Forms of Discrimination against Women, which was ratified by India in 1993,the legislature adopted the Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013 (hereinafter "Act"). The Act not only provides for the prevention and prohibition of sexual harassment of women at workplace, but also deals with the redressal of sexual harassment complaints.

The genesis of the Act can be traced to a landmark judgment of Supreme Court, *Vishaka* vs. *State of Rajasthan*.[39]In this case, Vishaka filed a public interest litigation (PIL) in the Supreme Court after a woman Bhanwari Devi who was working for State of Rajasthan was gang raped after she tried to prevent the marriage of a girl child. The Supreme Court discussed the right to equality and dignity of women as provided by the Constitution of India. The Court also referred to human rights instruments particularly the UN Convention on the Elimination of All Forms of Discrimination against Women (CEDAW) and laid down legally binding guidelines.Those guidelines remained in force till the 2013 Act was brought into force.

The term *sexual harassment* is defined broadly under the Act to include "any one or more of the following unwelcome acts or behavior (whether directly or by implication) namely:— (i) physical contact and advances; or (ii) a demand or request for sexual favours; or (iii) making sexually coloured remarks; or (iv) showing pornography; or (v) any other unwelcome physical, verbal or non-verbal conduct of sexual nature".[40]It is noteworthy that the term is defined in an inclusive manner and it is not exhaustive. Any other similar conduct not mentioned in the definition may also be covered in the definition provided it falls within the four corners of the term *sexual harassment*.

The term *workplace* includes (i) governmental establishments, government companies, local authority, co-operative society, etc.; (ii) private sector units, NGOs, etc.; (iii) hospitals or nursing homes; (iv) sports venue, stadiums, sports institutes, etc.; (v) place visited by employee during the course of employment, transportation provided by the employer

38 Provision 23, Violence and Harassment Recommendation, 2019.

39 AIR 1997 SC 3011.

40 Section 2(n), Sexual Harassment of Women at Workplace (Prevention, Prohibition and Redressal) Act, 2013.

for such journey; (vi) a dwelling place.[41] Like *sexual harassment*, the definition of the term *workplace* is also inclusive and not confined to what has been mentioned in the definition. The aforesaid terms have been defined broadly and in an inclusive manner to rule out any possibility for the accused of sexual harassment to take advantage of any loophole of the drafting.

The Act prevents sexual harassment of women at any work place. Section 3 lays down the circumstances, the occurrence of which may amount to sexual harassment. The Act also provides for the constitution of *Internal Complaints Committee*(ICC) by the employer at the workplace.The ICC is to consist of (i) a woman Presiding Officer; (ii) at least two Members from employees; (iii) one member from NGO committed to the cause of women. Half of the ICC Members are required to be women under the Act.[42]The Act also provides for the constitution of Local Committee for the purpose of receiving "complaints of sexual harassment" from those establishments where ICC could not be constituted due to the fact that there were less than 10 workers or where the complaint was made against the employer.[43]

COMPLAINT TO ICC/ LOCAL COMMITTEE

A complaint of sexual harassment at workplace may be made by any aggrieved woman or her legal heir to the ICC/Local Committee, as the case may be, within 3 months from the date of incident. At the request of woman and before initiating an inquiry, the Committee may try to settle the issue between the woman and the respondent through conciliation. Monetary settlement is not to be made on the basis of conciliation. In case the settlement is arrived between them, it will be recoded and no inquiry will be conducted.[44]

Where no settlement is arrived at, and the respondent is an employee, the Committee is to make an inquiry into the allegations as per service rules applicable to such person. Where the respondent is domestic worker and a case exists against him *prima facie*, such complaint is to be forwarded to police for registering the case under section 509 and other relevant provisions of the Indian Penal Code (IPC). Where the respondent does not comply with the terms and conditions of the settlement as discussed above, the Committee may make the inquiry or forward that complaint to the police. Where both of them are employees, an opportunity of being heard is to be provided to them in the course of inquiry.

Where the respondent is convicted, the court may order the payment of compensation to the woman by the respondent in accordance with section 15. Section 15 provides that while determining compensation, regard is to be had to –"(a) the mental trauma, pain, suffering and emotional distress caused to the aggrieved woman; (b) the loss in the career opportunity due to the incident of sexual harassment; (c) medical expenses incurred by the victim for physical or psychiatric treatment; (d) the income and financial status of the respondent; (e) feasibility of such payment in lump sum or in instalments".The Committee, while making an inquiry, has the same power as vested in a civil court under Civil Procedure Code (CPC). The inquiry is to

41 Id., section 2(o).

42 Id., section 4.

43 Id., sections 6-7.

44 Id., section 10.

be completed by the Committee within 90 days.[45]

When the inquiry is pending, the Committee, on the request of woman, has the power to recommend to the employer to (i) transfer either the woman or the respondent; (ii) grant additional leave up to 3 months to woman; or (iii) grant some other prescribed relief.[46]

When the inquiry is completed, the Committee will provide its report to the employer/ District Officer within 10 days. The report will also be provided to both the parties. Where the allegations have not been proved, the Committee will not recommend any action. But where the allegations have been proved, it is to recommend to the employer/District Officer – (a) to take action as per service rules or in the prescribed manner for sexual harassment as a "misconduct"; (b) to deduct salary/wages of the respondent to pay compensation to the woman as aforesaid.[47] A provision for filing an appeal has also been made in the Act. The appeal may be filed within 90 days of the recommendation to the Court/Tribunal.[48]In order to prevent its misuse, the Act also makes provisions for the punishment for a making false or malicious complaint under section 14.

DUTIES OF EMPLOYER UNDER THE ACT

Section 19 lays down detailed duties of the employer under the Act. Every employer is under an obligation to – (i) ensure safe working environment at the workplace; (ii) display constitution of ICC and the penal consequences of sexual harassments; (iii) sensitize employees by conducting workshops/awareness programmes from time to time; (iv) provide essential facilities to ICC for handling complaint and inquiry; (v) secure the attendance of respondent and witnesses before ICC; (vi) provide necessary information to the Committee regarding the complaint; (vii) provide assistance to file a complaint under IPC/other laws, if so desired by woman;(viii) cause to initiate action against the perpetrator under the law; (ix) initiate action for sexual harassment as a misconduct; (j) monitor timely submission of reports by the Committee. The Act also provides for the penalty for employer for non-compliance of the Act.49

CONCLUSION

The adoption of ILO Convention is a historic event as the entire world was waiting for a legally binding international instrument to make the workplace free from violence and harassment. Such a workplace will ensure equality, respect, dignity, freedom from fear which may lead to depression and anxiety, non-discrimination of any kind, among other things. It is very unfortunate that international community took so much of time to adopt the Convention on such an important subject matter. However, it is better late than never. The Convention has been drafted in a comprehensive manner in terms of the meaning of *violence and harassment*, *worker*, *world of work*, etc. The accompanying Recommendation on Violence and Harassment gives guidance to Members for their national laws and policy on the subject matter. The Recommendation is non-binding and therefore, it is upto the

45 Id., section 11.

46 Id., section 12.

47 Id., section 13.

48 Id., section 18.

49 Id., section 26.

Members to adopt it fully or partially or adopt with changes or not to adopt it. It is however advisable to take the recommendation into account while making national laws and policies.

The Convention is a promising binding instrument which takes into account the future work place, i.e. virtual workplace and also takes care of workers from vulnerable group. The Director-General of ILO Guy Ryder rightly stated that "the new standards recognize the right of everyone to a world of work free from violence and harassment" and "the next step is to put these protections into practice, so that we create a better, safer, decent, working environment for women and men".[50]

If we have to conceive of a world where everyone irrespective of his/her sex or gender has the freedom to work without any fear of violence and harassment, the ratification of this Convention by majority of States becomes essential. The time has come when every State should change its mindset and have in place under its jurisdiction a robust system to prohibit violence and harassment at the place of work. If the Convention gets support of a significant number of states by way of ratification, it will also help in dealing with underlying causes such as discrimination in various forms, gender-based power relations and gender stereotypes. By supporting ILO Convention only, the Member States can fulfil their human rights obligations under human rights treaties in a true sense.

As far as India is concerned, her Act of 2013 on the prevention of sexual harassment of women at workplace is doing very well. However, it is not gender neutral but women centric law. The time is ripe when India should come out with a gender neutral law. All men, women, and persons of third gender have the right of equality and dignity. The persons of third gender are more likely to be discriminated than men and women. They are also more vulnerable in society.It is highly recommended that India should become a party to the ILO Convention and bring in place a law that will protect all persons irrespective of their gender from violence and sexual harassment at work place. The legislature may have some additional provisions for women and the persons of third gender, but a law protecting all persons is the need of the hour.

Ways of Coping and Mental Health among Male and Female Police Constables: A Comparative Study

The Indian Police Journal
@BPRD, MHA
BPRD Publication
www.bprd.gov.in

Dr. Pinki[1]
Dr. Nitesh Kumar Jha[2]

ABSTRACT

Police play an important role in maintaining laws, rules and regulation in the society. In doing so, their nature of duty put them in different kind of mental health issues like stress and anxiety. Ways of coping skills help them to cope effectively with those mental health issues. Gender plays a vital role in determining one's coping strategies and mental health. The effort is made in this piece of work to study gender differences in the variables under study. The data was collected from 300 police constables (an equal number of male and female)in the age range of 25 to 40 years utilizing random sampling technique. Ways of Coping Questionnaire (Folkman and Lazarus, 1988) and WHO Measure of Mental Health (Wig, 1999) were administered to collect the data. Results were obtained on applying t-test which revealed that male and female police constables are significantly different in ways of coping and mental health. Male police constables were found to have higher mean scores on the variables, ways of coping and mental health than female police constables, which, reflects comparatively better ways of coping and mental health in male police constables than female police constables.

Key words: Police, Ways of Coping, Mental Health

INTRODUCTION

Crime and violence rate is increasing gradually. Burden on law enforcement agencies are also increasing. Police service is one of among the law enforcement agencies which directly or indirectly have to face and tackle minor to major crime related cases or incidences. Police personnel have to perform a versatile role and responsibility in order to maintain law and order in society. In doing so, their nature of duty put them in different kind of mental health issues like stress, anxiety, depression etc.

Ways of coping skills help them to cope effectively with those mental health issues. Individual having good skills to cope with life stressors adapt better in their life circumstances than those who have lack of coping skills. Gender plays a vital role in

Author's Intro:

1 Research Officer, SOMAARTH, Mitrol, NH-19, Aurangabad, Palwal (Haryana)
2 Research Officer, SOMAARTH, Mitrol, NH-19, Aurangabad, Palwal (Haryana)

determining one's coping strategies and mental health. Due to the biological makeup and socialization process both male and female acquire different characteristics which largely determines individual's coping strategies and mental health. Hence, the effort in this piece of paper is made to study gender differences in ways of Coping and Mental Health among police constables of Union Capital Territory Chandigarh.

POLICE CONSTABLE

Before explaining the concept of ways of coping and mental health, it is important here to consider the definition of the concept 'police constable', their role and responsibilities along with empirical finding. The concept of Police originated from Latin word 'politia' which stands for the condition of a 'polis' or 'state' reported by Mathur (1999). Oxford Dictionary defines Police as a system of regulation for the preservation of order and enforcement of law. It also means, the internal government of a state. In police service, the hierarchy is made from higher level officers to lower level constables to facilitate and enforce rules and regulations in society. Constable can be understood as the person holding a particular office, most commonly in law enforcement department.

ROLES AND RESPONSIBILITIES OF POLICE CONSTABLE

When it comes to understanding the roles and responsibilities of police, Walker and Katz (2000) noted that, the role of police in any particular society is not defined clearly.Police officers are asked to provide a variety of tasks, many of which include crime prevention, order maintenance and law enforcement. There is also the problem of role conflict amongst police officers, politicians and citizens as reported by the author. According to Agolla (2009), the work of police is to protect life and property. In order to do so, they face a lot of challenges such as fighting and prevention of crime. These roles and duties expose police officers to work in different situations that require different physical and mental ability to deal with those circumstances firmly and effectively (Alkus and Padesky, 1983; Violanti and Aaron, 1994; Anshel, 2000; Rollinson, 2005 and Morash et al., 2006).

Sehgal et al. (2006) revealed that women join the police service due to the pressure from women' rights activist and the courts. It was reported further that, women's work in police is generally restricted to cases involving women and children, and to clerical tasks. Usually, women are assigned work relating to victims of sexual crimes, juvenile and female offenders, missing persons and abused children. According to Muhammad and Shukla (2007), the main duties performed by the Indian women police are: helping the investigation, the team in the cases in which a child and woman is involved, interrogation and interview of child/juvenile and woman suspects, offenders and eyewitness. Also, women police assist local police in tracing missing women and children. They work as a security guard at airports, railway stations and bus stands.

Above cited findings reveal that, the police constable's roles and responsibilities are so versatile and challenging that require high level of coping skills and mental health so that they can feel comfortable and serve society in a better way.

WAYS OF COPING

Coping involves responses such as thoughts, feelings and actions that an individual uses to deal with problematic situations that are encountered in everyday life. It is an effortful attempt by an individual to deal with stressors that are beyond the normal range of functioning, with the purpose of reducing the negative impact of that stressor. According to Lazarus and Folkman (1988), coping is the cognitive and behavioral effort to manage specific external and internal demands that are appraised as taxing or exceeding the resources of a person.

There are eight coping strategies identified by Lazarus and Folkman (1988) that are: 1) Confronting Coping: it means an aggressive effort of an individual to change the situation. 2) Seeking Social Support: it involves efforts of the individual to obtain emotional comfort and information from others. 3) Planful Problem Solving: it requires deliberate problem focused efforts by the individual to solve the issues. 4) Self Control: it includes efforts of the individual to regulate their feelings. 5) Distancing: it means efforts made by the individual to detach oneself from a stressful situation. 6) Positive Reappraisal: it requires efforts by the individual to find a positive meaning in the experience by focusing on personal growth. 7) Accepting Responsibility: it means acknowledgment of an individual's role in the problem. 8) Escape Avoidance: it involves an individual's wishful thinking.

Lazarus and Folkman (1984) classified coping strategies in two categories-emotion focused coping and problem focused coping. Emotion focused coping involves the conscious regulation of emotions. It includes accepting responsibility, positive reappraisal, acceptance, denial and/ or cognitive and behavioral avoidance or distraction. Problem focused coping on the other hand attempts to manage the stressful problems or situations. Problem focused coping strategies are intended to get the person who is experiencing stress to change his or her behavior or to develop a plan of action to deal with the stress situation and follow it. The problem focused strategies include active coping, direct problem solving and planning (Folkman and Lazarus, 1988).

In most stressful incidents, people employ both emotion and problem focused coping strategies but use emotion focused when the situation seems to be unchangeable and use problem focused more often in situations where they see as relatively modifiable and changeable situations. The transactional model emphasizes the relationship between the person and the environment, taking into account the characteristics of the person on the one hand and the nature of the environmental event on the other.

MENTAL HEALTH

It is important to recognize that the physical and mental health is not separate construct Wig (1996). The separation between body and mind is only a convenient way of understanding the construct of health. Medical science has made it clear that mind influences the body in the same way as body influences the mind. It is also being said that the healthy body not only keeps a healthy mind but also a healthy mind greatly plays a

role to keep individual's body healthy.

The World Federation of Mental Health (Wig, 1996) explained the concept of mental health on the basis of three criteria that are: being comfortable with self, being comfortable with others and ability to meet life demands. Being comfortable with self means a person who is mentally healthy must be comfortable within him/herself. They need not to have emotions which frequently put them in to discomfort. If they feel emotions like tense, nervous, fearful, sad, aggressive or suspicious which shows that they are not mentally healthy. Being Comfortable with others: a person who is mentally healthy is not only comfortable within oneself but also makes others comfortable around him or her. An individual may be very happy and comfortable within oneself but if they are making life miserable for those around them, in this case too it can be said that they are not mentally healthy. Ultimately mental health is a kind of balance or harmony between an individual's self-interest and social responsibility. Ability to Meet Life Demands means a mentally healthy person is constantly striving to improve further. They never feel that they have reached perfection because they always make further efforts for self-improvement.

Mental health has been recognized as an indispensable aspect of an individual's total health status. It has been considered as a factor that contributes to the maintenance of physical health as well as social effectiveness. Mental health is an individual's innate capacity to keep balance in every life circumstances, either negative or positive. The people in the state having healthy mental health feel peace. They adapt better in every situation. They are said to have adaptive personality characteristics and also they are task oriented. They work productively and cope effectively with the situation experienced to be negative.

Differences in gender role and responsibility at social and family levels reflect ability to balance between social/family and occupational roles and responsibilities. As the gender differences play an important role in performing one's task in the family and at the services. Gender difference also plays are equally important role in determining one's ways of coping skills with psychological distress and mental health. On the basis of the above explanation the aims of the study was formulated which is presented below.

The aim of the study is to understand how male and female police constables of Union Capital Territory Chandigarh are different from each other in terms of ways of coping strategies and mental health. Keeping this aim in mind the following mentioned objective was framed.

OBJECTIVE

To study gender differences in Ways of Coping and Mental Health among police constables.

Hypothesis

Male police constables will be significantly different from female police constables in the Ways of Coping and Mental Health.

REVIEW OF LITERATURE

Ways of Coping among Male and Female Police Constables

Ronen and Pines (2008) reported significant gender difference in burnout, with women

engineers reporting higher levels of burnout than men. The gender differences in style of coping revealed i.e. women's greater tendency to utilize emotion-focused coping. Haarr and Morash (1999) found that women cope with stress by using escape and by keeping written records more often than men. The authors also reported that African-American officers rely on strong relationships with fellow minority officers when symptoms coping with stress. Overall, the constructive coping mechanism is considered to be the more appropriate approach to reducing stress.

Bond and Bunce (2003) found that workers with higher levels of the acceptance coping style significantly predicated better mental health and job performance. It was further suggested that, an intervention would be effective, that enhances acceptance coping styles of workplace stressors and increases behavioral changes to help the law enforcement officers pursue their work objectives that they wish to achieve. Khan et al. (2005) results indicated that both male and female teachers used the same strategies to cope with job strain. Significant difference was not found to exist between the male and female teachers on different types of coping strategies except use of humor.

Mental Health among Male and Female Police Constables

Govind (2012) investigated gender differences in mental health of college students. The study showed gender differences with regard to mental health. Males showed better mental health when compared to female students. Ram et al. (2014) reported from their findings that male and female youth inhabit different social worlds. According to them, female expressed greater restrictions to their independence than male.

Triveni and Aminabhavi (2002) reported that women professionals experience significantly higher occupational stress than men due to under participation. According to Greenglass (2002), men were more likely to confront problems directly or to deny or avoid their existence, on the other hand women in order to solve their problems and to deal with their stress preferred to seek social support from friends and family. It was also found that female employees sought more emotional support and relied more on social network.

Berg et al. (2005), it was found that policewomen perceived and experienced work-related stress more severely than policemen in all factors measured. This finding is supported by the work of Yoo and Franke (2011) who found that female police officers experienced significantly higher levels of stress and poorer health outcomes than their male counterparts.

Eaton and Bradley (2008) investigated the role of gender and negative affectivity in stressors appraisal and coping selection. Differential exposure to stressors was controlled by requiring participants to rate the stressfulness of identical hypothetical scenarios. It was found that women rated the scenarios as more stressful than men, and perceptions of stressfulness increased with participant negative affectivity. Women endorsed the use of emotion-focused coping strategies more than men, even when perceived stress was controlled.

Mental Health Issues among Police Constables

Due to those roles, responsibilities and functions of police mentioned above they are highly prone to face mental health challenges. It is reported in several studies that police work has been identified as the most psychologically stressful and critical profession in the world (Heiman, 1975; Manolias and Hyatt-Williams, 1986; Bonifacio, 1991). According to Selye (1980), due to the inherent nature of police work, this profession is likely to be one of the most stressful occupations in the world.

Miller (2005) reported that law enforcement is one of the important professions in which employees deal with a range of individuals from different levels of society. Police officers interact with criminals, they have many relationships with other community members and they also have mutual communication with other law enforcement professions. Even though personnel of law enforcement agencies are trained to manage interactions with different kinds of people, the necessity of making decisions under time constraints for specific circumstances creates significant stress for law enforcement.

On the basis of above explanation it was felt that consideration of ways of coping and mental health among police constable is needed to be studied in order to help them understand their mental health issues and cope with them effectively adopting an appropriate coping strategy, so that they can serve to the society maintaining balance between their personal and occupational life.

In view of the above explanation based upon the theoretical and empirical rationale of ways of coping and mental health, it is important here to mention that both the constructs are important to consider for the study in every individuals irrespective of their stages of life, nature of work and services they provide because both coping styles and mental health of an individual determines an individual's adaptive nature and effectiveness in society.

Specifically, if we talk about the ways of coping and mental health of police personnel i.e. constables, it has been observed in the findings of the literature that their roles and responsibilities are so much versatile and challenging that make them susceptible to get into mental health problems. Their mental health largely depends on how they cope with challenges in the front while providing services in order to maintain law and order in society.

The inconsistencies in the research findings have been observed which suggest that there is significant gender difference in ways of coping and mental health. There are literature reported to have male police constable with better coping skills and mental health than female police constable. Opposite findings are also available which suggest female constable have better coping skills and mental health comparative to the male police constable. Mix findings have also been reported in the existing literature. Therefore, the present study was formulated to understand gender difference in coping with styles and mental health in police constables of Union Capital territory Chandigarh.

METHODOLOGY

The present study is designed to explore gender difference in ways of coping and mental health among Chandigarh police constables. Therefore, the data is collected keeping in mind the objective of the study. In the subsequent sections necessary information about sample, tools used and the procedure employed for obtaining the relevant information has been presented.

Sample

The data was collected from 300 police constables (an equal number of male and female) serving in different police departments of Chandigarh such as police stations, traffic departments and Police Control room department, in the age range of 25 to 40 years utilizing random sampling technique. Only married constables were selected. And also, only those constables were selected who had been working for at least last 3 years. Educational qualifications of the individuals participated in the study were restricted to minimum 10th to graduation.

Tools

To measure the strategies that police constables use to cope with stress, Ways of Coping questionnaire developed by Folkman and Lazarus (1988) was used. To measure Mental Health, the WHO measure of Mental Health adapted for use in India by Wig (1999) was used. The descriptions of both the tools are presented below:

1. **Ways of Coping Questionnaire (Folkman and Lazarus, 1988)** there are 66 items in this questionnaire which measures 8 empirically derived subscales. Each of the 8 subscales describes different ways of coping which is used by an individual. Those subscales along with their brief descriptions are presented below:

1) ***Confronting Coping:*** It reflects an aggressive effort of an individual to change the situation and suggest some degree of hostility to risk taking.

2) ***Seeking Social Support:*** It reflects efforts of the individual to obtain informational, tangible and emotional support from others.

3) ***Accepting Responsibility:*** It reflects acknowledgment of an individual's own role in the problem with a concomitant theme of trying to put things right.

4) ***Plan-full Problem Solving:*** It reflects deliberate problem focused efforts by the individual to alter the situation, coupled with an analytic approach of problem solving.

5) ***Distancing reflects:*** It reflects cognitive efforts of the individual to detach oneself from the stressful events in order to minimize the significance of the situation.

6) ***Self-Controlling:*** It reflects efforts of the individual to regulate their feelings and actions.

7) ***Escape Avoidance:*** It reflects an individual's wishful thinking and behavioral efforts to escape or avoid the problem.

8) ***Positive Reappraisal:*** It reflects efforts by the individual to find a positive meaning in the experience by focusing on personal growth.

According to Lazarus and Folkman (1984), there are two categories of coping strategies, emotion focused coping and problem focused coping. Emotion focused coping includes the conscious regulation of emotions. Accepting responsibility, positive reappraisal, acceptance and denial/ avoidance or distractions are considered as emotional focused coping. Problem focused coping includes attempts to manage the stressful problems or situations. The problem focused strategies includes active coping, direct problem solving and planning (Folkman and Lazarus, 1988). These coping strategies are required to change behavior or to develop a plan of action to deal with the stressful situation.

Individuals respond to each item on a 4 point scale, including the frequency with which each strategy is used. (0) Indicates 'doesn't apply/or not used', (1) indicates 'used somewhat', (2) indicates 'used quite a bit' and (3) indicates 'used a great deal'. The scale has been widely used in Indian context by Parke (1986), Opara (1999), Mohan (2002, 2004, 2005, 2015), Shourie (2003) and Savneet (2012), and the test is reported to have good reliability and validity.

2. **WHO Measure of Mental Health (Wig, 1999):** The scale has 16 items and is designed to measure Mental Health on 3 dimensions. Those 3 dimensions are presented below along with their brief descriptions:

1) ***Being Comfortable with self*** reflects how comfortable the individual is in his/herself. If an individual who is mentally healthy must be comfortable within him/herself. They need not have emotions like tense, nervous, fearful, sad, aggressive or suspicious which frequently put them into discomfort.

2) ***Being Comfortable with others*** reflects how comfortable an individual feels in establishing and maintaining relation with others. An individual who is mentally healthy is not only comfortable within oneself but also makes others comfortable around him or her. Mental health is a kind of balance or harmony between an individual's self-interest and social responsibility.

3) ***Perceived Ability to Meet Life Demands*** means a mentally healthy person is constantly striving to improve further. They never feel that they have reached perfection because they consistently make efforts for self-improvement.

The test gives three scores on mental health dimensions and a summated score on total mental health. The response format has two categories 'Yes or No'. A score of one is given if the subject ticks 'yes' and a score is given zero if he ticks 'no'. It has been successfully used in India by Mohan (2004, 2005), Puri (2002), Sehgal (2002), Tripathi (2008), Rampal (2011),

Agarwal (2015) and Thakur (2015) reported to have good reliabilityand validity.

RESULTS AND DISCUSSION

The t-test was applied to study the gender differences in Ways of Coping and Mental Health among police constables of Union Capital Territory Chandigarh. The results obtained on applying t-test on the data collected from male and female police constables on the variables of ways of coping and mental health is presented below in the Table.

TABLE

Means, Standard Deviations and t-ratios comparing Male and Female Police Constables on the variables of ways of coping and mental health

Sr. No.	Variables Mean	Male Police Constables (n=150)		Female Police Constables (n=150)		t-ratios
		SD	Mean	SD		
	Variables of Ways of Coping					
	Confronting Coping	9.65	2.39	7.63	2.31	7.42**
	Seeking Social Support	9.41	2.09	7.03	2.21	9.55**
	Accepting Responsibility	7.57	2.07	6.79	2.00	3.32**
	Plan-full Problem Solving	8.53	2.15	6.65	2.23	7.44**
	Distancing	15.91	9.69	11.87	2.45	4.96**
	Self-Controlling	17.00	2.99	12.36	2.88	13.72**
	Escape –Avoidance	18.74	3.40	13.47	4.00	12.30**
	Positive Reappraisal	17.98	3.04	12.61	3.26	14.75**
	Variables of Mental Health					
	Being Comfortable with Self	2.14	1.20	1.82	1.00	2.50*
	Being Comfortable with Others	2.14	1.20	1.61	0.87	4.35**
	Perceived Ability to Meet Life Demands	2.10	1.12	1.46	0.82	5.70**
	Total Mental Health	6.84	2.77	4.89	2.05	6.92**

*t-value significant at 0.05 level=1.97

**t-value significant at 0.01 level=2.60

Results obtained on applying t-ratios reveal significance of difference between two means. The Table shows the mean, standard deviation and t-ratios of the measured variables in male and female police constables in the age group of 25 to 40 years. The group differences are examined on all the variables using t-ratios.

All the variables of Ways of Coping come out to be significant. Those variables are: Confronting coping, Seeking social support, Accepting responsibility, Plan-full problem solving, Distancing, Self-controlling, Escape-avoidance, Positive reappraisal.

Male Police Constables scored higher than Female Police Constables on Confronting coping (t (298)= 7.42, p<0.01); Seeking social support (t (298)= 9.55, p<0.01); Accepting responsibility (t (298)= 3.32, p<0.01); Plan-full problem solving (t (298)= 7.44, p<0.01); Distancing (t (298)= 4.96, p<0.01); Self-controlling (t (298)= 13.72, p<.01); Escape-avoidance (t (298)= 12.30, p<.01); Positive reappraisal (t (298)=14.75, p<.01).

A glance at t-ratios Table comparing male and female police constables revealed that male police constables scored higher than female police constables on emotion focused coping styles (Distancing, Self-Controlling, Escape-Avoidance, Positive Reappraisal) and Problem Focused Coping styles (Confronting Coping, Seeking Social Support, Accepting Responsibility and Plan-full Problem Solving).

Ways of coping, according to Lazarus (1991), refer to the cognitive and behavioral efforts to manage specific external or internal demands and conflicts between them that are apprised as taxing or exceeding the resources of the person. Coping is a continuous cognitive and behavioral process of overcoming stress and stressful consequences of external forces (Mohan, 2003)**.**

Research conducted by Roxburgh (1996) and Hall (2006) showed that just as females reported greater use of emotion-focused coping strategies than males, they also reported higher levels of subjective stressor exposure, higher levels of felt stress, more stress-related health problems, more health and illness behaviors, and also more health-promoting lifestyles. The reason behind this kind of gender differences in ways of coping strategies and mental health can be said that is because of differential gender socialization processes. Due to the socialization of both the gender differently, females have to involve in child birth and their care, they are more prone to health-related risks than male. Women were more attuned to, and more experienced, in terms of coping with stress and health threats, and perhaps these factors helped explain females higher use of coping specifically emotion-focused coping behaviors.

Hobfoll and Freedy (1996) in their study of the multiaxial model of coping reported that men utilized more aggressive and anti-social actions in their coping. Tamres (2002) reported that, women were found to report using all coping behaviors more often than men. In none of the studies did men report engaging in more absolute levels of coping than women. In contrast, studies investigating relative coping showed that men were more likely to use problem- focused coping, whereas women were more likely to seek emotional support. He concluded that gender differences in coping occurred due to appraisal rather than to preferred coping strategies.

All the variables of Mental Health come out to be significant. Those variables are: Being comfortable with self, Being comfortable with others, Perceived ability to meet life demands, Total mental health.

Male Police Constables scored higher than Female Police Constables on Being Comfortable with Self (t (298) = 2.50, p<.05); Being comfortable with others (t (298) = 4.35, p<.01); Perceived ability to meet life demands

(t (298) = 5.70, p<.01); Total mental health (t (298) =6.92, p<.01).

A glance at t-ratios table comparing male and female police constables revealed that male police constables scored higher than female police constables on total mental health and its dimensions viz. being comfortable with self, being comfortable with others and perceived ability to meet life demands.

Mental health can be understood as one's innate "intrinsic, natural state of well-being or wisdom arising from pure consciousness and accessed via a clear mind, or from realizing the infinite capacity for formless creation of new experience via thought" (Pransky and Carpenos, 2000). Mental health also explained in terms of either a level of cognitive or emotional well-being or an absence of a mental disorder.

Caur (2006) reported significant gender differences on the stressfulness of life events, daily hassles, escape avoidance, positive reappraisal and perceived happiness status. Louw (2007) reported from his findings that female police officers were found to experience more stress as compared to the male police officers. He et al. (2005) too reported that female officers had higher levels of stress than males. De Souza et al. (2007) found that female police officers have been shown to experience a greater proportion of psychological distress, and indicate that it could be due to the need for women to work harder in order to achieve the same professional recognition as men in a predominantly masculine institution.

According to Lipp (2009), greater proportion of females than males reported to have stress. Brown and Fielding (1993) reported that women uniformed officers reported higher levels of associated self-perceived stress than their male counterparts. However, the opposite findings have also been reported which reveals that females experienced crime related stressors less intensively and frequently than their male counterparts. McCarty et al. (2007) reported from their study that male and female officers did not report significantly different levels of occupational stress and burnout.

CONCLUSION

Male police constables scored higher than female police constables on all the variables of both emotion focused coping styles and problem focused coping styles. This result reveals that male police constables uses both problem focused coping and emotional focused coping strategies in their life to cope with their life stressors which reflects better coping skills in male than female police constable. And also,male police constables were found to have higher scores on all the three variables of mental health than female police constable. These findings reflect that male police constables have better mental health than female police constables. Over all,the finding of the study reveals that male police constables have better ways of coping skills and mental health than female police constables.

IMPLICATIONS

This study specifically will be helpful for the professionals serving with police department for the purpose of police personnel's training

and counseling. The professional such as psychologist, counselor and criminologist can make use of certain intervention or therapy module keeping gender differences in ways of coping and mental health among police personnel for the better outcome from their counseling or therapy sessions. The intervention or therapy module can consist of different components of ways of coping skills and mental health.

The professional conducts intervention programmes targeting to enhance the **ways of coping strategies** among police constables may be suggested from the findings of this study to incorporate constructs of ways of coping skills in their training module. As the importance of coping skills has been highlighted by Siponet al. (2014) mentioning it as survival skills in encountering various challenges in life. Grant et al., (2003) mentioned that coping strategies is a significant element in life functioning and individual development. The intervention will make police personnel aware, learn, and acquire the skills and knowledge required to deal with harmful, threatening or challenging problems or circumstances causing distress. The intervention module will consist of different components of ways of coping.

Confronting Coping the police constable specifically women police needs to be trained the skills required to make active efforts to change their stressful situation. **Seeking Social Support** training will help them learn the skills required to obtain information, tangible and emotional support from others that is required to cope with the distress. **Accepting Responsibility Skill** training will help them to learn the ways to acknowledge their own role in the problem so that they can work simultaneous to make things better.

Training of **Plan-full Problem Solving** skills will make the police constable learn and acquire the knowledge that how the situations can be altered by focusing upon the problem utilizing analytical approach of problem solving. Training police constables **Distancing** will help them learn and acquire the skills required cognitive efforts to detach themselves from the stressful events in order to minimize the distressing impact of the situation.

Self-Control teaching will help police constable learn the skills require regulating their own feelings and actions so that they can cope effectively with the distressing circumstances. **Escape Avoidance** training will enhance police constables wishful thinking and behavioral efforts to escape or avoid the situation causing stress. **Positive Reappraisal** training will help them learn the ways of attributing positive meaning to their experience by focusing on their personal growth.

The intervention targeting to enhance the **mental health** among police constables may suggest incorporating constructs of mental health which have been studied in this piece of work. Making police personnel aware, learn, and acquire the skills and knowledge require to feel comfortable with self as well as others and also to perceive ability to fulfill their life demands positively through the training, counseling and psychotherapy sessions.

Training the construct of **Being Comfortable with self** of mental health domain will make

them understand how comfortable they are. They will also come to know, if they are healthy they must be comfortable to themselves which will allow them to avoid emotions such as tense, nervous, fearful, sad, aggressive or suspicious which frequently put them into discomfort.

The police constables can be made aware about the construct of **Being comfortable with others** which reflects how comfortable they feel in establishing and maintaining relation with others. Police constable will come to know that those individuals who are mentally healthy being not only comfortable within oneself but also make others around them comfortable. Through the training of this construct of mental health they are educated to learn that mental health is a kind of balance or harmony between an individual's self-interest and social responsibility.

Session pertaining to **Perceived Ability to Meet Life Demands** will encourage police constables to improve themselves further in their life endeavors. The kind of awareness about the feelings that they have not reached perfection will help them make consistent efforts for self-improvement.

Learning these skills of mental health will enable police personnel to develop capacity to keep balance in every life circumstances either negative or positive.People having good mental health feel peace, adapt better in every situation, they are task oriented and possess adaptive personality traits. Also they acquire the knowledge and skills to work productively and cope effectively with life situations.

Cognitive-behavioral coping strategies incorporating emotional and behavioral coping techniques used to manage stressful events. Mindfulness training through meditation, yoga and physical activity/exercise is suggested to be some of the intervention programmes that would have a better impact in learning different ways of coping skills and the constructs of mental health.

Bhole (1977) highlighted that, breathing practices are intended to develop certain types of awareness within oneself. According to Nagendra and Nagarathna (1988), yoga has been emphasized as a key to combat stress. Mathur (1999) reported that physical exercise can play an important part both in reducing stress and in increasing one's ability to cope with a stressful situation. Swanson and Territo (1983) reported that more physically fit an officer feels, the more self-assured and happier he is with himself.

Apart from the training and counseling intervention related implications of this study, there are some other implications like higher authorities in the police department might gain an insight into assigning tasks or duties to the constable police keeping gender differences in ways of coping and mental health in mind. Policy makers of Indian police services can have a better idea from this piece of study to formulate policies related to police personnel's duties, role and responsibilities, and also for their training purposes.

The Indian Police Journal

Volume 67, Number 4, ISSN 0537-2429
October-December 2020

Note for Contributors

The Indian Police Journal (IPJ) is the oldest police journal of the country. It is being published since 1954. It is the flagship journal of Bureau of Police Research and Development (BPR&D), MHA, which is published every quarter of the year. It is circulated through hard copy as well as e-book format. It is circulated to Interpol countries and other parts of the world. IPJ is peer reviewed journal featuring various matters and subjects relating to policing, internal security and allied subjects. Over the years it has evolved as academic journal of the Indian Police providing critical inputs to the stakeholders of policing and internal security.

How to submit Article/Paper

The paper/article on crime, criminology, general policing, internal security, forensic science, forensic medicine, police organization, law and order, cyber crime, organized crime, white collar crime, crime against women, gender policing, juvenile delinquency, human resource development, police reforms, organizational restructuring, performance appraisal and service delivery, social defence, police family, police housing, police training, human rights, intelligence, corruption, terrorism and counter terrorism, community policing and allied subjects can be submitted.

The paper/article with keywords and abstract should be between 2000-4000 words. The paper/article should be original and have not been published in any journal. A brief detail about author should also be submitted. The paper can be submitted through email: vijenderkumar@bprd.nic.in.

The paper/article can also be submitted via post with a hard copy in duplicate and a CD on following address. **The Editor, The Indian Police Journal, BPRD, MHA, New Building, National Highway-8, Mahipalpur, New Delhi-110037**

EDITORIAL NOTE

VIPS Student Law Review is an annual, blind peer-reviewed journal which provides a platform to law professionals, research scholars and students to meaningfully engage in discussions pertaining to law, justice and society. It helps in bringing to the forefront the contemporary issues which are relevant for academic as well as legislative research. The inaugural issue of VIPS Student Law Review, Volume 1 received an overwhelming response and was a great success. VIPS Student Law Review, Volume 2 occupies a unique place in the developing legacy of our journals. Its timely publication during the time of ongoing pandemic was a challenging task. The global, unprecedented pandemic of COVID-19 implied calling on special measures to deal with the task at hand. The unwavering perseverance of all the stakeholders, ranging from authors to faculty to the student team, ensured the timely publication of this issue. This era has also taught us the importance of technology and the need of its adaptability in the education sector. It reflects the committed tenacity and motivated effort of our institute to continuously contribute to the ever growing area of law.

We are, thus, extremely pleased to present VIPS Student Law Review, Volume 2. Our Journal received an overwhelming response of 136 submissions to the call for papers and we are sincerely humbled by the same. The articles selected for publications are lucid, nuanced and tackle contemporary discussions. The research papers selected are not only addressing the issues erupted due to COVID-19 pandemic but are also covering various other relevant contemporary issues which needs to be highlighted.

Ms. Anuja Misra and Ms. Chitra Ahluwalia have critically examined the position of colour trademarks and their acceptability. Ms. Nikita Mittu has compared the system of corporate governance in India and the U.S.A. Dr. Raghuvinder Singh and Ms. Arti Sharma have comprehensively analysed the various aspects of the right of Muslim women to marry on divorce. Mr. Jayanta Boruah has addressed the relevance of international humanitarian law and the Syrian refugee crisis. Ms. B. Yamuna Saraswathy and Mr. R.B. Rishabh have addressed the position of scientific criminal investigation in India. Ms. Ananya Jain undertakes a deep study of the DRM technology and the principles of copyright law in lieu of copyright in ebooks. Ms. Akanksha Badika and Ms. Pragya Mishra write about the intermediary liability regime in India. Ms. Kanak Mishra writes about Narco-Analysis and the Brain Mapping tests through 'Fluid' consent. Mr. Akshit Bhardwaj has expressed his views on sports law jurisprudence in India and the challenges that lie ahead. Mr. Manan Katyal analyses the legality and application of single-color trademarks in India with

reference to *Christian Louboutin S.A.S. v. Abubaker and Ors*. Ms. Merrin Muhammed Ashraf discusses the feasibility of adoption of an inquisitorial model and the impact on the criminal justice system in India. Mr. Rishabh Soni examines the reliance on force majeure clauses to escape liability; with special reference to COVID-19. Ms. Ananya Sanjiv Saraogi and Ms. Vallabhi Rastogi discuss the impact of the pandemic on various walks of life. Ms. Mansi Mishra comprehensively evaluates the relation between merchant bankers and the function of due diligence. Mr. Rupesh Sunil Dhengre and Ms. Omeshwari Pancham analyse the issue of mercy petitions from a socio-religious perspective along with the legal dimension. Ms. Adiba Khan and Ms. Gunjan Kanoongo assess the increased domestic violence cases in light of COVID-19 and the subsequent lockdown. Ms. Nidhi Chhillar and Ms. Ritika Sharma give a holistic account of honour killings. Ms. Samavi Srivastava and Mr. Rounak Doshi critically assess the Biological Weapons Convention. Ms. Manasvita Tejsi and Mr. Mridull Thaplu call upon the criminalisation of marital rape.

The Journal presents three articles under the 'Case Comments' section. Mr. Hartej Singh Kochher explores two contradicting verdicts, delivered by the Competition Commission of India on the issue of "buyers' cartel". Mr. Raj Krishna and Mr. Kumar Mukul Choudhary discuss custodial death in light of *Rathnayake Tharanga Lakmali v. Niroshan Abeykoon*, 2019 SCCOnLine SLSC 14 (Sri Lanka). Mr. Jaideep Singh Lalli analyses the Supreme Court verdict of *Chebrolu Leela Prasad Rao & Ors. v. State of A.P. & Ors*.

I thank our reviewers for reviewing the articles timely and for giving their inputs. Special mention to the COO, VIPS and their staff for their support. I am thankful to the Editorial Committee for releasing the issue in time.

POSITION OF COLOUR TRADEMARKS, ACCEPTABILITY AND RELATED ISSUES: A COMPARATIVE ANALYSIS

Anuja Misra* and Chitra Ahluwalia**

Abstract

With the growing awareness of the essence of a trademark ranging from small businesses to multinationals, there is a constant development in adopting innovative and unconventional marks. One of such marks, bloomed to the full in recent times are the colour marks; although, they too, in the tedious process of recognition and protection as trademarks, have faced countless impediments. The essence of the paper brings out the same with a comparative analysis of three jurisdictions. Where the Shade Depletion Theory depicts how monopoly over a finite number of colours may lead to ultimate depletion of the colours in public domain, the Confusion Theory suggests innumerable shades of one colour on the Pantone Scale leading to extreme confusion amongst the purchasing public. Another aspect while protecting colour marks the Doctrine of Functionality which relates to the functional or descriptive aspect[1] of the mark. Pink toned milkshake cartons may be presumed as a strawberry product; similarly, monopolising red colour for a fire extinguisher where red represents the colour of danger and high descriptiveness. The second chapter of the paper mentions the plight of the Indian judiciary faced with insuperable difficulties in establishing rights over 'colour combinations' subject to acquired distinctiveness after admittedly hesitating to grant single colour monopolies. Realising the importance that a colour or its combinations play in a trade dress, courts have addressed it through precedents like Colgate Palmolive in light of the unwary consumers. The third chapter of the paper discusses the exclusivity of colour marks across European Union being reluctant in protecting these marks as compared to US where obtaining exclusive right over colour marks is more flexible. The last part of the paper has

1 Section 9(1)(b), Trademarks Act, 1999

been concluded by raising relevant concerns and providing suggestions regarding the registrability of colour marks. The pace at which businesses are realising the importance of trademarks is impressive and should be tackled with caution as well as creativity.

Colour Mark as a Non-Conventional Trademark

The Indian trademark act in its definition of a trademark states that "a mark which is capable of being represented graphically and which is capable of distinguishing goods or services of one undertaking from those of other undertakings." Since colour at the outset aid in enhancing the visual appeal of a mark, they serve as good graphical representations of a mark. Also, since colours are so distinct that they remain in the minds of the public and help them to identify the goods as coming from the same source, they have proved to be a powerful representation in marketing and advertising. The flashing siren red of Louboutin's[2] sole and the soothing blue colour of Tiffany have great ability of attracting the consumers and henceforth acquire distinctiveness by secondary meaning. As commercialisation grows in the capitalist market, there grows a need to protect such marks.

The European Union has always been apprehensive about granting colour marks. They were from the beginning totally against trademark of primary colours for a simple reason that the primary colours are basic colours and monopolising these basic colours would not only shrink the public domain but also limit its use. Also it has to be kept in mind that if no protection at all is given to these marks then it can lead to widespread copying and deceptively similar competing products will enter the commercial market likely to cause confusion in the minds of the public. A similar thing happened in the Louboutin case where the court did not grant injunction to it against the other competing products and as a result Louboutin suffered great loses in its business.

Colour attributes to the visual perceptibility of a mark and when a word combined with a colour denotes or signifies the products of a brand name, it serves as a successful trademark. What was held in the *Re Owens-Corning*[3] case was that "the colour pink may signify roof insulation, by virtue of both its physical resemblance to, and factual connection with pink roof insulation. Also through the connection of a myth, examined below, the sign pink may associate itself with roof insulation."

3 Re Owens-Corning Fiberglass Corp. 774 F.2d 1116 (1985).

Colours play an important role in communicating a lot to people. Like generally we have an assumption that the colour red signifies love or blue signifies peace or green signifies envy and so on. Thus, colours sometimes play this important role of communicating about the products belonging to the trade name company and that is how people remember it and associate the colour with the mark. In the case of *Qualitex v. Jacobson*[4], the court overturned the notion of generic application and held that the ironing pad had acquired its use of the colour green and hence it shall be associated with the company on grounds of secondary meaning. When a colour is being used for a particular product or brand it is easy for people to remember or trace the origin. This is exactly how colours become a 'sign' protected as a trademark.

Colour Depletion Theory

It has been made clear that if a trademark acts as a sign, it can distinguish between the products of one from another like the purpose of any other trademark; or if it has acquired a secondary meaning, then it can be registered as a valid trademark. However there are certain impediments in the way of colour mark being registered. They can be discussed under:

- Colour depletion theory
- Shade confusion theory
- Doctrine of functionality[5]

The colour depletion theory states that the colours which act as a sign for the registration of trademark are limited in number and when a company acquires trademark on a colour, there becomes one colour less from the existing range of colours available for the public to use. Also, if we see it from the manufacturer's point of view, then they will have one less option for choosing a colour as trademark and this will go on with the remaining manufacturing companies who want to register colour as marks, till all the colours are exhausted. In the case of *Campbell soup Co. v. Armour & Co.*[6], the plaintiffs who used to have their goods packed in red and white packaging barred the defendants from using similar colours. While the defendants got a valid trademark on the colour which acted as a sign and was distinctive in nature, it was still contended that the request to have a monopoly over the two colours was not desirable. This would encourage other manufacturers too, to have their colour marks registered leading to a situation where all the colours would

5 Vana, J.L, *"Colour Trademark"* 7 TIPLJ 387 (1999).

6 F. Supp. 114 (E.D. Pa. 1948).

be claimed monopoly upon, and there would be no colour left in the public domain. This situation, forget the difficulties which it brings with it, is not feasible.

However, in the case of *Qualitex*[7], the U.S Supreme Court rejected the view and held that there are a wide range of colours and the shades of those colours and that the mere granting of trademark to a colour would not lead to a limited supply of colours. The court gave this opinion keeping in mind that the manufacturers would be positioned at an inconvenience if they were refused the right to register these marks as trademarks. But if there is a finite number of colours, then granting protection to all of them would lead to an increase in the number of infringement litigations where the use of any colour mark would violate the registration of the said colour as a trademark.

Shade Confusion Theory

When we talk about shades of a colour, the basic assumption is that if a single colour is registered as a trademark, then the usage of its different shades would lead to confusion. This is not taken into account only when dealing with infringement procedures but also the confusion that the customers will face while purchasing goods. Confusion can be created in the minds of the public by using a slightly different shade of colour when going for a trademark registration[8]. The names and colour codes of different shades of the colours can be found on the *"Pantone Scale[9]"*. However, even though the scale provides apt colour codes for the sake of registration, it seems meaningless when we talk about 'likelihood of confusion' in the minds of the public because howsoever colours there may be specified distinctively on the scale, the close shades of a colour will seem the same to an average person of imperfect recollection[10]. What these manufacturers of like products do once they know that a specific colour has been trademarked by the other company, is that they select a close shade of the same colour from the Pantone Scale and file for registration, least caring about the deceptive similarity that it causes. For e.g. the colour shades of Cream Pink and Petal Pink seem all the same to a layman unless the proper code number is specified. This affects not just the brand owners but the general public.

Functionality Aspect of Colour Marks

The doctrine of functionality in colour marks considers keenly the functional aspect of the marks. In cases where a colour is descriptive of its nature in the sense that it provides a

9 *'Find a Pantone colour',* https://www.pantone.com/color-finder.

10 *Amritdhara Pharmacy v. Satyadeo Gupta, AIR 1963 SC 449*.

technical result, then the mark is not workable under the trademark law to get protection. This is done to stop the monopoly over the functional aspect of the mark. This can be elucidated further by help of an example. The colour Black absorbs heat faster and the reason why it is used in non-stick utensils of different companies so as to help food cook faster. If Prestige acquires a monopoly on this black colour on utensils then the other non-stick utensil companies would not be able to even establish a market. This would lead to an anti-competitive practice and hence not desirable under the trademark law. The colour Red painted on fire extinguishers which usually signifies danger, if monopolised by one company would prove to be a setback for the other fire fighting equipment companies.

The functionality doctrine concept under colour trademarks which is not favourable to colours providing a functional element can best be explained with the help of two cases- *Christian Louboutin S.A*[11] and *Maker's Mark Distillery, Inc*[12]. The doctrine seconds the view that such colours cannot be granted monopoly even if they have acquired distinctiveness in the market by secondary meaning[13]. In the *Louboutin* case, the court refused YSL's objection to the use of red colour on soles. The court said that "we see no reason why a single colour mark in the specific context of fashion industry cannot act as a brand or source identifier." Also the court gave protection to the red colour on the sole of Louboutin based on acquired distinctiveness of the brand as it wasn't serving any functionality element. YSL could keep any other colour on the sole as identification. In the other case of *Maker's Distillery,* the plaintiff sued the defendant Jose Cuervo on the use of dripping wax seal on its tequila bottles. The district court barred the defendant from using the red wax seal on the cap of the bottle to which the defendant responded that it was an aesthetically functional feature and appealed to the U.S. Court of Appeals. The apex court upheld the decision of the district court banning the defendant from using the red dripping wax seal on the bottles they were selling.

Therefore, it can readily be concluded that the colour marks are in fact unconventional in its very nature, since they bring along many impediments in their way. Issues in relation to the limited number of colours, confusion amongst the similar/ slightly similar shades of the same colour as well as the functionality aspect making the mark descriptive in nature, wherein the descriptiveness serves as an absolute ground of refusal, are some of the speed

breakers in the smooth adoption of such marks. The shade depletion theory has been well explained by the US courts in the landmark *Qualitex* judgement stating that refusal to grant protection where a particular colour is associated by the consumers exclusively to such proprietor only, may cause losses to such entity, however on the other hand has also acknowledged that granting protection to over all colours, which lead to an increased infringement cases. Shade depletion theory on the other hand, involves the *Pantone Scale* which provides for a wide range of colours leading to confusion between different shades of a single colour. Another major impediment involved in adoption of a colour is in relation to the functionality aspect of a colour linked with the type of goods/services being provided under it. The functionality is linked directly to the descriptive nature of a mark which has been catered symbolically by the US Courts in *Maker's Distillery*.

Colour Trademark: Position in India

Initial Stage of Non-Acceptance in India

In the Trademarks Act 1999, the definition of "trademark" and the word "mark" both include 'combination of colours' to be acceptable for registration of a trademark provided it is such a graphical representation that it is capable of distinction. Initially the Indian judiciary was a little influenced by the European Union ideology of not granting protection to colours as trademarks because of the colour depletion theory and hence granting monopoly rights over a colour was out rightly rejected.

This was reflected in the case of *Colgate Palmolive*[14], where the court was hesitant in granting a colour a trademark to the red and white trade dress of Colgate giving the reason that both red and white are basic colours and are descriptive in the sense that they depict the colour of tooth and gum. *Prima facie* the court rejected but an exception was held in this case that no party can claim a monopoly in a particular colour but if there is a combination of colours that has been long used by a manufacturer company and due to secondary meaning has been imprinted in the minds of the customer as coming from that particular company only, then such combination could qualify for trademark protection provided it fulfils all the other criteria of a valid trademark. Also if the colour combination, layout, packaging and the overall get up have been attached to a product for quite some time, then in that case, if the competitors come up with a deceptively similar product, there is a very high chance of the public being misled and if the trade dress or the colour is not registered, then, there is only by way of passing off that the infringed can claim their right.

14 (1998) 1 Comp LJ 171 MRTPC.

Shortly thereafter, the judiciary realised the growing importance of trade dress and colour as a trademark and that it casts a lasting impression in the minds of the customers who begin to associate that particular mark with the product. As per the definition given in the act, combination of colours or even a single colour serves as a trademark although a trademark consisting of combination of colours stands at a better chance of having the mark registered as it would face less opposition and also because of the distinguishability factor. It is seen that at present, in India, the courts are more at ease when it comes to granting trademarks to a combination of colours which on the other hand in case of a single colour, a stronger evidence as to its validity is required. "The judiciary understands the mental association of the colour in the mind of an average buyer[15]." As per the Trademarks Manual guidelines, 'in exceptional circumstances a single colour can be considered for registration if the colour is capable of denoting the origin of a product or service and has acquired a high level of distinctiveness.' The judiciary is still a little unconvinced about granting protection to a single colour but keeping in mind the mental association of the people they have started to change their practice on the pretext that if a company has in fact gained reputation in the market for being associated with a particular colour then it would be unfair if he has to bear infringement costs and loss to his repute because of other deceptively similar marks in the market.

Trade Dress Issue and Stand of Judiciary

Trade dress generally refers to the outer facade or the packaging of a product that makes it visually appealing. It is a form of intellectual property and is nowhere as such defined or protected under a different act. Its sanctity flows from the Trademark Act 1999, under section 2(zb)[16] that defines trademark to be inclusive of *"shape of goods, their packaging and combination of colours."* Protection to trade dress began to be given after the manufacturer company without due registration of his trademark established quite a repute and goodwill in the market, and then was threatened by the other party who tried to bring in the market a deceptively looking similar product quite similar to the earlier goods by its outer appearance or packaging. Thus in the cases of alleged infringement of the trade dress, the owner has to prove his established goodwill along with substantial damage to it. The concept of trade dress has been taken from the U.S Lanham Act[17]. A trade dress may include in addition to packaging, graphics, design, shape, size, colour combination, texture or placement of words on it amounting to the general outer appearance of the product.

15 *Rupa and Co. Ltd. v. Dawn Mill Co. Ltd.* AIR 1998 Guj 247, (1999).

16 "Trade mark" means a mark capable of being represented graphically and which is capable of distinguishing the goods or services of one person from those of others and may include shape of goods their packaging and combination of colours.

17 Section 43(a), US Lanham Act, 1946.

The *Colgate Palmolive Co. v. Anchor Beauty Care Pvt. Ltd.*[18] is an important case addressing the issue of trade dress in India. In that the court said that "It is the overall impression that customer gets as to the source and origin of the goods from visual impression of colour combination, shape of the container, packing etc. If illiterate, unwary and gullible customer gets confused as to the source and origin of the goods which he has been using for longer period by way of getting the goods in a container having a particular shape, colour combination and getup, it amounts to passing off."

The court in the case held that there was no monopoly on the particular colour but since similar reproduction of the combination of colours created a likelihood of confusion in the minds of the people, there was a ground for stopping the defendants.

Registrability Issue

Trademarks are generally composed of words or letters or accompanying slogans, but since the recent developments in the law of trademarks has brought in various types of trademarks, there has been considerable controversy regarding colours as a trademark. In India for the registration of a colour, the shade has to be graphically represented on a sheet of paper whereas in U.S. and E.U. the representation is done on the Pantone scale. Even after having all these requirements for registration of the colour on a sheet of paper, in India there are some problems that cannot be done away with when it comes to colour marks. Some of the problems include shade confusion theory and the material to which it is applied. At the time of registration, the applicant is not supposed to submit a sample of the material to which the proposed colour needs to be applied, which makes it all the more difficult to ascertain that over a period of time the shade fades away or changes when applied to a different material, making it extremely difficult to keep a legal record of such legal requisites.

Keeping this entire debate aside the Indian judiciary, which was earlier apprehensive about granting trademarks to colours, now has started believing that colours and the trade dress constitute an important part of the product because of the mental association that it casts in the minds of the consumers. It is now comparatively relaxed in this regard but still suffers from certain hurdles in registration of a single colour as a trademark. There are some desired suggestions that need to be applied for the registration process of colour trademarks which have been separately dealt with in the last part of the paper.

Concluding the position of the colour marks within India, it can be seen that, the initial phase of introduction of these unconventional marks, the Judiciary was essentially hesitant

18 2003 (27) PTC 478 Del.

in offering monopoly to colour marks. This was also reflected in the case of *Colgate Palmolive* where it was pointed out that the combination of red-white was descriptive in nature as it represented the gum-tooth assemblage. However, the court was flexible enough to acknowledge the mental association of the colours by the consumers in respect of only one product thereby providing that such monopoly can only be granted in cases where a mark has acquired a secondary meaning in its favour by the public at large. It cannot be ignored that the concept of trade dress has also been recognised in the same judgement by the Indian courts wherein the overall getup including the colours as shown within the packaging reflects the knowledge of consumers in respect of that product. Indian courts have been comparatively open to adoption of colour combinations instead of monopolising a single colour wherein exceptional circumstances may have to be proven. In practicality, there may be several issues a proprietor may have to face for obtaining protection over his unconventional mark including the graphical representation of a colour, fading away of the colours or the change in the shade of a colour when applied to a different material. Indian courts have usually kept a traditional approach while incorporating new concepts in the field of any intellectual property, however we have witnessed an increased number of instances wherein they have come out of this comfort zone and accorded protection over unconventional marks.

Position across Other Jurisdictions

The TRIPS Agreement, to which all the member states have to be in coherence with provides with a standard definition of Trademark as, "*any sign or any combination of signs, capable of distinguishing the goods or services of one undertaking from those of other undertakings, shall be capable of constituting a trademark. Such signs, in particular words including personal names, letters, numerals, figurative elements and combination of colours as well as any combination of such signs, shall be eligible for registration as trademarks.*"[19]

European Union

The legislation dealing with the registration of Trademark in European Union is the EU Directive which has defined Trademark in Article 2[20]. The registration and enforcement of Community Trademark is regulated by the "Council Regulation on Community Trade Mark" (CTMR).

19 Article 15(1), Agreement on Trade Related Aspects of Intellectual Property Rights, 1995.

20 Article 2**:** A Trademark may consist of any signs capable of being represented graphically, particularly words, including personal names, designs, letters, numerals, the shape of goods or of their packaging, provided that such signs are capable of distinguishing the goods or services of one undertaking from those of other undertaking.

The purpose of trademark is essentially to differentiate one's products from others. The concept of trademark protection in European Union is considerable young as compared to US, which is why it has been centralized.[21]

The TRIPS Agreement expressly mentions that 'combination of colours' can be registered as a trademark but does not mean to exclude the registration of a single colour.[22] Whereas there has been no explicit mention on the same in the definition under the EU Directive but it abides itself by the definition under TRIPS and the list given in its definition of trademark is hence not exhaustive. Following this, the trademark laws of many of the members of the EU have directly incorporated the registration of colour marks as well, which includes the German and Latvian laws.

Fulfilling the registrability criteria can be difficult when it comes to colour marks. From the time period of 1996 to 2012, the OHIM had received around 880 applications pertaining to colour trademarks, out of which only 276 had been accepted and approved.

However, the criteria to apply for the registrability of a colour mark had been laid down in the *Sieckmann's case*[23], according to which the graphical representation of a trademark should be "clear, precise, self-contained, easily accessible, intelligible, durable and objective".

However, in the *Libertel case*[24] of 2003 the general criterion of Sieckmann was observed to be applicable for colour trademarks as well. The court further held that the graphic representation of a colour mark can be fulfilled by consisting of a "description in word, a sample of the colour combined along with the description and designating the colour through an internationally recognised identification code." The court therefore laid down two essentials to get a protection over a colour mark:

1. Capable of graphical representation
2. Capacity to distinguish

21 Taylor Piscionere, *Imitation may not Always be the Sincere Form of Flattery: Why Colour Wars in the United States and Europe may result in Brand Dilution and Colour Depletion*, 25 Pace Int'l L. Rev. 43 (2013).

22 D. GERAVIS, THE TRIPS AGREEMENT: DRAFTING, HISTORY AND ANALYSIS, 2nd Ed. (Sweet & Maxwell) (2003).

23 *Ralf Seickmann v. Deutsches Patent*. C-273/00

24 *LibertelGroep BV v. Benelux*. C-104/01

In the case of *Heidelberger BauchemieGmBH*[25], filed an application for registration in the German Patent and Trademark Office consisting of a "rectangle having the colours blue on the top and yellow below it", which was to be used in connection with the building materials the application was rejected on the ground that it was impossible to represent the sign graphically and neither did it have any distinctive character. Upon an appeal to the Federal court in the present case, the ECJ gave certain guidance regarding the issue. ECJ confirmed the decision by stating that even though single colours are protectable but a combination of colours which is in every conceivable form" may not be able to fulfil the requirement of graphical representation. The court further observed that while dealing with applications relating to combination of colours the exact ratio or proportion must be provided by the owner.

This could lead us to the conclusion that, a liberal approach in order to fulfil the criteria of 'graphical representation' may lead to incorrect decisions and legal uncertainty. It would allow too much monopolization of the mark and the consumers would also not be able to differentiate the products from others.[26]

Therefore, if a mark comprises of multiple shades the accuracy should be higher and the proportion of the colours should be specifically mentioned in the application.

In the 2010 case of *BCS v. John Deere*[27], registration application for the combination of colours green and yellow to be used with respect to agricultural machines was applied on the basis of acquired distinctiveness of the colours in the market. There was evidence to prove the long subsisting use of the colours which was interpreted as an indication to the source or origin by way of books, catalogues and trade fairs and that there was a long persisting usage of the colours which was even recognised by the consumers within the relevant market.[28]

Cadbury had also been successful in protecting the colour purple with respect to its packaging of which was bearing the pantone number 26854c. The court in this case also held that the mark had acquired so much distinctiveness that the consumers associate it with the product of the applicant. Evidence in the form of public survey was also submitted in regard of the same.

Trade Dress

Trade Dress in European Union is considered to comprise of the product design along with its packaging. Although the relevant statute does not provide with any explicit definition for trade dress, but has been cited in many case laws and has differed across various jurisdictions. The Community Trademark Law extends protection to trade dress only when the particular requirement for distinctiveness has been met. The ECJ has time and again emphasised that the standards to assess the distinctivity is uniform for all types of marks.

The rationale for granting protection to trade dress depends on the subject matter under which it is to be protected. From the perspective of Trademark, a trade dress which has acquired distinctiveness and secondary meaning within the relevant sector of the market can be protected. Moreover, if protected under designs the trade dress should not be an imitation or already publicly known.[29]

United States

Registration of trademarks in US is governed under the Lanham Act and registration procedure is done at the United States Patent and Trademark Office (USPTO). Since trademarks are territorial in nature, the act provides protection to the registered trademarks only in US and after the registration; it is notified to all the other states as well. The act provides liability against the infringer to sue them being a legitimate and viable owner of the trademark.[30] Section 45 of the act defines the trademark and what all could constitute to be a trademark.

The statutory definition does not seem to expressly mention colour mark as a type of trademark and hence not eligible for protection as per the traditional ongoing rule. However, for a long period of time it was not extended to colour marks until the landmark judgement of *Qualitex Co. v. Jacobson Product Co.*[31] For a better understanding of the case, it is necessary to know about the situation prevailing 'Pre-Qualitex' as well.

Pre-Qualitex Position

Previously, colour mark was not recognised or not considered to be capable of registration and the rationale behind the said contention was that it being a 'weak mark', the consumers cannot identify and indicate the origin or source of goods. This has been observed in a

29 Report of Trade Dress Protection in Europe, Sept (2007) pp 1-6.

30 Section 32, US Lanham Act, 1946.

31 514 U.S. 159 (1995).

plethora of judgements.

In the case of *Diamond Match Co. v. Saginaw Match Co.*[32], the court refused the application for registration on the ground that a single colour mark would not be able to serve the purpose of the trademark and hence could not be registered. Thereafter, the court in the case of *Campbell Soup Co. v. Armour & Co.*[33] *(1949)* dealing with the same issue denied the trademark to "horizontal red and white Campbell's soup labels" to the owner. The court reasoned its decision by saying that it would lead to colour monopolization, depletion in colours available as well as confusion of shades. If trademark is given over a particular colour it will grant them the exclusive rights to restrain anyone to use the colour. However, the traditional practice did not bar the registration of a colour absolutely but it was held that in order to make the colour an essential feature of the mark, it should be so intricately connected with the mark or design that the manufacturers of similar products know what they may be allowed to pursue with.

However, in the case of *Re Owens-Corning Fibreglass*[34], the Court of Appeals for the Federal Circuit brought about a twist by stating that the tradition of not granting colour trademarks should be done away with and should be scrutinised or judged as per the facts and circumstances of each case. The fact that Owens-Corning used the colour pink in connection with his insulation products for over 30 years, has acquired distinctiveness among the consumers over a period of time. The court observed that the colour was arbitrarily chosen and could not be connected to the products in any way, and therefore had acquired a secondary meaning. But the judgement was unable to bring about a significant change in the minds of the judges, following which the seventh and ninth circuit courts refused to comply with this decision. This ideology was subsisting until the U.S. Supreme Court decision in the *Qualitex* case.

Post-Qualitex Position

The plaintiff company used to manufacture iron pads that were 'Green-Gold' in colour since 1950s for the purpose of dry-cleaning. The court in this case out rightly accepted that the green-gold colour has acquired distinctiveness among the consumers so much so that it has acquired a secondary meaning and therefore granted the colour mark.

33 175 F.2d 795.

34 774 F.2d 1116.

Trade Dress

It is pertinent to discuss the concept of Trade Dress with regard to issues under colour marks. Trade dress is a form of intellectual property which comprises of the visual elements of the product or its packaging which makes it easier for the consumers to identify the source or its origin.[35]

The Lanham Act does not per se grant recognition to Trade Dress, but Section 43[36] provides for certain remedies available against the infringement of trade dress, when not registered. It states that when a plaintiff files a suit for unregistered trade dress, he shall bear the burden of proving that the "matter sought to be protected is not functional." Thus, one requirement on which it clears its stance is that it should not be functional in nature. Therefore, it is possible to protect trade dress in US till the time it is not functional in nature and of course distinctive in character.

Journey so Far

Having discussed the position of colour trademarks in the European Union and the United States, one thing has prominently been brought into light that nowhere do we have an express denial of the recognition of colour marks as trademarks. The Lanham Act might not expressly recognise it, however in EU or in India the phrase 'combination of colours' is mentioned. Where on one hand the TRIPS Agreement which sets out the minimum standards to be followed by the member countries includes in its understanding of the term 'sign', letters, numerals, figurative elements and combination of colours and any combination of such signs[37], the EU Directive and the Lanham act have in a way by identifying packaging and trade dress exhibited flexibility in extension of protection to instances where the mark through its colour has established association with the attached brand name and has gained popularity among the public for the same.

Agreed that the packaging not only comprises the colour scheme in the backdrop but a combination of that with probably lines or a pattern or how a particular brand name is written, it all adds up to enhancing the visual appeal. Even so, the colour plays a predominant role in the association of the trademark with the manufacturer company that advertises and markets

35 Rituraj Shrivastava, *Trade Dress: Concept*, Mondaq, Sept (2013), http://www.mondaq.com/india/x/262928/Trademark/Trade+Dress+Concept+And+Indian+Practice.

36 § 43 (15 U.S.C. § 1125). False designations of origin; false description or representation:
(3) In a civil action for trade dress infringement under this chapter for trade dress not registered on the principal register, the person who asserts trade dress protection has the burden of proving that the matter sought to be protected is not functional.

37 Article 15 of the TRIPS Agreement.

it. Hence colour trademarks have garnered importance lately By way of 'combination of colours' and 'packaging' many countries all over the world are trying to expand protection to intellectual creativity.

Conclusion and Suggestions

Conclusion

Colours tend to leave behind an impression in the mind of the viewer. It becomes easy for people to identify and recognise things through colour marks. The recent trademark trend has been to look for innovative ways which are fascinating enough for the consumers of the relevant market. A single colour or a combination of it tends to distinguish the products of one owner from the products of others. It also forms a part of the packaging of the product and is even covered under the ambit of trade dress essentially. However, issues regarding monopolization of a colour can be reconsidered and ignored when the relevant market tends to link that particular colour to the product of the trademark owner. Recent trends have shown a development and modernised ideas have been inculcating with the acceptance of colour marks in US and EU.

However, certain level of clarity is needed as far as the registration of colour marks is concerned. Courts have a major role in laying down certain minimal standards to be fulfilled in order to get registration of a colour mark as a trademark. The two main requirements put forward and reaffirmed in cases like *Sieckmann*and *Libertel* includes the possibility of a colour to be capable of graphical representation and the existence of acquired distinctiveness of that colour within the consumers.

Indian courts have now chosen a liberal path in respect of the same issue for example, PayTm has now been granted a trademark over the colour combination of white and blue. However, the judiciary still seems too apprehensive while granting single colour marks as trademarks due to the fear of monopolization and further a misuse. However, the functionality aspect is also one of the major issues while speculating such cases because the justification for the same has been that if the colour is of a functional character it cannot be registered under trademark, same can be observed from the major dispute between *Colgate v. Anchor*.

A balanced approach could be the ideal situation wherein the interests of both the trademark applicant as well as the consumers should be kept in mind. The courts have to judge from the point of view of a person of an average intellect. Colour marks are therefore yet at an

infant stage wherein the judiciary has to play a major role by putting forward the facts and circumstances of each case.

Suggestions

In spite of the colour mark serving as a good trademark, there exist still certain hurdles to the successful registration of the same. Following are some suggestions that can help overcome these issues:

1. As already discussed, Indian scenario is still a little hesitant in granting colour trademarks to a single colour. To this issue, proper guidelines should be set out by the Trademark registry, outlining the problems that can crop up and how to deal with such problems along with ascertaining experienced people who shall deal with the same.

2. With respect to colours, the confusion as to the particular shade of the colour is bound to happen. Robust registration search systems should be made that can find out the exact difference between the colours and also whether there is a chance or likelihood of the public getting confused with the two colours or not.

3. Another issue that was raised was that the shade of the colour proposed to be registered depends on the material that it is applied to, and may change if applied to another material. In this regard, the Registrar along with asking for the exact shade of the colour from the *Pantone scale* should also ask the applicant to furnish along with the colour, a sample of the material to which the colour is proposed to be applied as a live example so that the exact shade of the colour can be registered. To prevent further confusion, the Registrar should have the powers to restrict the applicant to that particular shade only and prevent him from using the colour on a different material as submitted.

4. The issue that came up in the *Nexium* drug case was that people identified drug with the colour bringing up the stance that in India, trade dress is becoming increasingly important in the pharmaceutical sector. Before the registration of a particular colour to a drug, efforts should be made to ensure that it does not coincide with another drug of the same or similar colour and if so, then either the applicant should be notified to change the shade of the drug colour or a public notice should be issued along with big advertisements ensuring that the public which consumes these essential drugs are in no way confused by either the name of the company or the colour.

5. Special individual recognition should be given to trade dress in order to make these two branches i.e. trademark and trade dress, different and eliminate confusion. Also, it would be easier for the courts to litigate on matters when they know what the subject matter pertains to.

On a clear establishment of the fact that colours not only play a vital role in creating a lasting impression in the minds of the public thereby making it way easier for them to choose the product of a company of their choice amidst hundreds of alternatives of the same product available in the market, it goes on to add a visual appeal to the product. Even though a lot many cloth detergents companies have gone for the regular white and blue packaging, with their respective trademarks a part of the same, we have diversity with *'Ariel'* choosing the colour green and *'Tide'* choosing an absolutely out of the box, unrelated colour orange for its packaging to create this lasting impression in the minds of the public ensuring and making the best efforts with their creative thinking so that their product cannot be confused with another's at all costs.

However, the paper surely raises concerns about monopolising particular colours majorly the primary colours, which have been many a time refused by the courts until and unless they are presented in a combination with other colours or are different shades on the pantone scale or have proven the strength of their mark to be well known having earned secondary meaning after years of operating in the market. Be it Cadbury's purple or PayTm's blue, all had to go through a rigorous tussle in the courts to prove their strength of the mark, although examples like Christian Louboutin's red sole[38] does give us a hint that there is light at the end of the tunnel after all!

Comparative Analysis of Corporate Governance in India and USA

Nikita Mittu*

Abstract

Corporate Governance is the process of ensuring that management activities take place with transparency and efficiency. It is the responsibility of the Board of Directors of a company towards the shareholders. It is required to incorporate a culture which ensures maximization of the visions and mission of the company in relation to its performance.

This paper will discuss the concept of Corporate Governance, its origins in the international market and the process of Internal Governance in markets of India and United States of America. It further discusses Corporate Governance practices followed by companies in India and USA, thereby analysing the similarities and the difference between the two established legal systems, including internal control, Committees, Independent Director and their duties and Audit Committee. Furthermore, this paper discusses the cases which led to the need for Corporate Governance in India and USA and established the legal provisions for the same. In the conclusion, the paper gives a summary of the provisions of Corporate Governance in India and USA in relation to its implementation ad impact.

Introduction

Corporate governance is the method of creating effective relationships to ensure corporate direction of the company. The main responsibility of corporate governance i.e. the oversight and control of management activities hence lies on the Board of Directors of the company, who are appointed by the shareholders. As we come down from the managerial graph of any company, responsibilities are diluted along the graph. Further, additional participation to corporate governance lies upon the shareholders, who appoint the Directors, employees, the creditors and suppliers. A Board of the company has numerous responsibilities related to

* Advocate, Bar Council of Delhi

management of the business and reporting the same to the shareholders. Hence, Corporate Governance is the responsibility and work accomplished by the board of directors of a company in order to ensure effective functioning of the corporation to yield maximum value of the company.

Thus, Corporate Governance, hence essentially revolves around the board of directors of a company. It provides structure and directly affects the performance of the company.[1]

Academic and Legal Definitions

Organisation for Economic Co-operation and Development (OECD) defines 'Corporate Governance' as the "procedures and processes according to which an organisation is directed and controlled. The corporate governance structure specifies the distribution of rights and responsibilities among the different participants in the organisation – such as the board, managers, shareholders and other stakeholders – and lays down the rules and procedures for decision-making."[2]

'Corporate Governance' is defined by Institute of Company Secretaries of India as, "the application of best management practices, compliance of law in true letter and spirit and adherence to ethical standards for effective management and distribution of wealth and discharge of social responsibility, for sustainable development of all stakeholders".[3]

"The act of steering, guiding and piloting—describes what boards [should] do when in session. It does not describe and is not a proxy for the board itself, nor any other party or activity outside the boardroom. Regulators (to set rules), proxy advisers (lobbyists on behalf of shareholders and other interests), and shareholder meetings (communications) are all important, but none is corporate governance."[4]

Further, corporate governance acts as an accountability to capital generators and investing agencies.[5] It is the management's control which ensures effective functioning of the

5 Bruce Weber, Dean of the Lerner College of Business at the University of Delaware, at the inaugural meeting in November of the newly reconstituted advisory board for the John L. Weinberg Center for Corporate Governance.

company by working in its best interest and making the shareholders accountable to elect directors and auditors.

Corporate governance is generally the practice which affects the control of a business in a company. It not only affects the persons who control the companies but the allocation of risks and returns from the business of the company to persons including stockholders and directors.[6]

Concept of Corporate Governance

When we talk about any corporation, the first aspect which comes to the mind is the goodwill of the company and output it generates. In order to ensure an impact on the public, investors as well as the shareholders, every corporation prepares its management with utmost care. Corporate governance is the set of rules and regulations which ensure an effective corporate functioning of any company which decides its existence and accountability in the market. It exhibits a balance between the interest of the stakeholders of the company and the public. It includes all aspects of management within its ambit including the internal controls and the disclosures required by a company in its functioning. Internal controls ensure that the financial and the accounting details of the company are reliable and the disclosure of the information at every level ensures transparency to the Board. The National Association of Corporate Directors (NACD) was established in the United States of America (USA) to ensure effective leadership in board of directors of the company.

NACD published 'Key Agreed Principles to Strengthen Corporate Governance for U.S. Publicly Traded Companies'[7] to improve the concept of corporate governance. Hence, it suggested that a Board of Directors shall be the first essential requirement to ensure 'long term value creation', thereby leading to transparency in the practices of the company to the shareholders. It suggested that directors of the Board should be from difference academic backgrounds to ensure diversity of skills and experience on the Board. This Board should be accountable to the shareholders only and shall be independent from the management of the company. [8]

Corporate Governance in India

Corporate Governance plays a crucial role in the economic condition of India. From 1991, the economy in India has seen a better size of the stock market.[9] For Indian market to ensure more foreign direct investments, the companies in India need to focus more on 'Shareholders value maximization'.[10] Although the concept and attempts of corporate governance has existed since 1961 globally, it is observed that only in 1992 did India take an initiative by reforming the Securities and Exchange Board of India (SEBI). SEBI ensured supervision and standardization of stock trading leading to formulation of corporate governance rules and regulations. Later, Confederation of Indian Industry (CII) was formed in 1996, which led to laws essential for companies in India to act for corporate governance.

Kumar Mangalam Birla Committee and Narayan Murthy Committee were formed, which were constituted under Securities and Exchange Board of India, whereby they were required to substantiate the meaning and importance of corporate governance for the companies in India. After an in-depth understanding and analysis of the companies, clause 49[11] was then introduced for listed companies with SEBI relating to listing contracts, which was later reformed after cases like Satyam, WorldCom, etc. to deal with issues which led to dismantling of these company's structure and management, thereby degrading the economy of the country.[12] Clause 49 of the Listing agreement provides for a minimum number of independent directors, board members, committees, code of conduct, audit committee rules and limitations, etc. Financial penalties were imposed on companies which did not follow the principles as laid down in Clause 49.[13]

On improving corporate governance in a company, the relation of the company with its stakeholders improves. Since corporate governance ensures that the property is protected

11 Clause 49 of the Listing Agreement by Securities Exchange Board of India (SEBI) is applicable to all the listed Companies under SEBI w.e.f. Oct. 01, 2014. It provides for listed companies to ensure optimum combination of directors in the Company including executive and non-executive directors and include at least one woman director. It essentially includes the rights of the shareholders, the responsibility of stakeholders and directors and the disclosures required by the company to maintain transparency.

12 N. Sanan and S. Yadav, *Corporate governance reforms and financial disclosures: A case of Indian companies*, IUP Journal of Corporate Governance, vol. 10, no. 2, pp. 62-81, 2011.

13 K. Han and Y. Lu, *Corporate governance reforms around the world and cross-border acquisitions*, Journal of Corporate Finance, 2013.

and the registration of ownership is effectively and securely done, this benefits the company's capital mobilization. In order to receive funds, the company requires to be transparent in their disclosure of funds. Companies have to ensure that the funds are received and are effectively allocated.[14]

Clause 49 of the Listing Agreement

Clause 49 of the Listing Agreement is the agreement between the company and the stock exchanges on which it is listed, such as National Stock Exchange and Bombay Stock Exchange. This clause provides for the system set up relating to all the information necessary for the Stock Exchanges from the company. In order to ensure that India is able to participate in the competitive business around the world effectively, there led to the constitution of the regulatory framework to ensure corporate governance for listed companies. The Code of Corporate Governance published in 1998 by Confederation of Indian Industries (CII) was one of the first codes in Asia.[15]

Corporate governance is governed internally and externally. External factors include the market and the competition. Internal factors majorly include the internal functioning of the company. Internal governance of a company is done by the shareholders and directors. The board of directors are required to ensure that the financial statements of the company are audited. Executive compensation is provided to the members of the board for the purposes of compensation. In countries like the USA, the shareholders do not decide on the compensation amount. However, in India, Kumar Mangalam Birla Committee was constituted in 2000 by the Securities and Exchange Board of India (SEBI) which provided that it is the responsibility of the board of the company to provide for guidance in regard to leadership and strategy, management of the company independent of objective judgement and accountability to the shareholders of the company.[16]

Hence, the Board of Directors of a company has a huge responsibility for which it is required to be updated and acquire all necessary information to take important decisions of the company. In the case of *M.S. Pharmaceuticals Ltd. V. Neeta Bhalla and Anr.*,[17] the three judge bench of the apex court held that the Managing Director or the Joint

14 *Supra* note 8.

17 *M.S. Pharmaceuticals Ltd. V. Neeta Bhalla and Anr.,* (2005) 8 SCC 89.

Managing Director may have different responsibilities in the company; however, they have the responsibility to ensure that the business of the company is conducted effectively. Therefore, in this case, the signatory of the dishonoured cheque is liable under Section 141(2) as the liability of the concerned person office or position in the Company.

Further, in the case of the *Uttar Pradesh Pollution Control Board v Mohan Meakins Ltd.*[18], the Supreme Court opined that any person who holds the office of a Manager or in charge of the conduct of the company is liable under Section 47[19] of Water (Prevention and Control of Pollution) Act, 1974.

Analysis of Clause 49 and Sarbanes Oxley

Clause 49 of the Listing agreement has been based on the principles of Sarbanes-Oxley Act, 2002 (SOX Act). Sarbanes-Oxley Act, 2002 was ensued for listed companies on US stock exchanges. The SOX Act was passed by the U.S. Congress to aid the investors from fraudulent financial reporting. It broadly covered four areas, corporate responsibility, the increase in criminal punishment, accounting regulation and providing for new protection. The similarities include the number of directors, rules in relation to insider trading, etc. The main difference between Sarbanes-Oxley and SEBI is that under Sarbanes-Oxley, reports of fraud or annihilation lead to 20 years of imprisonment, however, SEBI can initiate criminal proceedings or charge a fine leading to delisting of the company.[20]

The aim of both the legislations is the same, however the structure of SOX Act and Clause 49 are different.

Under Section 404 of the SOX Act, the Management and the auditors establish internal controls for financial reporting ("ICFR")[21]. However, under Clause 49, all aspects to corporate governance are covered and it is not restricted to only financial reporting.

1. Under the SOX Act, the responsibility of internal control lies on the board, which is the certifying authority. However, under Clause 49, Chief Executive Officer (CEO) and Chief Financial Officer (CFO) are the certifying authority[22] for internal controls and are responsible for frauds in the company.

18 *Uttar Pradesh Pollution Control board Vs. Mohan Meakins Ltd.*, (2000) 2 SCALE 532.

19 Offences by companies

20 *Supra* note 10.

21 Sarbanes-Oxley Act, 15 U.S.C., 2002.

22 Securities and Exchange Board of India Act, Listing Agreement, Clause 49, Para V.

2. Under the SOX Act, a committee is established by the board, to ensure financial and accounting reporting. In cases where no such committee is established, directors of the board are considered as member of the audit committee whereby such directors are independent directors. However, the frequency of the meetings is not specified in the SOX Act. Under Clause 49, such details are specified, whereby it is provided that audit committee should consist of at least three directors as members, the audit committee should also consist of Independent Directors constituting two-third members of the committee, and at least one member of the audit committee shall have experience in relation to accounting and management of finance.

3. SOX Act and Clause 49, both require an independent director as a member of the audit committee. However, Independent director is defined differently under both laws. SOX Act defines independent director as a member without consultation fees, whereas Clause 49 defines independent director as:

   - A Director taking only director's remuneration and takes no other monetary benefits.
   - Is not related to any of the management members or the promoters of the Company.
   - Has not been an executive in the previous three years and also did not hold the position of partner in any legal or audit firm of the Company.
   - Does not hold the position of a service provider or supplier to the Company.
   - Holds up to two percent of voting shares of the Company.

4. Under the SOX Act, Section 301 provides for duties of the audit committee in relation to resolution of complaints and process of retaining them. Such complaints maybe of audit, accounts and internal controls[23] of the Company. However, Clause 49 provides for 'Investors Grievance Committee'. Therefore, it may be noted that SOX takes in account the accounting related issues with specificity.

5. Under SOX Act, a code of conduct should be declared and if such code of conduct is not accepted, the reason for the same should be duly mentioned. However, under Clause 49, it is mandatory to publish a code of conduct on the website of the Company. The senior management is required to adhere to such code of conduct. Code of conduct under Clause 49 is also applicable to stakeholders, however under SOX Act, the code of conduct is only applicable to the financial members of the Company.

23 *Supra* note 15, Section 301.

Case Studies

1. Enron Corporation was one of the biggest companies of America. In 2001, Enron inflated its earnings by 600 million dollars since 1994 by using shell companies and did not disclose its losses in its financial statements. Eventually, Enron had to file for bankruptcy protected in 2002 since its stocks had been reduced to less than $0.75 from $90.75 and the employees lost their savings and the investors of the company lost their equity in the company worth billions of dollars. Enron Corporations was one of the biggest failures of the capital markets in America. This failure was considered to be of the audit committee of the company since it did not have a model of corporate governance to rely on. The audit committee works in accordance with the regulation and SEC which provided for gaps and irregularities in the corporate governance system in the US in early 2000s. The Directors of Enron were paid with the stocks to ensure their interests to be same as the shareholders. This however, led to pressure on the executive members to want higher stock prices using any procedure and prevented the independent directors from questioning the creative accounting process. Further, the audit committee set up Enron was not itself well equipped to accounting practices since it did not hold the knowledge or expertise in accounting practices.

   The Enron scam was due to the inefficiency of the theories of the corporate governance model, the agency theory and the stakeholder theory. The efficient market hypothesis failed since the performance was connected with the compensation, the Board of Directors and the management of the company had close relations and the financial reporting method was ambiguous. Further, it would have been preventive if the stakeholders including supplies and customers were not made part of the management decisions.

2. The Satyam scandal[24], which is also known as 'Enron of India', is considered to be one of the biggest corporate frauds in the country, in which, 94% of the money reflected in the books of the company was shown as the earning of the company, which led to the investor losing around $2.2 billion. In 2015, the Chairman, B. Ramalinga Raju was held liable[25]. The Satyam Computer was established in 1987 and listed on the Bombay Stock Exchange in 1991. These were the few IT companies in the country which recognized the importance of outsourcing in the industry; Satyam Infoway, which was its subsidiary, was the first Indian company from the IT industry to be listed on the NASDAQ.

24 *Chintalapati Srinivasa Raju vs Securities and Exchange Board of India*, AIR 2018 SC 2411.

25 *Satyam Computer Services Ltd.* Before the Securities and Exchange Board of India, 2015 SCC OnLine SEBI 157.

In 2008, the stocks of the Company fell when the acquisition of Maytas was a failure and Satyam Computer Services was forbidden with the World Bank for the next eight years because of charges of data theft and bribery against the Company. Despite the panel of independent directors on its board, the Company faces issues due to lack of an effective corporate governance model. Therefore, Raju was forced to resign from the position of Chairman by accepting the transactions amounting to fraud which were almost of $1 billion (Rs. 7000 crores) and the intention to replace the fictitious assets of its company's with that of Maytas'. The Board of Directors, employees and the auditors (PricewaterhouseCoopers) of the Company were not aware of these activities and intentions for many years. Hence, the Government of India was forced to disband the Satyam board and thereby appointed a competent board of directors.

After the Satyam scandal, the government implemented the Companies Act, 2013 to prevent such frauds in the future. Furthermore, various amendments were initiated in Clause 49 of the Securities and Exchange Board of India (SEBI) to ensure effective market regulation. These amendments led to power with the board of directors and audit committees of the board, requirement of at least one woman director on the board and rotation of the audit company every ten years. However, the major reason behind the issues of corporate scandals lies with lack of effective enforcement and fraudulent practices.

3. The corporate scandal of Wells Fargo & Co. further raised the need of requirement of corporate governance. As the CEO pushed the employees to ensure every customer buy eight products of Wells Fargo, this led to higher pressure on employees who had to meet the requirements by working extra, failure of which would lead to their termination in two months. Hence, the employees started accounts and credit cards for customers without authorization and signatures which creation of over 1.5 million such accounts in a period of 6 years.

   L.A. Times conducted an investigation in 2013 which exposed this scandal and in 2016, Wells Fargo agreed with the regulations in Los Angeles and paid a fine of $185 million. Further it was found that the unethical behaviour of the employees was caused due to the incentive program of the company was against the corporate values. The report suggested that as the Company had fired over 5000 employees for such behaviour, this was no solution to the problem as the issue was the sales goals created by the Company.

Conclusion

It is observed that the laws like the SOX Act, 2002 and Clause 49 under the Indian legislation are similar in regard to the purpose and function, whereby they aim to protect the stakeholders of the companies. These laws are amended in order to maintain governance on the corporate activities. The Corporate governance featured under the Indian legislation is stringent and also forms part of the Companies Act, 2013; however certain provisions like PCAOB (Public Company Accounting Oversight Board), which is a non-profit corporation created under SOX to ensure effective audit in the company, the PCAOB is not included under clause 49.

Under SOX, PCAOB has the power to ensure audit, inspection and regulate the activities of the auditors or the firms of auditing in the USA. These powers are provided to Indian organisations through the Institute of Chartered Accountants of India (ICAI), whereby it provides for the act of auditing and inspecting the activities of the auditors. However, ICAI does not have the power to make regulations in regard to code of conduct of the auditors. Further, it is observed that certain terms, like internal controls have not been exhaustively defined under the Indian legislation, i.e., Clause 49 and Companies Act, 2013. However, SOX defines internal controls and intends to implement the same with the Committee of Sponsoring Organisations, which is constituted to implement the framework of internal controls in the companies. Such provisions provide a clear and better understanding of the terms and the Committee constitutes the aspect of reliability for the companies. Indian legislation may also begin to provide an unambiguous and reliable meaning of internal controls which would thereby help with the investor's interest and cooperation.

Hence, it may be concluded that by studying the provisions of corporate governance under US laws and Indian laws, the aim and purpose of the provisions are the same in reality. Indian laws, though, have a wider aspect of implementation, however SOX addresses non-compliance and crimes with a stringent view. Therefore, it is essential that amendments are made in order to ensure effective implementation of the Acts owing to the changing times and requirements in the market. This shall ensure that the corporate governance system is strong and reliable.

Syrian Refugee Crisis and its Impact on International Humanitarian Law

Jayanta Boruah*

Abstract

Due to several internal, socio-economic and political crises, Syria is witnessing the human barbarism. Inhuman tortures, and brutalities have made the headlines of daily newspapers in India. Although this crisis was initially an internal issue, subsequently, International interference gave it a global status and has also increased the rate of Refugees. The International Humanitarian Law is therefore expected to protect the rights of the victims and the Refugees in the Syrian Crisis and at the same time it is also expected to point out the wrong doings of those who are actively involved in this inhuman war. But, the facts in and around Syria proves the reverse stand. This Article will therefore make an attempt to analyze the success of the law keepers in implementing the International Humanitarian Law in the case of Syrian Civil War.

Keywords: *Syrian Crisis; Humanitarian Law; Human Rights; Refugees; and ICRC.*

Introduction

International Humanitarian Law (IHL) includes rules and regulations to defend and protect the aspects of humanity during war and conflicts. Its main aim is to establish a regulatory framework to provide relief and protection to the sick and wounded soldiers in armed conflicts, either International or Non-international.[1] Its aim extends to the providing of protection to the civilians from the impact of war by regulating the means and methods of war and the weapons to be used in such conflicts.[2] Protection to the civilians also include protection to those who are displaced during armed conflicts (mostly wars), generally

2 GEOFFREY COM, THE LAW OF ARMED CONFLICT: AN OPERATIONAL APPROACH (Wolters Kluwer Law & Business, New York, 2012).

known as refugees.[3]

Meaning of International Humanitarian Law

IHL is generally termed as the law of wars and its main objective is to regulate the conduct of war.[4] It positively provides protection to human rights of the non-combatants and civilians in war situations and negatively restricts the rights of the combatants by providing norms on the means and methods of warfare. The main foundations of IHL are- the Four Geneva Conventions and the Two Additional Protocols to the Geneva Conventions backed by several treaties and customs related to warfare.[5] Since refugees are mostly displaced due to war situations therefore the factors relating to refugees and their influences come under the domain of IHL.

Meaning of Refugee

A Refugee is generally a person who has been forced to leave his/her country of residence due to fear of being persecuted, war or violence. They are the people who most often face the fear of being persecuted on the grounds of race, religion, rationality, political opinion or membership in a particular social group.[6] From this we can conclude that following are the main reasons that in majority of cases leads to the situation where a normal citizen is forced to gain the status of a refugee-

a. Violence due to war,

b. Ethnic and Tribal conflicts,

c. Racial and other forms of discrimination,

d. For being a member of a particular political group,

e. Due to invasion of a rival country conducting inhuman tortures on native civilians, etc.

6 *What is a Refugee?*, UNHCR (Jan. 12, 2020, 02:17 AM) https://www.unrefugees.org/refugee=facts/what-is-a-refugee/.

Although the issue of refugees are stated above, the causes are very dynamic and multi-dimensional, they may differ from place to place or even from time to time. In most cases refugees are interchangeably referred to as 'Internally Displaced Persons (IDP)' but there is a huge difference between the two. Refugees are those who take shelter by crossing international borders while the IDPs are those who are forced to leave their residence but they don't cross the international borders rather they take shelters in schools, public places and so on. The reasons for people being internally displaced although are similar to those of refugees, but they might be different in most cases like for instance, environmental disasters like Tsunami, Flood Earthquake, etc. and therefore they might not come under the scope of IHL. While refugees are mostly forced to leave their land due to wars and conflicts.[7]

It is estimated that around the world nearly 67% of refugees are from the five countries-Syria, Afghanistan, South Sudan, Myanmar and Somalia. So, there is no doubt that Syria suffers from a huge problem of Refugees and also of IDPs. [8]

International Legal Perspective on Refugees

The subjects of protecting the Rights of the Refugees as well as of those who seek asylum have always been under consideration of both International Customary Laws as well as International Treaty Laws. Under the International Customary Laws, the Principle of Non-Refoulement and the provisions of Universal Declaration of Human Rights are recognized. Principle of Non-Refoulement means that no State shall force their Refugees to return back to their home State, where such Refugees can be subjected to torture and exploitations. The Principle further provides for right to life; right to freedom from torture, cruelty, inhuman treatments and other basic forms of human rights to the Refugees.[9] This Principle, besides forming a core aspect of the International Customary Laws on Refugees, has also been recognized under the Convention on the Status of Refugees, 1951 under Article 3 and Article 33.[10] While the Universal Declaration of Human Rights provides for respecting the human rights of all human beings merely on the ground of them being born as humans in

10 *Convention and Protocol Relating to the Status of Refugees,* UNHCR (Jun 02, 2020, 01:11 AM) https://www.unhcr.org/en-in/3b66c2aa10.pdf#zoom=95

this planet. This particular Declaration is the epitome of all legal sources for protecting the basic human rights as well as for recognizing majority of the International Customary Laws. Under Article 14(1), the Convention has given all human beings the right to seek and enjoy asylum in any country from persecution.[11] This particular provision is very important for all the Refugees in order to live a life with dignity since it entrusts upon all the States a corresponding responsibility of providing shelter to the Refugees within their countries rather than expelling them or returning them back to their home States.

Under the International Treaty Laws, the major source of Laws governing the Rights of Refugees originates from the Convention on the Status of Refugees, 1951 and the 1967 Optional Protocol.[12] The scope of this 1951 Convention was however initially limited to the Europeans who became refugees due to several instances that occurred prior to January 1951 but the Optional Protocol of 1967 made the provisions of this Convention applicable to all Refugees irrespective of any time deadline, thereby making it globally applicable. The Convention brought into existence the Office of United Nation High Commissioner for Refugees (UNHCR) with the main function to provide protection to the Refugees and to assist the Governments of the respective States in bringing solutions to the issues related to Refugees. This Convention has provided a multidimensional approach towards solving the issue of increasing Refugees across the globe which includes legal, political as well as ethical perspectives. Under its legal perspective, it seeks to provide an universal guideline for protecting the Rights of the Refugees; under its political perspective, it enables the States for establishing mutual corporation for sharing the burden of Refugees thereby recognizing one another internationally accepted principle of Burden Sharing and finally its ethical perspective is highlighted from the fact that almost 140 States have signed the Treaty accepting their responsibilities of protecting the Rights of most of the vulnerable sections of population that comes within the ambit of this Convention.[13] The Convention seeks to protect the Rights of the Refugees through several provisions, the approach of which can be categorized into three broad categories, via-

a. Naturalization and assimilation- under this approach the States are made responsible to allow the Refugees with the minimum facilities for getting assimilated within the State and they must be given access to valid documentation. No penalties on them shall be imposed for their illegal entry within the State territories and they shall be given access to the Courts of Law

11 Universal Declaration of Human Rights, 1948.

12 *Supra* note 9.

13 *Supra* note 10.

b. Access to Basic Services- under this approach the Convention has made all its signatories responsible for granting equal treatment as regards public services and assistance are concerned, to the Refugees in the similar manner as they are provided to the Nationals.

c. Employment- the Convention has also made the States responsible for granting the Refuges access to employment and access to Justice against any exploitations made on them in the same manner as they are provided to the Nationals.[14]

Besides these main International Laws on Protection of the Rights of Refugees, there are several other International Laws that more or less provides protection to such Refugees, some of which includes- The Geneva Convention of 1949 and the Additional Protocols that provides for extensive set of Rules protecting the humanitarian Rights of Individuals during the warfare. These set of Rules seek to provide protection to the civilians from the hostilities of war, who are not parties to the war and includes- health workers, aid workers, children, women, etc. and also to those who were involved in the war but later surrendered or got captured or injured or due to any other reasons has become non-parties to the hostilities. The Geneva Convention of 1949 was a combination of Four Geneva Conventions that were previously enacted while the two Additional Protocols strengthened the Rights of the Victims of both International and Non-International Armed Conflict respectively. There is a Third Additional Protocol that recognizes the Red Crystal with the same status as that of the Red Cross and the Red Crescent.[15]

Further there are several International Human Rights Laws that protects the Rights of the Refugees and the Asylum seekers from gross human rights violations like- The Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment also recognizes the Customary International Law of Non-Refoulement; The Convention on Rights of the Child where Article 2 provides the children of Refugees protection from discriminations, Article 3 provides for their best interests, Article 6 provides such children with the Right to life, survival and development, Article 12 provides them with the Right to be heard, etc.; the International Covenant on Civil and Political Rights also grants the Refugees with several Rights, like- Right of freedom from inhuman cruel treatment, Right to liberty of movement, etc. in whichever territory they reside; the International Covenant on Economic, Social and Cultural Rights provides such Refugees with the Right

14 *Supra* note 9.

15 *The Geneva Conventions of 1949 and Their Additional Protocols,* INTERNATIONAL COMMITTEE OF THE RED CROSS (Jun 03, 2020, 01:45 AM) hhttps://www.icrc.org/en/document/Geneva-conventions-1949-additional-protocols.

to have a minimum standard of living for having a proper physical and mental development including other Rights like Right to education; Similarly all Human Rights Conventions like- Convention on the Elimination of All Forms of Racial Discrimination; Convention on the Elimination of All Forms of Discrimination against Women; etc. seek to provide protection to different categories to Rights of the one or more classes of Refugees.[16]

Even Protection of the Rights of Refugees can be sought from the International Criminal Law, like the Rome Statute of International Criminal Court which provided that the International Criminal Court shall have jurisdiction for trying cases related to genocides, war crimes and all crimes that are against the very notion of humanity. This law seeks to provide protection to all human beings including Refugees from cross-border criminal offences, like forceful prostitution, sterilization, pregnancy, or any other like kinds of sexual violence. In the Judgements of International Tribunal for the Former Yugoslavia for Rwanda, activities like enslavement, rape, genocides, torture, etc. were declared as criminal offences against humanity. And based on such Judgements, the Rome Statute becomes relevant in determining the criminal activities that makes someone being excluded from the status of Refugee.[17]

Background of Syrian Crisis and its Impact on IHL

The Syrian civil war has a very long history and legacy, there is not a single cause that can be attributed to be the main cause of the war. However, the genesis of the war can be traced from 31 January, 1973 when Hafez al- Assad, the then President of Syria implemented a new Constitution whereby the condition that for being the President, one must be a Muslim was withdrawn. Since then many Muslim rival groups took arms against the government and started raising attacks to overthrow it. Later after the death of Hafez al-Assad in 2000, his son Bashar al-Assad became the President but most of his critics had opined that he failed to address any constructive reforms and to implement them. However, Assad later in 2017 opined that these protestants are merely Jihadis who were raising their voices against his secular democratic principles.[18] One another reason that can be attributed as a cause of this civil war is the huge socio-economic inequalities that mostly occurred due to the Free market policies introduced by Hafez al-Assad and then further accelerated by Bashar

18 Associated Press, *Rebels in Syria's largest city of Aleppo mostly poor, pious and from rural backgrounds,* FOXNEWS (Jan. 15, 2020, 01:47 AM) https://www.foxnews.com/world/rebels-in-syrias-largest-city-of-aleppo-mostly-poor-pious-and-from-rural-backgrounds.

al-Assad. Due to these open market policies, only a few nationals that belonged to the Sunni-merchant class having good relations with the governments were able to get jobs and maintain their families. While on the other side, there prevailed absolute poverty amongst the non-supporters of the government who later started joining the armed rebellion.[19] Moreover, the great immediate cause for this outbreak can be attributed to the massive and intense draught that occurred in 2008 and lasted till 2011 which led to several issues like-severe crop failure, increase in food prices, huge migration of farming families to urban centers that further increased the burden over the available resource stock, since lakhs of refugees from the Iraq war were already taking shelter there. This drought is alleged to be the result of anthropogenic global warming and it indicates that climate change which is an environmental concern is also a reason behind this war.[20] At last, the major reason behind this outbreak is the outburst of frustration amongst the Syrian citizens, since they were constantly restricted from exercising their basic human rights like freedom of expression, assembly, association, etc. They were all either curtailed by stringent measures or by repeatedly declaring emergencies.[21]

At present this crisis has led to gross human rights violations. The recent chemical attacks in a Damascus suburb has impacted millions of Syrian populations that has also led to the huge increase in the rate of migration of refugees in order to escape this inhuman action in 21st century civilization. It is not the only instance; in other words, it has been near about a decade that Syrian population is experiencing the other side of human civilization that we sitting at home cannot even dare to imagine. There is no doubt that now Syrian civil war has become the epitome of a humanitarian crisis. It is estimated that over 6 million people have been Internally Displaced and 5 million Syrian refugees have been relocated to neighboring countries. The people who want to flee from this war situation and to survive require medical support, pure drinking water, food and such other basic stuff, but unfortunately all these are rarely available.[22] In such a situation, it becomes difficult to decide, whether to die in war or to die in search for survival?

According to the United Nation High Commissioner for Refugees (UNHCR) the rate of Syrian Refugees will increase as the war progresses. But although the civil war is the primary reason for the suffering of Syrian Refugees, there are many other secondary causes that led to the massive suffering of these refugees.[23] First being that, due to the increase of birth rates in the refugee camps, the neighboring countries who initially gave shelter to these refugees are now facing shortage of resources to supply to their camps and even natives of those countries are not willing to adopt those refugees for which most of such countries are closing their international borders for these refugees, thus violating their obligations under the Convention of 1951. Second, since the war is still in progress the number of refugees is increasing as already mentioned.[24] In such a situation, it is obvious that refugee camps will be overcrowded. For instance, from the shelters in Idlib and Aleppo governorates many people had been forced to escape to safer place due to the ongoing war while many are still unable. Third, the refugees are still provided with some sort of reliefs by International Organizations and to some extent by neighboring countries, but the conditions of IDPs are even more pathetic since the governance of Syria has broken down for which they are mostly devoid of any security agencies and safety measures when war takes place and even in normal situations due to economic crisis they are unable to afford even the basic needs for their survival including healthcare facilities, education, etc. Further, the injured and disabled persons remain at the receiving end during war and even after the war.

Due to the war and emerging hostilities several infrastructures are also getting destroyed and those that are left undestroyed are wanting repair and so are in a non-functioning stage. For instance, the Allouk pumping station that was serving water to more than 400,000 people in and around Hasakeh, stopped functioning from 30 October, 2019. This water pump is very critical since it was used to supply water to more than 400,000 people. But its repairing is highly difficult since its servers are located near the front line where the hostilities are at the top. This is a great evidence, which proves that civilians who are not part of any hostilities are made to suffer without any of their cause.[25]

Further the health scenario is also pathetic. In most cities like in AI HoI, hospitals are failing to provide adequate facilities to treat the needy. Cases of malnutrition and injuries from weapons are mostly registered among whom many suffers from critical stages since they were not able to receive preliminary medical treatment, and this has made their situations

23 *Ibid*.

25 *Refugees and Displaced people in Syria,* ICRC (Jam 15, 2020, 01:11 AM), https://www.icrc.org/en/where-we-work/middle-east/syria/syrian-refugees.

even more difficult.[26] At one side resources are limited while at the other side many are unable to get access to whatever resources are available.

Among the millions of refugees, the majority are children, whose parents are in a dismal condition since while escaping the fear of death in their motherland, they are forced to enter a situation where they have only two alternatives- either to buy food for their children or to defend them from cold. While many such parents do not possess the money even to afford either of those alternatives. Most of such refugees take shelter in countries like- Lebanon, Iraq and Jordan but the residents and the refugees who are already there are suffering from severe conditions especially when the harsh winter arrives, since the present infrastructure is not enough to support all of them. Even it is estimated that around 2 million children have been devoid from going to school which shadows the future of the country besides affecting the present. Further, the children in the refugee camps had to work very hard like carrying water from distant places at the age of hardly 4-5 years in order to survive.[27] Most of the children in the refugee camps are suffering from physical and mental traumas created by this devastating war. Physical injuries however more or less may get healed with the passing of time but the fear is about the mental trauma that these children are undergoing. Most of them have experienced the emotions of losing their parents and are witnessing unprecedented violence In Front of their eyes and that also at the age when they should have been playing in kindergartens. Recently, UNICEF stated that over 500 children were injured or killed in this war in the first three quarters of 2019.[28] Such is the situation which makes a question relevant that if these children survive this phase of inhuman legacy then in the near future will they be able to live the life of a normal human being in this world?

As of January 2020, more than 380,000 people were killed in this war, as reported by Syrian Observatory for Human Rights. The death consisted of military personnel, government soldiers, armed rebel troops, and most importantly civilians including children.[29] While a report from SNHR in 2018 stated that 82000 victims were forcibly made to disappear by the Syrian regime which includes 14,000 confirmed deaths. Similarly, it is reported that girls of 6-8 years of age are brutally raped or converted to sex slaves while boys of same age group being tortured and are forced to conduct public killings.[30] In this year only, on January 1,

30 Jamey keaten, *UN report lays out agonies faced by Syrian child amid war*, LOCAL 12 (Jan. 16, 2020,

eight civilians including four children were killed in a Rocket attack in a school in Idlib by Syrian government.[31] Nothing can be a better example than this about the violation of not only humanitarian rights but also internationally recognized principles of humanitarian law.

Role of Humanitarian Organizations

The International Committee of the Red Cross (ICRC), that is an international organization historically working for the protection of humanity in war as well as conflict situations, and which has also contributed to the development of the IHL, is requesting the warning parties to spare the civilians and their infrastructure. Further, the ICRC is recommending not to attack those who want to flee from the war and has prohibited attacks that are indiscriminate in nature and are on hospitals, schools, etc. They have further issued restrictions on indiscriminately firing of Rockets and Mortars that are blindly targeted into the urban cities from either side of the Front Line. [32]

ICRC along with the Syrian Arab Red Crescent (SARC), which is providing reliefs to the sufferers of this civil war, are extending their support to an Emergency Response Center providing for first aid reliefs and also a neonatal Intensive Care Unit within the pediatric hospitals in the Idlib city. The ICRC has also established two polyclinics and provided three mobile health units in Western Rural Aleppo serving the escapers of war from Idlib and nearby areas. ICRC and SARC together are striving hard to protect the IDPs and to make them survive by providing daily food and other stuff in the relief camps. For instance, a recent report of ICRC on January 03, 2020 provided that a collective kitchen organized by SARC with the assistance of ICRC has been providing food with a target of serving 37,500 newly emerged IDPs, while they had been able to provide only 7,500 household kits in the city of Idlib. [33]

Similarly, few other international groups and activists are helping these victims of war to make life a slight better than hell. For instance, on December 30, 2019 Ireland welcomed 50 Syrian Refugees including 27 children under the Irish Refugee Protection Program.[34]

03:1 AM) https://local12.com/news/nation-world/un-report-lays-out-agonies-faced-by-syrian-children-amid-war.

31 Matilda Coleman, *Four Syrian Children killed in New Year's attacks on School*, UPNEWSINFO (Jan. 16, 2020, 02:13 AM) https://upnewsinfo.com/2020/01/01/four-syrian-children-killed-in-new-years-attack-on-school-news-from-syria/.

32 *Supra* note 24.

33 *Ibid*.

34 Alison Bray, *Fifty Syrian Refugees promised the warmest of Irish welcomes*, HERALD.IE (Jan. 16, 2020, 02:13 AM) https://m.herald.ie?news/fifty-syrian-refugees-promised-the-warmest-of-irish-welcomes-

While on the other hand, there are many more left who are claiming that they have not received any assistance from any of the international or regional groups.

Conclusion

It shows that humanity has a lot to learn from what is happening in Syria. It must be taken as an example for addressing conflicts in the future in any part of the world. While from IHL perspective, it also shows that there is much to be developed in order to avoid a massive conflict in the near future particularly in this nuclear age. The IHL advocates more or less, will now have to adopt a two way approach- first a protective and defensive approach where the main agenda will be to provide relief to the victims of the Syrian war, to monitor and to condemn violation of humanitarian law and the second approach- prevention and deterrence approach where they must spread the lessons taught by this war through the passing time to the entire world fraternity so that a fear is created in the minds of the young generations, thereby proving as a deterrence, to avoid themselves from getting involved in such huge conflicts. It is the responsibility of all of us to adopt this dual approach by providing donations and assistance in whatever manner we can to those victims and at the same time we must also frame our opinion about their pathetic stories and must educate our upcoming generations about the consequences that such conflicts can lead to.

Fortunately, now we can hope that after seeing such devastating consequences, no political party in this democratic civilization would dare to undermine public opinion. Further, this might act as a great lesson for the governments to learn before drafting and enacting any policy against the majority. Moreover, it appears that such conflicts are merely the result of economic disparity which is again caused by improper planning and settlement. The Syrian crisis was fueled by the drought of 2008 which is attributed to be the result of climate change. All these indicate that in the near future humanity might seem to be fighting for every resource in the same manner since we all are aware about the present state of the global atmosphere. Every beginning has its end and every end has a new beginning, similarly we can hope that this Syrian crisis will come to an end and then will lead to a new beginning.

RIGHT TO MARRY OF MUSLIM WOMEN ON DIVORCE : AN ANALYSIS

Dr. Raghuvinder Singh* and Arti Sharma**

Abstract

Divorce alters the status of married woman and can leave her destitute. The condition of Muslim women, especially the poor ones, is pathetic than the divorced women belonging to other communities for twin reasons; firstly, because of the husband's unilateral and private declaration of divorce; Secondly, after divorce she is entitled to claim maintenance for a limited period. Therefore, in such circumstances, remarriage is better option for her. However, remarriage is also not easy for a woman because of the stigma attached to the word 'divorce'. Thus, in such a scenario the law should be such that it encourages remarriage of divorced women. Therefore, in this paper, an attempt is made to analyze the grey areas, in the present Muslim law, as regards the right to marry of Muslim woman on divorce are concerned and also to provide suggestions for the existing grey areas.

INTRODUCTION

Divorce in '*vinculo matrimonii'* is a Latin phrase meaning divorce from the bond of marriage.[1] A kind of divorce of husband and wife dissolving the marriage tie; reverting the parties to their unmarried status from their matrimonial obligations and parties once again acquire the right to marry a person of their choice. It is different from 'an annulment' since it ends the marital status, whereas an annulment substantiates that a marital status never existed. It is also different from a *menso et thoro* which is a divorce from bed and board that means separation of parties by law, than a dissolution of the marriage.[2]

When the relationship between married couples runs aground, it is better to resort to the remedy of divorce for the welfare of the parties and family as a whole.[3] However, the

3 Furquan Ahmed, "Muslim Law" LII ASIL 797 (2016), (May 30, 2020, 04:20 PM), http://14.139.60.114:8080/

segregation of family unit has always brought upheavals and vagrancy in the life of the Muslim women especially the poor ones, for two reasons; firstly, because of the unbridled and arbitrary power of the husband to pronounce unilateral talaq upon his wife; and secondly, after divorce, she is entitled to maintenance for a limited period called iddat, and then she is left to the vagaries of fate. Although, she can claim maintenance under Section 125 Cr.P.C., however, that too only if her former husband consents to it.[4] In such circumstances, the option of remarriage after divorce can be proved to be very helpful to protect her from destitution. Nonetheless, it is also true that after divorce, there are fewer possibilities for women getting married easily than men.

Table 1 below shows the divorce rate, according to Census 2011, in the Hindu and Muslim communities. The divorce rate is defined as the total number of divorces of males/females in a particular community during a specific year to the total married males/females of that community.[5] Thus, the divorce rate formula is;

"Divorce rate = D x K/P

Where D is the total number of divorces in one year, P is the population at risk of divorce and K is a constant 1000"[6]

Table 1- Divorce Rate in the Year 2011

	HINDU	**MUSLIM**
FEMALE	2.64	5.64
MALE	1.54	1.60
TOTAL	2.09	3.66

7 C-3 Marital Status by Religious Community and Sex – 2011, (May 29, 2020, 01:04 PM), https://censusindia.gov.in/2011census/C-series/c-3.html.

Table 1 shows that the divorce rate is higher in the Muslim community than the Hindu Community. The divorce rate for Hindus is 2.09 and for Muslims is 3.66, which implies that there are 2 divorced Hindus per 1,000 married Hindus and there are 3.7 divorced Muslims per 1,000 married Muslims. Across gender, the gap is larger because most men remarry but women cannot, hence, the disparity.[8] There are 5.6 divorced Muslim women per 1,000 married Muslim women, while there are 1.60 divorced Muslim men per 1,000 married Muslim men. In the Hindu community, there are 2.64 divorced Hindu women per 1000 married Hindu women, while there are 1.54 Hindu divorced men per 1000 married Hindu men. This means that after adjusting population and marital status, Muslims are more likely to be divorced than Hindus, and Muslim women bear almost the whole burden of this difference.[9]

To skew the Muslim women's divorce rate and to save them from destitution after divorce, there is a need for improving the legal status of Muslim divorced women by the codification of Muslim personal law, in such a way that could broaden the range of their right to marry after divorce. Article 25(2) and Article 44 read with Entry 5 of the Concurrent List contained in the Seventh Schedule empower the state to regulate secular affairs surrounding religion and to enact measures of social welfare and reform.[10] Further, on this, Mohammad Ghouse[11] argued that in matters relating to marriage and divorce and other aspects relating to personal law, the state can validly enact measures of social welfare and reforms in the Muslim Personal law. Reforms so made and replacement so made of the Muslim personal law is valid and not unconstitutional.[12]

Presently, the matters relating to marriage and divorce are governed by the Muslim Personal law (Shariat) Application Act, 1937 (hereinafter called the Muslim personal law), which makes the principles of *Shariah* applicable on the right to marry of Muslim women after divorce. The rules governing the matters of marriage and divorce under the Muslim personal law, however, are not expressly codified and are, thus, governed according to the prevailing customs and usages. These customs and usages provide for certain impediments on the right to marry of Muslim women after divorce. In this paper, an attempt is made to

analyze the right to marry of Muslim divorced women and the present impediments on the right to marry of Muslim women after divorce, as provided by the prevailing customs and usages and also to suggest some remedies.

Right to Marry as a Human Right

The right to marry and to form a family is a human right, universally recognised by all the civilized nations. As a human right, it occupies a significant place in the Universal Declaration of Human Rights (hereinafter called UDHR) passed by the UN general assembly on December 10, 1948. As per Article 16(1) of the UDHR, all men and women of full age, without any discrimination on the basis of race, nationality or religion, have the right to marry and to found a family. Further, it provides that the family being a natural and fundamental unit of society is entitled to be protected by the state.[13] Furthermore, it provides that the marriage shall be entered into by the intended spouses only with their free and full consent.[14] Besides this, similar provisions are contained under Article 23 of the International Covenant on Civil and Political Rights, 1966 (hereinafter called ICCPR). Whereby, Article 23(2) provides that the right to marry and found a family of all men and women of marriageable age shall be recognised. And, article 23(3) of the said convention provides that no marriage shall be entered into by the intended spouses without their free and full consent.[15] Also, in 1979, the UN general assembly, adopted a Convention for the Elimination of all forms of Discrimination against Women (hereinafter called CEDAW) which also contains similar provisions for women. The convention, vide Article 16, provides that the state parties shall take all appropriate measures to remove discrimination against women in all matters relating to marriage and family relations. Further, it specifically provides that the state parties shall ensure, on the basis of gender equality, the same rights to enter into marriage, to freely choose a life partner, and to enter into marriage only with their free and full consent.[16] India is a state party to these conventions and covenants and, as such, is bound to give effect to them. Further, Article 253 read with Entry 10 and 14 of the Constitution empowers the Parliament to make laws to give effect to the said Conventions.

Right to Marry as a Constitutional Right

In India, every adult individual has a right to marry a person of his/her choice and form a family. In *Lata Singh v. State of U.P.*,[17] and in *Shakti Vahini v. Union of India and Others*,[18] the courts have recognised that an individual's exercise of choice in choosing a life partner is an integral aspect of the right to life and liberty, and therefore, is protected under Article 19 and 21 of the Constitution. In the *Shakti Vahini Case*, the court observed;

> "The petitioner is a major and was free to marry anyone she liked or live with anyone she liked. Since there is no bar to an intercaste marriage under Hindu Marriage Act or any other law, no offence was committed..."[19]

Further, the learned Justice observed;

> "[W]hen two adults consensually choose each other as life partners; it is a manifestation of their choice which is recognized under the constitution. Such a right has the sanction of the constitutional law and once that is recognized, the said right needs to be protected..."[20]

That means, for exercising the right to marry; firstly a person must be of the age of majority according to the law to which he is a subject; secondly, two adults consensually choose each other as their life partners; and thirdly, if such law creates a bar, then, he or she can remarry only after removal of that bar.

Right to Marry of Muslim Women on Divorce and Muslim Law

Under Muslim law, certain impediments are provided for contracting a valid marriage. A marriage in contravention of these impediments is either rendered void or irregular. Here we are concerned with impediments on the remarriage of a Muslim divorced woman and their effects on her second marriage.

Muslim Divorced Woman and Incapacity to Marry during *Iddat* Period

Iddat or *idda* may be defined as the period during which it is obligatory for a woman, whose marriage has been dissolved either by death or divorce, to remain in seclusion, and

17 *Lata Singh v. State of U.P.,* AIR 2006 SC 2522 (India).

18 *Shakti Vahini v. Union of India & ors*,, AIR 2018 SC 1601 (India).

19 *Ibid*.

20 *Ibid*.

to refrain from marrying another man.[21] According to Fyzee, the most suitable definition of *iddat* is 'the term, by the completion of which, a new marriage is rendered lawful'.[22] According to Section2(b) of the Muslim Women Protection of Rights on Divorce Act, 1986, the period of *iddat,* 'in the case of a divorced woman, is; (i) three menstrual courses after the date of divorce, if she is subject to menstruation; (ii) three lunar months after her divorce, if she is not subject to menstruation; and (iii) if she is enceinte, i.e., pregnant, at the time of her divorce, the period between the divorce and the delivery of her child or the termination of her pregnancy, whichever is earlier.'[23]

The purpose of imposing abstinence from marrying another man during iddat period is to ascertain whether the divorced woman is pregnant by the estranged husband or not, so as to avoid confusion of parentage.[24] Muslim personal law provides that if a woman undergoing iddat marries another man; her marriage would be rendered irregular under Sunni law and void under Shia law, as the Shia law does not recognize the difference between irregular and void marriage. Marriages, that are irregular under Sunni law, are void under the Shia law[25]

The Lahore High Court, at one instance, treated the marriage contracted during iddat period, under Sunni law, as void.[26] However, in *Mohammad Hayat & Ors. v. Mohammad Nawaz & Ors.*,[27] when again the question about the validity of such a marriage came up for consideration, the court held that a marriage contracted between Sunni parties, during *iddat* period, was only a *fasid* marriage and not *batil* and the children born of such a marriage were held to be legitimate.

Where a Muslim divorced woman remarries, while she is undergoing *iddat* period, the Muslim personal law prescribes the following consequences on her second marriage:

Under Sunni Law[28]

a) If her second marriage is consummated, then, on divorce; firstly, the woman would be entitled to proper or specified dower, whichever is less; secondly, even though the children born of such a marriage would be legitimate but it would not create mutual rights of inheritance between the parties.

27 *Supra* note 21 section 257(2*), Mohammad Hayat & ors v. Mohammad Nawaz & ors,* 1935 Lah 622.

28 *Supra note* 21 at 350.

b) If her marriage is not consummated then, no legal effects from such a marriage would flow on divorce.

Under Shia Law

(a) The second marriage of the divorced woman, while she is undergoing *iddat*, would not create any civil rights or obligation between the parties and;

(b) Children born of such a marriage would be illegitimate.[29]

The Waiting Period under Hindu law

Before 1976, the Hindu Marriage Act, 1955, by the proviso attached to Section 15, prohibited the parties to marriage from remarrying before the elapse of one year from the date of the decree of divorce from the court of the first instance till the date of their second marriage.[30]

One of the purposes, of the said prohibition, was to avoid the confusion as to the parentage of the child born. However, the said proviso was deleted by Section 10 of the Marriage Laws (Amendment) Act, 1976 on the recommendations of the Law Commission of India. The commission recommended that the considerations of the parties and the freedom to marry, available to parties, outweigh the object of the proviso.[31]

Muslim Divorced Woman and the Right to Remarry Former Husband until Nikah Halala is Performed

Nikah halala is made up of two Arabic words. Nikah meaning 'union of sexes' and in law it means 'marriage'. Marriage, according to Muslim law, is a contract for legalisation of intercourse and procreation of children.[32] Halala means 'halal' or 'to make permissible'. Thus, nikah halala is a practice to make a marriage permissible which has become forbidden. Remarriage between parties becomes forbidden as soon as talaq becomes absolute.

Before proceeding further it is necessary here to understand different kinds of divorce under Muslim personal law, as the practice of nikah halala is closely connected with it. Divorce,

32 *Supra* note 21 at 338.

under Muslim law, is divided into three categories; firstly, divorce which proceeds at the instance of the husband is called *talaq*; secondly, *khula* or *mubara'at* are types of divorce by mutual consent; thirdly, divorce by a judicial decree at the suit of husband or wife.[33] Divorce (*Talaq*) which is at the instance of the husband is of three types vis. *Talaq-e-ahsan*, *talaq-e-hasan* and *talaq-ul-biddat*. *Talaq-e-ahsan* is a single pronouncement of the formula of talaq by the husband during a *tuhre*, followed by a period of abstinence, which is called, *iddat*.[34] A talaq in *ahsan* mode becomes irrevocable and complete as soon as the period of iddat expires.[35] *Talaq-e-hasan*, is a form of divorce whereby the formula of talaq is pronounced thrice by the husband in successive *tuhrs* and no intercourse takes place during any of the three *tuhrs*.[36] Talaq in *hasan* mode becomes irrevocable and absolute on the third pronouncement, of the formula of talaq, irrespective of iddat.[37] Talaq-ul-biddat or triple talaq is pronouncing the formula of talaq thrice in single *tuhr*. It becomes irrevocable and absolute immediately on the pronouncement of the formula of talaq. As the talaq becomes irrevocable at once hence, it is also called *talaq-i-bain* i.e. irrevocable talaq.[38] The practice of triple talaq has been set aside by the Supreme Court on August 22, 2017 by a majority of 3:2.[39] Later, by passing the Muslim Women (Protection of rights on Marriage) Act, 2019, the Parliament has made it void and illegal.[40]

Khula is a divorce at the instance and consent of the wife, whereby, she offers or agrees to give consideration to her husband for her release from the marital tie.[41] As soon as the offer is accepted by the husband, it becomes *talaq-i-bain*.[42] *Mubara'at* is a divorce by mutual consent of both the parties. Herein, the offer may proceed at the instance of the husband or the wife, but once, it is accepted by either, it becomes complete and operates as *talaq-i-bain*.[43]

Ameer Ali says, 'When the power of reconciliation is lost, the separation becomes *bain* or absolute, while it continues, the talaq is simple *raja* or reversible.'[44] When a definite

44 SYED AMEER ALI, STUDENT'S HAND BOOK OF MOHAMMEDAN LAW, (S.K. Lahiri & Co.,

and complete separation takes place the parties so separated cannot remarry without the woman undergoing the formality of nikah halala.[45] However, the question which arises here is whether every irrevocable or absolute talaq creates a legal bar on remarriage and incumbents a wife to perform nikaha halala? To this the court, in Mrs. Sabah Adnan Sami Khan v. Adnan Sami Khan,[46] held that the formality of *nikah halala* was not necessary in the case where the husband had repudiated his wife by *ahsan* or *khula* mode. It is only in the case, when, the husband has repudiated his wife by pronouncing three *talaqs* against her, as in the case of *talaq hasan* and *triple talak*, it is not lawful for the couple to remarry again unless; firstly, the divorced wife observes *iddat* of divorce; secondly, she marries someone else; thirdly, the marriage is actually consummated with the other husband; fourthly, the latter husband has divorced her or dies after actual consummation of the marriage.[47]

The rule was framed to limit the husband's proclivity to pronounce *talaq* in Arabia. The check was intended to control a jealous, sensitive, but half-cultured race, by appealing to their sense of honors.[48]

Consequences of the Practice of *Nikah Halala*

A marriage performed in contravention of the formality of *nikah halala* is irregular and not void.[49] However, courts in pre-independence India have taken a different discourse as in *Saiyid Rashid Ahmed v. Anisa Khatun*,[50] case. The facts of the case are that the plaintiffs were the brother and sister of the Ghiyas-ud-din, who would have been the heirs, if respondents no. 1 to 6 were unable to establish their claim to be a widow and legitimate children. The dispute is related to the succession to the estate of Ghiyas-ud-din, a Muhammadan, who died on April 04, 1920. On September 13, 1905 he pronounced the triple talaq in the presence of the witnesses, though in the absence of his wife. Though, the later received Rs. 1,000/- as payment of her dower on the same day for which a registered receipt was produced. There was also prepared a *talaqnama*, a deed of divorce on September 17, 1905. Anisa Khatun, respondent no.1, challenged the validity of divorce on two grounds that the divorce was pronounced in her absence and second that after as husband and wife for fifteen years and five children were born to the couple. Thus, Ghiyas-ud-din did not

Calcutta 6th ed. 1912).

45 *Ibid*.

49 *Supra* note 20 at 430.

50 *Saiyid Rashid Ahmed v. Anisa Khatun*, AIR 1932 PC 25 (India).

intend to divorce her. The Privy Council held that triple talaq pronounced in the absence of wife by Ghiyas-ud-din was valid and immediately effective. The validity and efficacy of the talaq would not be affected by Ghiyas-ud-din's mental intention. Further, since the respondent had not undergone *nikah halala* after divorce, the Privy Council held that she was not legally married to Ghiyas-ud-din and the children born were held to be illegitimate, resulting in the rejection of her claim for succession.

Again, in *Mrs. Sabah Adnan Sami Khan v. Adnan Sami Khan*,[51] the husband of the woman tried to misuse this practice against the claims of the wife. However, the court held that the formality of *nikah halala* was not necessary in the case where the husband had repudiated his wife by *ahsan* or *khula* mode.

Nikah Halala: An International Perspective

Mahmood, in 'Muslim law in India and Abroad', said that the laws in Egypt, Iran, Jordan, Kuwait, Morocco, Philippines, Sudan, Syria, USE and Yemen, had totally derecognized the concept of triple talaq... the so-called device of halala for legalizing remarriage between the parties, which required wife's intervening marriage to someone else and subsequent divorce from him, also stood abolished in these countries.[52]

On Remarriage Mother Loses the Right to Custody (hizanzt) of Minor

Under Muslim personal law, the right of the mother to the custody (*hizanat*) of the child is greater than the father. She is entitled to the custody of her male child till he attains seven years of age and her female child until she has attained puberty.[53] This right of a mother to the custody of her minor male/female child continues, although she has been divorced by the father of the child.[54] However, the mother, upon remarriage with a person stranger to the child, forfeits her preferential right to the custody of the minor child.

In *Mir Mohamed Bahauddin v. Mujee Bunnisa Begum Sahiba*,[55] the question before the Madras High Court was, whether, by the reason of marriage to a stranger, the mother loses the right to continue to have the custody of the minor child? The Court held that the custody of the child could not be given to a woman, who had married a second husband, as

51 *Mrs. Sabah Adnan Sami Khan v. Adnan Sami Khan,* AIR 2010 Bom. 109 (India).

52 TAHIR MAHMOOD*, MUSLIM LAW IN INDIA AND ABROAD*, 145, (Lexis Nexis, Delhi 2nd ed. 2016).

53 *Supra* note 20 at 446-447.

54 *Ibid.*

55 AIR 1951 Mad. 280 (India).

it was not possible for her to take care of the child and look after her well being. Further, the court observed that the mother of the child was firstly answerable to the husband and took care of his comforts before she could invest time for her child. Furthermore, the court observed that where there was a father who was not totally unsuitable or there were other relatives who could take care of the child, the mother, who had remarried, was not at all the person to whom the custody should be given. Again, in *Arafathunnisa v. T. I. Zeeyavudeen, Taraja Beevi and Mohammed Yasin*,[56] the Madras High Court, while deciding a similar question, observed that if a woman married a person who was not related to the child within the prohibited degree i.e. a stranger, then, as per the Mohammedan Law, she was disqualified to have the custody of the child and therefore, the court held that, though under the Mohammedan Law, she was entitled to have the custody of her girl child, till she attained puberty, as, she had married a stranger, therefore, she was not entitled to have the custody of the child.

However, the Bombay high court, in *Irfan Ahmed Shaikh v. Mrs. Mumtaz*[57], observed that there was no hard and fast rule under Mohammedan law that the mother became disqualified for the custody of her minor child, the moment she married a stranger regardless of the wishes and welfare of the minor child. The court, further, observed that in such cases the court must see the treatment to be met out to the child at the hand of her stepfather, with whom the mother had remarried. So also, the Andhra Pradesh high court, in *Saiful Islam Habeeb Ali v. Asma Begum*[58], held that the mother, who had married a second husband, was entitled to the custody of the minor child, as the child expressed her desire to stay with the mother only. Further, the court observed that solely based on the personal law, the father could not claim custody of the child since it is settled that in case of conflict between the personal law and the consideration for the welfare of the child, the latter should prevail over the former.

56 *Arafathunnisa v. T. I. Zeeyavudeen, Taraja Beevi and Mohammed Yasin*, (May 19, 2020, 12:25 AM) https://indiankanoon.org/doc/1429323/

57 AIR 1999 Bom 25.

58 Saiful Islam Habeeb Ali v. Asma Begum (A.P.)(D.B.) : Law Finder Doc Id # 502869, (May 31, 2020, 09:00 PM) https://www.lawfinderlive.com/Judgement.aspx?v=3n8ya6tOyaEIFYyx1n4feYc6Yq9yADGuQLat%2bMEuws4wd2vBKwBllKDlD26oLm5QE1BPCmkW%2f88zvrwWqtyyp8pCdmTrpVMvWqdmV%2fvZOZLDF5PiN89UMMSm20j9RGDyF1He0hioRRUZrj3Cfy0xN%2fgLld4tc13OjraJEQ6myPiVYA7TQypOZ6XFN9ykIesYUhpUqMBGm0ul99lcvZKtzm80XTPpPDdsmnmpWFLHi7KTJeMBmylakIZV4xybFgNigb%2botg2XdGHdOnmxfXiNSzXaVGXMV0rqcs0M9XmaU4TISQmY7BtIlrNRANYYd%2fkN2vuOnOoYukB3%2b8EJbcTbRksYjA9q%2bnG4E%2bOWztJiF8VqcqGb201rwPAqwXdb1OrOqVPMJ5RcYJTwG%2fo%2fShA7%2bQcc%2fv4K3oWDzqyqkjBWoXIAXO%2fRlwYHmF9B1l%2by8iaHpeRwKAgQrEFnWylJh6r64vhfmEeUMmm9bKHXoGFGibo%3d.

Therefore, it is evident that the Bombay and Andhra Pradesh high court went beyond the dictates of the Muslim personal law in a case where the minor child was capable of expressing himself/herself, however where the child could not express his/her wishes, as in case of Mir *Mohamed Bahauddin v. Mujee Bunnisa Begum Sahiba* and *Saiful Islam Habeeb Ali v. Asma Begum*, the Madras high court did not go beyond the dictates of Muslim personal law, that disqualifies a mother, upon marriage, of her right to custody.

Muslim Women's Right to Custody of her Children upon Remarriage: An International Perspective

Today, almost all Muslim countries follow traditional *fiqh* rules, which divide the functions of parents into that of a custodian and guardian. The custodian is, generally, the mother of the child, who is responsible for the physical care and upbringing of the child up to a certain age, and the guardianship always rests with the father, who has the duty and authority over financial matters of the child. However, if the mother, after divorce, marries a person who is not a close (*mahram*) relative of the child, she forfeits her preferential right to custody of the child. In some Muslim countries, this traditional *fiqh* rule is considered as discriminatory against women and to grant the mother of her right to remarry, without the fear of losing custody of her children, has been modified by the statutory laws.

In Iraq, a mother has a preferential right to the custody of her children, as long as, it is in their interest. Article 57 of the Personal Status Law, 1959 has increased the maximum age to 15 years to which a mother is entitled to retain the custody of her children. After 15 years of age, a child himself can choose with whom he wants to stay.[59] Furthermore, before 1986, the mother used to automatically lose her right to custody of her children upon remarriage with a person not related to the child. To guarantee the mother's right to have a happy marital life, the legislator intervened in 1987 to repeal and redraft para 9b and 2 of Article 57 of the law. Now after 1987, vide article 57(2) of the law, the right to custody of mother remains valid after her marriage, provided, inter alia, that the court is satisfied that no injury would be caused to the child.[60] In case of a dispute between the father and the mother, regarding the custody of the children when the mother has remarried, the court is expressly empowered to decide the matter in the interest of the children.[61]

59 Article 57(5) of the Personal Status Law of 1959, (Aug 06, 2020, 04:30 PM) https://www.refworld.org/pdfid/5c7664947.pdf.

60 Article 57(2) of the Personal Status Law of 1959, (Aug 06, 2020, 04:30PM) https://www.refworld.org/pdfid/5c7664947.pdf.

61 *Ibid*.

In Morocco also, upon divorce, the mother has a preferential right to the custody of her children until the children attain the age of 15 years.[62] Upon the completion of the age of 15 years, a child himself is entitled to decide with whom he wants to stay. Further, a mother may forfeit her right to custody of her child, if she remarries a person, who is not within the prohibited degree of relationship or who is not a legal representative of the child.[63] However, Article 175 of the code provides certain circumstances in which the remarriage of the custodian mother does not result in the loss of the custody of her children, i.e., if the child is under 7 years of age or if such separation would inflict harm on him; if he suffers from some illness or is handicapped; or if she is the legal representative of the child.[64]

In United Arab Emirates (UAE) also, a mother has the preferential right to the custody of the child, after her, the father, then the maternal grandmother, then paternal grandmother and so on. A mother is entitled to the custody of her male child until he attains the age of 11 years and the female child until she attains 13 years of age.[65] However, the court is expressly empowered to increase the prescribed age limit in the interest of the child. Further, Articles 143 and 144 of the law provide certain conditions upon which a custodian may be disqualified from the custody of the child. Although, Article 144(1) of the law, inter alia, provides that a mother may forfeit her right to the custody of her children if she has married a person not related to the child, but the law also specifically states that the court is empowered, in such a case, to decide otherwise in the interest of the child.

Thus, Iraq, Morocco, and UAE, by way of codification of the rule, that the mother will not *ipso facto* lose her right to custody of her children and by expressly empowering the court to decide in the best interest of the child, have not only protected the right of the mother to remarry a person of her choice but also has gone beyond the dictates of traditional *fiqh* rule which denies the custody of the child to her in case she marries a person not a close relative of the child.

Conclusion and Suggestions

The rules and customs, discussed above, are centuries old and these should be changed keeping in view the changing needs of the society. Social reforms should be brought in the

62 Article 166, the Moroccan Family Code (Moudawana) of February 5, 2004, (Aug 05, 2020, 04: 45PM) http://www.hrea.org/wp-content/uploads/2015/02/Moudawana.pdf.

63 Article 174, the Moroccan Family Code (Moudawana) of February 5, 2004, (Aug 05, 2020, 04: 45PM) http://www.hrea.org/wp-content/uploads/2015/02/Moudawana.pdf.

64 Article 175, the Moroccan Family Code (Moudawana) of February 5, 2004 , (Aug 05, 2020, 04: 45PM) http://www.hrea.org/wp-content/uploads/2015/02/Moudawana.pdf.

65 Article 156(1), Federal Law No. (28) of 2005 On Personal Status, (Aug 05, 2020, 03:30PM) https://legaladviceme.com/legislation/140/uae-federal-law-28-of-2005-on-personal-status.

present Muslim Personal law by way of codification, to ameliorate the plight of Muslim divorced woman and to save her from destitution. Thus, it is concluded and recommended that;

1. The rule relating to the waiting period, under Muslim law, has twin purposes; firstly, to allow parties to reconcile within iddat period of three months; secondly, to know the paternity of the child in the womb, if any. Hence, it is recommended that the period of waiting should be reconsidered, in case of iddat period running beyond three months, as the same is required for knowing the paternity of the child. Moreover, a similar provision under the Hindu Marriage Act, 1955, has been deleted keeping in view the freedom of marriage available to the parties to the marriage. Secondly, with the advancement of modern medical techniques of blood test and DNA testing, now, it is easy to determine the paternity of the child. Also, the courts in India have started using these methods for determining the disputed paternity of the children.[66] Further, the law commission of India has also recommended to include blood test and DNA testing methods as proof of paternity in addition to the non-access rule under Section 112.[67]

2. Nikah Halala: The practice of nikah halala is necessary in case of triple talaq and talaq-e-hasan. Since, the practice of triple talaq has been declared void and illegal by the Muslim Women (Protection of Rights on Marriage) Act, 2019, the Muslim women would be considered as a legally wedded wife, and would not be required to undergo the formality of nikah halala. As far as, the practice of nikah halala in the case of talaq-e-hasan is concerned, the practice restricts a Muslim divorced woman's right to marry her former husband, thereby, restricting her right to choose her life partner. It is, not only, against her human right to marry and found a family, as enshrined under Article 16(1) of Convention on Elimination of all forms of Discrimination against Women, but also, against her right to autonomy and dignity as envisaged by the Constitution under Article 19 and 21.[68] In *Navtej Singh Johar v. Union of India*,[69] the court observed;

   "[A]utonomy establishes identity and the said identity, in the ultimate eventuate, becomes part of dignity in an individual."

66 *Radhey Shyam v. Pappi*, AIR 2007 Raj 42, *Vandana Kumari v. P. Praveen Kumar*, AIR 2007 AP 17 (India).

67 The Law Commission of India in 185th Report on the Indian Evidence Act, 1972 (March, 2003).

68 *Supra* note 15.

69 AIR 2018 SC 4321 (India).

Thus, the practice is against her right to autonomy, which in turn is against her dignity. Under Article 51-A (1) (e), the state is duty-bound to renounce practices that are derogatory to the dignity of the women. Therefore, it is recommended to abolish the practice of nikah halala by making an appropriate law.

3. On remarriage, the mother loses the right to custody of minor: Although, the paramount consideration, in custody cases, is the best interest of minor children, but the remarriage of the Muslim mother should not be a ground for depriving her of her parental right of custody. She should be treated as a normal and independent woman. This practice restricts a mother's right to marry on divorce, guaranteed by the Constitution, by creating a threat of losing the custody of her children. Further, it is also violative of her human right to equality, in matters relating to marriage and family, as enshrined under Article 16(1)(d) of CEDAW, which provides for the same rights and responsibilities of men and women in matters relating to custody of children, irrespective of their marital status. The law commission of India has also highlighted the need for reconsideration of this rule as it would easily create a bias against the mother.[70] Besides, Iran, being a Muslim country, has also abolished this rule by expressly codifying that a mother does not forfeit her right to custody after remarriage. Therefore, it is recommended to reconsider this rule.

INDIA'S CALL ON SCIENTIFIC CRIMINAL INVESTIGATIONS

B. Yamuna Saraswathy* and R.B. Rishabh**

Abstract

"Most Indian investigators work towards getting a confession rather than investigating the case. It is the easiest way to get a conviction in court – and the laziest."

Avirook Sen, Aarushi

Law is adaptive in nature so as to keep in nexus with the transforming social order. Law is being interpreted by the judiciary and so the judiciary must be kept updated with the various advancements occurring in the society. Gone were those days where criminals had no access to the technology and criminals today are the ones who take up sophisticated and contemporary means to commit crimes. This shows that there is a need to crack them down using equivalent scientific/ psychological tests. The constitutionality of the scientific tests like polygraph, P-300, narco analysis are in question because during the recent times these tests have been gaining judicial acceptances, which it did not previously receive. So now there is an exigency for serious consideration regarding its constitutional validity from the perspective of human rights.

Keywords*:* Article 20(3), Criminal investigation, P-300, Polygraph, Narcoanalysis.

INTRODUCTION

The basis of law is justice. The criminal law has got a major role to play in every civilized society in the world. The presence of criminal law provision can be seen among the citizens of the state in his day-to-day living. Still, the Indian criminal law is not found to be up to the mark. The investigation by the police forms the foundation of the Indian criminal justice system. The duties of the police are to investigate the matter, ascertain the facts, compile

* Student, School of Excellence in Law, Tamil Nadu Dr. Ambedkar Law University, Chennai
** Student, School of Excellence in Law, Tamil Nadu Dr. Ambedkar Law University, Chennai.

their conclusions and then present the whole to the court to figure out whether the person accused is guilty or not. Nowadays getting bail for a criminal case is not regarded as a big deal. So there are a number of cases wherein the person accused has been acquitted due to lack of evidence and the person who had suffered the trauma is left helpless. The trial judges do not hold an upper hand in the criminal justice system because they have to only rely on the conclusions or materials presented before them by the police. Therefore if the investigation methods applied are not up to the standards, if the witnesses become pugnacious, if there are no enough evidence or zero evidence, the judge presiding the trial is left with no other option other than to give the person accused the 'benefit of doubt' because law generally requires proof and confirmation beyond reasonable doubt. In India, the main problem is that there are many to defend the rights of the accused but no one to think about the victim. Criminals nowadays have been incorporating or applying hi-fi and sophisticated techniques to commit the crimes. The police often resort to third degree methods during police investigations to extort the truth from the criminals. India of all countries being a civilized society and governed by the principles of rule of law cannot permit such methods. The principle which India has been following is that 'evil cannot be destroyed by another evil' in any case. Therefore, all the methods adopted by the police in interrogations must be well within the permissible limit provided in the legal frameworks. Thus, the investigators nowadays seek the help of scientific evidence as it combines both science and law. They incorporate a number of scientific techniques like polygraph, brain mapping and narco analysis etc. in order to extract the truth from criminals in extraordinary cases. The fundamental principle in applying all these scientific methods is to promote the rule of fair play, unbiased approach and use these scientific evidences both by investigators and forensic experts.

Crime detection has turned to be easier due to the application of forensic science. Forensic science is regarded as a powerful soldier in the army of justice administration. When an investigation seems to be weak, forensic science acts as a strengthening agent of such investigation. The needs of forensic science have arrived because criminals are clever enough these days that they hardly leave any evidence to catch them. In *Som Prakash v State of Delhi*[1], polygraph, P-300 and narco analysis were stated to be the rebellious tools of forensic science but prove to be very beneficial in criminal investigation.

1 *Som Prakash v. State of Delhi*, AIR 1974 SC 983 (India).

Scientific Tests and their Validity:

P-300

P-300, which is also known as brain mapping is used as an interrogative method on criminals in the recent era. Here the subject is made to wear a headband with sensors and electrodes with the help of a physician mostly a neurosurgeon. These electrodes help in detecting the Multifaceted Electroencephalographic Response (MERMER) emitted from the subject's brain. MERMER is a mere brain wave emitted by the subject when he recognizes something said or shown to him in his memory. Hence it is clear that the electrodes will not detect any MERMER from subjects who does not have any related memory i.e., innocent persons. These brain waves are recorded with the help of EEG-ERP Neuro Scan Recording system which will later be studied and analysed by a neurosurgeon. The results thus arrived will help the investigation process and in collection of any evidence. It is crucial to note that this test does not involve any oral response from the subject.

Polygraph

Polygraph or a lie detector uses the psychological variations in the subject's body to analyse him. In this method, the psychiatrist attaches various probes on the subject's body which detects the variations in his heartbeat, blood pressure, pulse rate, skin conductance etc. It is believed that when a person lies he becomes nervous and his heartbeat, pulse rate increases as a result. For this purpose, a base line of the subject's psychological character is determined and then the interrogative questions are asked. So, any variation from such baseline will lead to the fact that the subject has lied in the specific interrogation. It is notable that this test does not involve any direct invasion in the subject's body.

Narco Analysis

Narco analysis also known as truth serum is one of the controversial scientific investigation methods. In this method, 3 grams of sodium pentothal is mixed with 3000 milliliters of distilled water and then administered in the subject's body along with 10% of dextnose for a period of three hours with the help of anesthetist. In medical terms, the drug injected exposes the neural membranes in brain to chloride ions which results in inhibition of the subject. This mixture kind of hypnotises the subject and makes him attain a stage where he cannot repress any of his emotions or facts while the interrogation is made. In layman language it can be said that the subject attains a drunken stage because of this sedative drug. Hence it is easy for the officers to extract truth from the subject which will help their investigation process. As said earlier, it is one of the controversial methods because

it involves direct invasion of drug in the subject's body. Any misstep in the mixture or dose level will lead the subject to comatose stage or even death. This can be said as a sophisticated barbaric method used by the investigation officers.

Constitutional Validity

During the past few years, the investigation methods have seen a shift from third degree interrogations to scientific methods. The officers nowadays are keen in extracting the truth using their wits rather than their fists. But the question here is, won't it amount to self-incrimination if the statement is made by the subject himself with the help of scientific investigations? This attracts the question of legal validity under Article 20(3) of The Constitution of India[2]. The article runs as follows: "No person accused of any offence shall be compelled to be a witness against himself". Thus, any statement made under these scientific tests will be considered as testimonials and not taken as an evidence as it attracts bar under Art. 20 (3). It is also significant to note that mostly every country around the world entitles its citizens the right to remain silent. Similarly, in India the witnesses and accused are protected by the law from self-incrimination. This part analyses the extent of legal validity of such scientific tests.

Polygraph and P-300 uses only probes and electrodes and does not involve any direct invasion. The investigation is made only with the help of analysis given by the doctors after getting the psychological reports of the patient. In these tests, the subject doesn't even give any oral responses while the investigation is made. Thus, there are no statements made by the accused and what is not said cannot be considered as a statement. The bar on self-incrimination is attracted only when there is a statement. Therefore, there is no reason to stop using this kind of scientific methods. The courts in India have acknowledged polygraph and P-300 as constitutionally valid scientific tests and the reports or analysis made from such tests can be used as evidence before the court of law.

As of narco analysis, it is still controversial as it involves administration of drugs into the subject's body. In this test the mental state of the subject is compromised with the help of sedatives as discussed above. The important question that should be considered in narco analysis is the consent of the suspect. Under Indian Laws, every human has the right to presumption of innocence and therefore forcing to undergo the narco analysis test would result in intrusion of privacy. Furthermore, while considering the legal validity of narco analysis, it is pertinent to take into account that an oral statement is made by

2 INDIAN CONST. art. 20(3).

the subject during the test which in the end might result in self-incrimination. Some high courts in India have upheld the validity scientific tests including narco analysis in cases like *Ramchandra Reddy v. State of Maharshtra*[3], *State of Bombay v. Kathi Kalu Oghad*[4] and *Nandhini Satpathy v. P.L. Dani & Anr*[5]. The constitutional validity was given in these cases because of the view that the legal permission got before the test is conducted does not amount to self-incrimination. However, the recent judgment of three judge bench consisting of the then Chief Justice K.J. Balakrishnan, Justice R.V Ravindranan and J.M. Panchal of the supreme court of India held narco analysis as unconstitutional and violative of Article 20(3) in the case *Smt. Selvi and Others v State of Karnataka*.[6] To that end, narco analysis is unconstitutional in India as of now. Nevertheless, it can be used for helping the investigation process and in collecting evidences.

Evidentiary Value

The Indian Evidence Act, 1872[7] regulates the confessions and admissibility of evidence before the court of law. A material or confession to become evidence must fulfill various factors and the court may either accept or reject such evidence. Section 24 to 30 of this act provides for admissibility of confession by the courts. These provisions clearly provide that any confession made in an unstable mental state or by way of inducement or threats cannot be accepted as evidence by the courts. Therefore, it is clear that any statement made by the accused during narco analysis test cannot be accepted as evidence because it is made under the inducement of narcotic drugs and the accused will not have a stable mind in such cases. This stand was taken in the *Smt. Selvi case*[8] where the Supreme Court decided narco analysis to be unconstitutional and not legally valid even if the consent of the person is attained by the authorities before such test is conducted. The narco analysis test also attracts bar under other criminal laws such as Indian Penal Code[9] and Criminal Procedural Code.[10] As per Sections 352, 323, 324, and 328 of Indian Penal Code, inflicting hurt to extort information or inducing any dangerous drugs in a person's body is a serious offence which is punishable under the court of law. This makes narco analysis a legally invalid scientific investigation method under all the criminal laws of the country. However, Section 45 of the

8 *Supra* note 7.
9 The Indian Penal Code, ACT NO. 45 OF 1860 (India).
10 The Criminal Procedural Code, ACT NO. 2 OF 1974 (India).

Evidence Act allows expert opinion in certain cases which makes the reports of scientific investigation methods such as polygraph and brain mapping a valid one.

Highlights and Challenges of Scientific Investigations

The polygraph and brain mapping tests are similar in some ways. Both tests need a well-trained doctor and equipments or machines to analyse the activities of the subjects. The polygraph uses probes on the subject's body whereas the brain mapping uses electrodes on the subject's brain. But in the end both the tests analyse the psychological behavior of the subject only. The highlights of these tests are that they do not involve any threat to the subject's health as there is no direct invasion in the body. Furthermore, the reports can be used as evidence before the court of law as it is constitutionally valid. Nevertheless, these tests are not free from shortcomings. The reliability of these tests still remains to be a questionable one. A person can easily deceive the polygraph test by knowing the tactics of the interrogations made. The person undergoing the test shall remain calm by having a stable mind which will not affect his polygraph report. On the other hand, an innocent may become a victim of the polygraph test due to his apprehension towards such test which in turn will give a false report. As in the case of brain mapping, it involves a huge amount of money to conduct these tests and the reading of such reports is not always easy which might end in misreading by the doctors.

In this ever growing scientific age, the investigators opt to use narco analysis rather than polygraph or brain mapping as it highly helps in the interrogation process even though it cannot be produced as evidence before the court of law. The drawbacks of narco analysis are lot more than that of the other tests. Firstly, this test has a high probability of affecting the subject's health. Any wrong mixture of the sedative can lead the person to comatose stage or even death. It is to be noted that the level of dosage depends on the subject's health conditions and varies from person to person. Thus, there is a high degree of going wrong in the mixture. Furthermore, it is not worthy to put a person's life at stake for a scientific test which cannot even be used as evidence in courts. Secondly, it is not proven that the statements made by the subject under the test are factual and truth. This is because; when a person is at inhibition stage it is not certain that he only speaks the truth, he can also talk about any fantasy of his own regarding the questions asked. Hence the reliability of narco analysis test is considerably low. Finally, even though narco analysis is a sophisticated scientific test, it is still being considered a form of third degree torture in psychological aspect.

Conclusion

The state governments and central authorities in India work in a correlated manner. Working in such a correlated manner has enhanced the investigative capabilities of police department. It is evident that in India there is a very low criminal conviction rate[11] and the situation needs to be checked on. These scientific techniques would be very helpful in bringing out the truths from the criminal thereby increasing the conviction rate. In *Aarushi murder case*[12], *Nithari killings case*[13], *Telgi scam*[14] and *Mumbai Bomb blast case*[15], the scientific criminal investigation methods were used which hastened the justice. Various courts in India have given judgments favoring these tests. Nowadays, as we already mentioned that the criminals have been using science and technology in performing their criminal offences has now compelled the drafters to rethink on the part of criminal justice to seek the help of scientific community in helping the investigators and the courts. To add on, the provisions in the evidence act which are more than a hundred years old are now found to be inadequate in today's rapidly growing science and technological world. Mostly these tests have been carried out only in high profile cases. Slow and steadily these scientific tools of investigation can become a legal alternative to the third degree physical torture while in police custody. In *D.K. Basu v. State of West Bengal*[16] the Supreme Court has rightly held that there is an urgent need to develop scientific tools of investigations and interrogations because torturing the accused by using third degree methods is nothing other than a huge hit at the principles of rule of law.

Suggestions

1. A clear policy must be enacted by the parliament regarding the scientific investigation methods inculcating the standards to be followed while conducting the tests by making them non violative of the fundamental rights guaranteed by law.

11 Arun Bothra, *Why is our conviction rate so low?,* THE NEW INDIAN EXPRESS (Feb.21, 2019, 10:04 AM), https://www.newindianexpress.com/opinions/2019/feb/21/why-is-our-conviction-rate-so-low-1941680.html.

12 *Aarushi Talwar & Anr. v. CBI*, (2013) 82 ACC 303 (India).

14 Anupama Katakam, *The Truth Serum Trial,* FRONTLINE (Mar.12, 2004, 10:10AM), https://www.google.co.in/amp/s/frontline.thehindu.com/the-nation/article30221420.ece/amp/.

15 *Ruling on the 1993 Mumbai bomb blasts, Supreme Court sends a strong anti-terror message*, TOI (Mar. 22, 2013, 11:00AM), http://articles.timesofindia.indiatimes.com/2013-03-22/edit-page/37935918_1_blasts-case-bomb-blasts-tada-court.

16 *D.K. Basu v. State of West Bengal,* AIR 1997 SC 610 (India).

2. In this changing world, development and advances in science and technology must be adopted by the law so as to ensure fair play with the criminals who have started using developed crime techniques and thereby serve justice.

3. With lower criminal conviction rate in developing countries like India, the scientific investigation methods should be adopted for the greater good because the public interest prevails over the individual rights and interests.

4. The legislations such as Indian Evidence Act and Criminal Procedural Code (CrPC) must be amended for providing evidentiary value for these scientific criminal investigations.

5. Article 20(3) of the Constitution of India must be amended to provide legal validity for these scientific criminal investigations at least in high profile cases.

COPYRIGHT IN EBOOKS: A TUSSLE BETWEEN DRM TECHNOLOGY AND PRINCIPLES OF COPYRIGHT LAW

Ananya Jain*

Abstract

Market of eBooks in India is expanding and people have failed to take note of the copyright issues that it brings for authors and the publishers, due to the ease of copying and distributing work over the internet involving negligible time and cost. The situation has compelled Copyright owners in digital sphere to use technology and software to restrict the rights of purchaser of an eBook. This new technology, called Digital Rights Management (DRM) brings with it a protective environment for the Copyright owner but at the same time, curtails certain rights which are conferred on the consumer by the Copyright Law, in order to ensure a balance between interests of the Copyright owner and the public at large. This paper argues against the fundamentalist view that people have taken of the DRM technology who see it as a bane to Copyright Law effecting various well settled principles of First Sale and Fair Use. Present paper suggests some technological and policy changes in the DRM technology to find a middle path which provides the opportunity to apply these principles in the digital environment while appreciating the challenges faced by the Copyright owners in protecting their material online and that the principle laid down for the physical work cannot be applied on as it is basis for the digital world.

Keywords: Copyright, eBooks, Digital Rights Management, Doctrine of Fair Use, Doctrine of First Sale.

INTRODUCTION

If anyone wants to buy a latest bestseller book in any genre, the person has various options as to how s/he wants to procure the book. Either the person can buy a physical copy of the book from a bookstore, can order a copy online or can opt to buy an eBook that s/he can

* Student, Symbiosis Law School, Pune.

read on any electronic device like kindle, tablets or phones. Technology of eBooks in lay man's terms refers to the electronic version of a book that can be read on a variety of electronic devices.[1] This technological advancement has brought about a lot of advantages for the consumers, making the book available to a large number of people spread over a large geographical area at low cost and in a more efficient manner. This wide reach has also facilitated the author and the publisher to reap more benefit from royalties and sales respectively, reducing the high cost of physically printing each copy of the book. The market for eBooks in India is believed to make a great potential and is currently valued at US$ 221 million in 2020 and is expected to grow at a rate of 8.8% and reach US$ 295 million by 2024.[2]

However, emergence of digital technologies has posed a great challenge to the authors and publishers to protect their copyright in books published in digital formats or as eBooks from the possibility of an individual to copy and manipulate the work. Traditionally, copyright infringement dealt with the physical imitation of the copyrighted work, and the unauthorized sale and distribution of the copyrighted work. The new technologies have brought with them, new and easier ways of infringing copyright in digital work that might have a greater impact on the author owing to its faster and wider reach.[3] Such social, economic and technological challenges require legal responses and the Copyright Act is no exception to the general rule. One of the legislative response to the issue was the introduction of Section 65A and 65B to the Copyright Act, 1957[4] (herein after referred to as 'the Act') vide the Copyright (Amendment) Act, 2012[5] which lays down liability for any person who circumvents a technological barrier used to protect copyright in digital works.

Present paper presents a viewpoint on the software of Digital Rights Management (DRM) which is used to protect copyrighted material online and detect copyright infringements. The paper would further analyze the threats posed by the application of DRM technology on various well settled Doctrines of Copyright Law like the Doctrine of First Sale and Fair Use and how certain policy and technological changes can be used under the current system to ensure that the purpose of the Copyright Law i.e. to ensure a balance between the rights conferred on a Copyright holder to be adequately rewarded and the right of consumers to access information by ensuring free flow of ideas and information, is always upheld.

Ownership v. License Dichotomy

It is not uncommon for a person 'buying' an eBook online to believe that s/he is the owner of the eBook. Therefore, the relevant question that arises is that, whether the purchaser really is the owner of the eBook purchased, or is s/he really only a licensee. The truth is that the eBook publishers merely license the purchaser the right to access the book and there is no transfer of actual title.[6] License is the permission granted by the Copyright owner, of revocable nature, giving the right to do an act which would otherwise be considered as unlawful.[7]

In the landmark case of *Vernor Vs. Autodesk*[8], the US 9th Circuit District Court, held the user of a software to be a licensee and not an owner as the title was retained by the company and restrictions were put on their transfer and usage. The analogy can be used in respect on eBooks as well, as even the terms and conditions of the so called 'sale' of eBook does not transfer the title of the eBook and puts complete restriction on its transfer and distribution. One of the clauses from the Terms of Use for the Amazon Kindle India, which is the most used eBooks platform in India, is reproduced below:

"**Use of Kindle Content**: ....Kindle Content is licensed, not sold, to you by the Content Provider.

Limitations: Unless specifically indicated otherwise, you may not sell, rent, lease, distribute, broadcast, sublicense, or otherwise assign any rights to the Kindle Content or any portion of it to any third party...."[9]

Hence, it can be said that an eBook is only licensed to the so called "purchaser", and limited rights to access the book is conferred under the license unlike the sale of a physical copy of a book which transfers the title and confers various other rights to the consumer.

Digital Rights Management (DRM)

Digital Rights Management, usually shortened to DRM refers to a system established for the purpose of protecting copyrighted material in electronic media and is used to guide the proper utilization of the digital content. It helps in trading, tracking and monitoring the

digital data in order to prevent any copyright infringement and to catch hold of such cases.[10] Section 14[11] of the Act confers certain exclusive rights on the copyright holder in a literary work including the right to reproduce and distribute the work to public. DRM acts as an additional protection for the intellectual property by blocking third parties from doing any act which the copyright holder has the exclusive right to do.

It is easier to understand the working a DRM through an example. Suppose an author decides to publish his book online and launch it as an eBooks, the first layer of protection of the work is given by the Copyright Act, which protects the work from any infringement. Another layer of protection is provided by the new regime of DRM, through which the work can be assumed to be locked and can only be accessed by a person who is authorized and has a key to the lock. This extra protection becomes of prime interest of any eBook publisher due to the infringement becoming much easier and very hard to control when its starts to spread in the electronic world.[12]

However, with the pace at which technical advancement is happening in the world, it won't be long before people would find a way to circumvent the protection of DRM and start infringing copyrighted work without getting caught. Therefore, in order to protect the sanctity of DRM or any other software designed to protect copyrighted work, the Indian Legislature introduced sections 65A and 65B into the Copyright Act, making it unlawful to circumvent such technical protections, through Copyright Amendment Act, 2012. An action was taken even though India is not a party to the WIPO Internet Treaties, namely, WIPO Copyright Treaty[13] (WCT) and WIPO Performers and Phonograms Treaty[14] (WPPT), which makes it obligatory for contracting parties to lay down an adequate and effective legal solution against a person involved in unauthorized tampering of the rights management system being used by Copyright owner to protect his Intellectual Property.

Section 65A clause (1)[15] of the Act lays down penalty for anyone who circumvents the applied technological measure, used to protect rights of the copyright holders conferred on

15 The Copyright Act, Section 65A (2012).

them by the Act, with the aim of copyright infringement, of imprisonment that could be extended to two years, along with fine. However, clause (2) lays down various exceptions to the above penal measure.

Section 65B[16] of the Act makes any person who tampers with rights management information without consent or sells, distributes or communicates to public, copies of the electronic work having knowledge about the rights management information being tampered with, shall be liable for imprisonment that could be extended to two years, along with fine.

Therefore, DRM plays a primary role in ensuring that authors are properly compensated for their work and rights of the authors are very well protected and further DRM technology is protected through statutory law. However, technology of DRM, as seen in its current form, does not complement the purpose of Copyright Law of maintaining a balance between the rights of Copyright holder and the consumers.[17] Though protecting rights of the author, it puts unregulated constraint on the consumer with no freedom of dealing with the books as per his wish, thereby affecting the free flow of information. Besides posing threats to Privacy of the users and making the use of eBooks complicated, the system grossly violates two very well settled principles of Copyright Law i.e. Doctrine of First Sale and Doctrine of Fair Use.

Doctrine of First Sale

Copyright Act confers certain exclusive rights on the Copyright holder by virtue of section 14 of the Act. Such exclusive right in case of literary work includes the right to reproduce the work in any material form, to issue copies to public, to make translation and to communicate the work to public. One of the most important right is the right to distribute copyrighted work to public or to authorize such distribution. However, the right of distribution is only related to copies that are not already in circulation by virtue of section 14(a)(ii) of the Act[18]. This means that the Copyright holder has exclusive right to regulate first sale of the copy of a book and once such copy is sold to a purchaser legally, the Copyright holder loses the right to regulate subsequent use and sale of the copy. This is known as the Doctrine of First Sale. This Doctrine acts as a favorable defence in cases of copyright infringement as it makes the Copyright holder incapable of exerting control over copies that are already sold to a purchaser. The Doctrine was first applied by the US Supreme Court in the case of

16 The Copyright Act, Section 65B (2012).

17 Divyesh Pratap, *Is 'Fair Use' of Copyrighted Work a thing of the past?,* Lexpress (Aug 30, 2015,08:00AM), http://www.lexpress.in/law-development/digital-rights-management-provisions-and-indian-copyright-law.

18 The Copyright Act, Section 14(a)(ii) (1957).

Bobbs-Merrill Co. v. Straus[19], where it was categorically laid down that one who has sold a copyrighted article, loses all the rights to control subsequent sale and hence, the publisher has no right to control the price at which a subsequent retailer sells the book.

It is important to understand that the right granted under the Doctrine is to resell the copy of the work and not to make unauthorized copies. The purchaser only has the right to resell the legally obtained genuine copy of the copyrighted work and the purchaser is not entitled to make or distribute any illegitimate copies of the work. This means that the purchaser cannot buy one copy of the eBook and then go on to duplicate it to make 50 illegal copies of it and then seek protection under the Doctrine. The Doctrine only confers a right to resell the one copy which was legally obtained.

The issues that arises in digital sphere brings up the question of whether the Doctrine is applicable to digital materials including eBooks and specially in case where there is a mere license to use the copyrighted material. In respect to the first question i.e. whether the Doctrine of First Sale can be applied in cases of digital products, it can be said that under the current system, most ePublishers use DRM technology which restricts copying and transfer of the work and this clearly acts as a threat to the Doctrine as it is restricts purchasers from further utilizing the copyrighted material as per his own wishes and the Copyright holder retains full control over the eBook.[20]

There is no jurisprudence on this issue in India and the same has not yet been discussed by Indian judiciary. Therefore, one has to analyze judicial decisions in other jurisdictions to bring in more clarity. The US District Court of Southern District of New York, in the case of *Capitol Records, LLC v. ReDigi Inc*.[21], held that consumers does not have any right to resell the digital music owned by them. The Defendant ReDigi provided a platform to resell digital music that was purchased from iTunes after a software called Media Manager had authenticated the file. After verification, the file would be uploaded on remote Cloud Locker, from where anyone could purchase the music. Once purchased the music file could no longer be accessed by the first purchaser. The Court denied the defence of First sale Doctrine and held it be a copyright infringement as the user was creating a copy and uploading it on the cloud server. The Court further held that the Doctrine is applicable only to material items that the Copyright holder has put into the stream of commerce. The same line of reasoning can be applied in respect of eBooks as well, to conclude that in the present scenario, law does not facilitate the applicability of First Sale Doctrine to eBooks.

19 *Bobbs-Merrill Co. v. Straus*, 210 U.S. 339 (1908).

20 Joseph Gratz, *Digital Book Distribution: The End of the First-Sale Doctrine?*, LANDSLIDE (2013).

21 *Capitol Records, LLC v. ReDigi* Inc., 934 F. Supp. 2d 640, 655 (2013).

With respect to the second question i.e. whether Doctrine of First Sale can be applied to licensed products, it is important to analyse the judgement of United States Court of Appeals for the Ninth Circuit, in *Vernor v. Autodesk, Inc.*[22], wherein the Court held that the Doctrine does not extend to licensees of the digital copy but only to legal owners of the copyrighted material. Further, licensee is governed and restricted by provisions of the license agreement. Therefore, in case of license where the company retains the title, and only confers a non-exclusive license with restriction on copying and distributing, no right to resell by the way of First Sale Doctrine can be claimed. Therefore, it is clear that in the current judicial scenario, the Doctrine of First Sale does not apply to digital products and eBooks.[23]

The lack of any judicial decision or any legislative intent to extent the Doctrine of First Sale to digital products actually brings in a question of whether is it not really feasible to apply the historic well settled principles of Copyright Law in the current situation or has it really become obsolete owing to the fast paced technologically changing environment. One of the most evident fall back for Digital First sale Doctrine would be loss of control that the Copyright holder can assert over digital content, which are at a high risk of being easily and quickly exchanged between people as compared to tangible products. This would not only give the consumers an easy chance of piracy but would have a huge impact on the sale of eBooks as people can purchase a copy of the eBook through the secondary market place at cheaper cost with no difference in quality. Therefore, Digital First Sale Doctrine may have an adverse effect on the authors and publishers of eBooks due to loss of revenue and high risk of piracy.[24]

Therefore, the publishers of eBooks are compelled to use techniques like DRM and licensing in order to protect their copyrighted work and hence, granting Digital First Sale rights would not be a great idea under the present circumstances. However, the author is not in favor of completely separating the Doctrine from digital products and suggests designing of the First Sale Doctrine in a way to ensure balance between rights of the Copyright holder and that of the consumers to alienate their property.

The author proposes a system that could be called “Digital Transfer Doctrine”, whereby the eBook publishers are bound by law to modify their licensing agreement to permit licensees to resell the eBook license, in such a way that a part of resale price has to go to

22 Vernor v. Autodesk, 621 F.3d 1102, 1110–11 (2010).

24 Eurie Hayes, *Digital First Sale: Friend or Foe?,* 22 Cardozo Arts & Ent. L.J. 853, 854 (2005).

the Copyright owner.[25] Royalties on sale in secondary digital market tries to maintain a balance between the interest of Copyright owner and user, while appreciating the difference between physical books and eBooks. Allowing resale of digital books brings in a unique risk non-degrading digital files, connected with a vast and boundaryless distribution system, and hence, the benefit sharing on resale would help the Copyright owner offset some risks posed by this new system.[26]

Further, stakeholders of an eBook can utilize the technology called 'Rights Locker Architecture', which would enable the publisher to store the content on a remote server, rather than it being stored locally on each device. When a consumer wants to access the eBook, it shall be directly done from the server, after verifying the authentication of the request.[27] This would help facilitate the application of the Doctrine by preventing the creation of any copy of the work. When any consumer decides to resell his license, access of the consumer to the eBooks from the server would be cancelled and would be granted to purchaser in the secondary market, thereby preventing any chances of a duplicate copy still remaining with the first purchaser as no copy was ever stored locally with the consumer and s/he was only granted access through the server.

It is not feasible to apply the Doctrine of First Sale on as it is bases to eBooks as it might ignore some of the valid risks that Copyright owner might face. On the other hand, the complete non-application of the given Doctrine would give unrestricted control to the Copyright owner and hamper rights of the consumer to alienate their property and be entitled to free flow of information. Therefore, no change in the statuary law is required as it already recognizes the Doctrine of First Sale. However, a detailed guideline by the Government allowing royalties for resale as well would indeed serve the purpose of Copyright Law of maintaining a clear balance.

Doctrine of Fair Use

Copyright Act as also discussed earlier, by virtue of section 14 confers certain exclusive rights on the Copyright owner, including the right to distribute or make the work available to public. Any person who violates any of these rights can be made liable for

copyright infringement. However, these rights are not absolute in the sense that under certain circumstances a person doing an act which would otherwise amount to copyright infringement cannot be held liable for the same as it falls under the scope of 'Fair Use'. The Doctrine of Fair Use is laid down under section 52 of the Act[28], which states certain acts that are exempted from the purview of copyright infringement. Under the Copyright Act, Fair Use in respect of literary work includes use of the copyrighted work for private use including use for research or for purpose of review or criticism or to report it as news. Purpose of the Doctrine is to encourage creation of new works and to develop knowledge. This is based on the belief that if copyright is absolute and unrestricted, adverse economic incentives would be created.[29]

In the case of *Chancellor Masters and Scholars of the University of Oxford v Narendra Publishing House and Ors.*[30], the Delhi High Court has very rightly summarized the Doctrine of Fair Use. The Court laid down that the very purpose behind the Doctrine is to maintain a balance between the rights conferred on the Copyright owner by the law and the opposing interest of enriching public domain. Therefore, it legitimizes reproduction of copyrighted work for private use and not for making commercial gains. Doctrine aims at promoting creativity by enriching the public domain, however, at the same time it condemns and prohibits blatant copying of protected work. However, digital market has brought about new challenges to the application of the Doctrine. Publishing an eBooks brings with it a certain set of challenges not faced by a publisher in the physical world and hence, the application of the traditionally Doctrine of fair is on as it is basis would not be the greatest idea.[31]The application of the Doctrine is dependent on the use of the copyrighted material for private versus public use. Such a distinction has been eroded in the digital environment where an individual has the capability to put the work on the internet to reach people across the globe who can use the same and utilize the work for private use. Therefore, in such cases even though the copy of the work is used only for private use of the third party, its availability over the internet to a large number of people may work in derogation of the interests of the Copyright owners.[32] Therefore, publishers of eBooks are compelled to use

28 The Copyright Act, Section 52 (1957).

32 Megha Nagpal, *Copyright Protection through Digital Rights Management in India: A Non-Essential Imposition,* 22 Journal of Intellectual Property Rights 224, 228 (2017).

technologies like DRM in order to restrict the unauthorized usage which in turn also has the effect of restricting certain activities that would fall under the ambit of Fair Use and hence, the digital work brings in its own set of new issues into the world of Copyright.

DRM technologies permits only certain kind of access to the copyrighted material and forbids all other, thereby having the effect of preventing use of the work in a way that would otherwise would had come under the purview of Fair Use. Therefore, DRM technology is in direct derogation with the well settled principle of Fair Use, giving the Copyright holders in digital environment an upper hand over their work and hampering the rights of fair users, who might now become liable for copyright infringement of the digital work as any kind of Fair Use is also prohibited[33]. However, the author is of the belief that certain tweaking of the DRM technology might help it foster the Doctrine of Fair Use rather than hamper it. The author proposes a system where in a person can utilize copyrighted material for any purpose falling under the Fair Use category, only after an authorization through remote or local means has been granted through the DRM, which would be further monitored by a Rights Expression Language.

The author proposes a hybrid approach to the authorization process involving two types of authorization for different situation, in case a person wants to make Fair Use of the copyrighted work. Through this approach a person may seek authorization locally, for a set of preauthorized uses which clearly fall under the scope of section 52 of the Act, and for permissions that are not preauthorized, the person would have to seek the authorization through a remote process, showing adequate proofs in order to receive a digital key necessary to use the material beyond the scope of preauthorization. Remote authorization would help curb the issue created by the ambiguity of the scope of Fair Use and try to accommodate uses that do not directly fall under the scope of the Doctrine.[34]

With the help of a built in authorization mechanism combined with the subjective authorization though remote process, the Copyright holder would be able to provide a reasonable opportunity to the public to make Fair Use of the copyrighted material. As there would be no incentive for the Copyright holder to introduce such a mechanism, Parliament has to make the required amendments in the Copyright Law in order to obligate the same.

Once an authorization has been granted, the person to whom the authorization has been given will have the capability of using the material beyond the scope of the license and

33 James T C, *Indian Copyright Law and Digital Technologies*, 7 JOURNAL OF INTELLECTUAL PROPERTY RIGHTS, 423, 430-434 (2002).

34 Timothy K. Armstrong, *Digital Rights Management and the Process of Fair Use,* 20 HARVARD JOURNAL OF LAW & TECHNOLOGY, 50, 81-84 (2006).

the DRM restriction are removed in respect of the purpose for which the authorization was availed. This makes the copyrighted material again susceptible to easy copying and distribution. Therefore, the stakeholders of an eBook have to further lay down an another layer of technological protection called "Rights Expression Language" (REL). It is used to lay down clear set of rules for the usage of the copyrighted material once the authorization is granted. Even after the authorization to use the copyrighted material is granted, REL ensures that user cannot use the material in whatever way s/he deems fit. The right granted to use and access the digital content may be given with certain restrictions on the time period, geographical extent of use, devices and certain other restrictions.[35] Also the number of time and the frequency at which it can be accessed can also be limited. Therefore, this would ensure that once the authorization is granted, the user does not have a blanket right to use the copyrighted material and REL can be imposed to limited such rights and monitor the activities to prevent any chances of copyright infringement.[36]

Such a mechanism is not full proof solution and might come with certain drawbacks, however, it has the capability of conferring the right of Fair Use to the public while taking into consideration the unique risks that are faced by the copyright holder in digital sphere, thus maintaining a balance between the rights of copyright holder and the public at large.

Conclusion

In the coming future, India is going to witness a steep growth in the market for digital goods including eBooks, which would bring with it a wide range of legal issues besides the technical issues as already being faced. The difficulty faced to apply well settled principles of Copyright Law is one such legal issue that needs to be addressed by the Parliament and the judiciary.

Consumers and the Copyright owners in digital work have to adapt to the new digital environment and the first step towards achieving that is through building a sense of trust in the system. eBook publisher have to be more open and transparent about their licensing policies and make the consumers well aware before persuading them to buy the eBook, that they are mere licensee of the eBooks and no title is transferred to them.

The Indian Legislature, Judiciary and also the public at large have to accept and appreciate various new issues that the digital world has brought to the copyrighted material and

35 Stefan Bechtold, *The Present and Future of Digital Rights Management,* Springer, 597, 600-605 (2003).

36 Deirdre Mulligan & Aaron Burstein, *Implementing Copyright Limitations in Rights Expression Languages,* Springer, Apr. 12,2020, 01:00AM), https://link.springer.com/chapter/10.1007/978-3-540-44993-5_9.

that application of the law drawn to protect the physical work cannot be applied without modification to suit the new environment. Copyright owners have to be more careful and vigilant than ever to protect their work online and hence, have to be given extra protection than traditionally conferred to them.

The paper argues against fundamentalist viewpoint that people have towards the new technology of DRM, who see it as a tool only capable restricting the access to the copyrighted material. Fundamentalists are against the adoption of such a technology as they view it as a bane to the Copyright world and believe that it hampers the Doctrine of First Sale and Fair Use, which are considered to be the two strong pillars of the Copyright Law which are required to ensure a balance between the rights of the Copyright holder and the interests of public. While discussing the various concerns against DRM technology, the paper shows that it is more flexible than it is commonly perceived to be and a little framework change in it can help foster the purpose of Copyright Law.

The DRM technology is believed to be the heaven for the Copyright owners and hell for consumers, however, people fail to understand the middle path between these two extreme opinions. It is difficult to think of a balanced DRM system which protect the rights of the Copyright owner and that of the society at large, but the suggestions presented in the paper show that it is not impossible. The potential of DRM to create a balance and information friendly environment is by large still unexplored by the humans. Just like all technologies, even DRM is malleable, and people shall not miss an opportunity to create a value addition design that fulfills the requirements of the well settled principles of Copyright Law while appreciating the difference in environment created in the digital world. Further, Parliament and the Judiciary is duty bound to lay down better Laws for protection against the circumvention of any such technological measures and encourage and facilitate the formation of a new system in a Copyright friendly manner.

ASSIMILATING INTERMEDIARY LIABILITY REGIMES IN COPYRIGHT INFRINGEMENT

Akanksha Badika* and Pragya Mishra**

Abstract

The concept of intermediary liability has always been a bone of contention as intermediaries at times become medium of infusing infringing content on the web. In this modern era, where circumvention becomes rampant and massive, the copyright holder loses control on its dissemination. This article will primarily focus on the evolved intermediary liability regimes which have evolved to the rescue of copyright holders and their assimilation in Indian judicial environs as these intermediaries play a pivotal role in circumvention of material all over the world. Firstly, the article would introduce the concept of intermediaries and their conditional liability in the digital world uploaded by third parties in wake of numerous judgments with a brief discussion on their accountability as per the US DMCA and EU Directives on Copyright Act. Secondly, the article would analyze the historical background and evolution of the regime in realms of copyright laws in India and other sovereigns resulting from digitization and the need to curb circumvention of infringing content being the intellectual domain of its rightful copyright holder. Subsequently, the article assesses the qualifications of an intermediary within the purview of IT Act (hereinafter, "the Act"), Indian Copyright Act and recent judgments. Thereafter, the article would explore the synergy between Indian legislative framework, combating the above mentioned in light of Intermediary Guidelines Rules, 2018 and judicial precedents highlighting how digitization has made more vigilant yet inept in harmonizing safe harbour exception to import immunity to intermediaries. Conclusively, the article would suggest the alternatives available to infer the conception with a more preferable option, minimizing the discrepancies of the present mechanism to make copyright laws inhibitory rather than following a 'take-down' approach post-infringement when the damage has already materialized.

INTRODUCTION

The principle of intermediary liability has always been a bone of contention because intermediaries often become a tool for infusing web-based infringement content. In this new age, in which circumvention is widespread and huge, the holder of copyright loses power over its dissemination. Recent judgements have held intermediaries as not liable as they come under the safe harbour provisions of Sec. 79 of the Act, others have held them liable despite safe harbour which at times is vaguely applied. Dynamism has been the epicentre of a ubiquitously contemporary world. The emergence of e-commerce and digitization has always been a boon for the society as it has provided a platform for discussion; however it has also been a bane for copyright holders, as intermediaries disseminate information at the click of a mouse.[1] In the process of such circumvention of infringing content the copyright holder gradually loses control over this dissemination, impacting the society at large as if they do not feel confident about posting content over the net, their freedom of speech and expression does get curbed. This article will primarily focus on the intermediary liability regimes which have been evolved to the rescue of copyright holders and their assimilation in Indian judicial environs as these intermediaries play a pivotal role in circumvention of material all over the world.

The word 'intermediary' in Indian context has been defined as storage, transmission, receipt of information or message or provision of any service related to information on behalf of another person and includes- telecom and network service providers, search engines, internet auction websites, internet service providers, etc.,[2] the definition has been widened to include the enumeration after the IT (Amendment) Act, 2008. In EU, the E-Commerce Directives define intermediaries as any person providing an information society service, which in turn is defined as a remunerated service at individual's request by electronic means[3],

Recital 18 further clarifies that it includes not only internet contracting but also services not paid for as it constitutes an economic activity.[4] In US, the DMCA the term intermediaries are known as 'service providers' to broaden their ambit to include even universities which provide students with access to information,[5] the definition includes transmission, routing and providing connection,[6] with some eligible conditions for limitation.

The old Copyright Act, 1957 did have provisions relating to secondary liability for copyright infringement much before the advent of internet. These provisions along with ISP liability provisions[7] of the Act, have formed the base for safe harbour provisions in India until Intermediary Liability Rules of 2011 were framed and published. There have been a host of case laws which have changed the statutes, one among them being, *Super Cassettes Industries Ltd. v. MySpace Inc. Ltd.*[8], wherein the court had opined that intermediaries should be responsible in uploading content on the website and should carry due diligence for the same at the time of infringement rather than conducting the same after the damage has already occurred. The court further handed down that legislative mechanism in India and USA are completely different and post infringement measures can work there but India needs to have more pre-infringement measures to prevent copyright infringement in the online world. During this case, the defendants, MySpace had enough opportunity to change the work by obtaining permissions from the customers, inserting advertisements to the plaintiff's works. However, the 2012 Amendment to the Copyright Act has significantly stifled such possibilities to materialize. In of *Avnish Bajaj v. State of Delhi*[9], the Court observed that Baazee.com had failed to practice the requisite due diligence because its filters were defective and allowed pornographic material, despite the post containing salacious material, the intermediary could not justify any amendments in its policy to counter the likelihood that such content could be published on the website.

The Intermediary Safe Harbour: An Escape Route

A safe harbour provision provides for a conditional immunity to the intermediaries for liability of third-party infringers. The safe harbour rules have evolved over times in different jurisdictions and accordingly formed the much-needed backbone in ensuring intermediaries are not pestered for infringements or illegal activities in the digital space which has unrestricted flow of information. However, the immunity provided to intermediaries is subjected to conditions in international spheres.

International Approach

In the EU, a sectoral and vertical approach is followed for intermediary liability. The ECD divides the liability –exempt intermediaries in three distinct categories based on which the liability of an intermediary depends, those have been mentioned in Art. 12, 13 and 14 of the ECD. If the ISPs function as conduits for information i.e., only transmission or providing access, then the ISPs are exempt from liability.[10] If the information received by a client is transmitted in a communication network where the intermediary stores the information in a 'safe, temporary and intermediate manner' solely for the purpose of transmitting the information to other recipients of the service, then the intermediary is also not liable solely for the storage of such information (popularly known as caching).[11] The intermediary's responsibility will depend upon the knowledge of contents of the information where the ISP provides for the storage of the receiver's information. If they have no actual knowledge of the infringing content, they are pardoned and the Article have different thresholds of civil claims which depends upon the degrees of awareness of the infringing material to the operator.[12]

The US has twin conditions for enabling intermediary to claim immunity, which have been embodied in Section 512 of the DMCA, which further create four safe harbour provisions: for conduits, there exists no monetary liability, only injunctive relief, for caching, the liability is limited to only those ISPs who upon notification to take down infringing content, take it down expeditiously, for information residing at the direction of users, the liability arises only when the ISPs had actual knowledge about the infringing content and they do not actively take efforts to disable access after a notice and when the ISP provides a referral or link to an online location or domain, the liability does not arise provided the conditions

10 E- Commerce Directive 2000/31/EC Article 12(2).

11 E- Commerce Directive 2000/31/EC Article 13.

12 E- Commerce Directive 2000/31/EC Article 14(1)(a).

of aforementioned case are fulfilled about the actual knowledge of infringing content.[13] The case of *Doe v. MySpace*[14] also illustrates that an intermediary cannot be held responsible for third party communications and how they are protected extensively, where MySpace was not held liable when minors interacted with sexual predators after lying about their age, the US Court held that MySpace cannot be held liable for any communication published by third parties and the case of negligence was dismissed.[15]

Indian Legal Regime

The intermediary liability regime in India has evolved over the years. Initially, the IT Act did not provide for any safe harbour significantly it was after the *Avnish Bajaj v. State*[16], where the managing director was able to escape because of inadequate intermediary liability and the amendment thereafter in 2008, which brought in the requisite broadening of the intermediary liability by inserting Section 79 of the IT Act, which provides immunity to intermediaries from all unlawful activities if they cater to the due diligence and other condition provided in the Section. According to the Section, it only includes those cases in which the intermediaries do not have any knowledge or control over the information that is being transmitted.[17] Moreover, the intermediary will only take down the information upon receiving actual knowledge of the same.[18] The Intermediary Guidelines 2011 clarified the conditions for claiming safe harbour under the IT Act and later the judgements of *Shreya Singhal v. Union of India*[19] and *MySpace*[20] case also added to the existing literature of intermediary liability of the 'actual or specific knowledge requirement'. *M/s Luxottica Group SPA v, M/s Mify Solutions*,[21] also clarified the laws regarding interaction of Intellectual Property Rights with e-commerce platforms, wherein an e-commerce platform cannot escape the liability if it allows for storage of counterfeit goods, advertises marks of

18 IT (Amendment) Act, 2008, S. 79 (3) (b).

19 *Shreya Singhal v. Union of India*, (2013) 12 S.C.C. 73.

20 *Supra* note 10.

21 *M/s Luxottica Group SPA v, M/s Mify Solutions*, CS (COMM) 453/2016.

plaintiff, stating that active participation would render them liable.[22] Further, the Copyright Amendment in 2012 had broadened the safe harbour for 'transient or incidental storage', thereby indicating how and why the storage of content is actually effectuated.[23]

To claim immunity under the Act and the Information Technology (Intermediary Guidelines) 2011, the function of such intermediary of ISP should be restricted to providing ingress or where the intermediary doesn't modify the information uploaded by a third party or does not select the receiver or does not initiate the process and the intermediary follows Rule 3 of the guidelines issued in 2011, namely publishing of rules and regulations which informs the user not to host, share or display any information which belongs to some other person and over which he possess no right or infringes any patent or copyright or any other Intellectual Property Right.

Despite all the efforts of the of the government to make the laws related to intermediaries simpler, however everything was in vain and in the year 2013 mouthshut.com along with the other petitioners like Shreya Singhal challenged the validity of Section 66 and Section 79 of the IT Act and claimed it that these Sections are infringing their Right to Freedom of Speech and Expression under Article 19 of the Constitution. The main reason for mouthshut.com to file the case was that they had received humongous amount of take down notices which is infringing their freedom of speech. According to the owners of the website it is "privatisation of censorship"[24]. The apex court gave its decision in the petitioners favour and ordered reading down of Section 79.

Under the Indian legal regime, one of the difficulties arising in pretext of Copyright law was the scope of Section 51(a)(ii), however in *MySpace*[25] judgement, the same was clarified to include even cyberspace, however the broad interpretation of the word 'place' as virtual space would effectually require more consideration as online platforms are more vulnerable as the control is lost eventually over the content.[26]

However, in these cases even, can an intermediary claim immunity in cases of public advertisements which they agree to publish, as then the ISP possess actual knowledge

about the illegal or infringing content not enough to shield them from liability in the garb of being an intermediary as per Sec. 79 of the Act, as while advertising, they act more like a publisher.[27]

Fixing Liability on Intermediaries: Increased Digitization and its Impact

With rampant digitization and massive dissemination of information, intermediaries can heavily influence the way content is read worldwide. As a result of which the Intermediary Guidelines have proven to be useful wherein the liability has been more clearly specified for various categories of intermediaries, though not as segregated in types of intermediaries in terms of functional variations as that in US or EU. It becomes really impossible for intermediaries to filter content or even be aware about the content which could have been published by over millions of populations across the world due to digitization and increased computer literacy, hence the red flag test, with subjective and objective elements, to understand an intermediary's liability about the knowledge factor to fix liability becomes important. *Viacom v. YouTube*[28] has significantly demonstrated this point, where Viacom sued You Tube for copyright infringement of content which belonged to Viacom and uploaded on You Tube by third party users, to which You Tube claimed immunity under S. 512 of the DMCA, the court ruled in favour of YouTube based on the red flag test and further observed that real knowledge involved clear and observable violations of sensitive information and not general understanding of its existence and YouTube had already followed the notice and take down procedure.[29] However, the take down approach only has remedied the damage after it has materialized but not looked after the damage which has already occurred due to infringement, it becomes really easy for an intermediary to escape liability without the need to monitor content. This way, the intermediaries claim vast immunity from liability as there are no civil or criminal claims against them. However, the intent of the Act was to absolve them from criminal liability as has been reinstated in the Standing Committee Report on the IT Amendment Act.[30]

30 Ministry of Communications and Information Technology (Department of Telecommunications), *Sixty-Eighth Report Standing Committee on Information Technology (2008-2009),* PRS India (February 17, 2009), https://www.prsindia.org/sites/default/files/bill_files/scrTRAI.pdf.

Under the Intermediary Guidelines Rules of 2018, Rule 3(8) of the Guidelines, mention a take-down approach, according to which an intermediary shall, upon receipt of specific information in the form of a court order or upon notification by the Government or its agency, remove or disable access to material legally restricted under Article 19(2) of the Indian Constitution no later than 24 (twenty-four) hours. It is a robust step because it helps in protecting the rights of the intermediaries and the users as it is becomes a herculean task for the intermediaries to examine all the uploaded documents or content and check the validity of the same. After this Rule, the intermediaries are required only to examine those documents for which the court has specifically asked them to do so. However, the factors on which the content should be removed have still not been clear. In addition, the Draft Rule does not cover the request for taking down of content in case of infringement of Intellectual Property which was there in the earlier Rules.

Under Rule 3(5) the intermediary needs to provide information or assistance as asked for by any government agency or assistance concerning security of the State within 72 (seventy-two) hours of communication. This step of providing assistance is a welcoming step however; the provision to ask for assistance is really wide giving too much power to the government agency immense powers to request any kind of assistance. In addition, the rules have just mentioned the government agencies and do not specify which kind of government agency. Therefore, the revision to Rule 3(5) is necessary to clarify which all rights of assistance is vested to the government agencies and to whom.

Moreover, according to Rule 3(9) intermediaries must also deploy automated tools for proactively identifying and removing unlawful information or content[31] however, the criteria for installing automated tools is unclear, because there is no explanation under the Draft Rules as to how such automated tools can detect unlawful information or content. The Rules do not define the term 'unlawful information or content' the absence of which creates confusion and inconsistency between intermediaries.[32] The usage of automated tools has been previously discussed in the landmark

31 The Information Technology [Intermediaries Guidelines (Amendment) Rules] 2018, Rule 3(9).

32 *Supra* note 15.

case of *Sabu Mathew George v. UOI,*[33] where the Supreme Court directed the respondents, Google, Microsoft and Yahoo to 'auto-block' sex determination advertisements. They also ordered establishment of a 'nodal agency' whose main work is to provide a list of blocked websites to the search engines[34].

In addition, Rule 3(7) of the Draft Intermediaries Guidelines makes it compulsory for all the intermediaries incorporated with more than 5 million users in India to get a permanent registered office in India and appointment of a nodal officer for all time coordination with the different Law Enforcement Agencies. The particular rule does not elucidate the method to calculate the numbers of users. An intermediary's number of users can be determined using different methods such as the registered user or active regular members, or number of installations or VIP users etc. This leads to a lot of uncertainty, as it is very difficult for an intermediary to determine whether or not it has passed the threshold of fifty lakh[35]. Moreover, registering also leads to a lot of burdensome formalities and statutory compliances.

Recent Judicial Observations: Stringency or Harmony?

The recent judicial response on intermediary's liability in cases of copyright infringement, will help us delve deeper into the intricacies of the Act and Copyright Act, especially when no objective tests exists for determination of fixing accountability on an intermediary, one can always determine the type of intermediary and its involvement with target audience while considering the same.

In case of *M/S Shree Krishna International Film Productions v. Google India and YouTube LLC*[36], the plaintiff was alleging that the defendants had been reproducing various sound recordings, cinematographic films and audio-visual recordings of the plaintiff on its platform

33 *Sabu Mathew George v. UOI*, 2017 (1) RC R (Civil) 175.

36 *M/S Shree Krishna International Film Productions v. Google India and YouTube LLC,* CR No.2198 of 2016.

without authorization, the defendants on the contrary argued that they were intermediary and had no knowledge of the infringing content, as they cannot plausibly evaluate each user generated or user uploaded content. The court ruled that defendants should have taken down the content after getting a notice for the same from the plaintiff as per the Intermediary Rules, 2011, the defence that proper notice procedure under the Rules have been catered to is invalid as the burden was on defendant to locate the URL even if the same was not mentioned in the notice. The decision has been appealed in Punjab and Haryana HC and has been admitted by the Bench, the grounds being- Status of You Tube as intermediary under the Act, no notice in furtherance of Article 51(a)(ii) prior to filing infringement case, no URL mentioned in the notice, 15 of the 18 works were assigned to Shemaroo which was not party to the suit.[37]

Also in case of Fermat Education v. Sorting Hat Technologies P. Ltd[38], the court observed that the defendant, Unacademy (managed by Sorting Hat Technologies) had about 200 questions and answers of the plaintiff (2IIM-CAT course), copied in literary and video form, the issue was whether Unacademy was an intermediary and can claim safe harbour and if not, whether the same was fair use under Sec. 52(1)(i) of the Copyright Act. The court held that Unacademy was not an intermediary as the Terms and Conditions stated that user content could be created by Unacademy itself, publication can only occur only after being approved by Unacademy and they have editorial control over the content being uploaded, hence Unacademy was not qualified as an intermediary. Also, when the defendants claimed fair use, which is an exception to infringement, the court held that Unacademy was paying consideration to educators for furnishing content hence, it was a business venture and the same will not come under fair use exception.[39]

In the case of *Amway India Enterprises Pvt Ltd v. 1Mg Technologies Pvt Ltd & Anr*.[40], the court observed that most of the e-commerce platforms are actively involved and thus cannot come under the safe harbour provision of Section 79 given to intermediaries. It was held that the e-commerce platforms will be liable for fine if they fail to comply with the statutory requirement given in the Intermediary Guidelines.

Analysing the Judicially *Cold-Shouldered* Aspects of Intermediary Liability

Intermediaries play a significant role in case the data uploaded is an infringing content, however their liability has to be matched with the interests of third party provider of information, who significantly has no role to play as per the Act and Intermediary Guidelines, hence a balance between freedom of speech and intermediary liability (following the chilling effect after the take down approach) needs to be achieved. A lot of intermediaries lack the ability to determine legality of expression, the qualifications and objective due diligence requirements have not been mentioned under the rules, third party provider of information is not informed about the take down, no mechanism for put back, no reasonable rejection by intermediaries is accepted, no transparency in take down procedure, procedural lacuna exists as there are no CPC or CrPC provisions with respect to it.[41] Also, one of the criteria to affix responsibility should be the nature of interaction an intermediary has with the target audience, here we can say the level of interactivity be categorised as- active, passive or intermediate and then, it will be even easier to compute damages.

Conclusion and Suggestions

Intermediary liability regimes have undergone tremendous change as now the liability depends upon the role intermediary plays in dissemination of infringing content. However, the Copyright Act should always follow an inhibitory approach rather than a notice and take down approach where the damage is remedied long after it has materialized and when the copyright holder gets apprised of the fact of such infringement. The diligence system should be clearer on the type of content that is infringing and what action an intermediary should take and the degree to which such action may be taken as intermediaries cannot always act as censorship boards inhibiting freedom of speech which is a Fundamental Right. At times, these intermediaries do over comply and take down content even if it does not result in copyright infringement in order to avoid the consequences as per the research done by Centre for internet and Society, Bangalore.[42] However, more clarity on working of these intermediaries is required and the blocking orders by governmental agencies should also take into consideration the aftermath of these intermediaries. Wilful blindness to infringing content can always lead to following an approach which will diminish the possibility of inhibitory approach.

41 Rishabh Dara, *Intermediary Liability in India: Chilling Effects on Free Expression on the Internet, 2011*, Centre for Internet and Society (2011), https://cis-india.org/internet-governance/intermediary-liability-in-india.pdf.

42 *Supra* note 30.

Automated mechanisms have also proved to be ineffective in determining copyright infringement as they rely on matching technologies in order to detect such infringements and have been criticized by rights holders and fair use advocates. Hence, a clear approach in defining the law clearly and then focusing towards its implementation can to some extent balance the intermediary liability regimes with freedom of speech and expression. The Draft amendment rules, 2018 are somewhere vague in nature. However, the State has tried to take a liberal approach to solve the earlier problems raised by the earlier rules.

A few suggestions to ascertain intermediary liabilities are as follows:

- **Harmonisation of conflicting laws**- The conflict between the safe harbour provisions under the Act and IPR laws in India need to be in harmony. The legislators and the judges should have a balanced view towards ascertaining intermediary liability.
- **Restricting the safe harbour window**- The legislation should mention the specific acts of intermediary that would lead to disqualification of an ISP from escaping liability under Sec. 79 of the Act in copyright infringement cases.
- **IT professionals as *amicus curiae* for determination of intermediary liability** - It would be more objective in ascertaining the Intermediary's liability by having an opinion of a reasonable IT professional working in some other intermediary having similar target audience other the intermediary in question. Such IT professionals can act as *amicus curie* in adjudging the liability as InternetLab had presented an amicus curiae brief where Facebook was alleged liable due to a fake profile generated on the platform of the plaintiff.[43] When third party information provider is willing to fortify, no real knowledge is ascribed to the intermediary, and if not, the intermediary is liable to actual knowledge.

With such balanced view, India can successfully assimilate the Intermediary liability regimes in cases of copyright infringement keeping in view rampant dissemination of content in this digital world.

SQUINTING AT THE NARCO-ANALYSIS AND THE BRAIN MAPPING TESTS THROUGH 'FLUID' CONSENT

Kanak Mishra*

Abstract

In today's scenario where science has reached its zenith, the law of the land does not wish to lag behind by keeping technology distant from the legal domain. Criminal investigation in India has time and again considered the admissibility of some of the most exceptional and technologically advanced forms of gathering evidence through the Narco-analysis test and brain mapping test. Both these tests involve cognitive sub-systems that play a significant role in determining the criminal intent of an individual. The study of the formation of criminal intent by the theory of culpability, however, is quite an abstract process. So, if it is feasible to read a person's mind through science and technology to gather all such information, without any overt efforts, then why not use this instead? The reasons attributed to the denial of the evidence obtained through these tests and arguments in favor of their admissibility are many. Therefore, the purpose of this scientific – legal paper shall be to deal with the intricacies of both these tests through the lens of 'fluid consent.'

INTRODUCTION

Science and technology have become the driving forces of the current epoch. Scientific advancement has also seeped into law, which is known to adapt to the changing social order. With the increase in population, the rate of crime is also consequently increasing, thereby multiplying the burden on law enforcement and courts. With a sudden surge in the crime rate over the years, the change in the types of crimes and criminal mindset can also be attributed to technology to an extent. However, the role of technology in determining criminal intent or human behavior is still deliberated with a pinch of salt. Scientific tests like Narcoanalysis and Brain Mapping, are increasingly being brought up time and again as a viable source of evidence in the name of the evolution of law and the changing societal

* Student, Jindal Global Law School, Sonepat.

order. These tests have time and again been brought under judicial scrutiny for being violative of fundamental freedoms enshrined in the constitution. The efficiency of drug-induced tests, along with its potential health effects, privacy violation issues, as well as torturous techniques, are also deemed to be a threat.

This paper aims to further the understanding of scientifically induced tests and the scope of its use and misuse. A rigorous effort has been made to interpret various landmark precedents of National and International value to analyze the constitutional and evidentiary value of these tests in the light of Articles 20(3) and 21 of the Constitution as well as Sections 27 and Section 29 of Indian Evidence Act, 1872.

Narco-Analysis Test

Narco analysis test is a type of deception detection test which is conducted by infusing the truth serum into the subject's body, causing a state of "hypnotic trance," and thereby "monitoring the blood pressure and heart rate continuously."[1] The word narco is derived from the Greek word 'narkc,' which means "anesthesia" or "torpor". Narco-analysis is the inducement of deep-sleep or the state of 'hypnosis' through injections of drugs on the patients.[2] The primary drug used in this test is Sodium Pentothal or Sodium Amytal (also known as the "truth serum"), which is heavily criticized for being hazardous and lethal.[3] The technique in which these drugs are administered, and the subject's consciousness is monitored continuously.[4] In this test, the subject goes through four stages out of which the second stage, i.e., the 'hypermnesia' stage that occurs after the first stage of 'hypnosis' is the most relevant one wherein it is believed that the subject becomes incapable of "suppressing the memories associated with the relevant facts." The inducement of this stage evokes a "re-integration of the disassociated personality" while the patient is in a dream-like state of mind. It is medically proven that the drugs given decrease the extent of anxiety and fear, which results in reduced pressure on the subject's 'ego'.[5] This makes

it easier for the subject to 'relive' that particular crime scene or traumatic situation. And it is only after this stage that a series of explanations, persuasions, and other forms of psychoanalysis procedures are performed that can stimulate the flow of associations in the brain of the subject to obtain oral responses.[6] The process of conducting a Narco-analysis test resembles that of psychotherapy. It is conducted under the supervision of registered medical practitioners "consisting of a physician, an anesthetist, and a clinical psychologist or a psychiatrist."[7] The responses of the subject and video-recorded and sent along with a brief report to the concerned authorities for the formal process of collection of evidence.

Brain Mapping Test

This test is also famously known as the P300 Waves test. Its close variants are the lie detector test, also known as the Polygraph test. Brain-mapping, on the other hand, evaluates the physical fluctuations in the brain of the subject to detect the possibility of a potential lie. This test does not require the subject in an unconscious state and nor does it necessarily require the presence of medical professionals. Unlike narco-analysis, no verbal exchanges between the subject and the interrogator take place during the tests.[8] Such tests work on the principle of 'target stimuli,' wherein upon certain audio-visual display, the neurons of the subject get triggered, and this produces a 'different' response from what a reasonable person in an ordinary course of nature would produce. A guilty person would thus pay more attention to the critical stimuli rather than the control stimuli, and this behavior would help in the detection or evaluation of lie by the experts.[9] The critical stimuli being the 'target word,' that gets invoked by the brain upon a visual or verbal representation of the crime, whereas the control stimuli being the neutral words for the purpose of psychotherapy.

Despite many successful criminal guilt determinations, the polygraph or P300 Waves tests have been under constant doubt for the way an accused can prep themselves before partaking the test. Considering the logic of determining guilt through the polygraph test is the amount

9 William M. Waid & Martin T. Orne, *The Physiological Detection of Deception: The accuracy of polygraph testing can be affected by such variables as attentiveness, drugs, personality, and the interaction between examiner and subject*, 70 American Scientist 402 (1982), (Jun. 19, 2020, 03:00 PM), https://www.jstor.org/stable/27851548.

of attention a subject pays to the critical stimuli, it seems easy to tailor the test to be less detectable, be it by consuming drugs or any other form of medication. Constructing various scenarios to cover up the actual situation, preparing answers to the questions that are most likely to be asked, tackling body movements, gestures and expressions accordingly, all way in advance, are some other ways in which a P300 Wave test or a lie-detector test may lose its value as a legitimate form of evidence.[10] A Polygraph and Lie-Detection report[11] which came up as an opposition to employee screening in the U.S. completely debunks the accuracy of such tests and points out that "the physiological responses measured by the polygraph are not uniquely related to deception," i.e., some other responses also accompany the same which are consciously made by the subjects. An example of such a response could be that of fear, which might arise out of the related questions asked by the interrogator. Also, it is not just the mere process or technique of the tests which should be under consideration. Still, even the slightest chance of error while and after the performing of the transaction of the polygraph test too should be given relevance. In a U.S. case of Daubert v. Merrell Dow Pharmaceuticals Inc.[12], it was noted that even though the attribution of accuracy can be given to the brain-mapping tests for sixty to seventy percent, yet, there remains a substantial amount of accuracy which might get hindered due to the type of environment under the test, the qualifications of the examiner and involvement of a subject with the crime.

Thus, on the face of it, both the tests, be it the Narco-analysis test, or the Brain mapping test, seem problematic enough to be taken as a primary piece of evidence. However, the following section shall hopefully be able to determine if these tests can be taken up as a piece of secondary or corroborative evidence. The upcoming section deals with some of the most prominent arguments proposed by various jurists and scholars trying to locate the specificity of scientific tests. The next section shall be an attempt to introduce a detailed understanding and analysis of the arguments pinned in the previous section.

The Argument Proposed on the Violation of Article 20(3) - The Right against Self-Incrimination

The primary issue with the narco test is a constitutional one, which is that the involuntary administration of the truth serum, leading to testifying against oneself in a hypnotic state, is violative of the right against self-incrimination. Article 20(3) of the Constitution of India

10 *Id.*

11 "*The Polygraph and Lie-Detection: Committee to Review the scientific evidence on the Polygraph*", WASHINGTON D.C.: NATIONAL ACADEMIES PRESS 2003, 212-213.

12 *Daubert v. Merrell Dow Pharmaceuticals Inc.*, 509 US 579 (1993).

holds the right against self-incrimination to be a fundamental right. This right ensures that any accused should not be made to make any statement against their will. Hence, it is pertinent to evaluate how the concept of 'will or consent' comes into play under the Narco-analysis test.

The landmark Indian judgement of Selvi v. State of Karnataka[13] provides a detailed analysis against the use of the narco-analysis test. Still, unfortunately, while explaining the rule against self-incrimination, the court draws out comparisons with foreign[14] and Indian[15] judgements which deal with confessions and admissions to the police only. The court, despite discussing the difference between the words voluntary and compelled, missed considering the disputed territory of how 'consent' works under the Narco Analysis Test.

The jurisprudence on the matter of the validity or admissibility of the Narco-Analysis Test in India has been severely restricted only to the admissions and confessions to the police. The cases cited above acknowledged that while undergoing the Narco Analysis procedure, the subject is compelled to make an involuntary admission under the influence of heavy drugs (while the subject is in a hypnotized state) that severely block the brain's ability to engage in the standard cognitive process but failed to acknowledge the concept of fluid consent.

Selvi[16] case had its flaws, but it was also an incredibly transformative judgement because of the way it dealt with the idea of the 'state.' It shows the gradual shift of the Supreme Court from viewing any case at hand only through the lens of crime control, to now liberally understanding the domain of criminal psychology alongside valuing the due process of law.[17] Thus, by collating the two ideas of crime and the right to life of an accused, the judgement indeed laid down an improved framework of the modern criminal investigation. While the case, firmly established that determining the guilt of the accused solely based on either the Narco Analysis Test or brain mapping test would be violative of the right to self-incrimination under Article 20(3) of the Constitution, it also grappled with the issue of violation of Article 21, i.e., the Right to Life and personal liberty of the individual. The right to life angle of the case, discussed in detail the scope of the word 'compelled' in Article 20(3). The reasoning in the case describes that when an accused is either coerced or

13 *Selvi and Ors. v. State of Karnataka*, (2010) 7 SCC 263 (India).

14 *Brown v. Walker*, 161 US 591 (1896).

15 *Nandini Satpathy v. P.L. Dani*, 0139 MANU SC 1978 (India).

16 *Selvi v. State of Karnataka, supra* note 14.

17 Gautam Bhatia, *Privacy and the Criminal Process: Selvi v State of Karnataka* (2018),(Jun. 18, 2020, 2:00 PM), https://papers.ssrn.com/abstract=3166849.

is made to confess against himself, then it would amount to being compelled. Such coercion would be the exact opposite of the word 'voluntary' and, thus, would be a violation of the right against self-incrimination. This reasoning of the court sufficiently addresses the inherent opposition between the terms - coercion and voluntariness, but it fails to engage in the scientific conundrum about the concept of consent revocation while a person is undergoing any drug-induced test.

In the famous Canadian case of Horvath v. R,[18] it was held that statements extracted through narco tests would be inadmissible as evidence because a person cannot be said to have made a statement of his own will when hypnotized. This case, unlike the Selvi[19] case, recognizes that although before the commencement of the test, the subjects are made to sign certain documents affirming their consent for the test, how does one evaluate if the consent seizes to exist in due course of the test? How does the law then grapple with this scientific mystery of consent when a person is heavily drugged? Does it distinguish between conscious consent against subconscious admissions that may not have been made if conscious?

The Argument Proposed Under Article 21- The Right to Life

Both these scientific tests violate Article 21, i.e., "Protection of life and personal liberty" on two grounds. Firstly, conducting such tests without the permission of the court would be violative the procedure established under law.it is because, the ambit of Article 21, i.e. Right to life, includes the "substantive due process of law".[20] Secondly, in Maneka Gandhi v. Union of India[21], Subba Rao, J. opined that an essential element of personal liberty is 'privacy'. Hence it is not just the liberty of an individual that is infringed but also their privacy when they are forced to undergo such tests without their consent.

Arguments Proposed for the Inclusion of Narco-Analysis Test Results as Evidence

Furnishing the test results derived by Narco analysis and brain mapping tests as corroborative evidence is premised on the idea of a valid 'consent.' The first argument given by scholars is generally that when a subject is made to undergo scientific tests, no compelled testimony seems to be extracted, which the Nandini Satpathy v. P.L. Dani[22] case describes in detail.

18 *Horvath v. R*, 385 C.C.C. 44 (1979).

19 *Selvi v. State of Karnataka, supra* note 14.

20 *Id.*

21 *Maneka Gandhi v. Union of India*, 0133 MANU (SC 1978) (India).

22 *Nandini Satpathy v. P.L. Dani,* 0139 MANU (SC 1978) (India).

As at the beginning of the test, the subject consents out of their own free will, to get exposed to the conditions mentioned above, the argument of compelled testimony cannot be raised. This argument was rejected by the court in Selvi[23] by reasoning that a compelled testimony is the one which is extracted not just by exercising physical threats or violence per se but also by intimidation methods, tiring interrogative process, psychic torture, environmental coercion, etc.

Scholars' second argument is that, even during the various stages of the test, no force is applied onto the subject, and it is only the drugs that are infused to merely block a certain thought process of the brain, in which case no scope of a hindrance with the personal knowledge of the subject remains. This argument was clarified by the court in the case of State of Bombay v. Kathi Kalu Oghad[24] wherein the court differentiated between "to be a witness" and to "appear as a witness." Thus, the 'Personal knowledge' that can be attributed to a person by 'being a witness' either orally or in writing is the same when extracted from a subject in a hypnotic trance under narco test and brain mapping tests. And would, therefore, amount to a compelled testimony.

Fluid Consent

With respect to both the arguments stated above, it can be said that the idea of consent in the case of scientific tests such as these becomes hugely debatable. While the subject may give their consent at the beginning of the procedure, the point at which their consent would seize during the test is not taken into consideration. This amounts to a flawed understanding of how consent works, and a subsequent continuation of the test would then be tantamount to a clear violation of privacy. Both the arguments as proposed by given by multiple scholars and jurists time and again do not take the 'fluidity of consent' into consideration. Their understanding of consent is limited to a static concept, that is incapable of changing once given. This is extremely problematic and deserves more attention. Thus, an understanding of consent as a fluid consent would help such scientific tests gain a heightened degree of certainty.

23 *Selvi v. State of Karnataka, supra* note 14.

24 *State of Bombay v. Kathi Kalu Oghad,* 0134 MANU 43-44 (SC 1961) (India).

The Argument Proposed for Section 27 of the Indian Evidence Act, 1872[25]

Also, no rational nexus can be attributed to the argument of constructive custody during the Narco test, wherein the team comprises of "one anesthetist, one physician, and one clinical/ forensic psychologist."[26] The concept of custody under Section 27 of the Indian Evidence Act, 1872 includes Constructive custody[27] , too, in which the accused is not physically present in the court. Still, his freedom is monitored by the legal authority in some way or the other outside the court.

Extraction of any admission through scientific tests in the presence of the above-stated team members can be attributed as a 'legal authority outside the court' because the ultimate aim of the medical professionals conducting the scientific tests on the subject would be to extract the admission or involvement in any crime. This would amount to constructive custody under Section 27 of the Indian Evidence Act, 1872, and would also be violative of Article 20(3) of the constitution and hence should be admissible as evidence.

The Argument Proposed for Section 29 of the Indian Evidence Act, 1872[28]

It is also argued by some that the hypnotic state of the subject can be compared to that of a drunk person. And in such a situation, Section 29 of the Indian Evidence Act, 1872 comes to the rescue, which states that merely "because a person is drunk and is made to answer questions which he need not have answered", then such evidence cannot be dismissed as

25 Section 27 in The Indian Evidence Act, 1872 (India). How much of information received from accused may be proved.—Provided that, when any fact is deposed to as discovered in consequence of information received from a person accused of any offence, in the custody of a police officer, so much of such information, whether it amounts to a confession or not, as relates distinctly to the fact thereby discovered, may be proved.

26 Mohan, *supra* note 4.

27 *Aghnoo Nagesia v. State of Bihar,* AIR 119 (1966) (India).

28 Section 29 in The Indian Evidence Act, 1872 (India). Confession otherwise relevant not to become irrelevant because of promise of secrecy, etc.—If such a confession is otherwise relevant, it does not become irrelevant merely because it was made under a promise of secrecy, or in consequence of a deception practised on the accused person for the purpose of obtaining it, or when he was drunk, or because it was made in answer to questions which he need not have answered, whatever may have been the form of those questions, or because he was not warned that he was not bound to make such confession, and that evidence of it might be given against him.or when he was drunk, or because it was made in answer to questions which he need not have answered, whatever may have been the form of those questions, or because he was not warned that he was not bound to make such confession, and that evidence of it might be given against him., , https://indiankanoon.org/doc/962897/ (last visited Jun 19, 2020

being irrelevant altogether. The underlying argument being that in the hypnotic stage of the Narco-analysis test, the state of the subject resembles the inebriated state. Hence, such evidence cannot be considered as inadmissible on the lines of Section 29.

This analogy is seriously flawed as it equates drunkenness with the hypnotic state of a subject while undergoing a scientific test. The difference between the two lies in the fact that while the former would amount to 'extorting communication,' the latter would constitute 'using the body for extracting evidence.'[29] This difference was laid down in two U.S. cases of *Armando Schmerber v. California*[30] and *United States v. Holt*.[31]

Conclusion

The formulation of these tests was done by the scientists to make efficient the process of a criminal investigation by providing the most relevant-direct evidence. So, no malafide intention can be attributed to the interrogators, to be able to reject the admissibility of the test. The types of drugs administered in the process and the authenticity and accuracy of such a test are the two aspects that are the most contested in the case of scientifically obtained evidence. It is not an unfamiliar fact that the drugs administered for the tests, do cause pain. These drugs are also harmful as they restrict a person's ability to suppress their memories and hence, would amount to torture (as and when India ratifies UNCAT) in violation of Article 1 of the U.N. Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment (UNCAT) if done without the consent of the subject.[32] Conducting the test in the absence of the subject's consent would amount to a violation of Article 21 and 20(3) of the Constitution of India. Additionally, it is also pertinent to note that irrespective of the subject's consent at the beginning of the test, the consent can be revoked at any point during the test, and this prima facie makes the scientific tests violative of privacy. The arguments advanced in favor of scientific tests based on Sections 27 and 29 of the Indian Evidence Act of 1872 cannot be sustained because of the concept of constructive custody and the difference between the state of drunkenness and hypnosis, respectively.

31 *United States v. Holt,* 218 245 (1910).

32 Narco-Analysis and the Indian Criminal Justice System: | Economic and Political Weekly, (Jun. 19,2020, 07:00PM), https://www.epw.in/journal/2008/36/commentary/narco-analysis-and-indian-criminal-justice-system.html.

The drugs administered during Narco-analysis and other like scientific tests work on the highest cognitive level of the brain. If the doses are given in the wrong proportion, then the tests could turn out to be lethal. Additionally, some or the other uncertainties always loom such technological procedures. Hence, it is pertinent to allow the Narco-analysis test and the brain mapping test only with a pinch of salt. Both these tests can be used cautiously, as a last resort, in determining guilt only as corroborative evidence and not as a primary piece of evidence.[33] Corroborative evidence derived through either the Narco-analysis test or brain-mapping test would indeed prove out to be very useful in the cases wherein the accused wants to plead innocence, especially in the cases of high-profile criminal investigations and terrorism-related matters.[34] It is essential to realize that while the results of such tests are admissible as corroborative evidence in the court, it is not the most sound form of evidence. Law enforcement authorities should be extremely cautious in running after these tests for extracting evidence. This is because such tests are still novel in a developing country like India. Hence, only those cases that are at the forefront of media coverage get to see the application of Narco-analysis or brain-mapping tests. It takes a reasonable person to determine the hue and cry created by the media in prominent cases. The Arushi murder case was an apt example of the extent to which media trials can affect the verdict of a case.[35]

Law, as we know, is not limited to the legislation itself, it is a 'living process,' which evolves. Hence, it is imperative to imbibe all sorts of technological advancements into the law, as long as fundamental principles of law, or the rights of individuals are not sacrificed. But considering the ways in which these tests undermine the concept of fluid consent, its application with or without consent of the subject should be resisted. A viable option would be to encourage the use of these tests only after exploring the alternatives that value the subject's static as well as fluid consent. So, by the end of this paper, I believe that I have addressed some pertinent concerns regarding the two scientific tests, namely, the narco-analysis test and the brain mapping test, which would hopefully be used and not misused in the future.

Changing Dimensions of Fantasy Games in India and its Legality

Akshit Bhardwaj*

Abstract

Technological advancements have paved way for a digitalized community across the world providing minute-to-minute access to different sports games played across diverse regions. With grand winnings that are just a click away requiring the right combination of skills and arrangement of real players, the young managers are virtually managing their own dream team after meticulously examining their career statistics. This has resulted in wide viewership and has provided significant access to e-games including fantasy sports in India. However, the existence of fantasy sports is yet again under scrutiny even when the judicial pronouncements have been in their favour in the past. With no specific laws and guidelines, the users and companies are still waiting for the government to strike a balance between gaming laws and their application on fantasy games.

This article analyses the statutory position of skill- based fantasy games in India while examining the recent judicial trends. It further identifies the challenges that are experienced by the online gaming industry that can potentially damage the growth of fantasy games. Lastly, the article proposes suitable measures to safeguard the interest of all stakeholders.

Keywords- The Sports (Online Gaming And Prevention Of Fraud) Bill 2018, Fantasy Sports Games, Dominant Factor Test, Challenges, Self- Regulation

Introduction

The evolution of fantasy sports games can be traced back to the United States, wherein offline records of fantasy sports players exist since 1960.[1] These records constitute data of sports

* Student, Amity Law School, Delhi.

1 Eddie Brown, *The history of fantasy football*, The San Diego Union-Tribune (Aug. 09, 2020, 10:00

like football etc. and provide details of their account holders.[2] Due to the rise in domestic leagues and commercialized international events, fantasy sports games are becoming a part of this culture. Significantly, a recent study of the Broadcast Audience Research Council (BARC) establishes that the game of cricket draws 93% of sports viewership in India.[3] It further reveals that other sports like kabaddi, wrestling, and football are also gaining popularity due to the advent of homegrown leagues and mass commercialization.[4] The growth of young athletes and the interest of youth in sports has contributed significantly to the viewership of sporting events leading to more revenue for broadcasters and streaming industry.[5] This has eventually contributed to the growth of fantasy sports games in India, making it a $150 Billion market due to the formation of multiple competitive platforms.[6]

According to a report prepared by the *Pennsylvania Gaming Control Board*, the characteristics of fantasy sports can be defined as:

"a fantasy or simulation sports game or contest involving athletic events in which a participant owns or manages an imaginary team and competes against other participants or a target score for a predetermined prize determined by statistics generated based on performance by individual athletes participating in actual professional athletic events, provided the outcome shall not be based solely on the performance on an individual athlete, or on the score, point spread, and any performance of any single real team or combination of teams."[7] In simpler terms, fantasy sports enable individuals to act as managers or team coaches while creating their own team involving real-world professional players participating in a particular contest. However, due to its dynamic nature fantasy sports cannot be restricted to a particular definition.

These sporting platforms/companies work on the notion of providing an array of contests to the public, ranging from paid leagues to free entries. The users accessing these services get an opportunity to test their sporting expertise by picking teams from a real-world player pool for the upcoming matches. Such drafts are drawn up using virtual credits provided for each game by the host. Weighted credit scores are given to players based on their recent form. For example, if there are 100 credits available, users must pick 11 players within the allotted budget. Moreover, marquee players hold the highest credit against their names. The participants are ranked based on the points earned by their selected players during the contest according to their on-field performance and scoring metrics for the relevant match. Companies have created their marking system for the activities carried out by the athletes during a contest.

Regulatory Framework Governing Skill Games in India

Participation and engagement in sports is an extensively practiced, recreational, and social activity that offers opportunities for customer engagement, brand advertisement and promotion, and involvement of fans.[8] Significantly, to regulate those offering complex competitive formats such as board games or fantasy sports, Indian laws distinguish between game involving 'skill' and game involving 'chance', and specify a strict prohibition on participation and the offering of 'chance' games for consideration, while at the same time taking a more favorable position with 'skill' games.[9] A historic characteristic of Indian law has been the distinguished treatment granted to games of skill and games of chance, with the former allowed and the latter prohibited.[10] The above differentiation appears to originate from India's traditional gambling treatment, where while it features throughout the millennia in Indian culture and history, it is associated with negative connotations and societal stigma.[11]

Public Gambling Act, 1867 and Prize Competitions Act, 1955

India's gaming framework at the national level is regulated by the Public Gambling Act, 1867, and the Prize Competitions Act, 1955. The Public Gambling Act, 1867[12] (hereinafter "PGA") criminalizes and prohibits the activity of gambling in the public forum and the keeping of a '*Common Gaming House*' in India. According to *Black Law Dictionary*,

8 *Games of Skill in India: A Proposal For Reform*, The Sports Law & Policy Centre, (Aug. 09, 2020, 10:00 AM), https://drive.google.com/file/d/0B6LE5s8UEIKGZXNKNGRnQk94ZEE/view.

9 *Ibid.*

10 *Ibid.*

11 *Ibid.*

12 The Public Gambling Act, 1867, No. 03, Acts of Parliament, 1867 (India).

Gambling refers to "*the act of risking something of value for a chance to win a prize.*"[13] Gambling is not defined in the PGA, however, the Act has incorporated the definition of '*Common Gaming House*' referring it as *"any house, walled enclosure, room or place in which cards, dice, tables or other instruments of gaming are kept or used for the profit or gain of the person owning, occupying, using or keeping such house, enclosure, room or place, whether by way of charge for the use of the instruments of gaming, or of the house, enclosure, room or place, or otherwise howsoever."*[14] It can be concluded that an act to qualify as gambling essentially requires chance, consideration, and a prize. Furthermore, it is safe to assume that web-servers that facilitate online gaming houses fall within the ambit of PGA.[15]

Moreover, the Act exonerates the liability of any game involving mere skills, thereby excluding the '*game of skills*' from any liability.[16] Games based entirely on participant's skills and knowledge and involve a factor of little or no luck would not, therefore, be considered illegal because such legislation or law imposes no penalty on games comprising of skills. Although, PGA does not define the ambit of the game of skills or any other factor to interpret the term '*mere skill*'. However, in the case of *State of Bombay v. R.M.D. Chamarbaugwala*[17], the court interpreted a game of "*mere skill*" as the game which primarily includes skills and enunciated that it will be only applicable to games that are preponderantly of skill, and in-spite of a certain degree of chance the game preponderantly remain a game of skill.

The Prize Competitions Act, 1955[18] (hereinafter "PCA") further sets out regulatory guidelines for the rewards and operation of prize competitions across the country. Under PCA, a prize competition can be defined as any competition providing a prize for the answer/ solution that is achieved through arranging or setting up pictures, puzzles, numbers, etc. It governs the restrictions and application on the conduct and hosting of a prize competition or a game. The Supreme Court while determining the background and intent of the legislature behind PCA's enactment enunciated that games that are predominantly based on skill are excluded from the regulatory framework and liability terms of the PCA.[19]

19 *Supra* note 17.

Furthermore, according to the Seventh Schedule of the Indian Constitution (List II, Entries 34 and 62), the state governments have been vested with the power to make betting and gambling legislation for their respective territory. Hence, where there is a state gambling legislation state, it prevails over the PGA. Consequently, many states in India in addition to the PGA have introduced legislation regulating gambling and gaming within their jurisdictions. These state regulations are essentially in accordance with the PGA, and also exempt games that involve skills as a predominant factor.

Conundrum between Game of Skills and Game of Chance

Dominant Factor Test

To adjudge a game as of a skill or chance it is important to take into consideration the facts and circumstances as the deciding factor of each case.[20] To determine the true character of a game, U.S courts have established a "Dominant Factor Test". Significantly, this test acknowledges that most of the games include some form of chance and thus focuses upon deciding whether luck or the skill involved is the most important factor in choosing the winner in those situations where predominantly skills are required.[21] In the case *Bayer v. Johnson*[22] Appeals Court of South Dakota (U.S.) held that: *"The test of the character of the game is not whether it contains an element of chance or an element of skill, but which of these is the dominating element that determines the result of the game."* Perhaps, the test elucidates that the mere influence of chance alone does not affect the nature of the game. Rather, it entails that the element of chance must achieve a certain degree of significance before it makes a game illegal.

Despite the evolution of this test, issues have persisted regarding its application. Initially, U.S courts failed to interpret whether the application of the test is in quantitative terms or in qualitative terms. Consequently, the Supreme Court of Washington explained that: *"The measure is a qualitative one; that is, the chance must be an integral part which influences the result. The measure is not the quantitative proportion of skill and chance in viewing the scheme as a whole."*[23] Thus, it can be safely concluded that the "Dominant Factor Test" is qualitative and not quantitative.

Indian Position & Dominant Factor Test

Courts in India have adopted a similar approach as laid down by the U.S. precedents. The test of predominant nature has been applied to identify the true character of the game.

Game of Rummy

In the landmark case of *State of Andhra Pradesh v. K. Satyanarayana*[24] (hereinafter "Satyanarayana Case"), the court held that even though there is a slight risk involved in the game of Rummy, it is a game of skill as it is predominantly based on the skill of the player playing the game. The court further held that: *"The "three card" game which goes under different names such as "flush", "brag" etc., is a game of pure chance. Rummy, on the other hand requires a certain amount of skill because the fall of the cards has to be memorised and the building up of Rummy requires considerable skill in holding and discarding cards. We, cannot, therefore, say that the game of Rummy is a game of entire chance. It is mainly and preponderantly a game of skill."*

Interestingly, the court in the above case adopted a two-step test to identify the nature of the activity. These steps involved: firstly, to identify whether the game in question is mainly and preponderantly a skill game, and secondly, whether the organization involved in the operation of these games is making any gain or profit from such activity except for the service fee charged for operations of the game. For the Game of Rummy, the court opined that it majorly requires skills to learn and understand the fall of the cards and needs considerable skills to finish the game and win. The logic behind identifying the true nature of a game has been applied by the legislation and the courts, however, the additional step pertaining to the determination of profit and gain that has been received by the organizer stands a point of issue. This is because if a game is a game of skill then the gambling laws and other allied provisions must not be applied under any given circumstances. This further creates a tussle between the fundamental rights of a person to carry out free trade and business guaranteed under Article 19 of the Constitution and the gambling statutes. It further jeopardizes business models with irrelevant and illogical differentiation.[25] Nevertheless, the *Satyanarayana Case* has laid down the foundation of clearing the confusion pertaining to skill games and chance games by applying the dominant factor test.

Horse Racing

Horse racing has been a part of the rich heritage and traditions and has served as a stage to display strength and valour. While dealing with aspect of wagering in it, the issue before

24 A.I.R. 1968 S.C. 825.

25 *Supra* note 8.

the Supreme Court was whether wagering on horse races constitute a game of skill or chance. In *K.R. Lakshmanan v. State of Tamil Nadu*[26] (hereinafter "*Lakshmanan Case*"), the Supreme Court held that: "*Horse-racing is a sport which primarily depends on the special ability acquired by training. It is the speed and stamina of the horse, acquired by training, which matters. Jockeys are experts in the art of riding. Between two equally fast horses, a better trained jockey can touch the winning-post. 'Gaming' in the two Acts would, therefore, mean wagering or betting on games of chance. It would not include games of skill like horse-racing. We, therefore, hold that wagering or betting on horse-racing - a game of skill does not come within the definition of 'Gaming' under the two Acts.*"

The court by this ruling allowed wagering on horse racing and declared it as a lawful activity that is outside the scope of PGA and PCA. The court formed such a basis due to the availability of numerous publication and information that assists the participant to learn about the maintenance of horses and the nuances of racing. Furthermore, with the application of such knowledge and the right information about the past performances of the horse and the racer, a high degree of skills get involve to determine the outcome of the race. The court also reiterated the principle of the dominance of skills as laid down in the *Satyanarayana Case* while ruling out the aspect of high degree of chance.

The landmark ruling in the *Lakshamanan Case* has special significance as it was the first time that a game directly related to field sports was declared legal in terms of betting. *Lakshmanan Case* and the *Satyanarayan Case* paved way for the fantasy games companies and sports enthusiasts to combine their skills online. The observation of the courts in these two cases rightly supports the legality of the skill based fantasy games as there are major skills involved in choosing the winning team and the right combination.

The Curious Case of Poker

The legality of poker games is surrounded by uncertainties and societal stigmas. Lack of clear and comprehensive legislation clarifying its status and legality has resulted in uncertainty regarding its operation in India. The Supreme Court had earlier propounded that there was no scope for the use of one's skill to reach the desired result in games such as poker, double up, blackjack and Pacman because electronic setups relied upon to play these games might be manipulated and therefore the chances of winning are no more in control of the player who is using his skills.[27]

26 (1996) 2 S.C.C. 226.

27 *M. J. Sivani v. State of Karnataka,* A.I.R. 1995 S.C. 1770.

However, the efforts of the Indian Poker Association (IPA) to legalize poker games have resulted in two favorable judgments from the Karnataka High Court and the Calcutta High Court based on their State legislation on Gambling. Although, these two decisions did not delve into the legality of poker altogether, resulting to be limited in nature. The Karnataka High Court in *Indian Poker Association v. State of Karnataka*[28] held that poker, if played like a game of skill, does not require a license and is legal when played in such a manner. However, the court did not test its legality by determining its nature and is therefore considered as a narrow interpretation. In *Indian Poker Association v. State of West Bengal*[29], the court by prima facie considering the game of poker outside the purview of West Bengal Gambling and Prize Competitions Act, 1957 considered it to be legal. Both these judgments have not relied on the "Dominant Factor Test" to identify the true characteristics of the game of poker.

However, the Gujarat High Court after perusing the rules of the game held that *'Texas Hold Em Poker'* was a game of chance and thus prohibited under Gujarat Prevention of Gambling Act, 1997.[30] The court relied upon the observations made in *Satyanarayan Case,* wherein the Supreme Court considered the '*3 Card Game'* like a game of pure chance and therefore declared it illegal. Furthermore, in *M/s Gaussian Networks Pvt. Ltd. v. Monica Lakhanpal and State of NCT*[31], the District Court (New Delhi) distinguished between games played in a physical space and those played on an online platform, and opined that playing 'games of skill' for money is lawful only when played in the physical form. Additionally, the court observed that when games are played on an online forum, various factors are involved that influence the degree of chance, and the predominance of skill over chance becomes uncertain, as other elements like arbitrariness, cheating, and collusion take over. Although, due to withdrawal of the original petition the observation of the court was subsequently set aside.

It can be concluded with regards to the observations made by different courts that poker is primarily a game of chance. However, different positions adopted by various states and lack of a common precedent is adding to the ambiguity regarding its current position. Predominantly, there are high chances involved in the Game of Poker when played online as rightly highlighted in the above case. Due to unreliable algorithms, the operating system might favour any person playing online even though he/she has displayed a minimum amount of skills. However, if a suitable regulation/ measure can be carved out to overcome this uncertainty, the courts must reapply the established tests to reach a balanced outcome.

Legality of Fantasy Sports in India

According to a recent study released by the Massachusetts Institute of Technology (MIT), the majority of sports fantasy games are based on skills rather than luck.[32] The researchers at MIT by analyzing the win/loss ratio and statistics of thousands of fantasy players involved in different sports over multiple seasons have concluded that a fantasy game is inherently a contest that rewards skill.[33] This adds to the rampant rise of online fantasy games that are flourishing amongst the virtual sports managers. Moreover, the dimensions of the online gaming market in India have been growing with revenues reaching approximately Rs. 43.8 billion in Financial Year 2018-19 and are expected to reach Rs. 118.8 billion by 2023.[34]

To effectively deal with the rise of fantasy sports games, Nagaland enacted *Nagaland Prohibition of Gambling and Promotion and Regularization of Online Games of Skill Act, 2015*. Prior to the enactment of this Act, fantasy sports games were not explicitly considered as 'game of skill' under any other policy or judgment. The State of Nagaland through this Act introduced a licensing regime to expressly recognize '*virtual sports fantasy league games*' and '*virtual team selection games*' as the skill based games.[35] Additionally, the State of Sikkim enacted *Sikkim Online Gaming Regulation Act, 2008* that legalized online betting in sports games. The majority of Indian States except Sikkim and Goa have enacted legislation barring betting and gambling after placing their reliance on PGA.

Significantly, the High Court of Punjab and Haryana in 2017 (hereinafter "*Dream 11 Case*") had held that a fantasy sports game was predominantly a game based on skills.[36] In this particular case, the plaintiff moved to the court against fantasy sports game company "Dream11" (defendants) alleging that the game was not based on skill and that Dream11 was conducting business that was covered within the definition of gambling in the State of Punjab. The High Court relied upon the *Lakshmanan Case* and opined that *"petitioner himself created a virtual team of a cricket match between two countries by choosing players, who were to play for two countries collectively and after forming a virtual team as per his own selection, knowledge and judgment, which is thoughtful will, he joined various leagues and after registration which was declared before participating, was not about possibility of winning or losing like horse riding not every bettor is winner."*

32 Jennifer Chu, *Study: There's Real Skill In Fantasy Sports*, MIT News Office (Aug. 07, 2020, 10:00 AM), http://news.mit.edu/2018/hosoi-study-skill-fantasy-sports-1107.

33 *Ibid*.

34 IFSG & KPMG, *The Evolving Landscape Of Sports Gaming In India*, KPMG (Aug. 02, 2020, 11:00 AM), https://home.kpmg/in/en/home/insights/2019/03/online-gaming-india-fantasy-sports.html.

35 *Supra* note 8.

36 *Varun Gumber v. Union Territory of Chandigarh and Ors.*, 2017 CriLJ 3827.

Consequently, the plaintiff's appeal was dismissed by the Supreme Court by upholding the observations made by the High Court in favour of the defendants.[37] This resulted in legalizing skill-based fantasy sports game in India. However, this does not imply that every fantasy game that is created is a game of skill. The Supreme Court at any given time possesses the power to test the merits of the game by determining its character.

Although, there have been instances in multiple States wherein the legality of skill games have been challenged even though when the Supreme Court has affirmed that skill-based games are legal. Recently, in *Chandresh Sankhla v. The State of Rajasthan and Ors*[38], a Public Interest Litigation was filed before the Rajasthan High Court alleging that Dream 11 constitute betting and gambling, and is illegal. The respondent company (Dream11) pleaded that Section 12 of the Rajasthan Public Gaming Ordinance, 1949 grants immunity of game involving "mere skill" and Dream 11 has been held to be a game involving skills (majorly). The court after considering the view adopted by the Punjab & Haryana High Court and the Bombay High Court dismissed the PIL while ruling that skill games are legal as exempted by Section 12 and out of the purview of Gambling laws.

Significantly, the Bombay High Court in *Gurdeep Singh Sachar v. Union of India and others*[39] ([hereinafter "*Gurdeep Singh Case*"), dismissed a Criminal Public Interest Litigation by placing its reliance on previous judicial pronouncements of the Supreme Court and other High Courts. The court upheld the legality of online fantasy sports gaming in India and asserted that such games preponderantly involve skills. The court further opined that unlike betting, the outcome of any team winning or losing in fantasy sports was not dependent on any team losing or winning in the actual world.

However, the Bombay High Court's decision in the *Gurdeep Singh Case* was challenged before the Supreme Court in 2019. Furthermore, the Union of India had also filed an appeal before the court. Subsequently, the petitions were clubbed and were jointly dismissed by the Supreme Court while upholding that Dream 11 facilitates a game of skill.[40] However, the Supreme Court had allowed the Union of India to apply to the Bombay High Court for a specific review for the application of Goods & Services Tax (GST) to Dream 11's operations. Thereafter, the State of Maharashtra filed a special leave petition challenging the Bombay High Court's ruling in the *Gurdeep Singh Case* and subsequently, the court

38 Civil Writ Petition No. 6653/2019 (High Court of Rajasthan, 14/02/2020).

39 (2019) 75 G.S.T. 258 (Bombay).

40 SLP (Crl.) Diary No. 42282 of 2019 and SLP (Crl.) Diary No. 43346 of 2019.

ordered a stay on the effect of the Bombay High Court's ruling and has initiated fresh hearings after notifying all the parties.[41] Interestingly, to determine the scope of Good & Services Tax (GST), the court has to pierce the veil to identify the true character of the activities. With the rise of such platforms, there is a possibility that the court might get into the merits of such operations. If the second step of the two-step test established by the court in *Satyanarayan's Case* which lays down to identify the profit or gain made by the organizer of a skill game except for the service fee, there are chances that the court can restrict the activities of the fantasy companies.

This order has created problems for the existing judicial pronouncements that are in favour of online fantasy games.[42] Nonetheless, the question that now persists is whether the Supreme Court will end the speculations regarding the legality of fantasy sports games in India, once and for all.

The Sports (Online Gaming and Prevention of Fraud) Bill, 2018

The Sports (Online Gaming and Prevention of Fraud) Bill, 2018 aims to maintain the integrity of sports in India by curbing fraudulent activities and regulating the commercial nature of sporting events.[43] The Bill primarily addresses the corrupt practices that are prevalent in sports such as spot-fixing, inside information etc., and proposes to punish the offenders.[44] It further proposes to regulate the online betting structure including the functioning of fantasy games by introducing systematic licensing for the operators.[45] Additionally, it lays down the procedure for renewal and suspension of such licenses that have been obtained under the Bill.[46] Significantly, Section 20 of the Bill seeks to establish an Online Sports Gaming Commission[47] that will perform the following functions;[48] a) to keep check on the activities of Online Gaming Websites; b) tracking illegal activities and

44 *Ibid.*

45 Section 15, The Sports (Online Gaming and Prevention of Fraud) Bill, 2018, Bill No. 259 of 2018.

46 Section 19 & Section 20, The Sports (Online Gaming and Prevention of Fraud) Bill, 2018, Bill No. 259 of 2018.

47 Section 11, The Sports (Online Gaming and Prevention of Fraud) Bill, 2018, Bill No. 259 of 2018.

48 Section 13, The Sports (Online Gaming and Prevention of Fraud) Bill, 2018, Bill No. 259 of 2018.

suggesting suitable measures to curb illegal functioning of Online Gaming Websites; c) to monitor suspicious betting trends of the user including the Licensees; d) coordination with State and Central law agencies to limit illegal transactions; e) to prepare special reports pertaining to Online gaming for the Central Government; f) to grant, revoke and suspend licenses and to decide fees for renewal and other applications. It is to be noted that Section 14 of the Bill sets out the ambit of Online Sports Gaming.[49] It states that no person shall engage in any online gaming activity except through an Online Gaming Website formulated under the Bill, and no person shall host any Online Gaming Server or Website without a prior License obtained under the Bill.[50] The provision further discusses the punishment in the form of imprisonment for a term 1 year and 3 years respectively and fine for the contravention of the above mentioned.[51] Consequently, the provisions of the Bill address the major concerns of functioning and governance of betting and gambling that have never been discussed in the past.

However, the Bill suffers from certain irregularities as it does not particularly state the name of the games that can be declared as a skill or chanced based games. Furthermore, the element of solving a dispute within a reasonable time arising between different stakeholders is also missing in the proposed draft. It is also important that the role of all stakeholders including the service platforms and the governmental agencies must also be clearly determined to avoid overlapping and unnecessary interference.

Although, in view of the success of sports leagues in India the Bill if implemented can prove to be a major contributor to the revenue regime. Significantly, Justice Mudgal, who headed the probe on IPL spot-fixing and betting scandal, himself added that legalizing betting in India would help the government generate income by reducing illegal spot-fixing, betting, etc.[52] Interestingly, the Indian Premier League, one of the richest league in the world places itself at the top of the offshore betting companies' revenue list across the world.[53] Moreover, the Betfair Exchange in 2018 traded a total of $4.3 billion, which is just a small part of the overall legal betting transactions taking place across the world.[54] Additionally, on 5

54 Vithushan Ehantharajah, *Professional betting and how it works during IPL*, Cricbuzz (Mar. 22, 2020, 10:42 AM), https://www.cricbuzz.com/cricket-news/107235/professional-betting-and-how-it-works-

July 2018, the Law Commission of India (headed by Justice B.S. Chauhan) tabled its final report on the prospect of legalizing online betting in India.[55] The Commission functioning under a 2016 order passed by the Supreme Court concluded that it is difficult to prohibit the practices of betting and gambling, although, it is desirable to formulate a regulation to oversee such activities.[56] In countries like the U.S. thee ae over 20 States that have legalized sports betting and are relying on it to cover the budget deficit in 2020.[57] It is expected that in total, sports betting will account for $1 billion in taxable gross gaming revenue this year, with the vast majority of this tax income coming from the 4 leading markets namely New Jersey, Nevada, Pennsylvania, and Indiana.[58] Indian Government should also consider such possibilities to cover the deficit by implementing such Bills.

One of the many reasons against legalizing sports betting is morally based. However, law and morals are not correlated. All the state should and has done to ensure a balance between law and morality is to control actions that for certain people do not perform well on a moral compass; such as drinking, smoking, etc.[59] With respect to the criminalization of betting in sports, we must bear in mind that criminal legislation will only be involved in the event of a breach. There is a gambling or betting agreement between two parties resulting in one party winning and the other losing, and such an arrangement is unlikely to be public harm or a danger to society's morality.[60]

In light of the above, The Sports (Online Gaming and Prevention of Fraud) Bill 2018 has taken into account all the necessary provisions for the smooth regulation of fantasy sports and betting activities. The licensing regime proposed by the Bill will act as an established structure that will guide companies to follow a systematic mechanism. Also, the system of levying fines for the breach of the provisions of the Bill will reduce the chances of contravention as it can lead to suspension and cancelation of the license.[61] In addition to

this, the penal provisions of the Bill will act as a deterrent against the threat of fraudulent and illegal operations. However, the Sports (Online Gaming and Prevention of Fraud) Bill 2018 lapsed due to the dissolution of the Assembly prior to the 2019 elections. It has not been reintroduced, although, it is considered to be an important foundation for the regulation of sports activities in India.

Challenges Faced by Fantasy Sports in India

The *Dream 11 Case* has changed the landscape of paid online skill fantasy games in India. According to industry estimates, there are nearly 50 to 80 companies scrambling for users in this market with Dream 11 emerging as industry leaders due to hefty investments made by Tencent and Kalaari, while others such as Fantain, Halaplay, and My Team are also witnessing major attention.[62] Perhaps this judgment has laid down a foundation for the industry's surge over the last few years.

However, as different states have the power to control the affairs of gambling within their territories through their legislation, the users and companies are in a constant dilemma to identify between skill and chance-based games that qualify as legal games in different states. Moreover, stakeholders broadly face the following challenges:

I. Lack of a Common Precedent- Games such as Poker and Rummy suffer due to irregularities and vague interpretations laid down under state legislations. Moreover, due to multiple legislations in different states, it becomes difficult to establish a common understanding throughout the country as PGA does not have the authority to rule over the state law.

II. Data Privacy and Data Protection - Right to Privacy is a fundamental right enshrined under Article 21 of the Indian Constitution.[63] A user registering on a paid fantasy sports website needs to provide his personal details including his bank account and PAN Number to withdraw his winnings (if any). The user providing this information gives exclusive access to the operating company. As new companies are entering the market and facilitating the use of fantasy websites, the users are creating their accounts on multiple platforms to experience

2018.

62 Rahul Sachitanand, *Despite Initial Success, Fantasy Gaming May Need A New Strategy*, The Economic Times (Apr. 16, 2020, 12:30 PM), https://economictimes.indiatimes.com/industry/media/entertainment/despite-initial-success-fantasy-gaming-may-need-a-new-strategy/articleshow/68867473.cms?utm_source=contentofinterest&utm_medium=text&utm_campaign=cppst.

63 *Justice K.S. Puttaswamy v. Union of India*, (2017) 10 S.C.C. 1.

different games. However, there is a significant risk that these details might not be completely protected and secured due to the lack of a policy to regulate the functioning of these companies. With the advent of server hacking, and consistent breaches leading to data leaking, the details of users and companies face an imminent danger that requires immediate attention.

III. Lack of a Regulatory Framework- Due to the absence of a *sui-generis* policy to administer the functioning of skill games in India, companies are facing difficulties in executing a systemic business model. With the changing dynamics of technology and gaming interface, a policy to address the issues relating to gaming infrastructure is a necessity. Additionally, at the central level there is no procedural and substantial framework to govern online establishments. Moreover, the lack of clarity regarding games that form part of a legal regime further adds to the problems faced by companies.

IV. Fair Play and Dispute Resolution- A major challenge for the companies is to design a fair-play violation policy that ensures stringent adherence to the guidelines laid down in the rules and regulations. According to the *ThreatMetrix Gaming and Gambling Cybercrime Report*, nearly one out of 20 new accounts are created for fraudulent transactions.[64] This suggests that this rapidly rising industry is affected by fraud and has become a prime target for fraudsters.[65] Moreover, the lack of a dispute resolution mechanism further adds to the problems as the disputes being dynamic in nature require a suitable procedure to resolve the issues of the users.

Conclusion & Recommendations

Skill gaming in India is experiencing tremendous growth that is driven by technological advancements, innovation, and changing patterns of consumer consumption. The current state of regulatory environment and perception of individuals would require this industry to develop policies and procedures such as self-regulation, maintaining high standards of corporate governance, honesty, and accountability. It is imperative that different stakeholders must collaborate with self-regulatory bodies such as the Federation of Indian Fantasy Sports (FIFS) to organize their structure according to a formal code of conduct. Organizations like FIFS promote self-governance for fantasy sports by creating a system

64 Team Springworks, *The importance of background checks in the gaming industry*, Springworks, (Aug. 09, 2020, 12:15 PM), https://blog.springrole.com/the-importance-of-background-checks-in-the-gaming-industry-1be8bdf7326.

65 *Ibid*.

of common industry practices and organizes research-oriented studies to focus upon the changing dynamics of sports industries. It further establishes a complaint and redressal mechanism for the users to resolve their issues and queries pertaining to the functioning of online fantasy games.

Furthermore, the government at the central level must formulate a *sui-generis* policy to promote and establish guidelines for the operation of skill-based games. For example, Malta Gaming Authority has issued *The Skill Gaming Regulations, 2017* to provide a broader framework and logical criteria for the assessment and characterization of a game of skill and their functioning. These criteria consist of multiple conditions such as nature and objective of a game, the required skills, and eligibility to participate.

In addition to this, the government must address the issue of obtainment and the protection of the user's data. This issue can be resolved by the companies by following a set of principles such as end-to-end encryption of the user's transaction to safeguard his details and banking operations. Additionally, a secured system must be developed to store sensitive information of the users. These initiatives would not only reduce the ambiguity pertaining to skill games but will also improve consumer protection while ensuring growth of an industry that contributes to the development of all stakeholders.

Little Red Riding Lawsuit :

An Analysis of The Legality and Application of Single-Color Trademarks in India, With Reference To Christian Louboutin S.A.S. v. Abubaker and Ors.

Manan Katyal*

Abstract

With the shift in international trade, the manner in which brands choose to manifest themselves in the global domain has been modified considerably. Trends worldwide are being experienced which result in the deviation from conventional to non-conventional trademarks, which include a variety of components beyond the traditional words, figures, shapes, etc. This paper focuses on signifying the importance of such a shift and incorporating single-color trademarks into the Indian legislation in light of the implications of its absence, and furthermore, how the position established by the Indian Trade Marks Act, 1999 has failed the development of the jurisprudence on single-color marks across the world. The case of Christian Louboutin S.A.S. v. Abubaker and Ors., comes into play as it shows how a multi-million dollar multinational organization, which has catered to society's crème de la crème for the past three decades, after attaining trademark protection for its red-soled footwear in more than 35 countries worldwide, including India, has been failed by the Delhi High Court in asserting a right over its own distinctive image and single-color mark. A critical analysis of this judgment highlights the impact of the limitation imposed by the exclusive interpretation of the legislation and the archaic and restrictive approach adopted by Courts while assessing matters related to single-color marks. More importantly, this paper suggests that these marks play an invaluable role in strengthening and invigorating an inadequate trademarking regime by widening its applicability, approach and functionality. Lastly, this paper proposes that the impact of inclusivity in trademarking on the economics of trademarks,

* Student, Symbiosis Law School, Pune.

business operations and national market and economy is a proposition considerable enough to allow their adoption under the Indian Trade Marks Act.

KEYWORDS: Non-traditional trademarks, Single-color trademarks, Trade Marks Act 1999, Christian Louboutin

INTRODUCTION

Initially, the purpose and function of trademarks was to act as a source identifier[1], but with the increasing dynamicity of international trade and globalization, the approach has experienced a shift towards providing an immersive and distinguishable brand experience. In coherence to this, businesses worldwide are exploring the infinite opportunities provided by non-conventional or non-traditional trademarks. Such marks have often been considered to be the most striking branding strategy of the 21st century.[2] The technological revolution persuaded many companies to experiment with 'extreme branding' with the aid of color, sound, smell, tastes or even 3D and holographic images.

An integral element of non-conventional trademarks is single-color marks, which associates a specific color with a brand, possessing a certain degree of acquired distinctiveness. Color psychologists and experts hold that through marketing studies and analysis, color can increase brand recognition by up to 80%.[3] Single-color trademarks act as a more potent source-identifier than a conventional trademark as practical employment of these marks have shown visual aspects of brands that transcend languages.[4] For example, a candy bar wrapped in a purple packaging, irrespective of whether the text on the wrapping is in Greek or Japanese, would instinctively allow consumers to associate it with Cadbury.

Hence, single-color marks encompass a full spectrum of sensory perception beyond commonplace visual signs and bear a high potential of economic value, leaving a greater degree of commercial impression on the consumers with its unique appearance, smell, touch or experience.

Single-Color Marks as Non-Traditional Trademarks

Concept of Non-Traditional Marks

Traditional or conventional trademarking includes a variation between words, figures, symbols, numbers, combination of colors, etc. but of late trademarks have undergone a revolutionary change and have proved to serve a holistic purpose. Modern innovative technology has produced more products to see, smell, touch, taste or hear than people would otherwise get through their non-augmented faculties. Corporations are no longer limiting their scope to only provide a tangible good as they are witnessing a shift towards selling experiences alongside commodities or services. Hence, the new form of trade requires a new form of trademarks, which go beyond the traditional trademarks in nature, characteristics, scope and economic potentials.[5] The development of non-traditional marks proves to show that trade mark law is subject to a dynamic process from which new types of marks may constantly evolve.[6] These marks are of great commercial value to an enterprise and an important part of evolving business strategy and intellectual property portfolio.[7]

Color is arguably one of the most potent tools in packaging, which a single-color mark perfectly encapsulates. Multiple studies of eye movement have reiterated that colors prompt the fastest response of any aspect of a package.[8] It can serve as a fundamental base to assert brand identification and distinction in consumers. The impact and significance of a color in trademarking would be further discussed.

International Jurisprudence on Single-Color Marks

Although a single color had been protectable as a trademark globally, it was only in the 1980s that its registrability was recognized in a judicial precedent. This was a result of the *Think Pink* campaign launched by Owens-Coming Fiberglass Corp. by insulating its fiberglass with a pink tint.[9] This campaign was the genesis which led to the development of the jurisprudence on single-color trademarks around the world. From here on, the impetus required by such marks to develop globally was predominantly contributed by the United States and European Union.

Contributions by the US

The authority relating to single color trademarks in the US is *Qualitex v. Jacobson*[10] where the court ruled that there would be no *per se* bar to registration as long as the mark meets the imperative condition of acquired distinctiveness. Trademarks, in their own essence, do not possess the ability to be inherently distinctive. Only once they have been associated with a brand and have acquired the distinctiveness by generating a secondary meaning for themselves, they can be legally registrable. The threshold of acquired distinctiveness can only be passed through consistent usage and market reach with the passage of time. In other words, the mark must have acquired a secondary meaning or a considerable level of significance, which differs from its most obvious and literal interpretation, throughout a substantial period of time.

This is the dominating reason because of which single-color trademarks have remained in the public domain. The mandate that the proprietor must be able to indicate the distinctive nature of the mark is rather restrictive due to the subjective interpretations a color may allow. More often than not, courts are of the opinion that a pure color can never have inherent distinctiveness, but leave open the scope of it being acquired through the process of time.

The acceptance that single-colors can acquire distinctiveness in order to be associated with a brand defied the principles heretofore established across the world and still continues to operate as a precedent even for the more contemporary issues. Since the *Qualitex* case, numerous companies have been successfully able to register their single-color marks, such as UPS[11], 3M[12], Tiffiany & Co.[13], etc. under the United States' trademark legislation.

Additional Mandates Imposed by the EU

The EU, however, adopted a more skeptical and cautious approach by further complicating the law on single-color trademarks and introducing an additional pre-requisite of graphical representation, which poses as a strong barrier to non-traditional trademark registration. A mark can only be graphically represented if its nature, description, features, technicalities, etc. can take the form of a pictorial representation, written description or both, concisely and accurately. Nonetheless, the implications of this condition were slightly more relieved for single-color marks due to the prevalence of a uniform system to standardize colors and

10 *Qualitex Co. v. Jacobson Prods. Co.*, 514 U.S. 159 (1995).

11 Registration No. 2131693 (registering brown as applied to vehicles).

12 Registration No. 2390667 (registering canary yellow as applied to adhesive notes).

13 Registration No. 2359351 (registering robin's egg blue as applied to boxes).

reduce them to a specific and definite shade. This system graded colors by allotting them a numeric code, serving as their unique identifier worldwide. The most prominent example of such is the Pantone Matching System (PMS), apart from the lesser popular ones, such as CMYK, RAL and RGB. Since color standardizing techniques ensure consistency, courts have found them to be admissible while analyzing the graphical representation of single-color marks.

In the forefront of the precedents on graphical representation, lies *Sieckmann v. Deustsches Patent und Markenant*[14], which ruled that a single color could be represented graphically through a "*clear, precise, self-contained, intelligible, durable and objective*" manner.[15]

The irony of the whole situation came into play in 2017 when the EU Trade Mark Implementing Regulation (EUTMIR)[16] was passed which overrode the requirement of graphical representation in the EU altogether. This ultimately loosened the noose around companies on trademarking their non-traditional marks. However, the mandate of graphical representation still subsists in countries such as India, Australia, China and most of Latin America.

Protection through International Agreements

Single-color marks have quite literally left a huge mark worldwide that it even finds itself seeped into the purview of various international treaties, but most particularly covered by the following:

1. The International Registration of Marks under the Madrid Agreement and the Madrid Protocol, 1891, (to which India has been signatory since April 8th 2013)
2. The International Classification of the Figurative Elements of Marks, as established by the Vienna Agreement, 1973
3. The Trade Mark Law Treaty, 1994
4. The European Union Community Trade Marks Regulations, 1996

Despite that these marks are not explicitly mentioned in the definition clause of the TRIPS Agreement of 1994, a plain reading of the section suggests that since it provides an inclusive and open-ended definition, it is wide enough to include such unconventional marks within its ambit.[17]

16 Regulation (EU) 2017/1001.

17 *Supra* note 5.

Law on Color Trademarks in India

The Trade Marks Act 1999

The Trade Marks Act 1999 (hereinafter referred to as 'the Act'), as metamorphosed from the Trade and Merchandise Marks Act 1958, functions as the leading legislation in India which governs and regulates the qualifications and procedure of registrability of trademarks and the rights and liabilities of their holders.

Section 2(1)(zb) reads:

> *"'trade mark' means a mark capable of being represented graphically and which is capable of distinguishing the goods or services of one person from those of others and may include shape of goods, their packaging and combination of colors."* [18]

Section 2(1)(m) reads:

> *"'mark' includes a device, brand, heading, label, ticket, name, signature, word, letter, numeral, shape of goods, packaging or combination of colors or any combination thereof."* [19]

Hence the conditions to be qualified for a registered trademark in India are similar to those as contributed by the EU, i.e. graphical representation and acquired distinctiveness. Additionally, a mark must not fall within the absolute grounds for refusal of registration as provided under Sections 9 & 10 of the Act.

The Manual of 2015 by the Ministry of Commerce

In order to compliment the Act, the Ministry of Commerce and Industries released The Manual (Draft) of Trademarks Practice and Procedure of Indian Trademark Registry. The Manual analyzed that Section 2(1)(m) does not exhaustively cover the categories of legally protected marks and due to its open-ended nature determined that single color packaging has the potential to be classified as a valid trademark, subject to judicial scrutiny on a case-to-case basis.[20] Adopting a cautious stance towards assessing distinctiveness for colors, the Manual states:

> *"As color per se is not normally used by traders as a means of brand identification, unlike words or pictures, consumers are not in the habit of*

18 Section 2(1)(zb), Trade Marks Act, 1999, No. 47, Acts of Parliament, 1999 (India).

19 Section 2(1)(m), Trade Marks Act, 1999, No. 47, Acts of Parliament, 1999 (India).

20 Dev Gangjee, *Non-Conventional Trademarks in India,* 22(1) NLSI R. 67, 86 (2010).

> *making assumptions about the origin of goods and services based solely on their color or the color of their packaging. It follows therefore, that a single color will only in exceptional circumstances be capable of denoting the origin of a product or service. Marks consisting of a single color will usually be liable to objection under Section 9(1)(a) of the Act because they inherently lack the capacity to distinguish."* [21]

The Manual also suggests that unless colors are used in a special or particular pattern or arrangement, it is not an imperative that the color would lend distinctiveness as a badge of origin,[22] i.e. the colors may be considered generally decorative or a mere property of things, and not sufficiently distinctive as a trademark.[23]

Case Study of Christian Louboutin S.A.S. v. Abubaker & Ors.

Background of Christian Louboutin

French footwear designer Christian Louboutin sells more than five hundred thousand pairs of shoes bearing his name each year[24], generating an average annual revenue of $300 million through its 71 stores spanning 29 countries. At prices between $400 and $6,000 a pair[25], these high-heels are fashion's ultimate symbol of status and opulence.[26] In a comparatively short span of time, Louboutin's brand skyrocketed as it had been spotted on many of their high profile clients, including celebrities, global icons and even the royalty. Over the years, the red sole has become a great visual cue, widely recognized by consumers as a trademark of the Louboutin brand[27] and shaken the fashion industry to its core. Louboutin, apart from trademarking its red soles in more than 35 countries across the world is also a valid holder of a total of eight marks in the Indian Trademark Registry[28] since 2008.

Analysis of the Judgment

Genesis of the Dispute: The Original Civil Petition

The case finds its origin from the Original Civil Petition filed in the Delhi High Court, adjudged on 25th May, 2018 by a Single-Judge Bench comprising of Justice Valmiki J. Mehta.[29] In this matter, Louboutin had filed for an injunction against the Respondent, a Mumbai-based company named Abubaker, who had been manufacturing and selling footwear bearing a red sole, alleging infringement and passing-off. Not only was the placement of the mark on the sole problematic, but the shade used by the Respondent appeared to be strikingly similar to the one globally used by Louboutin.

The judgment manifests a sense of peculiarity as on one hand the Court acknowledges Louboutin's trademarks of its red sole, as granted by the Registrar of Trademarks,[30] and on the other hand considered multiplicity of colors as a *sine qua non* for the interpretation of Section 2(1)(m). In conclusion, the Court isolated a single color mark from the scope of Act and stated that if the red sole cannot qualify as a valid mark under the Act, then it corresponds to the validity of its trademark.

The court also relied on the functionality doctrine, a well-established principle of trademark law which invalidates any mark that may be functional in nature.[31] Any feature of a product that may be considered functional cannot be trademarked in order to prevent a brand from unduly monopolizing it and in the larger scheme of events, to foster healthy competition. Section 9 of the Act declares functionality as an absolute ground for refusal by stating that color is applied to certain goods for the purpose of creating appeal, resulting in aesthetic functionality and the use of color performs only a non-trademark function, as it is a characteristic of the goods.

Appeal to the Division Bench

Subsequently, an appeal was filed to a Division Bench comprising of two judges of the same court, which released a homonymous judgment on April 11th 2019.[32] The Court ruled that the Single Judge was incapable of rendering an accurate decision due to the limitation of representation on behalf of the Respondents and any determination could only be provided after a deliberation of their case. Also, the procedure adopted by the Single

32 *Supra* note 29.

Bench, of determining a trademark matter *suo motu* by the Court on its very first hearing, was looked down upon. In conclusion, this Court adjudged to set aside the judgment of the Single Bench and ridiculed the lack of procedural compliance, but reinstated the original civil petition by referring this case to a different bench. Regardless of the consequences, the Division Bench had implicitly agreed with the rationale provided in support of the previous judgment, without going into the merits of the case.

Criticism of the Judgment

Narrow Interpretation of Section 2(1)(m)

Section 2(1)(m) defines a mark within the scope of the Act. On a bare reading, without an in-depth interpretation of the statute, the nature of the section is open-ended, inclusive and, more importantly, inexhaustible. Noticeably, it uses the word 'includes' while enlisting examples of permissible marks and not 'is limited to'. The Bench analyzed the legislation to have *deliberately* and *intentionally* used the expression 'combination of colors' and is of the opinion that the legislators carefully omitted a singular color. This signifies the narrow interpretation of the section as the Court looked deeper into it than necessary. A primary function of any statute is to be accommodating towards the advancements or developments in the jurisprudence of the law as well as with the time, which the open-ended nature of the section aimed to fulfill. Unfortunately, a motive the court had completely overlooked.

Disregards Louboutin's Registered Trademarks under the Indian Trademark Registry

As specified, Louboutin holds 8 valid trademarks with the Indian Trademark Registry.[33] Irrespective of whether the court deems the Louboutin's trademark status to be tenable, it essentially allowed the Respondent to pass-off and misuse a registered trademark under Indian law and override the status of registration granted by the Registrar of Trademarks. The jurisprudence of trademarks in India recognizes both a statutory and common-law remedy in order to protect the mark of a proprietor, both of which were bypassed by the judgment. By disregarding these registered trademarks while stating that the single-color mark cannot qualify as a trademark, the Bench set a very dangerous precedent that may prove to be detrimental in upholding the value, status and integrity of not only trademarks, but intellectual property as a whole.

33 *Supra* note 28.

Violates Sections 29(1) & 31 of the Act

Each of the conditions of infringement, as provided under Section 29(1) have been fulfilled in this case and each of the resultant circumstances have been actualized as under Section 29(4). Irrespective of whether such a mark is within the common practice of the industry, it was infringed by Respondent, who, rather than being penalized, was awarded the case. Additionally, the judgment omitted the consideration of Section 31 which affirms that there exists a *prima facie* presumption in the validity of a registered trademark in any legal proceedings, as the Bench failed to provide the benefit of the doubt to the Petitioner regarding the acquired distinctiveness of the brand.

Neglects the Application of Section 2(1)(zb)

Each mark contesting registration under the Act must pass the two conditions under Section 2(1)(zb); the mark must be capable of being graphically represented and distinct/ distinguishable. As put forward, single-color trademarks can be graphically represented through international color standardizing systems. Louboutin's red can be graphically represented on the Pantone scale as PANTONE 18-1663 TPX Chinese Red.[34] Moreover, Louboutin has acquired its distinctiveness through the differentiation of their product from the prevalent standards in the fashion industry in the past three decades. At the time of its conception, no brand had ventured into capitalizing on the color of the soles of a pair of stilettoes. Also, through the passage of time, the mark has become a symbol of high fashion and a unique brand identifier, not only to a fashion-savvy person, but even an extra-terrestrial.

Overlooks Indian Jurisprudence and Precedents on Trademarks

Previously in the same court, in the case of *Christian Louboutin S.A.S. v. Pawan Kumar & Ors.*[35], the Bench relied on the following in determining the red sole as a distinct trademark: (i) Louboutin's status as a well-known luxury brand in over 60 countries; (ii) extensive and continuous use of the red sole trademarks since 1992; (iii) knowledge of Indian customers of the red sole trademarks; (iv) Louboutin's status as the sole licensor of the red sole trademarks and several successful enforcement actions in the past and (v) extensive promotion of the red sole trademarks in India. However, the Single Judge failed to give their regard towards this precedent and a contradictory judgment had been released. Not only so, but with respect to the cancellation or revocation of registered trademarks

34 *Pantone 18- 1663 TPX Chinese Red,* PANTONE (Aug. 09, 2020, 12:05 PM), https://www.pantone.com/color-finder/18-1663-TPX.

35 (2018) 73 PTC 403 (Del) (India).

that the Single Bench had moved for, neither did the Act nor its bylaws authorize the court to invalidate the registration on a *suo motu* basis. The Hon'ble Bombay High Court has previously held on this matter that a court has this exceptional authority only when the invalidity of registration is raised by the Respondent at an interim stage.[36] The court also cautioned that such discretionary power can only be exercised as a consequence of a considerable threshold of *prima facie* proof being submitted before the court establishing the ex facie illegality or fraud involved in securing the registration from the Trade Marks Registry.[37] Since this condition was not met in the present case and the motion of revocation was solely raised by the Bench, it was in contravention with the precedent set by the apex court.

Should the Indian Legislation Focus on Inclusive Trademarking by Adopting Single-Color Marks within its Ambit?

In the absence of an encompassing legislative system, various grey areas tend to appear with respect to the application of laws, which ultimately led to inconsistent judicial pronouncements. The battle fought in *Christian Louboutin SAS v. Abubaker* was not one specifically for single color marks but was a fight for a greater representation of inclusive trademarking in India. Many a times, the Indian judiciary has turned a blind eye towards maintaining an inclusive approach with ruling on non-traditional trademarks,[38] which have only deepened the ambiguity with respect to their legality.

In a nutshell, the essence of this section moves to substantiate the case for the adoption of single color marks within the Indian legislation, as this approach strengthens and invigorates a national trademark regime. As non-traditional marks, most notably single-color marks, instill flexibility within a trademark system, they can serve the most integral and fundamental purposes of trademarks in a more efficient and effective manner, as compared to traditional marks. From functions such as enforcing product differentiation to enhancing branding, single-color marks witness an all-pervasive impact on the trademarking regime. The chain reaction that this has on business operations w.r.t. the economics of trademarks can allow businesses to expand their market reach and experience greater profits. With limited trademarking, not all business can take advantage of their intellectual currency, which as the recent age has shown, can be of any form and feature. Inclusivity in trademarking allows business to expand their brand presence in unprecedented ways. Further, stronger

trademarks have a significant influence on the domestic market and economy as it allows the Indian legislation to be more consistent and compliant with international trends and practices in trademarking, providing a lucrative growth to both FDI and foreign exchange.

How Does the Adoption of Single-Color Marks Strengthen & Invigorate a Trademark Regime?

Product Differentiation & Identification

Any form of trademarks across the world primarily aim towards product identification & differentiation.[39] Single-color trademarks are a more potent source-identifier than a conventional trademark as they manifest visual aspects of brands that transcend languages.[40] Clinical psychology and neuroscience tell us arguably that color is a very powerful tool in learning and educational settings as our brain can recall a color stronger, faster and with a greater sense of recollection than it can for words or figures.[41] Color psychologist and expert, Jill Morton goes beyond to hold that through marketing studies and analysis, color can increase brand recognition by up to 80%.[42] Courts have also been of the opinion that if a color is sufficiently distinct and peculiar, it has the power of overriding all of the brand's other trademarks and can serve as a sole primary mark.[43] As a conclusion, colors have a greater weightage in our minds, which allows us to associate and link it with a brand in a way that traditional trademarks would be incapable of. While making consumer choices, a consumer would, hence, be able to identify and differentiate a product bearing a single-color mark in an unprecedented way, allowing trademarking to be more effective and impactful.

Protects the interests of the Consumer

As the identity of a brand has been embedded deeper in our minds with the help of color, these marks assist in protecting the consumer, one of the fundamental objectives of trademark law. An ordinary consumer is riddled with a myriad of choices in the market, which can only be filtered through their image of the brand. This protection can be against deceptive and unethical trade practices, misrepresentation or even extended by providing a standard of authentication. Not only so, but once product identification and differentiation

39 V. V. Solpe, Managing Intellectual Property 39 (5th ed. 2016).

40 *Supra* note 4.

43 Dyson Ltd's Trade Mark Application, 2003 RPC 47.

is enhanced, a consumer's search costs reduce considerably, which plays a compelling role while exercising consumer choices.

Allows Branding to Adopt a Wider Approach

Additionally, single color marks provide a wider approach in low literacy areas. Companies are continually endeavoring to expand into a new consumer base, market or territory and with single color trademarks, they are able to provide a multi-sensory perception. Visual perceptibility cannot be the unconditional prerequisite for developing a brand image.

In low-literacy areas, people often perceive and connect brands with the corresponding color of the product or its packaging. As the illiterate populace is more susceptible to being misled or misguided, their only source of identification is a color, which to them surpasses language. They simply cannot rely on the arrangement of characters they cannot decipher in a word mark or shapes and figures they have no relatability towards in a shape mark. Not only so, but non-conventional marks in general have tapped into the market of specifically catering to visually impaired people where they identify goods through their scent, feel and sounds.[44]

Provides an Enhanced Appeal

Selling a product with which a consumer can associate a memory or an experience, has been proven to be more appealing and attractive. Modern-day marketing doesn't limit itself to a mere product or service, but to a whole immersive and memorable experience. Attaching a memory or a cultural significance to a product makes it more preferable as it doesn't only provide a good, but a holistic service. In this way, colors have often been used to express an emotion or a sensation with which a consumer can attach with the brand.

Taking the example of Christian Louboutin, the reason why the color red was chosen to represent the identity of the brand is because it is flirtatious, the color of passion and irresistible by men.[45] Analyzed through a historical sociological approach, the color red was reserved only for the nobility, as it signified power, status and privilege,[46] and in

order to allow his consumers to break from the constrains of society, he opposed from the industry standard to have a monochromatic or black sole. Only by employing one color, Louboutin has expressed his ideology and intent behind the whole brand.

Effect of a Stronger & More Inclusive Trademark System on the Economics of Trademarks and Businesses

Contribution to the Intellectual Currency of a Business

The modern economy has taken a complete shift from the *brick and mortar* economy, where wealth was measured through the possession of assets, to an economy governed by intellectual currency.[47] The number and diversity of a firm's IP is now paid an unprecedented weightage while ascertaining its wealth, market value and economic potential. In the long run, the competitiveness of the business organizations and their economic prosperity is enhanced by their trademarks and brand image.[48] In other words, the more trademarks an organization owns, it acts as a factor in reassuring investors and other stakeholders of their economic position, reaffirming their market reach, market value[49] and investment in R&D, and furthermore, enhancing their intellectual currency.

Including single-color trademarks would provide a comprehensive and thorough system which allows businesses to cover aspects of its trade dress that would've otherwise been unprotected and unregulated. This only opens the doorway for brands to counterfeit and pass off marks of another, which technically are excluded under law, but for the development of which, an uncountable sum of money, innovation and research has been invested. These marks go beyond the scope of traditional trademark protection and opens various avenues for brands to capitalize on their creations. This form of trademarking can be viewed as an additional tool to create exclusive rights[50].

Results in the Reduction of Marketing Costs

As firms in countries with a weaker system of trademarking cannot legally protect each aspect of their trade dress, they expose their brand to multiple risks. This subsequently

translates into enhanced costs as compared to their counterparts in order to differentiate their products and strengthen their brand image. These costs can arise in the form of extraordinary promotional or marketing costs, costs incurred towards innovation and product development, and investments made to reinforce or emphasize their Unique Selling Proposition (USP). As counterfeiting and imitating goods muddle the perception of consumers with relation to originality, source and quality, such costs are primarily incurred to combat the counterfeited or imitated goods being sold in the market due to lack of protection provided by the legal regime. Under an inclusive trademarking system, a brand would not be compelled to expend a great amount towards aggressive marketing and promotion as the distinctive image of each element of their dress can be legally protected, allowing their products or services to be easily identifiable.

Boosts Innovation & Invention

Stronger trademarks also stimulate innovation and invention with the interplay between IP and competition. Trademarks regulate competition in the market as it grants the holder an exclusive right to monopolize their mark, restricting the power of competitors to make an undue profit. As competition and innovation are inversely related due to the entry of a large number of rivals in the market,[51] limiting competition through trademarking facilitates and encourages innovation. Once businesses are provided with security of protection against new entrants in the market, by stronger trademarks, it is perceived as an economic incentive to invent and as a tool to monetize on innovations into more and new aspects of their trade dress that previously fell within the public domain. These undertakings require substantial amount of expenditure and resources, they can only be entered into if foreseeably a business can be afforded protection.

The sole of a stiletto had often remained as an afterthought for any footwear designer, up until the rise of Louboutin. The brand's ability to attain a trademark moved the designer to adopt this unique and innovative take towards branding by trademarking a part of a stiletto often overlooked. With the protection granted worldwide, Louboutin has been incentivized to make the most of the sole by using innovative techniques to amplify its sales.

Allows Budding Companies to Establish their Unique Selling Proposition (USP)

Broader trademarking policies can assists micro, small and medium companies in finding their USP. As a nascent company, in order to compete with market leaders, it is essential to establish a competitive edge and a unique and differentiable identity. Smaller brands are

51 Philippe Aghion et al., *Competition and Innovation: An Inverted-U Relationship,* 120(2) QUART. J. ECON. 701, 703 (2005).

required to be more creative and inventive while developing their mark and brand image. In order to facilitate this, they often employ non-traditional trademarks to stand out from the norms. Considering the example of Christian Louboutin, in the early 90s, multinational brands such as Manolo Blahnik, Fendi and Gucci, just to name a few, were the frontrunners in the international luxury footwear market, each being valued at more than a hundred million dollars. The red sole played a huge role in allowing Louboutin to establish his mark and surpass his competitors, which had been reigning the market for half a century. It was *sole*ly on this mark that he was able to establish a secure customer base and attract media publicity with his unconventional take on the fashion industry

Effects on the Domestic Market and Economy

Reinforces the Flow of FDIs

Once a country is able to strengthen their trademark regime, the most primary and direct impact is on the inflow of FDIs, due to the enhanced appeal of the national market to the international economy. Quite naturally, a stronger legal system attracts and incentivizes businesses to expand operations as it assures security of their intellectual property and also contributes significantly to the ease of doing business.[52] Also, if a country's policies at are par with the developments on an international scale, expansion becomes a more harmonious process.

Often, businesses choose to avoid expanding into countries where they can foresee that they would not face utmost protection. As a matter of fact, around 25% of leading American, German and Japanese high-tech firms have been reluctant from investing, either directly or through joint ventures, in countries with weaker IPRs in order to prevent decade-long legal battles and also to avoid the complexities regarding their functioning.[53] Therefore, it is quite reasonable for business to take a precautious approach by inclining themselves towards expanding and diversifying in countries where they feel that every aspect of their intellectual property would be protected.

Further, econometric studies have indicated that FDIs respond positively and elastically to stronger IPR regimes, most notably towards trademarks.[54] Empirical work demonstrates that

52 Amanda Perry, *An Ideal Legal System for Attracting Foreign Direct Investment? Some Theory and Reality,* 15(6) A.U. INTL. L.R. 1627, 1632 (2000).

53 Edwin Mansfield, *Academic Research Underlying Industrial Innovations,* 77(1) R. ECON. & STATS. 55, 59 (1995).

54 Keith E. Maskus, *The Role of Intellectual Property Rights in Encouraging Foreign Direct Investment and Technology Transfer,* 9 DUKE J COMPARATIVE & INTL. L 109 (1998).

the strength of trademarks have important effects on multi-national enterprises' decisions on where to invest and whether to transfer advanced technologies and capital.[55]

To substantiate this school of thought, Park[56] and Reynolds[57] had developed a trademark rights index, which served as the standard for comparing and measuring the development of a country's trademark system. This index includes coverage (referring to the types of names and symbols which can be legally protected), procedures (which considers the degree of enforcement of rights and restrictions on the holder) and implementation of international treaties. As per a study conducted by the OECD over a period between 1990 and 2005, with a range of 120 countries, it was suggested that a 1% increase of the indices of trademark protection corresponded a 3.8% increase in FDI.[58] In conclusion, intricate and specialized trademark policies have been witnessed to be a factor in influencing investment decisions to a great degree.

Augments the GDP

While analyzing the bigger picture, a direct correlation can be found between the strength of a country's trademark protection and its economic competitiveness. In the words of the International Chamber of Commerce:

> *"…the countries that are perceived as having the strongest IP protection are routinely found to be among the most economically competitive countries in the WEF (World Economic Forum) surveys … those (countries) perceived as having the weakest IPR systems tend to rank among the bottom for growth and competitiveness."*[59]

The most noticeable impact can be discerned through the GDP. IP-intensive industries have been accounted as one of the most significant contributors to GDP in the US, as single-handedly in 2014, they had added a value of USD 6.6 trillion to the GDP which was 30% higher than that of 2010, out of which trademarks played the second largest

59 International Chamber of Commerce, *Intellectual Property, Source of Innovation, Creativity, Growth and Progress* 7 (2005).

role, after patents.[60] According to a study conducted on the effect of IP on the German economy between the period of 1999-2009, trademarks have a viable potential to influence a country's GDP with the strongest economic impact, ahead of patents and designs by a great margin.[61]

Positively Influences Imports & Exports

Moreover, empirical evidence prescribes that, *ceteris paribus*, countries with stronger trademarks are able to attract more imports and facilitate a greater volume of exports. Interestingly enough, the application of trademarks seems significantly important in increasing exports of relatively low-technology goods, for e.g. clothing and other consumer goods.

This is because under a more developed system, the goods produced by foreign firms would be lesser exposed to imitation and counterfeiting, hence incentivizing them to boost their exports.[62] This starts off chain reaction ultimately resulting in lowered costs of exporting, as global firms would not find themselves in a predicament to discipline local imitators through decreasing their prices in order to appear more competitive, aggressively market themselves or even undertaking legal action.[63]

Upgrades the Quality of Goods & Services

In an industry, which witnesses a large number of firms producing the same line of products, a competitive advantage can only be obtained by higher quality products. The operation of stronger and more inclusive trademarks upholds the quality of goods and services as it represses counterfeiting and infringement. This prevents free riding by firms with lower investments in R&D and innovation off of the products of their counterparts and producing lower quality products. This process is particularly important in the case of food products, beverages, pharmaceuticals, cosmetics, etc. where counterfeited goods can prove to be hazardous or injurious. Not only so, but it ups the ante for the standard of goods available in a national market, allowing it to be internationally competitive and simultaneously enhancing consumer expectations. This creates a ripple effect as firms would be compelled to invest a greater deal of resources in innovation to enhance their product quality and grasp a greater market share.

60 *Ibid.*

61 Andreas Bielig, *Intellectual Property and Economic Development in Germany,* 39 EU. J LAW & ECON. 607 (2015).

62 Keith E. Maskus & Mohan Penubarti, *How Trade-Related are Intellectual Property Rights,* J. INT'L ECON. 227, 234 (1995).

63 M. Scott Taylor, *TRIPs, Trade, and Technology Transfer,* 26 CAN. J. ECON. 625, 626-27 (1993).

Additionally, brands producing higher-quality products once trademarked would have assured returns on their products as trademarking allows them to monopolize over a market, product or service. Once a firm can foreseeably predict returns, they are encouraged to uphold the quality of their products, if not to enhance it, in order to maintain their consumer base. After all, a brand's trademark is not only an identifier of its source but also of its quality.

Conclusion

The decision of the High Court in *Christian Louboutin S.A.S. v. Abubaker and Ors.*[64] can be viewed as a setback to intellectual property law development in India as the judiciary deemed it appropriate to adopt such an archaic approach in the realm of trademarks. The Court showed inconsideration towards the magnitude to which non-conventional trademarks, specifically single-color trademarks, have increased in terms of popularity and consumer-response, not just globally but even in India.

One of the pressing questions of the case is the unclear and unspecified ambit of a 'mark' under the Act[65], continually unanswered by the Judiciary. The definition utilizes the word 'includes', from which it can be construed that the list of marks in the section is not exhaustive and not limited to the conditions provided in the section. The basis of the judgment is on a presumptuous ground as the Hon'ble Single Judge construed the interpretation of the section to not include any other ground for granting trademark protection. Ambiguity in statutory interpretation opens the doors for an inconsistent and incoherent judiciary, which in turn may invalidate and discredit the sole purpose for which a piece of legislation may have been enacted.

Middle-income economies have come to account for most trademark applications filed across the world, i.e. 54 percent.[66] To a considerable extent, this trend has also been witnessed in India. According to the WIPO, India received 2.5 times more trademark applications by GDP in 2011 than it did in 1985.[67] Undeniably, it is experiencing a spurt in the number of trademark applications and with the marks protectable under traditional trademarking limiting more day by day, businesses would be indubitably compelled to shift to non-traditional trademarks. This foreseeable shift, however, cannot be accommodated by the Trade Marks Act, 1999 presently.

64 (2019) 78 PTC 262 (Del).

65 Section 2(1)(m), Trade Marks Act, 1999, No. 47, Acts of Parliament, 1999 (India).

66 *Supra* note 48.

67 *Ibid.*

As single-color marks invigorate existing policies to provide a more realistic and an *avant-garde* touch, their inclusion would only strengthen and expand a trademarking regime by not only fulfilling its integral purposes in a more efficient and effective manner, but would also allow trademarks to go beyond the conventional scope of appeal, applicability and relatability. As a result, such an impact creates a ripple effect on businesses and the economics of trademarks, which cannot be overlooked as an actor in benefitting the national economy overall.

Hence, the Legislature is ultimately met with two options; it can either expand the scope of its trademark regime in order to accommodate the growth in trademarking being experienced or be left behind on a global sphere by letting its businesses and economy take the blow for its regressive approach.

A Shift to Inquisitorial Model: Assessing the Challenges to India's Criminal Justice System

Merrin Muhammed Ashraf*

Abstract

The criminal justice system in India is largely adversarial in nature. The Malimath Committee Report (2003) found faults with the adversarial system for failing to secure conviction of the accused persons without delay and proposed a shift to the judge-controlled inquisitorial system. This recommendation of the Malimath Committee has now found favour with the Union Home Ministry that is reportedly deliberating wide-ranging changes to India's criminal justice system with a view to secure higher conviction rates and speedy disposal of cases. This article examines whether adoption of an inquisitorial system is an appropriate measure to salvage India's ailing criminal justice system. The article critically examines the arguments in favour of adoption of an inquisitorial system and the benefits that are claimed to flow from it. It is seen that though inquisitorial system is better at arriving at a less erroneous verdict, adversarial system ensures procedural fairness to the parties, especially the accused. Moreover, India's institutional preparedness to shift to a judge-controlled procedure under the inquisitorial system without jeopardizing the rights of the litigants is also doubtful. Therefore, instead of a shift to inquisitorial system, the article proposes reformation of the existing system so that it satisfactorily meets the ends of criminal justice. In that regard, the article highlights two out of the many issues that plague India's criminal justice system -- failure to ensure a level-playing field for the indigent accused and failure to adequately protect the rights of victims – and suggests solutions for the same.

Introduction

The Union Ministry is reportedly mulling wide-ranging changes to the criminal laws of the country by amending the Indian Penal Code, 1860, the Code of Criminal Procedure,

* Student, The National University of Advanced Legal Studies, Kochi.

1973 and the Indian Evidence Act, 1872.[1] One of the changes proposed is the adoption of inquisitorial system of criminal justice or at least some elements of it.[2] The expectation is that a judge-controlled procedure of the inquisitorial system will result in speedy disposal of cases and larger number of convictions than the lawyer-led trials of the adversarial system.[3] In fact, the Malimath Committee Report of 2003 also recommended a shift from the adversarial to the inquisitorial model.[4]

This article aims to examine whether adoption of the inquisitorial system would be an appropriate measure to cure India's ailing criminal justice system and whether higher conviction rate is a goal worth pursuing at the sake of fair trial rights of the accused. A change in the criminal justice system will have implications beyond the court-room; it has the potential to impact popular perception of legitimacy of the criminal law process.[5] An important issue to be considered is India's preparedness to deal with the consequences of giving more power to the judges, particularly for the rights of the parties involved. Instead of a wholesale shift to inquisitorial model, the author suggests reformation of the existing system in order to satisfactorily meet the ends of criminal justice.

Adversarial System *versus* Inquisitorial System – A comparison

Adversarial system and inquisitorial system are the two major criminal justice systems practiced in the world. While adversarial system emerged from the common law tradition, inquisitorial system owes its origin to Roman law and is adopted by civil law countries.[6] Though both systems have as their primary objective punishment of those guilty of crimes, the method adopted to achieve this objective differs greatly.

In an adversary system, as the name suggests, the trial is envisaged as a contest between the two parties (the prosecution, representing the victim, and the defence) who strive to establish their version of facts as the truth with the help of evidence. The prosecution is required to prove the guilt of the accused beyond reasonable doubt.[7] The accused is also

given fair opportunity to defend himself and is also given important rights like the right to remain silent.[8] In an adversarial trial, it is the parties that control the narrative presented before the court; they decide the evidence to be presented, the witness to be examined etc.[9] Adversarial system lays emphasis on live testimony of witnesses before the court and their cross-examination by the opposite side.[10] Thus, adversarial system is based on the premise that 'contested and oppositional presentation of facts best reveal the truth'[11].

The role of the judge in an adversarial trial is limited and he is often equated to a neutral and passive umpire.[12] He is not involved in the pre-trial investigation. He also does not control the evidences to be presented and the witnesses to be examined. His role is limited to deciding the case in favour of one side or the other solely based on the controverted facts and evidences presented before him by the partisan advocates. He has no latitude to go beyond the evidence placed.[13] Therefore, adversarial system results in a party-controlled criminal trial.

Coming to inquisitorial system of criminal justice, we see a role-reversal. Here the judge plays an active role to determine the truth. The trial is preceded by an elaborate pre-trial investigation under the supervision of '*juge d'instruction'* or the investigating magistrate.[14] The investigation is conducted by the state officials in a neutral and objective manner by collecting both evidences that favour the accused and those against him.[15] In order to properly conduct investigation, the investigating magistrate is empowered to issue warrants, direct search, arrest the accused and examine witnesses.[16] The findings of the investigation are presented as a dossier to the trial judge.[17] Therefore, the judicial officials, rather than the parties determine what information should be presented in the trial, in what order, and for what purpose.[18]

18 Ainsworth, *supra* note 5, at 81.

Before the trial judge also, the parties' role is limited to suggesting the questions to be put forward to the witnesses.[19] The actual questioning of witnesses is mainly done by the judges and the parties have very little say in the mode and manner of examination of witnesses. However, more than live testimony of witnesses, the judge largely relies on written statements.[20] The judge in an inquisitorial trial is therefore not tied down by the narratives presented by the parties. He is the ultimate fact-finder.[21]

There has always been a debate as to which of the two systems is preferable. While inquisitorial system is lauded for its ability to arrive at less erroneous verdicts, the adversarial system is perceived to be better at ensuring procedural fairness to the parties, especially the accused.[22] However, now very few countries follow the pure model of either adversarial or inquisitorial model. Now what we see is a convergence of legal systems – countries with inquisitorial systems are borrowing elements of adversarial system and vice-versa.[23] As Prof. Goldstein stated:

"It is becoming increasingly apparent to criminal justice scholars that single theory models of criminal procedure – whether termed inquisitorial or adversarial – are being stretched beyond their capacity by the phenomena they are designed to control. Virtually everywhere, formal systems of charge and adjudication cannot possibly be enforced in accordance with the premises underlying them."[24]

Why is there a Demand to Change India's Criminal Justice System from Adversarial to Inquisitorial?

From the limited information available from news reports, the reason behind the present proposal of the Union Ministry to adopt an inquisitorial model seems to be to address the issue of low conviction rate in the country. As per the latest available data of NCRB, the pendency of criminal cases in the court has reached its highest level since the turn of the 21st century.[25] This delay in disposing of cases is also evidenced by the large number of under-

trial prisoners languishing in jails.[26] The data also reveals that conviction rate is quite low in case of serious crimes like rape, rioting etc.[27] Even as far back in 2003, the Malimath Committee had noted that India's criminal justice system is virtually collapsing under its own weight as it is slow, inefficient and ineffective[28] and that people are losing confidence in the system[29]. One of the major recommendations of the Committee for remedying the situation was also adoption of inquisitorial system or at least certain elements of it.[30]

A major criticism against the adversarial system is the passive role played by the judge. Instead of endeavoring to ascertain the truth, the system requires him to confine himself to the facts and evidences presented by the parties, however faulty or convoluted they may be. The Malimath Committee Report noted:

"The Adversarial System lacks dynamism because it has no lofty ideal to inspire. It has not been entrusted with a positive duty to discover truth as in the Inquisitorial System. When the investigation is perfunctory or ineffective, Judges seldom take any initiative to remedy the situation. During the trial, the Judges do not bother if relevant evidence is not produced and plays a passive role as he has no duty to search for truth."[31]

In an adversarial system what the judge looks for is not truth but proof[32] and whichever side is able to put forward the best proof according to the evidentiary rules wins the case, regardless of whether it is the actual truth. Since the trial is envisaged as a combat between the two parties, each of them put forward only that evidence which favour them.[33] Such an approach fails to give complete presentation of facts and thwarts the discovery of truth. As a consequence, in many cases there seems to exist "a gap between judicial truth and what actually happened"[34]. This leads to many guilty persons escaping and sometimes innocent persons getting convicted. It is expected that a transition to an inquisitorial model with a judge-controlled investigation and trial will remedy this situation by enabling the judges to determine the truth without being tied down to procedural rules and parties' version of facts.

Another criticism usually raised against the adversarial system in India is the high standard of proof required to establish the guilt of the accused. This is proffered as another reason for the dismal rate of convictions. The standard of proof required is 'proof beyond reasonable doubt'. The Malimath Committee observed in its report that such a high standard of proof would make it difficult to secure the conviction of accused "on whom the burden is very little and who hires a very competent lawyer, while the Prosecution, on whom the burden is high, is very often represented by persons of poor competence."[35] The Committee, therefore, recommended a lowering of standard to the inquisitorial system's "the court's conviction that is true" that requires only the inner satisfaction of the Judge".[36]

Before proceeding to examine whether an adoption of the inquisitorial system is the most appropriate way to strengthen the criminal justice system in India, the author would like to point out certain faults in the Malimath Committee's arguments for a shift to an inquisitorial model. Firstly, it is important to note that India's criminal justice system is not truly adversarial but it contains some elements inspired from the inquisitorial system. Our criminal laws already contain provisions to enable a judge to play a more active role in a criminal trial. For instance, Section 311 of CrPC allows the court to examine any person as a witness even if he was not called as one by the parties. Similar power is given to the court under Section 165 of Evidence Act also. Section 319 of CrPC empowers the court to proceed against persons other than the accused if it appears from the evidence that such person/persons is also concerned in that very offence or in a connected offence. This section is premised on the doctrine *judex damnatur cum nocens* a*bsolvitur* (judge is condemned when guilty is acquitted).[37]

More importantly, the presence of Section 313 of CrPC puts into doubt whether the judge in a criminal trial in India is expected always to be a silent spectator to the contest between the two sides. This section permits the court to question the accused at any stage of a trial without previously warning him, with a view to enable the accused to personally explain the circumstances appearing in evidence against him. The section also imposes a duty on the court to question the accused generally on the case after the witnesses for the prosecution have been examined and before he is called or his defence. While the statement of the accused under Section 313 is not substantive evidence, according to Section 313(4), it may be taken into consideration at the trial.[38] Section 313, hence, makes way for a direct interaction between the judge and the accused in order to get a wholesome picture of the

35 Malimath Committee Report, *supra* note 4, at 125.

36 *Id,* at 270.

37 *Arun Dube v. State of Madhya Pradesh*, 11991 Cri LJ 840, 845 (MP) (India).

38 PILLAI, *supra* note 7, at 447.

facts.[39] However, the courts have repeatedly warned that the above-mentioned sections should not be regarded as authorizing an inquisitorial interrogation of the accused.[40] The judges should make use of these sections *"without unduly trespassing upon the functions of the Public Prosecutor and the defence counsel, without any hint of partisanship and without appearing to frighten or bully witnesses".*[41]

Secondly, the Malimath Committee's recommendation to lower the standard of proof to establish the guilt of the accused will constitute a violation of India's obligation under Article 14(2) of ICCPR which makes it a human right for a person charged with a criminal offence to be presumed innocent until proven guilty according to law[42]. Commenting on this right, the Human Rights Committee stated that by reason of presumption of innocence, the burden of proof is on the prosecution which has to prove the charges beyond reasonable doubt.[43] Therefore, convicting an accused without proving his guilt beyond reasonable doubt will constitute a serious violation of human rights.

The Malimath Committee's recommendation to adopt the standard of proof used in French and German inquisitorial systems i.e. 'the court's conviction that is true' seems to be based on a wrongful understanding that this standard is same as 'proof on preponderance of probabilities'. As the International Commission of Jurist pointed out, what this standard actually refers to is the free reign given to judges in an inquisitorial system to assess the legality, admissibility, and persuasive force of evidence according to their inner conviction, without being tied down by evidentiary rules as in the adversarial system.[44] When it is said that the guilt of the accused is determined based on the 'inner conviction of the court', what it actually demands is a persuasion of the court, based on its free conviction, that the accused is guilty beyond reasonable doubt.[45] Hence, the standard of proof required in both adversarial and inquisitorial system to convict the accused is the same.[46] It is also to be noted that the European countries that have adopted the inquisitorial system are also

45 *Id.*

46 *Id.*

signatories to the ICCPR and are also bound by the European Convention on Human Rights, both of which require a proof beyond reasonable doubt to rebut the presumption of innocence of an accused.[47]

With these pointers in mind, the next section critically examines the benefits to India's criminal justice system that are claimed to flow from a shift to an inquisitorial system.

Is Inquisitorial System a Panacea to India's Ailing Criminal Justice System?

According to Malimath Committee, shift to a criminal justice system that has 'quest for truth' as its focus will *'reduce the level of criminality in society by ensuring maximum detection of reported crimes, conviction of the accused persons without delay, awarding appropriate punishments to the convicted to meet the ends of justice and to prevent recidivism'*[48]. The committee proceeded on the rationale that giving judges investigative powers and more control over the trials will lead to higher rate of conviction. One cannot help note the fact that securing higher rate of convictions seems to be the primary concern of the Committee and rights of the accused takes a back-seat. No doubt, determination of guilt is the main objective of any criminal law process. However, in the pursuit of this objective, considerations of ensuring a fair trial and protection of rights of the parties, especially the accused, should not be ignored.

Inquisitorial system is definitely preferable to the adversarial system in terms of the latitude given to the judge to find out the truth for himself, instead of being subjected to the materials presented by the partisan advocates. His control over the entire process of trial and investigation helps to ensure that important evidences are not overlooked and that the trial process is not unduly delayed by the dilatory tactics adopted by the counsels. However, with an active judge taking center-stage, there also comes the danger of departure from impartiality and objectivity that is expected from a judge. This is because when the judge plays the dual role of an investigator and a judge, it makes it difficult for him not to be prejudiced against the accused at the start of the trial.[49] Moreover, the limited role of the defence counsel in an inquisitorial system makes it even more difficult to persuade the judge to give due weight to the exonerating factors. That inquisitorial system allows for a greater scope of bias was also expressed by Prof Lon L. Fuller and according to him, "an

47 Convention for the Protection of Human Rights and Fundamental Freedoms (European Convention on Human Rights, as amended) (ECHR) art 6(2); ICCPR (n 42).

48 *Malimath Committee Report, supra* note 4, at 21.

49 Adele, *supra* note 13, at 7.

adversary presentation seems the only effective means for combating this natural human tendency to judge too swiftly in terms of the familiar that which is not yet fully known"[50]. His proposition was later confirmed by an empirical social experiment conducted by two professors of psychology and a professor of law which suggested that adversary evidentiary presentation is better at overcoming the biasing effect of pre-trial expectancies about a defendant's guilt than the inquisitorial model.[51]

It is also said that adversarial system does a better job in securing procedural justice.[52] Procedural justice is different from substantive justice. While the latter occurs when there is an accurate determination of facts and application of law to the facts, the former occurs when the litigant is satisfied that the system has operated in a fundamentally fair manner.[53] Thus, an individual may feel that he has been treated fairly even when the judgment actually went against him. Similarly, a person who has won the case may not be satisfied with the system if he feels that he has not been treated fairly.

Experiments conducted by social psychologist Tom Tylor suggests that procedural justice or feeling of 'being treated fairly' has three components – (i) the party felt able to give voice to their side of the story; (ii) the adjudicator gave evidence that they had been listened to; and (iii) throughout the process, the party felt that they were treated with dignity and respect. Inquisitorial system, with its judge-controlled procedure, provides limited opportunity for the parties to shape their cases. The judge decides what information are relevant and written witness statements are preferred over oral examination of witnesses. All these contribute to the parties ending up feeling totally excluded from the trial process. In contrast, adversarial system provides litigants a greater control in shaping the narrative through their lawyers. Witnesses are also examined live before the court and this gives them a chance to tell their story directly. As a result, parties' perception of procedural justice is said to be greater in an adversarial system.[54]

Further, shifting to an inquisitorial model necessitates an examination of India's preparedness for the same. Giving judges more power will have implications for the entire system, especially for the rights of the accused. Safeguards need to be created in order to check the possibility of abuse of power by the judges. It is highly doubtful whether our

existing institutions and laws are capable of facilitating a transition to inquisitorial system without jeopardizing the rights of the litigants. It is also wrong to assume that a shift to an inquisitorial system will make India's criminal justice system more efficient when other deeper-rooted causes for its failure, unconnected to the type of system, are left unaddressed. These include lack of resources, both in terms of funding and personnel, inefficient police investigation, corruption, confession-oriented approach, police torture etc.[55]

Finally, whether we adopt an adversarial or inquisitorial system, it is of utmost importance that the system complies with the human rights principles. As the International Commission of Jurists observed: "*Human rights must be the benchmark for any criminal justice system... the rights of the accused must be at the center of all proceedings, and the rights of the victim must be protected at all stages*"[56]. When the Malimath Committee recommended lowering of safeguards available to the accused in order to secure greater conviction, it proceeded on the wrongful assumption that all accused are well-informed of their rights and are capable of engaging counsels to defend their case.[57] This is anything but the truth. A large number of criminal defendants and prisoners are poor who are unaware of their rights.[58] Even if securing higher rate of conviction is assumed as the aim of an effective criminal justice system, lowering the protections available to the accused is not the right way of achieving it, taking into consideration the inherent imbalance in the position of prosecution (backed by the state apparatus) and the accused, in terms of power and resources.[59] It is interesting to note that India is reconsidering the Malimath Committee's recommendation to adopt inquisitorial elements at a time when many countries that were traditionally following the inquisitorial model are shifting to an adversarial system of criminal justice in order to infuse greater procedural fairness.[60] In fact, the Malimath committee had also admitted that the fair trial rights of the accused are better protected in an adversarial system.[61]

Given the uncertainty about the supposed benefits that may flow from adoption of an inquisitorial system and the lack of institutional preparedness to make such a shift, a better alternative would be to reform India's existing criminal justice system by infusing it with dynamism and efficieny. Apathy of the judges and the consequent judicial gaming at the

expense of justice[62], no doubt, lead to acquittal of guilty persons and conviction of innocents. As mentioned earlier, Indian criminal laws already contain provisions to enable the judges to play an active role during criminal trials by calling for witnesses and questioning the accused in order to get a complete picture of facts. However, as Justice Sudhansu Dhulia commented, these provisions remain largely a dead-letter as it is very rarely that a trial judge calls upon persons as witnesses on their own.[63] Judges must shed this reticence when the need demands and must endeavor to "discover the truth and advance justice"[64] by making use of the powers given to them by the criminal laws. However, whenever he endeavors to don such an active role, care must be taken not to step into the shoes of the prosecution or the defence counsel. He must act "without any hint of partisanship and without appearing to frighten or bully witnesses"[65]. Suitable training must be imparted to judges, especially at the trial level, on how to make use of these provisions at appropriate times without affecting the impartiality and objectivity expected from them and without prejudicing the rights of the litigants.

Suggestions for Reforms

A shift to an inquisitorial system, without adequate safeguards and institutional reforms, is likely to do more harm than good. However, this is not to suggest that the adversarial system practiced currently in India is without any problems. In this part of the article, the author highlights two of the many issues that plague the criminal justice system of our country – *first*, failure to ensure a level-playing field for the indigent accused and; *second*, failure to adequately protect the rights of the victims.

Adversarial system of criminal trial proceeds on the assumption that "State using its investigative resources and employing competent counsel will prosecute the accused who, in turn, will employ equally competent legal services to challenge the evidence of the prosecution"[66]. In other words, the system pre-supposes equality of arms between the parties involved and the truth is expected to emerge from their confrontational presentation of facts. Hence, if the parties are not equally situated in terms of resources, the narrative presented before the court is likely to be one-sided, resulting in factually wrong decisions. In India, it is a known fact that many of the accused persons are poor and lack resources to engage the

66 *Supra* note, 59.

services of a competent lawyer.[67] Many of them are also uneducated and therefore incapable of defending themselves in the court of law and asserting their constitutionally guaranteed rights.[68] Without ensuring adequate representation for the accused, much of the ideals that our criminal justice system seeks to achieve, like equal rights, fairness, and accuracy remain as just ideals. In order to remedy this situation, our laws confer on the accused the right to get legal aid for his defence at State's cost.[69] However, more often it is seen that the defence counsels employed by the government for the accused do not take much interest in their case due to the low amount of honorarium paid and lack of any incentive from the government.[70] As a result, even state legal aid fails to create a level-playing field for indigent accused. In such situations, the judge should play an important role to ensure that the rights of the accused are adequately safeguarded during both the investigation and the trial phase. Also, the government must take steps to strengthen the legal aid service by creating incentives for competent lawyers to come forward.

The second issue that the author would like to focus is on the limited participation of victims in the criminal proceedings. Earlier the author mentioned about how the adversarial system gives more control to the litigants to shape their case than the inquisitorial system. However, in practice, as litigants are represented by the lawyers before the court, the creation of legal narratives is often done by them and the litigants have very little say in it. The lawyers carefully prepare the answer that their clients need to say before the court, as a result of which the litigants are deprived of the ability to tell their story in the terms that they think are significant.[71] Such an approach is especially disadvantageous to the victim, whose role in the criminal justice process in India, is limited to that of a prosecution witness.[72] Even though the victim is the prime source of evidence and we rely on them for reporting the crime, representation of victim's interest and their participation in the trial is very limited.

The victims rely on the prosecutor to prosecute their case with efficiency and to secure them justice. However, the role of a prosecutor is perceived as a minister of justice and it is considered that his duty is to place before the court whatever evidence is possessed, whether it is in favour of or against the accused.[73] The court in several cases has opined that the 'impartiality of prosecutor's conduct is as vital as the impartiality of the court itself'[74] and that he must not be overly concerned with securing convictions[75]. However, such an approach may run contrary to a victim's expectation from his/her prosecutor. Added to this is the prosecution lethargy resulting from overload of cases, unsatisfactory remuneration and lack of competency. The option of private prosecution is also limited in India as CrPC requires the private prosecutor to act under the directions of the public prosecutor.[76] All these lead to a sense of dissatisfaction among the victims who feel that their grievances are not adequately represented by the prosecutor. Their role during the trial is also limited to answering questions put forward by the counsels. In this respect, inquisitorial system seems to be better accommodative of the interests of the victims as they play a more active role in the investigatory and trial stage. They get an opportunity to say their version of the story directly to the judge. 'The victim is given voice, validation and respect in more, and better, ways than in the adversarial system.'[77]

In order to meet the expectations of victims from our criminal justice system, several steps can be taken. One is to institute a mechanism to enable the victims to complain about the unsatisfactory performance of their prosecutor like, failure to present crucial evidences or to adequately represent their interest before the court. There is also a need to give more participatory rights to the victims. Today we see the sorry situation of victims receiving little to no communication about the status of their case from the prosecutor and they having to helplessly depend on case diaries to know the progress of their case.[78] In this regard, Malimath Committee's recommendation is truly notable. It recommended giving the victims the right to participate in the proceedings which includes right to advance arguments after the prosecutor, right to know about the progress of the investigation and right to move to the court to ask for further investigation etc.[79]

78 Sharma, *supra* note 73, at 102.

79 Malimath Committee Report, *supra* note 4, at 270-271.

Lastly, the author also suggests the infusion of restorative justice principles while prosecuting crimes. Restorative justice essentially calls for restoring the parties, especially the victim, to the position that he/she occupied before the commission of the crime. While the usual sentencing practices may fulfill the state's interest in creating deterrence, it may not alleviate the physical/psychological impact of the crimes on the victim. Though India has taken some steps in this direction by introducing victim compensation scheme[80], it is cumbersome and largely inadequate to practically help the victim.[81] Restorative justice requires giving the victims a say in the sentencing process. Other means of achieving restorative justice like victim-offender mediation, family or community group conferencing, community service[82] are also worth considering. Adopting restorative justice principles will not only repair the injuries and trauma suffered by the victims and improve their satisfaction of the criminal justice system, but it will also help to ease the pressure on our over-crowding prisons.

Concluding Remarks

Adoption of an inquisitorial system is not going to be a panacea to all the problems that currently plague India's criminal justice system. Instead, it may give rise to new issues like abuse of power by courts, derogation of the rights of accused etc. Therefore, a better approach would be to reform and strengthen the existing system by tackling issues like crunch of resources and man-power, inefficiency in police investigations, corrupt practices etc. Moreover, while safeguarding the rights of the accused, it is important not to forget the victims. Their confidence in the criminal justice system must be improved by ensuring their adequate representation and participation and not by achieving higher rate of conviction and lowering the safeguards available to the accused.

Analyzing the Enforceability of Force Majeure Clause in Light of COVID-19

Rishabh Soni*

Abstract

Now with the spread of COVID-19 and impositions of lockdown in India, the economy has also suffered; the entire supply chain has broken and businesses are finding it difficult to survive. In these tough times, one most talked about remedy in various types of contracts affecting Businesses, rent agreements, etc., is the emergence of force majeure clause by parties to do away with their contractual liabilities.

Many companies always have a force majeure clause in their agreements to survive during tough times like these. Force majeure clause saves the bonafide party who was very much interested in performing its obligation under the contract but was not able to fulfill its part due to certain factors beyond their control and without any negligence on their part. There are also cases where more and more businesses though not having any force majeure clause in their agreements but are still coming forward to claim the remedy on account of the contract becoming impossible to perform and thus claiming the remedy of frustration of contract.

This paper tries to find out the circumstances under which courts will allow businesses to claim the force majeure remedy in discharging their liability under a contract. Paper also tries to compare the recent judgments given by Court in India and the United States in analyzing the test which needs to be satisfied before granting the remedy of force majeure. The paper also discusses the possible future tussles between insurance companies and businesses in settling claims and losses which the businesses have suffered on account of COVID-19.

* Student, Amity Law School, Delhi.

INTRODUCTION

The impact of novel coronavirus (COVID-19) pandemic has not only affected the physical health of humans but at the same time it has also impacted the health of economies of all the nations, and as a result of which businesses are finding it difficult to survive and most of them are unable to fulfill their contractual obligations. Restrictions on travel and imposition of lockdowns have impacted all the industries and more particularly international trade and trade of non-essential items have come to a standstill. In these tough times, the term which is gaining importance as a remedy seeker for businesses is the force majeure clause in business contracts.

Now after the lockdown has started to partially open in a phased manner, more litigations are coming on the subject matter of enforcing this force majeure clause as a defense by businesses to abstain from liability arising from contractual obligations We are seeing that many suppliers either want their contractual obligations to be delayed or their contract should be terminated. Many companies are citing reasons like restriction in movement, stoppage of production, increase in costs, labor shortage, and broken supply chains as the main factors for enforcement of force majeure as a remedy. Even big companies like Gateway terminals, Adani ports, Indian oil, Mangalore refineries, etc. have already invoked force majeure clause and many more are likely to join them.[1] The force majeure remedy which according to many was only a part of formality and rarely used remedy is now proving to be very fruitful and everyone is flipping their contracts to look for force majeure clause.

Many countries worldwide are also issuing force majeure certificates to firms, for instance on Feb 17, 2020, the China Council for the promotion of International Trade (CCPIT), revealed that it had issued about 1600 force majeure certificates to firms in 30 sectors, covering contract worth over $15 billion.[2] Even the Indian government through the department of expenditure, Ministry of Finance vide its order dated Feb 19, 2020, issued an office memorandum for procurement of goods. This memorandum states that COVID-19 could effectively be covered under force majeure clause because it is a natural calamity and directed the departments to enforce the same.[3]

Meaning of Force Majeure

The term 'force majeure' has been defined in Black's law dictionary[4] as "an event or effect that can neither be anticipated nor controlled". Force majeure is being used as a clause in contractual agreements from the past, but it has started to gain importance only in recent times after the outbreak of the pandemic. *Force majeure is a contractual provision to deal with uncertain situations due to which contractual obligations could not be performed and these situations can't be acknowledged at the time of entering into the contract*. Generally, a force majeure clause provides a temporary reprieve to parties from performing their obligations under the contract if the events mentioned in the force majeure clause are satisfied.

Entire Jurisprudence on force majeure has been beautifully summarized by Justice RF Nariman of the Supreme Court in the case of *Energy Watchdog v. CERC*.[5] Generally, a force majeure clause includes events beyond the control of parties to contract like an act of God, earthquake, fire, flood, terror attack, epidemics, etc. and the circumstances which are necessary to be fulfilled for the applications of this particular clause and also the aftermaths of enforcement of this clause like whether the contract will be permanently frustrated or is being only delayed for a particular period. In the Indian context, although there is no direct mention of the term force majeure, some linkage to it can be drawn from the concept of contingent contracts[6] as laid down under the Contracts act. Section 32 mainly deals with a situation when a particular contract is contingent on happening of an event and when this event becomes impossible then indirectly contract also gets impossible to perform. Force majeure clause is a very important aspect of any contract and its absence can lead to a very difficult situation for parties. This clause is now being seen to be a part of various types of contracts like power purchase and manufacturing contracts, real estate contracts, supply contracts, etc.

AM), https://doe.gov.in/sites/default/files/Force%20Majeure%20Clause%20-FMC.pdf.

4 *Meaning of Force Majeure*, BLACK'S LAW DICTIONARY (May 22, 2020, 01:15 PM), https://blacks_law.enacademic.com/11167/force_majeure.

5 Justice Nariman in *Energy watchdog v. Central Electricity Regulatory Commission and Ors.*, (2017) 14 S.C.C. 80 (India), quoted "Force majeure" is governed by the Indian Contract Act, 1872. In so far as it is relatable to an express or implied clause in a contract, it is governed by Chapter III dealing with the contingent contracts, and more particularly, Section 32 thereof. In so far as a force majeure event occurs de hors the contract, it is dealt with by a rule of positive law under Section 56 of the Contract".

6 Section 32, The Indian Contract Act, 1872, No. 09, Acts of Parliament, 1872 (India).

Method of Enforcing Force Majeure Clause and the Effect of it on Contracts

Generally in the original contract, only the method of enforcing the force majeure clause should be mentioned and it is up to parties to bilaterally agree on the method for its enforcement, but most of the times parties prefer to enforce this clause by giving notice to the other party and intimidating him/her about the enforcement of same. This notice can be given by one party informing the other about the occurrence of such an event or it can also be given if the force majeure event continues to happen for a prolonged period. These two methods of enforcement will differ with different contractual agreements. Now coming to the effect of this enforcement party enforcing it generally has 2 remedies:

a. Party will be allowed an extension of the period to fulfill his contractual obligations.
b. Party will be allowed to terminate the contract and settle their monitory concerns.

Alternate Remedy Available to Parties in case of No Force Majeure Clause in their Contract and the Doctrine of Frustration of Contracts

There are various cases in which the original contractual agreements between parties do not have any force majeure clause and yet they are unable to fulfill their contractual obligations. So in these particular cases, the only remedy which is generally available with the parties is that of the frustration of contract as governed by Sec. 56.[7] Section 56 is based on the maxim *"les non cogit ad impossibilia"* which means that the law does not compel a man to do what he cannot possibly perform. This doctrine seeks to protect the interest of the party who has suffered on account of the subsequent impossibility of the subject matter of contract.[8] It means that every contract is based on the assumption that parties to contract will be able to perform the same when the due date of the performance arrives. Now if because of some event, the event has either become impossible or unlawful, then the contract becomes void, and liability of the party will also be terminated and the essence of the contract will be frustrated.

The courts in India have held in numerous cases that the word "impossibility" as used in Section 56 should always be interpreted in a practical sense and not in the literal and strict

7 Section 56, The Indian Contract Act, 1872, No. 09, Acts of Parliament, 1872 (India).

8 *Ibid*. A contract to do an act which, after the contract is made, becomes impossible, or, by reason of some event which the promisor could not prevent, unlawful, becomes void when the act becomes impossible or unlawful.

sense and courts should always try to ensure that the object of a contract is fulfilled even if certain changes need to be done. In the leading English law case of *Tsakiroglou & Co. Ltd. v. Nobel Thorl GmbH,*[9] House of Lords observed that even though the contract had become more onerous to perform, it was not fundamentally altered and in this case, the contract was very much possible to perform but at the cost of an increase in freight price.

Moreover, the majority of eminent reference work on contract law has concluded that a rise in cost or expenses has been stated not to frustrate a contact.[10] Thus, to justify this statement a contract will always come under the purview of Section 56 even if it is not an absolute impossibility, but the contract has been fundamentally changed. This particular principle was given by the court in the *Satyabrata Ghose* case.[11] Further, in this case, the Court held that the changed circumstances make the performance of the contract impossible and the parties are absolved from further performance of it as they did not promise to perform an impossibility.

Now the question arises as to what will happen to partial obligations that have been performed before the contract became fundamentally frustrated. To this particular question, Indian law is very much clear with no doubts that if a particular contract is declared void after entering into it then it will be governed by the concept of restitution as laid down in Section 65.[12] So basically Sec. 65 provides that a party who has received any advantage before the contract became void, then he/she is bound to restore that benefit so that parties can be put in the same position as they were in if the contract had never been executed.

A Hypothetical Example Highlighting Force Majeure Clause in a Contract

Company A of (Ludhiana) entered into a contract with Company C of (Mumbai) on 15 February 2020 for the supply of 600 tons of steel. For fulfillment of delivery, a time period of 2 months was given. There was also a force majeure clause in the contract entered in between both the parties in which they both agreed that in case of any uncertain event beyond their control affecting the subject matter of the contract, a grace period of 1 month will be given. But this was subject to notice being given by party affected within 10 days from happening of that event. Now on 25th March 2020 nationwide lockdown was announced by the government, thereby affecting the supply of non-essential goods. As a

9 *Tsakiroglou & Co. Ltd. v. Nobel Thorl GmbH*, [1962] AC 93.

10 JOSEPH CHITTY, CHITTY ON CONTRACTS (31st ed., 2012).

11 *Satyabrataghose v. Mugneerambangur & Co. & Anr.*, 1954 S.C.R. 310 (India).

12 Section 65, The Indian Contract Act, 1872, No. 09, Acts of Parliament, 1872 (India).

result of this event A's consignment was struck for about 20 days on the border of Gujarat and Maharashtra. On 13th April 2020, A sent an email to B conveying him about the actual situation and enforcing the force majeure clause and demanding grace of another 1 month as the consignment was sent back to Ludhiana (Punjab). So now in this particular case, A will be allowed to enforce the force majeure clause as the delay was not in his hand and he made all possible efforts to fulfill the contractual obligations on his part.

Exceptions to the Applicability of Force Majeure Clause in Contracts

Generally, force majeure clauses are applicable without any restrictions, but at the same time, a party cannot hide its negligence and mal intention behind the force majeure clause. So where the non-performance is caused by the usual and natural consequences and not the uncertain consequences which are beyond the control of parties, their force majeure cannot be enforced under those cases. Further force majeure can also not be invoked simply because the contract has become financially and commercially more difficult to perform[13]. So parties taking shelter under the force majeure clause need to convince the court that the force majeure event was beyond their control and the event could not be stopped even after ensuring due diligence & taking all possible steps. These steps will vary as per the facts of each case. However, generally, these include looking for alternate suppliers, an alternate mode of transport and funding, etc. Now broadly analyzing, the event of force majeure must pass the following 3 test:-

a. Unpredictability- It involves that the event amounting to force majeure should be unpredictable and unforeseeable.
b. Irresistibility- The event of force majeure must make the execution of contractual obligations impossible.
c. Externality- It means that the force majeure event must not be created by the default or negligence of the party.

The Increasing Possibility of Businesses Claiming Loss Caused to them from Insurance Companies

There is a greater chance of various big companies claiming the losses suffered by them from insurance companies and trying to bring the claims within the ambit of business interruption insurance policies. It would however be very interesting to see in the coming

13 *Punj Sons Pvt. Ltd. v. Union of India,* A.I.R. 1986 Del 158 (India).

times as to what stand courts take on these claims by companies. Now if we look at the business interruption policies in general, we find that these policies can very much be issued as a separate stand-alone policy.

But in India these are incorporated in Fire policy or machinery loss policy and offer protection to the net profit, compensating for the increase in the working costs, etc.[14] So for the business interruption policy to cover the loss on account COVID-19, experts believe that it is necessary for the property insured to suffer physical damage due to covered perils, and it is very unlikely that such policies would cover losses caused due to COVID-19.

It also needs to be noted that the courts in the U.S have held that if a particular condition deprives the use of insured property, then that particular condition will be covered in sanctioning the claim for the loss occurred to the property. But the similar reasoning for approval of claims will not be applicable in India, firstly because of the specific wording in the insurance contracts in India and secondly US decisions would only be applicable if there is a presence of COVID-19 at the insured property, it also needs to be looked into here is that here in India most of the businesses are suffering losses not on account of being closed as a result of the presence of COVID-19 on their premises, but due to lockdown restrictions being imposed by the government.[15] Now we need to see in the coming times what view will the courts adopt in these matters and there may be some cases in which courts also adopt liberal view.

The Courts of the U.S.A and Force majeure

Many US states have given a narrow interpretation to force majeure as a remedy and have clarified that force majeure will qualify as a defense only if the contract specifically mentions for it to include events like pandemics etc. However, the state of Idaho have interpreted force majeure clauses more broadly and in a recent Idaho Supreme Court case, the court found that denial of building permit will be qualified as a force majeure event where the contract specially defined to include other events which are beyond the control of parties to contract.[16] Another major consideration that courts in the US are giving is that of foreseeability of the event. It is very much clear that COVID-19 as such cannot be foreseen

14 Manish Jha, *An Expert Explains: Can Business Interruption Insurance Cover COVID-19 Claims?*, THE INDIAN EXPRESS (April 16 2020, 07:57AM), https://indianexpress.com/article/explained/explained-can-business-interruption-insurance-cover-covid-19-claims-6363831/.

15 *Ibid.*

16 Steffan Hasselblad, *How To Tell If COVID-19 Qualifies As A Force Majeure In Your Contracts*, IDAHO BUSINESS REVIEW (June 16, 2020, 01:30 PM), https://idahobusinessreview.com/2020/06/16/how-to-tell-if-covid-19-qualifies-as-force-majeure-in-your-contracts/.

from before and also the majority of cases will come under it. But at the same time courts are not granting defense of force majeure to contracts related to supply of medical goods and contracts entered before December 2019.

Moreover like the recent judgment of Delhi High Court, courts in the US are also not giving strict meaning to the term impossibility in performing the contract and courts in the US have found that an even a 40% change in crop price throughout a single growing season did not make performance impossible.[17] Now concerning the occurrence of an event on account of an act of god, no court yet has examined whether a pandemic such as COVID-19 will qualify as an act of god.

Some Important Recent Judgments of Courts in India Interpreting and Deciding the Ambit of Force Majeure Clause in Light of COVID-19

The first major case interpreting the provision of force majeure after COVID-19 was the case of *Halliburton Offshore Service v. Vedanta Limited & Anr.*[18] (Delhi High Court). In this particular case, in the year 2018, Petitioner Halliburton was granted a contract by Vedanta for integrated development of oil and gas fields in Rajasthan for which he also furnished bank guarantees and the petitioner was given the time by 31st January 2020 to complete the project, which was eventually extended and the date was 31st March 2020.

The petitioner further demanded an extension, however, he was denied the same, and then on March 18, the petitioner sent a letter to respondents stating that he is invoking force majeure clause due to COVID-19 for extension of the deadline to complete the project. However, to these response respondents shown their disagreement and enforced bank guarantees against the petitioner which was extended by the petitioner during the signing of the contract. Petitioners moved Delhi high court to restrain the defendants from invoking bank guarantees.

The main issue in this particular case was whether the Petitioner can restrain respondents from invoking bank guarantees in case of non-acceptance by respondents for extending the deadline regarding completion of the project due to ongoing COVID 19. Delhi High Court noted that the alleged non- performance of the contract cannot be executed on the ground of force majeure as claimed by petitioner. *The Court acknowledged that COVID-19 was very much a force majeure event, but at the same time also held that delay on account of*

17 *Ibid.*

18 *Halliburton Offshore service v. Vedanta Limited & Anr.,* (O.M.P (I) COMM) No. 88/2020 & I.As 3696—3697/2020 (High Court of Delhi, 20/04/2020).

the petitioner was not due to COVID-19 as petitioner was already given 2 extensions to complete the project and that too before the lockdown was announced by the government.

The Court also observed that simply enforcing COVID-19 as a force majeure clause will not absolve the liability of parties to contract and they need to show that the non-performance was the direct result of COVID-19 and therefore this is to be determined from facts & circumstances of each case.

The Court also gave few points which were to be considered in each case before granting the relief to the party claiming force majeure clause on account of COVID-19. These are

a. Conduct of parties before outbreak
b. Deadlines for completion in contract
c. Steps that were taken to complete the contractual obligation
d. Other compliances that were required to be made.

Another important judgment concerning the application of the force majeure clause in tenant-landlord dispute is the case of *Ramanand and Others v. Dr. Girish Soni and Another (Khan market case)*[19].

In this case also, the Delhi High court after analyzing various clauses of the contract entered in between landlord & tenant, came to the decision that as such there was no mention of force majeure event in the agreement, but still, on account of prevailing situations, the Court agreed to allow a time frame to the tenant to pay rent but rejected their request of quashing the rent for a period of lockdown.

Conclusion

Force majeure clause in contracts is proving to be of great help to genuine parties who have suffered without any fault on their party and it can very much be claimed as a defense by a party to contract to abstain itself whether temporary or permanently from performing the contractual obligation, but it needs to be seen here that there is no straitjacket formula which will be applicable in all cases of an force majeure event to save a party from fulfilling its contractual liability. Courts will always analyze the facts & circumstances of each case and will always look into the actual reasons due to which contract was not been able to be performed either temporarily or permanently.

19 *Ramanand and Others v. Dr. Girish Soni and Another,* C.M. APPL. 1848/2020 (High Court of Delhi, 21/05/2020).

After this, if the force majeure event was a reason for causing delay or termination then the court can allow the party to claim shelter under the doctrine of force majeure. But in today's time businesses relying on the force majeure, will be required to show and convince the courts that the actual reason for non-fulfillment of the contract was COVID-19 and they were having no fault on their part. Also, we have seen in the recent judicial pronouncements that courts have adopted a strict approach towards granting relief on account of force majeure clause in contracts, so business solely relying on force majeure needs to be extra cautious and should approach courts only when they have been genuinely affected by the force majeure event and not to hide for their mistake.

LOCKDOWN IN INDIA - A MAJOR SETBACK?

Ananya Sanjiv Saraogi* and Vallabhi Rastogi**

Abstract

The current pandemic situation created an outburst in the whole world. The Indian Prime Minister had announced nation-wide lockdown on March 24, 2020 which continued for at least three months. During this period, there was a complete shutdown of industries and employable sectors; the economy of the nation was drooping down. The employment rate has fallen down which has in turn largely affected the migrant workers. These daily wagers had experienced a turmoil as they could not be transported to their hometowns. Apart from the less privileged population, the other sect faced the issue of job security. The motto, "Unity in Diversity" has tumbled under an exception; celebration of festivals and pilgrimages are forbidden.

Meanwhile, the education system has adopted the advanced methods of teaching the students at the primary and secondary level. Technology is the new mode of transmission of knowledge, whether the mode is easily accessible or not is the current question. The efficiency of the teachers and students has been affected along with the comfort level shared between them. Currently, India is a developing nation where there are various districts and villages which lack the basic resources like electricity and network towers to avail the facility being provided by the country.

The source of information, in the current situation, is the media which has taken undue advantage of being in power to impart the information. The ethical and moral principles including unbiasedness has seemed to be washed away with the pandemic. Unnecessary detailing on areas of lesser concern and direct comments without authentication of data has become the main agenda of the media. This paper has tried to elaborately explain the above-mentioned issues and discuss the consequent sub issues.

Employment

Novel Coronavirus created a line of tension across the globe followed by the lockdown in nations including India. The Lockdown has created a great fall in the economy of the world and created a space of recession. The IMF had recently reported the future of Lockdown being worse than the Great Depression.

India has reportedly been handcuffed in a similar situation – complete lockdown has caused a big crisis for industries including MSMEs in this period of confinement. The non-functioning of various sectors which involve the workforce has thrown up a bigger question of the issue of employment. The economy of the nation has drooped and so has the rate of employment. According to reports by CMIE, there has been a great shoot up in the rate of unemployment in India from March 2020 to April 2020 by an approximate difference of 14.77%.[1]

Automobile, Aviation, Tourism and Hospitality sectors have witnessed major setbacks in economical graphs. The research would mainly be confined to the various kinds of employees affected by the pandemic and the future prospects of employment specially for the upcoming graduates.

Migrant Workers

The most affected in this lockdown period have been migrant workers – the vulnerable cult. The nation-wide lockdown had created a rift among the workforce; the lot was eager to return to their homeland. March 24, 2020 was the beginning of the series of lockdown and on March 29, 2020 the Ministry of Home Affairs had passed an order citing all the employers from the "*industries, commercial establishments or shops*" to pay the wages to the employees till the continuation of the shutdown. Several companies had approached the Supreme Court against MHA's order.

Meanwhile, upcoming weeks of first lockdown noticed a rush of migrant workers on the streets of Bandra (Mumbai). Similar events were witnessed in Gujarat and Delhi. The main demand of workers was to be transported to their hometowns, the reason being loss

1 Unemployment rate in India, CMIE Report
March 2020 – 8.75 % (India): 9.41% (Urban) and 8.44 % (Rural)
April 2020 – 23.52 % (India): 24.95 % (Urban) and 22.89 % (Rural).

of livelihood of these people, no food or shelter. Another reason was that the harvesting season had begun and these migrant families act as labour at minimal rates. State borders were closed and farms located on the borders faced problems related to workforce [2]. Due to shortage of labour, transportation of essential goods had become a major issue for the farmers.

India is the second most populated country in the world thereby, the majority of the work is dependent on man labour. Migrant workers belong to the labour force and form the backbone of the Indian economy. Transportation had been prohibited during lockdown thereby stalling them. Workers had adopted other means of travel i.e. by foot. These workers are the ones who either work on contractual basis or without contracts. Manufacturing industry, Tourism industry, or restaurants – workers are required in every form. But with reduction in demand of certain goods from the given industries due to the pandemic, requirement of labourers would also reduce.

Various events and government policies for the migrant workers are worth mentioning. Bengaluru had witnessed the most heart-melting incident. Post the announcement of lockdown, approximately 200 to 250 huts were burnt down and few days later 60 huts were set on fire in the district of Kalaburagi[3]. These huts belonged to those migrant workers who had departed before the lockdown.

Kerala had a positive impact on the migrant workers. The state comprises a larger population of this labour. '*Apna Ghar* project' has provided relief to the workers while *Roshni* has been helping migrant children to stay in school and also educate them [4]. Kerala has been the first state in the country to provide relief in the form of food and shelter to the workers in such dire situations.

Shramik Special Trains, Indian Railways initiative, was introduced to deport migrant workers since lockdown. Surprisingly, certain media reports have stated that migrant workers have been charged an amount they could not afford for which they had to take loan from their relatives but the news has not been confirmed yet. The current report that has been affirmed to is that more than half of the fares are being borne by the Central Government and the rest by the State.

2 Lola Nayar, Jyotika Sood, Yagnesh Kansara & Salik Ahmad, *100 Million and More Indian Jobs Are at Risk After COVID-19 Lockdown. Is Your Job Safe*, Outlook.

3 Mustafa Plumber, *Burning Huts of Migrants Taking Advantage of Lockdown Unfortunate: Karnataka HC*, Live Law.

4 Dr Jamon Mathew & Jose M A, *Political Interference for Migrant Welfare: An Evaluation of Kerala Model,* PKP., at 657, 660.

The Supreme Court has recently passed the MHA's order by stating that the payment of wages need to be paid to the employees after settlement with employers. If employers are unable to come to consensus with employees then the two parties may approach the requisite labour authorities. This has been a relief for migrant workers as their travel would be curbed in lieu of being paid thereby maintaining their safety and reducing the spread of virus.

Government might provide relief which may not be a permanent solution to unemployment and recovery of the economy.

Uncertainty in Jobs

Lockdown had caused a complete shutdown including workplaces. Assured by the extension of lockdown for a longer period, companies, enterprises adopted work from home concept. Various commercial and industrial establishments have also adopted the concept but there are no specific guidelines on the method of working for employees. In the whole chaos, employees currently are not assured of their job security. There are chances that the companies may sack employees as the current situation is worse than the recession period.

Even if there is job certainty, there has been salary cut for the employees. Most of the private companies have reduced income by 15% to 25% for the individuals earning a certain amount. The security or cleaning staff or lower income groups have been saved from the cut. But the recipients have suffered a backlash as they are facing multiple problems. While their food and shelter has been taken care of, rest of the income has to be spent for payment of fees or loan payment for the rest of the family specially if the individual is the sole breadwinner.

Salary cuts, work from home are some of the issues which do not guarantee job security but act as factors of job stagnancy. Untimely requirement from client's needs to be entertained by employees. There are no specific hours of work and various companies have also warned of laying off employees. In such scenario's individuals have been forced to think about changing their job but they are unaware of the unavailability of new jobs. Although new jobs may be provided but the joiners are required to stay on a standby period till the situations have not settled. This further creates grave concern for these individuals and the ones searching for a new job as they are unable to live on their savings.

Sectors that have barely been affected by the pandemic are the e-commerce platforms, medical including pharmacy, hospitals, telecom industry which have been functioning in the

crisis. While the e-commerce platforms faced difficulties in supplying goods to consumers due to lack of workforce, the healthcare sector has evolved with the maximum employment rate. Individuals working under this sector have not faced the wrath of unemployment or recession.

India has been in a dire situation in terms of economy and economists believe that V-shaped recovery is difficult to attain. Even though analysts have mentioned in a promising note that closing of the lockdown will flock to fresh demands for which workforce is required, the achievement of the same seems like a far- fetched dream.

Future Prospects

Rate of unemployment has been growing steadily thereby raising various questions in regard to the employment. Every year universities produce new graduates – the final human products for placement in best companies or firms. The lockdown period has proved to be a barrier for the graduates to present their skills as the placements of these students are currently on hold. Complexities would arise once normality comes into form as these graduates would have to prove their worth in the market which already consists of the players who have better experience and abilities to build the company. Inviting newcomers would involve high risk as every industry sector would require analysts, individuals with the capability to lift the economy.

India has adopted the policy for utilization of the local products so as to build the SMSEs. The campaign of Make in India has strengthened further due to pandemic.

Also, the graduates who have been looking forward to foreign education would have to search for various other online platforms to build their skills. Universities like Stanford and Harvard have introduced certificate courses for aspirants. The future of the upcoming generation is under question, their education is dependent on the income of the current generation and the economic growth of the nation.

Media

Media regarded as the fourth pillar of democracy was once restricted under the Vernacular Press Act, 1878 due to the criticism of the British. The Indian Constitution enabled these rights through Article 19(1) but the present media has been misusing these rights.

In the current pandemic situation, especially during the lockdown, the media was the bridge between the citizens and actions of the State. This further build responsibility on the

broadcasting channels, editors and journalists to be accurate and unbiased in their speech and written material. Publishing articles or reports require information and various media platforms have been unable to find the source due to the situation.

Due to COVID-19, monotony has befallen on the news. The reason could be the unavailability of resources, approaching well-acknowledged individuals who could throw light upon the issue. Technology has bridged the gap but the analysts or researchers providing data are unsure of the accuracy. The news related to society has all been based on mere instances and not proven facts and figures.

Neutrality

The fundamental principle in mass media and communication is neutrality – in research, speech and articles. Opinions are to be formulated by the readers, listeners or authors who are not employed by news publishing houses or media houses.

Presentation of the daily events have included media reporters; writers being biased in their display. News is to be portrayed on the basis of facts and figures or the major decisions taken by the government. The span of time the news is depicted is for a short while. While the figures on coronavirus have been regularly displayed due to the government guidelines, the rest of the information has always been biased i.e. in criticism or favour of the government. Only one side of the story is presented thereby hampering the construction of opinions in an individual's mind.

Reports on the reason for the spread of coronavirus had mainly targeted the religious cult which had arrived in Delhi for a meeting. The other factors like the infusion of people from infected countries and lack of awareness program among masses were not given due attention. Also, the cover over the plight of migrant workers were not being discussed during the initial days of lockdown.

Indian media has begun to lose the basic ethical standards to be followed to represent particular news. Usage of jargons have become common which has further degraded the quality of news and aroused misinterpretation among the masses.

This has led the media to the doors of law due to the misuse of their right. Alongside the fundamental right to speech are reasonable restrictions which involve not to defame an individual. Arnab Goswami, an Indian journalist and television news anchor, was charged for defamation for questioning one of the politicians from the opposing party over silence on the lynching case. Recently a legal notice of defamation was issued against a media

house for portraying an actor's death as an act of cowardice [5].

Questions raised on the appropriate use of right and negation of duties while dealing with presentation of current events.

Social Media

Misinformation is never welcome in this field as media is the medium through which the individuals are informed. Social media is the current hub of the tech-journalism. News about Uttarakhand forest fire were doing rounds until the authorities confirmed the pictures were previous years and that the fire was not of that intensity as reported by various social media platforms.

The new-age of journalism, social media has covered the generation of all times, especially in the pandemic situation. It has created an obstacle for the news channels as this platform tends to fabricate the news. But apart from this social media has played a role in raising questions that the broadcasting channels have unable to publish. Questions on the employability rate, the conditions of migrant workers and views of the public on the ongoing events. 'Bois Locker Room' was one such incident which had reached the court due to the reports filed against it on social media.

The platform has been passing certain statements which are not verified by the authorities and due to the coronavirus, there is no policing on the statements. The platform enables individuals to attack each other without realizing their duties as a citizen of India. There have been various cases that have been reported on defamation, stalking and use of indecent language through comments or personal conversations with the users. This has led to lack of sensitivity among the users. Statements that could mentally affect another individual as a virtual conversation does not depict the personality of the person. The political comments and direct attack on the government without any authentic data has created a doubt on the awareness of the parliamentary privileges these individuals do not possess. Since direct comments on the stature of an individual could only be made in the Parliament as the parliamentarians are given the privilege to do so.

In a population of almost a billion and a smaller number of employees in cyber security to control the misuse of the platforms, awareness about proper conduct on social media is mandatory.

5 Tanurag Ghosh, *Aaj Tak Served Legal Notice for Spreading Misinformation On Sushant Singh Rajput's Death*, LAW STREET JOURNAL, (Jun. 05, 2020, 08:00AM), https://lawstreet.co/crime-police-and-law/aaj-tak-legal-notice-spreading-misinformation-sushant-singh-rajput-death.

Forsaken Data

The pandemic had restricted the movement of individuals due to lockdown. In such occasions the public was to be made aware of the ongoing events. The international treaties or policies, India's take on their relations with other nations, the funding scheme, government's schemes for the financial stability of the public and most important the current situation of the pandemic-- these events were brilliantly landscaped by the media as the information was government authorised. But such information was available only to the financially growing media houses, the local media houses in different parts of the country were facing grave issues. The local media centres are unable to display the news as the data collected would require government's approval which would be ineffective without it.

Issues being faced by the prisoners in the cells; the concern has not been showcased by the media. The Maharashtra government released certain prisoners on temporary bail to reduce the spread of COVID19. But are the prisoners being provided proper sanitation or are their basic rights being protected? – such questions have rarely been raised by the media. Women are being subjected to domestic violence and every day such cases are being reported but there is no debate in the media about the same. Is the media restrained from questioning or is it neglecting these issues considering it to be trivial?

Need of Artificial Intelligence

Artificial Intelligence has been a ray of hope in relation to technology. Its adoption has benefited sectors and researchers. AI has been collecting data to distinguish between the behavior of a human and machine through machine learning. While the AI can be misused in commission of crimes, it can also be used for assistance in finding the culprit through the data of such individuals or through DNA.

AI in the media could be used in eliminating fake news through its processed data. AI has the capability to adjust in accordance to the situation and give solutions related to the situation. The adaptability and decision-making power are quicker due to its algorithm. Recently WHO had also taken the aid by collaborating with Facebook so as to eliminate misinformation [6]. Humans are bound to get misguided from the ethical values required in the field of media.

AI could in future hold flags of neutrality, equality, peace which the human race has been debating on, if utilized in a proper manner.

6 Geetika Sachdev, *Artificial Intelligence: A shield against 'fake news'?*, India AI, at 2.

Education

The education system in India has been in a crippled and debatable state for quite some time. Education is a privilege which is still denied to the majority of the population. Education is the key which can socially elevate the poor, restructure the society, free it from its prejudiced and intolerant norms and boost the economy of the nation. Despite making education free for children of 6-14 years of age under the Right of Children to Free and Compulsory Education [7], India still comprises a huge fraction of the illiterates in the world.

The UNESCO while releasing its Global Monitoring Report in the year 2015-16 revealed that India has the largest population of illiterate adults in the world and that the country ranks 106th out of the 127 countries. Though this report was based on 2001 census statistics but the reason behind such low ranking has not changed much. Most of the aggrieved individuals, generally the rurals, that are able to make it to educational institutions are burdened to pursue only those fields that help in money making. Higher education suffers due to poor infrastructure, untrained teachers, lower government incentives, unjust public funding, unplanned curriculum for growth [8]. Adding on to the issue, government school teachers remain absent most of the time majorly due to their full time election duties or for several other excuses which goes unnoticed. However, these loopholes were trying to be reduced by awareness, night schools in villages and several other improvement measures. By the time results of such measures were to be analyzed, the outbreak of COVID19 deepened the crack of these loopholes. COVID19 outbreak has been deemed a global health emergency [9]. This pandemic has increased the inequality and intensified the breach in the education system.

Disparity in Resources = Difficulty in Access

While the country continues to fight against the perils of COVID-19, a gradual but relatively equal issue is posing a threat to this nation's progress. The teaching environment has completely changed. Online classes and tutorials are being conducted to educate the children, that is, virtual classes are being conducted instead of physical ones. This pattern of imparting education can be said to be a trial and error method as it has not been analyzed and examined earlier. One does not know whether it would prove to be a success. This can also be a medium that can give way to greater problems due to unequal distribution of

8 Pawan Agrawal, *Higher Education in India: The Need for Change*, ICRIER, June 2006, 5-7.

9 Catrin Sohrabi, et al., *World Health Organization Declares Global Emergency: A Review of the 2019 Novel Coronavirus (Covid-19),* 76 Int. J. Surg., 71-76.

wealth and resources across the nation. Mission Antyodaya, a nationwide survey of villages conducted by the Ministry of Rural Development in 2017-18, showed that approximately 16% of India's households received one to eight hours of electricity daily. For most of the parents, considering their income, sending their child to school is the maximum they can spend. Further expenditure on renting/buying computer devices and affording internet facility is not an option. The lower strata of the society do not have resources to avail the privilege of online classes for their children. It is also to be noted that some students of an institution, who can avail such devices, may be living in remote areas where the network connectivity is poor or negligible. They have no option but to miss those classes since they cannot leave their houses to get a network range, otherwise, it would have induced them into risking their lives when the entire nation was in a lockdown. Poor connectivity can be an issue on either end. Even the teacher may be a resident of a place where signal failures are common. According to the 2017-18 National Sample Survey report on education, only 24% of Indian households have an internet facility, while 66% of India's population lives in villages, only a little over 15% of rural households have access to internet services.

Self-Evaluation

Furthermore, several teachers have to be trained to operate online portals. They may not be accustomed to using such technological devices for imparting education. They may not be comfortable when it comes to virtual teaching. Few might be conscious with their pronunciation, voice modulations, intonations and may experience difficulty in speaking without an actual, physical audience. While physically present in class the students adapt themselves according to the teacher's dialect and expression. Generally, a teacher comes to know when a student is mentally absent though physically present in class. However, this changes when it comes to virtual education. Students know that even if they don't pay attention to what the teacher shares, they would not be pointed out and scolded. Therefore, most of them may take this method of teaching as unserious. With such lack of concentration, it is not the teacher who is at loss exactly but the students. In this pandemic situation, many might opine that only the education of high school (class 10) and intermediate level (class 12) are a concern since the primary classes do not have much to lose. Even the Government has laid relatively greater emphasis on higher levels by discussing their problems. However, the primary classes form the roots and fundamentals of any education system. The primary levels hold equal importance with the senior levels. Without primary education, which teaches the basics that form the prerequisite of higher levels, focusing on the latter would be a waste.

Imparting Knowledge - An Issue?

Other than online classes, parents are also a source of educating their children. Under lockdown, primary schooling is parents' responsibility. However, this will only be applicable when the parents, themselves are literate and educated. The parents, who are uneducated, are unable to teach and impart knowledge as far as syllabus is concerned. This also makes way for inequality as literate parents are at an edge whereas the illiterate lag behind. The measures taken by Government and various Non-Governmental Organizations to run rural schools and night education camps for the rural workers prior to this pandemic have also come to a standstill. Internships and student volunteer programs are other areas adversely affected by COVID-19. To illustrate a few, medical and law students require internships, since online classes would not suffice them. Practical experience and observations are a must for specific professional courses and the students cannot only rely on theory and watching online videos.

Admission Process- A Dilemma

Many private universities are enrolling students on the basis of interviews only rather than aptitude tests or merit basis. This might not be an issue where such practice was prevalent prior to lockdown. However, it might be unfair in cases where prior to the lockdown, private colleges conducted aptitude tests and interviews both or only aptitude tests or enrolled on merit basis. Candidates who are uncomfortable with interviews or had put in several hours of practice to prepare for aptitude tests are now at a disadvantaged position since these universities are enrolling students through interviews. Candidates might lose their opportunity to study in their dream college. Whom do they have to blame? They cannot blame themselves for working hard and putting in efforts. There might be students who have shortlisted colleges on the basis of their admission procedure, long before the start of their class 12^{th}. However, now the candidates have to either miss their opportunity or put in further efforts to prepare for the interview in such a short span which would not have been the case, had it not been for this public health emergency.

Considering all these issues, one might say that COVID-19 has adversely affected the education sector and most importantly, the future of the youth which will eventually, mould the progress and growth of this nation.

Travel and Transport

According to the World Travel and Tourism Council, India's Tourism has contributed Rs. 16.91 Lakh Crore that is 9.2% to India's GDP in 2018. It provides 8.1% of its total employment. On the contrary, this Council had projected that travel could fall by 25% in 2020 putting at risk 12-14% of the jobs in the sector, which implies 50 million jobs at risk, globally, but the global pandemic outbreak might further worsen these figures. According to estimates from CMIE's Consumer Pyramids Household Survey, travel and tourism accounts for five per cent of total employment in India (nearly 20 million jobs).

Unplanned Agenda

Travel is the single most important contributor to disease transmission [10]. The first steps to prevent transmission to others include taking precautions (mask and sanitizing equipment), avoiding close contact and ensuring adequate isolation. At the community level, people were asked to avoid crowded areas and postpone non-essential travel to places with ongoing transmission [11]. With having several people in its grip, several nations have imposed travel restrictions not only within their boundaries but have also denied people to enter their borders. Indian Government was astute enough to suspend travel and impose shutdown strategies to avoid cases of transmission and curb the spread at an early stage. This abruptly announced lockdown across the nation, though done to prevent the spread, was perceived as a hard hit by a few since there was no planned agenda for recovery and the people were not prepared with sufficient resources.

Religious Inadvertence

India, being a nation where religions like Hinduism, Islam, Sikhism, Buddhism trace their origin, had to intervene in the religious affairs due to this global outbreak. With travel bans, people were unable to celebrate festivals including Eid-al-Fatr, Easter, Baisakhi and travel to holy shrines and other religious institutions. Some had to let go their age - old traditions and customs while some were unable to go on pilgrimages. Such inability to fulfil their divine and sacred beliefs has caused resentment among the orthodox followers. Saudi Arabia suspended the year round Umrah pilgrimage to curb the widespread, however, Iran witnessed large regional outbreaks since it did not intervene in the religious pilgrimage [12].

12 Ebrahim, *supra* note 11, at 368.

State of Abandonment

With state borders being sealed, international flights being banned, buses and trains stopped, several people who were away from their hometowns or migrated to different states for work were left stranded, away from their families and friends and some even in a completely unknown place. With no work for the daily wagers, going home was a better choice but since no mode of transportation was available, few succumbed to their misery when walking hundreds of miles to meet their family while some were subjected to the police brutality on their way back home [13]. During the lockdown, few of the poor migrants had to stay in quarantine camps outside state borders with no clue as to when would they be allowed to travel to their native districts and live with their family. The Economic and Political Weekly stated that this situation was "reminiscent of the partition era, when refugees were forced to shift their entire household within the span of a few hours, the groups of migrants can be seen walking on highways, with the entirety of their belongings on their shoulders". Several newspapers reported that many labourers were so desperate to return to their villages that they hid in tankers and trucks, defying the lockdown and social distancing orders and travelled to their respective hometowns once the state borders were opened. Few succeeded to reach their destination without being noticed by the authorities while the others were stopped when the vehicles were inspected.

Livelihoods at Stake

With people following the lockdown and containment orders, livelihoods were at stake. Not only were there production halts, but also offices, business chains, outlets and stores remained shut allowing only a marginal fraction of essential services owners to provide for the basic amenities. Another reason for the stores being shut was that they received no supplies from the manufacturers with the ongoing travel restrictions. Inhabitants of remote areas are some of the people who were majorly affected due to the lockdown, since they had limited access to essential necessities including food and medicines. Some people are practicing work from home during the lockdown while some who are without any work have become lethargic, less productive and lost their workflow. This has psychologically and mentally strained them.

With the lockdown being lifted in orange and green zones, certain industries, offices, firms and shops were opened. However, labourers, workers and employees continue to face inconveniences with the inability of local trains, metros and buses. Those who have their

13 Bhupen Singh, *Media in The Time of Covid-19,* 55 EPW. 1 (2020).

workplace at far off places are either unable to turn up or report late. Moreover, even if these public transports start, people might fear travelling to avoid congestion and ensure their safety.

With all these increasing concerns, it is quite evident that a planned and well-structured agenda for recovery is necessary to reinstate, if not improve, the nation back to where it was prior to this public health emergency.

CONCLUSION

The novel coronavirus outbreak which was declared a public health emergency by the World Health Organization has adversely affected innumerous sectors across the globe. Not only has it suspended their operations but has also put them in a state from where revival is quite strenuous and distressing. This global outbreak has magnified the complexities and initiated novel challenges. With India still falling under the category of Third World nations, it would require effective measures for a favourable and satisfactory retort. Normalcy has become a long-lost dream! People have given up their conventional habits and usual comfort zones in order to survive and adjust in these extraordinary circumstances. New procedures have been adopted for sustenance.

Travel, tourism and education were the first set of sectors being severely hit by the pandemic. With no vaccination or effective solution available, the Government's strategy of imposition of lockdown and travel ban was more than necessary. However, taking such restrictions into consideration many businesses have taken a backslide and some are even on the verge of extinguishment. With no transportation and distribution of goods to retail stores, shops are devoid of the products and customers are returning empty handed. Moreover, in the near future people will have to self-regulate their travel. Instead of leisure travel, people will have to choose to confine themselves to their homes except for purposes which are essential. An article published by the Business World reported that social distancing has become the prevalent norm and sectors like travel, tourism and entertainment are not expected to recover soon.[14]

The increasing slope of unemployment and stumbling income levels have widened the extent of impact, COVID-19 has had. With travel regulations, revenues in the

14 Ishwinder S. Suri, *Impact of Covid on Indian Economy and Road Ahead for corporate Sector,* BUSINESS WORLD, (Apr. 30, 2020, 11:00AM), http://bwdisrupt.businessworld.in/article/Impact-of-COVID-19-on-Indian-Economy-and-Road-Ahead-for-Corporate-Sector-/30-04-2020-190322/.

transport industry have experienced a slump. Many employees might have to be sacked if similar scenarios continue to disrupt the revenue generation. This can be for other sectors as well. As a result of which another issue of job security props up. One can anticipate that people would be employed on a contractual basis rather than full time in the coming months. Work from home may be the new normal concept. With being confined at homes, most of them will have no choice but to shift to digital and internet economy- online education, online groceries and shopping, online jobs. Businesses which cannot be carried on without the internet will be forced to restructure their marketing strategies.

Educational institutions will have to identify and create a comprehensive way that is easily accessible for both the students and the teaching fraternity. Until then, virtual classes over the internet have to serve the purpose. Both the students and the faculty need to understand the gravity of the situation and act cooperatively. Helping one another will pave the way forward.

With everything getting digitalized, people might shift from print media to digital media in the upcoming phase. Though, much of the media which is corporate-owned has surrendered, a small section is still courageously following journalistic ethics [15] to highlight what news is actually all about. Instead of becoming a tool regulated by the 'Big Corporate Houses', the media must focus on outlining the actual concerns which have been neglected or otherwise overlooked. There are some vulnerable aspects which require urgent attention of not only the Government but also the people. However, the media has failed to bring such susceptible and sensitive situations to light. The escalation of misinformation through fake news has been another alarming issue during this critical phase which needs to be taken care of.

The citizens need to remain poised to understand and survive these grave circumstances. Being panic stricken and blaming others for the global outbreak is not the solution. At this time, India as a nation requires its people to cooperate with the measures adopted by the Government and form a recovery plan which might alleviate the perils and help in restructuring the society back to where it was prior to this public health emergency.

DUE DILIGENCE EXERCISE: DEMYSTIFYING THE DUTY OF MERCHANT BANKERS IN INDIAN SECURITIES LAW REGIME

Mansi Mishra*

Abstract

The Securities and Exchange Board of India, after much deliberation, adopted a disclosure based regulatory regime. This framework rests on the disclosure of relevant details by issuers, acquirers and intermediaries about their products, themselves and the regulations for facilitating informed decision making by potential investors. Adequate, timely and fair disclosures form the cornerstone of any disclosure mandated by the Board. In this regard, merchant bankers have been vested upon with the solemn onus of exercising due diligence by examining veracity of disclosures made by issuers in securities' transactions. This duty has attained gravity because it decides the fate of companies inclined to enter the securities' market. It is a means of preventing unscrupulous companies from defrauding investors and other stakeholders. Consequently, it becomes essential to regulate the duty of due diligence and prevent collusion by merchant bankers with issuer companies. This gives rise to various questions: - What is the statutory framework that governs due diligence by merchant bankers? What is the standard of this due diligence? How to determine the threshold of materiality of disclosures to be made by merchant bankers? What are the penalties for negligence in due diligence? Are there any factors that mitigate such penalties? In this article, the author shall provide answers to all the aforementioned questions. The author shall further provide analytical insights as to whether the interpretations and approaches adopted by the Regulator are effective in regulating due diligence exercise and furthering the aim of investors' protection.

INTRODUCTION

Since the inception of Securities and Exchange Board of India ("*SEBI*") in 1992, the capital markets in India have witnessed systematic reforms for protection of interests of investors.

* Student, National Law Institute University, Bhopal.

The most beneficial reform from investors' perspective has been the shift to a disclosure based regulatory regime. This framework involves disclosure of relevant details by issuers and intermediaries pertaining to themselves, the market, the products and the regulations in order to facilitate the investor to take informed investment decisions.[1] As such, SEBI is mandated to protect the interest of the investors and the securities market, and in pursuance of the same, it monitors both initial and continuous disclosures. In order to obtain assistance in smooth functioning of the disclosure based regime, SEBI enacted the SEBI (Merchant Bankers) Regulations, 1992 ("*Merchant Bankers Regulations*"). Merchant Bankers play a unique role in advancing the aim of investor protection by ensuring veracity of disclosers made by an issuer or an acquirer in the offer documents and other public documents. This process is termed as due diligence. Thus, the importance of due diligence conducted by merchant bankers cannot be over-emphasized.[2] This article seeks to discuss the obligation of conducting due diligence vested upon merchant bankers in Indian securities law regime and scrutinize certain aspects pertaining to it. Part I discusses the statutory framework providing for merchant bankers' duty of exercising due diligence in various securities transactions. Part II delves into the aspect of the standard of care and caution required to be exercised by merchant bankers while discharging responsibilities related to due diligence. Part III elucidates upon the importance of determining materiality of information for disclosure during due diligence, and the test prescribed for assessing such materiality. Part IV seeks to identify and examine the factors that result in mitigation of penalty for negligence by merchant bankers due diligence. Part V concludes the article and stresses upon importance of clarification of anomalies.

Statutory Framework

SEBI monitors the authenticity and adequacy of disclosures by casting solemn onus on merchant bankers to conduct due diligence before an offer document or other public documents are made available to potential investors. Currently, the legislation forming the foundation of merchant bankers, statutory duty of due diligence is the prescribed Code of Conduct under the Merchant Bankers Regulations, adherence to which is mandatory[3]. The Code of Conduct requires a merchant banker to protect the interests of the investors and to fulfill its obligations in a prompt, ethical and professional manner[4], while exercising

4 Securities and Exchange Board of India (Merchant Bankers) Regulations, 1992, Code of Conduct §3.

due diligence and independent professional judgment at all times.[5] The aim behind such an obligation is the adequate supply of true information to the investors and making them aware of the underlying risks associated with an investment decision.

The Code of Conduct further requires merchant bankers to make timely disclosures to the investors in a timely manner in accordance to the applicable regulations and guidelines to enable investors to make a balanced decision.[6] In the words of the Securities Appellate Tribunal ("*SAT*") in the matter of *Enam Securities Private Limited v. SEBI*[7]:

"*The Code of conduct places an onerous duty on a merchant banker not only of protecting the interest of the investors but also of ensuring that adequate disclosures are made in a timely manner without making any misleading or exaggerated claims and to render best possible advise to the clients. A merchant banker is required to maintain high standards of integrity, dignity and fairness in the conduct of its business and is required to promptly inform the Board any violation or non-compliance of the regulatory framework that come to its notice*".

While Merchant Bankers Regulations is a blanket legislation governing the merchant bankers' duty of due diligence, there are regulations pertaining to specific securities transactions requiring merchant bankers to conduct due diligence. When acting in the capacity of an underwriter, SEBI (Underwriters) Regulations, 1993 mandate merchant banker to exercise of due diligence, independent professional judgment and proper care.[8] In a buy back transaction, the merchant banker appointed by the company under the SEBI (Buy Back of Securities) Regulations, 1998 is required to verify the contents of draft letter of offer as well the public announcement to ensure that they are true, fair and adequate by performing due diligence. The same has been incorporated in the provisions[9] of the SEBI (Buy Back of Securities) Regulations, 2018 as well. Furthermore, the SEBI (Issue of Capital and Disclosure Requirements) Regulations, 2009 provide for appointment of merchant bankers as lead managers to the issue who are required to conduct due diligence and satisfy themselves about the veracity of disclosures made in the offer documents.[10] Additionally, merchant bankers are obligated to carry out due diligence and verify the

disclosures under the SEBI (Issue and Listing of Debt Securities) Regulations, 2008[11]. The same has been reiterated under the SEBI (Substantial Acquisition of Shares and Takeover) Regulations, 2011[12].

Despite such regulations in place for merchant bankers' duty of due diligence, there is no statutory framework laying down binding due diligence norms governing and elaborating upon the said duty. The blanket legislation and the detailed legislations for each securities transactions simply provide for the duty, instead of giving clear directions as to the necessary steps that the Regulator expects the merchant bankers to take in the due diligence process. Furthermore, there are no basic guidelines that could clarify the essential requirements of the process, neither is there any codified minimum threshold which, if not met with, would amount to negligence. SEBI recognized the same in 2011, and approached the Association of Merchant Bankers of India ("*AMBI*"), now Association of Investment Bankers of India ("*AIBI*"), to frame guidelines for due diligence for its members.[13] The Regulator had instructed AMBI to include norms for verification of corporate records and specific instructions on the method of conducting due diligence of promoters, company management and group companies for protecting investors' interest. Thereafter, AIBI brought out the Due Diligence Manual ("*Manual*") in 2012.[14] However, the Manual is merely indicative in nature and does not have the force of law, as stated in the Manual[15] itself. Even so, no steps have been taken till date towards imparting to it the imperative binding value so as to provide merchant bankers with guidelines recognized by SEBI. Another limitation of the manual is that it has set out guiding principles for due diligence to be performed only within the scope of SEBI (Issue of Capital and Disclosure Requirements) Regulations, 2009. Interestingly, even though formulated on the behest of SEBI itself, the Manual has never been cited as a recognized or generally accepted set of rules of due diligence by SEBI, SAT or any Court of law, which could be useful for merchant bankers in understanding SEBI's

stance. Therefore, there continues to persist unavailability of detailed guidelines of binding character prescribing basic steps to be followed by merchant bankers which SEBI would consider to constitute proper due diligence.

Standard of Due Diligence

The disclosure based regime in Indian securities market is not static, but possesses an evolving character. As a result, the process of due diligence itself is dynamic and complex in nature. Whilst due diligence is not defined in any statue, in practice the phrase generally constitutes collection of information about the acquirer or an issuer that would assist the merchant bankers in drafting and assessing the disclosures made in the offer documents.[16] The particulars which are required to be disclosed are intended to give a clear picture to a member of the company or prospective investors to the purpose for which the securities are being transacted and by whom.[17] However, both the Manual and the Code of Conduct are silent as to what is the standard of due diligence that is expected from merchant bankers involved in securities transactions.

This gap with respect to the requisite standard created by the silence has been attempted to be filled by the judicial precedents, which reveal that due diligence is concerned with efforts made, *bona fide* conduct of the merchant banker concerned and the facts and circumstances amid which such merchant banker acts.[18] There is no prescribed strait-jacket formula or fixed benchmark of due diligence and the law requires only 'reasonable diligence' even from the experts including merchant bankers.[19] In order to better put forth the standard of due diligence, it would be pertinent to mention the case of *Chander Kanta Bansal v. Rajendar Singh Anand*[20], wherein the Honorable Supreme Court had held that due diligence in law means reasonable diligence and doing everything reasonable and not everything possible. The meaning of the expression "due diligence" was elaborated upon by the Apex Court in the following words:

> *"According to Oxford Dictionary (Edn. 2006) the word "diligence" means careful and persistent application or effort. "Diligent" means careful and steady in application to one's work and duties, showing care and effort.*

16 *Supra* note 16 at 30.

19 *Almondz Global Securities Ltd. v. SEBI*, 2016 SCC OnLine SAT 219, ¶39; Shadi Lal Batra v. Unknown, AIR 1968 Delhi 283, ¶17(India).

20 2008 (5) SCC 117.

> *As per Black's law Dictionary (18 Edn.), "Due Diligence" means the diligence reasonably expected from, and ordinarily expected by, a person who seeks to satisfy a legal requirement or to discharge an obligation. "Due Diligence" means reasonable diligence; it means such diligence as a prudent man would exercise in the conduct of his own affairs".*

In another case of *SEBI v. JM Morgan Stanley Private Limited* [21], SAT had placed reliance upon the dictionary meaning of the said words as defined in the Law Lexicon (2nd Edition) which provided that diligence implies the care and prudence as is usually by persons of common or average care and prudence. Whether or not there is a lack of due diligence runs from the facts of each case and ultimately, there is no hard and fast rule as to what constitutes lack of due diligence.[22] In fact, it has been held that the merchant banker cannot be expected to look at each and every statement and information provided by the issuer with suspicion unless the facts and circumstances at the relevant time so demand.[23] In order to prove a fault in due diligence, there must be a convincing preponderance of evidence, as held by the Supreme Court in the case of *Pandurang dattatray Khandekar v. Bar Council of India* [24]. The Apex Court further clarified that before any violation of the concept of due diligence is found, there must be an enquiry and the finding must be sustained by a higher degree of proof than that required in a civil suit, but falling short of the proof required to sustain a conviction in a criminal prosecution.

However, upon observation, it becomes evident that this standard of reasonableness has acquired a stricter enforcement in the current regime. That is to say that the reasonableness cannot be equated with immunity from exercising due care. In fact, the disclosure based regulatory regime has resulted in imposition of heavier responsibility on merchant bankers of issuers of securities in respect of the accuracy and completeness of the information disclosed by them.[25] The premise underlying such a standard of due diligence is that the access to securities market for issuers and acquirers, as per the case, is conditional upon the disclosures verified by the merchant bankers. Probably, that is the reason why SEBI has tightened its approach in interpreting the established standard of prudence. It follows from the above that a merchant banker is not required to assume the role of a detective and look at every statement or document possible. In other words, the job of due diligence performed

21 2005 SCC OnLine SAT 79, ¶6.

22 *Supra* note 19.

by merchant banker cannot be limited to mechanical perusal of documents submitted to it. Neither can it be equated to disclosing whatever is given to it by the issuer. Rather it involves exercise of reasonable diligence to ensure adequate, true and fair disclosures in an offer document, prospectus or other public documents. This standard has been rightly set at reasonableness expected from a prudent person. However, the push of the Regulator towards stringency and stricter enforcement has tended to dissolve the element of reasonableness, even though the orders and judgments continue to pay lip service to it. This has given rise to the need of codification of the standard in the Code of Conduct itself in order to provide a clear picture to the merchant bankers with regards to the dynamics of the role that SEBI expects them to perform. Such codification also becomes imperative for assisting merchant bankers to differentiate between what could amount to a negligent conduct and what kind of actions by merchant banker could give rise to charges of collusion.

Materiality of Disclosures

The guiding principle in any disclosure-based regulatory regime is the need for the issuers of securities to provide the potential investors with full, accurate and timely disclosure of all relevant information in respect of the issuer and the security being issued.[26] The underlying object of disclosure provisions in Merchant Bankers Regulations is to ensure that the offer document contains all disclosures that are material for the applicants permitted to participate in the transaction to take an informed investment decision.[27] The merchant bankers discharge the duty of ensuring that the aforementioned requirement of adequacy of material disclosure is met with. Hence, it becomes pertinent to analyse the concept of materiality, which assists merchant bankers in determining as to what is material enough to disclose. The analysis of materiality serves the purpose of shaping the content of mandatory disclosures. Additionally, it crystallizes the content of non-mandatory disclosures made for the sole purpose of clarification in order to avoid misstatements. While the mandatory disclosures are straightforward in nature and do not involve exercise of professional judgment on part of the merchant banker, it is the clarifying disclosures whose absence can result in potential misstatements. The Merchant Bankers Regulations do not provide any threshold of materiality of disclosures. This glaring absence of a threshold renders scope for conflict between the judgment of materiality of a particular disclosure by SEBI and by the merchant banker. Another plausible consequence constitutes merchant bankers getting away with omissions in disclosures resulting from collusion with issuer companies, on the

26 *Supra* note 3.

27 *Kotak Mahindra Capital Company Limited v. SEBI*, 2016 SCC OnLine SAT 201, ¶14 (India).

pretext that in that their reasonable and professional judgment, the particular information was not material enough to be disclosed.

The vacuum around the position with regards to materiality of disclosures in offer documents by merchant bankers was put to an end in 2016 in the SEBI Adjudication Order in the matter of *M/s Electrosteel Steels Limited ("ESL") and M/s Electrosteel Castings Limited ("ECL")*.[28] ECL was the parent company of ESL and the former had promoted the latter in 2006 post a Memorandum of Understanding (MoU) with the Government of Jharkhand for setting up a steel manufacturing plant. Iron ore being a core raw material in the manufacturing process, ECL had applied to Ministry of Environment and Forests ("*MoEF*") for project clearance for obtaining iron ore mining blocks in Jharkhand. The said application got rejected in January, 2009. However, the matter of rejection was being reconsidered by the MoEF on request made by the Government of Jharkhand in July, 2009. In the meanwhile, ESL floated an Initial Public Offering ("*IPO*") in March, 2010 and completed the same in September, 2010. The MoEF gave the clearance only after the completion of the IPO. The substantive legal question for consideration before SEBI was whether the rejection of the application made by ESL to MoEF with regards to project clearance constituted 'material' information which ought to have been disclosed in the offer documents pertaining to ESL's IPO.

SEBI *vide* its Adjudication Order penalized, among other parties, the merchant banker in the case for failure to exercise due diligence by not disclosing the rejection of the said application which constituted 'material' information for prospective investors. With regards to the materiality of disclosures by merchant bankers, SEBI observed the following:

> "*Assessment of the materiality of an event or development requires a contextual determination that takes into account all of the relevant circumstances, including the nature of the event or development and its consequences to the issuer's business.… Thus, true and adequate disclosure is said to be made, if the disclosure is accurate and not misleading and does not omit a fact that is either material itself or is necessary to understand the facts that have been disclosed, so as to enable the investors investing in the issue to take an informed investment decision*".

SEBI further clarified that the subjective assessment or optimistic views of the issuer do not have any role to play in materiality analysis done by merchant bankers. Instead, the test of materiality is of objective nature. SAT, while upholding SEBI's finding with respect to the

28 Adjudication Order in the matter of *M/s Electrosteel Steels Limited and M/s Electrosteel Castings Limited*, AO No. AK/AO- 8-12/2016 (2016).

materiality of information, observed that the letter and spirit of the disclosure requirement is such that by disclosing every material event in clear terms, there is no scope left for judging the degree of materiality.[29] The emphasis has to be placed on disclosure, not otherwise. In other words, the merchant banker has to disclose even when the issuer has doubts regarding existence of element of materiality in the information concerned. The only facts that can be ousted from the purview of disclosure are those which the issuer is undoubtedly sure of lacking relevance to the issue.[30]

While SEBI favored the assessment of materiality from the perspective of a reasonable investor, SAT limited the scope of subjective analysis and shifted the onus upon the issuer to be sure about any piece of information being irrelevant. Furthermore, the SAT order mandating to disclose all information that is relevant to the issuer without determination of the relevance of that information to the investors runs contrary to the mandate of Merchant Bankers Regulations. In this regard, the Code of Conduct explicitly provides that merchant banker has to ensure that adequate disclosures are made in order to achieve the aim of enabling investors in making a balanced and informed investment decision.[31] Another significant observation, in the opinion of the author, is that the principle enunciated by SAT requiring blanket disclosure of all the information is also in contrast with the established standard of due diligence requiring exercise of care, caution and analysis on merchant bankers' end instead of mechanical disclosure by them. Hence, there is an anomaly in interplay of materiality and standard of due diligence expected from merchant bankers by law.

The emphasis on disclosure is justified; but disclosure of information of dubious significance has been held to accomplish more harm than good.[32] The vice of dubious disclosures lies in the fact that this leaves the potential investors with analyzing a bulk of information and nuanced task of identifying the material information on their own. Unlike merchant bankers, who are technical experts, the investors might suffer from high risk of over passing the material information amidst the dubious disclosures owing to their lack of expertise. Such an outcome is in sharp contrast to the aim that SEBI sought to achieve through a disclosure based regime. Not only does dubious disclosure undermine the sanctity of investors' protection, it also undermines the exercise of independent professional judgment that merchant bankers are envisaged to exhibit under the Merchant Bankers Regulations.

29 *Electrosteel Steels Limited* v. *Securities and Exchange Board of India,* 2019 SCC OnLine SAT 244, ¶16 (India).

30 *Id.*

31 *Supra* note 5 §6.

32 *TSC Industries, INC. v. Northway, INC.*, 1976 SCC OnLine US SC 119, ¶19(India).

Therefore, use the objectivity test while determining whether or not any information is material enough to be disclosed in a due diligence exercise is well founded. However, lack of clarity continues to exist because of the inconsistency created post SAT's ruling in *Electrosteel Steels Limited* case. It shall be interesting to see the degree of reliance that shall be placed on this case in future cases involving the question of materiality.

Factors Mitigating Penalty for Faulty Due Diligence

When merchant bankers fail to exercise due diligence, SEBI exercises its powers vested upon it under Section 11B of the SEBI Act, 1992 by imposing monetary penalty for violating due diligence requirement. Section 11B(ii) empowers SEBI to issue directions to intermediaries if the regulator deems it fit in the interest of the securities market and the investors. In some cases, the penalty may take the form of merchant bankers being restrained from accessing the securities market under the aforementioned provision read with Section 11A. The question arises as to whether there are any mitigating factors that result in exoneration of merchant bankers from penalty, or do all due diligence violations result in heavy penalties irrespective of any circumstance whatsoever. The following three factors have been identified for the purpose of this analysis:

i) violation of due diligence requirement on account of an inadvertent error;
ii) non-cooperation by company in providing information; and
iii) absence of harm to investors despite non-disclosure

Violations Due to Inadvertent Errors

The first factor essentially denotes the situation wherein the merchant bankers conducted the due diligence in a *bona fide* manner, and omitted to disclose certain information owing to a genuine error. The question arises as to whether the law has underlined any difference of treatment between mere inadvertent or technical lapse and deliberate non-disclosure by the merchant bankers. This was answered in the affirmative by the Supreme Court in *Hindustan Steel Ltd v. State Of Orissa*[33] by observing that a penalty for failure to carry out a statutory obligation cannot be ordinarily imposed unless the party obliged acted deliberately in defiance of law. Furthermore, refusal to impose penalty shall be justified if the breach is venial that flowed from a *bona fide* belief. SAT placed reliance on this judgment in 2003 in the case of *Doogar & Associates Ltd. v. SEBI*[34], where the merchant banker in the case

33 1970 SCR (1) 753, ¶7.
34 2003 48 SCL 115 SAT, ¶6.

was penalized by SEBI for filing the public announcement required to be filed with SEBI after it was already published in the public domain. SAT overturned the penalty imposed by the Adjudicating Officer and the merchant banker was let off because "*it had acted bona fide*". However, in another case in *J.M. Financial Investment Consultancy Services Ltd.* v. *Ananta Barua*[35], SAT refused to entertain the contention that the failure to exercise proper due diligence was not intentional. Interestingly, yet another change in approach was observed in 2004 in a subsequent judgment in the case of *SEBI v. Cabot International Capital Corporation*[36] where the Bombay High Court pronounced that if a breach was merely technical and unintentional, it does not merit penal consequence, and it ultimately depends on the facts of each case. In the same year, i.e. 2004, SAT placed reliance on the aforementioned judgment in the case of *Reliance Industries Ltd. v. SEBI* [37] and absolved the merchant bankers of penalty on the ground that the breach could not be called deliberate.

Ultimately when the Supreme Court was met with this question in 2006 in the matter of *Chairman*, *SEBI vs. Shriram Mutual Fund*[38], the Court held that penalty is attracted as soon as the contravention of any obligation as contemplated by SEBI Act and the Regulations framed hereunder is established and hence, the intention of the parties committing such violation becomes wholly irrelevant. The aforementioned ruling was further relied upon by SEBI in *Corporate Strategic Allianz Ltd*. Order[39] where the merchant banker acting as lead manager had failed to disclose track record of public issues managed by it and certain intangible assets of the issuer on its website. SEBI did not agree to the contention that the breach was not willful, and penalized the merchant banker for failing to exercise proper due diligence.

Hence, erroneous interpretation and error in judgment were earlier recognized as a mitigating factor especially if such interpretation was honest and bona fide to the knowledge of the merchant banker. As per the author's observation, there has been a shift in approach to a more stringent imposition of penalty in disregard of absence of element of deliberateness. This shift is a welcome one in furtherance of SEBI's aim of investor protection. Since the merchant bankers cater to the securities law regime critically by preventing unscrupulous companies from accessing the market, it calls for measures for propelling the merchant bankers in discharging their duties with utmost care and caution, leaving no scope for connivance and negligence. A minor inaccuracy, intentional or not, might result in massive

losses to the potential investors who rely on due diligence reports and the offer documents certified by merchant bankers. However, care must be taken to keep this strict regulatory approach balanced out in order to avoid overregulation, which is turn deincentivizes independent judgment. Nonetheless, the norm of disregarding the element of intention and tightening the standard while examining the violations of due diligence norms by merchant bankers has been rightly adopted by the Regulator in India.

Non-Cooperation by Company in Providing Information

The second factor deals with question as to whether non-cooperation by a company in providing information to merchant bankers during the due diligence process can mitigate the penalty for omission of the information withheld by the company. Perusal of approach by SAT[40] in this regard disseminates that merchant bankers cannot merely escape the responsibility by shifting the blame on the company without verifying the veracity of information. The allegation by merchant banker that the company concerned did not cooperate does not hold much weight while disproving lack of care while exercising due diligence on part of the merchant banker[41]. Furthermore, absence of anything on record to show that merchant banker took any proactive step to find out the correct information or made a specific query in this respect from the right source of such information weakens the plea of non-cooperation by company.[42] This leads to the observation that passively disclosing whatever is provided by a company and not independently exercising reasonable diligence to ensure adequate, true and fair disclosures amounts to failure comply with the Code of Conduct. The regulator considers the mitigating circumstance of non-cooperation only when the circumstances reveal that merchant banker did not have any means of knowing or reasonably anticipating of the existence of any information or document[43]. Another factor that has lead SEBI to exonerate merchant bankers was that the information withheld by a company could not have been obtained in public domain.[44] On the other hand, the argument of non- production of documents by company has been observed to hold no ground when the information captured by available disclosures made to merchant banker could have led to the concealed information.[45] Interestingly, even the case of an information

44 *Supra* note 42, ¶13.

45 *Supra* note 44.

asymmetry combined with non-availability of information in public domain does not put an end to exercise of independent judgment. In such cases, merchant bankers are expected to bring the violations and gaps in disclosures made by the company to SEBI's notice.[46]

However, SAT's ruling in the case of *SEBI v. Imperial Corporate Finance & Services Pvt. Ltd*.[47] has highlighted another facet of this independent duty of merchant bankers. In this case, the promoter of the issuer company concealed his criminal records from the merchant banker. Later, the merchant banker was anonymously tipped about the pending criminal litigation just a few days before the issue and there were no available means to verify it. Additionally, the concerned promoter refused to cooperate. As a result, the offer letter did not contain the information about the litigation and the merchant banker was penalised by SEBI. When the case came before SAT, it overturned the penalty by holding that the merchant banker duly discharged the independent duty of verifying the anonymous tip of criminal records. Merely because the verification could not be completed before the issue was complete was out of merchant banker's control. While criticizing the levy of penalty by SEBI, SAT also remarked, "*one must not carry the concept of due diligence to ridiculous levels*".

Hence, it can be deduced that by virtue of exercise of independent judgment, merchant bankers are vested with additional responsibility of verifying the information provided by the company. Additionally, they are entrusted with vigilance of corporate entity they're offering services to and act as a point of contact between the regulator and the corporate entity. Therefore, non-cooperation on part of a company in providing information leads to condoning of penalty only in extreme circumstances where there is an absolute absence of means of gathering the information withheld. In other cases, the success of plea of non-cooperation depends upon the extent of independent pro-active steps taken by merchant banker for verifying information. To understand this with the help of an illustration, assume that there are two merchant bankers- A and B. Both of them erred in conducting due diligence by not disclosing about a pledge on shares of the companies they were acting for. Subsequently, both of them claimed that the respective companies failed to provide them with the pledge documents. The fact that A tried to obtain the documents independently from the Registrar of Companies, unlike B, shall strengthen A's plea of non-cooperation, compared to B's plea. This is yet another interpretation by the Regulator for providing incitement to merchant bankers in discharging their duties with utmost prudence.

46 *Supra* note 45, ¶9.

47 2005 61 SCL 197 SAT.

No Harm Caused to Investors

This factor refers to a situation wherein even though a merchant banker omitted to include any information from the offer documents, etc., but such omission did not cause any harm to the investors concerned. Whether or not such a situation would warrant overturning or reduction of penalty has been answered by SAT on various instances, but after taking account of factual circumstances. A significant case in this regard is *SEBI v. Imperial Corporate Finance & Services Pvt. Ltd.*[48] In this case, the matter concerning the criminal case pending against Chairman and Managing Director (CMD) of the issuer was not disclosed in the letter of offer, and merchant banker was suspended from accessing securities market for three month. It was alleged that merchant banker acted negligently while exercising due diligence. A pivotal fact was that the omitted information was subsequently revealed in a clarification letter issued by the merchant banker to the investors after the issue was closed for subscription. Additionally, an exit option was given to the investors before allotment. Considering the fact that potential harm to the investors was averted because of the clarification letter, SAT reduced the penalty from suspension for three months to just fifteen days. SAT reiterated the aforementioned approach in a subsequent case[49] where the merchant banker had omitted to disclose a detail in the public announcement but disclosed it through another remedial announcement. The penalty was overturned and the merchant banker was let go with a warning in view of no harm causes to the investors.

However, a shift in approach can be observed in *Electrosteel Steels Limited* case discussed in Part III, where SAT refused to condone a technical violation despite the fact that no loss was caused to investors because ultimately, the license was obtained post the IPO. A possible repercussion of the approach in *Electrosteel Steels Limited* case being followed in the future might be unnecessarily harsh consequences for the merchant bankers in some cases. Furthermore, it might cause an imbalance between the twin objectives of investor protection as well as development of securities market because merchant bankers are an essential part of the securities market. Nevertheless, the lack of harm being caused to investors is more often than not an unintentional result of a merchant banker's faulty due diligence. Thus, it should not be overlooked by the Regulator. Corporate governance practices in companies shall take a backseat if non-disclosures by merchant bankers would be condoned where the investors do not suffer from a monetary loss by pure coincident. Even though the absence of harm caused to investors has been previously treated as a strong

49 *SEBI v. JM Morgan Stanley Private Limited*, 2005 SCC OnLine SAT 79, ¶16; *see Chona Financial Services Pvt. Ltd.* v. *SEBI*, 2005 SCC OnLine SAT 100, ¶16; *also see SATCO Securities and Financial Services Ltd.* v. *SEBI*, 2005 SCC OnLine SAT 7, ¶18 (India).

mitigating factor against penailising merchant bankers, the approach has righty been taken a divergence from. However, *Electrosteel Steels Limited* case is an isolated one and has not been relied upon by any other case till date. Therefore, it shall be entrancing to see SEBI's treatment of such situations in cases in the future.

Conclusion

While the different transactions and clients requiring customized styles of conducting due diligence calls for flexibility for merchant bankers, regulation cannot be disregarded. The need for regulation of merchant banker stems from the imminent role they play in the market. In pursuance of the same, the Merchant Bankers Regulations and the Code of Conduct has provided for indicative principles that are to be adhered to at all times. Even so, there persists a lack of any legally binding and codified course of action indicating the course of due diligence. This gap has been attempted to be filled by SEBI and SAT through their rulings by establishing standard of due diligence, threshold of materiality and factors condoning penalty. The analysis of these rulings sheds light upon a shift towards stringent approach of tackling instances of inaccuracies and misdemeanors by merchant bankers. This tightening of due diligence norms seems promising in reinforcing the aim of investors' protection and combating collusion by merchant bankers with issuer companies. However, measures should be taken to increase clarity with regards to what the Regulator expects from merchant bankers while discharging duty of due diligence, in form of indicative guidelines having the force of law. Till then, the steps prescribed in Due Diligence Manual of AIBI can prove helpful to merchant bankers in conducting efficient due diligence.

THE USE AND MISUSE OF MERCY PETITIONS : ITS GROWTH AS A DEFENCE

Rupesh Sunil Dhengre* and Omeshwari Pancham**

Abstract

Mercy Petitions have been a matter of discussion for a long time, in terms of social values, cultural beliefs and political ideologies. While all religions ardently believe in the concept of forgiveness and mercy, they also talk about punishing one who does crimes. But the question lies here: should punishment is declared, go as far as awarding death penalty? As soon as capital punishment is declared, victims may have the option to ask for mercy and to be forgiven from the death penalty, depending on the law governing them. This is so because some countries do not have provisions for mercy petitions, and some have no place in their law for death penalty.

As it always happens in laws, the loopholes in the law is used to the advantage and leaves scope for misuse and abuse of the law. In the context of mercy petitions to escape from death penalty, it was either no time limit to file mercy petition or difference in approach taken by different governments over the years. India has learnt from its mistakes and has been on its path to improvement.

Keywords: - *Mercy, Punishment, Death Penalty, Capital Punishment.*

INTRODUCTION

One of the most debated agendas that in law today is the issue of 'mercy petition', be it at the national or at the international level. Times are moving forward and different countries across the globe are moving towards abolishing death penalty, however, India is working towards reforms on mercy petition and death penalty.

Mercy Petition is asked for when one is awarded a death penalty. The Constitution gives provision for mercy petition which may be granted by the President under Art. 72 and the

* Student, Maharastra National Law University, Nagpur
** Student, Maharastra National Law University, Nagpur

Governors under Art. 161 of the Constitution. This means that the one can ask for mercy petition (which may be granted or rejected subsequently) only after the death penalty has been pronounced.[1]

Even after 7 decades of Independence, our law has been subjected to many hurdles in terms of its application and this hold true even towards the issue of mercy petition (and its execution). Only to state a few are long delays stretching over numerous years, inefficiency in pointing out clemency cases, etc. The negative effects of the present structure for implementation of the law relating to mercy petition, especially the part that is imposed upon the prisoners is termed by many as a 'misery' which is far beyond the utmost suffering permitted under Art. 21.[2]

Although most countries having a law on mercy petition do not contain an entailing provision that clarifies the time limit for the execution of a death penalty, it has been widely recognized by countries that delay in the process may be violative of the humane treatment of a convict. Such delay often leads to mental health issues among convicts as well.

In *Sunil Batra v. Delhi Administration*[3] the court had held that when one is kept in isolation and solitary confinement leads to violation of Art. 21. Further, in *T.V. Vatheeswaran v. State of Tamil Nadu*[4] the Honourable Supreme Court held that the retardation of two years is violative of Art. 21 and also held that such retardations may be the ground for shuttling of capital punishment.

The 262nd Law Commission Report brought attention to the fact that 140 countries had already abolished death penalty, implying that it did not need a law on mercy petition. However, on the basis of the 'Retributive Theory' of punishment, the provisions for death penalty is defended, which means that the law on mercy petition is also present in India. Deflecting from the words of the father of the nation, Mahatma Gandhi, 'an eye for an eye will make the world blind', the law for death penalty exists and mercy petition is a solution to the strict punishment. This is done in order to bring some relaxation on the harshness of a punishment like death penalty.

Religious Values Attached to Mercy Petitions

Religion is a set of beliefs that a group of people follow. Although the world has seen a lot of religions, but the core values of all the religions have certain ones in common. Generally, these are those values which empower the human civilization as a whole including love, compassion, peace, mercy. To look at mercy from a religious point of view might add more perspective, especially in the Indian context.

The Islamic preaching are also very strict about heinous crimes (which in the modern times might attract death penalty) and has also laid down that "whoever saves a life, it is as though he has saved the lives of all men. whoever kills a person, it is as though he has killed all men". At the same time, it has been said that according the Quran and the Sunnat in Islam, forgiveness and mercy is allowed even to the extent of pardoning a murderer if he is forgiven by the victim's family.[5] There is a differential criteria of possessing the power to grant forgiveness in a situation, it lies with the State[6] and in the other, it seems to be in the hands of the victim/victim's relatives. But it does establish the presence of values of forgiveness and mercy, even for the most serious crimes.

Even in Christianity, dating back at least to the New Testament era, the power to grant pardon for various crimes lied with the head/leader of the state. One of the earliest formal inclusion of this power in the Constitution was done by the USA, however its meaning and scope of it was left to be interpreted by the judiciary. This power starkly reflected the powers that were given in the hands of English monarchs who were believed to hold the power of pardoning, politically equivalent to pardon sins committed by the convict. Moreover, it was considered as an act of kindness by the monarch and which could not be demanded to be granted as a matter of right.

The judiciary has played a significant role in taking forward this line of thought. In United *States v. Wilson*,[7] it was held that "A pardon is an act of grace, proceeding from the power entrusted with the execution of the laws, which exempts the individual, on whom it is bestowed, from the punishment the law inflicts for a crime he has committed". This interpretation of the nature of forgiveness power was reviewed and then upheld accurately

by the Supreme Court in *Burdick v. United States*[8] case and therefore it paved the way for mercy petitions.

Hindus considers the Bhagavad Gita as its sacred book and Lord Krishna is believed to have been an ardent follower of it. It is said that in the Mahabharata, around five thousand years ago, he had referred and read the Bhagavad Gita.[9] It is also said and widely believed that all the animals that passed away during the war that took place in the Kurukshetra attained their initial and original form after the end of their lives.

The Vedas in many documents also refers to the term "Prayashchita" finds mention and explanations. This is a reflection of how early the genesis way laid down for the forgiveness and mercy shown towards those who repent their mistakes. It formed the essence of the Indian society and till dates such values can be seen deeply imbedded into the Indian culture and value system.

Mercy Petition: Boon Or Bane?

Mercy Petitions were brought with the intention of saving those, in other words, showing mercy to those, who had been wronged while trying to deliver justice. When a convict goes through the fear of being hanged till death and craves for mercy be shown to his/her life, it is expected that it will serve as an incentive to correct his behaviour and action if he is pardoned his life. This is the main intention behind mercy petitions – ultimately, to correct the behaviour of the convict.[10]

Many developed countries like the United States of America and Canada also have a law relating to Mercy Petitions. India too has a law relating to it, mentioned in the Constitution under Art. 72 and Art. 161. It is believed to add a 'humane touch', in the hands of the President, to the otherwise strict laws that are in place when there are harsh provisions like that of capital punishment – it creates a balance. It authorizes the State to look at the matter from a case to case and from a more holistic view as examining a mercy petition requires to look beyond legal provisions and evidences. At the same time, there is no obligation on the President or the Governor to accept all such mercy petitions. Most of the petitions till date have been rejected.

10 Prashanti Upadhyay, *Mercy Petition: Boon or Bane?*, LEGAL SERVICES INDIA (May 10, 2020, 01:23 PM), http://www.legalservicesindia.com/article/2026/Mercy-Petition-Boon-or-Bane.html.

In the Ranga Billa Case,[11] the scope of Art. 72 was discussed wherein capital punishment was pronounced for one of the convicts. The right of having reprieving power of president specifically of the mercy petition was bought into question. Herein, the mercy petition filed by the convict was rejected by the President which led him to file a writ before the Apex Court challenging the element of discretion available at the behest of the President while deciding on such cases of mercy petition. He argued that it was arbitrary that the President denied his mercy petition, allowing him to be hanged till death, without giving any reason for rejecting his petition. However, the Honourable Supreme Court upheld the rejection given by the President and held that he holds discretionary powers and may pronounce such a rejection without giving reasons.

The above ratio was once again upheld by the Honourable Apex Court in *Kehar Singh v. Union of India*[12] wherein it also explained that a person cannot demand his a mercy petition to be accepted. The granting of pardon or reprieve by the President was an act of being lenient towards convict and therefore it is a privilege and cannot be claimed by the convict. Getting his pardon granted is not a right.

It might seem like that the law is unfair to the convict, however, it must be taken into account that the Constitution of India confers a right to the convicts for making an appeal for mercy but, At the same time it also imposes a duty on the Presidents and the Governor to duly evaluate all the relevant facts and circumstances before deciding on whether to allow the mercy petition or not.as at last it's not the duty of the president or the governor to take decisions on any mercy petition promptly so as to not delay the process.

In 1983, the Supreme Court shifted its position on putting a time limit[13] of three months for the discarding a petitions which were filed under Art. 72 or Art. 161, or under Sec 432 or Sec 433 of the Criminal Procedure Code. Despite having such a mechanism in place, Afzal Guru's case is worth mentioning. He was sentenced to death on the accusation for being involved in the Attack on the Parliament happened in 2001. At first, the execution of his sentence was stayed due to a clemency petition filed in the Supreme Court. Again, a mercy petition was filed in 2013 which was eventually rejected by the President, the execution of his death sentence was delayed. Thereafter, he was finally hanged till death in the Tihar Jail in February 2013 and his cremation rites were also carried on within the jail premises.

11 *Kuljeet Singh @ Ranga v. Union Of India & Anr.*, AIR 1981 S.C. 1572 (India).

12 *Kehar Singh v. Union of India*, (1989) 1 S.C.C. 204 (India).

13 *Sher Singh & Ors. v. State of Punjab*, AIR 1983 S.C. 465 (India).

Similar was the case of Yakub Memon who was held guilty of being involved in the Mumbai serial blasts. He too was awarded a death sentence. He exhausted all his legal remedies before invoking the provision of filing a mercy petition before the Governor of Maharashtra. However, when all his remedies exhausted and he was not granted pardon, death sentence was finally executed on him.

Keeping in mind the abuse of remedies that were partaken purposely to hinder the execution of their death sentence, the Centre has urged the Supreme Court to limit the time for filing mercy petition to seven days after pronouncement of death sentence. This development took place as a response to recourse to multiple legal remedies being taken by the various accused, on by one, in the Nirbhaya Rape Case.

The Case of Yakub Memon: A Paradigm Shift

Another controversial case involving mercy petition has been that of Yakub Abdul Razak Memon, who was accused of criminal conspiracy in the Mumbai serial blasts of 1993. He was awarded death sentence and it was set to be executed on 30th July 2015. However, looking at the history of mercy petitions and the politics behind it reveals how the process of granting or rejecting a mercy petitions how involves individual thoughts and beliefs.

In April 2014, the President of India had rejected the mercy petition filed by Yakub Memon after having received the recommendation, reliefs and advice from the council of ministers, headed by the newly elected Prime Minister, Narendra Modi. The fact that a change in the government brought into action the law related to mercy petitions and execution of death sentences reflects on the role of politics on this matter.

In 1997, there was only one mercy petition pending before the President, the authority that either grants or rejects the request of a mercy petition. By 2014, this number rose to 28 pending mercy petitions. However, with the change of the government, a new perspective on mercy petitions was seen in action. The mercy petition of Yakub Memon was rejected by President Pranab Mukherjee.

If looked at who held the post of Presidents before President Pranab Mukherjee had different opinions on the subject and issues related to the 'capital punishment' and the harshness of death penalty. President KR Narayanan, President APJ Abdul Kalam and President Pratibha Patil were all hesitant to take a call on the question of death penalty. The discomfort in taking such tough calls was widely being observed in the previous governments, which

changed in 2014.[14] In fact, in 2012, when President Pratibha Patil was questioned as to why she was not acting on the petitions, she sought to the defence of Art. 74 of the Constitution and saying that she could not act on her own as she is supposed to take suggestions on the matter as per the aid and advice of the council of ministers. However, the Supreme Court had already mentioned in Kehar Singh v. Union of India[15] that the President of India under Art. 72 of the Constitution can go into the merits of the case in spite of that it has been judicially concluded and may come to a conclusion that may not be the same as the Court.

The entire scenario had changed by May 2015 wherein the Rashtrapati Bhawan records show that none of the mercy petitions were pending. It displays how with a change of the government, the approach towards a serious matter like mercy petitions changed. It shows the paradigm shift from a hesitant outlook on death sentences and mercy petitions to one where action and decisions are taken head on.

In most cases, when a decision is not taken on mercy petitions, the situation, especially of the convict, is left in a limbo. Taking prompt decisions is therefore an important aspect. It was stated in *Madhu Mehra v. Union of India*[16] that Art. 21of constitution grants the right to life and personal liberty as a fundamental right also implies that getting a speedy trial is also one part of this right. This aspect of having the right to life and personal liberty equally applies to discard of a mercy petitions.

In the famous case of *Bacchan Singh v. State of Punjab*,[17] the Supreme Court had also addressed an issue in performing a capital punishment. The Court observed that if there is no uniformity in the manner how a capital punishment is then it can often lead to the process being arbitrary. This has the potential to violate the right to equality under Art. 14 of the Constitution. This has led to different approaches of different governments who came to power on the issue of mercy petition exercised by the titular head of President.

The Nirbhaya Rape Case: Creating a Balance

In recent times, one of the most controversial cases related to death penalty and mercy petition has been that of the Nirbhaya Rape Case wherein the convicts were awarded with death sentence. However, because of the lengthy process involved in filing mercy petitions,

14 Manish Tewari, *The Politics of Mercy Petitions*, DECCAN CHRONICLE (May 14, 2020, 02:25 PM), https://www.deccanchronicle.com/150722/commentary-op-ed/article/politics-mercy-petitions.

15 *Supra* note 12.

16 *Madhu Mehra v. Union of India,* (1989) 3 S.C.R. 775 (India).

17 *Bacchan Singh v. State of Punjab,* AIR 1980 S.C. 898 (India).

as well as filing it before authorities multiple times, the death penalty was being postponed as by considering the facts of the case they had committed an extremely heinous crime cause of which death sentence was awarded to them. But due to the delay in executing it, the society's outcry for 'justice delayed is justice denied' led the Honourable Supreme Court in putting a cap on the delays in the procedure.[18]

On repeated delaying of executing the death sentence of accused due to filing of mercy petitions, the Honourable Delhi High Court said that the law cannot be abused by always resorting to it at the eleventh hour.[19] The Supreme Court was urged by the Government at the Centre to certain guidelines to end such malpractices. It sought for a move which would be in favour of the victim and society-centric (to bring back faith in the rule of law) and for the limiting the convict to file for mercy petition beyond seven days.[20] The Supreme Court confirmed that the right to file for mercy petition with the convict was rather being used a privilege, and was against the interest of the victim. Since the death penalty was awarded as a penalty for the sufferance of the victim, such privilege was not approved by the Apex Court. Therefore, a bench comprising of Chief Justice Bobde and Justice Surya Kant issued a notice to the Centre to modify the execution guidelines.

Focusing on the necessity to amend or re-outline the current rules which initially brought up to assure the interest of a death row convict. But the Solicitor General Tushar Mehta presented before the Court that these rights and privileges was being abused as an instrument to postpone the execution of the death sentence and it required reconsideration. He argued before the Court that "There is no time-limit for availing the legal and constitutional remedies available to a death row convict. The court should now take into account the interests of victims and society and lay down the guidelines which are in furtherance of the already laid down guidelines for the accused". The execution of the death sentence was delayed twice as three of the convicts were yet to exhaust their legal remedy to file for mercy petition.

19 Aditi Singh, *You Always Come at the Eleventh Hour: Delhi Court Seeks Report from Tihar in Nirbhaya Convicts Plea to Stay Execution of Death Warrant*, Bar and Bench (May 11, 2020, 04:25 PM) https://www.barandbench.com/news/litigation/you-always-come-at-the-eleventh-hour-delhi-court-seeks-report-from-tihar-in-nirbhaya-convicts-plea-to-stay-execution-of-death-warrant.

20 Aditi Singh, *Nirbhaya: No stay on trial court order postponing execution of convicts, HC directs convicts to avail all legal remedies within 7 days*, Bar and Bench (May 11, 2020, 04:25 PM), https://www.barandbench.com/news/litigation/breaking-nirbhaya-no-stay-on-trial-court-order-postponing-the-execution-of-convicts-directs-convicts-to-avail-all-legal-remedies-within-7-days.

Highlighting that how rules were abused, the Centre said that denounced convicts and specially if there were multiple (as in the Nirbhaya Case),should be embraced with a procedure to document corrective appeal in the Supreme Court in a steady progression to defer execution of capital punishment granted to them. It was addressed to the court to fix a specific time limit in which as convict could for a curative petition after dismissal of survey appeal by the Supreme Court. The service said the rules set somewhere around January 2014[21] for seeking mercy petition and execution of capital punishment considered the interests of those waiting for capital punishment and this must be adjusted by another arrangement of solutions which considered the interests of the person in question, their families and larger public interest.

The implementation of the Centre urged the Apex Court to order all subordinate courts and relevant authorities, including state governments, to enforce a sentence of death penalty within seven days from the date of rejecting the mercy petition that was filed. It was urged that this be enforced without any effect of a pendency of review of order or a curative petition filed by other convicts. With this, there was a shift in the law relating to mercy petitions from being inclined towards a convict a more balanced approach. This made sure that while the right to file for a mercy petition by a convict is still effective, the delaying of giving justice to the victim is not hampered.

Conclusion

The existence of death penalties in a legal system paves the way for use of mercy petitions. Death penalties have become a norm when the case falls within the category of 'rarest of the rare' which means that the court often faces cases which it has not faced before. Therefore, even the laws sustaining mercy petitions have evolved over the years and to be fair, it is still evolving. The dynamic nature of the law owing to new emerging situations has inevitably led to developments in the jurisprudence of the law governing mercy petition in India, mostly through judicial activism.

Indian culture witnesses the genesis of values of mercy and forgiveness to way back. In a country where moral values are deeply imbedded, it is only an enhancement of the beliefs of the people that the concept of mercy petition was included in its grundnorm. It was revealed by news outlets that the convicts of the Nirbhaya Rape Case went through a breakdown when the news reached them that their mercy petitions had been denied on them. This meant that their next step was to prepare themselves for their hanging. To get a

21 *Shatrughan Chauhan v. Union of India,* (2014) 3 S.C.C. 1 (India).

hold on the tensed situations, the Gita was also read out to them.[22]

Politics and different approaches taken by different governments has played a role in what verdict is given on a mercy petition, and under the current government (starting from 2014), all pending petitions were also discharged. However, as we have seen in the Nirbhaya Rape Case, the repeated use of the mercy petition provisions one by one at the eleventh hour led to delaying the execution death sentence. Therefore, the Centre urged the Supreme Court to formulate regulation to set a time bar of 7-days beyond which a convict awarded death sentences cannot seek to file a mercy petition. Now it lies in the hands of the Supreme Court as to how it will form guidelines to ensure use and prevent misuse of the mercy petition. Since the Supreme Court has previously shied away from formulating regulation on mercy petition, it is awaited to see if it will finally take a call now that the Centre has submitted its plea.

A Surge in Domestic Violence : Manifestations of the Virus

Adiba Khan* and Gunjan Kanoongo**

Abstract

The Coronavirus Pandemic has transformed into an era that has caused distress on a global scale. Inevitable quarantine has resulted in multiple problems like reduction in daily physical activities, psychological stress due to either lack of work or being trapped inside a place especially, if the individual is staying alone. The pandemic has already been the cause of several negative repercussions. But there are still indirect effects that have not been identified by the authorities. During such difficult times, persistent problems have only worsened. Recession is an issue encountered by various economies around the globe. Poverty has become widespread and almost all activities have come to a halt. One problem which has further contributed to such troubled times is Domestic Violence.

India is already considered to be country unsafe for women. The crime rate against women and children remains at a consistent, all-time high. The justice system has failed to curb or even address this issue decently over and over for decades. The Coronavirus induced a nationwide lockdown similar to most countries all over the world. This has also caused growing concerns for the victims of domestic violence in India. The victims of domestic violence are trapped indoors with the perpetrator and only a few to no remedies to avail.

The paper aims to discuss the issue of domestic violence independently and in the light of coronavirus. It aims to study the state action concerning the same and suggest changes that could help the victims of domestic violence in India and countries all over the world.

INTRODUCTION

The beginning of this decade was a new start for everyone around the world, a chance for setting up new businesses, pursuing higher education, getting married, or starting a family. But since the incipience of COVID-19, the world has been in complete lockdown. The Coronavirus originated in Wuhan, China but gradually found its way to almost every country on the planet.[1] Approximately, 7.42 million people worldwide have been tested positive for the virus.[2] Almost every sector and industry across the globe has taken a hit from the lockdown. The impact of coronavirus is so enormous that stock markets everywhere observed their most significant decline. The oil prices have seen the lowest crash in 21 years as there is a major drop in oil consumption.[3]

While the world is struggling to get back on its feet from the effects of COVID-19, there is another issue that has broken out- Domestic Violence. The United Nations has said that the increase of domestic violence across the world is acting like a shadow pandemic. Abuse has risen by about 20% as people have been urged to stay at home.[4]

Authorities around the globe have urged people to stay home while failing to see the heightened domestic responsibilities generated by the lockdown. The people most prone to such abuse are children who are required to stay home all day, elderly people who are particularly unsafe to the virus, and toddlers who can no longer be babysat with reliable neighbours. These people do not have any choice but to remain indoors.

If domestic abuse was a virus in itself, the lockdown not only expanded its breeding rate but also modified its DNA into a more vicious alternative. Other contributing circumstances involve the ability of the abuser to exert persistent scrutiny over the telephone, the decreased work of the courts, the failure and anxiety of travel to counselling centres, the uncertainty of virus infection in such centres and the growing financial dependency of women who are more prone to encounter salary reductions and job losses during the pandemic.[5]

Increased drinking at home or forced abstention from alcohol due to the local wine shops being closed can provoke the abuser and complicate the relationship between the abuser and domestic violence. The child helpline received 92,000 calls in 11 days of the lockdown being enforced.[6] The inaccessibility of contraceptives and abortion services further impedes domestic abuse. This is particularly true because the country's top hospitals have ceased elective surgery and perform only crucial or life-saving surgery.

Domestic Violence: An Independent Concept

Definition of Domestic Violence

The universally accepted definition of violence against women is provided by the United Nations Declaration on the Elimination of Violence against Women (1993). It states that "*any act of gender-based violence that results in or is likely to result in, physical, sexual or psychological harm or suffering to women, including threats of such acts, coercion or arbitrary deprivation of liberty, whether occurring in public or private life*."[7] The United Nations' definition is rooted in gender-based origins of domestic violence stating "*violence against women is one of the crucial social mechanisms by which women are forced into a subordinate position compared with men*."[8] This definition broadly covers it but is not restricted to, three spheres of domestic violence, i.e., "*violence occurring in the family, within the general community, and violence perpetrated or condoned by the State*."[9] The definition not only highlights the physical aspect of violence but also includes aspects of psychological harm undergone by survivors of such violence. It also considers aspects of private as well as public life.

In India, the enactment of The Protection of Women from Domestic Violence Act, 2005 introduced the legal definition of domestic violence. According to Section 3 of the Act, the act of abuse constitutes both an action and an omission which may lead to any physical injury or hurt inflicted on the woman that leads to a threat to life and limb, overall well-being including psychological health and physical health of the women and an act that may include any kinds of abuse; or any kind of harassment, hurt, physical injury or a threat

to endangering the woman with a purpose of forcing her to meet illegal demands of the perpetrator for dowry or other objects economically or otherwise valuable to the woman whether directly through her or indirectly through a person known to her; or implies a threat on the victim herself or a person is known to her by acts mentioned previously, or any kind of threat to the well-being of the woman whether psychological or physical.[10]

Domestic Violence has become a topic of concern over the last few decades. This increase in concern has been rooted in the constant struggles made by women for the acknowledgement of these problems faced by women globally. The strife to spread awareness about crimes against women, sensitize the issues and fight the defensive behavior of female survivors towards these crimes has led to the minimal increase in awareness about domestic violence. India is a country with a huge rural population (*Rural – Urban distribution: 68.84% & 31.16%)*[11] and a discriminated rate of literacy in women as compared to men (58.8% rural women were literate as compared to 78.6% rural men. 79.9% urban women were literate as compared to 89.7% urban men. A total of 65.5% women were literate as compared to 82.1% men).[12] These factors can be regarded as perpetuating factors of domestic violence.

History of Domestic Violence

The roots of domestic violence in India can be roughly placed around the post – Vedic period. During this period, it was observed that the birth of a daughter was regarded as a shameful event and was perceived to have brought upon disaster to the family. The birth of a son, on the other hand, was regarded as a blissful event.[13] The establishment of women as the biologically superior sex did not affect the social status of women. There is sufficient evidence to prove that the largely patriarchal society has rendered women the inferior sex and regards women as minors throughout their lives irrespective of their actual age. Thus, requiring women to be protected by males throughout their lives. This imposition of roles as protector and subordinate has been instilled in the minds of individuals throughout innumerable generations and results in men treating women in a brutal, barbaric manner in the guise of being a protector even in today's 'modern society'.[14]

Del Martin, in her book on Domestic Violence, has observed that "*Wife-beating, is a complex problem that involves much more than the act itself or the personal interaction*

14 *Id*. At 17-18.

between husband and wife."[15] Further explaining, she pointed out that the domestic violence is rooted in the perception of the concept of marriage in society and the attitude of the society towards women as an entity in that concept of marriage throughout history. She also emphasizes on the sustenance of these kinds of violence by the "intricacies of civil and criminal law and delivery system of social service agencies."[16] The World Development Report of 1993 depicts that out of the total disease (physical and non-physical) burden on women (in the age group of 15 – 44), 5% constitutes rape and domestic violence.[17]

Domestic Violence in India: Perpetration

Domestic Violence Portrayed by the Media

An established author of a book on domestic violence, Rinki Bhattacharya, has also made a documentary film named 'Char Diwari' on the same subject. In her book, she has provided instances where she came across the varying and shocking perceptions of domestic violence by individuals belonging to various sectors that are considered to be the pillars of any society like the executive branch of the Government. While making her documentary, she interviewed an Additional Commissioner of Police (ACP) in a suburban Mumbai police station. The Officer was eager in pointing out the number of false cases filed under section 498A of the Indian Penal Code that penalizes the husband of a woman or the relative of the husband for subjecting her to cruelty.[18] However, in the same year, lawyer Flavia Agnes pointed out that barely 100 cases were filed under the section and the conviction rate was negligible.

The ACP did not agree for his interview to be publicized and thus, it could not be depicted in the movie. However, another ACP stepped up and cited frustration at home, workplace issues or jealousy as excuses for abusive behavior among men. This incident only gives a brief account of how gross misconceptions regarding violence against women are instilled in individuals belonging to systems that have a responsibility of protecting the citizens.

The producers of the movie themselves, the Department of Women and Child in the Ministry of Social Welfare, New Delhi, refused to provide funds for English subtitles because it would tarnish the image of 'Indian Husbands and the sacred notions of marriage in India'.[19]

18 Indian Penal Code, 1860, No. 45, Acts of Parliament, 1860.

19 *Supra* note 13 at 19.

This further highlights the ignorant attitude of authorities that have a responsibility to uproot domestic violence. In the times of a pandemic, the ignorance of these authorities can be twice as dangerous as it already would be under normal circumstances.

Another study observes the various legal factors that perpetuate domestic violence, these include, but aren't restricted to, "Lesser legal status of women either by written law and/ or by practice; Laws regarding divorce, child custody, maintenance and inheritance; Legal definitions of rape and domestic abuse; Low levels of legal literacy among women; Insensitive treatment of women and girls by police and judiciary."[20]

Statistical Reports on Domestic Violence

India in most of its regions and states at least ticks off three of these five factors, which can be posed as a dangerous threat to the safety of women.

As per data issued by the Ministry of Home Affairs in 2013, in consensus with the National Crime Records Bureau of India, the differences between filing, registration and conviction of cases are visible in the given table:

Table 1:

Year	Cases registered	Cases charge-sheeted	Cases convicted	Persons arrested	Persons charge-sheeted	Persons convicted
2009	7803	1641	236	641	695	9
2010	11718	4330	415	182	323	5
2011	9431	4499	17	695	713	3

Source: Ministry of Home Affairs[21]

The number of cases charge-sheeted out of the number of cases registered was only 47% in 2011. The number of cases with a definite conviction is a bare minimum and the number of persons convicted is negligible.

During a pandemic, the victim is locked in with the perpetrator with very little means of escape. It is difficult for them to avail medical resources even with government easements. The opening of liquor stores by the state[22] has further caused a worrisome situation for

22 Ministry of Home Affairs, *Notification No. 40-3/2020-DM-I(A)*, GOVERNMENT OF INDIA.

alcohol-related violence against women. In a study published in the Indian Journal of Medical Sciences, it was stated that alcohol abuse had a direct relation with chances and degree of abuse.[23] The study shows that use absence of social support to the woman also denies her an out from the situation she is in.[24] Social Support, here, means the support of maternal family members. Under normal circumstances, the support of family members could be possible if available, however, due to the pandemic, acquiring their physical support has become more difficult than it already was.

The factors that usually perpetrate domestic violence seem to have become worse throughout the pandemic, thus posing a big question on the safety of women in their own homes. The state needs to review its policies on the safety of women for the pandemic and otherwise to improve the situation.

"There is a conflict in our houses, more than 8,500 women were murdered by their spouses and family members, and 1,03,272 cases of domestic abuse were recorded in 2018. Domestic violence is a fact that subsisted before the coronavirus and has grown as a consequence of the lockdown because women are barred in with their abusers. The pressure and stress of the perpetrator's home and work duties are released on women" said Anuradha Kapoor, Director of Swayam, an NGO in Kolkata.[25]

"The kind of violence that is being inflicted on them now is much more serious. We had a woman locked up in a room asking us to call the police to save her because she was afraid of her life. Another woman who was pregnant was beaten so badly that she and her 5-year-old daughter fled the house and walked home to her parents in the middle of the night. Young girls have also been seeking help because they are being abused by their brothers and fathers," she added.[26]

This is likely because this responsibility has traditionally been carried, and remains to be disproportionately supported, by women. The contrast is even more skewed for Indian women who do more uncompensated care and work at home than women in any other country. Indian women spend up to 6 hours a day working at home, which is more than an hour spent by men.

Domestic Violence and State Action

Lockdown Resulting in Surge of Abuse Cases

The Ministry of Health and Family Welfare has issued guidelines to state that abortion has been categorized as an essential service, but the Government needs the same mandate. Gender disparity and violence are an entrenched part of our daily lives and cannot be eradicated during the pandemic. But this cannot be the reason for us to set it aside while we're 'fixing' the pandemic. Our lopsided balance of household work and domestic violence need not worsen.[27]

The National Commission for Women has displayed a large number of cases being filed for domestic violence since the lockdown began. Domestic abuse constitutes an abuse of a person, physically, psychologically, sexually, emotionally, and financially. When a person is harmed, the victim faces other perils such as depression, post-traumatic stress disorder, and chronic illness. The people most sensitive to such harm are women but women, children, house help, elderly and men can also be a victim to it. As people are exacted to stay inside, the perpetrator can be triggered due to stress, anxiety, financial dilemmas, or any other disturbances.

An examination carried out by the Hindustan Times revealed data on two aspects. In some of the states in the country, there has been an increment in the number of grievances about domestic abuse while in some states there has been a reduction in the number of complaints and calls collected by the helpline. This review assists in explaining that it is challenging for the victims to record a complaint during the lockdown since they reside with the perpetrator.[28]

The Delhi Police in April recorded about 2,446 cases associating to women out of which 600 were for abuse against women, 23 for rape, and 1612 for domestic force. In Telangana and Rajasthan, the number of complaints has declined. While on the other hand, states like Punjab saw an enormous increase in grievances about domestic abuse. The Punjab State Commission for Women states that there have been at least 30 complaints every day for domestic abuse since March. It has also affirmed that before the lockdown, there were only one-third calls booked for domestic violence.[29]

28 Dhamini Ratnam, *Domestic violence during Covid-19 lockdown emerges as serious concern*, Hindustan Times (June 04, 2020, 11:00 AM), https://www.hindustantimes.com/india-news/domestic-violence-during-covid-19-lockdown-emerges-as-serious-concern/story-mMRq3NnnFvOehgLOOPpe8J.html.

29 *Ibid*.

Problems Arising Due to the Circumstances

Although there are many state-funded and private forums available that provide help and shelter to such victims, no support can be provided due to the lockdown. Since the police across the country are busy handling the duties assigned to them for reducing the spread of COVID-19, there is no place where these victims can register a complaint about investigations. Since domestic violence is a civil dispute, it has to be filed in the lower court. But due to the ongoing situation, the courts are only hearing emergency cases like bail pleas.

Another dilemma that has arisen out of this is retaining the perpetrator in confinement. Due to the stern rules of obeying social-distancing, prisons cannot sustain a high number of offenders. Parole has to be awarded and the perpetrator goes back home. Some High Courts in the country have received intimation of the condition and have enacted special orders to manage domestic abuse cases. The Jammu and Kashmir High Court proclaimed a command affirming that it will exercise a case on their own of domestic violence during the lockdown phase and also implemented regulations for organizing a special fund and designating special secure areas like drugstores and supermarket shops for victims to report domestic abuse without alarming the perpetrator. The state government of Karnataka has said that all the helplines, shelter homes, counsellors, are running throughout the day to attend to the victims of abuse.[30]

Activists also point out that the moment there is a shortage of food, as in a crisis like this when there is not much commercial activity, the immediate victims are the daughters and mothers in the house. The same is true of health care, as the total spending on women's health in families is expected to reduce further in this period of ongoing economic stress. "The likelihood of women in abusive relationships and their children being exposed to violence is dramatically increasing, as family members spend more time in close contact and families face additional stress and potential economic or job losses," the WHO said in its note.[31]

The World Health Organisation has also pointed out how violence against women has a significant impact on the survivor's health. They have pointed out that this has various implication including "*physical, mental, sexual, and reproductive health problems, including sexually transmitted infections, HIV and unplanned pregnancy*," apart from the

30 *Supra* note 28.

31 Shemin Joy, *Coronavirus Crisis: No lockdown for domestic violence*, Deccan Herald (June 09, 2020, 11:15 AM), https://www.deccanherald.com/specials/insight/coronavirus-crisis-no-lockdown-for-domestic-violence-829941.html.

obvious physical injuries and impact on physical health.[32]

With women also succumbing to losing jobs in the lockdown, their vulnerability has risen. In many events, whatever bare minimum amount women make is handed over to their husbands, and they are stripped of their right to do what they wish to with their own money. This is another contributing factor for violence, many activists say. There seems to be no acknowledgement of this problem by the Government. The financial independence of married women has posed many threats to the safety and security of women, not just in India but across the World.

Young girls are more vulnerable during the period of COVID-19, as families are trying to get then married. Karnataka State Commission for the Protection of the Rights of the Child Rights Chairperson Antony Sebastian recently highlighted the recent spike in such cases in the state. With the police and authorities focusing on the implementation of the lockdown, families are using it as an opportunity.[33]

It's not just the estimates, but also the psychological and social influence that the lockdown would have on women. "There is every cause to examine, as more advanced studies have proposed, that there is an increment in gender-based abuse during such crises," Jayashree Velankar of women's organization stated.[34]

Ineffectiveness of Divorce in lockdown

Divorce, as described by the Oxford Dictionary, is 'the legal ending of a marriage'.[35] But when you approach the Indian courts for a divorce, you are put through the legal wringer and you come out spinning, with or without a divorce, a few years later. Incorporation of a few changes would go a long way in making this a less cumbersome process.

A divorce case ends up lasting longer than the duration of a marriage. In India, most divorce cases go on for decades with no sign of instant relief. In the United States of America or the United Kingdom, acquiring a divorce is more accessible. With the rise of domestic violence cases in the country, likely, divorce cases will also rise. The already present system in India can make a separation for couples difficult and they may have to reside with each other for a more extended period, meaning that the victim is at more risk of abuse from the perpetrator.

33 *Ibid*.

34 *Supra* note 31.

35 *Little Oxford Dictionary, Thesaurus and Wordpower Guide*, 2nd ed. 2005.

Striking a Ray of Hope

Uttar Pradesh, India has one of the world's most recorded cases of domestic violence in the region. The police also introduced a new domestic violence helpline to report a spike in the number of incidents. On the front page, a newspaper advertisement printed the words "Suppress corona, not your voice." The police have decided to require a female officer to deal with these incidents and the police should have the right to prosecute the suspect.[36]

A local phone line has been set up in the Thar region in India to take calls from isolated women. These helplines receive calls and also deliver food to people who are in need. Through this process, they can check up on these vulnerable women to see if they are doing better, or are they still being abused.[37]

To counter the increasing domestic violence during the Coronavirus pandemic, the Pune Zilla Parishad was motivated by the virus control manual. Abusers in the Pune district will now be disciplined with institutional quarantine if a case of domestic violence is brought against them. Ayush Prasad, CEO, Pune Zilla Parishad, narrated to The Hindu, "Globally, there has been a sharp surge in domestic violence cases during the pandemic. So, we have taken this proactive step to preclude similar cases from occurring in the Pune rural region. The definition of a particular case is as given by the Protection of Women from Domestic Violence Act 2005 and the Criminal Law (Amendment) Act, 2013 (Nirbhaya Act)."[38]

Small but dedicated organizations like the Gauravi Centre, established by Sarika Sinha in Bhopal is aiding the vulnerable people during the Pandemic. These people include abused women, sex workers, Muslim minorities, homeless people, and transgender communities. They all come together to contribute towards their community to ensure that the families most affected by the virus are aided. The centre has collaborated with 18 other organizations to distribute food, rations, and clothes to the needy. The centre strives to contribute and educate the women to stand up for themselves. They hope to inculcate the value of self-dependence so that they do not face any kind of abuse in the future.[39]

The All India Council of Human Rights Liberties and Social Justice has filed a petition for safeguarding victims who have faced domestic abuse, especially during the COVID-19 lockdown. The bench of the Delhi High Court consisting of Justices J.R. Midha and Jyoti Singh ordered the Central Government, the Delhi Government and the Delhi Commission of Women to direct a meeting to discuss the matter at hand during these troubled times and to come up with a solution which should be implemented at once.[40]

There needs to be a decent way out of a country with deep-rooted patriarchal values, where women are expected to accept anything that is thrown of their direction. With the continuation of the lockout, the term of imprisonment for the sufferers is only extended. Fighting these predators and the beasts that prey on the frangibility of women is as important as tackling the pandemic. Administration and law enforcement officials need to realize the gravity of the matter. Women's health cannot be put on hold until we win the battle against the pandemic. The administration will take corrective measures without deviating from the COVID-19 work plan to protect and support victims of domestic abuse.[41]

It is believed that these measures will go a long way in uprooting domestic violence from society both during and after the pandemic. The urgency of the situation and the need for immediate and effective state action needs to be acknowledged by Governments across the globe.

International Perspective

Abuse Not Constricted to India

Every city across the globe has declared a lockdown due to the surge in coronavirus cases. The already identified vulnerable group- the abused women and children- has had it worse than others. As has been mentioned, the individual who abuses also is confined indoors. The vulnerable people are at more risk of being abused this way. Other parts of the world have also seen an increase in domestic violence cases.

Hubei province, the origin point of the Coronavirus, had reported thrice the number of domestic violence cases to the police. Activists in the region had notified that the number went from 47 reports from the previous year to 162 in just the last 2 months.

40 *Pandemic Triggers Domestic Violence*, The Leaflet (June 20, 2020, 10:20 AM), https://theleaflet.in/pandemic-triggers-domestic-violence/.

41 *Ibid*.

Wan Fei, a police officer who established a charity for fighting against abuse informed the Sixth Tone website, "The epidemic has had a huge impact on domestic violence. According to our statistics, 90% of the causes of violence [in this period] are related to the Covid-19 epidemic."[42] This is a pattern that is being reported everywhere across the globe. The situation in Brazil has also deteriorated. Adriana Mello, a judge specializing in domestic abuse cases from Rio de Janeiro stated, "We think there has been a rise of 40% or 50% and there was already really big demand. We need to stay calm to tackle this difficulty we are now facing."[43]

Activists in Italy informed that they received a large number of text messages and emails asking for assistance. "One message was from a woman who had locked herself in the bathroom and wrote to ask for help. For sure there is an overwhelming emergency right now. There is more desperation as women can't go out"[44] said Lella Palladino, from EVA Cooperativa, an activist group for the prevention of violence against women.

Activist Movements across the Globe

Spain had enforced strict rules during lockdown to ensure no one stepped out of their homes. They were fined if they left their homes. But the government made sure that women had the right to go report any abuse they faced. This was after a woman had been murdered by her spouse in Valeria, five days before the lockdown. The increased danger to women and children was a foreseeable side effect of coronavirus lockdowns, activists said. Increased violence is a trend that is replicated in many crises, including war, economic crisis, or disease outbreaks, although the quarantine rules present a particularly important challenge. There have been demands in several countries for legal or regulatory reforms to represent the increased danger to women and children in quarantine.

In the United Kingdom, Mandu Reid, leader of the Women's Equality Party, called for additional police powers to remove the victims from their homes for the duration of the lockdown and for the government to waive court fees for security orders.

The prosecutor in Trento, Italy, has ruled that, in cases of domestic violence, the attacker must flee the family home and not the victim, a move praised as "fundamental" by the CGIL trade union. The union asserted, "Being confined to home because of the coronavirus

42 Emma Graham-Harrison, Angela Giuffrida Helena Smith in Athens & Liz Ford, *Lockdowns around the world bring rise in domestic violence*, The Guardian (March 28, 2020, 09:15 AM), https://www.theguardian.com/society/2020/mar/28/lockdowns-world-rise-domestic-violence.

43 *Ibid*.

44 *Ibid*.

is difficult for everyone, but it becomes a real nightmare for female victims of gender-based violence."[45]

In Germany, the leader of the Green Party, Katrin Göring-Eckardt, said this week that she feared the lives of thousands of women living with abusive spouses and called on the government to free up funds for safe houses. "The spaces in women's safe houses are small even during normal times,"[46] she said to the German media, urging the government to acknowledge the renovation of empty hotels and guest houses and the conditions for people who are vulnerable to leave their homes. Her colleague, Katja Dörner, said that house visits should proceed in situations where there is evidence that children have been exploited despite rules banning contact.

Officials in Greece said they were speeding up a program to help women cope with issues arising from the issue of confinement. "Recognizing that this is usually an issue in times of crisis, we're working around the clock to get the message out. Once official figures are released next week, and we know the true scale of the problem, we'll be enlisting TV channels as well as social media and the mainstream press. There is no question in my mind that with the economic impact of the crisis this will get worse"[47] said Maria Syrengela, who heads the General Secretariat for Family Policy and Gender Equality

SUGGESTIONS

State Action

- Consideration of financially deprived victims of abuse is necessary. The Government may facilitate technological assistance in police stations or other Government sanctioned/recognized safe places across the country. The victims can go to these places in specific time slots to prevent overcrowding and attend their hearings.
- The Government should set up psychological assistance units with multiple objectives that can be developed upon further in due course of time. The first objective would be to provide emotional support to the victims of such abuse. The second objective would be to conduct regular local surveys across the country to keep a check on existing and potential cases of abuse. It is important to note that the questions asked in the survey should preferably be indirect so that the

45 *Ibid.*
46 *Ibid.*
47 *Ibid.*

victim discloses full information without fear of the perpetrator inflicting further harm. These surveys may be conducted on the phone for the pandemic. The third objective would be to set up safe houses for women in uncontrollable or extremely violent situations. These safe houses may be made in a way to ensure social distancing and the safety of women.

- A huge contributor to this type of abuse is a lack of financial security and basic resources. To overcome this, a specific amount of state fund should be allotted for those requiring financial aid. This would remove the financial stress and reduce the risk of stress-induced violence against women. It has also been observed that men resort to alcohol when in times of difficulty. This habit soon develops into alcoholism which, again, is a leading cause of violence against women.

- A highly neglected possible solution to the problem is psychological assistance to the perpetrators themselves. The Government should implement programs and initiatives to help the men understand how their courses of action during times of stress may affect people around them.

- Men across the globe must be sensitised to these issues carefully and help them develop better Emotional Quotients to prevent the risk of violence against women. This absence of psychological or emotional awareness is what ultimately causes men to react in inhumane and unlawful ways.

- It is a dire need of the current society for its individuals, irrespective of gender, financial status or any other differentiation to be psychologically sensitised. Therefore, the Government should make efforts to remove the stigma around mental health.

- Going forward, States must promote the creation of alternative reporting mechanisms; increase shelter options; improve protection and justice capacity; retain critical sexual and reproductive health programs where victims of domestic and sexual abuse are frequently reported and supported; support independent women's groups; financing economic protection measures for women workers, especially those working on the frontlines of the pandemic or in the informal economy, and other groups disproportionately affected by the pandemic, such as migrants, refugees, homeless and trans women; and collecting detailed data on the gendered effects of COVID-19.[48]

48 *The COVID-19 shadow pandemic: Domestic violence in the world of work: A call to action for the private sector* | Digital library: Publications, UN WOMEN (June 20, 10:20 AM), https://www.unwomen.org/en/

Course of Action for Friends and Family of Aggrieved

- The right to record domestic violence to the police is always open. Nevertheless, if the victim does not plan to do so, they can set up a security system for themselves, with a secure message to inform the people with whom they live when confronted with an unsafe circumstance.
- It is prudent to have a friend, family, neighbour or someone nearby notified in the case of intensifying peril. It is also necessary to explain this to trusted family members or friends so that the perpetrator can be held accountable.
- There are also many helplines for domestic violence and useful online counselling websites that victims can utilize for welfare purposes.
- People with previous injurious, destructive inclinations and anger control difficulties must strive to keep their stress as low as feasible. Exercising self-care, reducing media exposure, taking on online motivation programs, or soliciting remedy by counselling can make them better.
- Parents must keep in mind that their temporary lack of control may have a more profound influence on their child than they apprehend.
- When your loved one tells you that she is at risk, it's a good idea for her to make a safety plan with the assistance of professional support service. This may include, for example, putting some money away and ensuring that she has access to a mobile phone via contact with emergency services.
- When your friend is still engaged in a legal matter with an abusive ex-partner, be sure to know that community law centres and legal aid programs are also offering online advice to clients.[49]

Judicial Course of Action

- With the lockdown being imposed, it is tough to have fast-tracked courts and to have regular hearings. The government should take suitable actions to assure that the victim is protected like improving the scheduling of the trial, filling in the vacancies of the judge, and, of course, the necessary Virtual Courts.
- The courts should do away with so much needless paperwork while listing any required lockdown hearings, the same can be done when routine court hearings recommence.

digital-library/publications/2020/06/brief-domestic-violence-in-the-world-of-work.

49 *Ibid.*

Organisational Course of Action

- The COVID-19 pandemic is an opportunity to reconsider how the private sector will collaborate with other stakeholders to end domestic violence. With the removal of locks as women return to work, there will likely be a further rise in demands for assistance in the workplace to aid survivors of domestic abuse.
- Organizations must also be prepared to scale up their activities in the medium and longer-term. The private sector should be at the forefront of creativity, dialogue, and cooperation with governments, workers' unions, service providers, and non-governmental organizations.[50]

Conclusion

It is important to note that domestic violence was a global pandemic even before the outbreak of COVID-19. According to data obtained by the United Nations, 243 million women and girls between the ages of 15 and 49 in the world have been exposed to sexual or physical abuse by an intimate partner over the last 12 months. Put differently, one in three women has witnessed physical or sexual harassment at some stage in her life. LGBTQ+ people face equally high rates of aggression. As the Inter-American Commission on Human Rights and the United Nations have pointed out, countries must have a gender viewpoint in their response to the COVID-19 crisis.[51]

Victims of domestic violence must remember not to blame themselves for what is happening to them. Violence is unacceptable and the perpetrator has to be held accountable. Victims must not make excuses for the perpetrators' actions. Accepting these acts will lead to a vicious cycle of violence. However, understanding this may not be possible for everyone because of the society or environment they were brought up in. In a country like India, it has been a long-known practise to instil the idea of husband worship in the minds of young women. This perpetuates the notion that a husband is equivalent to God and can do nothing wrong.

The urgency of the situation and the need for immediate and effective action needs to be acknowledged by Governments across the globe. It is believed that the aforementioned measures will assist the concerned authorities in uprooting domestic violence from society.

HONOUR KILLING : PRESERVING HONOUR OR ATTRACTING IGNOMINY

Nidhi Chillar* and Ritika Sharma**

Abstract

Honour killing is one of the most serious offences against humanity. Women have been viewed as property from time immemorial and that is the reason that the present patriarchal society is unable to accept the fact that women have the right to choose their male counterparts. It is expected from them to live according to the norms of the families and the community she lives in; even the slightest deviance may lead them to lose their lives. The situation becomes worse when the woman falls in love with a man who is from a different caste. It is believed that inter-caste marriage brings dishonour to the family and this is the reason that many girls have fallen prey to honour killing. The families kill their daughter, sometimes even her male counterpart to preserve what they think to be the honour of the family. The Khap Panchayats also have a major role to play in honour killings. Khap Panchayats which are seen as the authority to preserve the tradition and custom of the villages often instigate and engages in the brutal act of honour killing.

Honour killing is a crime not only against an individual but the society as a whole. Various measures have been taken by the legislature to enact strict laws against honour killing. Judiciary has also played an important role in punishing the perpetrators of such a brutal offence.

The present paper tries to cover the topic "honour killing" in detail. The paper tries to focus on the causes responsible for honour killing, the infamous cases on honour killing, how the Khap Panchayats have played a major role in instigating honour killing. The paper has also tried to bring in light the consequences of honour killing and to describe the laws to protect the victims from honour killing, the response of the

judiciary on such crimes. The paper has also provided for the desired solution to combat the menace of honour killing.

The paper is primarily concerned with India, however, certain cases that took place outside India has also been highlighted to understand the concept better. The paper has also analysed the judicial response in Honour Killing cases.

Keywords: *honour killing, honour, caste, patriarchy, Khap Panchayats, dishonour, murder, homicide.*

INTRODUCTION

Killing females in the name of honour expresses a despotic society dominated by arbitrary culture

- Khaled Hishma

Honour killing is one of the barbarous offences. An honour killing is a homicide of a member of a family by the other members of the family, due to the belief that the victim has violated the norms of the community or a religion thereby bringing shame to the honour of the family.[1] Honour killing is nothing but a plain murder in the name of so-called honour. Women have been thought of as a chattel and her chastity a matter of honour. She is brutally killed if she marries, or loves someone who is not of the same caste or religion. The perpetrators justify themselves by citing that the acts of the victim have brought shame to the family and they killed the victim to preserve the honour of the family, with no sign of remorse.

Most of the time, it is the woman who fell prey to honour killing but there can be no denial of the fact that men can also be victims of honour killing by the members of the family of the women with whom is believed to have an inappropriate relationship.[2] It is sad to note that in many countries the data of honour killing are not sufficiently collected and the cases are often difficult to be traced as the cases go unreported or the family members of the victims register or report the cases as suicides or accident.[3]

Causes of Honour Killing

There are various factors responsible for honour killing. Some of them are discussed below:

- Dressing in a way unacceptable to family or community norms.
- Denying arranged marriage or being in a relationship with a man of the caste lower than the girl's caste. It is one of the major reasons for honour killing. In a recent *Kevin Murder Case*, Kevin Joseph who belonged to a Scheduled Caste was murdered for loving a girl named Neenu, who is a Malankara Catholic.[4]
- A woman wanting to obtain a divorce without the consent of the husband. It is considered as a shame for the husband's family.
- Allegation on the character or morale of the women. Sometimes the mere allegations are enough, however false they may be. It is believed that the women should be chaste and pure, any deviance from the prescribed norms is considered as a shame for the whole family.
- If a woman is raped it is believed that it brings dishonour to the family, it is especially the case when the woman becomes pregnant.
- Having an extramarital affair is perceived as bringing dishonour to both the families i.e. the husband's family and the girl's family.

Infamous Cases Related to Honour Killing

Honour killing has often led to major high-profile murders of women in the name of dishonour brought on the family. Honour killing is often done by a male member of a particular family claiming that the action of that woman has defamed the name of the family or its prestige. Such crimes are widely suspected to be underreported and they take place throughout the world. The UN estimates that around 5,000 women and girls are murdered each year in so-called "honour killings" by the members of their families.[5] Honour killings are widely reported in the regions of the Middle East and South Asia but most of these crimes occur in countries like Bangladesh, Brazil, Canada, India, Egypt, Iran, Italy and the United States. The crime of honour killing is not limited to women and girls rather is also on the rise against LGBTQE, particularly gay men.

Manoj-Babli Case

The infamous Manoj-Babli honour killing case shocked entire India when a couple from Kaithal district, Haryana were brutally murdered just in the name of ignominy which was brought to the family by the act of the couples. The cruel act was carried out on the orders of Khap Panchayat as the couples married in the same *gotra* which took place in June 2007. On June 23, two decomposed bodies were found from Barwala branch canal in Hisar.[6] The investigations unfolded the shocking details about the case. According to the reports, the couples were forcefully asked to accept each other as brother and sister. When they both denied, the vengeance of the family members came into the picture. The couples were forcefully fed pesticides and were brutally strangled to death. The dead bodies were thrown in the canal. The families of couples lived in Karoran Village, Kaithal. Manoj's family consists of five members. Similarly, Babli's family included five members with the only earning member who was her eldest brother. Manoj's mother confessed that she knew about Babli long before they decided to marry each other. In April 2007, Manoj and Babli got missing from their houses. It was alleged that Manoj has eloped Babli to Chandigarh and they got married to her at a Durga temple which was a mere commitment to one another transcending their willingness to abide by societal norms.[7] The Khap Panchayat intervened and annulled the marriage. However, Babli's relatives were chasing Babli and Manoj even after the Court provided police protection to the couples. Even after all the security and protection of the police and the efforts of the couples to escape, they were kidnapped, beaten and were strangled to death. Their bodies were wrapped in a gunny sack and were dumped in the Barwala Link Canal in Hisar District. The case was brought before the trial court convicted the accused and the policemen who did not comply with their duties rather misused their powers. There were constant threats to the judge also, who gave the verdict in the matter. The matter went for the appeal in the High Court of Punjab and Haryana Court and the four convicts were awarded death sentence.[8]

Qandeel Baloch's Case, 2016

The pattern and the reason for killing in this are not new at all. A Pakistani social media celebrity named Qandeel Baloch was murdered ruthlessly by her brother. She was drugged and asphyxiated by her brother when she was sleeping in her parents home in Multan.

7 Death sentence commuted in Manoj-Babli case, THE HINDU, 12 March 2011.

8 Manoj-Babli honour killing: SC allows plea against acquittal of accused, The Times of India (Aug. 05, 2020, 11:40 AM), https://timesofindia.indiatimes.com/india/Manoj-Babli-honour-killing-SC-allows-plea-against-acquittal-of-accused/articleshow/9844060.cms.

Autopsy reports confirmed the same. Her brother Waseem confessed that he murdered her sister as she was bringing disrepute to their family's honour and reputation.[9] The murder was widely condemned all over the world by several famous personalities.

Ghazala Khan's Case, Denmark, 2005

Ghazala Khan was the Danish woman who was killed by her brother as she married against the will of the family. It was confessed by her brother that the murder was ordered by their father to save the honour of the family. It was being mentioned by the family that the girl was involved in an intimate relationship with Emal Khan, three years before her marriage.[10] After the confession of her feelings, she was badly beaten up by her mother and was locked inside the home in isolation. After they were married, the family member played a trick to kill the couple. They pretended to meet and reconcile the issue. They convinced the couples to meet at a railway station and this was the location where both Emal and Ghazala were shot. The accused were convicted in the court proceedings and were awarded requisite punishment.

Bhavna Yadav Death Case, 2014

Bhavna Yadav was a 21-year-old Delhi University student who was strangled to death by her parents just after three days of her marriage. This was because she married against her parents' wishes. This case was one of the most shocking cases as so-called honour crimes rarely involve middle class educated families in big cities.[11] The girl was brutally killed for marrying her batchmate as according to the family, she brought disgrace to their reputation.[12]

Khap Panchayats and Honour Killings

What is Khap?

Khap is a cluster of villages, where every boy and girl is deemed to be brother and sister. Thus, they cannot form the ties of affinity within a khap[13].

Khap Panchayats and their Role in Honour Killing

Khap panchayat is the traditional local judicial body active in north-western states like Haryana, northern Rajasthan, the rural belt of Delhi and western Uttar Pradesh.[14] The leadership of the Khap Panchayat is decided on the parameters of caste, status, gender and financial status etc.

The very mention of khap panchayat brings to our minds the horrifying picture, where the couples are brutally killed for loving each other against the norms of the community.[15] According to the Justice Verma Committee Report, the Khap Panchayats have no sanction under law.[16] The Khap Panchayats have always tried to maintain caste order by preventing inter-caste marriages and debarring *sagotra* marriages. These practices have severely restricted the individual's freedom to choose their life partners. This further unduly emphasises a woman's honour, thus, not only controlling her sexuality but also her marital choice by stigmatising inter-caste marriages.[17]

Khap Panchayats are considered as the custodian of the customs, culture and traditions of the community. Khap Panchayats are seen opposing the marriage within the village, *Sagotra* marriage; marriage within the khap and inter-caste marriages.

The Khap Panchayats does not allow the violation of the above-stated norms. Any violation of these norms attracts strict and barbarous punishments, often leading to humiliation and even the murder. In *Arumugam Servai v. State of Tamil Nadu,*[18]the Hon'ble Supreme Court pointed out that there is nothing honourable in "honour killing" and, it is nothing but a shameful and barbaric murder.

Consequences of Honour Killings on the Society

Honour crimes are usually considered as a convenient expression to describe the incidents of violence and harassment caused to the young couple intending to marry against the

wishes of the so-called community or the concerned family members. However, the terms of such kind are often used as catchy phrases and not as apt and accurate expressions.[19] It has been widely observed that men are also targeted by honour killings. The consequences are far more negative. Honour killings are not at all honourable. It is a wrong perception in the minds of the perpetrators that by killing the couples who have disobeyed the norms and the rules of the community would lead to deterrence and no other individual will think of taking any step of this kind. This misconception has led to the deaths of many innocents. There are perils of falling in love. A kind of mental trauma and a deep fear of being killed is usually instilled in society by such acts of honour killings. People begin to fear to fall in love. Love becomes a tool to commit crimes of such sort.

Laws to Protect the Victims from Honour Killing

There is no specific legislation on honour killings as of now and it is generally considered as murder or culpable homicide. However, there are various provisions contained in various statutes and the Constitution that deals with the same. These provisions are discussed below:

- Honour killings are the cases of murder and homicide both of which are the grave offences under the Indian Penal Code (IPC). Section 300 of the IPC deal with murder while Section 299 and 301 deal with culpable homicide not amounting to murder. Since the honour killing is committed with the intention of killing the victims because their acts have brought the dishonour to the family, therefore, the act of honour killing falls within the murder and culpable homicide.[20]
- The members of Khap Panchayat or the family can be made liable under Section 302 of the IPC for instigating to commit suicide those who have violated the norms of the community.[21]
- Since the honour killing particularly targets the woman, it is against Article 14 of the Constitution which provides for the Right of Equality before the Law. Honour killing has given rise to Gender Violence[22].
- Killing someone in the name of honour is violative of Article 21. Article 21 guarantees the right to life and personal liberty. The family members and the

19 Law Commission of India, "*242nd Report on Prevention of Interference with the Freedom of Matrimonial Alliances: A suggested Legal Framework*" (August, 2012).

22 Seied Beniamin Hosseini, C Basavaraju, "*Study on Honor Killing as a Crime in India-Cause and Solutions*", 2(1) MYSINTCON 90, 91 (2015).

Khap by killing the victim violate Article 21. Every person has the right to live and the capital punishment can only be given as per the rule established by law. Since neither the Khap Panchayats nor does the family members authorised to invoke capital punishment by law, they act in violation of Article 21.[23]

- The Special Marriage Act, 1954 came into force to legalise the marriage solemnised outside the caste, religion or within the same village, khap or gotra. Thus, making such marriages completely legal. The couples belonging to different castes can thus marry under the Special Marriage Act, 1954[24].
- Scheduled Tribe and Scheduled Caste (Prevention of Atrocities) Act, 1989 was enacted to protect the SC's and ST's from any kind of humiliation and atrocities. The Act is connected with honour killings as most of the cases of honour killing are committed in connection to caste and religion.[25]
- The Protection of Human Rights (Amendment) Act, 2006 contains provisions for protecting the individual rights of human beings. It also provides for the establishment of the National Human Rights Commission, the State Human Rights Commission and Human Rights Courts for better protection of Human Rights.[26]

Judicial Response

Every society has its customary practices. Some practices are good for society while others may turn out to be bad. Honour killing is the most barbaric and brutal nature of the customary practice. The judiciary has always condemned Honour killing through its judgments and has been successful in awarding appropriate punishments to perpetrators.

In the *State of Uttar Pradesh v. Krishna Master and Another*[27], the accused were guilty of murdering six members of the family in the name of honour killing. The Hon'ble Supreme Court in its judgment observed that killing six members of the family on the flimsy ground of saving the honour falls within the rarest of the rare cases. The Supreme Court thus awarded rigorous imprisonment for life and a fine of ₹25,000 each, in default, RI for two years.

23 *Supra* at 29.

24 *Ibid*.

25 *Supra* at 91.

26 *Ibid*.

27 *State of Uttar Pradesh v. Krishna Master and Another,* Criminal Appeal No. 1180 of 2004, decided in 2010.

In *Lata Singh v. State of U.P. and Another*[28], the Supreme Court of India observed that the caste system is dividing the nation into two parts. It was observed that inter-caste marriages are in the national interest as they will result in destroying the caste system. The Supreme Court further stated that India is a free and democratic country, and once a person becomes major, he/she has every right to marry any person who he/she likes. If the parents don't agree with the choice of their child what they can do is that they can cut their social relations with the child but cannot threaten or harass them. The Court held that such threats and harassment are wholly illegal and those who commit these shall be severely punished.

The decision of the Supreme Court in *Arumugam Servai v. State of Tamil Nadu*[29] is noteworthy. The case arose in connection with the violation of certain provisions of Scheduled Tribe and Scheduled Caste (Prevention of Atrocities Act), 1989. The Supreme Court observed that the act of Khap Panchayat (khatta Panchayats) in Tamil Nadu in encouraging the honour killing is wholly illegal and is needed to be ruthlessly stamped out. The court further observed that the Khap Panchayats by indulging in such acts takes the law in their hands, and amount to kangaroo courts, which are wholly illegal.

The Supreme Court in *Bhagwandas v. State (NCT of Delhi)*[30] observed that "*honour killing for whatever reason would come within the category of rarest of rare case deserving death penalty*."

Present Situation

In the present situation, crimes of honour killings are taking novice and distinctive forms. It is increasing day by day and there has been no break in the increment if the same. The National Crime Record Bureau statistics depict that honour killings in India have grown by more than 76%-79% from 2014 to 2015.[31] While 28 murders were reported under this category in 2014, this number jumped to 251 in 2015. Moreover, there are many cases which go unreported. The data available is only of the cases which are reported. There have been thousands of cases in the interiors which are not reported.

31 National Crimes Record Bureau, Ministry of Home Affairs, "*Crimes in India*" (2016), (20th March 2020) https://ncrb.gov.in/sites/default/files/Crime%20in%20India%20%202016%20Complete%20PDF%20291117.pdf.

Desirable Solutions

- There is a need for the transformation in the attitude of the people. Inter caste-marriage should not be viewed as a stigma. There's no honour in an honour killing.
- Honour killing should be made a separate offence as it would help in bringing more clarity for the law enforcement agencies.
- Legal Protection should be given to the couples who are threatened for marrying against the wishes of their families.
- Severe Punishments should be awarded to the perpetrators of the offence to give a strong message to all.
- Regular statistics should be collected, studied and analysed to decide the steps that must be taken to combat such crimes.

Conclusion

To sum up, it is important to note that the very act of honour killing itself defies the very rule of nature. Nobody has been embodied with the right to take anybody's life. This authority vests in God only. A mere misconception of false honour and ego leads to such heinous crimes. This has proved to be the greatest setback on the entire social structure. In the name of honour, plain murder is executed. People do not understand that for whom they do such acts, those people of society will never support in any circumstances, whatsoever. In the end, it is only the blood relations who stand in the situations of crisis. The incidents of honour killings have always been a debatable one. It is a stain on society. There is a need to understand that taking life just for the momentary pleasure of maintaining one's honour, status and reputation in society cost huge amounts in the long run.

THE BIOLOGICAL WEAPONS CONVENTION: LEGAL LACUNAE AND THE WAY FORWARD IN LIGHT OF COVID-19

Samavi Srivastava* and Rounak Doshi**

Abstract

Biological Weapons are weapons of mass destruction that may cause various forms of damages. The use of Biological Weapons substantially impacts a considerable population all over the world. With the advancement of technology, the need of development of a Convention which prevents the development and usage of such weapons has become an agenda of paramount importance. Efforts have been made all over the world to curb the menace of use of biological weapons, and so far, one of the most successful steps taken in this regard has been the excogitation of the Biological Weapon Convention which prohibits the production, use, and proliferation of Biological Weapons. This paper provides an insight into the recent allegations against China for manufacturing the virus that led to the COVID-19 pandemic; which constitutes a violation of the BWC. The authors will discuss in detail the salient features, working, implementation, as well as shortcomings of the Convention, and will critically assess and analyse the present global position on the said issue while stressing upon the need of certain amendments to ensure the proper functioning of the BWC.

INTRODUCTION

In today's time and age, biomedical advances have made it possible to control features of living organisms in helpful manners, prompting breakthroughs in health, the economy, farming, the life sciences, and other sectors. Research in biology and the opening of biological laboratories across the world has provided a platform for the development of vaccines and solutions to even the deadliest viruses and diseases that humankind has ever faced. Nevertheless, in times such as these, its negative repercussions cannot be overlooked. Such technological advancement is also the path to the development of biological weapons

that threaten international peace and human security.[1] Rapid advances in biotechnology and the proliferation of biological weapons capabilities have already posed serious threats to society by enabling the production of biological weapons with unique and unpredictable characteristics.[2] They have unprecedented rates of proliferation and are hard to trace, therefore being able to pass off as natural occurrences, making them the perfect weapons for hostility. In fact, biological weapons are considered to fall under the umbrella of "Weapons of Mass Destruction"[3] and even in *Nuclear Weapons* Advisory Opinion, the International Court of Justice has specified that the use of weapons of mass destruction tense to be a prohibited activity.[4]

The fundamental question that arises is; how do we distinguish between biology being used for peaceful purposes and harmful ends. To provide some clarity, WHO has defined biological weapons as microorganisms or toxins that are delivered and discharged intentionally to cause disease and death in people, animals, or plants.[5] Toxins refer to those poisonous products of organisms that are lifeless and incapable of reproducing themselves.[6] Further, Biological Weapons consist of two inalienable parts – a weaponized agent and a delivery mechanism.[7] The harmful or negligent use of these biological weapons can cause serious harm at the national and international levels.[8] They may cause socio-political-economic harms that are terrifying.[9]

The Biological Weapons Convention (hereinafter "BWC") is the first multilateral treaty that prohibits the development, production, stockpiling, and use[10] of biological weapons.

10 U.N. BWC, 4th Review Conference, U.N. Doc. BWC/CONF.IV/9 (Dec. 6, 1996).

It bans an entire category of weapons of mass destruction (hereinafter "WMD"). After all the preparatory sessions in the United Nations' Office of Disarmament Affairs forum starting in 1969, the BWC opened for signature on April 10, 1972, and entered into force on March 26, 1975.[11] It currently has 183 states-parties.[12] Its conception was based on the acknowledgment of the dangerous nature of biological weapons.

In recent times, this discussion on biological weapons and the BWC has specifically gained a lot of relevance and importance because of COVID-19, also known as the coronavirus, a deadly disease spread by a virus through rampant human to human transmission that has brought the world to a standstill. Emanating from China,[13] it has wreaked havoc on the lives of many people. It has displaced and disrupted humankind and their activities globally. As of June 14, 2020, coronavirus has killed more than 430139 people and infected nearly 7787271 persons across the globe.[14] The virus has caused world trade to fall by around 30% and also seriously impacted cultural and sports events all around the world.[15] and[16] A lot of speculation has been made regarding the emergence of Covid-19. Various media outlets[17] have claimed that Covid-19 is a Biological Weapon artificially developed by the People's Republic of China in its high-security biochemical Wuhan lab to cause a substantial amount of harm to other nations and severely impair the global economy.

Recently on April 3 2020,[18] a complaint against the People's Republic of China before the United Nations Human Rights Council (hereinafter UNHRC) was jointly filed by

the International Council of Jurists and All India Bar Association for the violations of International Human Rights and Serious Violations of International Humanitarian Laws. The complaint places its focus on the conjecture that COVID-19 is a carefully assembled biological weapon, aimed at crippling major countries in the world leaving only China as the beneficiary.[19] Moreover, on April 21 2020, a petition against the People's Republic of China for using the biological weapon was filed by the Attorney-General of the State of Missouri in the United States District Court for the Eastern District of Missouri Southeastern Division.[20]

Further analysis of this accusation and the relevance of the BWC forms the crux of this paper. It has been broadly divided into four parts- the history and status quo of the BWC, the legal lacunae and loopholes that persist within the BWC, past-allegations of non-compliance, and suggested solutions and changes which could be incorporated by the BWC.

History and Status of the Biological Weapons Convention

The usage of biology for the advancement of weapons made for hostile purposes or armed conflict was discovered by mankind many years ago, as early as the 12th century AD. Biological toxins have historically been used as destructive forces against armies as can be seen in instances such as of the year 1155 when the Roman Empire used human bodies to poison water wells in Italy during the battle of Tortona, 1495 when the Spaniards mixed wine with the blood of patients suffering from leprosy to sell to their French enemies, or more recently in 1863 when Confederates, or British forces, sold clothes of patients suffering from yellow fever and smallpox to troops in the United States.[21] In modern times, during the first World War, many countries initiated the development of biological weapons on a military scale, and allegations were made that Germany infected horses that were being shipped to the Allied powers with anthrax or glanders, thereby making use of biological toxins.[22]

Subsequently, the dangers of using biological weapons became abundantly clear to the international community. In order to ameliorate the situation, the League of Nations drew up a protocol that prohibited the use of chemical and biological weapons in warfare, and it was signed by member States at a conference held in Geneva in 1925. Being brought into force in 1928, it came to be called the Protocol for the Prohibition of the Use in War of Asphyxiating, Poisonous or Other Gases, and of Bacteriological Methods of Warfare[23], or more commonly, the Geneva Protocol. However, the shortcomings of the Protocol were inescapable as many countries, especially the major powers such as the United Kingdom, France, and the Soviet Union, reserved the right to legally use such weapons in retaliation.[24] Further, there was no mention of the production or storage of such weapons in the Protocol, thereby allowing countries to accumulate large quantities of biological and chemical agents.

The adoption of the Geneva Protocol did not prevent the usage of biological weapons, examples being the second World War and the Vietnam war. There was a need for a more definitive convention that had to be adopted and implemented, and in hopes of the same, the United Nations started working towards the disarmament of biological weapons. Initially, most nations were unwelcoming of this suggestion, but this position was drastically altered once the then President of the United States, Richard Nixon, announced his support for renunciation of biological weapons.[25]

At the very onset, the BWC specifies in its preamble that it finds its foundation in the Geneva Protocol and adheres to all its principle and objectives. The essence of the convention is the prohibition of the storage, development, or usage of any biological weapons or toxins for hostile purposes or armed conflict.[26] It places a positive obligation of due diligence on each member State to prohibit and prevent the development of such weapons in their territory or area of jurisdiction[27], further iterating that no member State shall in any way assist or induce another State to acquire any biological toxins, weapons or the equipment thereof.[28] The BWC envisages a world free of biological weapons and therefore stipulates that all

existing biological weapons, toxins, or equipment must be destroyed or diverted to peaceful purposes within nine months of it being brought to force.[29] There is also an undertaking of cooperation that exists among the states to ensure the application of the stipulations of the convention.[30]

It must be acknowledged with due care that this prohibition on the usage of biological weapons is not absolute; it is only for purposes that are not prophylactic, peaceful, or protective.[31] In fact, the convention urges all Member States to participate in the fullest exchange of research and knowledge to develop themselves in the field of biology. It clarifies that there is no intention to hamper any technological or economic developments arising from research in this field.[32]

Finally, it asserts that any complaint one member State has with another regarding breach of obligations of the convention can be addressed to the Security Council of the United Nations. Upon consideration, it may investigate the matter further.[33]

This convention, like most international treaties, relies hugely on State cooperation and confidence-building. In order to pursue the successful implementation of the convention, the member States hold review conferences every five years to discuss developments in the implementation of the stipulations as well as future plans and endeavours of the countries. Implementation Support Units (hereinafter ISUs) were established in the sixth review conference for administrative support and assistance as well as the national implementation of the BWC.[34] There have been eight review conferences so far, the most recent one being held in 2016,[35] the results of which found most state parties disappointed as there was minimal consensus amongst the members. Therefore, despite the presence of a Final Document that commanded agreement of all members, the text of the same was barely different from the same of the seventh review conference.

Despite the seemingly bleak future of the BWC, it has suddenly emerged as a convention of immense relevance and deliberation following the allegations of its violation by China. The conjecture that the coronavirus was manufactured by laboratories in China intentionally is a clear violation of the very essence of this convention. However, it has been maintained by China consistently, as by all other countries faced with similar allegations in the past, that its laboratories dedicated to biological research are only for peaceful developmental purposes.[36] Whether or not the allegations against China have any veracity is beyond the scope of this article, however, the extent of the legal lacunae that plagues the BWC has been explored extensively and is discussed in the next part.

Legal Lacunae and Loopholes of the BWC

The BWC is undeniably a crucial step that the international community has taken towards disarmament. It is a specialization of the text of the Geneva Convention and highlights that chemical and biological weapons ought to be differentiated in order to truly achieve complete weapons reduction. However, there are certain shortcomings of the Convention which act as barriers in allowing it to reach its full potential.

The first major impediment in the BWC is incontrovertibly evident in the very first article itself. The article states that "*each State Party to this Convention undertakes never in any circumstances to develop, produce, stockpile or otherwise acquire or retain microbial or other biological agents, toxins, weapons, equipment or means of delivery designed to use such agents or toxins for hostile purposes or in armed conflict*".[37] It seems to be a forthright article, however, there is no clear definition of "weapons, equipments or means of delivery" that has been agreed upon by the State parties.[38] Biological weapons had been defined as those the design of which indicated that they could have no other use than for hostile purposes, or that they were specifically intended to be used for such purposes.[39] Initially, Switzerland, stating that since there is no clear definition provided by the convention, held the right to determine for itself what would constitute a biological weapon.[40] The explanation offered by Switzerland was that since there are hardly any

weapons which are peculiar to being used only for hostile purposes, it ought to decide for it what auxiliary means fall within that definition.[41] The United States of America, albeit agreeing to the limitation of this definition, objected to this reservation and maintained that a country must not unilaterally reserve with itself the right to determine what constitutes a weapon as that undermines the very essence and authority of the BWC.[42] In today's rapidly developing world where new advancements in science and technology take place regularly, such a clear distinction between a weapon and machinery is difficult to observe. This has commonly been recognised as the 'dual-use dilemma', where the results of well-intentioned scientific research can be used for both good and harmful purposes. There is no black and white differentiation, and the BWC has no clear definition of what constitutes 'weapons, equipment, or means of delivery' to navigate this grey area. Hence, its stipulations are always at risk of being subverted.

Secondly, another glaring limitation present in the first article is the specification of the prohibition of only those biological weapons which use toxins or agents for hostile purposes or armed conflict. The convention explicitly allows the use of biological toxins or agents for peaceful, prophylactic, and protective purposes.[43] While ipso facto this seems to be a straightforward stipulation, it is perhaps the most controversial article of the Convention. In research facilities, in the initial stages of research and development, and perhaps even later, it is difficult to stratify the research into hostile and peaceful slots. Just as to manufacture an antidote one must deal with the toxin that would develop the antibodies required for such a cure[44], for developing vaccines, protective equipment, and other prophylactic research, a laboratory will have to host the biological toxin in question. Thus, the difficulty here arises in ascertaining the intention of the member State while handling these biological toxins and agents. This could have been solved by appropriate measures of verification of such intentions coupled with accountability for the same, however, attempts towards the same have so far been unsuccessful.

The third Review Conference of the BWC had tasked a group of experts called VEREX (verification experts) to discuss potential measures of verification to determine the purpose of research as well as the adherence to the Convention by the State Parties.[45] Based on the

44 *International Programme on Chemical Safety,* World Health Organization, (March 13, 2020, 11:00 AM), https://www.who.int/ipcs/publications/training_poisons/guidelines_poison_control/en/index7.html

45 U.N. BWC, 3rd Review Conference, U.N. Doc. BWC/CONF.III/23 (Sept. 27, 1991).

report of this group, an Ad-Hoc group was established to create a legally binding protocol regarding verification to strengthen the Convention.[46] However, the recommendations of this ad-hoc group were never adopted due to differences between the member States.[47] Currently, no binding verification mechanism exists to ensure compliance with the Convention.

An Accountability Framework for the BWC reporting on national compliance to the Review Conferences was initiated in the First Review Conference itself, however, government reports remained unsystematic and lacked uniformity and compliance. In 2006, there were only 22 national reports to the Sixth Review Conference from among 155 States Parties.[48] The BWC has no stipulation which obliges the Member States to declare the possession of such banned weapons, the laboratories engaged in research and development surrounding biological agents which could be used for hostile purposes, or the usage of biological agents in non-prohibited activities. There is no limitation to the quantity or type of toxins that are permissible as per the Convention. Further, no external organisation outside the framework of the BWC has the legal authority to implement any verification mechanism. This essentially serves the member States with a carte blanche with no accountability, where submitting themselves to the inspection of the BWC is merely voluntary.

Thirdly, the nebulous line that divides research for peaceful and hostile purposes also infests as a problem while reading Article 3 of the BWC in consonance with Article 10. Article 3 states that each State Party to this Convention undertakes not in any way to assist any State in manufacturing or otherwise acquiring any of the agents, toxins, weapons, equipment or means of delivery specified in Article I of the Convention.[49] Further, Article 10 states that the States Parties to this Convention undertake to facilitate and have the right to participate in the fullest possible exchange of equipment, materials and scientific and technological information for the use of biological agents and toxins for peaceful purposes in order to avoid hampering the economic or technological development of States Parties to the Convention.[50] Firstly, without a clear and uniform understanding of what constitutes a 'hostile purpose', these articles regrettably act as contrary forces. Most machines and equipment using biological toxins, or even otherwise, are not exclusive in their usage; as

47 The Biological Weapons Convention: An Introduction, United Nations Publication 22-23 (2017).

48 Nicholas A. Sims Et Al., An Accountability Framework of the BWC 4 (2010).

49 Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction, art. 3 (1972), 1015 U.N.T.S. 163.

50 Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction, art. 10 (1972), 1015 U.N.T.S. 163.

such, they can be weaponised. Since the BWC's *raison d'être* is disarmament, co-operation in the exchange of biological agents is hard to accommodate without leaving room for misuse. Secondly, Article 10 promotes co-operation in exchange for technology which has led to a significant technological gap between the developed and developing countries as most developed countries exchange information without accommodating other countries which are behind in technological developments, as was acknowledged by the Member States in the Fourth Review Conference of the BWC.[51] This has hampered economic growth in developing countries, contrary to its intention.

The fourth shortcoming presents itself in the observation that countries are often reluctant to disclose information regarding their military facilities. Their own plans and actions are 'information' and those of another state is 'propaganda'.[52] This resistance in co-operation might stem from international politics, but it creates a perplexity with regard to the BWC as it is dependent on confidence and meaningful co-operation amongst the member States for successful implementation. The secrecy surrounding biological research could create suspicions and lead to allegations of breaches. Further, in order to get ahead in the arms race, countries might act on those suspicions, true or not, and embark on their defensive, or offensive, weapons programmes.

The fifth problem is the complaint mechanism as stipulated in the Convention. The BWC provides for a complaint mechanism in case the aforementioned allegations do arise. Article 5 of the BWC provides that the state parties may consult each other to solve any problem in relation to the objective of the BWC.[53] Article 6 of the BWC states that any State Party to this Convention which finds that another State Party is acting in breach of obligations may lodge a complaint with the Security Council or the Secretary-General[54] of the United Nations, which, based on the evidence provided by the complainant, it may take into consideration for further investigation.[55] However, due to the secrecy surrounding such research discussed above, it is very difficult for a member State to gather such information which has enough force for the UNSC to initiate investigations. Nonetheless, there is no instance when parties have used the procedure prescribed under Article 6 of the BWC. This

53 Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction, Art. 5 (1972), 1015 U.N.T.S. 163.

54 U.N. BWC, 3rd Review Conference, U.N. Doc. BWC/CONF.III/23 (Sept. 27, 1991).

55 Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) and Toxin Weapons and on Their Destruction, Art. 6 (1972), 1015 U.N.T.S. 163.

may be because of its highly political nature of formally accusing another State Party of non-compliance. Further, if any allegations are against the permanent members of the Council, which is a probable condition considering they are leading powers in technological and military advancements, they can veto any investigation which may have been conducted.[56] Additionally, there has been no punishment specified in the stipulations of the BWC which may be accorded to defaulting parties. Another forum for addressing such complaints can be the International Court of Justice.[57] However, member states often have reservations to their declarations to the ICJ limiting its authority and jurisdiction on certain matters[58], thereby often rendering this topic of investigation out of bounds.

The sixth and final issue that cripples the BWC has been the lack of available funds for its functioning and the negligence and lack of assistance of Member States in this regard. In the 2018 Meeting of the State Parties, it was affirmed that "the financial problems encountered by the BWC result from: (a) Structural non-payment, which is a persistent pattern of non-payment of contributions within the calendar year, creating a consistent deficit in the revenues available for the work of the intersessional programme as well as accumulated debts currently in excess of $130,000; (b) Delayed payment, which is a payment within the budget year, but later than the thirty days expected upon receipt of the invoice, such that funds may not be available at the time they are required; (c) Inadequacy in applying the Financial Regulations and Rules of the United Nations to the agreed programme of work of the BWC, in light of the requirement that full funding is on hand before staff contracts are signed or meetings are held and thus have led to difficulties in extending ISU contracts, as well as to cancelling (or reducing) meetings agreed in the intersessional programme"[59]. Further, in 2016, the Implementation Support Unit of the BWC distributed a document prepared by the Financial Resources Management Service (FRMS) of the United Nations which states that 62% of the State Parties owed a total of US$ 96,519 to the Convention between 2001-16 only.[60] This has significantly hampered the effective implementation of the BWC, as well as the smooth functioning of the ISU and convening of meetings in the future.

Allegations of Non-Compliance

Ever since its implementation, there have been many instances of allegations of non-compliance with the BWC. At several review conferences, States Parties have openly accused others of violating the provisions of the BWC. For instance, during the Third Review Conference, in 1991, Australia, the United Kingdom, and the United States blamed the Soviet Union for manufacturing biological weapons,[61] and at the principal meeting of the Fifth Review Conference,[62] in 2001, the United States made claims against four States Parties, namely Iraq, Iran, North Korea, and Libya for violating the BWC. Discussed further are those cases which have received the most attention amongst such allegations.

The Sverdlovsk Case

In the year 1980, an accusation against the Soviet Union for maintaining an offensive biological weapons programme which included production, weaponization, and stockpiling of biological warfare agents was made by the United States of America.[63] An airborne release of anthrax spores from a Soviet biological facility, which caused an outbreak of anthrax in the city of Sverdlovsk in 1979,[64] was considered to be the basis of this accusation. The Soviet Union attributed the breakout of this infection to the sale of anthrax-contaminated meat in violation of veterinary regulations.[65] Interestingly, this incident is eerily similar to the current case of the spread of the coronavirus. Subsequently, various meetings of scientists from all over the world were held to evaluate the Soviet account of the incident, but to no avail.[66] Finally, in 1992, after the internal disintegration of the Union of Soviet Socialist Republic,[67] the Russian authorities admitted that a breach of the BWC had been committed.[68]

The "Yellow Rain" Case

In 1981, the Soviet Union was again accused of violating both the Geneva Protocol and the BWC by the US government.[69] The accusation was based on the production, transfer, and use of Trichothecene Mycotoxins (a group of toxins).[70] The Soviet Union unequivocally rejected the allegation. US charges were based on observers who reported that an adversary airplane had been showering a toxic yellow material on fields. The USA used several reports from chemical laboratories to substantiate their case. However, the veracity of the proof was increasingly questioned[71] as broad systematic endeavours in a few labs neglected to affirm the initial positive reports of Trichothecenes.[72]

The Cuban Allegation

In 1997, the United States of America was accused by Cuba for committing biological aggression.[73] Cuba alleged that an American crop-spraying plane was witnessed releasing an unknown mist into the air.[74] A few months later, the Cuban National Pest Control Center discovered Thrips palmi, a bug that feeds on many agriculturally important crops, for the first time in Cuba.[75] The Cuban government requested an investigation under Article 5 of the BWC. After inspecting the proof from the two nations, States Parties submitted reports to the Chairman of their meeting. Of the 12 States Parties that made entries, 9 commented that the data didn't bolster the Cuban charges and 2 (China and Vietnam) said that no concrete conclusion could be drawn.[76]

Iraq Accusation

In the year 2002, the USA and the UK accused Iraq of non-compliance of the BWC.[77] Iraq

77 Erhard Geissler, Chemical and Biological Warfare and Arms Control Developments, in SIPRI Yearbook: World Armaments and Disarmament (Oxford University Press, 1992)

became a member of BWC in the year 1991[78] when it also agreed to disclose information of all of its weapons of mass destruction and undertook to destroy them.[79] The UNSC created a body called UNSCOM[80] to review Iraq's chemical, biological, and missile abilities and accommodate their annihilation. It was revealed that Iraq's biological weapons program produced anthrax bacteria, ricin, botulinum toxin, aflatoxin, and wheat cover smut fungus.[81] Iraq professes to have finished its natural weapons program in 1991, but it is generally accepted that Iraq kept up the program all through the 1990s. These convictions are substantiated by Iraqi attempts to hide its program from UNSCOM overseers. In 1998, Iraq suspended collaboration with UNSCOM leaving numerous issues unanswered.[82] The gathering was disbanded and supplanted with the UN Monitoring, Verification, and Inspection Commission (UNMOVIC).[83] On November 8, 2002, the UNSC adopted Resolution 1441 expecting Iraq to allow unlimited access to UNMOVIC controllers. However, Iraq has neglected to reveal numerous subtleties of its biological weapons program to UNMOVIC.[84]

These cases further go on to prove that despite actions and evidence pointing to violation of the Convention, it has proved difficult for State Parties to actively use the Convention to prohibit such acts. This is substantiated by the fact that the complaint mechanism of the BWC has never been invoked so far.[85] This is indicative of the assertion that the BWC ought to incorporate a few changes and solutions in order to further its goal of complete disarmament.

Improving The BWC

In pursuance of the previously discussed shortcomings of the BWC, certain alterations and additions to the Convention may go a long way in improving its implementation and efficiency.

> "*Endogenous reinforcement can be intelligently steered, in such a way as to put flesh on the bare bones of the BWC, and to do so with a care for internal balance so that all its sectors move forward together. Its sectors include a regime of compliance, a regime of development, a regime of permanence, and a prospective regime of research.*"[86]

The most limiting barrier in the effective execution of the stipulations of the BWC is the lack of a clear distinction between peaceful and hostile purposes of biological agents or toxins. This ambiguity is justified due to the nature of research that goes into the development of biology-related technology. Therefore, for the BWC to be successful in preventing the development and usage of toxins for hostile purposes, a verification mechanism can be established which confirms compliance with the Convention and monitors the nature of research taking place in member States. Inspiration may be taken from the establishment of the IAEA (International Atomic Energy Agency) that verifies whether a State is living up to its international commitments to not use nuclear programmes for nuclear-weapons purposes.[87] Treaties concerned with non-proliferation, such as the NPT (The Treaty on the Non-Proliferation of Nuclear Weapons), entrust the IAEA as their nuclear inspectorate.[88] It has been granted extensive powers and authority through the Additional Protocol to the safeguards agreement which enhances its abilities of verification.[89] A similar Agency or organization which ensures the implementation of the BWC by conducting safeguard activities such as verification of reports submitted by State Parties, scheduled and unscheduled on-site inspections of facilities, laboratories or other locations containing biological toxins and equipment, verification of biological material inventory, surveillance measures, etc. will significantly increase the compliance of State Parties to the Convention and eventually play a role in building confidence amongst them by lifting the veil of secrecy.

The problem of the lack of accountability can be approached keeping in mind the Canadian proposal of an Accountability Framework at the Sixth Review Conference of the BWC.[90] An annual meeting of the State Parties of the BWC can be conducted where the focus would be on a State's accountability of its biological research and development to other States. Each State Party would report its actions towards the fulfilment of the stipulations of the BWC, article by article. This would ensure that the structure of the Framework

would already be known to the members. To enforce a sense of uniformity, a general list of questions and criteria may be provided based on which the members can proceed with their reports.

The difficulty in observing Articles 3 and 10 of the BWC conjointly can also be solved if, in a meeting such as this, any exchange of biological research, equipment, or agents and toxins of a significant decided quantity is declared. This declaration could be substantiated by a report of its nature and usage by the receiving country. This would ensure that such exchange is accounted for and is solely being used for peaceful purposes and economic and technological development. This meeting need not be annual, but the essence is regularity.

While a meeting such as the one discussed above may go a long way in increasing transparency, other forms of Confidence Building Measures (hereinafter CBMs) can be adopted to increase trust and allay insecurity amongst member States. CBMs are agreements between parties for the exchange of information regarding military and security activities along with verification.[91] Keeping the BWC in mind, these measures could include prenotifications of tests conducted for biological equipments, joint training programmes fostering biological research and development, exchange programmes for sharing such research, on-site visits by officials, etc. These measures will ensure that usual developmental activities aren't mistaken for being hostile and thereby reduce suspicions.

The complications in the complaint mechanism pose a menace to the foremost purpose of minimizing the use of Biological Weapons. A remedy to this predicament could be a modified version of the remedy used by the IAEA. In the IAEA, a separate organ deals with the investigation of complaints of non-compliance; when this organ finds some violation by a state party, then it may refer the matter to the UNSC.[92] The proposal here is that a new representative body of state parties should be established, like the one in IAEA rather than the United Nations, having the sole authority to deal with the investigation of matters of non-compliance. In adjudging complaints of violations of the BWC, the newly established representative body of the state parties should play the primary role in doing the investigation, when this body finds a violation then it must report it to the UNSC, which shall further take suggestions of the representative body whilst making a decision. Additionally, following an already proposed suggestion during initial negotiations,[93] the

93 The Biological Weapons Convention: An Introduction, United Nations Publication (2017).

permanent members of the UNSC should waive their right to veto with regards to matters or resolutions related to investigations of complaints.[94] This suggestion would also facilitate in upholding the principle of natural justice *nemo judex in causa sua*.[95] No specification of punishment for violation of provisions of BWC is also a major concern. As William Blackstone said, "*It is a settled and invariable principle of law, that every right when withheld must have a remedy*".[96] As we have already suggested the relegation of the UNSC from its status as the primary investigation authority in cases related to the BWC, thus we propose an alternative way for punishing the responsible state; reparations[97] in the form of restitution,[98] compensation,[99] and satisfaction[100] must be demanded from the responsible state under the Responsibility of States for Internationally Wrongfully Acts (ARSIWA).

Finally, every organization needs financial adequacy to manage its functions. The lack of funds[101] has been the least addressed issue in BWC's review conferences since its inception.[102] The measures to ameliorate the financial sustainability of the Convention ought to be urgently addressed. These could involve asking the UNODA to send invoices to the state parties at earliest and asking them to pay their past evaluated contributions without further delay. Additionally, creating a contingency fund of 10% to the cost estimates for a year would facilitate in meeting the unforeseeable requirements.[103] Moreover, a mechanism for enhancing liquidity within a budget year would succour; a reserve fund, financed by voluntary contributions should be created to serve this purpose. This reserve fund should focus on generating contribution amounting to at least 50% of the expected annual expenditure;[104] it shall be utilized as a method for financing costs of mandated exercises.

104 U.N. BWC, Elements of a Decision on Measures to address the Financial Predictability and Sustainability

In furtherance, a firm budget should be created. Proper accounting of financial documents should take place every year. Furthermore, it is proposed that careful consideration should be given to the arrears of a particular State Party before electing its citizen as an officeholder under the BWC. All the non-state parties that attend a BWC meeting should be asked to pay a certain amount of contribution in respect of the meeting attended. At the very least, the financial condition of the BWC should be an agenda in upcoming BWC meetings and conferences.

Conclusion

Conventions and Protocols play a large role in ensuring peace and stability globally. Each State voluntarily accepts a Convention and the text of the same is also decided based on the consent of the member States.[105] This requires cooperation and trust, both of which are severely hampered if feelings of suspicions infest within international relations. Additionally, wars have historically been a recurring hurdle that societies have had to face, and often they have had catastrophic results on civilians due to the usage of certain inhumane weapons. Biological weapons are a dangerous and intractable form of weapons and can destroy societies with ease if not eliminated. Therefore, a Convention such as the BWC potentially acts as a source of trust and cooperation and a barrier between humanity and a dystopian society; its goals of the elimination of biological weapons are essential for the survival of mankind. The suggestions contained in this paper are a glimpse of how the Convention can serve its purpose to its fullest.

As for the question of China and the allegations posed against it; if such allegations are true, then China would have violated the BWC. If China has manufactured the virus as a biological weapon[106], it is a direct violation of Article 1 of the Convention which prohibits the development and usage of biological toxins for hostile purposes. Further, even if China claims that in such a circumstance there was no government involvement, the mere presence of such a BW programme within their territory would constitute a violation of the duty of due diligence stipulated under Article 4 of the Convention. However, due to the shortcomings of the BWC, prima facie it cannot be conclusively held whether there was a violation of the BWC or not. China, like all accused countries, will maintain that any and all biological laboratories are only used for peaceful and developmental purposes. Due to

of the Convention, U.N. Doc. BWC/MSP/2018/CRP. 1 (Dec. 4, 2018).

105 Vienna Convention on the Law of Treaties, Art. 9 (1969), 1155 U.N.T.S. 331.

106 Dr. Adish C Aggarwala, *Complaint to the United Nations Human Rights Council, Geneva* para 5, p. 25 (April 3, 2020,08:00AM), https://www.livelaw.in/pdf_upload/pdf_upload-372096.pdf.

the barriers of secrecy, lack of evidence, lack of proper definition of what could constitute a biological weapon, no obligations to declare biological research and development, and no verification mechanisms, the veracity of either claim will be implausible to determine beyond doubt.

The BWC is in dire need of certain changes to improve its efficiency and validity, the most important of which is a verification mechanism that instills a sense of accountability in the State Parties. Each State ought to make collective efforts to build confidence and negate feelings of suspicion and secrecy which are the main reasons behind the escalation of an international crisis. They must also bear the onus of financing the BWC more responsibly as it is a Convention that will only become more and more essential with developing technology and intelligence.

To ensure that no country, organization, or group of people use the loopholes in the BWC to cause harm to the society, and to ensure that in case of pandemics such as today's coronavirus, the trust and security amongst countries are not shattered, it is imperative that these inconsistencies be addressed and rectified. This will be the international community's quantum jump towards mankind.

MARITAL RAPE - NEED FOR ITS CRIMINALISATION IN INDIA

Manasvita Tejsi* and Mridull Thaplu**

Abstract

Matrimony is a sacred bond that ties two people, and two families, together. However, if this matrimony is without consent or the people involved in the marriage are not content, then it can turn sour. Our society is inclined towards a patriarchal system from the ancient times of hunting and gathering. So, it comes as a nature for men to display emotions of dominance. Looking around the globe, law and order has a huge role in prescribing and limiting standards for human conduct. Under the Indian Penal Code, 1860, the laws have been made and appropriate punishment for the same have been provided. Neverthess, what most of the people fail to comprehend is that these laws were made by the British a long time ago. At that time, Marital Rape was not considered a crime which can be one of the reasons why it was exempted under the penal laws. This research paper substantiates and focuses solely on evolution of the rights for women; mainly the effects of Marital Rape; and the reasons how it is in violation of the Constitution of India.

Keywords: - Marital, Rape, Woman, Section 375, Dowry, Harassment, Legality, Domestic Violence, Wife

INTRODUCTION

For a long time, people believed that a woman's duty in her married life is to look after her husband, bear children, take care of household matters, cook and provide emotional and sexual needs to her husband. This was first noted in Manusmriti which is considered to be an ancient legal text and has been used to formulate the Hindu Law.

imaṃ hi sarvavarṇānāṃ paśyanto dharmamuttamam |
yatante rakṣituṃ bhāryāṃ bhartāro durbalā api ||[1]

* Student, Rajiv Gandhi National University of Law, Punjab.
** Student, Rajiv Gandhi National University of Law, Punjab.
1 GANGANATHA JHA, MANUSMRITI WITH THE COMMENTARY OF MEDHATITHI 9.6 (Vol. 2,

The same text states that it is the duty of a man to protect his wife, even if he is physically weak. This kind of stigma has been created by the society itself and men assume the role of dominance, sometimes taking it too far. The women were not given the status similar to that of their male counterparts and, before marriage, were considered the property of their fathers, and after their marriage, were considered the chattel of their husbands.[2] The father could wed off his daughter to whomsoever he deemed fit. The woman had to provide her husband with an offspring for continuation of the family line. If her husband could not provide her with an offspring, she had to get impregnated by her brother-in-law.[3] This made the woman believe that being sexually available to her husband and providing progenies was a necessity and her duty; she could never decline her husband's wishes.[4] Manusmriti contained all the laws and principles which were in the earliest days followed by the people of the subcontinent irrespective of their caste, creed or sex.

Women were considered to be the slave of man and the ill practices like Sati and child marriages were prevalent in the country but the situation in the country changed after the movement of Raja Ram Mohan Roy. Even Mahatma Gandhi took a great initiative to improve the social conditions of the women because it was the first time in the Indian Independence Struggle that women participated in the same and were at par with their male counterparts. The outcome of these very movements was a Constitution which gave equality to the women and almost all the rights that are given to the men; be it Right to Vote or Right to contest elections. Post-Independence, there were improvements and advancements in almost all the fields and focus on the life being given to woman could be made better. They were rather discriminated on the basis of their gender. The women have always fought for their rights and this was one of the main reasons why the status of women and men was equated in the Indian Constitution. There were many legislative reforms taken after the independence of the country to strengthen women and improve their status in the country so that no discrimination takes place with them. With the introduction of a Constitution, women have been granted equal social as well as political rights to that of men.

Women have been given the freedom and all the support from the constitution so that they can help in shaping the future of the country. The recent example of *Mangalyaan* is worth quoting because the whole team in the same consisted mostly of female scientists. Even though women have achieved great heights and are striving in almost all the fields whether it is education, law enforcement agencies or science and technology, there are many areas where our country lags behind.

Marital Rape

Marital rape in layman's terms can be explained as a person having sexual intercourse with their spouse without their consent.

According to Section 375 of the Indian Penal Code –

> *"Rape means unlawful sexual intercourse or any other sexual penetration of the vagina, anus, or mouth of another person, with or without force, by a sex organ, other body part, or foreign object, without the consent of the victim."*[5]

However, there is an exception provided which says that if non-consensual sexual intercourse takes place between a married couple, in that case, it will not amount to rape[6]. Domestic violence refers to the violent or aggressive behaviour within the home which involves the violent abuse of a spouse or partner[7] which takes place with a woman because the husband in all the circumstances is powerful and most males comprehend that marriage gives them the right to have sexual intercourse with the wife at any point of time whether she is willing or not. This is the face of a patriarchal society; this act is detrimental to the institution of marriage. IPC, 1860 provides for rape and punishment for rape under section 375 and 376, respectively.

Marriage is a form of social bonding between both the spouses and everything in this institution needs to have the consent of both; Justice Ahmad in the case of *Bodhisattwa Gautam v. Subhra Chakraborty* said that this *"cruel act, in turn, destroys the entire psychology of a woman and pushes her into deep emotional crises"*[8].

Marital Rape is a crime in almost all the countries of the world wherein they have either made amendments to the existing law or added a new law for the same. Marital Rape has been criminalised in around 150 countries of the world wherein countries have brought amendments in their law for criminalising marital rape. In the United States, marital rape is a crime in all the 50 states whereas in the United Kingdom the maximum legal penalty for marital rape is life imprisonment. In countries like the United Kingdom[9], Fiji it was criminalised due to decision delivered by courts, in some countries like Brunei[10] the offence

5 Section 375, The Indian Penal Code, 1860, No. 45, Acts of Parliament, 1860.

6 Exception to Section 375, The Indian Penal Code, 1860, No. 45, Acts of Parliament, 1860.

7 Section 3, The Protection of Women from Domestic Violence Act, 2005, No. 43, Acts of Parliament, 2005 (India).

8 *Bodhisattwa Gautam v. Subhra Chakraborty,* (1996) 1 S.C.C. 490 (India).

9 *R. v. R,* [1992] 1 AC 599 (UK).

10 Section 375, Brunei's Penal Code.

is explicitly criminalised. In some countries like Bangladesh, India[11] the law for marital rape does not exist because women are considered the property of the husband and the state does not interfere in the institution of marriage.

Many legislations have been passed in the country to check violence towards the woman such as dowry, domestic violence or cruelty but amongst them is marital rape that has not yet been criminalized in the country. Marital Rape is inhumane and the woman knows that she has to live her whole life with the perpetrator which has a substandard physical and mental effect on her. It is a very under-reported crime in the country because most of these women know that going to the authorities will be futile as there are no laws for marital rape; they can also face social boycott.

In the 21st century, when society is well aware of their rights and needs, laws need to be amended. Indian Penal Code, 1860 provides that having sexual intercourse with a wife who is under 15 years of age, is a crime. However, there existed a loophole in this situation, According to the Prohibition of Child Marriage Act, 2006, In India, *child marriage* is only voidable and not void which means that it is not immediately illegal[12]. The minor party, when attains the age of major, can file for divorce within one year of attaining majority otherwise, the marriage is considered legal. But there existed a lacuna in the law under which there was no provision for men asking for consent with their wife aged 15-18 years, and this provided a window for husbands to have sexual intercourse with their wives till they reach the age of majority.

The Hon'ble Supreme Court in the case *Independent Thought v. Union of India*[13] raised the age of consent for marital sexual intercourse in the case of a minor wife to 18 years which was earlier 15 years for the Exception because it was violative of Fundamental Rights as well as provisions of the POCSO act of the minor wife thus amounting to discrimination between minor girls on their marital status. Though the Hon'ble bench did not comment anything on the issue of Marital Rape in a case where the age of wife is above 18 years and added that the issue presented before the court was only regarding the marital rape of a girl who is below 18 years of age and it should not be observed in any way for that of above 18 years. The court did not comment on the issue of "marital rape" where the victim is an adult wife, thus the main lacuna in the law still exists in the country.

However, Under the Protection of Women from Domestic Violence Act, 2005, the definition of domestic violence is given under Section 3(a) which says that *"harms or*

12 Section 3(a), The Prohibition of Child Marriage Act, 2006, No. 6, Acts of Parliament, 2007 (India).

13 *Independent Thought v. Union of India,* (2017) 10 S.C.C. 800.

injures or endangers the health, safety, life, limb or well-being, whether mental or physical, of the aggrieved person or tends to do so and includes causing physical abuse, sexual abuse, verbal and emotional abuse and economic abuse".[14] Sexual abuse mentioned under this definition includes any conduct of a sexual nature that abuses, humiliates, degrades or otherwise violates the dignity of woman[15], which in turn gives a chance to wives to initiate legal proceedings. The drawback of this act is that it is more civil in nature than criminal. It does not provide for a period of imprisonment. Rather it provides for compensation, monetary gain, restraining and protective orders.

Effects of Marital Rape

Marital Rape leaves scars in the life of a woman; they include physical, psychological and mental health issues which hurt the emotional as well as the physical wellbeing of the women in the long run. This section is widely bifurcated into psychological and health issues that a woman may encounter during or after rape.

Psychological Effects

Women who have had encounters relating to Marital rape have had cases of depression, PTSD, fear, self-esteem issues, rape trauma syndrome and also being sexually unstable, unavailable or dysfunctional.[16] As soon as a woman is married, she is expected to fulfil her husband's sexual desire. The first time any female must have experienced this, it must come as a shock to her that such a thing might be required without her consent. Any occurrences after that must seem dreadful but numb to her but she knows there is no use denying or not obeying her partner. The woman feels her family name will be tarnished. So, she feels this pressure to maintain her family's name.

Rape Trauma Syndrome is the medical term given to the response that survivors have to rape and it is the natural response of a psychologically healthy person to the trauma of rape[17]. This may be immediate or may occur after months or even years. The victims may feel humiliated or degraded. The victims may also feel confused as to why this happened

14 Section 3(a), The Protection of Women from Domestic Violence Act, 2005, No. 43, Acts of Parliament, 2005 (India).

15 Section 3(d), The Protection of Women from Domestic Violence Act, 2005, No. 43, Acts of Parliament, 2005 (India).

16 Campbell, R., Dworkin, E. and Cabral, G., *An ecological model of the impact of sexual assault on women's mental health. Trauma, Violence, & Abuse*, PUBMED.GOV (June 10, 2020, 08:15 AM), https://pubmed.ncbi.nlm.nih.gov/19433406/.

17 *Surjibhai Badaji Kalasva v. State of Gujarat*, (2018) 59 (3) G.L.R. 2498.

and how could they not help themselves during the incident. Some victims may also blame themselves for being weak not to stop it or for not wanting sexual intercourse as their husbands want them to[18]. A quintessential psychological aftereffect of rape also is self-blame due to which the victim undergoes Post-Traumatic Stress Disorder because of the feeling of helplessness; not being able to help yourself from being raped and self- blaming their self to justify it.

As this issue is not even looked at as a problem so, victims may feel shame and embarrassment telling anyone about it. They feel that this is a taboo and talking about it with other people will raise eyes and questions. In the case of *Bodhisattwa Gautam v. Subhra Chakraborty*[19], a criminal complaint was filed based on a consensual affair and a questionable finding of rape due to failure to marry. Also, in a hearing for criminalizing marital rape, Hon'ble Delhi High Court in 2018 said that: *"Force is not a pre-condition for rape. If a man puts his wife under financial constraint and says he will not give her money for household and kids expenses unless she indulges in sex with him and she has to do it under threat."*[20] All these situations put mental pressure on the victim and their children if they have any. This can cause the children to have a severe mental breakdown or go into clinical depression. It, therefore, becomes evident that such acts not only destroy a woman and her life but also have severe impacts on the health of the children leading to a whirlpool effect.

Health Issues

Although there is a provision provided in the Protection of Women from Domestic Violence Act, 2005[21], but that accounts for only civil liability for sexual abuse. The psyche behind the violent act can be to show dominance and to instil fear that if they do not get what they desire, they may resort to violence.

Most women suffer from perpetual soreness due to frequent rapes. This eventually leads to having broken ribs, knife wounds, marks on their body due to the assault, black eyes. These are just a few examples of what women may experience. Most victims have reported feeling sore and bleeding from the vaginal tract. Bleeding occurs due to intense rupture of

21 *Supra* note 7.

the vagina.[22] Those forced to have anal sex can report bleeding, pain and irritability. They may feel nausea if are somehow reminded of the incident of abuse. Amidst this unwanted pregnancy can also be caused and this further causes mental and psychological pressure on the victim[23]. This can call for premature motherhood and can seriously impact the infant in question. Infertility can also be caused due to vaginal rupture and this can cause the victim to never have children. This can seriously deteriorate the victim for the future if they would ever actually want to start family planning. They can be scarred for life. This can also drive the victims to take their own life. With the notions revolving around marital rape, and the victim not being able to tell anyone anything about the abuse, the victim may think of suicide as the only option.

Marital Rape Laws in India

Our country has advanced in almost all of the fields and there have been many amendments and new legislations in our country, but till date marital rape is not considered to be an offence in the country. The laws for protecting a woman in the institution of marriage does not exist and the matters related to the same are left to the discretion of the court.

Under Section 375 of the Indian Penal code, has mentioned exception that – *"Sexual intercourse by a man on his own wife, who is above 18 years of age, is not rape"*[24]

Under the Indian Penal Code, the instances where punishment is awarded to the husband under marital rape is as follows:

i. When the age of wife is between 12-15 years, there can be imprisonment up to 2 years or fine or both;[25]

ii. When the age of wife is below 12 years, there must be imprisonment for term which shall not be less than 7 years but can also extend to life and shall also be liable to fine.[26]

iii. When the wife is judicially separated, there can be imprisonment up to 2 years and fine[27]

iv. When the age of wife is above 18 years, the rape is not punishable.[28]

22 *Supra* note 12.

24 *Supra* note 6.

25 Section 376(1), The Indian Penal Code, 1860, No. 45, Acts of Parliament, 1860.

26 *Ibid.*

27 Section 376A, The Indian Penal Code, 1860, No. 45, Acts of Parliament, 1860.

28 *Supra* note 6.

Hence, we can conclude that once a female crosses the age of 18 thereafter as a wife, she has no legal protection if she is sexually harassed by her husband which is also a direct attack on her human rights. It is very shocking because the Constitution has set 18 years as the legal age for marriage whereas the law will protect only those females from sexual abuse which are below 18 years of age and beyond this age limit there exists no remedy for the women.

Thus, it is depicted that the law which is meant for the safety of the victims, is not able to protect those who are victimised and have gone through the trauma of marital rape because according to the obsolete law, marriage in itself has given the consent to have intercourse at any point of time after the marriage and the consent of the female is not needed. Violence takes place with a woman due to which she has to submit herself to sexual activity and further on, she gets hurt physically as well as emotionally. Our judiciary, as well as the legislature, is still silent on the very fact that "*Is marriage a license to rape"?*

The Report of 42nd Law Commission[29] talks about the removal of exception of Section 375 from the IPC because it is discriminatory towards women and is not in accordance to the law. Even the Report of 172nd Law Commission[30] was in favour of removing the exception to Section 375 thereby making marital rape a criminal offence but more than 10 years have passed and no action has been taken on the same issue.

Constitution of India on Marital Rape

This law which seemingly permits marital rape can be challenged on several grounds some of which are enumerated herein. According to the Indian Constitution, all the laws which are passed by the legislature should follow the basic structure doctrine of the Constitution. If any law is in contravention of this, it can be declared as unconstitutional by the Courts. Any law or provision, if made, in favour of marital rape it would have to be in consonance with the basic doctrine of the Constitution.

Article 14

Article 14 of the Indian Constitution[31] guarantees the Fundamental right of equality before the law and equal protection of the laws within the territory of India. However, criminal law is still silent on the discrimination that is faced by the victims of marital rape. The

29 Law Commission of India, *42nd Report on Indian Penal Code, 1860* (June, 1971).

30 Law Commission of India, *172nd Report on Review of Rape Laws* (January, 1998).

31 INDIA CONST. art. 14.

Exception to Section 375 of IPC is a discriminatory law for the married women because there is a new stratum of women created by this law who will not get protection from the law if they face sexual harassment from their husbands which does not fulfil intelligible differentia because it is arbitrary, artificial and evasive.

Section 375 does not include rape which is done by a husband to his wife. Protecting a person from the ambit of Section 375 of the IPC based on the marital status is discriminatory and it violates the Article 14 of the Indian Constitution. Rape or marital rape is one and the same thing and the only difference is that the victim is married in the latter case, and everything else is similar to what is in the rape. It is, in turn, difficult for a married woman because she has to live her whole life with the perpetrator and they are dependent on their husband. In the real sense, this exception encourages the husbands to commit forced sexual intercourse because they know that the same is not punishable under the law. Hence, marital rape is in clear violation to Article 14 of the Indian Constitution because equal protection is not available to the female victims and it does not pass the twin test laid down in Article 14 of the Constitution in terms of intelligible differentia and reasonable nexus.

Article 21

Article 21 of the Indian Constitution says that:

> *"[N]o person shall be deprived of his life or personal liberty except according to a procedure established by law."*[32]

In the case of *Kharak Singh v. State of Uttar Pradesh*[33], the Hon'ble Supreme Court held that *"[b]y the term "life" as here used something more is meant than mere animal existence"* There have been many cases where the Supreme Court has interpreted this article and given a whole new shape to it. Under Article 21, there are many rights which are given to the citizens which include the right to health, dignity, safe environment, sexual privacy, human dignity, among others. In the case of State of *Karnataka v. Krishnappa*[34] , the Hon'ble Supreme Court held that *"[s]exual violence apart from being a dehumanizing act is an unlawful intrusion of the right to privacy and sanctity of a female.",* it further held that rape in itself is a serious blow to the self-esteem and dignity of the victim and it degrades her, leaving behind a traumatic experience.

32 INDIA CONST. art. 21.

33 *Kharak Singh v. State of Uttar Pradesh*, A.I.R. 1963 S.C. 1295.

34 *State of Karnataka v. Krishnappa*, (2000) 4 S.C.C. 75 (India).

Right to Healthy and Dignified Life

In the case of *C.E.S.C. Ltd. v. Subhash Chandra*[35], the Hon'ble Supreme Court held that Right to Life also includes the Right to live a healthy and dignified life which is one of the most important things to maintain the individuality of a citizen in the country[36]. The exemption to Section 375 is a violation to the right to the good health of a married woman because marital rape causes emotional, psychological and physical problems to a woman and puts her into depression, moreover in the case of forceful sexual intercourse, there always exists a chance of transmission of STDs to the victim. There are many cases held by the Hon'ble Supreme Court wherein it talks about rape as a crime against the society and also violative of Article 21 of the Indian Constitution[37]. Hence the exemption to Section 375 of IPC is in clear violation to the woman's right to live a healthy and dignified life because sexual intercourse without the consent of the woman challenges her dignity, as well as her health, therefore it violates the very basic structure of Article 21 and is unconstitutional.

Right to Sexual Privacy

There are numerous cases in the Apex Court where it has been held that Right to Privacy is to be protected constitutionally under Article 21.[38] Therefore, any type of forceful sexual act to a woman is a violation of her privacy as it is her body and she has full right to consent to it and protect it. If we talk about sexual privacy the same has been discussed by the Hon'ble Supreme Court in the case of *State of Maharashtra v. Madhukar Narayan*[39] where it was held that "*[e]very woman is entitled to her sexual privacy and the same is not open to for any and every person to violate her privacy"*. However, the exemption of marital rape in the IPC is violative to the right to sexual privacy of a married woman because nobody should force her to have sexual intercourse against her will. Therefore, this exemption is in violation with the Right to Privacy and therefore should be held unconstitutional.

Right to Bodily Integrity

A woman is the owner of her own body and all the decisions regarding her bodily matters are to be taken by her, without the interference of anybody, whether it is having sexual intercourse or not; that is something which is to be decided by a woman and she has the

35 *C.E.S.C. Ltd. v. Subhash Chandra*, (1992) 1 S.C.C. 441 (India).

36 See also *Bandhua Mukti Morcha v. Union of India* (1997) 10 S.C.C. 549, *Francis Coralie v. Union Territory of Delhi,* A.I.R. 1981 S.C. 746.

37 *The Chairman, Railway Board v. Chandrima Das*¸ A.I.R. 2000 S.C. 988 (India).

38 *Govind v. State of Madhya Pradesh*, A.I.R. 1975 S.C. 1378.

39 *State of Maharashtra v. Madhukar Narayan*, A.I.R. 1991 S.C. 207.

right to deny the same and nobody can force her; in the eyes of IPC if a woman denies sexual intercourse and is forced into it, the same is termed as rape but if a married woman is forced into sexual intercourse by her own husband, the same is not rape. Hence, the exemption to Section 375 is a violation of a married woman's right over her own body because marriage does not mean that consent for having sexual intercourse is not needed.

Hence, the exemption to the Marital Rape under Section 375 of the Indian Penal Code is in clear violation of Article 14 & 21 of the Indian Constitution. This exemption does not pass the tests of "just, fair and reasonable law" and the test of reasonable classification because it is not a fair law and is discriminatory towards a married woman and makes a distinction towards them. This exemption is now obsolete and needs not to be present in the IPC, rather India should also take strict measures to guard the rights of the married woman because there is a large portion of women who are victims of marital rape but they do not have a law which can support them; the only remedy available to them is the Section 498A of the IPC and the Domestic Violence Act. The Supreme Court in the case of *State of Maharashtra v. Madhukar Narayan Mandikar* [40] held that "*A prostitute had the right to refuse sexual intercourse if she is being forced and the same is being done without her will; not withholding the same will amount to Rape.*" This is a vast problem, Indian judiciary in a plethora of cases have criminalised almost all types of rapes but made an exemption to marital rape due to which a large fraction of the females is victimised.

Human Perspective

A majority of people are in favour of not criminalizing marital rape. This creates the face of public opinion and portrays the nation in an incorrigible light. These arguments have gained momentum because most people in India are culturally active and believe that the laws that defined India a thousand years ago are prevalent even today. Moreover, these arguments hold no place in the current times because this exception is discriminatory. Here are some arguments and their rebuttal.

Arguments against Criminalising Marital Rape

The Sanctity of Matrimonial Institution

The first argument regarding not criminalizing marital rape is that it would destroy the sanctity of the marriage and this would furthermore destroy the family. The sacred bond that a husband and a wife share would be broken and the meaning of marriage would be

40 *Ibid.*

lost. Criminalization of marital rape would mean that the state is entering the fine line between home and law which creates a brick wall situation for the judiciary. Providing a legislation for the same would mean that the state is crossing boundaries and going beyond its jurisdiction. Marriage is between two people and any decision encroaching upon this line can be met with opposition and harsh criticism.

Marriage is Consent

Marriage is how two individuals enter into a legal union in their personal capacities. Similarly, people have argued that if these individuals have entered this contract on their volition then the woman has already consented to the marriage. If the marriage is not by her own choice, the parents are responsible for matching the matrimonial relation and that is considered as consent. The tradition of not asking for the woman's consent is widely prevalent. The consent of sexual relationship is thought to be given, to the husband, while consenting to marriage or getting their marriage fixed by their parents. Arranged marriage and forced marriage are two entirely different concepts. Arranged marriage is when both parties are willing to get married upon meeting each other whereas forced marriage is when either one of the parties is not consenting for marriage.

Cultural Boundaries

People have been taught to follow certain traditions, norms and values since they were infants. These values have been etched into one's brains and anything that may go beyond it or does not match the frequency is termed to be taboo. These socio-cultural norms have taught people that it is normal for a man to expect from his wife to fulfil his sexual needs. Culture is what makes a nation.

Pseudo Cases

A large majority of the people have also argued that if legislation is made on marital rape, some wives will use this as a tact to get out of their marriages or to intimidate their partners into doing anything, threatening to use the said legislation. In the case of *Arnesh Kumar v. State of Bihar,* the Supreme Court held that [s]ection 498A is being used as a weapon by disgruntled wives rather than a shield[41]. It would then be the men who would come under the scrutiny of the judiciary every second. This can create a ruckus in judicial proceedings as a plethora of false cases can be filed which will delay the justice of more quintessential cases. India still does not have the means to compensate for all the cases being delayed from years.

41 *Arnesh Kumar v. State of Bihar*, (2014) 8 S.C.C. 273.

Pre-existing Legislation

The Protection of Women from Domestic Violence Act, 2005 is said to be the remedy for marital rape. Arguments are made that if this legislation is already in force, there is no need for a separate legislation for the same in the state. Marital rape can be considered under Section 3(a) *"harms or injures or endangers the health, safety, life, limb or well-being, whether mental or physical, of the aggrieved person or tends to do so and includes causing physical abuse, sexual abuse, verbal and emotional abuse and economic abuse"*.[42] An existing provision has been provided to foresee sexual and verbal abuse at the hands of the husband.

Arguments in Favour of Criminalisation

Sanctity is Distorted

When a man has sexual intercourse with his wife without her consent, the sanctity of matrimony has already been tainted. There is no option of going back and claiming that marital rape can be exempted as it is crossing the boundaries of issues between a man and his wife. Similarly, High Court of Gujarat, in the case of *Nimeshbhai Bharatbhai Desai v. State of Gujarat*[43], held that the "*[n]on-consensual act of marital rape violates the trust and confidence within a marriage and the prevalence of marital rape in India is what has damaged the institution of marriage"*. The Court while hearing the case observed that marriage does not make the wife a chattel of the husband and it does not give the right to violate the dignity, autonomy and privacy of the woman by coercing her into a sexual act without her free consent. The court added and said that the time has come when we need legislative intervention into the matter so that this serious problem gets solved in the earliest possible time. When the concept of sanctity has been contradicted, this argument becomes ethically flawed.

Consent is Important

The Prohibition of Child Marriage Act, 2006, makes child marriage voidable rather than void[44]. Parents can marry off their minor offspring to anyone and the children cannot take a divorce or an annulment from their spouse until they are not minor anymore i.e. 18 years of age. However, Section 375 of IPC, 1860 prohibits sexual intercourse of a man with wife

42 *Supra* note 12.

43 *Nimeshbhai Bharatbhai Desai v. State of Gujarat,* 2018 SCC OnLine Guj 732.

44 *Supra* note 14.

less than or of 18 years of age.[45] This, however, creates a loophole for those who are above 18 years of age. They have to co-inhabit with someone who may or may not force them into sexual activities against their consent. This is an old tradition that pledges marriage is consent. Being in the 21st century, these archaic laws can be changed according to the advancement of society.

Changing of Culture

Taking the mythology 'Mahabharat', it is believed that Yudhishthira bet his wife in a game of 'chauras' against Duryodhana. From ancient times, women have been objectified and have been treated as a mere chattel. In marriages, the giving away of the bride is called 'kanyadaan' by the father to the husband. A girl is deemed to be foreign to her family members and is believed to be owned by her husband. Old traditions like this should be logically debated upon and it has to be understood that in this era, women have rights and cannot be objectified. The cultural paradigm should be encouraged. This would help in evolution or banishment of old traditions which seem irrelevant.

A Criminal Liability

The Hindu Marriage Act and the Domestic Violence Act provides the women with a means so that they can remove themselves from a threatening situation in turn for a civil liability. People have argued that if there is an existing legislation for domestic violence which is inclusive of 'sexual abuse', then why do the women of India need another legislation. The Protection of Women Domestic Violence Act, 2005, only provides the offenders with civil liability. Moreover, in civil liability, the perpetrator can get away with just providing compensation to the victim. For this crime, the perpetrator needs to be imprisoned. This will set an example for the rest of the society that this crime needs to be recognized and the state will not turn a blind eye to such behaviour.

Conclusion

Justice Krishna Aiyar in the case of *Rafiq v. State of Uttar Pradesh* said that *"A Murderer kills the body but a Rapist kills the soul"*.[46] The State says this is not sacrosanct and it is the sole business between a husband and wife; the state has already made laws relating to marriage e.g. dowry, cheating, cruelty and divorce. It is the firm belief of this paper that there is an immediate need to criminalise marital rape. Adding marital rape to the list would

45 *Supra* note 25.

46 *Rafiq v. State of Uttar Pradesh*, 1980 Cr. L.J. 1344 S.C.

be nothing but a huge success for India towards healthy mental development. The state also said that criminalising marital rape would "destabilize the institution of marriage"[47] and it can be easily used to "harass husbands". When an act has already been done to taint the very sacrosanctity of marriage, how would getting justice for the very same act destabilize the marriage of the two individuals? The marriage has already been destabilized when the spouse tried or did sexually abuse their partner. The second point of 'harassing husbands' can be met with fast-track courts and their speedy trials. Setting up of various other fast-track courts all over the country would help in solving this issue of false cases. Sacrosanctity and harassment of husbands should not be reasons behind not criminalising marital rape. This could be cited as missed justice on the part of the legislature and the judiciary. There has to be a stringent punishment for marital rape. Consent should not be considered as given on the grounds of having a spouse; this is highly subjective. Marital Rape should be added as a ground for divorce which cruelty does not cover as marital rape in itself is not a law in the current scenario of the Indian Justice System.

In 2019, Advocate Anuja Kapur filed a petition in the Supreme Court to make marital rape a ground for divorce; a two-judge bench comprising of Justice S.A. Bobde and Justice B.R. Gavai, asked the petitioner to file for relief in the High Court.[48] When the state itself can be rigid in not taking any steps in furtherance of marital rape, then it can take years to get the act criminalised. There is a need to criminalise the same because these steps are necessary to be taken so that the married woman can also use the law to address their grievances. Marital rape will only be criminalised when the distinction between rape and marital rape is understood.

Sensitisation of marital rape is the need of the hour. As a society, we are tremendously cultural and put traditions on a pedestal. This ceases the need of discussing about taboos. Turning a blind eye towards these taboos will not solve the problem itself; the problem still looms. Marital rape cannot be put in force until the very own citizens of the nation are familiar itself with the same. Even if marital rape becomes a crime, there would have to be a thorough explanation of the said act/statute. Awareness of marital rape would have to be made in order to achieve the zenith of justice. Various organisations have been committed towards the same but until the citizens do not bring the attention of the judiciary to how grave the issue already is, no big steps will be taken. Studies show that 70 per cent of women have experienced physical and/or sexual violence from an intimate partner in their

47 *Nimeshbhai Bharatbhai Desai v. State of Gujarat,* 2018 SCC OnLine Guj 732.

48 *Marital rape as ground for divorce: SC asks petitioner to approach Delhi HC,* BUSINESS STANDARD (Aug. 06, 2020, 02:00 P.M), https://www.business-standard.com/article/news-ani/marital-rape-as-ground-for-divorce-sc-asks-petitioner-to-approach-delhi-hc-119070100334_1.html.

lifetime.[49] This goes against the very thing our forefathers fought for- fundamental rights. Article 14 and Article 21 of the Indian Constitution talks about equality and freedom of life and liberty. India needs to take a decision on the furtherance of marital rape. In a land where goddesses are revered and worshipped, India can certainly not afford to stay silent on this issue any further. Doing so would be a gross miscarriage of justice.

Buyers' Cartels – Two Differing Opinions by the Competition Commission of India

Hartej Singh Kochher*

Abstract

The author, by way of this study, would shed light on how the CCI has given diametrically differing views in two separate cases on the issue of "buyers' cartels". The two cases would be contrasted and studied and the legal rationale behind them would be understood. Further, this paper will also dwell on the proposed change under the Draft Competition (Amendment) Bill, 2020 to amend the definition of a 'cartel' under the Act. The impact of the proposed change would be gauged and finally, the author will offer his suggestions on the "buyers' cartels' jurisprudence of the CCI and the proposed change to the definition of a 'cartel'.

Critical Analysis

Competition Commission of India (hereinafter referred to as "CCI"), is the regulatory expert body[1], tasked with addressing competition concerns in the Indian market. It was constituted under the Competition Act, 2002. According to the author, the CCI, in its domain, has functions which can be divided into four broad spheres- (i) to prevent anti-competitive agreements in the market; (ii) to prevent the abuse of a dominant position enjoyed by an enterprise in a market; (iii) to regulate combinations which are proposed and finally; and (iv) competition advocacy.

Under the first sphere, i.e. to prevent anti-competitive agreements, the CCI has powers to strike against "*Cartels*". The Competition Act gives us an *inclusive* definition of a cartel, stating that it "*includes an association of producers, sellers, distributors, traders or service providers who, by agreement amongst themselves, limit, control or attempt to control the production, distribution, sale or price of, or, trade in goods or provision of services*".[2]

* Assistant Professor of Law, ICFAI Law School, Hyderabad.

1 The status of the CCI as a regulator performing roles which are administrative, quasi-judicial and that of an expert body in nature has been emphatically stated in *Brahm Dutt v. Union of India*, A.I.R. 2005 S.C. 730 and more recently, in *Mahindra Electric Mobility Ltd. v. CCI*, (2019) SCCOnline Del 8032.

2 Section 2(c), The Competition Act, 2002, No. 12, Acts of Parliament, 2002 (India).

Hence, according to this definition, an '*agreement*' which points to some '*collusion*' is necessary to constitute a cartel.

Section 3 of the Competition Act, is the operative provision, which explicitly prohibits '*anti-competitive agreements'*.[3] One such sub category of anti-competitive agreements which are frowned upon are agreements between parties engaged in "*identical or similar trade of goods or provision of services*".[4] It is under this sub-category, that the Act, explicitly mentions any agreement between 'cartels' to be presumed as an anti-competitive agreement[5] if it satisfies any of the following circumstances- (i) it fixes prices; (ii) it fixes output; (iii) it divides the market; or (iv) it enables bid rigging or collusive bidding.[6]

While the CCI has adjudicated upon various cases which deal with 'cartels' per se, there have only been two instances[7], where the regulator has been specifically called on to settle action against what could be called "*buyers' cartels*".

It was in *Pandrol Rahee Technologies Pvt. Ltd. v. Delhi Metro Rail Corporation and Ors.*[8] (hereinafter referred to as "*Pandrol*") that a question pertaining to a buyers' cartel, came up before the CCI for adjudication, for the very first time. Anti-competitive conduct was alleged by the informant, in light of subsisting agreements, by the five Opposite Parties in the procurement of the *"rail fastening systems for ballastless track in metro rails"* in India. An argument for abuse of dominant position was also advanced.

It was claimed that the Delhi Metro Rail Corporation (DMRC) had not initiated any tendering process for the said procurement. This tendering process was stated to be an incumbent responsibility upon a public body. Other Metro rail projects in different cities were also recommended the procured products by the DMRC.

In the final decision, the procurer was adjudged to be a consumer i.e. a buyer, per the majority's opinion, since the "*production chain can be said to end where the last transaction takes place and after which point the utility of the product or service is consumed by the person who buys it*". This criterion, of being the end consumer, of a good or service, was satisfied by the DMRC and the other metro projects. As per the opinion, even though this

3 Sections 3(1), 3(2), The Competition Act, 2002, No. 12, Acts of Parliament, 2002 (India).

4 Section 3(3), The Competition Act, 2002, No. 12, Acts of Parliament, 2002 (India).

5 The burden, hence, shifts on the parties accused thereof to disprove.

6 For a more detailed discussion on the conditions, please see Sections 3(3)(a), 3(3)(b), 3(3)(c), 3(3)(d), The Competition Act, 2002, No. 12, Acts of Parliament, 2002 (India).

7 In the research of the author.

8 Case No. 3 of 2010 (Competition Commission of India, 07/10/11). One order given by the majority and one dissenting order. This study will only be confined to the majority order as the dissent did not address any of the issues relevant for this study.

was a public body, it was an entity which was a representative consumer on behalf of the public, and a consumer was expected to know what was best for him. Consequently, a consumer could freely select a product by exercising consumer choice.

The legal rationale advanced was that the considerations stated under Section 19(3), which are taken into account to determine appreciable adverse effect on competition, did not contemplate a purchaser to be able to cause competitive harm. Further, Section 3(3), categorically, states that sub-units forming a cartel, are required to be engaged in "*identical or similar trade*"[9], and the term '*acquisition*' was not stated in the definition of '*trade*'[10] under the Act. Hence, any sort of acquisition i.e. purchase, did not fall in the definition of a 'trade' and thus, no purchaser/ consumer could be brought under the bounds of Section 3(3). As a consequence, a buyers' cartel would be outside the regulatory jurisdiction of the CCI.

After some considerable gap, a second case pertaining to buyers' cartels came up for hearing before the CCI in the form of *XYZ v. Indian Oil Corporation Ltd. and Ors.*[11] (hereinafter referred to as *"XYZ"*). As per the information supplied by the informant, the Opposite Parties had allegedly indulged in collusive/ joint tendering. Three public sector oil companies were the Opposite Parties, and the tender was concerned with procurement of services of Tank Trucks for transportation of LPG cylinders. The CCI, while detailing the factual matrix of the case, clearly expressed that *"...the Commission notes that in the present case the Informants have alleged an existence of a buyer/purchase cartel. Section 3(1) and 3(3)(a) covers both sellers' as well as buyers' cartel..."*

According to the decision, Section 3(1), which prohibits anti-competitive agreements, explicitly used the term '*acquisition*'. Pricing fixing[12] by a cartel is to be treated as a per se violation under Section 3(3). Hence, it was clearly mentioned in the verbiage of the Act itself that fixing of a purchase price by a cartel was a violation. As a result, buyers' cartels came under the jurisdiction of the CCI.

However, taking into account a peculiar aspect of buyers' cartels, it was observed, *"... the creation of 'buyer power' through joint purchasing agreements may rather lead to direct benefits for consumers in the form of lower prices bargained by the buyers"*. Thus, *"... treating buyers' arrangement/cartel, at par with sellers' cartel may not be appropriate"*. Hence, each case, with its unique factual matrix, needs to be adjudicated upon individually while taking the possible benefits to a consumer of a buyers' cartel into account.

9 Of either goods or services.

10 Section 2(x), The Competition Act, 2002, No. 12, Acts of Parliament, 2002 (India).

11 Case No. 5 of 2018 (Competition Commission of India, 04/07/18).

12 Section 3(3)(a), The Competition Act, 2002, No. 12, Acts of Parliament, 2002 (India).

The CCI did not venture to discuss the definition of "*trade*" as it had referenced in the *Pandrol* case. To the author, the reasoning given in *Pandrol* seems to stand on firm legal footing and the decision in *XYZ* is erroneous.

Section 3(3) of the Act states the "*identical or similar trade*" criteria and even though the Opposite Parties in *XYZ* were in the identical/ similar trade, they were '*acquiring*' the service (of the trucks) for their consumption, thereby, becoming end users of the service. They were not going to further 'trade' in the services they acquired, thus, satisfying the letter of the law, strict interpretation followed in *Pandrol*. A consumer, as per a strict reading of the Act, cannot be interpreted to be a constituent of a cartel. Buying goods or services for final consumption cannot be stated to be a '*trade*' under the Act.

An even more perplexing omission is regarding the absence of *Pandrol* in the *XYZ* order. This situation followed even after *Pandrol* being the only other case the CCI had inquired into pertaining buyers' cartels. This leads to a scenario where precedent ceases to be of concern and ad-hoc adjudications can be made in any matter. If a previously decided case is referred to explicitly, its decision-making rationale can be relooked at. It can be affirmed fully or partially or overruled fully or partially. It gives a certain stability to the jurisprudence.

In the present scenario, we have two wildly differing opinions regarding the ability of the CCI to inquire into buyers' cartels. If *XYZ* is the correct law, then the Opposite Parties in the *Pandrol* matter slipped through the jurisdiction of the CCI. If *Pandrol* is correct, the CCI should have not gone beyond the preliminary inquiries in *XYZ,* after it realized that the case pertained to buyers' cartels.

Further, if the previous case was referenced and specifically overruled, a situation with two diametrically opposing decisions in the same realm would not have come into being. It has been held by the Apex Court itself that "*The doctrine of binding precedent has the merit of promoting a certainty and consistency in judicial decisions, and enables an organic development of the law, besides providing assurance to the individual as to the consequence of transaction forming part of his daily affairs".*[13] In light of the two different perspectives on the issue of buyers' cartels, it is the individual, who cannot gauge the impact of his transaction and thus, cannot determine whether he or she is falling foul of the Competition Act or not.

In the opinion of the author, a possible line of argument in *XYZ,* to justify the inclusion of a buyers' cartel within the definition of a 'cartel' under the Act, could have been the fact that

13 *Union of India & Anr. v. Raghubir Singh (Dead) by LRs. Etc.*, A.I.R. 1989 S.C. 1933.

the definition given and stated in full above, is inclusive in nature and thus, not exhaustive.[14] Hence, a buyers' cartel, can be envisaged within the definition of a cartel itself. However, no such reasoning was pursued. In spite of this, the hurdle created by the definition of 'trade' not containing the word 'acquisition' remains. It becomes pertinent to note that the definition of 'trade' furthers that '*control of goods'* constitutes a trade.[15] When a buyer buys a good, it comes within his or her control, hence, a consumer could be brought under the definition of trade. This would, plainly, be quite a stretched legal reasoning.

Adding to the intrigue is the recommendation of the Competition Law Review Committee (CLRC) to incorporate the word 'buyer' in the definition of a cartel.[16] Based on the recommendations of the CLRC, a Draft Competition (Amendment) Bill, 2020 has been put out in the public domain to seek comments from the public at large. The Draft Bill, in consonance with the recommendations of the CLRC has duly proposed to amend the definition of 'cartel' in Competition Act, 2002 by incorporating the word 'buyer' in it.

Under Section 2(c), the definition of a cartel as proposed to be amended by the Draft Bill would be (with proposed amendments underlined and in italics):

> *"cartel" includes an association of producers, buyers, sellers, distributors, traders or service providers who, by agreement amongst themselves, limit or control or attempt to limit or control the production, distribution, sale or price of, or, trade in goods or provision of services."*[17]

However, no amendment is proposed to the definition of 'trade'. Hence, the questions raised by the reasoning in the *Pandrol* order still remain. The CLRC, in its report while suggesting the said amendment, only referenced the *XYZ* decision, and stated that in its decisional practices, CCI has recognised that Section 3(1) and 3(3), cover both buyers' and sellers' cartels.[18] Thus, the *Pandrol* decision seems to have been completely discarded and the way forward seems to be in sync with the reasoning advanced in *XYZ*.

14 Section 2(c), The Competition Act, 2002, No. 12, Acts of Parliament, 2002 (India).

15 Section 2(x), The Competition Act, 2002, No. 12, Acts of Parliament, 2002 (India).

Rathnayake Tharanga Lakmali v. Niroshan Abeykoon: Sri Lankan Supreme Court Recognises Custodial Death as a Violation of Right To Life

Raj Krishna* and Kumar Mukul Choudhary**

Abstract

Police brutality is a point of concern for the entire world. Post the George Floyd incidence, questions have been raised all over the world on the extent of force which can be used by the law enforcement agencies for maintaining law and order. Similar questions were also raised before the Supreme Court of Sri Lanka in the case of Rathnayake Tharanga Lakmali v. Niroshan Abeykoon wherein the Court held that custodial death violates right to life of an individual and therefore, is prohibited by law.

In the light of the above facts, the authors in this case comment have analysed the judgement of the Sri Lanka Supreme Court. The authors have also discussed about the impact this judgment will have on the Sri Lankan constitutional and human rights jurisprudence. Furthermore, the authors in this case comment have also discussed about the significance of this ruling for the Indian legal system.

Introduction

"The rule of law doesn't mean the police are in charge,
but that we all answer to the same laws"

- Edward Snowden

Custodial torture is a major disgrace for a society governed by rule of law. The most pertinent question before any adjudicating authority dealing with the issue of police brutality is that, to what extent deference may be provided to law enforcement agencies in matters of use of force for implementation of law. Furthermore, whether rule of law should be implemented

* Student, Chanakya National Law University.
** Student, Chanakya National Law University.

by courts in formal sense or substantive sense while determining these questions? Should authorities be given free hand or should they be held accountable for their acts just like a common man? There are many such questions which pop up when we discuss about the use of force by police authorities.

The U.S Supreme Court has answered these questions by way of qualified immunity. Initially the Court held that *"[a] policeman's lot is not so unhappy that he must choose between being charged with dereliction of duty if he does not arrest when he had probable cause, and being mulcted in damages if he does."*[1] As a result police officials were provided with immunity from civil suits for their actions. But for grant of such immunity mental intent of the police officers has to be seen which should not be malicious. However after sometime this requirement was also diluted. Furthermore to protect the officials the courts applied the test of reasonableness instead of trials to see whether the action of the official would reasonably violate law or any constitutional principle.[2] As a result cases of police brutality increased in United States.

Recently, similar questions were raised before the Sri Lankan Supreme Court[3] i.e. to what extent deference may be provided to law enforcers in their act of use of force upon general public. The Supreme Court of Sri Lanka in the landmark judgment has held that "*extra-judicial killing of a detainee in police custody violates the fundamental right to life of an individual, despite the fact that there is no explicit right to life mentioned in the Sri Lankan Constitution.*[4]*"* Furthermore, the standard of evidence required to make police accountable must not be too burdensome. This would make contention of victim too hard to prove and would give a free hand to the law enforcement authorities.[5]

Facts of the Case

This Fundamental Right application was filed by the wife of the deceased Rathnayake Tharanga Lakmali, on behalf of her husband Ranamukage Ajith Prasanna who died in a Police Custody on September 18, 2010. The petitioner in her application contended before the Supreme Court that her husband was wrongly arrested and detained. After arrest, her husband was subjected to torture, cruel inhuman treatment and was eventually killed by

5 *Id.* at 12.

the police officials in the custody. As a result, several police officers from the Embilipitiya Police Station were made respondents in this case.[6]

However, the respondents argued that the arrest of the deceased was a lawful arrest and the deceased was not subjected to any torture, cruel, inhuman or degrading treatment. Furthermore, the Respondents claimed that the death of the petitioner's husband was merely accidental and thus justified by law.[7]

Critical Analysis of the Judgment

On the basis of arguments of both the parties and the post mortem report, the three-judge bench of the Supreme Court held that the respondents and the State have infringed the Fundamental Rights of Ranamukage Ajith Prasanna guaranteed to him under Articles 11[8] (which says *"No person shall be subjected to torture or to cruel, inhuman or degrading treatment or punishment."*) and 13(1)[9] (which says *"No person shall be arrested except according to procedure established by law. Any person arrested shall be informed of the reason for his arrest."*) of the Constitution. The Court in its judgement further observed that, the Sri Lankan legal system provides for investigation, inquiry, trial, and punishment by proper authorities. As per Article 13(4) of the Constitution, *"no person shall be punished with death or imprisonment except by order of a competent court.[10]"* Though the Constitution of Sri Lanka does not explicitly recognize right to life. However, it has been held that Article 11 (freedom from torture) read with Article 13(4) (freedom from arbitrary punishment) recognizes, by necessary implication, right to life under Sri Lankan Constitution.

This judgment of the Sri Lankan Supreme Court has been hailed as a landmark judgment for holding constitutional values and essential principles of victim justice. It should also be appreciated for being given in a nation which holds such a grim record in the field of protection of human rights.[11]

11 U.N High Commission for Human Rights, '*Report of OHCHR Investigation On Sri Lanka*' 16 September 2015, A/HRC/30/CRP.2.

In this judgement another contention raised by the respondents was that the victim was an aggressive criminal having relation with underworld and doing contract killings. Therefore, deference should be provided to police in matter of extensive use of force. To prove this point, they also relied upon *Jeganathan v. Attorney General,*[12] wherein the Supreme Court held that *"The petitioners' allegations against the 4th and 5th respondents if proved will carry with them serious consequences for these respondents. Furthermore, the allegations are of a very serious nature. They must therefore be strictly proved. This degree of cogency is seriously lacking in these proceedings which must fail.*[13]" This implies that to support the proposition that allegations of torture and extra-judicial killing which are of a very serious nature must be strictly proved.[14] But in the present judgement, Court did not accept the above-mentioned proposition. The Court further held that, even though victim was barbaric criminal causing severe law and order problems. But on the day of encounter, police took him out with minimal security.[15] They have even not entered the record of such investigation in their record book.[16] Furthermore, by way of post-mortem report it came to the knowledge of the court that severe injuries have been caused to the victim in the police custody. The court held all of these evidences are sufficient proof of improper working of police.[17] The Supreme Court further held that merely because prisoner is a hardcore criminal, it does not power the authorities to commit gruesome acts upon the prisoner and take his life and liberty away without proper application of the law. This could be gathered from following words of the court- *"Our legal system provides for investigation, inquiry, trial and punishment by proper authorities which is the base of democracy and the Rule of Law. As per Article 13 (4) of the Constitution, no person shall be punished with death or imprisonment except by order of a competent court. Hence, even a convicted criminal has a right not to be arbitrarily deprived of his life except in accordance with procedure established by law.*[18]" By these words courts not only recognised the right of the prisoners but it also incorporated principles of rule of law in substantive sense i.e. substantive version of the rule of law described by Tamanaha as the "social welfare" concept, which "imposes on the government an affirmative duty to help make life better for people, to enhance their existence, including effectuating a measure of distributive justice.[19]" The Supreme Court of

19 BRIAN Z. TAMANAHA, ON THE RULE OF LAW: HISTORY, POLITICS, THEORY 1644 (Kindle ed. 2004).

Sri Lanka vide this judgment imposed the duty upon the government and the executive to look after the rights and interest of the prisoners to protect their basic fundamental rights.

However, there are certain grounds on which this judgment can be questioned. Some of the grounds are as follows: -

Restrictive Constitutional Interpretation

On page 13 of the judgment, the court has recognized that Constitution is a living document and should be interpreted liberally.

> *"The Fundamental Rights Chapter in our Constitution does not expressly refer to a right to life. However, the Constitution, as a living document, should not be construed in a narrow and pedantic sense. I am of the view that constitutional interpretation should be informed by the values embodied in it.*[20]*"*

However, at the time of ratio, the court has emphasized upon its earlier judgment[21] in which the Court has recognized life as a mere existence and distinct from dignified existence. Thus, it can be said that right to life has not been recognized by the Court in its absolute sense which in turn puts rights of weaker section of public in jeopardy.

Evasive Approach of the Court

The Supreme Court took nearly 10 years to deliver this verdict, whereas the Sri Lankan Constitution under Article 126(5)[22] (which says *"The Supreme Court shall hear and finally dispose of any petition or reference under this Article within two months of the filing of such petition or the making of such reference.")* provides that petitions related to fundamental right should be disposed of within two months of filling.

However, the Sri Lankan Supreme Court in another case[23] has held that this regulation is not mandatory. This creates a negative impact upon the ambitions of general public to stand against wrongs committed by state. It brings uncertainty in their mind with regards to time and resource required to protect their rights.

21 *Sriyani Silva v. Iddamalgoda*, *Officer-in-Charge, Police Station Paiyagala and Others* (2003), 2 Sri LR 6 (Sri Lanka).

22 The Supreme Court shall hear and finally dispose of any petition or reference under this Article within two months of the filing of such petition or the making of such reference.

23 *Visuvanagam v. Liyanage,* [1983] 1 Sri LR (Sri Lanka).

Non Determination of Duty

The Sri Lankan Supreme Court in its judgement observed that fundamental rights have been violated under the constitution. But still it did not order the investigation of killing. Furthermore, it also doesn't determine that whether the killing was intentional or not. The court in its judgement also failed to understand that monetary compensation may be sufficient for victim, but not for the public in general. The court in this matter should have decided that what amounts to ex-judicial killing or torture along with what liability can be imposed upon accused if such acts were committed. If the same would have been done then the judgment of the court would have created a deterrent impact upon the authorities which may have retracted such horrendous acts in future.

Significance of this Ruling for the Indian Legal System

This judgment of the Sri Lankan Supreme Court is even important for the Indian Legal System. In India, police encounters, custodial deaths and brutalities are common phenomenon and courts often find themselves incapable of dealing with such issues. The Supreme Court of India in *D.K Basu*[24] judgement has laid down guidelines pertaining to arrest which has also been incorporated into the provisions of Cr.P.C and Evidence Act. But, still the approach of police officials towards torture and brutalities has not been transformed in any sense. According to latest report of N.C.R.B, since 2005 to 2017 more than 1300 people either died or disappeared from police custody[25].

There are provisions in Cr.P.C., which provides for enquiry by judicial magistrate in case of custodial death. But only in 20% of the above-mentioned cases these enquiries were ordered.[26] This undoubtedly shows lethargic approach of courts and authorities to act against custodial death or torture. The main reasons behind custodial deaths are ancient investigative approach of police and too much burden of work upon officers.[27] This results into confession by way of torture and brutality. Although, Supreme Court always condemned this manner of confession. But lacklustre approach of lower courts in dealing with enquiries does provide police officers deference for their actions. This approach of lower courts has on many occasions restricted authorities from taking action against culprit

26 *Ibid*.

27 *Bound by Brotherhood*, HUMAN RIGHTS WATCH (June 12, 2020, 10:05 AM), https://www.hrw.org/report/2016/12/19/bound-brotherhood/indias-failure-end-killings-police-custody.

officers because deference provided to them by lower courts.[28] These tactics of judiciary and authorities has further undermined the right of weak and vulnerable.

Furthermore it is also an accepted view in the Indian Legal System that police encounters are necessary. The Supreme Court of India while dealing with the legitimacy of encounters has pointed out in *Public Union for Civil Liberties v. Union of India*[29] that *"if the version of the police with respect to the incident in question were true there could have been no question of any interference by Court. Nobody can say that the police should wait till they are shot at. It is for the force on the spot to decide when to act, how to act and where to act. It is not for the Court to say how the criminals should be fought.*[30]*"*

Even Section 46 of the Code of Criminal Procedure permits police encounters in India. The acceptance of validity of encounters in our legal system is based upon a misleading fact. The fact is that the State and the accused are on the same footing and the authorities do not have any other option than encounters.[31] This assumption can be rejected with the help of present judgment of the Sri Lankan Supreme Court. It is because in this case the court deviated from the strict proof and recognized the unequal footing of the petitioner and the respondent in the given case.[32]

The Indian courts should also follow their Sri Lankan counterparts in cases involving police brutality instead of saying that they cannot do much.[33] The Indian Courts should accept that police hold sheer power of state sovereignty from which the citizens require thoughtful protection, who are no way close to police power.

Furthermore, Parliament has a responsibility to protect vulnerable people from the access of the law enforcement agencies. Hence it is expected from the legislature that they will bring legislation to limit the extensive use of force by police officials. For this purpose, they can rely upon recommendations of 273rd report of Law Commission.[34] Furthermore,

33 Utkarsh Anand, *Courts Can't Do Much: SC Adds 'Peace' Caveat to Hear Pleas Against Police Crackdown on Jamia, AMU Students Tomorrow*, NEWS 18 (June 9, 2020, 11:00 AM), https://www.news18.com/news/india/courts-cant-do-much-its-law-and-order-problem-sc-refuses-to-hear-plea-on-violence-in-jamia-2425595.html.

34 Law Commission of India, *Implementation Of United Nations Convention Against Torture And Other Cruel, Inhuman And Degrading Treatment Or Punishment Through Legislation*, Report No. 273 (Oct. 2017).

the law commission has also annexed a draft prevention of torture bill[35] which could help legislature in forming a new law. Therefore, it could be anticipated and wished that parliament possibly will bring a law in future to prevent torture in this vibrant democracy in order to protect the rights of most vulnerable in the society.

CONCLUSION

This judgment of the Sri Lankan Supreme Court may not be of much significance for the Western democracies. However, in a country like Sri Lanka which has history of torture and war crimes,[36] recognition of constitutional principles and rule of law is a great achievement.

This judgment further brings a new hope that Sri Lanka will now ensure rights to its prisoners and vulnerable. Even though this judgment can be criticized on various grounds but it deserves an appreciation because this judgment has recognized the rights of the prisoners and other constitutional principles. The Court vide this judgment has tried to remind the authorities that even a convicted criminal has a right not to be arbitrarily deprived of his/ her life except in accordance with procedure established by law.

At last the authors will like to conclude by saying that the judges while deciding the case of police brutality should remember the lines of Justice White [U.S. Supreme Court Judge] from the case of *Wolff v. McDonnell* wherein he observed that, *"A prisoner is not wholly stripped of constitutional protections when he is imprisoned for crime. There is no iron curtain drawn between the Constitution and the prisons."* [37]

35 *Ibid*.

Dissecting The 100% Reservation Case: Case Analysis of Chebrolu Leela Prasad Rao & Ors. v. State of A.P. & Ors.

Jaideep Singh Lalli*

Abstract

This paper is first and foremost, an exercise of separating the ratio from the obiter for a 152-page judgment to allow the reader to engage with the reasons given by the Court for arriving at its decision with considerable ease and provides an account of the author's opinion not just on the Court's reasoning but also on the unfair criticism that the judgment has received from other academicians. Discussing the SC's view on Andhra Pradesh's policy of reserving 100% seats for the post of school teachers in Scheduled Areas for local S.T. candidates to conclude that the Apex Court's preoccupation with the constitutional repugnancy of a reservation to the tune of 100%, relegated the issue of examining the justification for the policy to haughty disdain that lacked reasonable substantiation.

Keywords: 100% reservation, Chebrolu Leela case, Scheduled Areas, teacher absenteeism

Introduction

Judicial review of reservation and preferential treatment policies has been quite the spectacle ever since cases like *Kesava Iyenger v. State of Mysore*[1], *M.R. Balaji v. State of Mysore*[2], *T. Devadasan v. Union of India*[3], *State of Kerala v. N.M. Thomas*[4], *A.B.S.K. Sangh (Railway) v. Union of India*[5] and a catena of others started to surface in the realm of academic scrutiny. The instant case is yet another intriguing instance of the Apex Court's

5 *A.B.S.K. Sangh (Railway) v. Union of India*, A.I.R. 1981 S.C. 298.

exercise of its power of judicial review of a policy which in its opinion fails to pass the test of rationality. Jurisprudence on the essentials of the constitutional scheme of equality (specifically, that of access to educational and public employment opportunities) has undergone marked interpretative change throughout the period since the late 1950s; all of which achieved finality to a considerable degree in the nine judge bench judgment of *Indra Sawhney v. Union of India*[6]. Principles like the 50% ceiling on vertical reservation, creamy layer exclusion and compelling reasons (like backwardness, inadequacy of representation and efficiency) developed in *Indra Sawhney* have enjoyed axiomatic judicial imprimatur since their consecration in *M. Nagaraj v. Union of India*[7]; the same trend has been followed more recently in *Jarnail Singh v. Lachhmi Narain*[8]. The *Chebrolu Leela Prasad Case* is a further addition to the long list of judgments that have predicated their rejection of outlandish reservation proportions on the principles evolved in *Indra Sawhney*. However, it appears that the *ratio decidendi* of the Court is preoccupied with the abhorrence of the 'percentage' amount prescribed for the reservation, to the exclusion of providing enough reasoning for why the actuation or reason of ushering such a 100% reservation policy is itself repugnant.

Contextualising the Judgment's Discussion

Factual Matrix: Tracing Governmental Obstinacy

The seemingly problematic reservation policy under challenge in the instant case was not the starting point of the controversy. The genesis of the issue was that the Governor of the erstwhile State of Andhra Pradesh (hereinafter abbreviated as 'A.P.'), in exercise of his powers under para 5(1), Schedule V to the Constitution of India issued G.O.Ms. No. 275 (dated Nov. 5, 1986) by which the posts of teachers in educational institutions in the scheduled tribe (hereinafter abbreviated as 'S.T.') areas had to be reserved for S.T.s only. But in Aug. 1989, the notification was quashed by the A.P. Administrative Tribunal. Another notification, G.O.Ms. No. 73 (dated Apr. 25, 1987) had been issued to amend G.O.Ms. No. 275, by which non-tribals were allowed to hold the post of teachers in the scheduled areas till such time any qualified local tribals were not available. Subsequently, non-tribals who had been appointed as teachers in such areas filed a writ petition in the High Court of A.P. against termination of their services. The High Court then declared G.O.Ms. No. 73 and the advertisements pursuant to that notification as violative of Article 14 of the

6 *Indra Sawhney v. Union of India*, A.I.R. 1993 S.C. 477.

7 *M. Nagaraj v. Union of India*, (2006) 8 S.C.C. 212.

8 *Jarnail Singh & Ors. v. Lachhmi Narain Gupta & Ors.*, (2018) 10 S.C.C. 396 (India).

Constitution of India. Later, the Government issued a new notification (G.O.Ms. No. 3 dated Jan. 10, 2000; hereinafter referred to as 'the impugned notification') that provided for 100% reservation for the posts of teachers in schools located in Scheduled Areas in A.P. to the local S.T. candidates only, out of whom 33 had to be women. A 'local S.T. candidate' was one who either himself was continuously residing or whose parents had continuously been residing in the scheduled areas of the district of which they were residents since Jan. 26, 1950. The tribunal set aside this notification again. Thereupon, writ petitions were filed at the A.P. High Court, where a three judge bench upheld the constitutionality of the impugned notification by majority. The aggrieved parties then preferred appeals to that decision at the Supreme Court, following which, the matter was referred to a Constitution bench of five judges (comprising Arun Mishra, Indira Banerjee, Vineet Saran, M.R. Shah and Aniruddha Bose, JJ.). The bench delivered a unanimous opinion on the legal questions referred to it. The case was decided on Apr. 22, 2020, and the judgment was delivered by Justice Arun Mishra. The bench came down heavily on the government for its obduracy in pushing for a policy that had previously been declared invalid by the tribunal, by issuing a new notification with a similar purpose.

The Majority Opinion Imbroglio: Scrutinising A.P. High Court's Reasoning

The A.P. High Court's majority ruling upholding the validity of the 100% reservation notification was based on four basic arguments: firstly, that the Governor possessed the power to issue the notification as per para 5(1), Schedule V to the Constitution, the non-obstante clause of which overrides all other provisions in the Constitution including Part III; secondly, that the policy was based on intelligible differentia and the classification had a nexus with the object sought to be achieved since the reservation was being provided in light of absenteeism of staggering proportions, of teachers in schools situated in scheduled areas; thirdly, the Court sought to legitimise the necessity for the impugned policy by shrouding it with the claim that the scheme aimed at increasing literacy in scheduled areas by way of ensuring that teachers are available; and fourthly, the Court attempted at using the scope allowed in *Indra Sawhney* for the existence of exceptional scenarios where the 50% ceiling limit could be relaxed in to say that the ceiling limit wasn't an absolutist ordainment.

The minority opinion of the High Court naturally, projected an entirely different viewpoint. The judge asseverated that providing 100% reservation by its very nature was the antithesis of the constitutional structure of equality of opportunity, since the impugned policy was discriminatory not just to the open category, Scheduled Caste and Other Backward Classes candidates but also to those S.T. candidates who did not pass the arbitrarily fixed 'local S.T.

candidate' threshold. It was emphasized that the exception for the 50% ceiling permitted little relaxation, and that absenteeism by itself was not sufficient to justify the dogmatic policy. All these arguments were eventually considered by the five judge Constitution bench to arrive at its final decision.

Overview of A.P.'s Legal Framework on Reservation: Rules in 'Act'ion

The percentage amount of reservation to be provided to different classes in A.P. was substantively regulated by Rule 22 and 22A of the A.P. State and Subordinate Service Rules, 1996 (hereinafter referred to as 'the Rules'), which had been made under the proviso to Article 309 of the Constitution of India. The A.P. Regulation of Reservation and Appointment to Public Services Act, 1997 ((hereinafter referred to as 'the 1997 Act') *inter alia*, ensured that the scheme of reservation specified in Rule 22 is observed. The Act itself however did not spell out any percentage specifications for reservation. Apart from this scheme of reservation, as per Presidential Order[9] issued under Article 371D of the Constitution, aspiring candidates of any category could not apply for teaching posts outside the district/zone of their residence, which is why the Appellants asserted that the impugned notification would result in unfair ramifications since residents belonging to other categories in the scheduled areas would be completely deprived of the opportunity to apply (because, they can neither apply for the posts of these areas due to the 100% S.T. reservation and nor can they apply for posts outside such areas since the Presidential order prohibits that). The impugned notification in the instant case, issued by the Governor under para 5(1), Schedule V to the Constitution referred to the Rules and not to the 1997 Act for a modified application of the reservation percentages.

Accordingly, one of the main questions in the instant case at the Supreme Court was with respect to the scope of the Governor's power under para 5(1), Schedule V to the Constitution, since the Appellants had misgivings about interpreting the Governor's power under that provision to mean unbridled modification; and also because this power of modifying or creating exceptions (conferred on the Governor by para 5(1) of Schedule V) existed only with reference to an Act of the Parliament or the State Legislature. Naturally, the question of whether this power could be exercised with reference to the Rules was confounding. Needless to say, this issue found its way to the Constitution bench's attention, as the judgment provides a lengthy exposition on the law surrounding this quandary.

9 Andhra Pradesh Public Employment (Organisation of Local Cadres and Regulation of Direct Recruitment) Order (1975).

Detestable 100%: Sifting the Prolix Judgment

The five judge bench declared the 100% reservation policy to be *ultra vires* on the basis of four propositions: firstly, the Court held that the Governor could not have promulgated the policy with reference to the Rules (which were an amalgamate piece of subordinate legislation) under para 5(1), Schedule V powers because these powers could only be exercised in relation to an Act; secondly, the impugned notification's conflict with the Presidential Order results in consequences that upset the constitutional balance of equality; thirdly, 100% reservation has no place in the jurisprudential scheme of Article 16; and fourthly, the cutoff date, i.e., 26th Jan. 1950 is unreasonable. Each one of these propositions is accompanied by related questions of constitutional interpretation in the judgment, which is where complexity intensifies.

Extensive Modification or Inaccurate Legislative Reference: Where did the Governor Go Wrong?

As explicated earlier, the impugned notification was issued by the Governor under para 5(1), Schedule V to the Constitution, a provision which only allows the Governor to make exceptions or modifications to an Act as regards its application to a specific Scheduled Area. The two questions arising from this verity are: (i) 'can the Governor exercise this power without reference to any Act?'; (ii) 'does the Governor have the power to modify the reservation scheme to such an extent that the percentage scheme is entirely replaced by a new one?'.

The answer to the first question is already crystal clear. The answer to the second one is still somewhere in a boundless sea of uncertainty. The judgment relies on past precedent to clarify that there is no rationale behind limiting the word 'modification' only to such modifications that do not make any radical transformation.[10] With that, the Court also refers to judgments that speak for a more restrictive interpretation of the word 'modification'. However, the Court fails to provide any clarity on which side lays down the correct law. Towards the end of the discussion on the problem posed by the second question, the Court does say "the exceptions and modifications are created by the law, which is already applicable in the area. It is not the formulation of a new law which is contemplated under Para 5(1) of Schedule V…The power of modification cannot extend to rewriting the entire statute". Albeit, the Court makes these general remarks, but it is still unclear whether the Court regards the change in the percentage scheme (from those under Rule 22 to 100% local S.T. candidates) as an action that seeks to 'redraft the complete statute' under the false garb

10 *Puranlal Lakhanpal v. President of India*, A.I.R. 1961 S.C. 1519.

of mere modification or whether it only objects to the Governor's peccadillo in referring to the Rules (and not the 1997 Act) for making a modification in policy which is valid in as much as it's merely a modification and not a complete repudiation. It is unequivocal that the Governor has erred in exercising his power under para 5(1), but inexactitude remains as to whether the 'excessive modification flaw' has been committed or not. The judgment further provides countenance to the analysis of how the combined effect of the impugned policy and the Presidential Order is glaringly discriminatory not just to the open category incumbents but also to those of other disadvantaged sections.[11]

100% Reservation for Chronic Absenteeism: Is the Justification Reprehensible or the Percentage?

The judgment in the instant case proffers two reasons to advance the assertion that 100% reservation is incompatible with constitutional requirements. Firstly, as per *Indra Sawhney* reservations for S.C.s, S.T.s and O.B.C.s under Art. 16(4)[12] are not founded on the 'proportionate representation' principle (reservation for a specific class proportionate to the population of that class in the area for which the reservation has to be made), instead, they are based on the 'adequate representation' concept (which contemplates larger considerations of social backwardness, inadequacy of representation and administrative efficiency for arriving at a decision on the percentage). For this reason, 100% reservation for S.T.s cannot be permitted merely because it is sought to be enforced in Scheduled Areas (with a sizeable S.T. population) as, such a percentage defies logical corollaries of the precepts of adequate representation (one of which is Dr. B.R. Ambedkar's recognition that reservations under Article 16 are to be confined to a minority of seats[13]). The court also added that unlike in art. 330 and 332 of the Constitution (which follow the proportionate representation principle), the proposition that only tribal teachers could effectively teach tribal students could not be affirmed for such employment. Secondly, the significance of the 50% ceiling is reiterated to insist that the discriminatory effects of this percentage amount (when placed in the context of the Presidential Order) validate its spurning.

The Court does not shy away from engaging with the characterisation of the need for the 100% reservation policy, as is propounded by the Respondents. The Respondent side contended that due to serious dearth of requisite facilities and inaccessibility, teachers in

11 The right to affirmative action through reservation that the Indian Constitution assures to other disadvantaged sections like SCs & OBCs, stands to be whittled down because of the impugned scheme as it provides for reservation of all the seats only for a specific vulnerable group, i.e., the STs of the concerned region, to the exclusion of SCs & OBCs.

12 Indian Const. art. 16, cl. 4.

13 Constituent Assembly Debates, 30 Nov. 1948.

Scheduled Areas were not turning up to teach, which led to phenomenal absenteeism of non-tribal teachers; this in turn necessitated a reservation policy by which local tribal teachers could be provided for whom accessibility wouldn't have been an issue, since they would've been local residents. According to the Respondents, this peculiar predicament was sufficient to warrant the 100% stipulation. The Apex Court emphatically disagreed. The judgment's non-acceptance of this justification was based on a two-pronged argument: firstly, the absenteeism complication could have been taken care of by providing "better facilities and other incentives"; and secondly, the decision to release the impugned notification was not taken on the basis of any verifiable data, but only on the ground of absenteeism. Albeit, the four propositions tendered for declaring the impugned policy as unconstitutional form a well-founded and compelling *ratio* in their conglomerate capacity, yet, the two pronged argument meant to counter the 'absenteeism justification' seem half-heartedly proposed at best and inadequate at worst. This is because the application of the generic platitude of 'other alternatives' can be extended to almost any justification for a reservation, for instance, it can be argued that a reservation policy motivated by inadequacy of representation should be rejected because 'other alternatives' exist in the form of providing 'better facilities and perks' at the educational level to incentivise students from disadvantaged communities to work harder for enhancing their merit positions. This is not to say that the impugned policy of 100% reservation is anyhow valid just because one of the sweeping arguments against its justification is perfunctorily explained.

Similarly, it is unfortunate that the Court does not explain what it implies by insinuating that required data wasn't collected and the policy was only based on absenteeism. The Court's only mention of this argument in the entire judgment deserves to be reproduced *in extenso* for clarity: "The decision to issue G.O. Ms No.3/2000 was taken not on verifiable data, but it was taken on the basis that there was chronic absenteeism of nontribal teachers in the schools in scheduled areas." It is uncertain whether the Court was doubting the veracity of the 'absenteeism justification', because the sentence structure implies that the Court regards the subject of the verifiable data to be different from the justification that the Respondents provide. The question of what this 'verifiable data' was supposed to indicate remains eclipsed by incertitude. It would still be instructive to acknowledge that it is plausible that the Court was trying to make an 'insufficient factual foundation' argument to say that Respondent's justification cannot be accepted on face value without necessary statistics.

This examination of the Court's response to two parts of the policy's analysis, i.e., the content of the policy (100% reservation) and its actuation (the absenteeism justification) reveals that the Court was not shaken as much by the justification that the respondents

provided as it was by the magnitude of the reservation's percentage. This translated into a preoccupation with establishing that the impugned policy is *ultra vires* because it specifies for reservation to the tune of '100%' seats (a condemnably disproportionate stipulation), and in this absorption with the alarming percentage specification, focus on engaging with the absenteeism explanation was inexorably lost.

Judgment's Legal Elucidation: Regrettable for Banality or Desirable for Stare Decisis?

The judgment's reasoning may not seem to have been guided by a significant degree of novelty *ex facie*. Most of its *ratio decidendi* is a mere reproduction of portions from past precedents that are germane to the discussion of the issues referred to the Constitution bench in this case. That by itself should not inspire any disparaging critique to refer to this as an instance of unoriginality, as long as the precedent being cited is relevant to rendering a decision characterised by a consistent application of established dictum. The judgment deserves plaudits for contributing some clarity to the difference between the Governor's power of modifying and creating exceptions to the application of Acts for specific Scheduled Areas under para 5(1), Schedule V of the Constitution and the Governor's law making powers under para 5(2), Schedule V. Its discourse on non-obstante clauses in the Constitution and their relationship with Part III also irons out the wrinkles in that regard, since it provides a conclusive pronouncement to the effect that exercise of powers under non-obstante clauses in the Constitution cannot escape the scrutiny of Part III rights and the Constitution's basic features.

Concluding Remarks: Addressing Unwarranted Denigration

It is lamentable that academia is fraught with instances of unfair critiques that use cherry picked lines from a judgment to present a dismal (but apocryphal) picture. Sadly, even the *Chebrolu Leela Prasad Case* has not remained immune to this phenomenon. The judgment has recently been lambasted for purportedly expressing disdain and tacit contempt for tribal culture.[14] That critique is uncalled for in so far as the judgment does not, firstly, extend 'primitive' as an adjective to tribal culture as a blanket ascription. The judgment's emphasis on the lack of access to education and healthcare which invariably imply exposure to scientific living (and not one rooted in divine reveries) provides ample context to understand what exactly the Court means by integration of tribal people who have lived primitively in isolation for decades. Saying that the judgment makes scornful generalizations is an exercise

14 Amit George, *Tribal Culture(s) and the Supreme Court: A Critique of Chebrolu Leela Prasad & Ors. v. State of A.P. & Ors.*, Bar and Bench (Apr. 28, 2020, 9:07 AM), https://www.barandbench.com/columns/tribal-cultures-and-the-supreme-courta-critique-of-chebrolu-leela-prasad-ors-v-state-of-ap-ors.

in unnecessary sensationalism. Secondly, labeling the judgment as an ethnocentric account of tribal culture is preposterous in light of the objective context of national integration and commitment to an educated & scientific way of life, supported by healthcare, which the judgment provides as a vision for tribal people. The judgment at no point seeks to address the tribal people as disgraceful savages that need occidental reformation. It merely acknowledges the history of disenfranchisement of tribal people and thereby presses the need for their meaningful integration into the national life through representation, education and healthcare. Therefore, the surmise that the judgment exhorts its readers to harbour a hankering for cultural uniformity is gravely misplaced.

This careful examination of the judgment and the opinions of its critics discloses that the five judge bench has applied the principles developed in past precedents consistently to the facts of the instant case. With a reasoning mostly based on well-established constitutional requirements like the 50% ceiling, the adequate-proportionate representation dichotomy and data collection to establish foundation, the judgment really is old wine in new bottles.

Precautionary Principle and Environmental Jurisprudence: An Appraisal

Dr. Rajinder Verma*

Introduction

One of the most controversial principles of International Environmental Law is the precautionary principle. The need and the pitfalls of the principle have been highlighted by many. The debate however cannot be said to have exhausted itself, as the precautionary principle has been welcomed, criticized and ignored all at once. The actual contents of the rule have been difficult to formulate, as most of the existing formulations appear to be a result of political compromise clouded by sovereign need and greed. The objective of this research paper is to make an effort in crystalizing the constituents of the precautionary principle. In the course of the paper analysis of municipal jurisdiction with special reference to India is also made. The paper will take inductive approach by first analysing the international perspective and then broaden towards the Indian scenario. Most of the analysis in the paper will be restricted to the way the judiciary has played its hand in appreciating the intricacies of the principle.

Precautionary Principle- Conceptual Analysis

The precautionary principle means the principle of establishing a duty to take such measures that anticipate, prevent and attack the causes of environmental degradation even when there is not yet scientific proof that the environment is being harmed. [1] The taking up of measures does not require sufficient scientific evidence to identify a threat of serious of irreversible harm to the environment. The concept assumes that science does not always provide the insights needed to protect the environment effectively, and that undesirable effects may result if measures are taken only when science does provide such insights. Furthermore, it assumes that scarce financial resources may be allocated inefficiently if action is taken only after scientific certainty as to detrimental effects has been ascertained, particularly when alternative technologies and products are available. In fact, the precautionary concept rejects the so called assimilative capacity approach to environmental policy. The assimilative capacity principle is based on the belief that scientific theories are certain and adequate to provide the remedies for ecological restoration whenever environmental pollution occurs. The principle is built on the foundation of scientific certainties and adequacies. However, assimilative capacity principle suffered setback when the inadequacies and the uncertainties of science became visible in environmental context. It has

* Associate Professor, Department of Law, HPU, Shimla-5.

[1] Gurdeep Singh, "Legal Status of Precautionary Principle in Environmental Jurisprudence", *National Capital Law Journal,* Vol. 5 (2000) Pg. 36

been revealed that inadequacies of science result from identification of adverse effects of a hazard and then working backwards to find causes.[2]

From a legal point of view, the most important facet of the principle is that positive action to protect the environment may be required before scientific proof of harm has been provided. The new element is the timing of, rather than the need for, remedial action. Preventive action once damage has been determined is a long standing requirement of international environmental law. In fact, the essence of the precautionary concept, the precautionary principle is that once a risk has been identified the lack of scientific proof of cause and effect shall not be used as a reason for not taking action to protect the environment. The timing between exposure and observable effect creates intolerable delay before regulation occurs.[3]

International Perspective

The precautionary concept has become intrinsic to international environmental policy, especially with the adoption in 1992 of the Rio Declaration at the United Nations Conference on Environment and Development (UNCED).[4] Principle 15 of the Rio Declaration provides that in order to protect the environment, the precautionary approach shall be widely applied by states according to their capabilities. Where there are threats of serious or irreversible damage, lack of full scientific certainty shall not be used as reason for postponing cost effective measures to prevent environmental degradation.[5] The Convention on Biodiversity in the preamble stated that where there is a threat of significant reduction or loos of biodiversity, lack of full scientific certainty should not be used as a reason for postponing the measures to avoid or minimize such a threat.[6] This statement indicates that the parties' obligations under the convention can be interpreted in the light of the precautionary principle. Agenda 21 also employs precautionary language tied to specific measures which would enhance the policy of a precautionary and anticipatory rather than a reactive approach is necessary to prevent the degradation of marine environment. this requires the adoption of precautionary measures, environmental impact assessment, clean reproduction techniques, recycling, waste audits and minimization, construction and improvement of sewage treatment facilities, quality management criteria for handling of hazardous substances and a comprehensive approach to damage impact from air, land and water.[7]

[2] *Id at 34.*
[3] *Ibid.*

[7] Agenda 21, the program of action adopted at UN Conference of Environment and Development (UNCED), Rio De janeiro, June 1992, Ch. 17, Para. 17.21

A perusal of the codification of the precautionary principle in few of the above instruments highlights that diversity in the understanding of the principle. After a similar study, it has been classified into the following:

First, the degree of harm that is required to get the precautionary principle into action. It varies from irreversible or serious harm to reasonable grounds for concern. The Bamako Convention[8] reduces the standard to just 'May Harm.' Moreover, since the standard of proof is not specified in any of these instruments, identifying the level on which scientific evidence is sufficient to override arguments postponing measures or at which measures might even be required as a matter of international law is still an open question.

Second, while the UN Framework of Convention on Climate Change (UNFCCC) requires that measures to anticipate, prevent or minimize the causes and mitigate its adverse effects through cost effective means,[9] Rio Declaration and the Bamako Convention link prevention and precaution thereby requiring total prevention of environmental degradation. The Ozone layer protocol requires that 'measures to control equitably.[10]'

Third, there is also a debate on whether the principle should take into account the relative capabilities of the nations to address environmental problems. For example, Principle 15, Rio Declaration and those instruments which use a verbatim reproduction of the same requires the implementation of the precautionary principle according to their capabilities. The European Energy Charter, for instance requires measure to be implemented in a cost effective measure, which impliedly brings the question of balancing the needs and capabilities of the states involved.[11]

Thus, precautionary principle has various elements like non-preclusion which means regulation should be precluded by the absence of scientific c uncertainty about activities that pose a risk of substantial harm. Margin of safety is another constituent of precautionary principle states that regulation should include a margin of safety, limiting activities below the level at which adverse effects have not been found or predicted. Best available technology requirements should be imposed on activities that pose an uncertain potential to create substantial harm, unless those in favour of those activities can show that they present no appreciable risk. Last component is prohibition should be imposed on activities that have an uncertain potential to impose substantial harm unless those in favour of those activities can show that they present no appreciable risk.

Indian Scenario

[11] European Energy Charter Treaty, Dec 17, 1984, Art. 19(1), 33 ILM 360-394, (1995).

Environmental jurisprudence has seen considerable development in the last few decades. With the expansion of public interest litigation[12] and a more proactive definition of the fundamental right to life to include the right to environment,[13] the need to take positive steps in furtherance of such an objective became apparent. Keeping in mind the need to address the growing issues surrounding environment, its importance in the international arena and the lack of legislative and executive action in fulfilling this duty, the Supreme Court of India has taken a very proactive role in environmental jurisprudence. Keeping in mind its constitutional duty under Article 32 to protect the fundamental rights guaranteed in the Indian Constitution, the Supreme Court has incorporated various principles into our domestic system to fill the legislative and executive void. Once such principle is the precautionary principle, whose content, according to the court,[14] consists of;

- Environmental measures by the state government and the statutory authorities must anticipate, prevent and attack the causes of environmental degradation.
- Where there are threats of serious and irreversible damage, lack of scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation.
- The onus of proof is on the actor or the developer or industrialist to show that his action is environmentally benign.

The above definition has been taken to be an authoritative one and has been reiterated in the decisions.[15] Nonetheless, each of these points has certain unsettled issues; does precautionary principle mandate a total prevention of environmental degradation by completely abdicating the activity? What significance must be attached to the serious and irreversible damage? How must one satisfy the onus in case of scientific uncertainty? Interestingly, there was no necessity to deal with the precautionary principle in Vellore Citizens case, there being no issue of uncertainty since the effects or pollution caused by the tanneries was already well researched and documented. How the principle is to be applied and how the onus is to be fulfilled were not discussed. The court, however did mandate that individual pollution control devices be set up for all the tanneries. In fact, most cases allegedly applying the precautionary principle do not actually apply the principle at all. In the Taj Trapezium matter,[16] court expressly stated that it is proved beyond doubt that the emissions generated by the use of coke/ coal by the industries in TTZ are the main polluters of the ambient air. The same applies to the case regarding emission standards for vehicles.[17] The discussion of the principle was thus futile. The only case that the author feels had any relevant application of the precautionary principle is the case of Nayudu[18].

[18] *Supra Note 15.*

In an effort to provide an answer to the third question mentioned above, the court held that they are to discharge this burden by showing the absence of a reasonable ecological or medical concern. That is the required standard of proof. The result would be that if insufficient evidence is provided by them to alleviate concern about the level of uncertainty, then the presumption should operate in favour of environmental protection.

The court in a subsequent order,[19] applying the above test, denied permission to one industry to construct within ten kilometre radius of certain lakes which were providing drinking water to nearby cities. The court after making an in detail examination of three independent scientific reports stated that it cannot be said that the two lakes will not be endangered[20] and rejected the solution provided by the industry since it did not take care of elimination of effluent effects. When it was argued that this can be taken care of by making sure that during storage of raw material and after release of the hazardous liquids, they are put in containers and removed; the court rejected the same on the basis of the reasonable man's test. The court held that the burden cannot be discharged by relying upon a bare assurance that care will be taken. If one has a relook at the decision, there was no uncertainty for dispute regarding the ecological impact of the industry, even in case of seepage; rather the developer himself was committed to taking steps to prevent such pollution. The dispute was whether the proposed solution could actually keep the possibility of pollution at bay, the answer being no, the court did not permit the construction of industry. The following quote form another decision of the court seems appropriate.[21] It appears to us that precautionary principle and the corresponding burden of proof on the person who wants to change the status quo will ordinarily apply in the case of polluting or other project or industry where the extent of damage likely to be inflicted is not known. When there is a state of uncertainty due to lack of data of material about the extent of damage or pollution likely to be caused then in order to maintain the ecological balance, the burden of proof that the said balance will be maintained must necessarily be on the industry or the unit which is likely to cause pollution. On the other hand where the effect on ecology or environment on setting up of an industry is known, what has to be seen is that if the environment is likely to suffer, then what steps to mitigate can be taken to offset the same. Merely because there will be a change is no reason to presume that there will be ecological disaster. Although, the court's opinion that construction of dam does not lead to ecological disaster may be questionable, what is of our concern is the implication of the above paragraph. When the petitioner questioned the environmental effects of the project, including the magnitude of a few, the court just .chose once scientific opinion over another that favouring the project coupled with a solemn oath on the part of the state to monitor the ecological impact. The court held that since the studies have been undertaken and further studies are underway in assessing the impact of the project, there was no need for the court to interfere.

[19] *Ibid*
[20] ibid
[21] Narmada Bachao Andolan v. Union of India and Ors., (2000) 10 SCC 664.

Similarly, in the Tehri Dam case,[22] the court refused to take a stand in case of uncertainty. Experts in science may themselves differ in their opinions while taking decisions on matters related to safety and allied aspects. The opposing viewpoints of the experts will also have to be due consideration after full application of mind. When the government or the concerned authorities after due consideration of all viewpoints and full application of mind took a decision, then it is not appropriate for the court to interfere. Such matters must be left to the mature wisdom of the government or the implementing agency. In such cases, if the situation demands, the courts should take only a detached decision based on the pattern of the well settled principles of the administrative law, if any such decision is based on irrelevant consideration or non-consideration of material or is thoroughly arbitrary, then the court will get in the way. Here the only point to consider is whether the decision making agency took a well informed decision or not. If the answer is yes then there is no need to interfere. The consideration in such cases is in the process of decision and not in its merits. Even when deliberating upon these proposed mitigation factors, the court presumed the ill effects of the dam, though not their magnitude. On the contrary, there was scientific uncertainty as to the seismic stability of the dam, the court in such a situation, ordered that further tests be done in this regard.

The preliminary conclusion is that most cases which declare the precautionary principle to be law do not apply the same and reliance on such cases would not be prudent. In those few cases in which the court does seem to have applied the principle, the facts never warranted the application of the same. Typically in this category of cases, the subject matter involved was the emission of pollutants or the use of hazardous substances, whose negative effects were well documented. Even in those rare cases where there was a need to apply the principle, the court has taken a backseat approach by limiting itself to procedural requirements of further studies and reiterating mitigating factors, the utility and effect of which were never discussed.

One may clearly conclude from the above that the precautionary principle appears as a very bleak object in the eyes of the judiciary, a vision that is clouded by limited judicial review. The use of the precautionary principle as a shield rather than as a weapon in testing any action reduces the scope of the precautionary principle to merely a tool of executive or legislative prerogative. Judicial deference to administrative bodies in such cases highlights the inherent policy issues involved in making decisions on the basis of the precautionary principle. So what are these inherent difficulties with the precautionary principle? The answer is the concept of risk, one thing that seems undisputed is that the precautionary principle applies only in cases of uncertainty. Of course, for our purposes, we restrict ourselves to the studies of the potentially negative environmental consequences of an activity. In simple words, prior to the application to the principle, there is a need to understand the environmental risk involved with an activity, risk being defined as the possibility of an unfortunate event occurring.[23] This is done through the mechanism of risk assessment or Environment Impact Assessment in the appropriate cases. The goal of risk assessment is to measure the overall magnitude of the risk taking into account

[22] N.D. Jayal and Anr. v. Union of India and Ors., (2004) 9 SCC 362.
[23] Environmental Damage in this case.

probability of harm, pathways of causing harm and size of at risk population. The assessment process can result in either a quantitative measure of the risk or a qualitative description such as substantial risk or high risk depending on the purpose of the assessment and the availability of data. When such an assessment is made, there could be certain risks which may remain controversial at the scientific level but which may not be unreasonable to expect. In other words, even uncertain risks require a minimal level of scientific evidence of a probability of a risk.

Risk management is the next step involved in the precautionary principle. The question is how to respond? Perplexing questions like, should the activity be forgone? Or should measures to mitigate the damage be taken etc. confront the decision maker at this stage. Logically, this depends on the probability of the event occurring and the damage it may cause in case of occurrence. In other words, the decision maker will have to balance the cost of the measure as against the cost of inaction. Thus, what action is to be taken is a function of factors. Briefly speaking, the application of the precautionary principle may result in three types of unintended results; risks from alternatives by unintentionally exposing an individual to other untested alternatives due to banning a substance by application of the precautionary principle. Further, by denying the benefits of the product which may have more benefits than harm. Lastly, risks of remediation, since the remedial action may itself cause new risks cleaning up hazardous wastes.

Conclusion

Thus, precautionary principle comes into play when the risk is too high, so high in fact that full scientific certainty should not be required prior to the taking of remedial action.it is to be applied in those cases wherever activity may result in long lasting or irreversible damage to the environment as well as in those cases where the benefit to be derived from a particular activity is completely out of proportion to the negative impact which that activity may have on the environment. in certain cases, the number of consideration that needs to factored into the decision making process becomes to many to handle with a sequential flow of thought. This inevitably will lead to the introduction of personal and professional judgements into the assessment process. The challenging of this decision is an adjudicatory mechanism is an even more mind boggling task. The objective of this research paper is not to dismiss the precautionary principle. Instead, what the author wishes to underscore here is that the precautionary principle does not necessarily result in making the correct decisions at the right time.

A consequence of this analysis is that the precautionary principle is not in the nature of a standard that we have always come across in the field of law. It is principle with potentially no standards or basis to review. It is an open ended policy question. It is for this reason that judiciaries all over the world have been grappling with applying the precautionary principle to each case, it is for the same that interpreting the precautionary principle as positive obligation upon the state to be enforceable in a court of law would require stretching common sense too far, to such an extent that the system may fall under its own weight. This highlights the need for other mechanisms, apart from the judicial process in regulating and applying the precautionary

principle. As the Law Commission of India in 2003 in its 186th report on proposal to constitute environment courts noted, under the existing system, most appeals against decisions taken are to various officers of government or departments of government and not to a court manned by persons with judicial knowledge and experience assisted by experts in various aspects of environmental science. Even if such other mechanisms are established, reviewing a decision by running through every single document, a new will remain a daunting task. On the other hand, this analysis highlights the need for an effective and efficient decision making process and procedure at the very beginning. This is yet another area that emphasizes the requirement of a vigilante and strong executive in the governance of any nation.

RIGHT TO PRIVACY VIS-A-VIS RIGHT TO INFORMATION

Dr. Rajinder Verma
Associate Professor,
Department of Laws,
Himachal Pradesh University,
Summerhill, Shimla,
Himachal Pradesh 171005
India

1. INTRODUCTION

Right to Privacy has been included in to the Constitution of India by the Hon'ble Supreme Court as a component of two Fundamental Rights - the right to freedom under Article 19 and the right to life and personal liberty under Article 21. The higher judiciary of the country, consumer redressal forums as well as Information Commissions have developed the right to privacy over decades since independence.[1] The much-debated right of privacy so provided is conditional under almost all the laws. The laws that once were restricted to privacy alone now affirm that the information being a valuable asset may be claimed by other individual, corporation, national entity etc. The right to information strives to promote transparency and accountability in the functioning of the Government. After the commencement of Right to Information Act in 2005, various new provisions permitting the right to seek information came into practice.

The clash of individuals with each other or clash of groups or associations with each other or with individuals to achieve wants and desires often may give rise to conflict or competition between interests.[2] Different statutes governing the privacy rights attempt to create harmony between the right of individuals and social interests.[3] The year 2000 has been selected to discuss the provisions before and after the commencement of Information Technology Act,2000. The present paper examines the pattern of carving out the exceptions against the privacy right by the government. It presents out harmony between pro-privacy and anti-privacy legal provisions. The paper is confined to existing provisions under Indian legal system and does not cover proposed Bills. The paper is based on doctrinal research, covering various scattered legislative provisions.

2. PRIVACY OF COMMUNICATIONS UNDER INDIAN LAWS BEFORE 2000

The Indian legislative regime under various areas such as Postal Articles, Medical Information, Public Information relating to Deaths & Births etc. embodies the powers on one hand and restrictions to protect the privacy on the other hand.

ASSIMILATION OF TECHNOLOGICAL ADVANCES VIS-À-VIS INDIAN CRIMINAL JUSTICE SYSTEM

Dr. Rajinder Verma

Associate Professor, Himachal Pradesh University, Shimla, Himachal Pradesh, India.

ABSTRACT

The present paper aims to highlight current technologies deployed in the criminal justice system in India along with identifying the impacts of technology on the criminal justice system and specify interactions between criminal justice and technology. Technology has been seen as a dependent and independent variable.[1]

1. INTRODUCTION:

Technology does not determine social structure; it simply widens all kinds of possibilities. The thoughtful incorporation of technology into our society requires an active evaluation of our values as a society, of how our society can and should be reshaped by the technology, and of how the technology should be shaped by our society. Although each technological change may have very different impacts on both law and society, useful observations can be made at a more general level. Technological change has an impact on existing legal rules-enhancing uncertainty, making them over-inclusive or under-inclusive, and rendering them obsolete.[2] The criminal justice system as a whole results from the interaction between legal rules, administrative practice, and societal attitudes and behavior.[3] The developments in medical sciences, psychology[4] and information technology has enabled the smooth working of the criminal justice system. The police community must use technologies to combat the technological sophistication of the criminals.

2. ADOPTION OF NEW TECHNOLOGIES BY CRIMINAL JUSTICE SYSTEM:

In most cases, a suspect enters the criminal justice system as a result of investigation and apprehension by the police. Since the beginning of organized police work in the early 19th century, technological advances have widened the net cast by police investigations and have improved the ability to identify offenders and capture suspects. Now new technologies are providing police with powerful new capabilities. By improving the abilities of local and State law enforcement agencies to cooperate across jurisdictions, these new technologies and have may also decrease their dependence on Central law enforcement agencies. Innovations in criminal justice technology can be divided into two broad categories: hard technology (hardware or materials) and soft technology (computer software, information systems).[5] Hard technology innovations include new materials, devices, and equipment that can be used to either commit crime or prevent and control crime.[6] Soft technologies involve the strategic use of information to prevent crime and to improve the performance of the police.[7]

2.1 Use of Technology in Investigation, Identification and Apprehension:

(a) Technology in Investigation:

Forensic science has developed over the past 300 years or so, and its processes continue to improve and evolve today as science and technology find better and more accurate techniques. In 1929, the first American forensic lab was created in Los Angeles by the police department. Forensic science plays an integral role in the criminal justice system.

(b) Technologies Used for Identification:

Cell Phone Records:

Generally, cell phone record investigations are a type of telephone surveillance, cell phone surveillance that can be part of a larger investigation or can stand on their own as an investigation. These investigations are crucial to many types of investigations, including asset searches, missing persons cases, skip tracing, fugitive recovery, process serving, cheating spouse investigations, domestic investigations, background checks, telephone account investigations, employee checks, business checks, fraud investigations, criminal investigations, phone call record theft investigations, child custody investigations, child abuse investigations, and others.

The Indian Evidence Act, 1872 and Information Technology Act, 2000 grants legal recognition to electronic records and evidence submitted in form of electronic records. According to section 2(t)[8] "electronic record" means data, record or data generated, image or sound stored, received or sent in an electronic form or micro film or computer generated micro fiche. The Information Technology Amendment Act, 2008 has recognized various forms of communication devices and defines a *"communication device"* under section 2 (ha)[9] of the Act *"communication device"* means cell phones, personal digital assistance or combination of both or any other device used to communicate, send or transmit any text, video, audio or image.

DNA Technology[10]:

DNA profiling (also called DNA testing, DNA typing, or genetic fingerprinting) is a technique employed by forensic scientists to assist in the identification of individuals by their respective DNA profiles. DNA profiles are encrypted sets of numbers that reflect a person's DNA makeup, which can also be used as the person's identifier. In India, initially the judges took very conservative views regarding the application of DNA evidence in resolving the paternity/maternity dispute cases. What is striking is that the dominant controversies about DNA technology now revolve around the competence of the criminal justice system rather than the reliability of the technology itself.

Automated Fingerprints Identification System[11]:

One of the most important parts of a forensic investigation is fingerprinting. As fingerprints are unique to each individual, they serve as a highly accurate way for law enforcement agencies to identify a suspect, as well as potentially prove their guilt or innocence. The Indian Version of Automated Fingerprint Identification System (AFIS) is called FACTS, which was co-developed, by NCRB and CMC Ltd., India. The current version of FACTS is 5.0. The system uses Image Processing and Pattern Recognition technique to capture, encode, store and match fingerprints, including comparison of chance prints. It uses pattern class, core and delta information, minutiae location, direction, neighbouring information, ridge counts and distances, density, type, print background/foreground information etc. for matching Finger Prints. Apart from the above details, FACTS also stores non-fingerprint information or demographic details like gender, region and conviction details.

In Drojan Singh and another v. State (Govt. of NCT of Delhi)[12], the Delhi High Court empowered the investigating agencies that the fingerprints or specimen handwriting of an accused taken by an Investigating Officer during probe into a case was admissible as evidence even though permission from a magistrate was not taken.

Detection Deception Tests:

The deception detection tests (DDT) such as polygraph[13], narco-analysis[14] and brain-mapping have important clinical, scientific, ethical and legal implications. The DDTs are useful to know the concealed information related to crime. This information, which is known only to self, is sometimes crucial for criminal investigation. Narco Analysis, Polygraph and Brain Mapping are main deception detection tests. Till 2010, various High Courts have interpreted the validity of such tests as per their judicial knowledge. In Selvi & others v. State Of Karnataka & Another , the Apex Court was of the view that the compulsory administration of the impugned techniques violates the `right against self- incrimination'. Forcing an individual to undergo any of the impugned techniques violates the standard of `substantive due process' which is required for restraining personal liberty.

(c) Electronic Surveillance for Apprehension[15]:

CCTV:

CCTV is used extensively and can be found in many places including in commercial premises, at ATM venues, on public transport, at airports, in central business districts, and shopping malls. The rate of uptake seems to be accelerating. As most central business districts now have them the most recent and future expansion of CCTV is in suburban and rural areas. India has now moved into an age where security seems to be the primary issue for most

Abstract

The professional life of the doctors and other health-care workers is laborious due to the nature of their occupation. The primary and inherent peril of their occupation is risk of various infections. Their jobs may become life-threatening while treating patients having contagious diseases. They also have to deal with the physical and mental fatigue, the torment of difficult decisions, the agony of deaths of their patients and colleagues. The present situation in the world of Covid-19 has raised the challenges for them as the vast number of health-care workers got affected with it across the world. The state of Himachal Pradesh had slow emergence of the Covid cases and the present paper looks at how the government has implemented the rights of the health-care workers.

Keywords: Covid 19; Health care workers; Himachal Pradesh; World health organisation

Introduction

As per Guidelines of W.H.O., there are numerous rights of the health-care workers during the current pandemic. Some of important rights include to receive all necessary preventive and protective measures to minimize occupational safety and health risks; to receive adequate IPC and PPE supplies (masks, gloves, goggles, gowns, hand sanitizer, soap and water, cleaning supplies) in adequate quantity to healthcare and other staff engaged in caring for suspected or confirmed Covid-19 patients. They must be acquainted with technical updates relating to Covid-19 and provided appropriate tools to assess, test and treat patients. They should be able to disseminate infection prevention and control information with patients and the public. Their rights extend to obtain information, training as well as instruction regarding occupational safety and health such as refresher training on infection prevention and control (IPC). They also have to know the correct manner of use as well as disposal of personal protective equipment (PPE). The right to receive proper working hours with breaks; to respect the right to compensation, rehabilitation and curative services if infected with Covid-19 after exposure in the workplace are included in the list of the rights. The right receive access to mental health and counselling resources is also primary. Due to a lack of personal protective equipment's, healthcare workers are being infected in hospitals. Others are also being infected outside hospitals, in their homes or communities. More than 3,000 healthcare workers from 79 countries around the world have died due to the novel coronavirus infection [1]. Almost 1,302 doctors have found positive for the virus. In terms of infections, private consultants and resident doctors count for the highest number of cases. Out of the total infected healthcare workers, resident doctors were 566, private consultants were 586 and house surgeons were 150. Till April 30, more than 5% accounted for healthcare workers. The above figure is expected to be a major undervalue due to a lack of reporting. They have also experienced reprimanding including arrests and dismissals from the authorities and their employers for voicing safety concerns. In some cases, they have been exposed to violence and stigma from members of the public. On 30th July, 2020 six months passed since a global health emergency was

declared under the International Health Regulations by the World Health Organisation. The research objectives of the present study are to discuss the rights of the health-care workers during Covid-19; to enumerate the measures taken by the Govt. of India and Govt. of H.P. for protecting the rights of health care workers and to study the enforcement of the rights of various health care workers in the state of H.P [2].

Ministry of Health and Family Welfare, Government of India vis-a-vis Rights of Health Care Workers

Inspirational series on Healthcare Service Personnel has been launched by the MoHFW. The series include musical tribute to the health-care workers; break the stigma-do and don'ts; gratitude towards them; felicitation of the nurses etc. The series is made available in Hindi and English. Insurance Scheme for Health Workers Fighting Covid-19 under Pradhan Mantri Garib Kalyan Package was approved in the end of March 2020. It will provide an insurance cover of rupees fifty lakhs for ninety days [3]. It aims to cover around 22.12 lakh public healthcare providers, along with community health workers, approaching Covid-19 patients in direct contact and care. It will also embrace accidental loss of life due contracting Covid-19. Due to the extraordinary situation, private hospital staff, retired, volunteer, local urban bodies, contract, daily wage, ad-hoc, outsourced staff employed by States, Central hospitals, autonomous hospitals of Central or States or UTs, AIIMS & INIs or hospitals of Central Ministries can also be included. An advisory dated 18th June 2020 requires detailed instructions; activation of Hospital Infection Control Committee (HICC), stipulates Standard Operating Procedure for health work force deployment during COVID-19 , different procedure to be adopted in case a health care worker reports symptoms suggestive of COVID-19 and mandates regular quarantine of healthcare workers after performing duty in COVID-19 areas. Country-wide Toll free helpline numbers have started under the aegis of the Ministry and under Indian Medical Association for pscyho-social support for the various health professionals [4-8].

Government of Himachal Pradesh vis-a-vis Rights of Health-Care Workers

On 28th March, Himachal Pradesh State Government formed a 'HP Covid-19 Solidarity Response Fund' to offer personal protection equipment to the health workers and other related officials. It would ensure even supply of essential commodities such as food items and medicines. A new bank account with HDFC Bank, Chotta Shimla has been opened to allow donors for generous donating to help the persons suffering during the COVID-19 pandemic. A number of Guidelines and Advisories have been issued by the Government of Himachal Pradesh dealing with Covid-19. List of Training resource material for the purpose of capacity building of health care professionals for Covid 19 containment was released in April, 2020. Committee for giving advisory for managing Health Care Work was constituted on 26th May, 2020. Covid Clinical Committees have been established in the six Government Medical colleges in State to monitor cases on day to day basis on 4th June, 2020. Additional incentive of Rs.1000 to all ASHA workers from March, 2020 to June, 2020 was announced on 26th June, 2020. HP SDMA Covid-19 State Disaster Response Fund is a secure way to contribute to the state of Himachal Pradesh efforts to respond to Corona pandemic. Essential supplies such as PPEs to various health workers and food, medicines etc. may be provided to communities with the assistance from this fund [9,10].

Study conducted in the State of Himachal Pradesh

The doctrinal and non-doctrinal methods of study have been adopted by the researchers. The health-care workers were interviewed through digital means. Around 25 questions were asked including the nature of job, district of posting, and the knowledge about the rights of the health-care workers. As on 30th July, 2020, the total number of cases in H.P. are 2403; active cases are 1057. Total 14 deaths have taken place so far in the State [11].

Universe of the study

The researchers have adopted convenience sampling. The universe of the study is state of Himachal Pradesh. Himachal Pradesh is located in the Western Himalayas and is one of the eleven mountain states and is characterized by an extreme landscape featuring several peaks and extensive river systems. It has a total population of 6,864,602. The state covers an area of 55,673 square kilometres (21495 sq mi) [12,13].

Nature of Respondents

108 respondents were included, from various categories of health care workers. Doctors, nurses, final year students, interns etc. constituted the respondents (Table 1) (Figure 1-5).

Findings

- Around 58% did not made any complaint regarding violation of their rights during Covid-19. Almost 20% of the respondents made violation of their rights whereas almost 22% made no complaint.
- Out of the respondents who made complaints, only 35% respondents found improvements after making the complaints. Whereas, for 65%, situation remained the same.

- 32.4 % respondents replied that they have not been provided any training on infection prevention and control; and use/ disposal of Personal Protective Equipment. Whereas 67.6% respondents were provided the training.

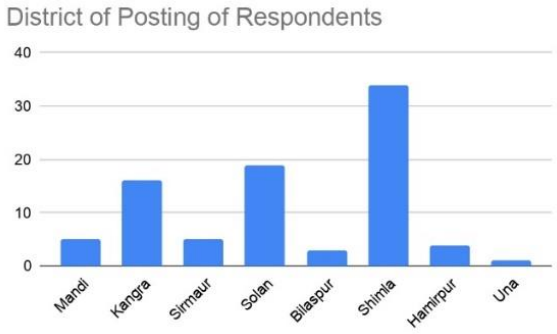

Figure 1: *District of posting of respondents.*

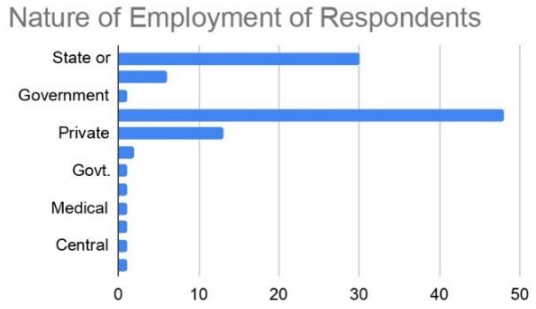

Figure 2: *Nature of employment of respondents.*

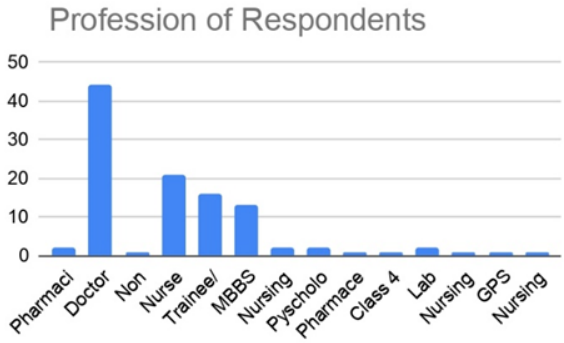

Figure 3: *Profession of respondents.*

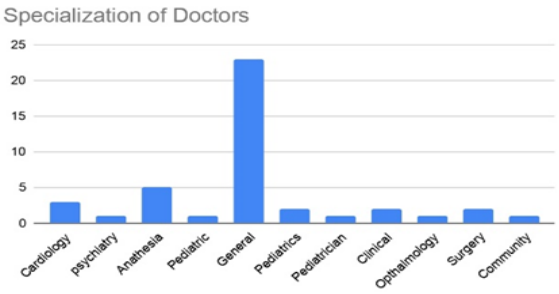

Figure 4: *Specialization of doctors.*

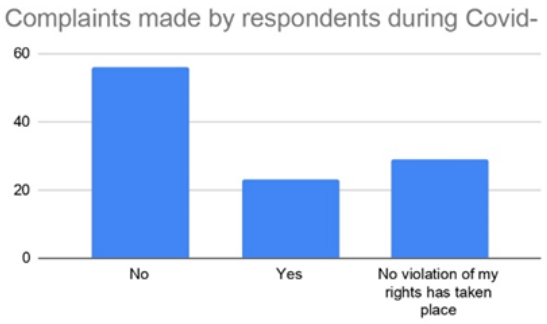

Figure 5: *Complaints made by respondents during Covid.*

Table 1: *Respondents from different parts of H.P.*

S.No.	District	Percentage of Respondents
1.	Bilaspur	3.4%
2.	Hamirpur	4.6%
3.	Kangra	18.4%
4.	Mandi	5.7%
5.	Shimla	39.1%
6	Solan	21.8%
7.	Una	1.1%
8.	Sirmaur	5.7%

- 58.3 % respondents answered that mental health and counselling services exist in your workplace, if required by a health-care worker. 41.7 % answered the absence of such services for the health care workers.
- 62.6% respondents were not aware of the toll-free helpline – "08046110007" for psycho-social support for health care workers in India. Only 37.4 % of the respondents had knowledge of this Toll-Free Helpline.
- 76.5% respondents found adequate availability of equipment's like pulse ox meter, temperature measuring devices etc. in their hospital or college. 23.5% answered negatively.
- Regarding regular sanitization of the hospital or the medical college, 64% respondents believed that their workplaces were sanitized whereas more than 20% of the respondents had no knowledge of sanitization. 16% believed that the hospital or college were not sanitized.

Conclusions and Suggestions

Health care workers have played a significant role in the global comeback to the Covid-19 pandemic. Across countries, they have put their health and wellbeing at peril. They continue to work in very difficult circumstances and with very little support, to ensure that people are able to access the essential services they need. It must be accepted that the health-care workers are a dominant

resource and their lives are precious for everyone. Recognizing and accepting that every health system is vulnerable would help to trace any existing gaps and would enable the protection of both health workers and the public at large.

- The national and state governments must take measures such as provision of food, rest and care for Health care workers and their families.
- The psychological support for Health Care Workers also needs to be focused.
- Adoption of proper security and sanitization measure by the hospitals and its supervision by the dedicated department of the Government.
- Enhanced incentive scheme for work over-time and extra shifts.
- Organized training and emergency drill sessions for the health workers.
- States should ensure that employers provide all health and essential workers with adequate PPE to protect themselves during the Covid-19 pandemic, in accordance with international standards, as set by W.H.O.
- States should place Covid-19 under the category of an occupational disease. The workers who contract Covid-19 as a result of work-related activities should be allowed to claim compensation and medical and other necessary care. This should comprise all health and essential workers regardless of the nature of their contract.
- Health and essential workers safety concerns must be attended to and addressed in a suitable manner. There must be no adverse action against workers for raising concerns or lodging a complaint related to health and safety.
- Prompt investigation in an independent and fair manner of any by attacks or acts of violence against health and essential workers must be done by authorities. Perpetrators must be brought to explanation.
- The States should acknowledge that health care workers are at a higher risk on account of their work.
- Effective, comprehensive and independent reviews should be undertaken regarding preparedness for and responses to the pandemic.
- Data on the basis of occupation, who have been infected by COVID-19, and how many have died as a result should be collected and published by States.

Environmental Protection and Role of Judiciary in India

Dr. Rajinder Verma*

Introduction

The law should vary with time and with changing needs of the generations. The legal theory of social engineering propounds that there should be an improvement in the law in the light of social wants of the time. An active judiciary adopts various means to meet the growing needs of a society. One of the major vehicles of justice in this regards is the public interest litigation. Indian Judiciary started adopting the concept of public interest litigation for promoting various interests of the society including its enforcement. Judicial activism may not only serve to improve the dynamism of the existing laws and jurisprudence but also lead to newer direction and fields where legal system has not developed at all. One of the classic examples is this regard should be environmental protection. With the limited number of specific legislations, the judiciary went on to adopt newer strategies to fill the gaps. In the 1980s, the judiciary started playing an active role. Though the activism of the Supreme Court was in different fields, the enthusiasm shown by the judiciary in protecting the environment is remarkable. It may not be an exaggeration to say that the active period of the Indian judiciary is overwhelmingly focused in rendering environmental justice. This active period saw the adoption of new techniques by the Supreme Court in recognizing liberal 'rules of standing.' It was a time when environmental consciousness was not as strong as of today and judiciary realized that limiting the standing to raise environmental issues to the traditional bodies, may not prove effective in saving the threatened environment.

A five judge Bench of the Supreme Court,[1] held that even a letter addressed to an individual Justice of the Supreme Court could be admitted in case of a public interest litigation. The court in admitting such letters even dispensed other procedural requirements like affidavits which are otherwise necessary to initiate litigation. In this progressive judgement, the Supreme Court emphasized the significance of judicial activism in the words that- 'Law has to grow in order to satisfy the needs of the fast changing society and to keep abreast with the economic development taking place in the country. As new situations arise, the law has to be evolved in order to meet the challenge of such new situations. Kaw cannot afford to remain static. We have to evolve new principles and lay down new laws, which would adequately deal with the new problems which arise in a highly industrialized economy.'

Judicial Activism

The innovation of the Public Interest Litigation by the Supreme Court into the judicial system has to a large extent contributed constructively in the protection of the environment. In lieu of

this positive development, that opened upstairs for affirmative action. Social action litigation or Public Interest Litigation has come of age in India and the higher judiciary is doing a remarkable service in enforcing the rights of the Indian people in socio-economic and environmental matters in the face of executive apathy and indifference. In the process, the Supreme Court has established in resolving these matters is commendable. The court seeks the help of experts in the field through the constitution of committees and decides the relevant issues on the basis of technical reported data.[2]

This fresh approach to enable the judiciary to be more proactive has led the Supreme Court to adopt, apply, evolve and derive a range of principles to guide the development of environmental jurisprudence. In Municipal Council, Ratlam v. Vardhichand,[3] the resident of a locality within the limits of Ratlam municipality, tormented by the stench and stink caused by the open drain and the public excretion by nearby slum dwellers, moved the magistrate under Section 133 of the Criminal Procedure Code of 1898, to be its duty towards the members of the public. Another complaint was that the municipality had failed to prevent the discharge of malodorous fluids onto the public street. Due to this mosquitoes found in a stagnant stream, which was hospitable to breed and flourishing in. it was pointed that no municipal agent took note of the problem and adopted redressive measures. The Supreme Court, directed the municipality to remove the public nuisance and observed that if the centre of gravity of justice is to shift, as the Preamble to the Constitution mandates, from the traditional individualism of the locus standi to the community orientation of Public Interest Litigation, their issues must be considered. The municipality and the citizen of a ward are path finders in the field of people's involvement in the rusting process.[4] Accordingly, the court directed the municipality to take immediate action to stop the effluent from the alcohol plant from flowing in to the street. It also directed the state government to take appropriate steps to prevent pollution. The court also observed that industries cannot meet profit at the expense of public health after taking the excuse of budgetary provisions.

The first articulated indication of the right to a wholesome environment is in the Subhash Kumar v. State of Bihar and Ors.,[5] the Supreme Court held that Article 32 is designed for the enforcement of the fundamental rights of a citizen by the Apex Court. It provides for an extraordinary procedure to safe guard the Fundamental Right of a citizen. Right to live is a fundamental right under Article 21 of the Constitution and it includes the right of enjoyment of pollution free water and air for full enjoyment of life. If anything dangers or impairs to have recourse to Article 32 for the prevention of pollution is maintainable at the instance of the affected person or even by a group of social workers or journalists.[6] The doctrine of locus standi, applicable in the traditional private law litigation has been liberalised by the Indian courts in the

case of Public Interest Litigation. The traditional concept of standing is based on the doctrine of aggrieved person. The courts have accepted a new approach by allowing any member of the public to seek judicial redress for a legal wrong, caused to a person or to a determinate class of persons who by reasons of poverty, helplessness or disability or a socially disadvantageous position are unable to approach the court directly.[7]

In the Charan Lal Sahu v. Union of India,[8] the validity of the Bhopal Gas Disaster (Processing of claims) Act, 1985 was challenged on the ground that it allows the state to take away the rights of the victims to claim compensation by themselves. To decide the validity of the Act, the Supreme Court discussed the doctrine of parens patriae[9] in detail and asserted that the prerogative of the doctrine is inherent in the supreme power of every state, whether that power is lodged in the most beneficent function. In India, the Preamble to the Constitution read within Articles 38, 39 and 39-A of the Directive Principles of State Policy enjoins the State to take up such responsibilities. The Government is within its duty to protect and control persons under disability. It is the protective measure to which a social welfare state is committed. Supreme Court concluded that conceptually and from jurisprudential point of view, it is possible to authorize the central government to take over the claims of the victims if they were disabled in pursuing their claims. In the Shriram Gas Leak case,[10] Oleum gas leaked from a unit of the Shriram Food and Fertilizer Industries and affected the residents of Delhi. The Supreme Court in this case laid down the principle of absolute liability. The court declared the liability to be absolute and refused to limit itself to the decision in Rylands v. Flechers[11] that evolved a strict liability.

the Supreme Court In India held that the Precautionary Principle is the part of the environmental Law of the country. In the Vellore Citizens' Welfare Forum v. Union of India,[12] the court held that the Precautionary Principle in the context of the municipal law means:
