Abstract

After Second World War countries across the world have formed many regional economic blocks as instrumentsfor consolidating relations to preserve and promote their common political, strategic and economic interests. The successful experience of regional groupings like European Economic Union, ASEAN and othersmotivated countries to explore new landscapeofsuccess through regrouping into economic blocks. SAARC and BIMSTEC are also created to achieve better standards of living for the masses of South Asia through economic integration. BIMSTEC was formed on 6th June 1997 to integrate the "West Look Policy" of ASEAN and "Look East Policy" of India. It is in this context that the present study attempts to examine theperformance and prospects of India's trade relations with BIMSTEC countries by applying the Revealed Comparative Advantage model.The results report that India's CAGR of exports and imports is better with BIMSTEC countries as compared to the CAGRof her global exports and imports. India has astrong (RCA>1) in 19 commodities out of top 25 commodities considered for analysis during the year 2019. The trend analysis of exports, imports and trade and its projection for next ten years indicates that India has a sustainable trade potential and prospects with BIMSTEC countries, butitrequires structural revival and preferential treatment.

Key Words: Exports, Imports, Trade Balance, BIMSTEC, Revealed Comparative Advantage.

1. Introduction: Regional economic groupings are the associationsof countries situated in a particular region which arrives at a common understanding and platform through agreement with specific rules and regulations for propelling economic prosperity among member nations. For this purpose, they aim at reducing or eliminating the tariff and non-tariff trade barriersto trade among the participating nations to facilitate the free movement of goods, services, labor and capital. Thesuccessful experience of European Economic Union and ASEAN is testimony to the contribution of regional cooperation in the economic growth of the countries and world economy as well. In the context of South Asia, the steps initiated by the political elites are reflected in the form of SAAARC and BIMSTEC. SAARC as a regional economic association was established in December 1985 with seven members i.e. India, Nepal, Bhutan, Bangladesh, Pakistan, Sri-Lanka and Maldives for promoting peace, stability, and progress in the region. **(Bhattacharjee, 2018).**Consequently, to integrate the "West Look Policy" of Thailand and ASEAN and "East Look Policy" of India and South Asia, BIMSTEC as a regional economic association was formed on 6 June 1997 through the Bangkok Declaration and this was initially formed with four Member States Bangladesh, India, Sri Lanka and Thailand and named as 'BIST-EC'. Following the inclusion of Myanmar on 22 December 1997 the bloc was renamed as 'BIMST-EC', while with the induction of Nepal and Bhutan in February 2004, the name of the trading bloc was changed to 'Bay of Bengal Initiative for Multi-Sectoral, Technical and Economic Cooperation' (BIMSTEC), with its permanent secretariat established in Dhaka. **(Kabir & Salim, 2010)** BIMSTEC attains the fresh look due to two reasons: one, the stagnation in the functioning of SAARC due to chronic Indo-Pak conflict and second, when in 2019 Prime Minister Narender Modi invited BIMSTEC heads of the states to his 2nd term swearing-inceremony, which highlights the prominence that his governmentis giving to BIMSTEC countries.**(The Hindu, 2019).**

BIMSTEC can also be termed as 5 SAARC + 2 ASEAN nation's economic grouping which is important for its strategic location and potent market. The BIMSTEC region is home to around 1.6 billion people which constitute around 22 percent of the global population with a combined gross domestic product of US$ 2.8 trillion **(Rahman & Kim, 2016).** BIMSTEC Chairmanship rotates among member countries alphabetically. BIMSTEC is one of the least integrated regions in the world although the member countries are contiguous to one another, except for Sri Lanka, which is an island state. BIMSTEC's primary focus is on economic and technical cooperation among the membercountries to

Gravity Model Analysis of India's Trade Linkages with ASEAN Countries during Pre and Post AIFTA Regime

Raj Kumar Singh, Jyoti Kumari & Ajay Kumar

Abstract

India has long and intimate history of socio-cultural and economic association with Southeast Asian nations. The present study revisits India's economic engagement with ASEAN nations during pre and post ASEAN-India Free Trade Agreement using Gravity Model Theory. (Tinbergen 1962) The study is distinct in the sense that it specifically examines the application of Eli Filip HeckscherBertil Ohlin (1933) and Staffan Linder (1961) theories by employing GDP per capita differential. The study reports that India and ASEAN are emerging economies with impressive share in global DGP, reflecting vast potential for economic co-operation. India's growth of trade, exports, and import is higher in Pre-AIFTA period; however, the overall growth rate of trade, exports, and imports with ASEAN countries is also impressive vis a vis India's global growth rate of trade. The empirical estimates appear consistent with the fundamentals of gravity model as the study reports positive coefficients for economy size and negative coefficient for distance. Trade liberalisation policies and foreign direct investment are unsupportive for boosting India's external sector growth, thus, suggesting rethinking of trade policy and FDI policy. The positive coefficient of per capita GDP differential indicates that trade between India and ASEAN countries happens due to difference in level of economic development based on comparative advantages, proving that trade relations between India and ASEAN are determined by Heckscher-Ohlin hypothesis.

Key Words: Trade, AIFTA Regime, Gravity Model Theory, H-O Theory, Linder's theory.

Subject: **SUBMISSION OF MANUSCRIPT IN THE AREA OF _____.**

(e.g. Finance/Mkt./HRM/General Mgt./Engineering/Economics/Computer/IT/ Education/Psychology/Law/Math/other, please specify)

DEAR SIR/MADAM

Please find my submission of manuscript titled '_____' for likely publication in one of your journals.

I hereby affirm that the contents of this manuscript are original. Furthermore, it has neither been published anywhere in any language fully or partly, nor it is under review for publication elsewhere.

I affirm that all the co-authors of this manuscript have seen the submitted version of the manuscript and have agreed to inclusion of their names as co-authors.

Also, if my/our manuscript is accepted, I agree to comply with the formalities as given on the website of the journal. The Journal has discretion to publish our contribution in any of its journals.

NAME OF CORRESPONDING AUTHOR	:
Designation/Post*	:
Institution/College/University with full address & Pin Code	:
Residential address with Pin Code	:
Mobile Number (s) with country ISD code	:
Is WhatsApp or Viber active on your above noted Mobile Number (Yes/No)	:
Landline Number (s) with country ISD code	:
E-mail Address	:
Alternate E-mail Address	:
Nationality	:

* i.e. Alumnus (Male Alumni), Alumna (Female Alumni), Student, Research Scholar (M. Phil), Research Scholar (Ph. D.), JRF, Research Assistant, Assistant Lecturer, Lecturer, Senior Lecturer, Junior Assistant Professor, Assistant Professor, Senior Assistant Professor, Co-ordinator, Reader, Associate Professor, Professor, Head, Vice-Principal, Dy. Director, Principal, Director, Dean, President, Vice Chancellor, Industry Designation **etc**. ***The qualification of author is not acceptable for the purpose***.

NOTES:

a) The whole manuscript has to be in ***ONE MS WORD FILE*** only, which will start from the covering letter, inside the manuscript. ***pdf. version is liable to be rejected without any consideration***.

b) The sender is required to mention the following in the **SUBJECT COLUMN of the mail**:

New Manuscript for Review in the area of (e.g. Finance/Marketing/HRM/General Mgt./Engineering/Economics/Computer/IT/ Education/Psychology/Law/Math/other, please specify)

c) There is no need to give any text in the body of the mail, except the cases where the author wishes to give any **specific message** w.r.t. to the manuscript.

d) The total size of the file containing the manuscript is expected to be below **1000 KB**.

e) Only the **Abstract will not be considered for review** and the author is required to submit the **complete manuscript** in the first instance.

f) ***The journal gives acknowledgement w.r.t. the receipt of every email within twenty-four hours*** and in case of non-receipt of acknowledgment from the journal, w.r.t. the submission of the manuscript, within two days of its submission, the corresponding author is required to demand for the same by sending a separate mail to the journal.

g) The author (s) name or details should not appear anywhere on the body of the manuscript, except on the covering letter and the cover page of the manuscript, in the manner as mentioned in the guidelines.

2. **MANUSCRIPT TITLE: The title of the paper should be typed in **bold letters**, **centered** and **fully capitalised**.

3. **AUTHOR NAME (S) & AFFILIATIONS: Author (s) **name**, **designation**, **affiliation** (s), **address**, **mobile/landline number** (s), and **email/alternate email address** should be given underneath the title.

4. **ACKNOWLEDGMENTS: Acknowledgements can be given to reviewers, guides, funding institutions, etc., if any.

5. **ABSTRACT: Abstract should be in **fully Italic printing**, ranging between **150** to **300 words**. The abstract must be informative and elucidating the background, aims, methods, results & conclusion in a **SINGLE PARA**. ***Abbreviations must be mentioned in full***.

6. **KEYWORDS: Abstract must be followed by a list of keywords, subject to the maximum of **five**. These should be arranged in alphabetic order separated by commas and full stop at the end. All words of the keywords, including the first one should be in small letters, except special words e.g. name of the Countries, abbreviations etc.

7. **JEL CODE: Provide the appropriate Journal of Economic Literature Classification System code (s). JEL codes are available at www.aeaweb.org/econlit/jelCodes.php. However, mentioning of JEL Code is not mandatory.

8. **MANUSCRIPT: Manuscript must be in ***BRITISH ENGLISH*** prepared on a standard A4 size ***PORTRAIT SETTING PAPER***. *It should be free from any errors i.e. **grammatical, spelling** or **punctuation.** It must be thoroughly edited at your end*.

9. **HEADINGS: All the headings must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.

10. **SUB-HEADINGS: All the sub-headings must be bold-faced, aligned left and fully capitalised.

11. **MAIN TEXT**:

THE MAIN TEXT SHOULD FOLLOW THE FOLLOWING SEQUENCE:

INTRODUCTION

REVIEW OF LITERATURE

NEED/IMPORTANCE OF THE STUDY

STATEMENT OF THE PROBLEM

OBJECTIVES

HYPOTHESIS (ES)

RESEARCH METHODOLOGY

RESULTS & DISCUSSION

FINDINGS

RECOMMENDATIONS/SUGGESTIONS

CONCLUSIONS

LIMITATIONS

SCOPE FOR FURTHER RESEARCH

REFERENCES

APPENDIX/ANNEXURE

The manuscript should preferably be in ***2000 to 5000 WORDS***, But the limits can vary depending on the nature of the manuscript.

12. **FIGURES & TABLES:** These should be simple, crystal **CLEAR**, **centered**, **separately numbered** & self-explained, and the **titles must be above the table/figure**. **Sources of data should be mentioned below the table/figure**. *It should be ensured that the tables/figures are referred to from the main text*.

13. **EQUATIONS/FORMULAE:** These should be consecutively numbered in parenthesis, left aligned with equation/formulae number placed at the right. The equation editor provided with standard versions of Microsoft Word may be utilised. If any other equation editor is utilised, author must confirm that these equations may be viewed and edited in versions of Microsoft Office that does not have the editor.

14. **ACRONYMS:** These should not be used in the abstract. The use of acronyms is elsewhere is acceptable. Acronyms should be defined on its first use in each section e.g. Reserve Bank of India (RBI). Acronyms should be redefined on first use in subsequent sections.

15. **REFERENCES:** The list of all references should be alphabetically arranged. ***The author (s) should mention only the actually utilised references in the preparation of manuscript*** and they may follow Harvard Style of Referencing. **Also check to ensure that everything that you are including in the reference section is duly cited in the paper**. The author (s) are supposed to follow the references as per the following:

- All works cited in the text (including sources for tables and figures) should be listed alphabetically.
- Use (**ed.**) for one editor, and (**ed.s)** for multiple editors.
- When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc., in chronologically ascending order.
- Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
- The title of books and journals should be in italic printing. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
- For titles in a language other than English, provide an English translation in parenthesis.
- ***Headers, footers, endnotes*** *and* ***footnotes*** *should* ***not be used*** *in the document.* However, **you can mention short notes to elucidate some specific point**, which may be placed in number orders before the references.

PLEASE USE THE FOLLOWING FOR STYLE AND PUNCTUATION IN REFERENCES:

ABSTRACT

Entrepreneur is the key feature of entrepreneurship and economic growth. Entrepreneurship is a recent incident and in the entrepreneurial process entrepreneurs have to face various problems. In this paper attempts have been made to study the demographic profile of entrepreneurs and analyze the major problems faced by entrepreneurs. For this purpose, primary as well as secondary data has been used. The secondary data have been collected from journals, internet, magazines, newspaper annual reports etc. For primary data a sample of 400 entrepreneurs was taken from high hills zone of Himachal Pradesh. Simple random sampling technique was used to conduct this research paper. Finally, the study reveals that relating to land, availability of raw materials, availability of labour skilled and unskilled, relating to building and machinery equipment, availability of transport facility, marketing and advertisement, registration, industrial licensing and long term finance, high cost of doing business were the major problems faced by entrepreneurs in the high hills zone. Government need to provide financial as well as others facilities like transport, communication and organize awareness programmes regarding different promotional activities and credit facilities for further expansion.

KEYWORDS

enterprises, entrepreneurial process, problems.

1.1 INTRODUCTION

Entrepreneurship in India starts in the era of Indus Valley Civilization. Its economy depended majorly on trade, which was facilitated by advanced transportation technology. During the copper age, the Indus Valley Civilization area showed ceramic similarities with southern Turkmenistan and northern Iran which suggested considerable mobility and trade. During the Early Harappa period (about 3200–2600 BCE), similarities in pottery, seals, figurines, ornaments, etc. document intensive caravan trade with Central Asia and the Iranian country. There was an extensive navigation trade network operating between the Harappa and Mesopotamian civilizations as early as the middle Harappa Phase, with much commerce being handled by modern Bahrain and Failaka located in the Gulf. Such long-distance sea trade became possible with the innovative development of plank-built watercraft, equipped with a single central mast supporting a sail of woven rushes or cloth. History elucidates that Aside from the subsistence of agriculture and hunting, the Indus people supported themselves by trading goods. Through trade, the Indus Civilization expanded its culture, coming into regular contacts with faraway lands.

The story of the Indian entrepreneurship is fills with paradoxes. Entrepreneurship as the present era understands was definitely not forthcoming from this social segment. Political & economic factors had an extensive effect on the entrepreneurial spirit. There were many issues that impact negatively on Indian entrepreneurship like Lack of political unity and stability, absence of effective communication systems, existence of custom barriers and oppressive tax policies, prevalence of innumerable currency system until around the third decade of the 19th century. Indian Entrepreneurship ruled by the community system in the Historical past. Brahmans were learned men who had assisted the kshatriyas in the administration, vaishyas have performed trading and industrial productive activities and shudras engaged in an agricultural occupation. Also, the people were organized in a very simple type of economic and social system. In the way to implement this concept to modern entrepreneurship, it can compare with the villages are the organization and an entrepreneur is called as a craftsman. The independent India could claim to have created a conductive climate for spread of entrepreneurship. It is in this broad backdrop that the later evolution and growth of Indian entrepreneurship has to be located.

1.2 PROMOTION OF ENTREPRENEURSHIP

Government will continue to support first generation entrepreneur through training and will support their efforts. Large number of EDP trainers and motivators will be trained to significantly expand the Entrepreneurship Development Programmes (EDP). Industry Associations would also be encouraged to participate in this venture effectively. Women entrepreneurs will receive support through special training programmes.

The concept of entrepreneurial development involves equipping a person with the essential information and information used for enterprise building and polishing his entrepreneurial skills. In these days, entrepreneurship development programmes are treated as an important tool of industrialization, and provides employment to the people of state. Entrepreneurs shape economic future of nations by creating wealth and employment, offering products and services and generating taxes for government because of which entrepreneurship has closely been linked to economic growth of a country. Entrepreneurs convert ideas into economic opportunities through innovations which are considered to be major basis of competitiveness in an increasingly globalizing world economy. Therefore, most governments in the world struggle to expand supply of competent and globally cutthroat entrepreneurs in their respective countries.

2.1 REVIEW OF LITERATURE

Jagallnath Panda, (2005) focuses on small scale entrepreneurs who started their new ventures in Gujarat State in his study entitled Entrepreneurship and Economic Development'. An integral part of his development which have grown up to the stature of potential Indian Multinational like Cedilla, Torrent, Core, Ashima, Adani, Bakeri and the Reliance. Smaller entrepreneurs like Ajanta, Rasna and Syntex have their own success stories. The purpose of this study is to analyze the different facets of entrepreneur's development and its economic consequences in the State of Gujarat.

Venkatapathy, R. (2006) using purposive sampling technique studied 75 first generation and 58 second generation entrepreneurs. The results of the investigations suggested that first generation entrepreneurs perceive the father as a loving person and parents as encouraging and overprotective. They are influential by the father attribute greater importance to friendship, initiative venture to promote self employment, desire to be a model to others. They consider social awareness

and involvement as essentials for a business venture which are the second generation entrepreneurs perceive the father as being dominant, are not influenced by any one, attribute least importance to friendship adopt a venture to avoid unemployment consider social awareness and involvement as not essential for a business venture.

Ansari & Ahmed (2007) analyzed the relationship between risk taking behaviour and age among entrepreneurs. The late entry of entrepreneurs into business having a higher level of education could be on account of two reasons. First on account of the time they were required to spend on education and secondly on account of their failure to get another job which maintained parity with their higher educational qualifications.

Bholanath Dutta, (2009) in his book, Entrepreneurship Management: Texts & Cases, deals in detail on the factors influencing entrepreneurship, viz., education, legality, infrastructure, finance, procedures, IT and communication, rapid changes, size of the firm, R & D and technology, stakeholders and globalization. The author has elucidated the characteristics of a successful entrepreneur at length. According to him, there are many critical factors contributing success such as skills, innovative mind, providing completeness to the factors of production, decision making, creative personality, plan making, dynamic leadership, creator of wealth, self-confidence and ambitiousness, risk bearing, and adventurous mind.

Desai, (2009) in his published book "Environment and Entrepreneur" undertake a review of entrepreneur, entrepreneurship and environmental effects. As per his opinion the concept of entrepreneurship has assumed prime importance both in research and in action for accelerating economic growth in developing countries. He examined entrepreneur and entrepreneurship the person and the process are the critical factors for the growth of organizations. The study brings with the person and the process, conceptual frame work and geographical origins. Concept of entrepreneurial functions and gap in economic theory together with explanations of entrepreneurial talents as a model for environments.

Mohamed, Z., et al. in (2011) examines the effectiveness of informal entrepreneurship extension education among Malaysian farmers especially the members of Farmers' Organization Authority. They found that informal entrepreneurship education is not able to provide the entrepreneurship skills acquisition as expected. The study shows that the level of understanding on "what is entrepreneurship" is still low among the Farmers' Organization Authority (FOA) members. In this regard, efforts should be intensified to improve informal agri-entrepreneurial courses and training, and extension on developing entrepreneurial skill among the farmers.

Briggs Kristina, Henricson, (2013) conducted a study on entrepreneurship as a tool for economic development in Uganda. The main aim of the study is to contributing the knowledge around social entrepreneurship. The study highlighted that entrepreneurship is a key for economic growth is today an important part of national development strategies in both developed and developing countries. The study focuses on how entrepreneurs are supported through business incubators and discuss some implications of business incubators initiatives in developing countries. Further the study suggests that mobilization of entrepreneurship may be more fruitful than attempts to create it, and points that project initiation need awareness of the risk failing into ethnocentric perspective.

Legas Habtamu, (2015) conducted a study on "Challenges to Entrepreneurial Success in Sub-Saharan Africa: A Comparative Perspective". The objective of study was to explore and put in perspective the critical challenges entrepreneurs in Sub-Saharan Africa frequently face gaining ground to start a firm. The results show that cumbersome laws and regulations, corruption, poor infrastructure, lack of finance, lack of strong entrepreneurial training and small market came out as basic obstacles to entrepreneurial success.

3.1 OBJECTIVES OF THE PAPER

1. To study the demographic profile of entrepreneurs.
2. To analyze the major problems faced by entrepreneurs.

3.2 RESEARCH METHODOLOGY

The study was conducted in high hills zones of Himachal Pradesh. Random sampling technique was used for the selection of study area. A sample of 400 respondents was taken on the basis of standard that they should be running their enterprise separately and not in partnership. Enterprises taken up for the study were beauty parlors, handloom units, general stores and bag making units. Well-structured and pretested interview schedule was used for collecting primary data by survey method and secondary data was collected from magazines, newspapers, journals, periodicals, reports, text books and websites.

4.1 DATA ANALYSIS AND INTERPRETATION

This section presents data from the sampled respondents, comprising their Gender, Age, Educational qualification, Occupation, religion, caste and annual Income of the respondents in before business and the range of annul income after business. The Tables 4.1.1 to 4.1.11 contain the profile of the respondents.

Table 4.1.1. Gender wise Distribution of the Respondents

TABLE 4.1: GENDER WISE DISTRIBUTION OF THE RESPONDENTS

Sr. No.	Variables	Frequency	Percent
1.	Male	270	67.5
2.	Female	130	32.5
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

Table 4.1 Shows that the gender wise distribution of the sample respondents. From the total sample a majority group 67.5 per cent are male respondents and 32.5 per cent are female. This refers that majority of the respondents are belonging to male group.

Table 4.1.2. Marital Status of the Respondents

The table 4.2 explains about the marital status of the respondents.

TABLE 4.2: MARITAL STATUS OF THE RESPONDENTS

Sr. No.	Variables	Frequency	Percent
1.	Married	300	75.0
2.	Unmarried	100	25.0
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

Out of the total sample highest group 75.0 per cent were married and the remaining 25.0 per cent are unmarried. This shows that majority of the entrepreneurs were married, 75.0 per cent of the entrepreneurs started their enterprises after their marriage to decrease their family burden with their Family members.

Table 4.1.3. Age of the Respondents

TABLE 4.3 AGE OF THE RESPONDENTS

Sr. No.	Variables	Frequency	Percent
1.	Below 30	109	27.25
2.	30 to 40	190	47.5
3.	40 to 50	90	22.5
4.	50& above	11	2.75
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

The table 4.3 shows that the age wise distribution of sample respondents. Out of the total sample 47.5 per cent were between 30-40 years age group, 27.25 per cent are below 30 years age group, 22.5 per cent are between 40-50 years and 2.75 per cent are 50& above years age group. It may be concluded that majority of the entrepreneurs are between 30-40 years age group.

Table 4.1.4. Education wise distribution of the Respondents

TABLE 4.4: EDUCATION WISE DISTRIBUTION OF THE RESPONDENTS

Sr. No.	Variables	Frequency	Percent
1.	Illiterate	96	24.0
2.	Middle School	161	40.25
3.	High School	66	16.5
4.	HSC Completed	25	6.25
5.	Graduation & above	29	7.25
6.	Any Other	23	5.75
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

The table 4.4 depicts that the educational qualification of the sample respondents. From the total sample a major group 40.25 per cent of middle school followed by 24.0 per cent with illiterate, 16.5 per cent with high school, 7.25 per cent with graduation & above, 6.25 per cent with HSC Completed and the remaining 5.75 per cent with any other. Finally, the table shows that majority of the entrepreneurs are middle School passed.

Table 4.1.5. Religion wise distribution of the Respondents

The distribution of sample respondents by their religion-wise response presented in the above table.

TABLE 4.5: RELIGION WISE DISTRIBUTION OF THE RESPONDENTS

Sr. No.	Variables	Frequency	Percent
1.	Hindu	286	71.5
2.	Muslim	56	14.0
3.	Sikh	41	10.25
4.	Christian	17	4.25
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

Table 4.5 explains the religion wise distribution of respondents. It is observed from the table that the major group 71.5 per cent from the Hindu religion, 14.0 per cent is Muslim religion 10.25 per cent are Sikh religion and 4.25 per cent are Christian religion. It may be concluding that majority of the respondents are from the Hindu religion.

Table 4.1.6. Caste wise distribution of the Respondents

TABLE 4.6: CASTE WISE DISTRIBUTION OF THE RESPONDENTS

Sr. No.	Variables	Frequency	Percent
1.	SC	166	41.5
2.	ST	115	28.75
3.	OBC	62	15.5
4.	General	57	14.25
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

The distribution of sample respondents by their caste-wise response presented in the table number 4.6. The major groups 41.5 per cent from Schedule Caste, 28.75 per cent are Schedule tribes 15.5 per cent are OBC and 14.25 per cent are general categories. Finally, the table shows that majority of the respondents are from the Schedule Caste.

Table 4.1.7. Residential Status of the Respondents

TABLE 4.7: RESIDENTIAL STATUS OF THE RESPONDENTS

Sr. No.	Variables	Frequency	Percent
1.	Rural	227	56.75
2.	Urban	173	43.25
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

Table 4.7reveals that out of the total sample 56.8 per cent respondents are said that they belong to the rural area and 43.25 per cent are belong to the urban area. This shows that majority of the respondents, 56.75 per cent are belonging to the rural area of Himachal Pradesh.

Table 4.1.8. Type of the Family

TABLE 4.8: TYPE OF THE RESPONDENTS FAMILY

Sr. No.	Variables	Frequency	Percent
1.	Nuclear Family	253	63.25
2.	Joint Family	147	36.75
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

It is observed from the table 4.8 that out of the total sample 63.25 per cent respondents are said that they belong to the nuclear family and 36.75 per cent are belong to the joint family. Further the table shows that majority of the respondents, 63.25 per cent are belonging to the nuclear family.

Table 4.1.9. Employment Status of respondents

TABLE 4.9 EMPLOYMENT STATUS OF THE RESPONDENTS

Sr. No.	Variables	Frequency	Percent
1.	Self Employed	82	20.5
2.	Full time employee	28	7.0
3.	Unemployed	114	28.5
4.	Part time employee	121	30.25
5.	Any other	55	13.75
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

The employment status of the respondents is presented in the table 4.9. From the total respondents' majority of them 30.25 per cent are in Part time employee followed by 28.5 per cent unemployed and 20.5 per cent were self employed, and from the remaining 13.75 per cent involved from any other business and 7.0 per cent are full time employees. The results show that the majority of the entrepreneurs are 30.25were part time employees.

Table 4.1.10. Annual Income of the respondents before business

TABLE 4.10: INCOME WISE DISTRIBUTION OF THE RESPONDENTS BEFORE BUSINESS

Sr. No.	Variables	Frequency	Percent
1.	below 1 lakh	219	54.75
2.	100000 to 200000	140	35.0
3.	200,000-300,000	27	6.75
4.	300000 & above	14	3.5
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

Table 4.10 examined that the income wise distribution of respondents before business and the range of annul income at their entry time. From the total sample major groups 54.75 per cent were between less than 1 lakh, followed by 35.0 per cent 1 lakh-2 lakh, 6.75 per cent were 2 - 3 lakhs, and the remaining 3.5 per cent were 3 lakhs and above. It can be observed that majority of the respondents have less than 1 lakh, per annum at the time of their entry.

Table 4.1.11. Annual Income of the respondents after business

TABLE 4.11: INCOME WISE DISTRIBUTION OF THE RESPONDENTS AFTER BUSINESS

Sr. No.	Variables	Frequency	Percent
1.	below 1 lakh	142	35.75
2.	100000 to 200000	158	39.5
3.	200,000-300,000	71	17.75
4.	300000 & above	29	7.0
Total		**400**	**100.0**

Source: Field Survey

Note: Figures in the parentheses are percentages to the row totals.

Table 4.11 depicts that the income wise distribution of respondents after business and the range of annul income after entry into business. From the table it is observed that the majority of respondents were 39.5 per cent fit in between 1 lakh -2 lakh, followed by 35.75 per cent less than 1 lakh, 17.75 per cent were 2 - 3 lakhs, and the remaining 7.0 per cent were 3 lakhs and above. It can be observed that majority of the respondents have 1 lakh-2 lakh, per annum after entry into business.

TABLE 4.12: PROBLEMS FACED BY RESPONDENTS IN CONSTRUCT THE ENTERPRISES

Sr. No.	S.A.	A.	N.	D.	S.D	Total	Mean	S. D.	Skw	Kurto-sis	Chi-square	P-value	D.F
1	43(10.75%)	57 (14.25%)	122(30.5%)	131 (32.75%)	47 (11.75%)	400 (100.0)	2.80	1.15	.368	-.615	91.90	.000	4
2	103 (25.75%)	32 (8.0%)	58 (14.5%)	102 (25.5%)	105 (26.25%)	400 (100.0)	2.81	1.54	.304	-1.417	55.32	.000	4
3	89 (22.25%)	29(7.25%)	58 (14.5%)	105 (26.25%)	119 (29.75%)	400 (100.0)	2.66	1.51	.459	-1.258	55.33	.000	4
4	121 (30.25%)	75 (18.75%)	48 (12.0%)	102 (25.5%)	54 (13.5%)	400 (100.0)	3.26	1.45	-.146	-1.445	48.62	.000	4

Note: Figures in the parentheses are percentages to the row totals.

Notes:

1. Relating to land
2. Availability of raw materials
3. Availability of labour skilled and unskilled
4. Relating to building and machinery equipment
5. Availability of Transport facility
6. Availability of Technical facility
7. Marketing and advertisement
8. Registration, industrial licensing and long term finance
9. New opportunities in respect of Marketing and production
10. Lack of knowledge of science and technology
11. High cost of doing business

4.12 ANALYSIS OF PROBLEMS FACED BY RESPONDENTS IN CONSTRUCT THE ENTERPRISES

RELATING TO LAND

It is obvious from the table that the respondents are disagreed with relating to land. The mean value is 2.80. This is lower than the average mean score. The standard deviation is 1.15. The positive value of skewness.368 shows the responses are towards lower side of mean value. The value of kurtosis -.615 shows that the distribution of opinion is platy kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that the respondents faced problems in construct the enterprises.

AVAILABILITY OF RAW MATERIALS

It is evident from the table that the majority of the respondents are disagreed with availability of raw materials. The mean value is 2.81. This is lower than the average mean score. The calculated value of standard deviation is 1.54. The positive value of skewness.364 shows the responses are towards lower side of mean value. The value of kurtosis -1.417 shows that the distribution of opinion is platy kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that the availability of raw material is not adequate.

AVAILABILITY OF LABOUR SKILLED AND UNSKILLED

It is observed from the table that majority of the respondents are strongly disagreed with availability of labour skilled and unskilled. The mean value is 2.66. This is lower than the average mean score. The calculated value of standard deviation is 1.51. The positive value of skewness.459 shows the responses are towards lower side of mean value. The value of kurtosis -1.258 shows that the distribution of opinion is platy kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that the availability of labour skilled and unskilled are not sufficient for construct enterprises.

RELATING TO BUILDING AND MACHINERY EQUIPMENT

It is observed from the table that mean value is noted more than the average score i.e. 3 at five point scale. The standard deviation is 1.45. The negative value of skewness -.146 depicts that the responses are towards higher side of mean value. The value of kurtosis -1.145 shows that the distribution of opinion is platy kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that the respondents are strongly agree with relating to building and machinery equipment.

AVAILABILITY OF TRANSPORT FACILITY

It is apparent from the table that respondents are agreed with availability of transport facility. The mean value is noted more than the average score i.e. 3 at five point scale. The standard deviation is 1.23. The negative value of skewness -.530 depicts that the responses are towards higher side of mean value. The value of kurtosis -.783 shows that the distribution of opinion is platy kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that the availability of transport facility is suitable for respondents.

AVAILABILITY OF TECHNICAL FACILITY

It is clear from the table that availability of technical facility is quite better. The mean value is noted more than the average score i.e. 3 at five point scale. The standard deviation is 1.00. The negative value of skewness -.241 depicts that the responses are towards higher side of mean value. The value of kurtosis -.602 shows that the distribution of opinion is platy kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that the respondents are agree with availability of technical facility.

MARKETING AND ADVERTISEMENT

From the table it is estimated that majority of the respondents are agree with marketing and advertisement. The mean value is noted more than the average score i.e. 3 at five point scale. The calculated value of standard deviation is 1.04. The negative value of skewness -.266 shows the responses are towards higher side of mean value. The value of kurtosis -.604 shows that the distribution of opinion is platy kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that the marketing and advertisement are suitable for construct enterprises.

REGISTRATION, INDUSTRIAL LICENSING AND LONG TERM FINANCE

It is revealed from the table that majority of the respondents are agree with registration, industrial licensing and long term finance. The mean value is noted more than the average score i.e. 3 at five point scale. The calculated value of standard deviation is.972. The negative value of skewness -.800 shows the responses are towards higher side of mean value. The value of kurtosis.714 shows that the distribution of opinion is lepto kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that respondents are agree with registration, industrial licensing and long term finance for enterprises.

NEW OPPORTUNITIES IN RESPECT OF MARKETING AND PRODUCTION

From the table it is estimated that majority of the respondents are agree with new opportunities in respect of marketing and production. The mean value is noted more than the average score i.e. 3 at five point scale. The calculated value of standard deviation is 1.04. The negative value of skewness.624 shows the responses are towards higher side of mean value. The value of kurtosis -.336 shows that the distribution of opinion is platy kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that the majority of the respondents are agree with new opportunities in respect of marketing and production for enterprises.

LACK OF KNOWLEDGE OF SCIENCE AND TECHNOLOGY

It is revealed from the table that the respondents are lack of knowledge of science and technology. The mean value is 2.89. This is lower than the average mean score. The calculated value of standard deviation is.936. The positive value of skewness.152 shows the responses are towards lower side of mean value. The value of kurtosis -.037 shows that the distribution of opinion is platy kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that the respondents are not fully aware about science and technology.

HIGH COST OF DOING BUSINESS

It is clear from the table that the respondents are agree with high cost of doing business for enterprises. The mean value is noted more than the average score i.e. 3 at five point scale. The calculated value of standard deviation is.120. The negative value of skewness -.766 shows the responses are towards higher side of mean value. The value of kurtosis -.236 shows that the distribution of opinion is platy kurtic. On the application of Chi square test, calculated value has been found significant at 5 per cent level of significance, therefore a null hypothesis rejects and alternative hypotheses accepts. It can be concluded that the respondents are agree with high cost of doing business for construct enterprises.

Table 4.13 Reliability Statistics

TABLE NO. 4.13

Cronbach's Alpha	Cronbach's Alpha Based on Standardized Items	Number of Items
0.685	0.691	11

The results of reliability statistics have been presented in table 4.2. The reliability of the construct is determined by computing the Cronbach's alpha. Cronbach's coefficient alpha value of 0.6 is considered acceptable for the exploratory purposes, 0.7 is considered adequate and 0.8 good for confirmatory purposes. The reliability of the construct is determined by computing the Cronbach's alpha.

Further, table reveals that the Cronbach's alpha value based on standardized items obtained is 0.691 which shows considered acceptable reliability of the scale. The overall reliability and validity of the scale as depicted by Cronbach's alpha is nearest 0.7, therefore it is valid to use this scale.

MAJOR FINDINGS

- The majority of the respondents are belonging to male group.
- The majority of the respondents are belonging to male group.
- It may be concluded that majority of the entrepreneurs are between 30-40 years age group.
- It may be concluding that majority of the respondents are from the Hindu religion.
- The majority of the respondents are from the Schedule Caste.
- The majority of the entrepreneurs were part time employees.
- It can be observed that majority of the respondents have less than 1 lakh, per annum at the time of their entry.
- It can be observed that majority of the respondents have 1 lakh-2 lakh, per annum after entry into business.

CONCLUSION

Entrepreneurship development programmes may be defined as a programme designed to help an individual in strengthening his entrepreneurial motive and in acquiring skills and capabilities necessary for playing his entrepreneurial role effectively. Entrepreneurs faced following problems i.e. financial and marketing production, work place facility, health problems, availability of long-term finance, regular and frequent need of working capital, poor location of shop, lack of transport facility, non-availability of raw material. The government needs to take necessary action and organize awareness programmes on Entrepreneurship development and training programmes. Guidelines framed as a solution to these problems can help entrepreneurs to deal with these problems effectively.

REQUEST FOR FEEDBACK

Dear Readers

At the very outset, International Journal of Research in Computer Application & Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue, as well as on the journal as a whole, on our e-mail **infoijrcm@gmail.com** for further improvements in the interest of research.

If you have any queries, please feel free to contact us on our e-mail **infoijrcm@gmail.com**.

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward to an appropriate consideration.

With sincere regards

Thanking you profoundly

Academically yours

Sd/-
Co-ordinator

ABOUT THE JOURNAL

In this age of Commerce, Economics, Computer, I.T. & Management and cut throat competition, a group of intellectuals felt the need to have some platform, where young and budding managers and academicians could express their views and discuss the problems among their peers. This journal was conceived with this noble intention in view. This journal has been introduced to give an opportunity for expressing refined and innovative ideas in this field. It is our humble endeavour to provide a springboard to the upcoming specialists and give a chance to know about the latest in the sphere of research and knowledge. We have taken a small step and we hope that with the active co-operation of like-minded scholars, we shall be able to serve the society with our humble efforts.

Assessment and Analysis of Financial Inclusion for MNREGS in Himachal Pradesh: A Study of Distt. Chamba
International Res Jour Managt Socio Human
District Chamba is one among the backward districts of Himachal Pradesh. The present study covered whole of the area of Chamba district in Himachal Pradesh. It studied all the aspects of financial inclusion in this particular district with population residing on hilly and tough terrines. Largely, the study is based on the observation through direct interviews with stakeholders ranging from district/tehsil/block level Govt. Officials, Bank officials, office bearers of Panchayati Raj Institutions, Technical hands and the labourers i.e. beneficiaries working under MNREGS. Study was based on primary data and it was collected through a well structured schedule of questions. Study shows that to improve the financial inclusion position of the district, the banking system needs to be improved more.

Livestock Economy of Himachal Pradesh Growth Patterns, Ecological Implications and State Policy

Virender Kumar

Livestock in hills forms an integral part of the age old mixed crop-livestock farming system and it assumes further significance as the livelihood options are limited in these areas. Though the livestock population seems to have stabilized during the past three decades or so in Himachal Pradesh, its composition has undergone noticeable changes. These changes have implications not only from the view point of increased demand for the livestock products but also from the viewpoint of such issues as draught power availability, ecological pressure, etc. Furthermore, the role of the state in the livestock development has not been studied from a broader policy perspective. With this background in mind, the present article examined (a) various spatial and temporal changes in…

ROLE OF INFRASTRUCTURE IN ECONOMIC DEVELOPMENT OF BIHAR

2019 •International Res Jour Managt Socio Human

The level and quality of infrastructure plays dominant role in influencing the pace of direction of economic development and social change. It has been observed that variation in the level of development and social change. It has been observed that variation in the level of development of different countries and different regions of the same country does not occur only due to resource constraint but to a great extent due to variation in the level and quality of infrastructure. It is considered as foundation on which activities of the different sectors of the economy thrive. The low level and inferior quality of infrastructure is the root cause of economic and social stagnation and vicious circle of poverty in underdeveloped countries.

No Investment No Economic Development: China Can We Can Not

2021 •International Res Jour Managt Socio Human

Nobody is assured about when the normal economic condition would resume in the countries affected by Covid-19 pandemic. It is quite natural that the financial condition of these countries will improve gradually after the pandemic is over. But it should be kept in mind that Indian economy has been gasping not only due to pandemic but also due to other reasons that happened much more before the Covid-19 pandemic began. It is right that India's jeopardy in both two phenomena viz. per capita income and the rate of growth of national income is quite prominent. In this context comparison of Indian economy with that of Chinese economy can substantiate the matter in a better way. Making comparison between the two economies is not unfair because in many cases our experts draw the context of China. Some discussion regarding the overall investment rate of the two countries over the last two decades but up to the

time when the world got affected by Covid19 pandemic is very much necessary for only one reason that the rate of investment determines the rate of growth of national income. And where there is no significant change in the rate of growth of population year after year, rate of growth of national income confirms the rate of per capita income. Over the last two decades, rate of investment of India is less by 8 to 10 percent-point than the investment in China. Unless the rate of investment of India goes up to the proximity of investment of China, the per-capita income, and standard of living of general people of this country would never be improved. India's progress in service sector is remarkable and India is now one of the world leaders in this sector. But the share of industry in GDP has been falling since 2010. …

PUBLIC SECTOR INVESTMENT OF HIMACHAL PRADESH AND CONTRIBUTION OF TRIBAL AREAS IN STATE GROSS DOMESTIC PRODUCT

[1]Dr. Devinder Sharma[2]Manoj Kumar

Abstract

The purpose of this paper is to study public sector investment contribution of tribal areas of Himachal Pradesh in the gross domestic product of the State. The data has been taken from the secondary sources and analyzed for contribution and growth in the state GDP. The analysis shows a moderate contribution of tribal districts in the gross domestic product of the State.

Introduction

Himachal now is one of the fast growing hill states of India in terms of its development in all sectors affecting the socio- economic structure of the State. The economy of the State is in the phase of huge changes. It has already shed off the elements of backwardness. It has also acquired characteristics of developed economies. The natural and human resources of the State are the foundations of its economic development. The State is located in the Himalayan range due to which, life is tough. Despite of this fact, tremendous growth of the State raises basic question whether development is indicative of all the regions including tribal areas with reference to the role and strength of Public Sector institutions meant for overall development of the State. The rationale behind the study is to know about Public Sector Investment and Per Capita investment in Public Sector followed by contribution of Tribal regions in State Gross Domestic Product and trend of Per Capita Income of people in the State including tribal areas.

Objectives of the Study:

1. To study total and Per Capita per annum Public Sector Investment in Himachal Pradesh.
2. To examine contribution of Kinnaur and Lahaul&Spiti in terms of State Gross Domestic Product.
3. To analyze the trend of Per Capita Income of tribal areas in Himachal Pradesh

Scope of The Study

The secondary data with effect from 2008-09 have been taken for analysis. The Public Sector Investment trends have been examined since 1st Five Year Plan i.e sinse 1951 and the two tribal districts (Kinnaur and Lahaul&Spiti) have been taken for research analysis.

Analysis and Interpretation

As per the objectives, data have been analyzed as under:

Investment in Public Sector:

The high level of literacy resulting to awareness and prosperity has been assumed to be the factor attracting for more investment. The public sector investment is considered as the safest mode of

investment. It leads to strengthen Public Sector organizations. The following table 1 shows investment behaviour in Public Sector in Himachal Pradesh since 1951. The Public Sector Investment which was just Rs. 5.27 crore during 1951-56, is Rs. 5700 crores in 2017-18. It is surprising that since 1992, there has been unexpected growth in Public Sector Investment from Rs. 393.81 crore in 1990- 91 & 1991-92 to Rs. 3480.72 crores during 1992-97 and then after, it

Comparative Study on Cropping Pattern in Kinnaur and Lahaul & Spiti

Dr. Heera Bhagti* Devinder Sharma**

*Govt College Sainj, Kullu **Himachal Pradesh University- Hill, Shimla-05.

Abstract: Agriculture is a highly dynamic process and the growth and development of agriculture in Himachal Pradesh has crossed several mile stones in different historical periods. The cropping pattern of Himachal Pradesh was based on the traditional system of the subsistence farming without any surplus. With the passage of time, the relationship between commercialisation and cropping pattern emerged complimentary. The State has different variations in the agro-climatic conditions. The agro-climatic variation supports different types of cropping patterns in the State. However, it was the availability or unavailability of marketing facilities which played a key role in determining the cropping structure in the State. The aim of the present paper is to compare the cropping pattern in Kinnaur and Lahaul & Spiti districts of Himachal Pradesh. The percentage method has been used to analyse the data. The study reveals that the commercial crops of both the study regions are main sources of income of the tribal areas. While analyzing the diversification, the Kinnaur district is witnessing a fruits belt as compared to district Lahaul & Spiti. The farmers are gradually diversifying to commercial crops for the sake of higher earnings.

Key words:- Cropping pattern, Land use, Agriculture.

I. Introduction

India is a country where great majority of population belongs to the rural areas having sufficiency of land holdings for agricultural and horticultural production. The production of the different regions varies widely and the mountainous regions like Kinnaur and Lahaul & Spiti of Himachal Pradesh are known for high level of fertility and good quality of production. In tribal areas, the return of crops is not contributing enough which raises a question to analyze the status of crop intensity and outturn of crops in such area. There is a huge disparity in terms of landscape, climate, irrigation, environmental hazards and preferences of people regarding option of occupation for economic development. All such factors varying production and fertility affect choices of people regarding selection of crops providing optimum outturn and convenient for the producer. The study has been necessitated to be conducted to know about the factors which are affecting choice of crop being produced in the areas under study. Moreover the study is also an endeavour to examine the dependency of tribal's as per their cropping pattern.

II. Literature review

Sharma (1987) in his research, **"The Economy of Himachal Pradesh"** has analyzed the changes in the cropping pattern during the period 1950-51 to 1982-83. The author reveals that there is hardly any change in the cropping pattern of Himachal Pradesh during the entire period.

Gender, Environment and Social Transformation: A Study of Selected Villages in Himachal Pradesh
Richa Minocha
In Himachal Pradesh, 85 per cent of the female work force is in agriculture and 60 per cent of the total work force in agriculture and allied activities is female. Women are a storehouse of traditional knowledge of agriculture (cropping patterns and rotation), conservation methods, cuisines and medicinal plants. The current development scenario is changing women's lives for the worse. The degradation of the environment and the neglect of rural household needs have a great impact on biomass-based subsistence societies, with the women bearing the brunt of such changes. This article discusses how land acquisition for industry and hydro power, the non-profitability of and loss of interest in agriculture and its consequent decline for all the above-mentioned reasons are affecting women. The article…

Western Himalayan Cold Deserts: Biodiversity, Eco-Restoration, Ecological Concerns and Securities
2015 •V P Tewari
This paper provides an insight into the intimate relationships between plant diversity, land degradation and ecological concerns in the cold deserts, which is a unique eco-system of Western Himalayas. Undoubtedly, addressing desertification, including land, soil, water and plant degradation, can certainly facilitate or ease the ecological concerns, but may not completely solve it in presence of the other issues, related causes and the effects. In view of the fact that very little or for that matter no site specific research work has been done in these fragile but ecologically significant areas, an attempt has been made to offer some suggestions, in the wider context, so as to evolve and develop ecologically and socio-economically sensitive and acceptable strategies for holistic development of the are…

SAUSSUREA COSTUS (FALC.) LIPSCH.: A PROMISING MEDICINAL CROP UNDER COLD DESERT AGROECOSYSTEM IN NORTH WESTERN HIMALAYA
Yashwant S Rawat

The present study was conducted in the cold desert region of the Lahaul valley in Himachal Pradesh. Saussurea costus (Falc.) Lipsch. an endangered medicinal herb, was studied in terms of its distribution pattern, cultivation practices and problems in cultivation. Seed germination showed better results in hot chamber in the month of May, June and July. Seeds sown in hot chamber at 30oC showed better germination (99±1.33%) in the month of June in comparison with cold chamber at 20oC. Energy and monetary efficiencies revealed output/ input ratio of 7.5 and 0.8, respectively. Introducing of seasonal cash crops like Pea, Potato and Hop, need for a mandatory permit for cultivation and export, longer cultivation cycle (3 years), lower and continuously fluctuating market rates were found to be the…

From Feudalism to State Developmentalism: Changing Economic Formation of Himachal Pradesh

Yogesh Snehi

Himachal Pradesh is often held out to be a model case of development, moving from the bottom of economic and human development indices to the top of the tables in the course of its post-independence existence. This article traces the nature of its pre-independence political economy and the social structures that sustained it and then describes the manner in which changes occurred in the post-independence phase. It marks out the successes as well as flags the continuing areas of concern.

Willow (Salix fragilis Linn.): A Multipurpose Tree Species under Pest Attack in the Cold Desert of Lahaul Valley, Northwestern Himalaya, India

Yashwant S Rawat

Salix fragilis is the most common willow species grown extensively under the indigenous agroforestry system in the cold desert of Lahaul valley located in the northwestern Himalayas, India. Presently, this tree is under severe pest attack, and other infections have made its survival in the area questionable. This deciduous multipurpose tree species provides vegetation cover to the barren landscape of Lahaul and is a significant contributor of fuel and fodder to the region. This study is a detailed profile of the plant in three villages within this region: Khoksar, Jahlma, and Hinsa. The willow provided 69.5%, 29%, and 42% of the total fuelwood requirements of Jahlma, Khoksar, and Hinsa respectively. A striking observation was that only 30.0 6 20.1% trees were healthy: 55.2 6 16.1% of the willows…

Four Decades of Land Use and Cropping Pattern Changes in Himachal Pradesh

Najibullah HASSANZOY, Virender Kumar

Land is the most critical factor of production. The problem of scarcity of land is more acute in mountainous regions due to uneven population pressure. Various socio-economic and political factors interact over time and space to determine the pattern of land utilization and cropping in any region. The present investigation attempts to scrutinize these changes during the past three and a half decades in Himachal Pradesh. The findings revealed that the growth rate of net sown area turned out to be negative during the overall study period with the decline being quite strong in the post 1990s period. The area put to non-agricultural uses registered very high growth rates, more so after the 1990s. The growing marginalization of the holdings gets reflected in the fact that about 87 per cent of the farmers…

Governance of Commercial Banks' Credits in Neo Liberal Era with Special Reference to Himachal Pradesh

2015 •International Research Journal Commerce arts science

Banking in India, has a long historical past to govern all ethnic and religious communities and to meet out the monetary demand of all. In the neo- liberal era, there is a wide disparity in the credit and deposit ratio of commercial banks in all the states and also in Himachal Pradesh, in all the twelve districts. In the period of past two decades, in Himachal Pradesh, the CD Ratio of the commercial banks has shown a gap between 16.23 in Lahaul- Spiti to 65.84 in Sirmaur. It is not a good indicator of the objective to have equitable overall economic development of the State despite of the fact that the commercial banks have focused to govern credits for accomplishment of their goals.

Comparative Study on Cropping Pattern in Kinnaur and Lahaul & Spiti

Dr. Heera Bhagti*

Dr. Devinder Sharma**

*Assistant Professor, Department of Commerce Govt. Degree College Sainj, Kullu

**Professor Department of Commerce, Himachal Pradesh University, Summer- Hill, Shimla-05.

According to the author, the share of land allocated to the cereals and non cereals crops remains by the large unchanged and the share of area under wheat has increased from one third to nearly two fifth of total area sown during the period 1950-51 to 1982-83 as a result of the adoption of new form technology. Further, the author finds a noticeable change in the cropping pattern of Himachal Pradesh, with in the non cereal category, i.e. the rise in share of area under fruits of all kinds. The study concluded that Himachal Pradesh has a large potential for the production of fruits of different categories, but the fruits crops still enjoy a low weight age in the total area sown.

Sharma et.al (1992), studied "**impact of irrigation on socio-economic structure of farm families in Himachal Pradesh.**" They focused on the impact of irrigation on the vegetables based and cereal based crops. The authors have found that in vegetable based farming, a net return on per hectare of cultivated land was high as compared to cereals based farming of the State. They have concluded that irrigated land gives more output in terms of vegetables as compared to cereals, and the positive impact of irrigation is found in socio-economic structure of the farm families in the State.

Swamy, (2011), observed in **"Tribal Land Question and Land Reforms in Kerala"**, that the exclusion of 'adivasis' in India in terms of land rights remains a reality in contemporary India, and their rights to productive resources have generally been left unattained by the State Government. The author highlighted that Government has not taken any significant effort to grant land rights to landless tribal households and they shift from food to cash crops and from indigenous to hybrid seeds have also undermined the livelihood of these people which must be taken care of by the Government.

Uma et. al (2013) in their study **"Changing Cropping Pattern: A Boon or a Bane to Food Security**" revealed that most of the agricultural labourers are showing less interest in producing food crops and are changing their cropping pattern to commercial crops. The authors also find that all marginal farmers are slowly depending on other sector for higher wages without fully neglecting the agriculture. The authors' reveal that instead of changing the cropping pattern and

that the crop sector of Jammu and Kashmir agriculture at an aggregate level is gradually diversifying in favour of high-value crops. The authors found while analyzing the diversification, the Jammu division are witnessing a specialization in food-grain crops, while as Kashmir division depicting a trend towards diversification. The farmers are gradually diversifying to commercial crops for the sake of higher earnings.

Yadav and visvesvaraya (2019) have stated in the article "**Crop Pattern Change and Crop Water Requirement Judgment using Remote Sensing and GIS Techniques: a research onTungabhadra Dam Right**" due to growing population and increase demand for food products crop violation is found in every command leading to more irrigation. According to authors remote Sensing (RS) and Geographical Information System (GIS) techniques have emerged as powerful tools for crop water management. Remotely sensed land use-land cover data was used for analysing the cropping pattern in the area and also to estimate the change in the cropping pattern. The canal selected for cropping pattern analysis is located at vallabhpur, Bellary district on Tungabhadra river. Further, authors revealed that crop water requirement was calculated using Modified Penman Equation for present cropping pattern. The authors find that, approximately 50% of water could be saved using modified Penmen method compared to crop water requirement.

III. Data Base and Methodology

The data for the study gathered from a purposeful and well structured field survey. The survey was conducted during June 2019. The sample was based on stratified random sampling and two stage sample design adopted for the purpose.

IV. Objectives

- To compare the crops grown and cash crops grown in kinnaur and Lahaul & Spiti.

V. Need of the Study

Production of crops is one of the major traditional occupations of the tribal people. The need of the research has been felt to examine the cropping pattern of the tribal communities and its contribution in the living standard of the farmers.

VI. Analysis and Interpretation

1. Crops Grown

There are two seasons of crops in Kinnaur region, spread as Kahriff crops which is being sown in the month of April-May and the Rabi crops which is sown in the month of November and December in the region and during the kharif season, vegetables are also grown. Table 1 shows the different crops being growing. In Lahaul and Spiti, the climate during spring and summer seasons (April-October) is rather mild during which both *Rabi* and *Kharif* crops are grown simultaneously. The rains are scanty and humidity remains low during this period. However, during winters (November-March), the climate is extremely cold and harsh and mercury drops even up to minus 35oC. During this period, heavy snowfall occurs and this area remains cut-off from rest of the world. Therefore, the area has a single cropping season.

EFFECTS OF NON-MONETARY REWARDS ON EMPLOYEE'S MOTIVATION AND RETENTION IN PRIVATE COMPANIES ARUNA KAPOOR

Interal Res journa Managt Sci Tech

This study is an investigation of the impact of non-monetary rewards on employee's motivation and retention in private companies. The main objective is to analyze the effect of non-monetary rewards such as recognition, training, and rewards & incentives on employee's productivity in an organization. When employees are motivated, they develop the drive to work hard and hence, in turn,the output is increased. Data was collected through primary as well as secondary sources. Primary data was collected using questionnaires from the educated people/ employees of Delhi from a sample size of 60 respondents and analyzed by descriptive analysis. The study depicts that employee's recognition,participation in management, training, flexible working hours, good working conditions, status and other non-monetary rewards affect and help an employee in contributing to the success of an organization as they directly affect employee's motivation and in turn compel them to remain in the organization also. The study reveals that employee's appreciate and give more value to the non-monetary rewards and they would like to be provided with the

variety of such rewards by the organization. So, according to the results of the study, this can be concluded that most of the employees think that the non-financial rewards in their organization do motivate them and make them retain in that particular organization for the long term. Also, the findings suggest that they value non-financial incentives as much as financial incentives. Therefore, as per the survey study, thiscan be concluded that non-financial rewards have the positive potential to increase the motivation of employee'sand help them in retaining in the private organization.

Abstract

Efficient means of transportation play an important role in the development of a nation in the modern world because movement of people in the present times has increased to higher levels than ever before. Higher levels of economic activity and economic growth increase the movement of people and goods across regions and cities. This movement of people is facilitated by various means of transportation like roadways, railways and airways. Movement within the urban centres is highly dependent on the public transport. Along with this, private vehicles are also used by commuters for daily travel. Public transport is comparatively cheaper and helps in reducing congestion on the roads but the management of public transport most of the times is a challenge for the government. In highly urbanized and highly populated areas public transport is desperately needed to ease off congestion and long traffic jams. In highly urbanized areas the level of economic activity is also high meaning thereby that the earning potential of people is also good. Higher income groups of people will prefer a good quality of public transport or otherwise they would travel using their own vehicles.

Abstract and Figures

This study aims to analyse the availability of banking facilities in India from 1971 to 2011. The study is based on secondary data and the Z-score technique has been employed to find out the extent and magnitude of disparities. The study reveals that the availability of banks has increased from 5 banks per 1000 sq. km of area in 1971 to 27 per 1000 sq. km in 2011 and indicates a five times increase during last 40 years. The study finds that the increase in banking facilities in relation to population was slow and insufficient and only one bank served a population of 10,000 during the study periods. The study also reveals the prevalence of interregional or inter-districts disparities in availability of banking facilities. The areas in and around the national capital territory of New Delhi, coastal parts of Kerala and central Gujarat have witnessed high development of banking facilities, whereas the mountainous area, desert and peninsular parts of the study area have displayed low development of banking facilities in relation to the area.

ABSTRACT This study aims to analyse the availability of banking facilities in India from 1971 to 2011. The study is based on secondary data and the Z-score technique has been employed to find out the extent and magnitude of disparities. The study reveals that the availability of banks has increased from 5 banks per 1000 sq. km of area in 1971 to 27 per 1000 sq. km in 2011 and indicates a five times increase during last 40 years. The study finds that the increase in banking facilities in relation to population was slow and insufficient and only one bank served a population of 10,000 during the study periods. The study also reveals the prevalence of inter-regional or inter-districts disparities in availability of banking facilities. The areas in and around the national capital territory of New Delhi, coastal parts of Kerala and central Gujarat have witnessed high development of banking facilities, whereas the mountainous area, desert and peninsular parts of the study area have displayed low development of banking facilities in relation to the area.

INTRODUCTION

Social infrastructure usually refers to those facilities, which improve the quality of human life. The role of social infrastructure in accelerating the economic growth and enhancing public welfare is more pronounced in developing economies (Rosenstein 1943). It often encompasses education, healthcare, housing and drinking water facilities to name a few. Investment in social infrastructure leads to human capital formation and socio-economic development (Tiwari 2000). While thinking about infrastructure, usually attention is paid to the economic and social infrastructure comprising roads, bridges, railways, power, communication, irrigation, education and health facilities and services to name a few. Quite often, it is not realised that a well-developed, well integrated and efficiently functioning financial infrastructure comprising financial institutions, financial markets and financial services is equally essential for an accelerated rate of development of the economy. The financial infrastructure contributes to the economic growth by increasing the rate of capital formation or investment by encouraging technology development and also by helping the development of economic and social infrastructure. Many scholars believe that economic growth and poverty reduction depend on the effectiveness of the national financial system (Bhole 2006). An effective financial system is said to have a causal link with growth, macroeconomic stability, reduction in volatility, improvement in total factor, productivity and living standards, and poverty reduction. A strong and deep financial system insulates the economy from macro fluctuations. Therefore, it is the job of policymakers to ensure that banks, other financial institutions and stock markets reach their full functional potential (World Bank 2001).

The banking sector plays a vital role in the development of the Indian economy. The growth of the banking sector depends upon the services provided by them to the customers in various aspects. The banking system in India is significantly different from other Asian nations because of the country's unique geographic, social and economic characteristics. India has a large population and land size, a diverse culture and extreme disparities in income. Keeping in view the importance of banks in the financial infrastructure, the accessibility and availability of banking facilities in relation to area and population have been examined in this study.

SPATIAL AND TEMPORAL VARIATIONS IN EDUCATIONAL ATTAINMENT IN INDIA

Diksha Kumari
B. R. Thakur
Rajan Bhandari

Abstract

The present study aims at examining the progress in levels of educational attainment in India during 1991-2011. The study is entirely based on secondary data collected from Census of India and educational reports of Ministry of Human Resource Development. In order to examine the progress in educational attainment percentage method has been used. The study shows remarkable increase in the growth rate of highly educated people as compared to elementary and secondary educated persons. The study reveals that the share of secondary educated persons increased from 18.60 per cent in 1991 to 24.10 per cent in 2011. Although the share of higher educated persons has increased from 5.67 per cent in 1991 to 8.90 per cent in 2011, yet India is passing through the teething stage of educational attainments where merely 8.90 per cent out of the total literates are highly educated. The study also reveals that educational attainment in India happens to be uneven at the state level which is attributed mainly to the varying educational and developmental infrastructures. The states and union territories equipped with better availability of educational institutes, gross enrolment ratio, urbanization and less poverty fared well in regard to educational attainment.

Keywords: Education, Attainment, Determinants, Spatial Variations, India.

Introduction

The level of education is one of the major indicators of welfare, prosperity and security of people in any society. The quality of education influences the quality of human resource for the societal benefits (Yadav, 2018). The countries with higher educational enrolments achieve higher growth rates than the countries with lesser educational enrolments (Aftab, 1977). Thus, literacy and education play a decisive role in the development process of a nation. India has experienced epochal shifts in her teaching and learning environment since ancient period. The heritage of Indian philosophy, knowledge and academic climate has been subject to indigenous thoughts, fine tunings, restructuring and rejuvenation introduced through time to time. At the time of attainment of independence in 1947, India had only 20 universities and less than 500 colleges.

After independence, education sector

received a concerted attention both by the central and state governments. With the advent of new economic reforms in 1991, entire educational scenario underwent changes. Under liberalization, privatization and globalization (LPG), many private schools, colleges, universities and other institutes surfaced up in the country. Indeed, the onset of post-reforms period saw the demand for skilled and educated people which led to visible improvement in educational attainments at almost all the stages throughout the country. Many scholars, including geographers, conducted researches on different facets of education in India. Various researchers like Ram (1990), Chaudhary (2009), Panda (2011), Gakhar and Kour (2012), Ahmed (2013), Sharma and Sharma (2017) have studied educational expansion and schooling inequality, determinants of primary schooling, education of girls, scenario of present higher education in India.

Besides, a few studies have been conducted on the levels of educational attainment. Ahuja and Filmer (1995) have assessed the educational attainment in developing countries and projected that currently south Asia, is the least educated part of the world. Filmer and Pritchett (1999) have analysed the effect of household wealth on educational attainment for 35 countries. Mukherjee (2004) has examined the trends and patterns of educational attainment in India excluding the union territories, by focusing on the indices of literacy, enrolment in schools, dropout before completion of study and completion of school stages. Alam and Raju (2007) have assessed the gendered literacy and educational disparities in rural Bihar among various religions. Desai and Kulkarni (2008) have studied the changing inequalities in educational levels among various social groups of India. Husain and Sarkar (2011) have examined the gender disparities at each of the main educational levels in the Indian education system. Khan and Butool (2013) have analyzed the state-wise educational status of Muslims in India.

Although these studies address a spectrum of issues relating to literacy and education in India, yet the issues and progress of educational attainment at different educational standards among states and regions remain unattended. This necessitates to undertake a geographical study on level-wise educational attainment in India. This also raises an academic curiosity to examine how the educational attainment at different levels varies over space and time during the post-liberalization period of 1990-2011.

Objectives of the Study

The major objectives of the study are:

- to examine the spatio-temporal variations in educational attainment at elementary, secondary and higher levels of education and
- to study the reasons of varying pattern of educational attainment.

Study Area

Covering an area of 32,87,263 km², India supported 1210 million population as per 2011 census. It covers 2.4 per cent of the total geographical area and 17.64 per cent of the total world's population. Geographically, it extends from 8° 4' to 37° 6' north latitudes and 68° 7' to 97° 25' east longitudes. India has had a long history of organized education. The Gurukul system of education has been one of the oldest on earth. Gurukuls are considered the traditional Hindu residential schools of learning, typically in the teacher's house or a monastery (Pajankar and Pajankar, 2010).

With the passage of time, the education system in India started expanding during the reign of various dynasties in India. The modern school system has been introduced by the Britishers in India. The Macaulay's Minute of 1830s is the prominent one. The Wood's Despatch of July 19, 1854 has been the landmark in the history of education in British India as it has laid down the broad principles and programmes for educational development. In the post-independence period, the government of India became more concerned for education. The national policy of education (1968 & 1986) and its revised formulation (1992) envisaged a uniform pattern of school education (10+2+3 pattern i.e. 12 years of schooling and 3 years of graduation) across the country. The post reforms of 1990s enhanced the demand of quality human resource and competition in the quickly changing employment landscape and global ecosystem.

Database and Methodology

The study completely relies on secondary sources of data downloaded from the website of Census of India. Apart from Census, planning commission reports and educational reports published by National Institute of Educational Planning and Administration (NIEPA) and Ministry of Human Resource Development (MHRD), Government of India have also been consulted. The study has been conducted with reference to two census years of 1991 taken as base year and 2011 as latest year. The present study is based on analysis of 25 states and 7 union territories as per 1991 census year, although, there are 28 states and 7 union-territories as per 2011 census.

For conducting study effectively and making comparisons easy, the data for newly formed states of Uttarakhand, Jharkhand and Chhattisgarh in 2011 have been clubbed in the parent states of Uttar Pradesh, Bihar and Madhya Pradesh, respectively. Hence, Census map of 1991 has been taken as the base map for comparisons. For the purpose of analysis, the data are compiled to arrive at three broad stages of elementary, secondary and higher level of education. The primary and upper primary educated persons are integrated and taken as elementary educated. Similarly, the educated persons at high/matric and senior secondary level are integrated as secondary educated. While, highly educated include those who have completed the post-secondary education i.e. graduates, post-graduates, M.Phil. and Ph.D. degree holders.

In order to examine the distributional pattern of educational attainment in India, the following 10 determinants of educational attainment have also been analyzed. These include number of elementary schools/800 persons, secondary schools/1000 persons, and higher educational institutes/1,00,000 persons (Y_1); gross enrolment ratio (per cent) at elementary, secondary and higher education levels respectively (Y_2); level of urbanization (per cent) (Y_3); density of population (persons/km^2) (Y_4); level of poverty (per cent) (Y_5); work participation rate (per cent) (Y_6); road density (km/100 km^2) (Y_7); railway density (km/100 km^2) (Y_8); gross state domestic product (GSDP, per cent) (Y_9) and budgeted expenditure on education (per cent) (Y_{10}). Co-efficient of correlation has also been calculated to understand the relationship between educated persons at each level with the determinants of educational development for both the reference years. The number of primary and upper primary schools in each state has been summed up to arrive at single unit, i.e. elementary schools. Acco-

rding to Right to Elementary Education (RTE) Act (2009), a habitation having 300 persons is ideal for building a primary school and a habitation having 500 persons is considered ideal for upper-primary school. So, technically, there should be 1 elementary school per 800 persons. Thus, in the present study, to compute the density of elementary schools per size of population, the population norm of 800 persons has been taken into consideration. The spatio-temporal variations in educational attainment have been discussed with the help of comparative choropleth maps.

Choice of variables

It is imperative to justify the selection of determinants of educational attainment. It needs to be seen in analytical framework rather than abstract logic and should have sound conceptual underpinning. The first indicator in the series is availability of educational institutes. A good educational infrastructure is prerequisite for the development of literacy and education in any nation. Higher the number of educational institutions, more is likely to be the literacy rate and educational attainment. The next indicator is gross enrolment ratio. It determines the number of students enrolled at an educational level. Higher enrolment normally leads to higher literacy and thus higher level of educational attainment. The next indicator is urbanization. Urbanization is the cause and effect of literacy and education. Urban schools are generally larger, more likely to have higher proportion of qualified teachers and have optimum student-teacher ratios as compared to schools in the rural areas of developing countries like India. Access to better schooling facilities in urban areas leads to higher level of literacy and educational attainment as compared to rural areas.

Other indicator is density of population. The states with higher densities of population may record larger stock of population in each level of education, resulting into higher educational attainments and vice-versa. The next variable is poverty. Children from well-off households are more likely to remain in school, college and university as compared to poorer ones who are prone to be withdrawn from educational institutions due to their financial constraints. It is generally assumed that the poor states have lower educational attainments as compared to the economically sound states. Road density and railway density are other potent drivers of educational attainments. The recent development of means of transportation has added a new dimension to the process of propagation of literacy and education. The rural isolation has been broken. Educational institutions in the urban areas have now become accessible to the countryside. The states with better road-railway connectivity are expected to have greater educational attainments and vice-versa.

The next variable in the series is work participation rate (WPR). Higher the level of work participation in a state, more will be the level of educational attainment and better will be the economy of the state. The next indicator is gross state domestic product (GSDP). States with higher GSDP have most successful learning systems, offering education to a good extent to its inhabitants. The last variable is budgeted expenditure on education. The total educational expenditure expressed as a percentage of GSDP gives a good indication of priority given to education sector in the society. More money spent on education is likely to increase all kind of facilities in schools and colleges which are necessary to make a healthy academic environment. Notably, these may not be

adequate indicators in capturing the complex picture of educational attainment in India but surely are the best for which limited secondary data for state level analysis have been available at the time of the study.

Results and Discussion

Inter-state Variations in Levels of Educational Attainment

The spatio-temporal variations in educational attainment have been discussed at three different educational levels i.e. elementary level, secondary level and higher education level as under:

Educated Persons up to Elementary Level (1991-2011)

The share of elementary educated persons has been 49.6 per cent to total literates in 1991. It declined to 41.13 per cent during next two decades (Table 1). But there has been an increase in the absolute number of elementary educated persons. Their number has increased by 78.29 per cent during the study period (Table 2). The highest growth among elementary educated persons has been observed in Dadra & Nagar Haveli (about 280 per cent), followed by Rajasthan (174.86 per cent) and Madhya Pradesh (174.22 per cent). The highest negative growth has been recorded by Kerala (-26.33 per cent) followed by Goa (-13.97 per cent). The decline in share of elementary educated persons is an obvious pointer of pursuance of higher education by more people in these states. It is a visible sign of growing educated population in the country. The rising awareness among people towards higher education for better jobs, quality of life and high standard of living also motivates people to go for higher education. The correlation matrix (Table 3) exhibits a positive correlation between educated persons and work participation rate (0.56 in 1991 and 0.27 in 2011), poverty (0.26 in 2011) and budgeted expenditure on education (0.34 in 2011). However, negative relationship has been found between educated persons at elementary level and level of urbanization (-0.54 in 2011) and density of population (-0.51 in 2011) at national level. The negative association between educated persons and urbanization at elementary stage is largely due to slum population and more scope of unskilled jobs in the country. The study reveals that the poverty is no longer a major constraint in seeking elementary education after universalization of elementary education under Sarva Shiksha Abhiyan (SSA-2001) and Right of Children to Free and Compulsory Education Act-2009. Higher availability of educational institutes, high work participation rate and high budgeted expenditure on education all fostered the elementary educational attainment during the post liberalization period in India.

Areas with High Proportion of Elementary Educated Persons

Three states namely, Kerala, Assam, Nagaland and two union-territories (UTs) Daman & Diu and Lakshadweep have registered high proportion (more than 55 per cent) of literates with elementary education in 1991 (Table 1 and Fig. 1). The study reveals that the states and UTs with high literacy rates like Kerala (89.81 per cent), Lakshadweep (81.78 per cent) and Daman & Diu (71.20 per cent) and states with higher availability of elementary schools like Assam (1.23 unit per 800 persons) and Nagaland (1.09 unit) have registered higher proportion of elementary educated persons (Table 4). The states with high work participation rate like Nagaland (42.70 per cent) and Assam (36.10 per cent) also observed higher share of elementary

educated persons (Table 5) in 1991. In 2011, no state as well as UT fell in this category (Fig. 2). It does not mean that overall educational attainment at elementary level has declined among these states during the study period, rather it is a promising sign of higher educational attainments as people have shifted from lower academic standards to higher ones in the country.

Areas with Moderate Proportion of Elementary Educated Persons

The study reveals that more than half of India registered moderate proportion (45-55 per cent) of elementary educated persons in 1991. The states running from north-western part to eastern and north-eastern parts and coastal states like Gujarat, Maharashtra, Karnataka, Orissa and Tamil Nadu have witnessed moderate proportion of elementary educated people in 1991 (Fig. 1). The moderate to high literacy rates (60 to 75 per cent), moderate to higher availability of elementary schools (1 to 1.5) per size of population and high work participation rates (more than 40 per cent) have been some of the factors responsible for moderate share of elementary educated persons in these states. By 2011, central and north-eastern Indian states of Rajasthan, Madhya Pradesh, Orissa, Mizoram, Assam, Nagaland and Tripura and UTs like Andaman & Nicobar Islands and Lakshadweep have witnessed moderate proportion of elementary educated persons (Fig. 2).

Areas with Low Proportion of Elementary Educated Persons

The states namely Tripura, Sikkim, Andhra Pradesh, Madhya Pradesh and union-territories Delhi and Chandigarh have registered low share (less than 45 per cent) of elementary educated persons in 1991 (Fig. 1). Very high population density resulting into low availability of elementary schools per size of population in Chandigarh (0.10 unit) and Delhi (0.20 unit) could be one of the factors responsible for low proportion of elementary educated persons (Table 4).

In 2011, almost whole of India except Rajasthan, Madhya Pradesh and Orissa (now Odisha) in central India and Assam, Nagaland, Tripura and Mizoram in northeast India registered low proportion of elementary educated persons (Fig. 2). Low proportion of elementary educated persons in large populous states of northern plains namely Punjab, Haryana, Uttar Pradesh, Bihar and West Bengal and peninsular India like Maharashtra, Karnataka, Kerala, Tamil Nadu and Andhra Pradesh is a remarkable sign of educational development. These states witnessed an improvement in educational attainment during next two decades because of the shift of educated people from elementary to secondary stages and beyond (Table 1).

Educated Persons up to Secondary Level (1991-2011)

The national average of secondary educated persons has been about 19 per cent of the total literate population of India in 1991. It increased to 24.10 per cent in 2011 (Table 1). Number of secondary educated persons increased by about 175 per cent between 1991 and 2011 (Table 2). The growth of secondary educated people has been more than the double from the elementary educated persons during the same period. The highest growth among secondary educated persons has been observed in UTs of Dadra & Nagar Haveli (606.93 per cent) and Daman & Diu (527.51 per cent) followed by states of Arunachal Pradesh (338 per cent) and Meghalaya (334 per cent). The least growth in

number of secondary educated persons has been observed in Goa (99.43 per cent) during the study period (Table 2).

Growing demand of skilled, semi-skilled and educated human resource in different sectors of Indian economy, attracted the people towards attaining higher levels of education. Many literacy and education improvement programmes introduced and implemented by both central and state governments have been equally responsible for the shift of people to secondary and higher education levels. The correlation matrix (Table 3) exhibits a positive correlation between secondary educated persons and gross enrolment ratio at secondary level (0.71 in 1991 and 0.50 in 2011), level of urbanization (0.48 in 1991 and 0.43 in 2011), density of population (0.55 in 1991 and 0.27 in 2011), road density (0.53 in 1991 and 0.28 in 2011) and railway density (0.67 in 1991 and 0.17 in 2011). However, negative relationship is found between secondary educated persons and poverty (-0.33 in 1991 and -0.41 in 2011). The study thus reveals that growing urbanization, development of roads and population density functioned as seedbed for the secondary educational attainment at the national level. Poverty continued to curtail the progress of secondary education at the national level during 1990s and beyond in India. The spatio-temporal variations in secondary educated persons in India have been discussed as under:

Areas with High Proportion of Secondary Educated Persons

The broad pattern of secondary educated persons reveals that Punjab, Haryana, Uttar Pradesh, Bihar, Goa and three UTs namely Delhi, Chandigarh and Pondicherry recorded high percentage (20 per cent and above) of secondary educated persons in 1991 (Fig. 3). In 2011, the states with more density of population, highly urbanised, equipped with better transportation facilities and incurring more expenditure on education namely Punjab, Haryana, Goa, Uttar Pradesh and Bihar recorded higher proportion of secondary educated persons (Fig. 4; Table 5). Similarly, due to high literacy rate and better availability of secondary schools per 1000 persons, the states of Himachal Pradesh (0.48 unit), Goa (0.32 unit), Sikkim (0.32 unit) and Manipur (0.31 unit), have recorded high proportion of secondary level educated persons (Table 4; Fig. 4). Likewise, Delhi and Chandigarh UTs and southern states of India have been better in terms of secondary educational attainment. However, the poverty stricken states like Bihar and Uttar Pradesh and states with poor road-railway connectivity like Jammu & Kashmir and north-eastern India like Sikkim, Arunachal Pradesh, Assam, Nagaland and Manipur have also fared well in attaining higher proportion of secondary education (Fig. 4; Table 5).

Areas with Moderate Proportion of Secondary Educated Persons

The hilly states like Himachal Pradesh, Sikkim, Assam, Manipur and northwest states of Rajasthan, Gujarat and whole of south India have witnessed moderate proportion (15-20 per cent) of secondary educated persons in 1991 (Fig. 3). The moderate urbanization, moderate population density and low poverty in Gujarat, Andhra Pradesh, Himachal Pradesh and Manipur are responsible for their moderate level of attainment of secondary education (Table 5). In 2011, only seven states of country namely Rajasthan, Madhya Pradesh, Orissa, West Bengal and northeastern states of Meghalaya,

Tripura and Mizoram have been found in this category (Fig. 4).

Areas with Low Proportion of Secondary Educated Persons

The poverty stricken states namely Orissa, Madhya Pradesh, Arunachal Pradesh and Tripura; states with low total work participation rate like West Bengal and poor road-railway connectivity like, Arunachal Pradesh, Tripura, Meghalaya, Nagaland and Mizoram have registered low proportion (less than 15 per cent) of secondary educated persons in 1991 (Fig. 3; Table 5). In 2011, no state has been found in this category as all the states have moved up to upper levels of education. Because of the growing demand of skilled, semi skilled and educated workforce in globalising Indian market, the people have started attaining higher levels of education. A series of flagship programmes such as Programme of Action (POA-1992), National Knowledge Commission (NKC-2005), National Scheme of Incentives to Girls for Secondary education (2008) and Rashtriya Madhyamik Shiksha Abhiyan (RMSA-2009) introduced and implemented by both central and state governments are also equally responsible for the epochal shift of people to higher education levels.

Educated Persons up to Higher Level (1991-2011)

The study unfolds that there has been a slight increase in proportion of highly educated persons from merely 5.67 per cent in 1991 to 8.90 per cent in 2011. It clearly indicates that Indian higher education system is passing through teething stage where even one-tenth of its total literate population is still not highly educated. However, the study has revealed the highest growth of educated people at higher education level as compared with elementary and secondary stages. Their number has increased phenomenally at 231 per cent during the study period. Their growth has been about 3 and 1.32 times higher than elementary and secondary educated people respectively. It signfies the propensity and inclination of people towards higher education after 1990s. The highest growth rate among highly educated people has been observed in two UTs namely Dadra & Nagar Haveli (957 per cent), Daman & Diu (559 per cent) followed by Sikkim (403 per cent) and Haryana (397 per cent) states. On the other hand, the least decadal growth has been observed in Chandigarh (108 per cent). The correlation matrix exhibits a positive association between educated persons at higher level and number of educational institutes per size of population (0.43 in 1991 and 0.29 in 2011), gross enrolment ratio (0.84 in 1991 and 0.78 in 2011), level of urbanization (0.70 in 1991 and 0.66 in 2011), density of population (0.88 in 1991 and 0.81 in 2011) and rail-road density at national level (Table 3). The study shows negative relationship between educated persons at higher level and level of poverty (-0.37 in 1991) at national level. The study therefore reveals that increasing number of educational institutes, higher enrolments, growing urbanization and improved network of roads and railways resulting into greater place to place connectivity furthered higher educational attainments at the national level. The poverty continued to hinder the progress of higher education at the national level during the post-liberalization period in India. The spatio-temporal variations among educated persons at higher level during the study period are discussed below:

Areas with High Proportion of Higher Educated Persons

Two union-territories of Delhi and

Chandigarh have highest share (10 per cent and above) of graduates, post-graduates, M. Phil. and Ph.D. degree holders (Fig. 5; Table 1). Better road-railway connectivity along with the availability of institutions of higher education and affordability of people to seek higher education are the reasons for high proportion of highly educated persons in these UTs (Table 5). The higher concentration of highly educated people in the national capital territory of India and Chandigarh the capital city of Punjab and Haryana states in 1991 may be attributed to high literacy rate (75.29 per cent and 77.81 per cent), high urbanization (89.90 per cent and 89.70 per cent), high population density (6352 and 5632 persons/km²) and better road-railway connectivity along with the availability of institutions of higher education and affordability of people to seek higher education (Table 4 and 5). In 2011, the states like Haryana, Manipur, Maharashtra, Goa, Tamil Nadu and Andhra Pradesh and UTs such as Chandigarh, Delhi and Pondicherry have recorded high proportion of highly educated persons (Fig. 6). The spatial pattern of highly educated persons (2011) has been the corollary of a host of factors like high urbanization in Delhi (97.50 per cent), Chandigarh (97.25 per cent), Pondicherry (68.33 per cent), Goa (62.17 per cent) and Tamil Nadu (48.39 per cent) and high population density in Delhi (11297 persons/km²), Chandigarh (9252 persons/km²), Pondicherry (2598 persons/km²), and very low poverty in Goa (5.1 per cent), and Andhra Pradesh (9.20 per cent) (Table 5).

Areas with Moderate Proportion of Higher Educated Persons

Major states of India lying in Indo-Gangetic plains extending from Punjab to West Bengal and the tribal population dominated states of Arunachal Pradesh and Manipur along with Madhya Pradesh, Maharashtra, Andhra Pradesh and Karnataka in south India accounted for moderate level of (5-10 per cent) proportion of highly educated persons in 1991 (Fig. 5). In 2011, majority of the states in northern half of India along with Karnataka and Kerala have recorded moderate share of highly educated persons (Fig. 6). A cursory look at the pattern reveals that high population density resulting into more literates to seek higher education in Bihar (1516 persons/km²), West Bengal (1029 persons/km²), Uttar Pradesh (1017 persons/km²) and Kerala (859 persons/km²) has resulted into moderate share of highly educated people. In addtion to this, low poverty indicating more affordability for higher education in Kerala (7.10 per cent), Himachal Pradesh (8.10 per cent), Sikkim (8.20 per cent) and Punjab (8.30 per cent), high work participation rate in Madhya Pradesh (45.57 per cent), Bihar (36.50 per cent), Uttar Pradesh (35.66 per cent) and Himachal Pradesh (51.85 per cent) have been some of the reasons behind such a distri-butional pattern of higher educated persons in these states (Fig. 6).

Areas with Low Proportion of Higher Educated Persons

The hilly state of Himachal Pradesh and some north eastern states along with Gujarat, Orissa, Kerala and Tamil Nadu and Andaman & Nicobar Islands, Dadra & Nagar Haveli, Lakshadweep and Daman & Diu UTs have recorded very low proportion (less than 5 per cent) of highly educated persons in 1991 (Fig. 5). The most intriguing feature is the low proportion of higher educated persons in the high literate states of Kerala (89.81 per cent), Himachal Pradesh (63.86 per cent), Assam (52.89 per cent) and Nagaland (61.65 per

cent) (Table 4). In 2011, only Tripura state and Lakshadweep UT continued to be at bottom in the higher educational attainments (Fig. 6). Out of the 28 states and 7 UTs, the Tripura state stood at 4th rank in terms of literacy rate in 2011 (Table 4). But, it is at the bottom in terms of higher educational attainment in India (Table 1). However, it is at the top in attainment of professional degrees and diplomas in the country, indicating that people are drifiting away from higher education with little scope for employment. Similar is the case of other highly literate states like Kerala, Himachal Pradesh, Mizoram.

Conclusions

The study finds remarkable changes in the educational attainment at all the three levels of elementary, secondary and higher education in India between 1991 and 2011. The proportion of elementary educated persons has declined due to epochal shift of elementary educated persons towards secondary and higher education levels. But, there has been increase in the absolute number of elementary educated persons during the study period. A rise in elementary schools per size of population, higher work participation rate and high budgeted expenditure on education supported and fostered the elementary education. The government's initiative to achieve the target of universalization of elementary education is a big factor in expanding the elementary education even in poverty ridden, rural and geographically inaccessible areas of the country. The study reveals phenomenal rise in the number of secondary educated persons between 1991 and 2011. The growth of secondary educated people has been more than double as compared to the elementary educated persons during the same period. The national capital Delhi and Chandigarh UT and southern states of India have higher proportion of secondary educated persons. However, the poor states and states with preponderance of tribal population like Madhya Pradesh, Orissa and north-eastern states have shown relatively lower proportion of secondary educated persons during the study period.

The highest growth (about 231 per cent) has been observed in higher educational attainment in India during 1991-2011. The growth among highly educated people has been about 3 and 1.32 times higher than the elementary and secondary educated people respectively. It shows the growing propensity and inclination of people towards higher education after 1990s. Although the number of higher educated people has increased from about 6 per cent in 1991 to 9 per cent of total literates in 2011, even then the country is passing through an infancy stage of higher educational attainments where about 91 per cent of total literates have yet to be graduated and post-graduated. The advanced nations generally have the highest share of population in tertiary education followed by secondary and elementary education, but in case of India it is just opposite. Delhi and Chandigarh UTs emerged as academic leaders in terms of higher educational attainment during the study period. The pace of increase in proportion of highly educated people has been quite low in densely populated states of country like Bihar, West Bengal and in hilly tribal tracts of north-east India.

KEYWORDS Regional Disparities. Standard Score. North-Western Region of India. Social Backwardness

ABSTRACT The issue of regional imbalances has received attention from various researchers, policy planners and academicians. It is a global phenomenon and can be found all across the world including India. The present study intends to examine the trends and pattern of regional disparities in social development in Northwestern states of India. Based on 8 indicators, the study has been conducted with reference to three reference years, that is, 1971, 1991 and 2011. In order to examine the social development composite standard score has been computed and interpreted. Co-efficient of variation has been computed to gauge into spatial variations at individual level of social variables. Majority of the districts of Jammu and Kashmir and Rajasthan registered low level of social development. The study reveals high development in few enclaves and pockets of the region. Although, regional disparities are declining but some districts are still socially backward.

INTRODUCTION

Spatial inequalities in development is a universal phenomenon at any level. These remain prevalent in all countries of the world. Spatial disparities represent the co-existence of relatively developed and depressed or backward regions in any area. Some particular areas enjoy benefits of concentrated developmental activities due to the factors such as development of markets, favourable geographical conditions, structured government policies along with other social, economic and political reasons. The concept of development evolved mainly during the II World War based on newly originated theoretical foundations guided by international institutions such as International Monetary Fund (IMF), United Nations (UN) and World Bank (WB). The theories of Kuznets (1955) and Williamson (1965) claim that spatial inequalities increase initially in the process of development and follow decline subsequently.

Kuznets discussed that very few people benefit from the early stage of development and the inequalities increase. But during later stages, the shift from agrarian activities to other activities takes place and these spatial inequalities get reduced. Williamson stated that the industrialization was driven by discovery and utilization of natural resources. Therefore, the economic prosperity in the industrialization process is also unequally distributed on space, so the spatial inequalities rise in the process. But, at later stage of development attractive employment opportunities in developed regions attract workers from other regions which result in depressing the wages in destination regions and increasing the wages in home/depressed regions. Thus, a natural convergence process starts, possibly encouraged by government policies, the regional inequalities experience falls. Barrios and Strobel (2009) analysed that growth is accelerated in the leading regions and in result, the regional inequalities increase. The other lagged regions follow the leading regions with the available technological capabilities and natural resources. The study reveals that the spatial inequalities follow the trend of increase, peak and decrease.

Different regions of a country grow with different rates resulting in disparities which result into various socio-economic problems. India has been progressing from underdeveloped to developing country with gaining high capabilities in terms of social, economic and overall development. However, the benefits of socio-economic development remain confined to small areas

of certain social, economic, political or strategic significance. This trend results into regional disparities. Various studies by Rao (1968); Mydral (1974); Dholakia (2003); Rai and Bhatia (2004); Mustaquim et al. (2006); Sahol and Kaur (2006); Kurian (2007); Mohanty (2009); Mishra and Mujoo (2013); Rajalakshmi (2013); Ganaie et al. (2014); Ghosh and Chakma (2014); Nayak (2014); Singh (2014); Asif (2015); Sadaf and Munir (2015); Mustaquim and Asif (2016); Radhika et al. (2016); Savita and Rajeshwari (2016); and Sharma (2017), analysed the issue of regional disparities in India. These studies have mainly investigated the disparities in infrastructure, health and education sectors at the district or sub-district level. Initially, the concept of development was confined to economic variables but later on it has expanded in various other dimensions and social development received an epochal attention. The concept of social development is people-centric. Emphasizing on social development, Copenhagen declaration laid stress on full participation of people in society to promote social progress, justice and betterment of human conditions and integration of economic, cultural and social policies. Various social issues like poverty, unemployment, illiteracy, health and issues related to safe and just societies were discussed. It was observed that social development is about improving the well-being of every individual in society; so, everyone can reach his/her full potential. International Consortium for Social Development (ICSD) defined the social development as an approach to "expand capacity to individuals and communities, promote world peace and social justice, improve access to healthcare and education, overcome discrimination against women and minorities to create sustainable income and economic structures" (ICSD 2012: 13). Health and development are the two important sectors of societal well-being and are the key source of human capital formation (NCERT- Indian Economic Development 2006: 83-84). These are the two key sectors of creating human capital, which lead to social development in particular and overall, in general.

The social dimensions of development primarily received attention in 1980s, which reflected in World Development Report (WDR) of 1991 compiled by the World Bank. It asserted that the challenge of development is to improve the quality of life especially in the world's poor countries. It encompasses ends in themselves, better education, high standard of health and nutrition, less poverty, a clearer environment, more equality of opportunity and a richer cultural life (WDR 1991:4). The concept of social development is inclusive of economic development but differs from it in the sense. It emphasized the development in totality of society in its economic, political, social and cultural aspects (Gore 1973 quoted by Nahar 2014:6). Historically, the development pattern in India has been uneven and irregular due to interplay of physical, economic, cultural and political factors and processes. However, it was during the British regime which served to accentuate the regional disparities in socio-economic development. The basic purpose of British government was to foster the colonial interests, hence developed only those areas which were potentially suitable to them as per their economic, political, cultural and global needs. However, the regional development has always been the part of Indian Planning process. But some factors such as uneven distribution of natural resources, mobility of capital, migration, governance, nature of political will and government policies led to spatial inequalities in social sphere in India. The regional disparities in the north-western part of India are the fulcrum of peculiar physical landscape, historical processes and variations in the socio- political and economic aspects. The present study is an attempt to trace the variations in the level of social development among north-western states of India at district level based on eight variables between 1971 and 2011. The study may be helpful in assessing the inter-district development disparities in social development in the study area.

Objectives

The present study aims to fulfil the following two objectives:

i) To study the level of social development and classify the districts as per levels of development.
ii) To examine the trend of disparities in social development in Northwestern states of India.

Study Area

The Northwest region of India is selected for the present study. According to Census of India (2011), it covers an area of about 6, 67,327 km^2 and population of 17,0047,793 persons. It covers about one-fifth (20.30%) of the total geographical area of country and about 14 percent of the total population of India. Geographically, the study area is located between 23^0 30' N to $37^0$06' N latitude and $69^0$30' E to 81^0 10' E longitude. In the northern part, the study area shares the boundary with Afghanistan and Pakistan. In the north-east, it demarcates the boundary with China and Nepal. In the south-east, it shares the boundary with Madhya Pradesh and Gujarat state lies in the south-west of the study area.

METHODOLOGY

The present study is entirely based on secondary data collected from Directorate of Census Operations, Directorate of Economics and Statistics and Department of Health and Family Welfare of different states (Jammu and Kashmir, Himachal Pradesh, Uttrakhand, Haryana, Punjab, Rajasthan) and union territories (New Delhi and Chandigarh), for the years 1971, 1991 and 2011. The spatial disparities in the levels of social development have been examined at district level in the study area.

The level and pattern of disparities in social development in the study area have been examined with respect to 8 indicators namely (X1) total literacy rate, (X2) female literacy rate, (X3) male literacy rate, (X4) urbanization, (X5) sex ratio, (X6) total health institutes/10000 persons, (X7) total institutional beds/10000 persons, (X8) student-teacher ratio (number of students per teacher).

In order to examine the disparity in social development at district level, z-scores have been computed using the following formula

$$\mathbf{Z} = \left(\frac{xi - \bar{x}}{\sigma}\right)$$

Where; **Z** represents the Z-score.

xi represents the original value of the ith observation.

x denotes the Mean value of variables

σ represents the standard deviation from the mean value

Further, composite z-scores are calculated by summing up the Z scores of all the indicators and divided by the number of indicators using the following formula:

$$CSS = \frac{\Sigma zij}{n}$$

Where**; CSS** means the composite standard score

zij denotes the z-score of all indicators **j** of district **i**

n means total number of indicators

To examine the trend of spatial disparities in social development, the composite standard score has been classified into following three categories:

Category	*Composite Score*
High development	More Than 1.00
Moderate Development	0.00 to 1.00
Low Development	Less Than 0.00

Besides, to find out temporal variation at the level of individual indicator, the co-efficient of variation (C.V.) has been calculated by applying following formula:

$$C.V. = \frac{\sigma}{\bar{x}} \times 100$$

Where; C.V. means co-efficient of variation

σ represents the standard deviation from the mean value

x denotes the mean value of variables

Karl Pearson's co-efficient of correlation method has also been used to show the relationship between social variables in the study area, using the following formula:

$$r = \frac{\Sigma XY - \frac{\Sigma X \Sigma Y}{N}}{\sqrt{(\Sigma X)^2 - \frac{(\Sigma X)^2}{N}}\ \sqrt{(\Sigma Y)^2 - \frac{(\Sigma Y)^2}{N}}}$$

Choropleth technique has been used in preparing the maps and to show the spatio-temporal variations in the level of development during the study period. Line and bar graphs have also been prepared to show the behaviour of social development in the study area.

OBSERVATIONS AND DISCUSSION

In order to maintain homogeneity in the administrative units and bring out the comparative picture of regional disparities in social development the districts of 1971 have been taken as base districts and

the newly carved out districts of census year 1991 and 2011 have been merged in the districts of base year by using following methodology:

i) If the newly created districts in 1991 and 2011 were fully carved out from a single district, these were merged with the parent district of 1971.
ii) If the newly created district has been carved out from multiple parent districts, the district accounting for more than 50 percent administrative area of the new district is considered as parent district for merging purpose.

On the basis of composite index, the districts of northwestern states of India have been divided into three categories of level of development. Higher value of composite index shows higher level of development and vice-versa.

Areas of High Development (>1.00)

The districts having composite index value more than 1.00 have been taken as the areas of high social development. Lahul and Spiti (Himachal Pradesh), Chandigarh and Delhi were the only three districts with 2.03 percent of total area and 6.62 percent of total population witnessing high level of development in 1971. In 1991, Ladakh district of study area was the only district registering high level of development. Figure 3 exhibits that Chandigarh and Delhi registered the high level of development in 2011 covering about one-tenth of total population. Better socio-economic conditions, earlier availability of healthcare services, small size of population and other government initiatives have resulted into high level of development in the district of Lahul & Spiti in 1971. Lahul & Spiti has performed visibly well in health sector which is evident from 5.93 and 5.64 Z-score values in availability of healthcare institutes and health institutional beds per size of population. Chandigarh and Delhi witnessed high level of development mainly due to better conditions in education and urbanisation sectors. Availability of basic learning institutions, high level of education, and employability contributed to high level of development in Chandigarh and Delhi in 1971. Due to statistical fallacy, Ladakh district in Jammu & Kashmir registered the high level of development in 1991. Because, the data for the reference year (1991) were available for a single variable among all 8 variables of social development. On the basis of available data of total health institutes per 10000 population, the composite index of Ladakh has been taken into consideration and that resulted into the high level of social development. In 2011, Delhi and Chandigarh witnessed high level of development. Relatively better conditions in literacy (both male and female), adequate availability of health institutional beds, appropriate student-teacher ratio and more importantly higher urban population have contributed to high level of development in these areas in 2011.

Areas of Moderate Development (0.00 to 1.00)

Figure 1 exhibits that mainly central and northern parts of study area witnessed moderate level of development in 1971. Entire state of Uttrakhand, Himachal Pradesh (excluding Chamba, Kullu and Lahul & Spiti) and Punjab (excluding Bathinda and Sangrur) observed moderate level of development in the study area. Kaithal, Jind, Mahendergarh and Gurgaon districts of Haryana along with Ajmer, Jaipur, Jodhpur and Bikaner districts of Rajasthan also witnessed moderate level of development in 1971. In 1991, the spatial pattern experiencing moderate level of development remained almost unchanged. The entire states of Jammu & Kashmir, Himachal Pradesh, Uttrakhand and Haryana registered moderate level of development barring some districts in each state (Fig.2). The northern part of Punjab stretching from Patiala district in south-east up to Amritsar district in north-west part along with Chandigarh, Delhi, Ajmer and Jaipur also registered moderate level of development.

Figure 3 portrays that the distribution pattern in the category of moderate level of development remained same but the number and share of the districts changed during next two decades. The study reveals that in 1971, about 44 percent of the total districts registered moderate level of development. It has significantly increased to 47.36 percent in 2011. But locationally, the districts have not remained the same during the study period. The districts have changed with the passage of time. The districts have not progressed with uniform pace of development. The available technological capabilities and natural resources effected the level of development. The

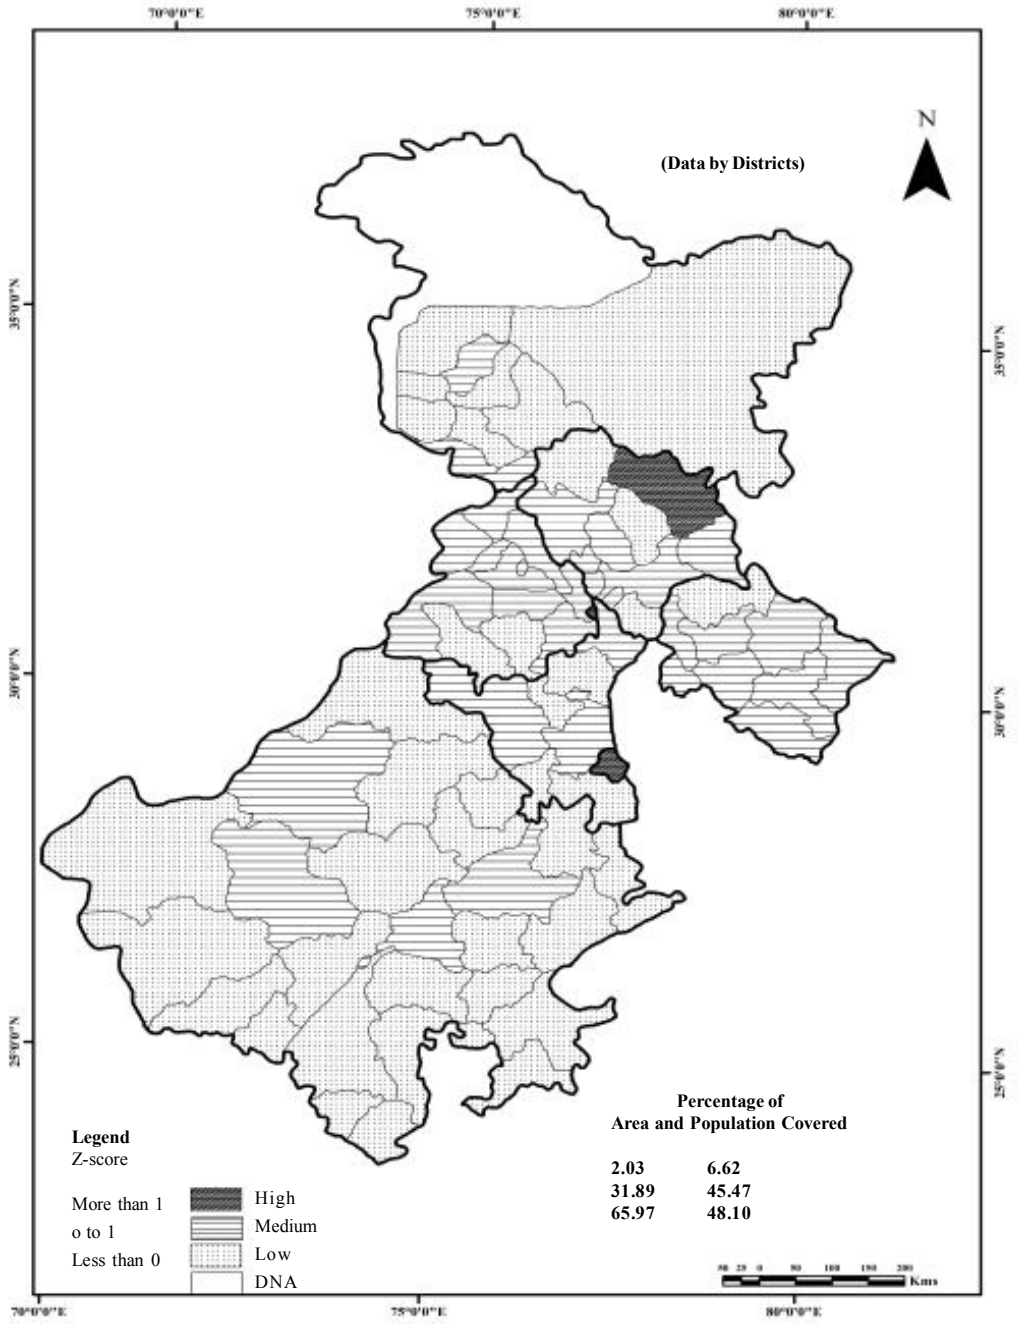

Fig. 1. Northwest India: Levels of Social Development 1971

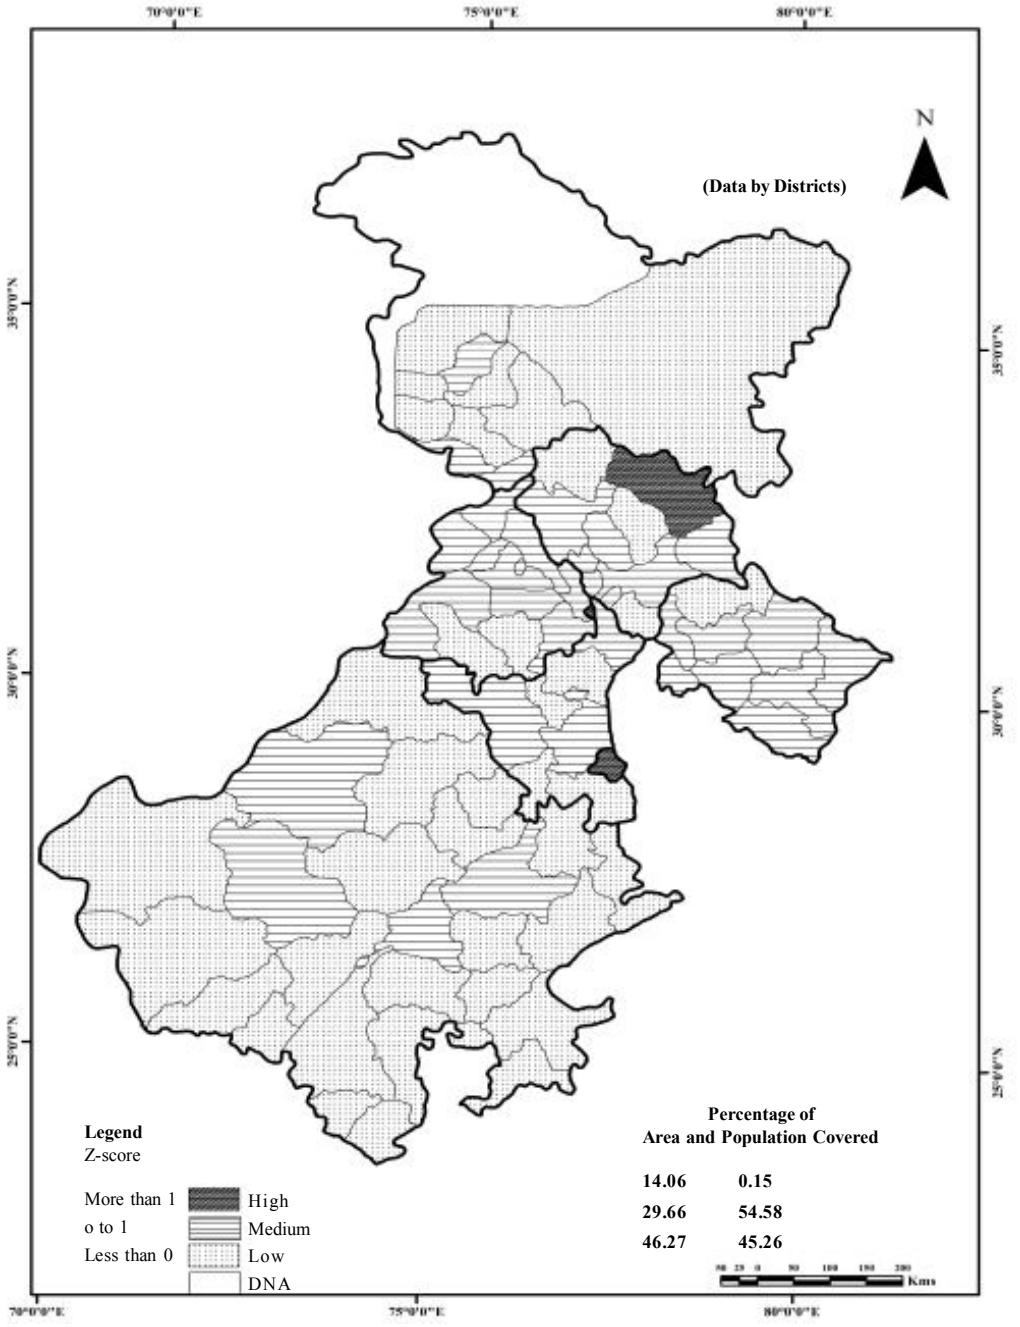

Fig. 2. Northwest India: Levels of Social Development 1991
Source: Prepared by Authors Based on Census of India Data

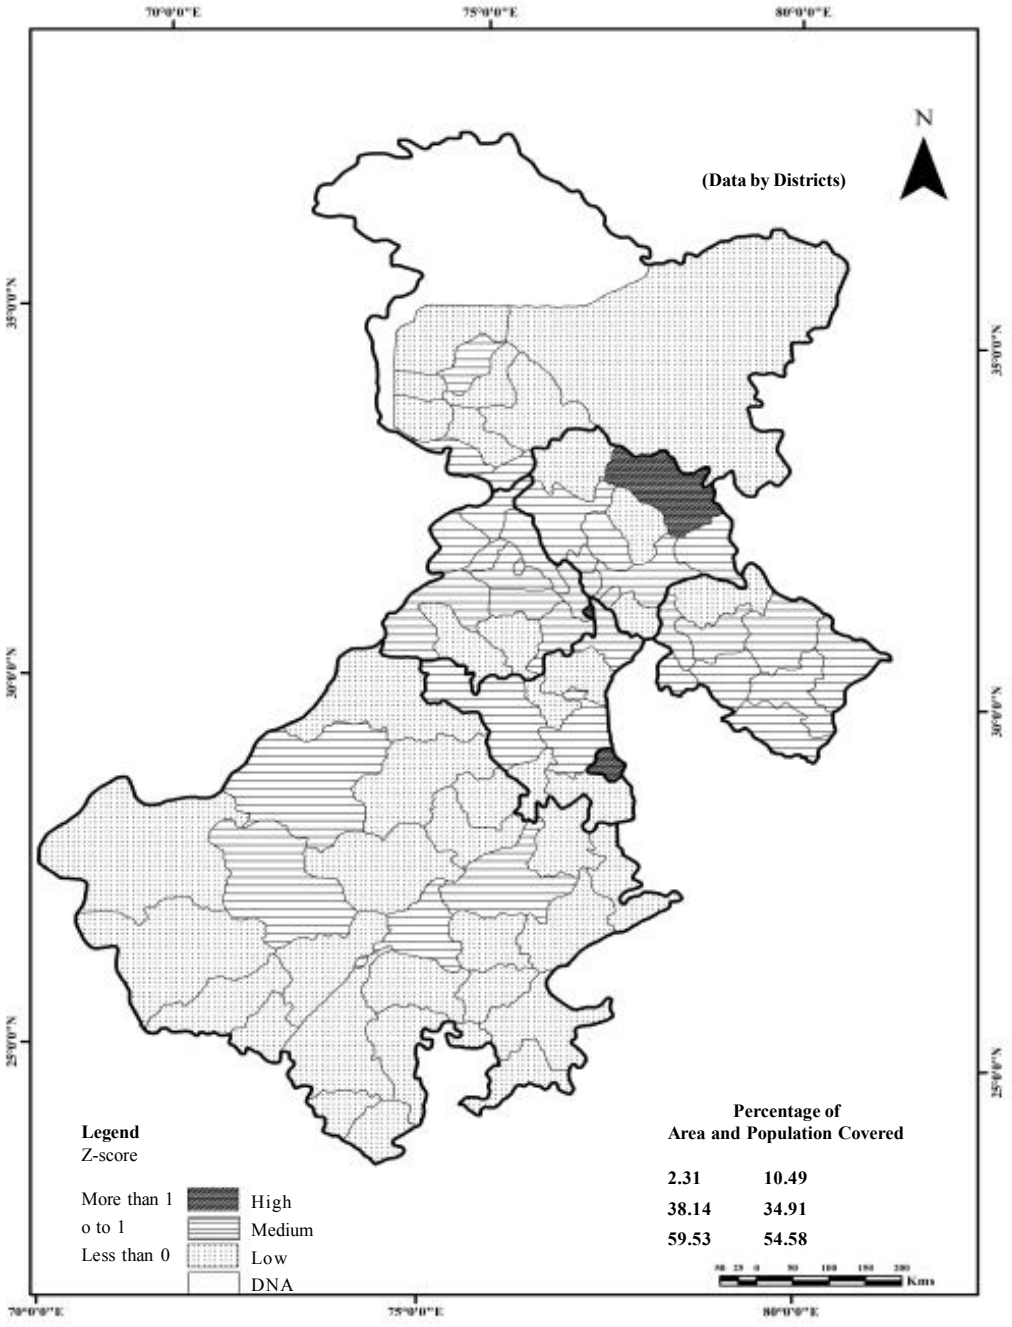

Fig. 3. Northwest India: Levels of Social Development 2011
Source: Prepared by Authors Based on Census of India Data

study reveals that the areas of moderate level of development were mainly concentrated in the central and northern parts of the study area.

Areas of low Development (<0.00)

The study reveals that almost entire state of Rajasthan (excluding Ajmer) and Jammu & Kashmir (excluding Ladakh and Jammu districts) registered low level of development. Some southern and central-eastern parts of Haryana along with Bathinda district of Punjab and Chamba district of Himachal Pradesh observed low level of development in 1971. The study reveals that the whole state of Rajasthan (excluding Jaipur and Ajmer) along with south-western stretch of Punjab in a contiguously observed low level of development. Some individual isolated districts distributed in Himachal Pradesh, Haryana and Uttrakhand registered low level of development in 1991. The share of the districts with low level of development was 51.31 percent in 1991 and reduced to about 48.68 percent in 2011. Figure 3 portrays that almost same geographical locations witnessed low level of development in 2011. Almost entire state of Rajasthan (excluding Ajmer, Sikar and Jhunjhunun), south-western part of Haryana and majority of the districts of Jammu & Kashmir (excluding Ladakh, Punch, Jammu and Kathua) witnessed low level of development. Karnal and Jind districts of Haryana, Chamba and Sirmour districts of Himachal Pradesh along with Hardwar district of Uttrakhand observed low level of development. Low performance in education sector (literacy rates) due to inadequate availability of schooling facility, lack of transportation and communication, economic backwardness and pre-dominance of primary activities and wide gender gap due to patriarchal society, favouritism against females, desire to have a male child, sex selective abortion could be some of the reasons leading to low level of social development in the study area. Apart from the above reasons less urbanisation, engagement of more males in agricultural activities, scattered distribution of population resulting into less population density and negligible industrial development also resulted into low development in the study area during the study period. During 1990, majority of the districts of Jammu & Kashmir witnessing low level of development have moved up to moderate category due to statistical fallacy, as mentioned earlier. In 2011, the districts of Jammu & Kashmir again observed low level of development. Both populations share and the share of districts in low category of developed districts has increased during 1991 and 2011. However, the number of districts witnessing low level of development has changed with time but the spatial location of the districts remained in same areas.

The present study corroborates the theory of Kuznets which finds that regional inequality increases during the early stage of development and decreases as the economy matures. Myrdal (1957), Williamson (1965), Friedman (1966) and Alonso (1980) further supported similar behaviour of regional disparities conceived by Kuznets. Minocha (1983) found that the process of growth in India was confined to a few enclaves which assisted in the process of exploitation of the hinterland. With the independence, the organization has undergone some changes but the organization continues to be based in the favour of metropolitan cities and large urban centres. Similarly, the metropolitan cities and urban centres and politically potent administrative headquarters such as New Delhi, Chandigarh, Shimla and Dehradun witnessed comparatively high level of social development in the study area. Other hinterland areas (including the majority of the districts of Jammu & Kashmir along with Rajasthan) witnessed comparatively low level of social development. These areas continue to be weak in every relationship between urban environs characterised as core and rural hinterland as peripheral milieux.

Regional Disparities in Social Development Variables (1971-2011)

Different regions of a country grow with different rates resulting in disparities in socio-economic life. Given the difference and diversity in physical and human environs among the states of Northwest India, the regional disparities in social development are bound to happen. The study reveals discernible spatial disparities in social development in the study area.

Table 1 represents that the co-efficient of variation in literacy rate was 39.48 percent in 1971. It has phenomenally decreased to 15.55

Table 1: Northwest India: Co-efficient of variation among social development variables

Census year	*Coefficient of variation (%)*							
	X1	*X2*	*X3*	*X4*	*X5*	*X6*	*X7*	*X8*
1971	39.48	30.59	75.54	88.21	9.26	95.95	86.02	83.45
1991	15.55	10.22	24.90	30.30	6.80	75.06	76.10	72.65
2011	14.03	9.74	21.12	47.79	7.40	71.85	66.30	83.19

Source: Computed by Authors based on census of India data
(X1: Literacy Rate, **X2**: Male Literacy Rate, **X3**: Female Literacy Rate, **X4:** Student-Teacher Ratio, **X5**: Sex Ratio, **X6**: Urban Population (percent), **X7**: Health Institutes/10000 persons, **X8:** Institutional Beds/10000 persons)

percent in 1991 and about 14 percent in 2011. The study reveals that the pace of decrease in disparities in literacy rate was higher between 1971 and 1991 than during the next two decades. The study reveals that in 1971, the co-efficient of variation in male literacy was 30.59 percent. It witnessed about three-fold decline between 1970s and 1990s. It declined further marginally to 9.74 percent in 2011. The study reveals that regional disparity in male literacy has witnessed more than three-fold decrease during the study period. The study brings out that the regional disparity in female literacy rate has also registered more than 3.5 times decrease in the study area. In 1971, the co-efficient of variation in female literacy rate was 75.54 percent. It has decreased to about 25 percent in 1991 and about 21 percent in 2011. The study reveals that pace of decline in disparities in the female literacy rate was much higher between 1971 and 1991 than 1991 and next 20 years. It happened due to focus of government towards gender parity and just issues during 1970s and 1980s and increasing awareness in the study area. The study reveals that in 1971, the co-efficient of variation in pupil-teacher ratio was 88.2 percent. It has decreased to about 30 percent in 1991. It further increased to about 48 percent in 2011. Initially, the regional disparities in pupil-teacher ratio registered decline but after 1990s experienced increase due to increasing enrolments and resulting overcrowding class rooms and paucity of primary teachers. The universalization of primary education without adequate provision of primary level teachers also increased the regional disparities in this context.

The sex ratio among northwest states of India has witnessed fluctuating trend during the study period. It is evident from the study that in 1971, the co-efficient of variation in sex ratio was 9.26 percent. It has decreased to 6.80 percent in 1991 and increased slightly to 7.40 percent in 2011. The study reveals that among all the social variables the magnitude of spatial disparities is the least and continues to be minimum in sex ratio. Table 1 reveals that the co-efficient of variation in urbanisation was about 96percent in 1971 and declined to about 75 percent in 1991 and about 72 percent in 2011. Thus, the study shows that during 1970s and 1980s there were notable disparities in urbanisation but declined with the passage of time. The pace of decline was more intense between 1971 and 1991 than 1991 and 2011. Table 1 reveals that regional disparities in availability of health institutions have decreased during the study period. The co-efficient of variation in availability of health institutes per size of population was about 86 percent in 1971 which declined to 66 percent in 2011. In 1971, the co-efficient of variation in availability of institutional beds per size of population was about 83 percent. It has decreased to about 72 percent in 1991 and further increased to about 83 percent during next two decades mainly due to excessive population growth and less availability of institutes in rural areas.

Trend of Disparities in Social Development (1971-2011)

The level of social development varies from area to area and society to society. Disparity in social development mainly follows the two trends either the increase or decrease over period of time. The change in disparities in the levels of social development depends upon many factors. The available social science literature indicates that India has witnessed regional disparities in social development. The study reveals that in

1971, the co-efficient of variation in social development was 63.6 percent among northwest Indian states. It decreased to 38.9 percent in 1991 and 40.2 percent in 2011 (Table 2). The study reveals that the disparities in the levels of social development have decreased between 1971 and 2011. The study shows that the pace of decrease in the disparities in social development was very high between 1971 and 1991. The disparities in social development in the study area remained almost confined to about 40 percent in 2011.

Table 2: Northwest India: Trends in co-efficient of variation in social development

Census year	*1971*	*1991*	*2011*
Co-efficient of variation (%)	63.6	38.9	40.2

Source: Computed by Authors based on census of India data

The decline in the co-efficient of variation showing the levels of development could be largely attributed to the progressive improvements in total, male and female literacy rates. Apart from the above variables, the significant improvement in urbanization and health sectors also helped in reducing the social disparities in the study area between 1971-2011.

Relationship Among Different Sectors (1971-2011)

Table 3 reveals that education sector including total, male and female literacy rates and pupil-teacher ratio is directly correlated with moderate to high degree of correlation with the social development in the study area. The urbanisation is also positively correlated with the social development with high to moderate degree of correlation. Sex ratio and social development registered negatively low degree of correlation in 1971. But, due to improved conditions, it has witnessed the positive signs and registered the positively low degree of correlation in 1991 and

2011. The health sector has observed positive relationship with low to moderate degree of correlation with social development varying during the study period.

CONCLUSION

The study reveals that the level of development in the northwestern region of the country differs from district to district and state to state. In 1971, the high level of development in Northwestern states of India was concentrated in few pockets. Delhi, Chandigarh and Ladakh (Jammu & Kashmir state) witnessed the high level of development. The extreme northern and southern parts of the study area were lagging behind. In 2011 also, almost the same pattern of development has been observed in Northwestern states of India. The centrally located and administratively prime centres, that is, Delhi and Chandigarh registered the high social development and bordering areas of Jammu & Kashmir and Rajasthan especially majority of the districts of Rajasthan are still lagging behind. These areas have registered the multi-sectoral social backwardness.

RECOMMENDATIONS

The Northwestern states of India have certainly undergone visible positive social transformations during the study period. But, rural and multi-sectorally backward districts of the study area have witnessed distinct spatial disparities in the levels of social development. Thus, the Governmental plans and programmes need to focus upon minimising the regional disparities in social development in the area. There is need of balanced regional planning and social development policy. Backward areas need to be strengthened and developed on priority basis.

Infrastructural development in Churah Tehsil of Himachal Pradesh - a village level analysis

Sanjeev Kumar and B. R. Thakur*, Shimla

Abstract

Churah is one of the economically and socially backward tehsils of Chamba district in Himachal Pradesh. The present study, based on secondary data pertaining to the 1991 and 2011 census, evaluates the progress in the levels of development in social and economic infrastructure in this tehsil using village-level data. Six sectoral indicators such as education, health, transport, communication, drinking water and electrification have been considered at the village level for the analysis. A composite index of these six sectors of infrastructure has been computed by assigning differential weightages to different facilities according to their relative importance and relevance in rural socio-economic development. The differential Z-score has also been used to show the pace of infrastructural development. The study reveals that there has been a considerable expansion in infrastructural facilities in different villages during the study period though intra-tehsil disparities have accentuated.

Keywords: *Infrastructure, Development, Spatial Variations, Churah Tehsil.*

Introduction

Chamba being one of the 115 backward districts as identified by the NITI Aayog, occupies a unique place in the history of Himachal Pradesh. Churah is one of the backward *tehsils* (sub-district) of this 'aspirational district' chosen for development. The aspirational district programme was launched by NITI Aayog in January 2018. It is an outcome-focused, data-driven framework aimed at bringing expeditious improvements in the socio-economic indicators of the most underdeveloped regions in the country. At present, there are 112 such pockets in the country. Continued inadequacy of basic infrastructure largely an outcome of the constraint posed by difficult terrain of this *tehsil* located in the Himalayan region, has kept this *tehsil* deprived both socially and economically.

The basic infrastructure required in rural areas is education, health, housing and drinking water to list a few which unfortunately are still poor in most villages (Srikanth and Kavuri, 2019:92-96) of India. Rural infrastructure plays a key role in reaching the benefits of development to the large masses of the rural poor. Poor rural infrastructure limits the ability of the traders to travel and communicate with remote farming areas, limiting market access from these areas and eliminating competition for their produce. Construction of rural roads inevitably leads to an increase in agricultural production and productivity by intensifying existing land use to take advantage of expanded market opportunities (Samanta, 2015:86-93). The access to public infrastructure could have a

Abstract and Figures

The spatio-temporal analysis of the higher educational attainment in India during 1991-2011 has been made at the state level by picking up data/information from the Census of India and Government of India educational reports and documents. Simple percentages, gender differential and coefficient of correlation technique has been used to study the spatial pattern and changes therein. The study unfolds that though there has been an increase in the share of persons having higher educated attainments from 5.7 per cent in 1991 to 8.9 per cent in 2011, still India is at the infancy stage of higher educational attainments where only about one of each ten literates has attained the higher educational level. Moreover, there are wide variations in educational attainment at the regional level, attributed mainly to the varying determinants like availability of educational institutes, gross enrolment ratio, literacy rate, urbanisation and poverty. Rapid expansion in higher education and narrowing down gender inequalities in higher education attainment are some of the distinctive achievements of the post-reforms period.

Introduction

Higher education, which has long been considered a key factor in economic, institutional, social development and technological progress (Lutz and Goujon, 2001:323), provides not just educated workers, but also knowledge workers to the growth of the economy (Tilak, 2003:152). While computing the human development index of any country, the UNDP has also accorded equal weightage to the education factor, speaking of the vital importance of literacy and education to the development of a nation. The higher education system is thus considered as a key pillar for the development of the national economy and achieving the frontiers of knowledge and innovation for human resource development (see Tilak, 2007; Altbach, 2009; Chattopadhyay, 2009; Jacob, 2018). For centuries, India has been home to higher education institutions and Nalanda university is believed to be one of the World's oldest universities created well before in Europe, America and other developed nations (Stolarick, 2014).

Several studies conducted earlier reveal that the inequality in access to higher education has increased substantially based on household's economic status, gender and residence (see Tilak 2007; 2018). Altbach et al. (2005) while analyzing the patterns of higher education development throughout the world concluded that universities in much of the third world simply cannot cope with the increased enrollments, budgetary constraints, and in some cases, fiscal

TRENDS AND PATTERN OF DEVELOPMENT OF EDUCATIONAL INSTITUTIONS IN ROHRU BLOCK OF SHIMLA DISTRICT, HIMACHAL PRADESH

Ajay Chanjta
D.D. Sharma

Abstract

Education plays an important role in the overall development of any region. It strengthens the other sectors by forming human capital and provides human resource to the society. It further shapes the cultural aspects and means and end of economic growth of any region. Development of educational facility is the threshold that can transform all the sectors of social and economic development. In the present study, an attempt has been made to identify the changing pattern and current status of development of educational institutions in Rohru block of Shimla district, Himachal Pradesh. The study reveals that the share of villages having primary school availability increased from 43.37 per cent to 69.82 per cent during the 1991-2019 period. Villages having the availability of middle and high school have also witnessed an increase from 13.25 and 6.63 per cent to 36.09 and 22.48 per cent, respectively. There has not been any senior secondary school at any village during 1991, but 24 new senior secondary schools have been opened during the study period. The study area has a noticeable regional disparity in the levels of development of educational institutions. However, decreasing trends of disparity in the levels of development of educational institutions have been witnessed during the study period.

Keywords: Education, Educational institutions, Development, Disparity, Composite index, Rohru.

Introduction

Education is the basic requirement for human beings. Education provides humans an ability to read and write, participate in economic growth, developing skills, creating an efficient workforce and provides basic skills to human capital for higher earning and better living (Mukherjee, 2004; Sharma and Sharma, 2017). Education is an indicator of the status of living, a path for the advancement of any nation, a gateway towards knowledge and a major contributor to the overall development of any nation (Ahmed, 2013; Wedam et al., 2015; Kumari et al., 2020). Out of eight Millennium Development Goals (MDGs) launched by United Nations in 2000, two have been directly focusing on educational development (Ngwaru and Oluga, 2015). Education is called to be an instrument for social change and it can bring equality and improve social mobility as well as interactions among different social groups of society (Sarkar and Kasemi, 2020). It acts as a tool for social transformation, poverty reduction and a base for social transformation (Rani and Jaglan, 2020). Education is an important avenue that

provides a wide range of opportunities for all-round development (Singh and Singh, 2005). Education is one of the greatest needs of our time as it brings improvement in the quality of life and plays a pivotal role in social reconstructions (Singh and Patidar, 2011). Some of the important indicators of educational development such as literacy rate, schools per 1000 population, single teacher school, drop-out rate, enrolment ratio and pupil teacher ratio have been studied and explained by Vijender and Kaushik (2015) at district level for Himachal Pradesh.

At the time of Independence, there have been only 20 universities and less than 500 colleges all over the country. After independence, in 1950, constitutional committee made provision of free and compulsory education up to the age of 14 which further converted to the right to education for 6-14 years of age by the constitutional amendment of 2002 (CREATE, 2009). This constitutional amendment has strengthened the education sector in India. Economic reforms of 1991 have boosted the private sectors to institutionalized education and improved the status of education sector in India (Kumari et al., 2020).

Many scholars have conducted studies on different areas of education over the world and in India. Ahuja and Filmer (1995) have analyzed the educational attainment in developing countries and projected the level of educational attainment by the year 2020. The study projected rising trends in the gender gap in education. Wedam et al. (2015) have critically examined the community participation in educational infrastructure development and management in Ghana. They have further observed that the local community has a considerable knowledge and understanding at the local level for the betterment and development of educational infrastructure. Mukherjee (2004) has examined the educational attainments in India with respect to trends, patterns and policy issues. She has observed that providing elementary education to all in India still remains an un-assailed frontier and there are still regional variations and disparity in the post-reform period in education with a moderate rate of success. Khan and Butool (2013) have analyzed the state-wise educational status of Muslims in India and concluded that the educational status of Muslims in India is not satisfactory and requires special attention. Sharma and Sharma (2017) have examined the trends and patterns of education in India and suggested a complete structural reform to improve the quality. Kumari et al. (2020) have analysed the spatial and temporal variations in educational attainments in India and observed increasing trends and patterns of educated persons at secondary and higher level of education. Bhunia et al. (2012) have tried to map the existing school infrastructure at primary and upper primary level in Paschim Medinipur district in West Bengal and observed that Sarva Shiksha Abhiyan has contributed significantly in improving the infrastructure up to the upper primary level. Before independence, Himachal Pradesh was also far behind in terms of educational infrastructure. But after independence from the first to sixth five-year plan, special emphasis has been given to develop educational infrastructure in the state (Lal, 2013). In terms of literacy, Himachal Pradesh has made a remarkable progress. Rana and Jyoti (2018) have found that in 1950, total literacy rate of Himachal Pradesh has been only 4.8 per cent which has increased to 83.78 percent in 2011. Similarly, Vijender and Kaushik (2015) have observed an increase in

the enrolment of the students between the age group of 6-14 and school dropout rate has also fallen considerably especially among the girls of SC/ST families in Himachal Pradesh.

Although, all these studies addressed different aspects of the educational infrastructure and educational policies, yet the issue of availability of educational institutions at village level remain untouched. This gap has necessitated to carry out a village-level study on the status of development of educational institutions in Himachal Pradesh. It is the institution that provides the base on which the structure of educational development can be erected. In this context, this study has been conducted to evaluate spatio-temporal variations in the availability of educational institutions and disparity in the level of development of educational institutions in the Community Development block Rohru of Himachal Pradesh.

Objectives

Major objectives of the study are:

- to examine the current status and changing pattern of availability of educational institutions, and
- to evaluate the trends and pattern of disparity in the levels of development of educational institutions in Community Development Block Rohru of Himachal Pradesh.

Study Area

The study area constitutes Community Development (CD) Block Rohru of Shimla district. The block is situated in eastern part of the Shimla district of Himachal Pradesh. The block is located between latitudes of 31º 6' 39" to 31º 17' 32" north and longitudes of 77º 40' 15" to 77º 55' 35" east. The block spreads over an area of approximately 324 km^2 and falls in the lesser Himalayan region (Fig. 1). CD block Rohru covers the south-eastern part of Shimla district which is a water divide of two major river systems of India i.e., Ganga river system and the Indus river system. This area has a complex physiographic mosaic of hills, valleys and snow-clad peaks. The relief of this area ranges from a minimum of 1378 meters to a maximum of 3409 meters. This area is drained by Sai khad and Dogra khad which are tributaries of Pabbar river. Pabbar river rises from Chandra Nahan north of Rohru and joins Tons river near Tuini in Uttarakhand. The study area comprises of 188 villages out of which 170 have been inhabited with 12,480 households in 2011. The total population of the study area has been 56,421 persons in 2011, constituting 29,050 males and 27,371 females. The density and sex ratio of population in the study area have been 186 persons per km^2 and 942 females per thousand males, respectively in 2011. The literacy rate of the study area has been 76.75 per cent and there has been only 0.11 per cent of gender disparity in literacy. The economy of the study area is agro-based. The study area is dominated by apple cultivation and is one of the major apple producers in the state. More than 45 per cent of the study area is under cultivation in which 43 per cent area is under the cultivation of horticultural crops. In 2011, about 31 per cent of the total population has been of cultivators and agricultural labourers.

Database and Methodology

The study is based on secondary data collected from the Census of India for the decades of 1991, 2001 and 2011. Data have also been collected from the Directorate of Elementary and Higher Education, Shimla,

Himachal Pradesh for the year of 2019. The census year 1991 has been taken as base year because the study intended to compare two decades prior to Right to Education (RTE; 1991, 2001) and almost two decades after RTE (2011 and 2019) since census 2021 is yet to be conducted. It provides almost 30 year long period to study the development of educational institutions in the study area. The village is the primary unit of study. To study the levels of development of educational institutions, the availability of primary school, middle school, high school, senior secondary school and college in a village has been given scores according to their hierarchy as 1 for primary school; 2 for middle school, 3 for high school, 4 for senior secondary school and 5 for college. The scores have been added together for the particular village to know the composite score. To evaluate the overall development of educational institutions in the study area statistical technique of z-score has been used. Village-wise raw data of each indicator have been computed into a standard score which may be expressed as:

$$Z_{ij} = \frac{X_{ij} - \bar{x}}{\sigma}$$

where, Z_{ij} is standard value of the indicator i in village j, x_{ij} is actual value of indicator i in village j, $\bar{x}$ is the mean value of indicator i in all villages and σ is standard deviation of indicator i in all villages. Population estimation for the year 2019 has been done by following the equation developed by Al-Eideh and Al-Omar, (2019), which is mathematically expressed as: $Nt = P \times e^{r \times t}$ where, Nt represents the number of people at a future time, P is the population at the beginning time, e is the base of the natural logarithms (2.71828), r is the rate of increase (natural increase divided by 100) and t represents the period involved.

Results and Discussions

Availability of Primary Schools

In Himachal Pradesh, a primary school can be opened if there is a walking distance of 1.5 km from the neighbourhood school and a minimum of 25 children in the age group of 6-11 years are available and willing to get enrolment in that school. Table 1 shows that except a minor decline in 2019, there has been a constant increase in the number of primary schools during the study period. In 1991, there have been 72 villages (43.37 per cent, of the total inhabited villages) having primary schools. The spatial distribution of villages having primary school reveals that in 1991, villages on the central, eastern and southern parts of the study area have a noticeable availability, while northern, western, north-western, south-western and south-eastern parts are having fewer villages with the availability of primary school facility (Fig. 2). In 1991, 96 inhabited villages have been lacking primary school facilities. Table 1 further shows that in 1991 the number of schools per 300 persons has been only 0.48. In 2001 the number of villages with primary school facility increased to 104 villages (62.65 per cent) with having a total of 118 primary schools. In 2001, 46 new primary schools have been added in 32 villages. These villages are distributed in the northern, north-eastern, eastern, central, southern, western and north-western parts. The study shows that the number of primary schools per 300 persons increased to 0.69 in 2001 from 0.48 in 1991.

In 2011, there have been 136 primary schools located in 115 villages. With respect to 2001, 11 new villages with 18 primary schools have been added in 2011. Out of these 11 villages, 5 villages (D.P.F. Kui Awal, Anu, Kerasa, Kalgaon and D.P.F. Nal) have been

Fig. 2

from Rohru tehsil, while 6 villages (Farog, D.P.F. Hinstari, Naksetli, Koti, Shekal and D.P.F. Narain) have been from Tikkar tehsil (Fig. 2). Table 1 further shows that there have been 0.72 schools per 300 persons in 2011, suggesting a slight improvement for the year with respect to 2001. In 2019, there have been 133 primary schools in 118 villages (69.82 per cent of total inhabited villages), suggesting degradation of 3 schools with respect to 2011. These three schools are GPS Shardu, GPS Barla and GPS Galon located at Sainji and Banchuchh villages of Rohru tehsil and Naksatli village of Tikkar tehsil, respectively. These schools have been discontinued by the Directorate of Elementary Education due to decreasing strength of the students. The number of primary schools available per 300 persons also declined from 0.72 in 2011 to 0.61 in 2019. However, the study reveals that with the state government's initiatives regarding the expansion of primary school facilities in the block, the Right to Education Act, awareness of the public and improvement of education among the people have led to the expansion of primary schools, as the facility recorded about two times improvement during the study period. Although, there has been an increase in the number of primary schools, yet the facility is still far behind the state government norm i.e., a primary school per 300 persons and one school per 1.5 km of travel distance.

Availability of Middle Schools

According to the government norms of Himachal Pradesh, a middle school also known as upper-primary school can be opened if there is a walkable distance of 3 km from a neighbourhood school having not less than 25 children in class 5th and are willing for enrolment in that school. In 1991, there have been only 22 villages (13.25 per cent to total inhabited villages) having middle schools (Table 1). There has been a random distribution pattern of the villages having middle school facility in 1991 (Fig. 3). Out of these, there have been only 7 middle schools for 46 villages with 11, 450 population in Tikkar tehsil. While, in Rohru tehsil there have been only 15 middle schools for 141 villages having 33,554 population. Thus, middle school facility has been better in Tikkar tehsil with respect to Rohru tehsil. Table 1 further shows that in 1991, the number of middle schools per 1,000 persons has been only 0.49 in the study area. The number of villages having middle school increased to 46 (27.72 per cent) in 2001. Thus, an addition of 24 new middle schools has been witnessed in 2001. Out of these 24 villages, 21 villages (Bashla, Berara, Bhamnoli, Chhupari, Dalgaon, Gangtoli, Garhai, Jaunli, Katsari, Kewli, Khangtehri, Khara Paani, Kupri, Madarli, Malthi, Nasari, Pujarli, Rantari, Seri, Shalawat and Sharmali) have been from Rohru tehsil, while 3 villages (Hanstari, Hanstari Teer and Kharla) have been from Tikkar tehsil. These villages have been distributed randomly all over the study area (Fig. 3). The study shows that in 2001 the number of middle schools per 1000 persons increased to 0.90 with respect to 0.49 schools per 1000 persons in 1991.

In 2011, the number of villages with middle school facilities further increased to 63 (37.27 per cent) having 64 middle schools. In 2011, 18 new middle schools have been opened. Out of these 18 villages, 13 villages (Andhreothi, Banchuchh, Bhalara, Bharoli, D.P.F. Kui Awal, Kanda, Kerasa, Khashkandi, Koti, Munchharah, Parsa, Sherog and Tandali) fall in Rohru tehsil, while 5 villages (Farog, Khalai, Koti, Thana Bag and Kuthari) have been from Tikkar tehsil. These villages have

Villages with Middle School
0 Kms. 5

Fig. 3

been distributed in the central, western, southern and south-eastern parts. Table 1 further shows that middle school per 1000 persons increased to 1.13 in 2011 from 0.90 in 2001. However, in 2019, the number of villages with middle schools decreased to 61 (39.09 per cent) with a total of 62 middle schools, because two schools (Shekhal village of Rohru tehsil and Katlah village of Tikkar tehsil) have been degraded due to a drop in student enrolment. There have been 0.94 middle schools available per 1000 persons in 2019, suggesting a decline in school population ratio with respect to 2011 (Table 1). Thus, the middle schools in the study area increased from 22 to 62 in number during the study period of 1991-2019. However, the number is still not sufficient as per the government norms. Students from 93 villages still have to walk up to 5 km to reach a middle school. Students from 12 villages like Bari, Bhamnala, Chunjar, D.P.F. Beraseli, D.P.F. Hanstari, D.P.F. Malkhun, D.P.F. Sharmali Doyam, Kaneora, Kasheni, Kutu, Runda and Thana have to walk 6 to 10 km to reach a middle school and students from D.P.F. Bhalara village have to walk more than 10 km to avail the facility of middle school.

Availability of High Schools

A middle school can be upgraded to a high/secondary school if the enrolment of students in 8th class is at least 40 and it should be at a 3 km distance from the neighbourhood secondary school. The availability of high schools also has shown increasing trends with an increase in the population. Table 1 shows that there have been only 11 villages (6.63 per cent) in 1991 having high schools' facility. There have been only 4 high schools in Tikkar tehsil at D.P.F Kalgaon, Khangta, Pujarli-3 and D.P.F. Pujarli-4 villages. These schools have been serving 46 villages having 11,450 population. While, in Rohru tehsil there have been only 7 high schools at Arhal, Bhutara, Katedi, Kotru, Kui, Lower Koti and Shil villages serving 141 villages having 33,554 population. Table 1 further reveals that the number of high schools per 1,000 persons has been 0.24 in 1991. The number of villages with high school facility increased to 26 (15.66 per cent) in 2001. Thus, an addition of 15 new high schools has been witnessed in 2001. Out of these 15 villages, 12 villages like Bhalun, Jagothi, Jaunli, Khara Paani, Kupri, Malthi, Nasari, Pujarli, Samoli, Seri, Shalawat and Sharmali fall in Rohru tehsil, while 3 villages (Kuthari, Sharontha and Badshal) have been from Tikkar tehsil. These villages have been distributed in northern, central, south-western and western parts (Fig. 4). In 2001, there have been 0.51 high schools per 1,000 persons, which is an improvement of more than two times with respect to 1991.

With the addition of 8 new high schools in 2011, the number of villages with high school facility increased to 34 (20.12 per cent). Out of these 8, 7 villages like Bajauri, Bashla, D.P.F. Kui Awal, Dalgaon, Karalash, Kerasa and Rantari) are from Rohru tehsil, while only one village (Kadiwan) falls in Tikkar tehsil. These villages have been distributed in the central, western, and eastern parts of the study area. Table 1 further shows that the number of high schools per 1,000 persons increased to 0.60 in 2011 from 0.51 in 2001. In 2019 with the addition of 4 new schools the number of villages with high school facility increased to 38 (22.48 per cent). The new high schools have been opened in Kotara, Munchhara, Khangtheri and Shekhal villages. There have been 0.58 high schools available per 1000 persons in 2019, recording a slight decline with

Fig. 4

respect to 2011. Although, the number of high schools increased from 11 in 1991 to 38 in number in 2019, recording more than 3 times improvement, yet the number is still not as per the government norms. Students from 40 per cent of villages have to walk up to 5 km to reach the school. Students from 28 per cent of villages have to walk 6 to 10 km to reach a high school and students from 9 per cent of the villages have to walk more than 10 km to avail the facility of high school, while as per government norms the facility should be available within the distance of 3 km from the neighbourhood.

Availability of Senior Secondary Schools

A senior secondary school can be opened if there is a walkable distance of 5 km from the neighbourhood and a minimum of 60 children in the 10th class. It is evident from the study that there has been no senior secondary school in any village till 1991. During the 1991-2001 period, 15 senior secondary schools have been opened in 15 villages (9.04 per cent of total inhabited villages). Out of these, 2 senior secondary schools have been at Khangta and D.P.F. Pujarli 4 villages of Tikkar tehsil serving 46 villages having 12,501 population. While, in Rohru tehsil there have been only 13 senior secondary schools at Arhal, Bashla, Bhalun, Gangtoli, Jaunli, Khara Paani, Kui, Malthi, Nasari, Pujarli, Seri, Shalawat and Sharmali serving 141 villages having 38,369 population. These schools have been distributed in the northern, central and western parts (Fig 5). Table 1 further shows that in 2001 the number of senior secondary schools per 1,000 persons has been 0.29.

With addition of 12 new schools, the number of villages having senior secondary school increased to 27 (15.98 per cent) in 2011. Out of these 12 villages, 9 villages of D.P.F. Kui Awal, Dalgaon, Karalash, Katedi, Kerasa, Kotru, Lower Koti, Rantari and Samoli have been from Rohru tehsil, while 3 villages of Kuthari, Pujarli-3 and Badshal have been from Tikkar tehsil. These villages have been distributed in the northern, central, eastern western and north-western parts (Fig. 5). In total there have been 4 senior secondary schools for 46 villages having 13,970 population in Tikkar tehsil and 23 senior secondary schools for 141 villages having 42,451 population in Rohru tehsil. The institutional population ratio has increased from 0.29 in 2001 to 0.48 in 2011. However, it must be mentioned that Census of India has shown the availability of senior secondary schools in nine villages of Bashla, Jaunli, Khara Paani, Kotru, Nasari, Pujarli, Seri, Shalawat and Sharmali in 2001 as well as in 2011 but the data received from Directorate of Elementary and Higher Education and field check revealed that there have been no such schools in these villages. Thus, actually there have been 6 and 18 senior secondary schools in the block in 2001 and 2011.

With the addition of 6 new schools, there have been 24 (14.20 per cent) senior secondary school in 2019. There have been 0.37 senior secondary schools available per 1000 persons in 2019 as compared to 0.48 schools available per 1000 persons in 2011, suggesting a decline in school population ratio (Table 1). These schools are distributed in northern, central, eastern, southern, western and north-western parts (Fig. 5). Thus, the senior secondary schools in the study area increased from 0 in 1991 to 24 in 2019. However, the number is still not sufficient as per the government norms. Students from 73 villages still have to walk up to 5 km to reach a senior secondary school. Similarly, the

students from 52 villages have to walk 6 to 10 km to reach a senior secondary school and students from 17 villages have to walk more than 10 km to avail the facility of a senior secondary school.

Availability of Colleges

A degree college can be opened if there is a walkable distance of 25 km from the neighbourhood college. The study shows that there has been only one college in the study area during 1991-2011, located at Seema village. However, a new college at village Khangta (Tikkar) has been opened in 2016 improving the accessibility for higher education.

Disparities in Levels of Development of Educational Institutions (1991-2019)

To highlight the regional variations in disparities in the levels of development of educational institutions, z scores have been calculated and the results have been discussed as under.

Areas with High Level of Development

The villages recording composite z score values of more than 1.50 fall in this category. In 1991, 12 villages comprising 7.23 per cent of total inhabited villages witnessed high level of educational institutional facility (Table 2; Fig. 6). In 2001, the number of villages falling in this category increased to sixteen. Only 5 villages (Arhal, Bajauri and Kui from Rohru tehsil and D.P.F. Pujarli-4 and Khangta from Tikkar tehsil) could maintain their position from 1991 to 2001 period. 11 new villages entered to this category in 2001. The addition of new primary, middle, high and senior secondary schools in Gangtoli, Junli, Pujarli, Seri and Khara Paani villages and addition of the middle school, high school and senior secondary schools in Malthi, Nasari, Shalwat and Sharmail villages has shifted these villages to the high level of educational facility in 2001. Similarly, the addition of middle and high schools in Bhalun village and addition of middle and senior secondary schools in Bashla village has led to the improvement in their development of educational institutions. Seven villages (D.P.F. Kalgaon and Pujarli-3 from Tikkar tehsil and Buthara, Katedi, Kotru, Lower Koti, and Shil from Rohru tehsil) recorded no expansion of educational facilities in 2001 as compared to other villages in 1991, therefore due to this factor these villages could not retain their position and shifted to the lower levels of educational facility.

In 2011, the number of such villages increased to 28 (Table 2). All the sixteen villages from 2001 maintained their position in this category in 2011. Twelve new villages (Pujarli-3, Kuthari and Badshal from Tikkar tehsil and Katedi, D.P.F. Kui Awal, Dalgaon, Karalash, Kerasa, Rantari, Lower Koti, Kotur and Samoli from Rohru tehsil) entered to category in 2011. The addition of new primary, middle, high and senior secondary schools in D.P.F. Kui Awal and Kerasa villages and the addition of either middle, high school and senior secondary schools at Bashla, Rantari, Badshal, Katedi, Kotru, Karalash, Pujarli-3, Dalgaon, Lower Koti and Samoli villages has led to the improvement in their composite z scores for joining this category in 2011. However, in 2019, only twenty-four villages witnessed a high level of development of educational institutions. Nineteen villages could maintain their position of 2011 in 2019 (Table 2). While, Jagothi, Kotara, Shil, Kadiwan and Sharontha villages joined this category with improvement in the composite score with the addition of middle, high and

senior secondary schools. It can be observed from the above discussion that there has been a continuous change in the number as well as the spatial pattern of the villages witnessing a high level of the educational institutional facility.

Areas with Moderate Level of Development

The villages recording composite z scores ranging from 0.51 to 1.50 fall in this category. The study shows that only 10 villages have recorded moderate level of development of educational institutions in 1991 (Table 2; Fig. 6). In 2001, the villages witnessing moderate level of educational facility increased to 12. Only 5 villages (Badshal, Kuthari and Sharontha villages from Tikkar tehsil and Jagothi and Samoli villages from Rohru Tehsil) could maintain their position in areas of moderate category from 1991 to 2001 period. Seven new villages such as Buthara, Katedi, Kotru, Lower Koti, Pujarli-3, Shil and Kupri have entered this category in 2001. The opening of new primary, middle and high schools in Kupri village has led to its entry in this category, while the other six villages recorded no expansion of educational facilities as compared to other villages, due to this factor these six villages have been shifted from high level of development in 1991 to moderate level educational facility in 2001.

Five villages (Bhalun, Kadiwan, Beral, D.P.F. Shekhal and Karalash) falling in this category in 1991 could not maintain their position in levels of moderate development of educational institutions in 2001. Bhalun village recorded the addition of high and senior secondary schools, therefore shifted to a high level of educational infrastructure facility in 2001. Beral, Kadiwan and Karalash recorded no expansion of educational facilities as compared to other villages, therefore recorded a decrease in the composite score as compared to other villages and shifted to a low level of educational infrastructure facility in 2001. D.P.F. Shekhal witnessed closing of primary and middle schools, therefore, recorded no educational facility in 2001 (Fig. 6).

In the year 2011, only 6 villages recorded a moderate level of educational infrastructure facility (Fig. 6; Table 2). Five villages (Buthara, Shil, Jagothi, Sharontha and Kurpi) could maintain their position of 2001 in 2011. While, Kadiwan village entered this category with the addition of a high school in the village. Seven villages (Katedi, Badshal, Lower Koti, Kuthari, Samoli, Pujarli-3 and Kotru) which have been in this category in 2001, have joined the category of a high level of development of educational institutions due to the addition of senior secondary schools in these villages in 2011. In the year 2019, 11 villages witnessed a moderate level of educational infrastructure. Only Buthara village could maintain its position in this category in 2019 with respect to 2011. Ten new villages such as Bashla, Berara, Bhamnoli, Garhai, Kewli, Khangtehri, Munchharah, Pujarli, Shekhal and Thana Bag entered moderate level of development of educational institutions in 2019. Thana Bag village from Tikkar tehsil and Berara, Bhamnoli, Garhai, Kewli, Khangtehri, Munchharah and Shekhal villages from Rohru tehsil recorded addition of the primary, middle and high school, therefore joined the areas of a moderate level of development of educational institutions in 2019. Five villages (Jagothi, Kupri, Shil, Kadiwan and Sharontha) that have been in this category in 2011 could not maintain their position in 2019. Out of these Jagothi, Shil, Kadiwan and Sharontha villages recorded the addition of the senior secondary school, therefore, shifted to

high level of educational infrastructure category in 2019. Kupri village could not be able to retain its position in moderate level of development of educational institutions in 2019 as compared to 2011.

Areas with Low Level of Development

The villages recording composite z score 0.50 or less fall in this category. In the year 1991, 50 villages, comprising 30.12 per cent of the total villages witnessed a low level of development of educational institutions (Fig. 6; Table 2). In 2001, the number of such villages has increased to 76, comprising 45.78 per cent of the total villages. Only 42 villages could maintain their position in the low category from 1991 to 2001 period (Fig. 6). Thirty-four new villages have joined this category due to the addition of new primary and middle schools (Table 2). Eight villages (Bashla, Batara, Kerasa, Kalgaon, Malthi, Nasari, Shalawat and Sharmali) which have been in this category in 1991 could not retain their position in this category in 2001. The addition of middle and high schools in Bashla, Malthi, Nasari, Shalwat and Sharmali villages has shifted these villages to the moderate level of educational facility in 2001. While Batara, Karasa and Kalgaon villages witnessed closing down of primary schools and therefore recorded no educational facility in 2001 as compared to 1991.

Further in 2011, 81 villages consisting of 47.93 per cent of total villages witnessed low levels of development of educational institutions. Out of these, 72 villages are from the list of 2001 (Table 2). Nine new villages of Annu, Kalgaon and D.P.F. Narain from Rohru tehsil and Farog, Koti, D.P.F. Hanstari, D.P.F. Nal, Nagsetli and Shekal from Tikkar tehsil have joined this category by recording an increase in the composite score due to the opening of primary and middle schools in 2011. Four villages (Karalash, Dalgaon, Rantari and Kadiwan) from the list of 2001 have been shifted to the upper category of educational development in 2011 by having the addition of high and senior secondary schools (Fig. 6). However, in 2019, 84 villages witnessed low level of educational infrastructure facilities. Out of these, 71 villages are from the list of 2011 that could maintain their position in the low category in 2019 (Table 2). Thirteen new villages entered the category of low level of educational infrastructure in 2019. Among these, D.P.F. Beral, D.P.F. Ganga Nagar, D.P.F. Jagterli-II, D.P.F. Kashiani and Dharot villages witnessed an addition of the primary school, therefore joined this category in the year 2019. Jaunli, Khara Paani, Kotru, Kupri, Nasari, Seri, Shalawat and Sharmali have been shifted from category of high level of educational facilities in 2011 due to data fallacy as there have been no senior secondary school in 2019 in these villages but the census data have shown the availability of senior secondary schools in these villages in 2001 and 2011. Ten villages (Berara, Bhamnoli, Garhai, Kewli, Kotara, Khangtehri, Munchharah, Shekhal, Nagsetli and Thana Bag) from the list of 2011 have been shifted to moderate level of educational facilities in 2019 due to the addition of middle school and high school facilities. It can be observed from the above discussion that a high proportion of villages that have witnessed low level of development of educational institutions are having only primary and middle school facility.

Areas having No Educational Institution

In 1991, a total of 94 villages comprising 56.63 per cent of the total villages of the

block have been without any school (Table 2). Among these, 68 have been from Rohru tehsil and 26 have been from Tikkar tehsil. In 2001, the number of such villages decreased to 62 villages comprising of 37.35 per cent to total villages, out of which 38 and 24 villages have been from Rohru and Tikkar tehsils, respectively. Thirty-seven villages that have been in this category in 1991 witnessed improvement in educational infrastructure with the opening of either new primary middle or high schools in all of them, therefore these villages have been shifted to the upper category in 2001 (Fig. 6). Five villages (Batara, D.P.F. Kalgaon, D.P.F. Shekhal, Kalgaon and Kerasa) which have been in high, moderate and low categories in 1991 have joined this category due to closing down of primary, middle and high school from D.P.F. Kalgaon and D.P.F. Shekhal villages and closing down of primary school from Batara, Kalgaon and Kerasa villages in 2001.

Further in 2011, the number of villages falling in this category decreased to 54 comprising 31.95 per cent of total villages, out of which 37 villages have been from Rohru tehsil and 17 have been from Tikkar tehsil. Eleven villages (Annu, D.P.F. Kui Awal, D.P.F. Hanstari, D.P.F. Nal, D.P.F. Narain, Farog, Kerasa, Kalgaon, Koti, Nagsetli and Shekal) which have been in this category in 2001 witnessed improvement in their educational infrastructure due to addition of new schools, therefore joined the categories of a higher level of educational infrastructural facilities in 2011. In 2019, the number of such villages further decreased to 50 out of which 33 villages have been from Rohru tehsil and 17 have been from Tikkar tehsil. Five villages (D.P.F. Ganga Nagar, D.P.F. Kashiani, Dharot, D.P.F. Baral and D.P.F. Jagterli-II) shifted from no educational facility in 2011 to a low level of educational facilities in 2019 due to the addition of primary schools. Naksetli village witnessed a decrease in composite score due to the close-down of only primary school in the village, therefore entered in this category. It can be observed from the above discussion that there have been decreasing trends in the number of villages with no educational facilities which shows the improvement in availability of educational institutions, but still over one-third of the total villages are away from the basic educational facilities.

Conclusions

Educational institutional facility plays an important role in the overall development of any region. The study shows remarkable improvement in the village-wise availability of educational institutions at all the three levels (elementary, secondary and higher) in the study area during 1991-2019. In 1991, there has been a total of 105 schools at elementary, secondary and higher secondary level accounting for 2.33 schools per thousand persons, in 2019 the number of institutions increased to 257 and availability increased to 3.94 schools per thousand persons. This shows improvements in the availability of educational institutions in the study area during the study period.

Villages with primary school facilities within the village have increased from 38.50 per cent in 1991 to 63.10 per cent in 2019. The ratio of primary schools per 300 population has improved from 0.48 schools in 1991 to 0.61 schools in 2019. The percentage of villages having middle schools has also increased from one-tenth in 1991 to near about one-third of the total villages in 2019. The number of high schools has witnessed an increase from 11 to 38 during the study period, while the number of senior secondary schools has increased from

nil in 1991 to 24 in 2019.

The study also shows that the inter-village disparity in terms of availability of educational institutions has gone down. The number of villages having high and moderate composite scores has increased while a decreasing trend has been witnessed in the number of villages with low composite scores. According to the government norms there should be a primary school within the distance of 1.5 kilometers from the neighboring school but near about thirty per cent of the total villages of the study area are deprived of this facility, where the students have to walk more distance to reach the school. There are seven villages namely Daroti, Batara, Tikri, Bahli, Khalwan, Antapu and Nagsetli with more than 300 population but without a primary school. As per population criteria these villages qualify to have a primary school. This anomaly should be addressed.

Acknowledgements

Authors are thankful to all sources from where the data have been collected for this paper. The authors are also thankful to the people who have in one way or the other contributed for this study. The authors are highly indebted to the reviewers and the chief editor of the journal for their valuable suggestions in the improvement of this paper.

PAPERS SUBMITTED: 2020-12-01 PUBLISHED: 2020-12-01

Chaos, Curries and Curiosities: Some Experiential Dimensions of Indian Culture for Foreign Tourists

Sonia Khan, Professor[+]

Full Article

Abstract

The culture of India has held a special attraction for international tourists. The vast landmass of the subcontinent offers a kaleidoscope of diversity. Though the country has a vast and varied resource base of tourism product, the top of mind awareness of India remains concentrated in the images of the 'Taj Mahal' huge population, colours, food, culture, customs and particularly the all-pervasive 'chaos' that forms the heartbeat of the country. This paper aims at gaining insight into the distinct aspects of India and Indian culture that tourists find curious, captivating, fascinating, shocking, and incomprehensible. The study concludes that India provides both an 'intimidating' and 'exhilarating' travel experience. The challenging country full of unpredictable surprises (both pleasant and unpleasant) is discovered as a 'universe' in itself, which delivers everything conceivable for tourists and much more. For the experiential tourists, with all its positives and negatives, a visit to India culminates into a profound 'life changing' experience that no other country can offer.

Domestic Tourism: A Panacea for Global Disasters

Sushma Rewal Chugh

Institute of Vocational (Tourism) Studies, Himachal Pradesh University, Shimla, India

Abstract: - **Disasters and pandemics have from time immemorial wreaked havoc on tourism industry worldwide. Recently tourism has been badly affected by the impact of Corona virus and the worst hit would be international tourism industry. In the wake of the threat of corona virus looming large, international tourism is bound to fall back into oblivion due to uncertainties involved. Although this pandemic has spelt disaster for tourism industry globally, domestic tourism worldwide could emerge as a ray of hope in such grim scenario. This paper is an attempt to project domestic tourism as the way forward during crises or global pandemics.**

Key words: **Disasters, pandemics, domestic tourism, international tourism.**

I. INTRODUCTION

World due to its dynamic nature is very diverse and complex and is witness to many disastrous events (Richardson, 1994). These disasters may be natural or manmade. Disaster events resulting from natural and human-made hazards are frequent occurrences throughout the world (International Federation of Red Cross and Red Crescent Societies, 2006). Latest one such disaster to hit the world is COVID-19. This deadly pandemic has in many ways devastated the lives of people globally and wrecked havoc on humanity. As per Maslow's hierarchy of needs Maslow, 1954), physiological needs are the most basic needs followed by the needs of safety and security. Tourism activities fall under higher order needs. Tourists would not want to climb up the ladder of hierarchy of needs if their lower and the most basic needs are compromised. Therefore the growing numbers of disasters and such unforeseen events/crises (Paraskevas et al., 2013) have an adverse impact on the tourism demand.

The disease had its origin from Wuhan, Hubei Province of central China. It first emerged in December, 2019. Chinese are the world's top outbound travelers. Since tourism involves movement of people, tourism activities were considered as stimulating factors that had contributed to the spread of virus. The nature of the tourism products are such that these services cannot be brought to one's door steps. A person willing to consume tourism services has to visit a particular location to avail these services (Lovelock & Wirtz, 2007). Many travelers, who travelled to and from China, became the carriers of this deadly virus, resulting in the spread of this disease all across the globe. Unfortunately even the most developed countries of the world are unable to deal with this virus or to find a cure. In these trying times when most of the countries have opted for 'lock down' or 'social distancing', economy worldwide is heading for the biggest recession of all times which is likely to last for many years to come. Tourism industry is the hardest hit industry during these tough times. When the survival of humanity is at stake, tourism would be the last thing to consider. Almost all the countries have put a ban on tourism related activities since January, 2020. International tourism would be considered a highly risky venture in modern world's uncertainties for some time to come. However, Some scholars have opined that disasters do not have lasting impact on the economy of a destination (Cavallo et. al., 2013). Tourism is a very resilient industry and has the capacity to bounce back. Many researchers suggested ways for revival of tourism industry through varied innovative measures.

Keeping in view the uncertainties and dangerous nature of the deadly virus, an attempt has been made in this paper to focus on the growing need of strengthening, promoting and projecting domestic tourism as a panacea for ailing tourism industry of the world.

II. METHODOLOGY

The study relies on the secondary data. Many researchers have studied impacts of pandemics on tourism and have suggested a way forward. Many web sites have also been consulted in this study.

Disasters, Crises and Domestic tourism

There is not much literature available on the impact of crises on tourism. Very few researchers have studied the impacts of disasters on tourism industry (Faulkner, 2001).

Travel, in general is governed by Push and pull factors. Whereas 'push' factors are intrinsic in nature and indicate personal needs, such as relaxation or breaking the monotony by taking to travel and tourism activities, 'pull' factors present the attributes of a destination (Dann, 1977, p.187). Modern world is full of complexities. Disasters or crises could happen anywhere across the globe.

Natural disasters (like earthquake, typhoons, floods, droughts), climate change and global epidemics by a new types of influenza or other unknown diseases have been identified by Prideaux (2003) as events requiring more attention and in depth studies from tourism perspective for such events may cause the most frequent and serious losses at tourism destinations. Disaster occurrences not only affect the safety of local residents and tourists, they also give rise to negative tourism images and have serious impacts on tourism development (Stylidis, Biran, Sit, & Szivas, 2014).

Tourists may have a firsthand experience or learn through media about a destination's approach /unpreparedness to deal with such crises or disasters. It would result in creating

negative image of a destination leading to avoidance of visiting that particular destination. In the wake of such eventuality, unforeseen circumstances and uncertainties tourism industry is always the first one to suffer and invariably the last on to revive. People would also have concern about travelling to the countries where health care system is compromised or not up to the mark. It has emerged from the previous studies that when image of a tourist destination is low owing to its safety or health measures, chances of revival of economy are also very low as tourists would not wish to visit such a destination (Walters et. al., 2015, p.111). Therefore, riskier destinations may be omitted from the destination choice set (Crompton, 1992; Sönmez & Graefe 1998a, 1998b). When traveling internationally, tourists often experience a great degree of anxiety (Korstanje,2011). Risk perceptions, whether real or perceived, can potentially become the dominant factors in travel related decisions, particularly in the international context (Sönmez & Graefe, 1998a; Sönmez, 1998). Air transportation is the basic element of international tourism. This may prove to be a risky preposition as infections may be spread on the aircraft through close contact and large droplets (Mangili & Gendreau, 2005); airborne spread through small-particle aerosols, as in the case of severe acute respiratory syndrome (SARS) (Olsen et al., 2003); or even through contaminated food, (Eberhart-Phillips et al., 1996; Widdowson et al.,2005). Risk perceptions associated with international travel may vary depending on the geographic region (Sönmez & Graefe, 1996). Furthermore, risk perceptions seem to have a great effect on avoidance of geographic regions and destinations (Sönmez & Graefe, 1998b). The same has been suggested by Gunter and Smeral (2016). They opined that such unforeseen situations and disasters create uncertainties with consumers, to which they react by reducing international travels and substituting it with domestic tourism, necessities to fulfill basic needs and increased savings for emergencies. Domestic tourism and regional tourism may be marketed and promoted as an antidote for survival and revival to sail through such turbulent times. Domestic tourism is the travel of residents within their own country for tourism purposes (Middleton, et al., 2009). Similarly, Hall & Lew (2009) defined domestic tourism as the tourism of resident tourists within the economic territory of the country of reference. Furthermore, Horner & Swarbrooke (2005) defined domestic tourism as a tourism activity when residents conduct holiday tours wholly within their own country of reference. Over the past 25 years a number of tourism researchers have emphasized upon the need for more scholarly attention to be devoted to domestic tourism (Jafari, 1986; Pearce, 1996; Ghimire, 2001; Gladstone, 2005).

Taine (2014: 46) opined that domestic tourism particularly in developing countries had been awarded relatively little attention compared to international tourism. Scheyvens (2007: 308) pointed about an insidious perception that domestic tourism had invariably been the 'poor cousin' of the more glamorous international tourism market, and that domestic tourism could not bring the same range of development benefits to a country. In the recent years much emphasis has been given to international tourism over domestic tourism in most developing countries. (Jerenashvili, 2014; Scheyvens, 2007; Mazimhaka, 2007).

However, importance of domestic tourism cannot be undermined, more so in the prevalent uncertain situation. Domestic tourism is the largest and the most significant form of tourism when compared to its international counterpart (UNWTO, 2012). It has been observed that countries such as Brazil, India, Indonesia and South Korea promote domestic tourism as a vehicle for national integration and nation building seeking to channel local tourists to destinations of collective symbolic significance (Ghimire, 2001; UNWTO, 2012; Kang et al., 2014).

International Tourism a treacherous endeavor in the times of pandemics?

Tourism worldwide has suffered a lot from covid-19 pandemic and is not likely to recover in the coming years. In the current scenario, when thought of crowded airports is a cause of grave concern, travel for the purpose of exploring and enjoying foreign destinations will cease to be a source of joy and pleasure. During such treacherous times domestic tourism may emerge as a less risky alternative.

Experts have predicted a grim future for tourism industry across the globe. It may take from a few months to years for tourism industry to recover from the impact of Corona virus. People may not be willing to undertake international travel and tourism activities for the risk and uncertainties involved. There has been a growing concern among the natives with regard to foreigners or even their own nationals who had travelled abroad. Non natives are scrutinized with suspicion. The whole outlook towards travel and tourism activities took a U-turn. All across the globe, people who were travelling or had travelled recently have been treated like untouchables for the obvious reasons. Majority of the countries globally have opted for 'lockdown' for months altogether. The worst hit in this exercise were tourists who were stranded in foreign lands with limited means. There were travelers who were stuck in cruise ships with the fear of corona virus looming large. Many of them became infected with the deadly virus. Thus tourism related activities have instilled fear and anxiety in the minds of future travelers as well. However, due to these trying times tourism should not be labeled as a dangerous activity. Tourism is a highly resilient industry. These times should be seen as an opportunity to develop and promote domestic and regional tourism. This can prove to be as an antidote to cure ailing tourism industry globally. Studies have revealed that domestic tourists are not much affected by the global upheavals. Domestic tourism has the capacity to spring back on track quickly compared to international tourism as the fear or anxiety factor of venturing within one's own country is significantly less.

Socio-economic implications of domestic tourism

Dynamism is inherent in mankind urging to find ways to explore and discover. Road ahead for tourism should be to discover their own countries or undertake regional travel as this may be considered less risky. Efforts should be made to connect people to their roots by encouraging them to travel to undiscovered or lesser discovered destinations in their own countries. This may emerge as a safeguard against spatial disparities in tourism. Moreover this would also ensure somewhat equal distribution of tourism earnings to far flung areas by reducing congestion of tourism in some well defined pockets.

Domestic tourism can also prove to be instrumental in stopping rural exodus. This type of tourism may encourage rural population to develop means to engage in ethnic handicraft/souvenir production, and also explore the possibilities of experimenting with local cuisines for the use of tourists. Fairs and festivals of ethnic communities should be promoted as rich and knowledgeable cultural products. This could be promoted among the tourists as an added touristic appeal.

There are many distant and lesser explored destinations that remained virus free even during the peak of pandemic. These unexplored remote areas having a great potential for nature, cultural, adventure, spiritual and wellness tourism should be identified by the developers and marketed among the domestic tourists with the help of local communities.

Domestic tourism is as important for a country as international tourism. During the uncertain times, domestic tourism can give a thrust to economic growth in the holiday regions and may give a fillip to ethnic art and craft. This may even help in filling up the void created by the lack of international tourist visitation. In one of the earliest studies conducted on domestic tourism. Archer (1978: 127) stresses its positive impacts for bringing about "a spatial re-distribution of spending power" as well as "an inter-mingling of people from diverse social and cultural backgrounds". Domestic tourism ensures a steady flow of currency and keeping it within the country. It keeps a check on inflation and also proves to be a steady source of income and employment for locals. The same fact is also emphasized by Kang et al. (2014), according to them, continuing recognition among government agencies of international travel as more significant from an economic perspective since at the national level inbound international tourism represents a form of income whereas domestic tourism represents the recycling of monies within the nation. (Kang et al., 2014: 3). During the times of crises and disasters domestic tourism assumes tremendous importance as foreign tourists shy away from crossing international boundaries. Studies revealed that domestic tourism contributions, when compared with international tourism, are as high as 60% of the overall tourism income and up to 80% of tourism arrivals (Boniface and Cooper, 1994 cited in Ghimire, 2001). The robust domestic tourism could also be used to alleviate financial outflows (Ranjanthran & Mohammed, 2010), to iron out seasonality (Kruger & Douglas, 2015) and the uncertainty of the tourism industry (Okello, Kenana, & Kieti, 2012). Domestic tourism expands and diversifies the tourism industry (Mazimhaka, 2007), generates employment, enhances economic growth, and overall tourism industry development (WTO, 2006). Domestic tourism is widely recognized as a wonderful 'crisis shock-absorber' (Mazimhaka, 2007) counterbalancing the uncertainties of international tourism owing to varied reasons such as pandemic threats, threat to safety and security, less promotional effort or lack of requisite infrastructure for international tourists. Furthermore, domestic tourism inculcates a sense of pride among natives for their culture, creates employment and entrepreneurship avenues for them, aids in economic development and promotes travel culture among the residents (Mendiratta, 2011).

This has also been observed that if a destination has negligible number of domestic tourists' visitation, it is not even popular among international tourists. Therefore generally domestic tourists are instrumental in discovering a destination and making it popular among tourists. Domestic and international destinations exceedingly depend on each other (Malska, Hudo, & Cubuh, 2005). If domestic tourism in the country has low number of tourists, this destination has also low attractiveness for international travelers. And vice versa, if country has high number of international arrivals it means that this destination is also attractive for local citizens (Djachenko, 2007). Therefore importance of domestic tourism cannot be undermined.

The global domestic tourism is lead by the United States and followed by China, India, Brazil, and the United Kingdom (Bigano, et al., 2007). Following an increase of middle income earning people and the spread of globalization, travel for the pursuit of pleasure by nationals within their own country has shown significant growth in the third world countries (Scheyvens, 2007).

Marketing as an effective tool for promoting Domestic tourism

International tourism has generally been assigned much importance than domestic tourism by most of the developing countries. Despite the fact that domestic tourism represents approximately 80 percent of world tourism flows, within tourism scholarship domestic tourists are given far less attention than their inter-national counterparts (Scheyvens, 2002; Canavan,2013). Post COVID this trend needs to be changed. It has been observed there is an esteem and prestige value attached to foreign visits by developing countries' nationals. Many of the high spender tourists who undertake international visits have yet to explore their own countries. Since international travel would not be considered safe for quite some time post COVID, therefore such potential tourists could be motivated to discover their own countries by engaging in travel to farthest unexplored corners. One effective way to attract potential tourists to these virgin native destinations

could be by posting beautiful pictures of scenic locations and tranquility on social media/websites while the world erstwhile was ravaged by the deadly virus. Various tour packages like adventure, nature, rural, health and wellness, cultural, ecological etc. can be prepared for the varied categories of tourists.

Way forward

Post COVID efforts should be made to attract tourists to those destinations that have not been affected or very less affected by this corona virus, so that tourists feel safe to visit these destinations. It is also important to safeguard these destinations against any future virus threat. Tourists should not act as carriers of this deadly virus. Therefore entry of tourists should be subject to their production of covid-19 free certificate.

Fairs and festivals of a destination should be promoted as year round attractions for tourists. Remote and unexplored destinations should be marketed as destinations abundant in natural beauty along with added touristic appeal of wellness, spiritual and cultural destinations. This has to be done with the active support of native community. Community approach can prove to be the most effective and positive during the times of crises. Community through its cumulative efforts can deal with the disasters by way of providing medical services, provisions for food and safety or housing the people in need. The same has been emphasized by Yamamura, 2016, in the study conducted on the impact of the Great Hanshin-Awaji earthquake in Japan in 1995.

It could be inferred from the after effects of pandemics that social distancing could emerge as the new norm. This aspect should be accorded due attention by the tourism developers as well. Many service providers such as restaurants have started experimenting with social distancing while serving their guests. A restaurant in New Zealand has been offering beverages to its guests using lumber (https://www.republicworld.com).

Some of the countries have used the lockdown period to promote tourism virtually with the help of social media. Tourism ministry of India has launched ‘dekho apna desh’ (discover your own country) webinar series to motivate people to travel across India. This webinar series has been providing an in-depth knowledge of Indian destinations and also urging them to explore their own countries after the lockdown period (https://www.incredibleindia.org). The same could be adopted by other nations too where their natives could be encouraged to explore own country by ‘venture within’ or ‘discover your own country’.

III. CONCLUSION

Scholars suggested governments, researchers, and tourism business sectors to prioritize domestic tourism for diversifying the country’s tourism industry (Mazimhaka, 2007), for a more socially and economically sustainable development of less developed regions (Seckelmann, 2002), in addressing the spatial uneven tourism development (Rogerson, 2015), for the recovery of the tourism industry (Bulin, 2015), for the development of non-industrialized areas to reduce economic disparities (Xu, 1999).

It has been observed that Domestic tourists are frequent travelers than international tourists (Eijgelaar, et al., 2008), and the growth of domestic tourism is steady and rarely affected by situations of the international market. Moreover, it minimizes seasonality of tourism; spread tourism activity; creates awareness (UNWTO, 2012); brings better tourist security (Mendiratta, 2011); solidarity among people (Mendiratta, 2011); sustainable development (UNWTO, 2012); retain the tourism spending within the nation; it can be developed without huge investment and so on (Som & Al-Kassem, 2013). Furthermore, providing job opportunities, rectifying the rural exodus, and revitalizing the economy, the impact of domestic tourism is dynamic for the overall economic, social, cultural and political goals of the nations (Mazimhaka, 2007; UNWTO, 2012). Hence, tourism trends are definitely slated to hit for a change for times to come. In order to revive tourism industry, it is desired to promote domestic tourism as a less risky, safe and gratifying alternative over international tourism.

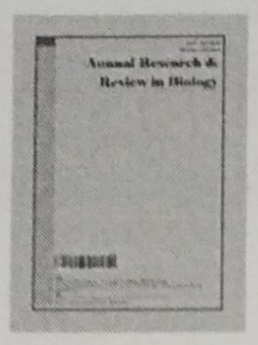
Abstract: ***The present studies were conducted on diversity, distribution and relative abundance of insect pollinators of mango in KyardaDoon valley of district Sirmaur, Himachal Pradesh. During the flowering period i.e. April - May 2019, collections were made regularly from 7 different localities viz. Kolar, Dhaulakuan, Majra, Paonta Sahib, Puruwala, Rajban and Sataun. Insect diversity studies showed a total of 23 species of insect pollinators belonging to 4 orders and 13 families of class Insecta. Of these, 11 species belonged to Diptera, 6 to Coleoptera, 4 to Hymenoptera and 2 toHemiptera. Morphological features, genitalia and wing venation of the insect species were studied. Analysis of data on relative abundance of different insect pollinators revealed that dipterans were the most prominent insect visitors of mango flowers in all the localities i. e. Kolar (56.10%), Dhaulakuan (52.03%), Paonta Sahib (57.71%), Majra (47.62%), Puruwala (61.58%), Rajban (59.96%) and Sataun (64.85%). Episyrphusbalteatus was the most abundant insect visitor to mango flowers in all the localities i. e. Kolar (16.06%), Dhaulakuan (18.09%), Paonta Sahib (13.12%), Majra (9.43%), Puruwala (27.44%), Rajban (20.11%) and Sataun (27.31%). Besides dipterans, coleopterans also constituted an important group of insect pollinators followed by hymenopterans and hemipterans.***

Keywords: Insect pollinators, Diversity, Distribution, Relative Abundance, Mango, KyardaDoon Valley

1. Introduction

Pollination is the transfer of pollen grains from male anther to the female stigma of flowering plants. Plants depend on animal pollination through insects, birds, bats and others, while insects playing the major role (Abrol, 2012). Insects and other animal pollinators are play very important role in the production of healthy crops for food, fibers, edible oils, medicines, and other products. Cross pollination by insects is of great importance in increasing crop yield, improving fruit and seed quality. Insect pollinators mainly belong to orders Coleoptera, Lepidoptera, Diptera, Thysanoptera and Hymenoptera. Pollination is an ecosystem service that is a key to food security. Pollinators are essential for many fruit and vegetable crops. Most of the Crops like cashew, mango, high blush blueberry, cramberry, squash, cacao and cardamom are pollinated by wild insects having having a combined average value of $1.2 billion (Gupta and Gupta, 1997).

The mango (*Mangifera indica* L.*)* has been acknowledged as an excellent fruit from the ancient times and has been liked by adults and infants alike. In India, the mango is produced in almost all the states. Production of this fruit has been found in the Uttar Pradesh, Andhra Pradesh, Bihar and Maharashtra, Gujarat, West Bengal, Karnataka and Kerala in the beginning. But now a days, most of the states like Punjab, Haryana and Himachal Pradesh have entered in its cultivation. Mango plants are pollinated by various pollinators and flies and stingless bees are thought to be the dominant pollinators of mangoes as they visit the flowers in large numbers and disperse between different trees.



2. Literature

Review of literature has indicated that various researchers has worked on the insect pollinators from different region of country e.g. Popenoe (1917) reported that honey bees were the important Hymenopteran insect visitors of the mango flowers. More than 550 species of flowering plants are visited by Dipterans that are potential pollinators. Mukherjee (1953) listed a number of important insects visiting mango which belonged to Lepidoptera, Hymenoptera, Coleoptera and Diptera including important genera like *Musca, Syrphus* and *Psychonosma*. Singh and Sturrock (1969) observed that flowers of mango had none of the characteristics of wind pollinated flower and considered mango to be an insect pollinated plant. Dag and Gazit (1996) observed insect pollinators visiting on mango bloom in 10 orchards located in all major mango growing areas at Israel. The species were found to play a significant role in mango pollination are; Dipterans: *Lucilia sericata, Chrysomyia albiceps (*blow flies), *Musca domestica (*housefly) and several species of syrphidae family (hoverflies). Rajan and Reddy (2019) studied the pollination efficiency of two species viz. *Apis florae (*Hymenoptera) and *Chrysomya megacephala (*Diptera) and concluded that the Calliphorid fly (*C. megacephala*) was as good as wild bee (*A. florae*) in effecting mango pollination and enhancing fruit set.

The annual economic value of insect pollinators to agricultural productivity for the major crops cultivated in the state of Himachal Pradesh is US Dollar 365 million and it is US Dollar 6.93 million for mangoes in Himachal Pradesh (Klein *et al*., 2007). This indicates that a total loss in local insect pollinators would result in a two - thirds reduction in fruit crop production (Partap and Tang, 2012). Keeping in

ABSTRACT

Aim: The study on biology of fruit borer, *Virachola isocrates* Fabricius was carried out under laboratory conditions.
Place and Duration of study: Study on the biology of *V. isocrates* was carried out under laboratory conditions in the Horticultural Research Station, Dr Y S Parmar University of Horticulture and Forestry, Seobagh Kullu in 2019.
Methodology: In order to study life cycle, *V. isocrates* reared in the laboratory and measurements of different stages were regularly recorded with the help of ocular micrometer and stage micrometer.
Results: The average incubation period was recorded to be of 8.66 ± 2.05 days. The developmental period of first, second, third, fourth and fifth instar was 2.66 ± 0.46, 3.33 ± 0.46, 3.66 ± 0.46, 3.33 ± 0.46 and 3.33 ± 0.46 days, respectively. The total larval period was found to be of 15.33 ± 6.94 days. Pupal duration was found to be 15.33 ± 6.94 days. Total developmental period was completed within 40 ± 4.08 days through five larval instars on pomegranate.

ABSTRACT

In view of the insecticidal properties of *Mentha piperita* (peppermint) and *Verbascum thapsus* (jungle tambakoo) these were evaluated for their efficacy against pulse beetle *Callosobruchus chinensis* (L.) infesting horse gram. Extracts of leaves, roots and inflorescence were prepared with acetone and methanol and these evaluated by considering adult mortality, oviposition and emergence of F1 progeny. The results revealed significant effects on oviposition and emergence of adults, with extracts from leaves providing the best protection. It was observed that 20% extract of *M. piperita* resulted in 100% inhibition of adult emergence.

Key words: *Mentha piperita*, *Verbascum thapsus*, leaves, roots, inflorescence, acetone, methanol extracts, *Callosobruchus chinensis*, oviposition, emergence, progeny, mortality

Pulse food grains are most susceptible to insect pest damage having 5% susceptibility index as compared to wheat (2.5%), paddy (2.0%) and maize (3.5%) (Sharon et al., 2014). Horse gram *Dolichos biflorus* L. is a commercially and medicinally important pulse crop in India. Bruchids are well known pests of stored legumes worldwide and *Callosobruchus chinensis* L. is the most notorious among these and infesting horse gram. Infestation begins in the field when pods are near maturation and continues during storage where it causes maximum damage. Chemical pesticides are used for controlling its infestation but it has its own undesirable effects. Methyl bromide and phosphine are still being used as the most effective fumigants but some stored-product insects have developed resistance (Kim et al., 2003). Hence, there is a need to find ecofriendly alternatives, and plant pesticides or botanicals can satisfy this need. The plant derivatives/ metabolites play major role in defense and produce behavioural and physiological effects on insects. Use of native plants is a promising approach and this study evaluates the efficacy of acetone and methanol extracts of leaves and roots of *M. piperita* and leaves and inflorescence of *V. thapsus* on adult mortality, emergence and oviposition deterrence of *C. chinensis*.

MATERIALS AND METHODS

Experiments were carried out in the Department of Biosciences, Himachal Pradesh University, Shimla during 2016-2018. Seed samples infested with *C. chinensis* were collected from grain market, Sundar Nagar, Mandi, Himachal Pradesh and cultured on horse gram at 25°C and 70% RH. Maximum seven days were allowed for mating and oviposition and progenies emerging from subculture were used. Acetone and methanol extracts of both plants were prepared following Talukder and Howse (1993) with slight modifications. Freshly collected leaves and roots of *M. piperita* and leaves and inflorescence of *V. thapsus* were air dried and ground to fine powder. Powder was passed through a mesh sieve to obtain a fine dust. The extracts were prepared by mixing 20 g of plant powder in 100 ml of solvent in a covered glass beaker to make stock solution. This was filtered through Whatman filter paper No. 41 and left undisturbed for 24 hr. and then kept in hot water bath for complete evaporation at 56°C for acetone and 64.7°C for methanol. These crude extracts were weighed and preserved in sealed bottles in refrigerator until used for insect bioassays. Concentrations viz., 5, 10 and 20% were prepared by mixing the 2 g extracts with 40, 20, 10 ml of distilled water and whole volume of each solution was applied separately on filter paper disc and placed in 90 x 15 mm petri dish for drying. Five pairs of *C. chinensis* adults were placed on these with 50 healthy prewashed and dried horse gram seeds in each. Acetone and methanol treated filter papers in petri dishes formed the control, making the total treatments to four, each replicated thrice. Daily observations on mortality were made up to fifteen days along with observations on oviposition

Distribution of Himalayan Grey Langur, *Semnopithecus ajax*, Pocock 1928 in Himachal Pradesh, India

Vikram Singh* and DR Thakur

Department of Biosciences, Himachal Pradesh University, Summer Hill, Shimla, Himachal Pradesh- 171005, India

(Received: February 25, 2020; Revised: May 10, 2020 ; Accepted: July 05 , 2020)

ABSTRACT

Study on diversity, distribution and abundance of critically endangered species *Semnopithecus ajax* Pocock 1928commonly known as Himalayan Gray Langur was carried out in Himachal Pradesh, India and it has been observed that out of total twelve districts of the state this species is confined to Chamba districts only. This species was studied from 18 different localities of Chamba district during 2015-18. The largest troop consisting of 89 individuals was recorded from Prangal panchayat of Bharmaour block and an isolated single young individual was noticed on Koti Bridge near Sundla. There is seasonal but local migration of grey langur in the study area and species has conflict with human being due to shrinking of habitat and other natural resources.

Key words: Himalayan Gray Langur, Critically endangered, Distribution, Human langur conflict.

INTRODUCTION

India has a rich diversity of fauna and flora due to its diverse geographical and climatic conditions. These rich natural conditions equip Indian land mass to support diverse number of species of non human primates. Fourteen species comprising six species of macaques, five of langurs, two of loose, and one species of gibbon and 39 subspecies of nonhuman primates occur in India (Southwick & Lindburg, 1986; Mir *et al.*, 2015). In population abundance, Rhesus and Semnopthecus (Hanuman langur) are considered as largest population of non human primates sharing this distinction with baboon of Africa (Roonwal & Mohnot, 1977). Langurs are important species as they occupy a key position in food chains of many forest ecosystems. In India most of the population of langur comes under genus *Semnopithecus*.

Prior to 2001 *Semnopithecus entellus* was considered only one species with several subspecies like *S. entellus achates* (Plains langur), *S. e. ajax* (Dark-eyed Himalayan langur), *S. e. anchises* (Deccan hanuman langur), *S. e. entellus* (Bengal hanuman langur), *S. e. hector* (Grey langur), *S. e. hypoleucos* (Dark-legged Malabar langur), *S. e. schistaceus* (Central Himalayan langur), *S. e. dussumieri* (Dussumier's Malabar langur), *S. e. priam* (Madras grey langur) and *S. e. thersites* (Grey langur) (Molur *et al.*, 2003). It was in 2001 when these subspecies were recommended for separate subspecies under genus *Semnopithecus*. Accordingly seven different species viz. Nepal grey langur (*Semnopithecus schistaceus),* Kashmir grey langur (*Semnopithecus ajax),* Tarai grey langur (*Semnopithecus hector),* northern plains grey langur (*Semnopithecus entellus*), black-footed grey langur (*Semnopithecus hypoleucos*), Southern plains grey langur (*Semnopithecus dussumieri*)and tufted grey langur (*Semnopithecus priam*) have been recognised (Groves, 2005).

Dark-eyed Himalayan grey langur *S. ajax* is one of the least studies species of langur. This species is distributed in a varied habitat including quite dry savannah and tropical rain forests. They inhabit between 2200-4000 m amsl in the subtropical, tropical moist temperate, alpine, coniferous, broad leaved forests and scrublands (Nowak, 1999; Hilton & Taylor, 2000). In Indian subcontinent their distribution is reported from Himachal Pradesh and Jammu and Kashmir and adjacently from Pakistan and Nepal. In Himachal Pradesh they are reported from Kalatop-Khajjiar and in State of Jammu and Kashmir noticed in Dachigam National Park and in Bhaderwal district.

This species is reported from different places of the Pakistan (Roberts, 1997) and from Neelum Valley (Machiara National Park and Salkhala Game Reserve), Jehlum Valley (Moji Game Reserve and surroundings), and Hillan and Phalla game reserves in District Bagh of Pak occupied Kashmir (Ahmed *et al.*, 1999; Baig, 2004; Dar, 2006). They are also reported from Lang Tang National Park of Central Province in Nepal (Walker & Molur, 2004).

Himalayan Gray Langur is normally confused with other species of *Semnopithecus* but can be easily identified by its larger size and outer sides of both the fore and hind limbs covered with silvery-dark coloured hair (Wilson, & Reeder 1992). The long tail of this langur always forms a broad arc over their back curving towards the head when on the ground (Jay, 1965).

Dark-eyed Himalayan gray langur is basically folivorous and mostly feed on a combination of fruits, buds, leaves, stems, barks, roots and flowers and also observed eating insects. They prefer mature leaves as compared to the other parts of the plants. Average group size of *S. ajax* does not show much variation across seasons. The overall population density of *S.ajax* is about 16.32 to 28.3 individuals/ km^2 (Bagchi *et al.*, 2003; Minhas *et al.*, 2012; Edgaonkar, 2008). There is not significant variation in the density of langurs across different seasons.

S. ajax is an endangered species according to IUCN red data list but after reassessment in 2004 this species was re-designated as "Critically

Pandemics and biodiversity: A review

Authors
Sunita Saklani, Nitesh Kumar

Abstract
Pandemics and biodiversity: A review Sunita Saklani[1], Nitesh Kumar[2] [1] Department of zoology, Govt. College Sujanpur Tihra, Himachal Pradesh, India [2] Department of Botany, Govt. College Sujanpur Tihra, Himachal Pradesh, India Abstract Pandemics have a long history throughout the centuries and most of them not only result in the fatality and also undermine the social and economic set up of a society. Pandemics are always linked with biodiversity since most of the pandemics are of zoonotic origin and the majority of these are caused by viruses like Influenza (H1N1, H2N2, H3N2), MERS, Ebola and most familiar present-day. The main cause of these outbreaks is the imbalance caused by humans in Nature. A rich level of biodiversity can overcome the menace of the outbreak of pandemics. Hence, by taking the lessons from the present and past pandemics, human as a global community need to take steps to mitigate the risk of future pandemics. Keywords: biodiversity; influenza; pandemics; viruses

Introduction In this modern era, where human advances in every field are taking giant leap the emerging and re-emerging of various communicable disease health threats, and its transmission is an ever- evolving subject. If we look at the history of emerging or re-emerging infectious disease pandemics globally, then we can easily conclude that on an average it happened in every decade. However, now, the trend is changing, and it is quite evident that-, the frequency between pandemics seems to be disturbingly shorter. Transmission of pathogens that causes acute respiratory diseases/infections which were better illustrated by Severe Acute Respiratory Syndrome (SARS) in 2003, Influenza A H1N5 (bird flu) in 2007, H1N1 (swine flu) in 2009, Middle East Respiratory Syndrome (MI 2012, Ebola in 2014 and in present- most common example is Coronavirus disease 2019 (COVID-19) (Rewar & Rewar, 2015; Ma 2016; Qiu et al., 2016) [23, 16, 21]. If we look at terms often used for infectious disease, they are mistakenly used interchangeabl by medical experts. This is because the definition of each term is like liquid and it changes with the diseases which become m less prevalent over the times. (Harris, 2000; Morens et al., 2009) [1, 9]. Definitions are as follows So, Pandemic is an epidem AN EPIDEMIC is a disease that affects a large number of people within a community, population, or region.travels with A PANDEMIC is an epidemic that's spread over multiple countries or continents. enormity in term ENDEMIC is something that belongs to a particular people or country. geographical area, number AN OUTBREAK is a greater-than-anticipated increase in the number of endemic cases. of cases and days of suffering resulting in deaths. But what's the difference between endemic and epidemic? Endemic, are the diseases which have a constant presence in a specific location as malaria is endemic to parts of Africa, whereas on the other hand, an epidemic is often localised to a region, but the number of cases infected in that particular region is significantly higher than the normal. For example, when SARS cov2 or COVID-19 was reported, it was limited to Wuhan (China) at that time it was an epidemic. Afterwards, its geographical spread turned it into a pandemic. The human population have suffered from many pandemics throughout history be it the earlier form of smallpox or tuberculosis or various flu or the recent incidence of HIV/AIDS or H1N1 or SARS cov1&2. All these have created catastrophic damage in different forms. Pandemics The literal meaning of pandemic is "pan" meaning all and "demos" meaning population which apply to the rapid spread of transmissibl diseases. So, pandemics are large scale outbreak of new infectious diseases globally, which affect the substantial number of population and destroy economic and social set up of the countries. It is primarily used to indicate the rate of spread of disease and the distance of its spread (Last, 1988) [14]. The first known use of the word pandemic was found in 1666, referred to "a *Pandemick*, or *Endemick*, or rather a *Vernacular* Disease (a disease mainly dominating in a Countrey) (Harvey, 1666) [10]. Afterwards in 1828, epidemiologist and lexicographer Noah Webster in his first edition of *Webster's Dictionary* listed epidemic and pandemic as synonym (Webster, 1828) [32]. In late 19th and early 20th-century influenza pandemics may have temporarily systemise the use of word pandemic, but due occurrences of large-scale non-influenza infections and chronic and lifestyle- associated diseases it gradually loses its exactness and it thereby returned to a status similar to its later one i.e. denoting almost anything that increased in and appeared to spread within or among groups of people. Moreover, with better control on major pandemic diseases as cholera, plague, smallpox and tuberculosis etc. the term "pandemic" became closely associated with ancient time diseases, rather than present time diseases (Moren et al., 2009) [19]. In the past 5-6 decades, the origin of 335 emerging infectious diseases was reported globally. Most recent epidemics are primarily zoonotic originating in wildlife

Herbal potential of some plants from Shivalik hills of H.P, Northwestern Himalaya for treatment of waterborne diseases: A Review

Nitesh Kumar, Priya Kumari, Rakhi Gagotia, Sunita Saklani, Arvind Kumar

Abstract

Water pollution is the significant pollution of rural areas and even in the cities pollution of water occurs when pollutants or contaminants are inducted into the natural surroundings intentionally or unintentionally. Water pollution is the discharge of impurities into water bodies like chemicals, microorganisms, radioactive energy, and heat. These substances are called water pollutants and obstruct the essential water utilization or the natural working of the ecosystem. The contaminated or polluted water causes many human diseases such as cholera, diarrhea, dysentery, typhoid, jaundice, polio (infantile paralysis), and trachoma (eye infection). Himachal Pradesh is a hilly state which is full of forests with characteristic medicinal wealth and floristic diversity. Mostly the peoples of Himachal Pradesh live in the rural areas and the vicinity of the forest. They are having a great reservoir of traditional knowledge regarding the use of local plants from the forest to treat various health problems. This study emphasizes the conventional use of some plants from the forest of Shivalik hills of Himachal Pradesh, the North-Western Himalayan region, for the cure of diseases that occurs because of water pollution.

To investigate leaf extracts of *Verbascum thapsus* Linn. For their antioxidant potential

Ved Prakash and Anand Sagar

Abstract
In today's times, the role of antioxidants has been continuously recognised as a critical influence on the biochemistry of living beings. Any substance that causes delay or prevents oxidative damage to a target biomolecule is often known as an antioxidant. Antioxidants prevent the oxidation of certain biomolecules such as nucleic acids, proteins, carbohydrates, fatty acids etc. by various mechanisms. The current study was undertaken to investigate the leaf extracts of *Verbascum thapsus* Linn. for their antioxidant activity. The antioxidant capacity of the different extracts i.e. methanol, acetone and aqueous was evaluated by DPPH (1,1-diphenyl-2-picrylhydrazyl) and reducing power tests. The plant exhibited good DPPH radical scavenging activity (57.00% at 100 µg/mL in methanol extract) but moderate reducing power potential. Thus the study provided scientific evidence to the traditional uses of this plant in the treatment of disorders caused due to oxidative stress. Therefore, the leaf extracts of this plant can be selected for further investigation to predict their exact mechanism by isolating and purifying their active constituents.

Keywords: *Verbascum thapsus*, leaf extracts, DPPH, reducing power

Introduction
Pathological conditions such as ischemia, asthma, arthritis, inflammation, neuro-degeneration, Parkinson's diseases, mongolism, dementia etc. are caused by accumulation of free radicals. Natural products have become the target for a great number of research studies around the globe in finding the sources of potentially safe and more effective antioxidants [1]. Herbal drugs are considered as free radical scavengers for their therapeutic applications. Antioxidants are generally applied to prevent lipid per-oxidation in the food industries [2, 3].
Reactive oxygen species (ROS) are class of highly reactive molecules mostly derived from the oxygen metabolism through various mechanisms. Reactive oxygen species are an inevitable by-product of cellular respiration causing oxidation of lipids, nucleic acids and proteins thereby ROS damage is an underlying cause of many diseases [4, 6]. These free radicals exist in the body during an imbalance between Reactive oxygen species and antioxidants. Many medicinal plants contain valuable antioxidants such as Vitamin C, Vitamin E and polyphenols [7]. Natural antioxidants enhance the antioxidant potential of the plasma and reduce the risk of certain diseases related to heart and skin. There are many synthetic antioxidants but they are associated with many side effects hence there is a need for more potent and less toxic antioxidants [8]. It has been revealed that plants rich in phytochemicals especially polyphenolic compounds such as flavonoids possess antioxidant properties [9, 10]. Cells have refined antioxidant regulatory systems to maintain proper balance between ROS and antioxidants, however, disruption in homeostasis leads to oxidative stress and tissue injury [11, 12].
Verbascum thapsus Linn. (Family: Scrophulariaceae) grows all over Europe and in temperate Asia as far as the Himalayas and in North America. The plant is found wild on stony grounds, wastelands, woodlands, clearings and roadsides. *V. thapsus* is a herbaceous annual or biennial, erect and stout weed that produces a low vegetative rosette up to 60 cm. Leaf margins are entire or obscurely crenate and alternately arranged. Stem is erect and stout having 50-180 cm range of tallness. Flowers are densely arranged usually occurring one per axil. These flowers are yellow in colour bearing five sepals, five petals, two-celled ovary and five stamens [13, 14].
V. thapsus is known to exhibit many valuable medicinal properties such as analgesic, antihistaminic, anti-inflammatory, anticancer, antioxidant, antiviral, antibacterial, cardio-depressant, estrogenic, fungicide, hypnotic, sedative etc. The leaves, roots and flowers are usually anodyne, anti-inflammatory, antiseptic, spasmolytic, astringent, demulcent, diuretic, emollient, expectorant, nervine and vulnerary [15, 16].

Abstract and figures

Plant products have served as a major source of useful drugs for centuries and about half of the pharmaceuticals in use today are derived from these natural products. The efficacy and safety of herbal medicines have attracted the attention of scientists towards medicinal plants research. The present study was designed to investigate the whole plant extracts of Achyranthes aspera L. for their anti-enzyme (α-amylae and urease) activity. All the extracts of A. aspera were reported to show good alpha-amylase and urease inhibitory activity of greater than 50% in all the solvents used at a concentration of 1 mg/mL. α- amylase inhibition ranged from 17.66±0.10-69.90±0.50% whereas urease inhibitory activity ranged from 18.60±0.50 to 79.90±0.50% suggesting a strong α- amylase and urease inhibitory effects of this plant. Thus the study provided scientific evidence to the traditional uses of this plant in the treatment of obesity, diabetes, ulcers, kidney stones intestinal infections etc. Therefore, the whole plant extracts of A. aspera can be selected for further investigation to find their therapeutic potential. Keywords: Achyranthes aspera, plant extracts, α-Amylase, Urease

STUDIES ON ANTIBACTERIAL AND ANTIOXIDANT ACTIVITIES OF *CALTHA PALUSTRIS* L.

Mohar Singh[1*], N.K. Thakur[2] and Anand Sagar[1]

[1*]Department of Biosciences, H.P. University, Shimla (H.P.), India.
[2]Department of Chemistry, B.B.N. College, Chakmoh (H.P.), India.

Abstract

Antibacterial and antioxidant activities of *Caltha palustris* L. were evaluated by using agar-well diffusion method and DPPH free radical scavenging assay respectively. Antibacterial activity of different plant part extracts in acetone and methanol solvents was tested against four human pathogenic bacteria namely *Escherichia coli, Listeria monocytogenes, Shigella dysenteriae* and *Staphylococcus aureus* using different concentration (i.e. 25, 50, 75 and 100%.) Further, antioxidant activity of different extracts in acetone and methanol was also studied at 5%, 10%, 15% and 20% µg/mL concentrations. Extracts of different plant parts exhibited significant antibacterial and antioxidant activities. Methanol root extract showed greater zone of inhibition as compared to others extracts. Similarly, acetone leaf extract of this plant showed greater zone of inhibition as compared to others. Root and leaf acetone extracts of this plant exhibited higher antioxidant potential with lowest IC50 values 33.43 and 43.83 respectively. Potential antibacterial and antioxidant activity of this plant further investigated for knowing the bioactive molecules.

Key words: Zones of inhibition, Plant extracts, antibacterial activity, agar-well diffusion methods, DPPH (2, 2-Diphenyl-1-picrylhydrazyl) free radical scavenging assay.

Introduction

India is one of the 17-mega biodiversity centres possessing 10% of the biodiversity wealth in the world (Shiva, 1996). There are around 20,000 species of medicinal plants recorded in India till today (Dev, 1997). Himachal Pradesh is a hub of medicinal plants and people of the state have a good faith in curative properties of medicinal plants (Sharma *et al*., 2014). In India, different parts of medicinal plants have been used to cure various diseases from time immemorial (Bhattacharjee, 1998). Since, most of the available antimicrobial drugs are being resisted by microorganisms therefore researchers have focused on screening novel bioactive compounds from various medicinal plants having potential to overcome multiple drug resistance and be effectively curative in nature (Bizauyehu and Assefa, 2017). Medicinal plants produce a diverse range of bioactive molecules making them source of many useful drugs (Sukanya *et al*., 2009). Antioxidants protect the bio-molecules and different cell components from harmful free radicals by various mechanisms (Braca *et al*., 2002). The antioxidant compounds are effective free radical scavengers and popularly called secondary metabolites, present in all parts of plants (Methew and Abraham, 2006). These secondary metabolites functions as singlet or triplet oxygen quenchers, enzyme inhibitors, peroxide decomposers and synergists (Larson, 1998). Natural antioxidants are in more use as compared to synthetic antioxidants because these are less toxic, cost effective and having no side effects. Therefore interest in natural antioxidants is growing rapidly. Certain phytochemicals like flavonoids and phenolics are potent for free radical scavenging activity (Channda and Dave, 2009). Investigated medicinal plant *Caltha palustris* L. is a wild species of Ranunculaceae family having ethno-botanical medicinal uses has been collected and analised from district Kullu of Himachal Pradesh.

Abstract and figures

In the present investigation, three strains of cyanobacteria isolated from agricultural fields near to salt mine were used as biofertilizer individually and in consortia. Farm yard manure was also used along with cyanobacterial biofertilizers to see the ameliorative effect on soil physical, chemical and biological properties. The algalization experiment was conducted in pots in the glass house of the department for 240 days. There was an improvement in carbon, nitrogen, phosphate, potassium, magnesium, calcium, zinc, iron, copper and manganese with biofertilizers treatment whereas sodium ion, EC and pH were found to be decreased. Soil microbial activities and plant growth parameters were found to be improved. Thus, the cyanobacterial species show promise in effective exploitation for phytoremediation and improved productivity of saline soils.

Abstract **– The study was conducted to isolate and identify the rhizosphere fungi and AM spores from the soil samples of *Murraya koenigii* (Curry patta) growing in three different sites of Hamirpur District of Himachal Pradesh. For the isolation of Rhizosphere fungi Dilute Plate Method was followed. Isolation and identification of AM spores was done by using Schenck and Perez (1990), manual. Investigations on rhizosphere fungi and VAM spores isolated from the root adhering soil samples of curry patta revealed the presence of thirty species of fungi and seven species of VAM fungi belonging to three genera were present. A comparison of seasonal distribution of these fungal associates revealed that twenty species belonging to 16 fungal genera (*Alternaria, Aspergillus, Chaetomium, Coniothyrium, Curvularia, Emericella, Fusarium, Gliocladium, Mortierella, Mucor, Penicillium, Phoma, Pythium, Rhizoctonia, Rhizopus* and *Trichoderma*) were reported in rainy season and eleven species of fungi belonging to seven genera (*Aspergillus, Cunninghmella, Fusarium, Mortierella, Penicillium, Rhizoctonia* and *Trichoderma*) were recorded in spring season. Eight species belonging to six genera (*Alternaria, Aspergillus, Baratalinia, Coniothyrium, Chaetomium*, and *Trichoderma*) were recorded in summer season and seven species of fungi belonging to four genera (*Aspergillus, Gliocladium, Mortierella* and *Penicillium*) were recorded in winter. The VAM fungi include three genera *Acaulospora*, *Gigaspora* and *Glomus. Acaulospora* was the dominant genus represented by four species (i.e. *A. delicata*, *A. foveata*, A. *mellae* and A. *spinosa*). The genus *Glomus* was represented by two species (i.e. *Glomus geosporum* and *Glomus macrocarpum*). The genus Gigaspora was represented by a single species (i.e. *Gigaspora calospora*). The results showed the association of rhizosphere as well as VAM (Vesicular *Arbuscular Mycorrhiza*) fungi in *Murraya koenigii*.**

Keywords **– Rhizosphere fungi, VAM, *Acaulospora*, *Gigaspora*, Curry Patta.**

I. INTRODUCTION

Murraya koenigii (L.) Spreng. is an important member of family Rutaceae. The genus *Murraya* include five species of which, the leaves of *Murraya koenigii* are used as an ingredient in curry. The common name of this plant is Curry Patta. It is distributed in India, China and Philippine islands. In India it grows in Himachal, Punjab, Parts of Assam (Lakhimpur), Bengal, Deccan, Konkan, Western Ghats of Bombay to Travan core and Ceylon.

The 'rhizosphere' generally refers to the zone of soil surrounding the roots with higher microbial activity than in soil remote from roots [1]. The rhizosphere microorganisms increase the ability of plants to acquire nutrients from soil by either increasing the extent of root system (through the fungal hyphae) or solubilising macronutrients such as phosphorous or sulphur [2].

VAM fungi are ubiquitous in distribution. They occur over a wide ecological zone. It has been estimated that VAM can be found in 70% of all plant families [3]. Members of order Glomales form mycorrhizal relationship with most agronomically important angiosperms, some gymnosperms, as well as certain bryophytes and pteridophytes and even a few algae [4].

Abstract

In this paper, literature regarding antioxidant activity (in vitro) of Indian medicinal plants was reviewed. Paper also gives an account of family, places of collection, part used, solvent, standards and methods used to define antioxidant potential of most of the Indian medicinal plants, which have been analyzed for free radical scavenging property.

WELCOME TO THE AJCB (An International Peer-reviewed Journal) ISSN 2278-7666 (Online)

Frequency: Bi-annual [July & December]

Asian Journal of Conservation Biology (AJCB) is an international peer-reviewed open access journal of conservation biology, dedicated to provide a reliable source of information concerning the biodiversity conservation, natural resources management, sustainable development, legal status, survival prospects of all wildlife and would prefer conservation issues related to Asian biodiversity.

CURRENT ISSUE

Vol. 12 | No. 1 July 2023

Teachers' Perception towards National School Lunch Programme (Mid-Day Meal Scheme) In District Kangra of Himachal Pradesh at Elementary Level

Chaman Lal
Assistant Professor, Department of Education, ICDEOL, Himachal Pradesh University, Shimla-171005, India

Abstract

The purpose of this study was to study the teacher's perception towards national school lunch programme (mid-day meal scheme) in district kangra of Himachal Pradesh at elementary level. A sample of 100 teachers, which included 74 female and 26 male teachers, were selected using purposive sampling technique. Teachers' perceptions towards national school lunch programme (Mid-Day Meal Scheme) studied by using questionnaire. The information collected through teacher's questionnaire, was put to percentage analysis to give meaning to data. This study will be very helpful to the teachers, policy makers and all others who are concerned with the mission to develop elementary education and reach the goal of universalization of Elementary Education in India.

KEYWORDS: Teachers Perception, National School Lunch Programme, MDM, Elementary level Himachal Pradesh.

Introduction

The Mid day Meal Scheme was launched by Government of India with the objective of giving a boost to universalisation of education by increasing enrollment, attendance and retention and simultaneously improving the nutritional status of students in primary/upper primary classes. Mid Day Meal in schools has had a long history in India. In 1925, a Mid Day Meal Programme was introduced for disadvantaged children in Madras Municipal Corporation. Levinger (1994) the impact of School Feeding Programmes (SFPs); National Council of Educational Research and Training (2000) improve the enrolment and retention of girls in schools; Grewal et al. (2004) Nutritional Status of Rural Punjabi Children; Rana (2005) Utilization of Resources at Primary Stage; De et al. (2005) Mid Day Meal Scheme (MDMS) ; Kumar (2005) Effectiveness of National Programme of Nutritional Support to Primary Education (Mid Day Meal scheme); Gangadharan (2006) Mid Day Meal Scheme (MDMS) (termed as noon-meal scheme in Kerala); Gupta (2006) Effectiveness of National Programme of Nutritional Support to Primary Education (Mid Day Meal scheme); Deodhar (2007) Mid Day Meal Scheme; Hadi (2009) Mid Day Meal Schemes; Sharma et al. (2010) Impact of wholesome mid day meal (MDM) program; Mehta and Kour (2012) The nutritional contribution of MDM to the actual daily dietary intake of children; Paul and Mondal (2012) Impact of Mid-day Meal Programme on Academic Performance of Students; Kales (2014) Mid-day meal scheme; Chhabra and Rao (2014) The Challenges and interventions in meeting delivery of nutrition in mid-day meal scheme; Grover and Kaur (2014) examine the execution of Mid Day Meal Scheme; Lalita (2016) examine the nutritional contribution of MDM norms at Upper primary Classes; Jayalakshmi and Jissa

(2017) The Nutritional status of Mid-Day Meal programme beneficiaries and Samal and Dehury (2017) Family Impact Analysis of Mid-day Meal (MDM) Scheme in India with Special Focus on Child Education and Nutrition.

Need:

Almost all of the above studies were conducted on enrolment and retention, utilization of Resources at Primary Stage, effectiveness of national programme of nutritional support to primary education (Mid Day Meal scheme) and no efforts have so far been to see the teachers perception towards national school lunch programme (mid-day meal scheme). So, to study the teachers perception at elementary level this study was selected.

OBJECTIVES:

1. To study teachers' perceptions towards national programme of nutritional support to elementary education in Kangra district of Himachal Pradesh with regard to achievement of objectives of mid day meal scheme.

2. To study teachers' perceptions towards national programme of nutritional support to elementary education in Kangra district of Himachal Pradesh with regard to quality of meal provided under mid day meal scheme and its preparation.

3. To study teachers' perceptions towards national programme of nutritional support to elementary education in Kangra district of Himachal Pradesh with regard to perceived effect of value inclination and development of hygienic habits among students.

4. To study teachers' perceptions towards national programme of nutritional support to elementary education in Kangra District of Himachal Pradesh with regarding their own role.

5. To study teachers' perceptions towards national programme of nutritional Support to elementary education in Kangra District of Himachal Pradesh with regard to perceived effect of mid day meal scheme with respect to some miscellaneous factors.

Tools:

To conduct the study effectively a questionnaire was developed by the researcher for the purpose of obtaining responses from the teachers. This questionnaire consisted of three parts in which Part-I is introductory, Parts-II consisted of closed type 30 items concerning all the important aspect of Mid-Day Meal Scheme and Parts-III consisted of open ended questions in which teachers were allowed to write down freely the problems related to implementation of Mid-Day Meal Scheme and also the suggestions for its improvements and making the scheme more effective.

Methodology:

To achieve the objectives of the present study effectively survey technique under descriptive method of research was used.

Sampling:

A sample of 100 Government primary school teachers both 26 males and 74 females was selected by using purposive sampling procedures.

Statistical Technique:

The data collected through questionnaire was analyzed. In the study percentage was used for the interpretation of data. The percentage means that the results are calculated and discussed from per 100 in order to understand the results in a better manner.

Results and Discussion:

Major Findings of the Study based on Teachers' Perceptions towards national school lunch programme (mid-day meal scheme) in district Kangra of Himachal Pradesh at elementary level

- 92% government elementary school teachers were of the view that Mid Day Meal Scheme is helping to achieve the goals of Universalization of Elementary' Education and 53% teachers responded that there is no increase in enrolment at all.
- Maximum 59% teachers responded that there is no increase in the attendance of students as a result of Mid Day Meal Scheme and 80% of the teachers are against the reduction in number of dropouts.
- Improvement in learning levels as per the reviews maximum number of 80% teachers responded that there is very little improvement in learning levels and 49% government school teachers were of the view that a very little improvement in nutritional status by the Mid Day Meal Scheme.
- 98% government elementary school teachers were of view that Mid Day Meal scheme is helping to balanced and nutritious diet and 90% school teachers are in favour whereas rest 10% teachers are of the view that Mid Day Meal scheme is helping to some extent only.
- 98% government school teachers are in favour that the quality of food grains (rice) provided by F.C.I. is good in quality and 99% teachers are with the view that all the precautions has been adopted by the staff while preparing Mid Day Meal.
- 98% teachers are in favour of inculcation of values through this Mid Day Meal scheme and as per the statistic 100% teachers are in favour of scheme to eradicate discrimination.
- Sitting arrangement of children from different castes as per the result 100% teachers are in favour of sitting together children of all caste.
- 100% teachers of the government school supported the idea of development of hygiene habits through this Mid Day Meal and 82% teachers are not taking the Mid Day Meal as a problem whereas 14% teachers are taking it as a problem.

- 91% teachers responded that they should be free from the responsibility of Mid Day Meal Scheme and 77% teachers are no problem of motivation for proper implementation of Mid Day Meal Scheme.
- 88% teachers that implementation of various schemes like Mid Day Meal . Sarav Shiksha Abhiyan etc. scheme is primary concern in government elementary schools and 82% teachers were in favour of Mid Day Meal Scheme in Himachal Pradesh they realized its need in the H.P.
- 91% teachers were that Mid Day Meal Scheme is not a wastes the teaching-learning time of teachers and students and 95% teachers were in favour of providing hot cooked mid day meal daily to the students in the school.
- 97% teachers were that after the launching of cooked Mid Day Meal Scheme there is inspection by parents/guardian of children in the context to this scheme and 63% teachers have expressed that students do not feel sleepy after taking mid day meal.
- 100% teachers perceived that the meal, which is provided to the children under Mid Day Meal Scheme is liked by the students and 100% teachers responded that there is no help received on the part of local people for the implementation of Mid Day Meal Scheme.

Major Findings of the Study based on Problems Related to Mid-Day Meal Scheme in district Kangra of Himachal Pradesh at elementary level

- In district Kangra mostly there is no separate kitchen in the elementary schools for preparation of mid day meal and the preparation of meals in the same surrounding near the classes disturb the students and teachers.
- The attention of students is distracted due to this inappropriate distance of kitchen from classrooms.
- Proper storage provisions are not available in most of the elementary schools.
- There are no safety provisions in case of any accident like fire, leakage of gas cylinder etc.
- The grant for National School Lunch Programme (Mid Day Meal) is not made available timely by the concerned department dealing with Mid Day Meal Scheme.
- There is no participation and help received from the local community for the implementation of National school lunch programme (Mid-day meal).

Major Findings of the Study based on Suggestions for Making the Scheme More Effective in district Kangra of Himachal Pradesh at elementary level

1. Elementary School Teachers should be relieved of all National School Lunch Programme (Mid Day Meal) responsibilities, except supervising the preparation and distribution of mid day meal.

2. Separate kitchen-cum- store should be made available to all government elementary schools and it should be at an appropriate distance from the classrooms.

3. The National School Lunch Programme (Mid Day Meal) should be implemented in such a manner that in any circumstances it does not adversely affect teaching-learning activities in schools.

4. The grant for National School Lunch Programme (Mid Day Meal) should be increased by taking into consideration the inflation rate and should be provided monthly well in time.

5. Encourage the participation of the local school management committee in the implementation of National School Lunch Programme (Mid Day Meal).

Abstract

Disability is part of human life, and children with disabilities can be found in every society, every culture and every community throughout the world. They have the right to have respect and support in order to ensure their full participation and equality in society, but often, as a result of social attitudes or environment, they are unable to realize these rights. "Education contributes to an individual's journey toward self-reliance and independence. Schools and instruction must be designed and organized to meet the varying needs of individual learners". The present study is an attempt in this direction and assesses the objectives of Inclusive Education of the Disabled at Secondary Stage (IEDSS) in terms of indicators of access, quality and equity.

***Keywords**: Disability, Disabled students, Inclusive Education, Secondary Stage, IEDSS etc.*

Scholarly Research Journal's is licensed Based on a work at www.srjis.com

INTRODUCTION:

The concept of an Inclusive Education is clearly a shift from the traditional welfare and service oriented practice of special/integrated education that is no longer appropriate or effective given the current agenda based on human rights. Inclusive Education is a relatively new concept, and is now recognized throughout the world. Inclusive.

Education in essence stands for equality, and accepts every child with his or her own unique capabilities. This notion is now being accepted by all the international, national and local educational programmes. Inclusion therefore entails the educational system making it open and welcoming to all. As far as the inclusion of disabled children is concerned, there is a shift

Copyright © 2020, Scholarly Research Journal for Humanity Science & English Language

in outlook and the services from `care of the disabled child' to `education and personal development' of the child.

INCLUSIVE EDUCATION OF THE DISABLED AT SECONDARY STAGE (IEDSS) SCHEME IN HIMACHAL PRADESH:

A proposal was finalized and submitted by Himachal Pradesh Government to Government of India (G.O.I.) in 2010-2011. The proposal was approved by the Government of India (G.O.I.) in 2013-2014 and in the same year Himachal Pradesh Government executed that with immediate effect. With the mandate of providing education to every child with special needs (CWSN), irrespective of the kind, category and degree of disability, in an appropriate environment, Inclusive Education for Disabled at Secondary Stage (IEDSS) was commenced in the state in 2013-14.

REVIEW OF RELATED LITERATURE:

Affleck et al (1988) also found no significant differences in academic progress when they compared pupils without disabilities in inclusive settings (N=39) to the progress of pupils in non-inclusive settings (in this case, a comparable group in the same school but whose class did not include pupils with SEN). The pupils with SEN had mild 'handicaps', described by the authors as learning disabilities, mild 'mental retardation' and severe behavioural disorders. The measures taken carried out by California Achievement Test Battery. The results showed no significant differences between the groups. The authors conclude that placing pupils with SEN in inclusion setting does not help or hinder the academic performance of pupils without special educational needs.

Jan et al. (1990) described neurological, developmental and cognitive differences that exist between visually impaired, blind and sighted children. The findings revealed that visual impairment affects the total process of gathering and exchanging information and the effect is noticeable not only in motor skills, but also in cognition, language development and social skills.

Singal (2007) contends that in India inclusive education is understood and practiced differently from the western world. In fact there is ''a tendency to be 'politically correct' by taking on current trends in the west without a real or common understanding of their meaning, resulting in dilution of service quality''. Ideally, "inclusive education means

attending the age appropriate class of the child's local school, with individually tailored support".

Subramanyam and Rao (2008) aimed at assessing the impact of gender on emotional intelligence and academic achievement of secondary school students. The investigators concluded that there was no significant difference with regard to the impact of gender on emotional intelligence and academic achievement.

Reema (2010) conducted a study of relationship between self-concept and adjustment of visually impaired adolescents studying in inclusive and special schools. The findings of the study revealed that the development of self-concept was better in inclusive schools. It was even better in the case of male adolescent than the female ones. The relationship between self-concept and level of adjustment in the case of female adolescents was better in inclusive school settings than their male counterparts. This trend was reversed in the case of relationship between those aspects in special schools.

M. Tariq Ahsan (2011) did his work on "Meeting the Challenges of Inclusive Education in Bangladesh" the impact of the international trends for adopting inclusive educational approaches on the developing country contexts. While critically analysing the issue & mentioned about the uniqueness of the challenges of developing countries that include massive diversity in students, resource challenges, teacher readiness, accessibility related challenges, curricula and pedagogy reform and also the reluctance of the systems to accept reforms related to inclusion.

Sood Siddhi and Agnihotri Kamakshi (2015) studied the topic entitled "status of inclusion of children with special needs and effective teaching in inclusive classrooms". Inclusion, right of Children with Special Needs, is an approach to educate students with special educational needs with non-disabled children, i.e., Inclusive Education.

OBJECTIVE:

To study the perception of parents towards the implementation of INCLUSIVE EDUCATION OF THE DISABLED AT SECONDARY STAGE (IEDSS) Scheme in the state of Himachal Pradesh.

METHODOLOGY AND PROCEDURE:

The population in this study included all government secondary and senior secondary schools students' parents of Himachal Pradesh state.

Abstract: *Inclusive education is a pairing of philosophy and pedagogical practices that allow each student to feel respected, confident and safe so he or she can learn and develop to his or her full potential. It is based on a system of values and beliefs centred on the best interests of the student, which promotes social cohesion, belonging, and active participation in learning, a complete school experience, and positive interactions with peers and others in the school community. These values and beliefs will be shared by schools and communities. Inclusive education is put into practice within school communities that value diversity and nurture the well-being and quality of learning of each of their members. Inclusive education is carried out through a range of public and community programs and services available to all students. The present study was undertaken to investigate the perception of teachers towards implementation of IEDSS (Inclusive Education of the Disabled at Secondary Stage) in the state of Himachal Pradesh.*

Key Words: *Inclusive Education, Disabled students, Secondary Stage, IEDSS etc.*

1. INTRODUCTION:

Education occupies a very important place in the history and life of a nation. It is most important single factor in the achievement of rapid economic development and technological progress and also it assists in creating healthy society which aim to promote social justice through equal opportunities and freedom to masses. It is very much essential to the refinement of the cultural life of the society. So long as the educational system of a civilization is sound and comprehensive, it is alive; otherwise it could fall into small fragments. For a long time those concerned with the field of education have been grappling with the serious question of what kind of education to provide for children especially in the context of varying and different abilities of the students. Traditionally education had come to be separated into two types, namely, general education and special education. Experts and authorities have been increasingly questioning for some time now if this was a correct approach to provide education in a situation where there were children with differing abilities. It had been believed earlier that children with differing needs and especially those with special needs must be given education separately. Owing to lack of knowledge, educational access and technology, disabled or challenged and disabled children were therefore initially segregated from other children. This had led to the rise of general schools on one hand and on the other, the establishment of 'Special Schools' for the disabled or the disabled. Since the last three decades this segregation in the education field has come under severe criticism and now a consensus has begun to emerge that instead of continuing with segregated education, inclusive education must be provided. Hence efforts have been made in this direction, particularly during last two decades.

1.1. INCLUSIVE EDUCATION OF THE DISABLED AT SECONDARY STAGE (IEDSS) SCHEME:

The National Policy on Education (NPE), 1986 and the Programme of Action (1992) gives the basic policy framework for education, emphasizing on correcting the existing inequalities. It stresses on reducing dropout rates, improving learning achievements and expanding access to students who have not had an easy opportunity to be a part of the general system. The NPE, 1986 envisaged some measures for integrating of children with physical and mental handicap with the general community as equal partners, preparing them for their normal growth and development and enabling them to face life with courage and confidence. India has also been a signatory to international declarations like the Salamanca Statement and Framework for Action on Special Needs Education (1994) and the Biwako Millennium Framework for Action (2002) and the UN Convention on the Rights of Persons with Disabilities, 2006 that emphasize the need for fundamental educational policy shifts to enable general schools to include children with disabilities. The Centrally Sponsored Scheme of Integrated Education for the Disabled Children (revised 1992) is presently being implemented in States and UTs in over 90,000 schools benefiting over 2,00,000 children with disabilities. The scheme was introduced with a view to providing educational opportunities for children with disabilities in general schools, to facilitate their retention in the school system. It provides for facilities to students with disabilities including expenses on

books and stationery, expenses on uniforms, transport allowance, reader allowance, escort allowance, hostel accommodation and actual cost of equipment. The scheme also supports the appointment of special teachers, provision for resource rooms and removal of architectural barriers in schools. An important policy development after 1992 has been the enactment of Persons with Disabilities (Equal Opportunities, Protections of Rights and Full Participation) Act, 1995. Article 26 (a) of the Act makes it a statutory responsibility on the part of Central, State and Local Governments to provide free education in an "appropriate environment" for all children with disabilities up to the age of 18 years. Article 26(b) of the Act calls upon appropriate governments and local authorities to promote the integration of students with disabilities in normal schools. In addition, the Act stipulates that the appropriate Governments and the local authorities, inter alia, shall make schemes for varieties of educational initiatives and strategies.

2. REVIEW OF RELATED LITERATURE:

Singal (2007) contends that in India inclusive education is understood and practiced differently from the western world. In fact there is ''a tendency to be 'politically correct' by taking on current trends in the west without a real or common understanding of their meaning, resulting in dilution of service quality''. Ideally, "inclusive education means attending the age appropriate class of the child's local school, with individually tailored support".

Arunmozhi and Rajendran (2008) made an attempt to assess the influence of age, marital status, type of family, community and family status on the emotional intelligence of 305 women self-help group members. The investigator concluded that the self-help group members do not differ in their emotional intelligence based on their age, marital status, type of family community and family status.

Nusrat Zerin (2009) done his work on Braille Champions: Inclusive and Community Development Approach to Support Children with Visual Impairment - Experience of Sight savers Bangladesh. Sight savers Bangladesh is demonstrating the Braille champion approach, which is creating mass awareness in the community and ensuring more involvement and participation of community people in the process of implementing inclusive education of persons with visual impairment and children. Thus, illiterate persons with visual impairment are becoming literate and the children with visual impairment are getting community level support in learning Braille.

Brenda Peters and Chris Forlin (2010) did their work on "Children with ASD as Part of the Learning Community in Three International Schools in Hong Kong: Practical Implications for Class Practice" there has been a global rise in the numbers of children and young people with special educational needs, including those with Autism Spectrum Disorder (ASD), attending regular schools. The inclusion of children with ASD into regular classrooms has been mooted the most challenging for teachers. A wealth of research has investigated inclusive practices in the West. Little is known, however, about inclusive practices in Hong Kong schools for learners with ASD. Therefore, reports the results of a mixed methods study that focuses on enhancing social communication and interaction for learners with ASD. Extant inclusive class practices and opportunities for social interaction and communication for children with ASD in regular schools in Hong Kong are identified and practical implications for class practice are employed.

Astha, Bhargav Smriti and Vats Rajeev (2012) done their work on "inclusive education for disabled at secondary stage in Haryana: inputs and action required" and found that education of children with disabilities has seen a paradigm shift from segregated education in separate schools to inclusive education in regular schools along with normal children. Successful implementation of inclusive education requires consideration of policy matters, legislation reforms, financial resources, human resources, infrastructural resources and intellectual resources. There is an urgent need for providing competencies at various levels for inclusion to be successful.

Ram & Rao (2013) investigated in their study and found that providing quality education for all children in inclusive setting has been identified as the most challenging. The main purpose of this study was to find an approach of elementary school teachers for inclusive education. Attitude towards the Inclusive Education Scale (ATIES) was conducted on 78 teachers, who were working in primary school in Visakhapatnam district of Andhra Pradesh. It was found that the primary school teacher had a positive attitude towards inclusive education, significant differences found in approach towards inclusive education in relation to sex, area, age educational qualification and learning experience etc.

2.1. OBJECTIVE:

To study the perception of Teachers towards the implementation of INCLUSIVE EDUCATION OF THE DISABLED AT SECONDARY STAGE (IEDSS) Scheme in the state of Himachal Pradesh.

3. METHODOLOGY AND PROCEDURE:

The population in this study included all government secondary and senior secondary schools teachers of Himachal Pradesh state.

3.1. SAMPLE OF THE STUDY: 94 schools, 10 % of the government secondary and senior secondary schools of four sample districts, were taken up out of the total number of 940 schools and 2 teachers of each sample schools (i.e. 188 teachers) sample districts were included in the sample.

4. RESULTS:

Table 1. Perception of Teachers for the evaluation of inclusive education for disabled at secondary stage (IEDSS) in Himachal Pradesh (Total Teachers= 188)

A. Attainment of Indicators that provide educational opportunities and facilities to the students with disabilities at secondary level:

Item No.	Description	Response					
		Yes		No		Not Sure	
		N	%	N	%	N	%
i.	**Identification and assessment of children with disabilities**						
1.	Is the assessment team assess and identify the CWSN?	188	100	0	0	0	0

Abstract

Myth is a folklore genre in which characters are usually gods, demigods, or supernatural humans. Myths are endorsed by rulers and priests and are closely linked to the way a religion is practiced. In referring to their remote past many societies invoke their myths, legends or history to make an evaluation of their present. Indian and Greek mythologies are very ancient and share some startling similarities. However, mythological history across civilizations has been largely recorded by male sages, poets or philosophers like Aeschylus, Homer, Sophocles, Valmiki, Kalidas. A closer scrutiny of goddesses in various mythological traditions clearly shows that every culture was dominated by male gods although goddesses were elevated to the status of mothers or deities. In both Greek and Indian mythologies gods, who we worship, have ill-treated goddesses. The present paper highlights sufferings faced by goddesses or their subjugation in Greek and Indian mythologies.

Keywords: **mythology, goddesses, folklore, subjugation, gods, culture, discrimination**

Indian and Greek mythologies are two very popular ancient mythologies known to the world. Both mythologies have no settled connections with one another yet these share some startling similarities. Devdutt Pattanaik, an Indian mythologist, draws links between Indian and ancient Greek mythological practices. He draws parallels between Greek and Indian mythologies—'Dionysus and Shiva', '*Illiad* and *Ramayana*', 'Hercules and Krishna', 'Indra and Zeus', 'Sita and Persephone', 'Mount Olympus and Kailasha'[1] and many others. Mythologies have given variety of sacred and spiritual ideas and thereby manipulated social and cultural life of societies. Worshipping goddesses as mothers is one such idea which has trickled down in the present societies wherein women are revered as mothers. In all societies Ahmed Rasool argues "The responsibility of women for the preparation of food, reproduction and maintenance of children creates this meaning for the human community at a time that the female is guarantee of the survival of the human community. Based on this conception the image of women, they gained more power in society, the persistence of life by women, turned into a sacred matter… they were sanctified to the extent that they were praised as Goddesses and mother-gods" (24). Perhaps the most important reason of treating them as Goddesses was the fertility and reproduction (25).

History is written by men—Indian, Greek or Persian sages, poets or philosophers like Aeschylus, Homer, Sophocles, Valmiki, Kalidas recorded or created myths. All the goddesses that we revere or worship have been invented or discovered by men. In "Unearthing the Goddess Within" Christine C Keating suggests "a discourse that has been established by a patriarchal myth. We were given such characters with their beauty and flaws, by men" (486).

Martha Beck in 'Using the Greek Goddesses to Create a Well-lived Life for Women' says:

The Achievers Journal
Volume 6, Issue 4
ISSN (ONLINE): 2395-0897 / ISSN (PRINT): 2454-2296 October to December 2020

> People's behavior, that how should one act and behave is mere a personification of Gods and Goddesses of Greek, Hindu and other mythologies. This pattern or behavior is followed by every person. Gods are embodiment of each thing they do. Our myths clearly show how every culture is male dominating 'patriarchal'. And men eventually use their power to abuse women. They are exposed and condemned in myths and suddenly we realize, gods who we think to be sacred, actually treated their women in similar abusive manner, they made their women to suffer for what they did or not, knowingly or unknowingly. (1)

In any mythology one finds plethora of stories in which goddesses are humiliated or punished by their male counterparts. Irrespective of any religion or culture a society imitates their gods and goddesses to legitimize their social or personal conduct. One takes examples from their life and tries to follow them. On a closer view one can easily find that the goddesses were generally subjugated in various mythologies. They rarely had an independent voice. In real life there is no practical equality between man and women in any society. Women might appear to be happy and rejoicing their honorable status but in real life they are subject to all sorts of maltreatment and misconduct. "Make her Lakshmi" and set boundaries for her—is one of the commonly spoken lines in India**.**

Sue Blundell and Susan Blundell in *Women in Ancient Greece* describe:

> …Evolution of patriarchal dive power and of an orderly cosmos are seen to be inextricably linked. Thus male domination is represented as an essential ingredient in the stability of the universe and the justice of divine rule… Uranus tried to block the birth of his children, and it was from his genitals that the Aphrodite was born. Cronus swallowed his children and then disgorged them through his mouth… Zeus is the ruler, he produces a daughter, Athena. this means he

The Achievers Journal
Volume 6, Issue 4
ISSN (ONLINE): 2395-0897 / ISSN (PRINT): 2454-2296 October to December 2020

> completely usurps the woman's reproductive role; and birth now takes place from the head, the seat of wisdom. (21)

Aphrodite being born from the genitals of Cronos and Eve from the ribs of Adam--by this they seized the mother's reproduction. The male takes the role of a creator. Every single culture and religion glorify the magnificence of gods alone while goddesses are given a secondary role of child bearing and child rearing. Everyone is aware of the fact that fertility is in women's nature. That is why earth is worshipped as a mother because of its productive nature.

In ancient Greece several restrictions were imposed on women. They married off their daughters as soon as they attained puberty and gained sexual awareness. Many scholars claim Draupadi was married to five Pandavas as she attained her puberty at the age of sixteen; Sita was married to Lord Rama at the age of six. Similarly, Helen of Troy was married when she was seven or ten years old. P. Walcot, in "Greek Attitudes towards Women: The Mythological Evidence" says "Marriage was arranged at this age so that they could not easily tempted by all other suitors. In the course of time, it has become propensity of a man to devalue woman and they viewed her as an object of entertainment "(38). Another important factor of the passiveness of Indian women is they prefer to suffer and be dutiful to their husbands rather than submit themselves to others for the sake of pleasure and love. A popular example is of Washerman's wife in Ramayana**,** who remained truthful and dutiful to her husband after all his atrocities, she remained loyal to him. Persephone, who was the daughter of Demeter, the Goddess of grain, was abducted by Hades, the God of under-world. She pacified her mother that she would live with him and remained faithful to him.

There are many stories in Greek or Indian mythology where one finds issues like rape or abduction and there is no doubt that the female body is frequently made susceptible to sexual assault. In *Mahabharata* one witnesses the plight and agony of Draupadi, who had five

The Achievers Journal
Volume 6, Issue 4
ISSN (ONLINE): 2395-0897 / ISSN (PRINT): 2454-2296 October to December 2020

husbands, walked through fire to restore her virginity before she went to the next husband. Men desire pure, virgin and dutiful yet quiet women. To use a Keatsian phrase in "Ode to Grecian Urn", "unravished bride of quietness." Nobody can measure the trauma of Draupadi when she was called a 'whore' in the gambling hall of Kaurvas. Similarly, Menelaus, King of Sparta used to call his wife, Helen of Troy, a whore, and curse her beauty.

According to Manu a woman's most important duty is taking care of her children, husband and the extended family as protector and supplier. According to *Manusamriti* Verse 9.3 "Pita raksati kaumare bharata raksati yauvane|raksanti sthavire putra na nari svatantryamarhati||3|| "The father guards her during virginity, the husband guards her in youth, the sons guard her in old age; the women is never fit for independence" (258). Manu in *Manusmriti* again added guidelines for men, "even if man's mind is unable to resist and is full of desires, he should avoid to have sex with a woman who is on menstruation; he should not even sleep with her in the same bed. A man who has sex with a woman flooded in menstrual blood loses his wisdom, energy, strength, eyesight and long life" (255). The ideal Indian womanhood has often been transmitted through the highly popular expression 'Sati-Savitri'. The figure of Sati and Savitri constitute imitable standards of Hindu womanhood passed on by Indian mythology. Sati has been seamless in strengthening ideal of Hindu womanhood in which a wife stood by her husband's side in every situation and Savitri brings the husband back from the kingdom of dead. In *Iliad* Homer describes the role of women as a mere toy or object over which men fight with each other. Sharon L. James and Sheila Dillon in *A Companion to Women in Ancient World* say there is a constant "Conflict between Agamemnon and Achilles for the ownership of the captive Briseis" (57) and in *Ramayana* Tara, wife of Bali felt crushed between two brothers Bali and her brother-in-law, Sugriva, for the throne of Kishkindha.

Devdutt Pattanaik in his book *Sita: An Illustrated retelling of Ramayana* retells a story of Renuka.She was so faithful to Jamadagni that she could collect water for him from the river in

The Achievers Journal
Volume 6, Issue 4
ISSN (ONLINE): 2395-0897 / ISSN (PRINT): 2454-2296 October to December 2020

unbaked pots. One day Renuka saw a Gandhrava bathing in the river. She forgot the purpose and got late to return home. Jamdagani accused her of adultery and ordered his sons to cut-off their mother's head. Four out of five refused, but the youngest one swung his axe and did the needful. He used the axe in so dreadful manner, thereafter he is known to the world as Parushrama (n.pag.). Devdutt Pattanaik in *7 Secrets of the Goddesses* explains "Sita proves her fidelity by going through a trial by fire. A Sati's fidelity allegedly offered her protection from widowhood. *The Puranas* tells the story of Shilavati, who carries her leper husband on her shoulders to prostitutes. A sage is so disgusted by her husband that he declares he will die when the sun rises next. Shilavati then uses her power of chastity to prevent the sun from rising" (25).

In biblical mythology Eve is tempted by the serpent and eats the fruit from the tree of knowledge and also compels Adam to do so. For this act of transgression, both Adam and Eve are cast out of Paradise and Eve is made subservient to Adam. Before the creation of Eve, god is said to have created Lilith with hairy legs, but she refused to be subservient to Adam and so was cast out, and eventually she became the mother of Monsters.

Society located its honour in woman's body. Thousand Greek ships sailed to bring back Helen, the wife of Menelaus, King of Sparta, who eloped with Paris, Prince of Troy. Greek epics described her action brought shame to all of Greece. After Troy was torn to the ground, the wives of Trojan Warriors were brought back to Greece as concubines. Agamemnon, the leader of the Greeks, who had sacrificed his daughter Ipigeniah, to ensure good winds as they sailed to battle, returned with the Trojan princess Cassandra by his side. Agamemnon's wife, Clytemnestra was so angry that she murdered her husband and his concubine

In these stories one finds a woman stops being a person; she is dehumanised and turned into a symbol of masculine honour. This transformation from prized possession to venerated object marks the triumph of patriarchy.

If Gods are true symbols of infallibility, then why did goddesses suffer irreparably and immensely in *Ramayana, Mahabharata, Iliad,* and *Odyssey*? Standards of morality had been set by Gods: as Rama is known for his 'righteousness', Shiva for his 'impartiality', Brahma for his 'justice', Zeus for his 'mercy', and Poseidon for his 'friendly nature. That's why they are worshipped. But even gods failed to sustain 'dharmic' conduct. Following are a few examples of goddesses from Indian and Greek mythology of goddesses who have been subjugated and victimized? Most of the goddesses in great epics like *Ramayana, Illiad, Odyssey,* and *Mahabharta* suffered immensely at the hands of gods or sages.

Goddesses are generally linked with beauty, love, motherhood and fertility whereas gods are linked to valour, strength, masculinity, saviours of women, warriors—a clear binary.

II

Helen and Sita

Both *Iliad* and *Ramayana* are always glorified with the tales of heroism and hyper masculinity. Amidst the glory of men depicted in these epics lies a woman who's sacrifice and fidelity is always neglected and marginalized. In "How *Iliad* and *Mahabharata* have depicted Woman as Catalysts of War" Divya Godbole says women were harbingers of war simply because they were silent or were silenced in the course of the narrative. These muted characters and their positions were presented as catalysts of war… Their beauty was a weapon in their arsenal that they apparently used to bring the down fall of great men". Madhu Kishwar in "Yes to Sita, No to Ram" says "Sita's proof of being a chaste, by coercing her through 'Agnipariksha' was a sudden whim of an unreasonable and dubious husband" (23). When Sita came back to Ayodhya, she was not welcomed there and they called her impure. Rama sent pregnant Sita to the forest against her will and she suffered her entire life**.** Helen, who was daughter of Zeus and wife of Menelaus suffered similar fate. Margaret R. Scherer in "Helen of Troy" says "how Zeus made a plan with

The Achievers Journal
Volume 6, Issue 4
ISSN (ONLINE): 2395-0897 / ISSN (PRINT): 2454-2296 October to December 2020

Themis, Goddess of order, to bring about the Trojan War. And it was him who made Helen to run away with him and this resulted into Trojan War. Helen was mere a puppet of Zeus and Aphrodite's conspiracy. When Helen came back to Sparta, Menelaus in undignified manner used to call her 'whore'. Gods were the reason why these two women wailed all of their life" (369-70).

Diti and Gaia

Stories of killing foetus in a mother's womb or murdering new born babies out of fear either of castration or usurpation of the throne is quite common in different mythologies. In Indian mythology one finds examples of Diti (mother of Asuras, Marutas) and Devaki (biological mother of Krishana) whose brother Kamsa killed her seven sons. And in Greek mythology one finds Gaia (Earth-mother) and Rhea (daughter of Gaia) who also suffered same pain as their husbands Uranus and Cronus swallowed their own children and controlled parturition.

Diti is the mother of both the Marutas and the Asuras and sister of Aditi and Sati. Many sons of Diti were killed by Indra. In her grief Diti, pleaded with sage Kashyapa, her husband, that she should be blessed with a heroic son. Out of fear Indra managed to splinter her foetus into several pieces who became devas known as 'Maruts'. Whenever she asked her husband to have intercourse. He avoided her by saying, women should control their desires. According to *Srimad Bhagavatam* in Canto 3(3.14.23) women (only women) need to control her sex desires. "the difference between a married wife and a public prostitute is that one is restrained in sex life by the rules and regulations of the scriptures, whereas the other is unrestricted in sex life and is conducted solely by the strong sex urge."[3]

One finds a similar situation in Greek mythology. Gaia is personification of Earth in Greek mythology. *7 Secrets of Goddesses* of Devdutt Pattanaik tells a story of Gaia: her mate Uranus, the starry sky, clung to her intimately and gave her no space to deliver her children. After

The Achievers Journal
Volume 6, Issue 4
ISSN (ONLINE): 2395-0897 / ISSN (PRINT): 2454-2296 October to December 2020

castrating Uranus, his father Cronus declared himself king and ate his own children to prevent them from overpowering him as he overpowered his father. Gaia saves one son, Zeus, from the brutality of Cronus, and eventually Zeus attacked and killed Cronus. In triumph Zeus declared himself the father of Gods and takes residence atop Mount Olympus. Gaia remained the earth-mother, respected but distant (3). One can't say whether relations between Earth and other Gods was ever amiable. Donald J. Hughes and Frank Richard in "Gaia: Environmental Problems in Chthonic Perspective" say "The Gods, warrior of sky are mostly males. Sky gods became Olympians, by dominating and exasperating Gaia" (95). Woman has always paid for a man's greed.

Persephone and Saraswati

According to the Bible Eve was born out of Adam's ribs and is technically the daughter of Adam. In certain versions Adam and Eve are viewed as siblings born like two parts of single fruit. Therefore, the relation between them can be called incestuous. *Rig Veda* also tells a story of Dyaus, who had an incestuous relation with his daughter Usha. Devdutt Pattanaik in *7 Secrets of Goddesses* retells a story in which son of Brahma tried to rape his own daughter. There are many similar stories of rape and incest in different mythologies. Zeus, the lord of gods and impersonator was notorious for his libido. He had secretly seduced wives and daughters of many kings. He took the form of Swan and made love with Leda. He took the form of a beam-light and made love to Danae. He made love to Alcmene, disguised as her husband Amphitryon. Michael L. Morgan in "Plato and Greek Religion" explains that "In the shape of a serpent Zeus violently raped his mother Rhea and sired Persephone then he raped Persephone and sired Dionysos (237). In Indian mythology Brahma is considered to be the first amongst Gods. Saraswati came out from his mouth and he created human race. *Shiva Purana* tells us that when Brahma's daughter came into being Brahma desired her. In *7 Secrets of Goddesses* Devdutt Pattanaik is of the view that disgusted by the incestuous craving of father, Shiva beheaded brahma and took upon himself

The Achievers Journal
Volume 6, Issue 4
ISSN (ONLINE): 2395-0897 / ISSN (PRINT): 2454-2296 October to December 2020

the great burden of Brahma-hatya-paap. *Vishnu Purana* tells us that Ravana, a brahmin, abducted Ram's wife, Sita, not remembering that she is actually his daughter whom he had abandoned long ago (91-93).

Surapnakha and Medusa

In various mythologies the pain of goddesses remains unsung and unhonoured**.** There are many female characters in male epics who are misunderstood, ignored and almost forgotten. Those women are always seen and understood through this patriarchal vision. Both Surapnakha and Medusa are examples of those misunderstood characters and have been portrayed as demon, ogress and bad women. A dominating, vocal, sexually aggressive woman is seen as a threat to patriarchal society. Athena originated from Zeus's head, and was devoted to her father and usually did things that pleased him. Patriarchy here works this way. The name Medusa originated from a Greek word meaning 'Guardian'—was one of the three Gorgons sisters and after rejecting her childhood lover, she chose to be a priestess of Athena's temple. One day Poseidon in a fit of rage raped Medusa in the temple of Athena. Athena found Medusa guilty for seducing Poseidon cursed Medusa and turned her into a monster and transformed her hair into serpents. William S. Duffy in "Medusa as Victim and Tool of Male Aggression" says, Ovid was the first author who recognised Medusa as a rape victim. In Greek mythology one finds Gods routinely having non-consensual sex with mortal women without sustaining its consequences and without losing their status and prominence. And women were reprimanded badly for attracting the gods (5-6).

In Indian context there is a story which revolves around the most misunderstood character of *Ramayana*, Ravana's sister, Meenakshi, who was innocent, naïve, and sweet. In her childhood because of her ugliness, she faced the ignorance of her mother and later she fell in love with Vidyujiva and married him, soon after the death of her husband, on the orders of Ravana, she metamorphosed from sweet Meenakshi to ogress Surapanakha, one with sharp nails. In Dhanak

The Achievers Journal
Volume 6, Issue 4
ISSN (ONLINE): 2395-0897 / ISSN (PRINT): 2454-2296 October to December 2020

forest, Rama ordered his brother Laxamana to slice off Surapnakha's ears and nose. In a revenge Ravana abducted Sita. The alternative story of Surapnakha's describes her as a strong independent woman, who is able to fight for her own rights. She is equally strong as any man. She was a victim in the hands of patriarchal dominance and a gender biased society. She got punished merely for showing interest in another man. While Rama is shown as protector of women and he is seen as commanding Laxamana to mutilate Surapnakha's nose. Beautiful face of a woman is an asset to her because it captivates one and all. If her face is disfigured, her strength and existence is broken. Both Medusa and Surapnakha are examples of beautiful maidens. One suffered the lust of a God, the other suffered the humiliation of a God.

Indra's Wife (Sachi) and Zeus' Wife (Hera)

As a symbol of patriarchal society one finds 'pativratas' like Sita, Anasuya, Arundhati, Savitri, Mandodari, Damayanti celebrated as ideal women, who half-heartedly served their husband inspite of their treachery and impertinence. These are women who sacrificed their all and mutely suffered all throughout their life and were considered as the epitome of womanhood. In any mythology sexuality of every goddess was totally controlled by their husbands. According to *Ancient History Encyclopedia*, Hera, daughter of Rhea and Cronus, wife of Zeus and queen of the Olympians is frequently represented as the faithful wife of Zeus, but she is more famous for jealously and revengeful nature. Hera constantly caught her husband's infidelity as he was always in a chase to find a voluptuous maiden. She always remained worried and insecure for her husband. Laura Kennelly in *Is Zeus a Boundary Breaker?* suggests "Zeus in Greek mythology has been always known for his sexual voraciousness; his illicit affairs; and for his chameleonic instincts. Zeus also disregarded the paramountcy of his marriage to Hera through his countless affairs" (17). Hera was so insecure that she punished all lovers of Zeus and made them to suffer as she was suffering the agony of not being loved.[2] As W.J Wilkins in *Hindu Mythology* refers to Indrani also known by another name Sachi: "She is the Goddess of beauty in

The Achievers Journal
Volume 6, Issue 4
ISSN (ONLINE): 2395-0897 / ISSN (PRINT): 2454-2296 October to December 2020

Hinduism. She is the daughter of Asura, Puloman. She is famously known for her wrath and jealousy" (62). But like Hera she was sick of Indra's infidelity. Emily West in "The Transformation of Cyavana: A Case Study in Narrative Evolution" argues how Indra, seduced the wife of sage Gautama, Ahalya, by disguising himself as her husband (95). Both Zeus and Indra had many affairs with mortal women as well as goddesses. Apalla , Tilottama, Menaka are the names of some apsaras who had been seduced by Indra. Renate Sohnen in "Indra and Women" says "Indra being impish, was always ready to make love with a human woman, regardless of she be a virgin, married, or a paramour" (71). One of the mythological novel *Menaka's Choice* written by Kavita Kane discusses that he couldn't resist himself after seeing Menaka and took her to Amaravati. He wanted all the pleasures from her solely. Aishwarya Javalgekar in her "Indra, Zeus, and Thor: A Comparative Study of Indo-European Mythology" describes "Indra is a phallic God and a dancer. In one of the myths, Indra is castrated by angry Shiva, and is given testicles of Rama instead, which are much more potent than those of a human or anthropomorphic god" (10).

To conclude, one finds that internalization of patriarchy is very strong in women and it could be traced back to mythological goddesses who suffered silently at the hands of gods. Mythology has been always a play of men by men. In mythological space women generally did not play any significant role; they were treated as side actors in both Greek and Indian mythology. They have either been treated as an auxiliary or appendage and rarely had a voice of their own. That's why Sita's testament, Surapnakha's mutilation, Eve's elimination, Circe's expulsion and Medusa's disfigurement is showcased as the right thing they deserved. Women are portrayed as troublemakers. Pandora being a curse is blamed to bring all the bad luck and problems to the human kind. Helen is generally blamed to bring Trojan war and Draupadi for Mahabharata. Adrienne Rich has defined "re-visioning" is the act of looking back at things with a fresh perspective and Jacques Derrida has given the concept of "deconstruction" which could be used

to reinterpret centrality of mythologies, patriarchy, supremacy of men, domination and restore dignity of characters like Sita, Ahalya, Helen, Draupadi, Kunti, Mandodari, Tara, Aphrodite, Helen, Semele Surapnakha and Medusa who have been labeled as unfaithful, preludes to war and bad omens. A reinterpretation of their lives can liberate these goddesses from their afflictions and sensitize societies and cultures about treachery and abomination inflicted upon them by gods.

International Journal of Science and Research (IJSR)

International Journal of Science and Research (IJSR) is delighted to have you here! Are you a researcher looking for an international platform to publish your work? The International Journal of Science and Research (IJSR) can be your ideal choice. We believe your research deserves the widest possible audience and that is why we are proud to introduce you to the International Journal of Science and Research (IJSR).

We provide researchers with an **Open Access**, **Fully Refereed**, and **Double Blind Reviewed** platform for their work. All articles are published Monthly online in **12 issues** per year. Our passionate editorial team ensures all submissions are of the highest quality, using industry-standard peer review processes. All published papers are assigned a **Digital Object Identifier (DOI)** so they can be easily cited and tracked from anywhere in the world.

Submit Manuscript Now!

Submit Manuscript via Email: editor.ijsrnet[at]gmail.com

Article Publication: Maximum 3 Days, **Accepted Language:** English Only

Disciplines Covered: Medical Science, Engineering, Management, Science, Commerce, Social-Sciences and Arts

Type of Articles: Research Paper, Survey Paper, Informative Article, Case Studies, Review Papers, Comparative Studies, Dissertation Chapters, Research Proposals or Synopsis, M.Tech / M.E / PhD Thesis, Photo Essay

Call for Paper Publication

We are pleased to announce that the International Journal of Science and Research (IJSR) is now inviting you to submit your research manuscript for possible consideration in the current issue. At International Journal of Science and Research (IJSR), we provide an international platform where authors can submit their work and get it published with the help of our Double Blind Peer-Reviewed Editorial Board.

We provide peer-reviewed publications of the highest quality and standards. Plus we also provide an open source feature that allows you to access your content from anywhere in the world.

We look forward to receiving your manuscript. Our Editors will review it for quality and accuracy before publishing it on our website.

Our team is available 24/7 to answer any questions or doubts you may have regarding the journal submission process. Thank you for taking the time to discover International Journal of Science and Research (IJSR), please do not hesitate to reach out if you have any questions or concerns!

Journal Features

Double Blind Peer Reviewed	ISO 9001:2015 Certified
42, 000 + Publications	Quick & Easy Publication

WELCOME TO SPJMR !!

The Suraj Punj Joural for Multidisciplinary Research, e-ISSN : **2394-2886** is a monthly publication, with peer arbitration in Engineering, Science and Management. SPJMR is an open-access, Multidisciplinary journal, driven by the belief that all types of knowledge must be globally available. Its target audience are original researchers who dialogue with the interdisciplinary theme in science, technology and management. The journal publishes unpublished research, of recognized theoretical rigor, intellectual and scientific relevance and that involves multidisciplinary discussions that revolve around four main thematic axes: Science, Engineering and Management.

Suraj Punj Joural for Multidisciplinary Research is an open access journal, which means that all articles are available on the internet to all users immediately upon publication. Non-commercial use and distribution in any medium is permitted, provided the author and the journal are properly credited. Benefits of open access for authors include: free access for all users worldwide, authors retain copyright to their work, increased visibility and readership, rapid publication, no spatial constraints. Special issues dedicated to international conferences in the topics of the journal are brought out, as well. All submitted manuscripts are initially evaluated by the Editor and, if are found suitable, are sent for further consideration, to peer reviewers for an independent and anonymous expert review process.

Why Publish In SPJMR?

High Visibility: SPJMR Journal of Social, Technological and Environmental Science is available via many university libraries. Articles are freely and easily available to anyone in developing countries. All articles can be accessed for free.

Open Access Option: SPJMR is part of online open, which allows authors to access published article anytime and anywhere.

Publication Cost: Very normal charges with additional benefits to publish your articles.

Indian Authors

1500/- (online publication)

Pay the publication by using the following link

• Filled in Registration Form, Copyrights Form scanned copies along with scanned copy of payment proof has to be send to submitspjmr@gmail.com, editor@spjmr.com

Impact: A good impact views from all over countries like India, Unites states, Europe, Asia, etc...

- SPJMR is an Open-Access, peer reviewed International Journal
- We have Provide the prestigious academic journal reviewer's team from various universities, colleges private or government sector, and Highly reputed company.
- It covers the full range of qualitative & effective research papers
- Download any article from the website for free of cost
- Simple steps for publication of research articles and review articles
- SPJMR Journal of Social, Technological and Environmental Science is Open access journal for high indexing and promotion of your published papers
- Share free Knowledge and promote "Advance Research & Innovative Ideas"
- For any query email us on : **submitspjmr@gmail.com, editor@spjmr.com**

Topics of intrest for submission are included, but are not limited to the following:

- **Engineering&Technology (SUBJECT-AREA/)**
- **Arts, Social Sciences and Humanities (SUBJECT-AREA/)**
- **Biomedical Engineering (SUBJECT-AREA/)**
- **Biological & Medical Sciences (SUBJECT-AREA/)**
- **Management and Commerce (SUBJECT-AREA/)**

International Journal of Science and Research (IJSR)

Since 2012, The International Journal of Science and Research (IJSR) is a Peer Reviewed, Open Access International Journal. Notably, it is a Referred, Highly Indexed, Monthly, Online International Journal with High Impact. International Journal of Science and Research (IJSR) is published as a Monthly Journal with 12 issues per year. We also assist International and National Conference to publish their conference papers. International Journal of Science and Research (IJSR) covers all disciplines including Arts, Science, Commerce, Social-Sciences, Management and Engineering. International Journal of Science and Research (IJSR) always strives to be a platform for Academicians, new Researchers, Authors, Engineers and Technocrats and Engineering Scholars. Since inception, International Journal of Science and Research (IJSR) is continuously publishing original and best quality research articles.

Position of Women Down the Ages in India

Dr. Sharda Devi

Assistant Professor in History (ICEDEOL) HPU

The status of women in India has been progressing subject to the changes in the legislature over the past few years. From ancient time to present the promotion of equality for women by many reformers has been eventful in India and is also believed that women enjoyed equal status with men in all walks of life. From the words of patanjali and Katayana is believed that women were educated in the early Vedic period. Rig Veda elucidate that women got married at matured age and were free to choose their husbands. Scriptures of Rig Veda and Upanishad mention the existence of women sages and seers in those periods. It is also known from the great Tamil Literature Silapathikharam that Kannaki had instigated the king Pandian for justice. It is believed that women enjoyed equal status and rights even during the early Vedic period. Throughout the Vedic period women were given a status equal to men to participate in sacrificial rites, to undergo the investiture ceremony and to be man's equal in upholding "dharma". Vedic era has witnessed equal rights for women in the field of education, religion, politics, property and inheritance. However, later on approximately during 500 B. C. the status of women began to decline. Around sixth century, the practices of child marriages is believed to have started in India.

The position of women in the society gradually weakened during the medieval period. It was considered the worst period in the history. During this period society had become patriarchal and men women difference was evident. Man-Woman role was decided on the basis of sex. Women were consigned inside the four walls of home. Later on Sati, child marriage and on widow remarriages became part of social life in India. In some part of India, the Devadasi or the temple women were sexually exploited. Polygamy was widely practised especially among Hindu Kshatriya rules. Queen Durgavati ruled for fifteen years before she lost her life in a battle with Mughal emperor Akbar's general Asaf Khan in 1564. Chand Bibi defended Ahmednagar against the mighty Mughal forces of Akbar. Jahangir's wife Nure Jahan effectively wielded the imperial power and was recognized as the real force behind the Mughal throne Shivaji's mother, Jijabai was deputed queen regent, because of her ability as a warrior and administrator. In south India, many women administered villages, divisions, towns and heralded social and religious institutions. The Bhakti cult tried to restore women and questioned some of the forms of oppression. Mirabai, a female saint poet was one of the most important personalities in Bhakti movement. Some other female saints include Akkanna Devi, Rani Janabai, and Lal Dev Bhakti sects within Hinduism such as the Mahanubhab, Varkari and many other were principle movements within the Hindu fold to openly advocate social justice and equality between men and women. JahanAra Bagum and Princess Zebunnisa were well known poetesses and they also influenced the ruling administration. Gurus of Sikhs also preached the messages of equality between men and women by advocating assemblies.

During the modern period a number of social reformers felt the need to emancipate women and tried to establish a justified place for them in the family and society. The thinkers and social reformers realized that unless the condition of 50% of Indian population is improved Indian society cannot improve. In this era, the demographic factors, industrialization, organization and advancement of knowledge have brought about radical changes in the basic institution like family and are also affecting the economic security and social status of women. In the beginning the Britishers adopted passive "non-interference" policy towards personal status of Women. However, the impact of Western civilization through British rule gave an impetus to claim equal status and rights by the Indian women.

Sincere efforts were made by eminent scholars, judges and social reformers like Raja Ram Mohan Ray, Dwarakanatha Tagore, kesava Chandra Sen, Eshwara Chandra Vidyasagar, etc. to improve the status of Indian women. As a result of the efforts of the social reformers and public up surge some reformative laws like Hindu Widows remarriage Act 1856, the Abolition of sati Act, [1929] The Widow Remarriage [1858],Female infanticide Act, [1870],The civil Marriage Act [1873], the Married Women property Act [1874] The age consent Act [1881] the child Marriage Act [1992] were passed by the British Govt. the family and social status of Women also improved during the British period because of female education and raise in the age of Marriage. In 1946, the Hindu Women's Right of separate Residence and maintenance Act 1946 was passed. To improve the pathetic status of Widow, the Hindu Women Right of property Act was passed in the year 1937. Entrance of Dr. Anne Besant in the Indian political scene in the year 1914, marked the dawn for Women's resurgence. Gandhi ji call for Women's participation in the freedom struggle brought out the Indian Women from the seclusion in their houses. Many Women leaders emerged during the freedom struggle Sarojini Naidu, Durgabai Desh Mukh, Aruna Asaf Ali etc. are some of the prominent personalities to mention. The Government of India Act 1935 provided franchise and civil service under the crown for the women.

After Independence in 1947, Government of India went for socio, economic transformation of the country and the framers of the constitution realized the unequal status of women and assured that women should get equal rights. The fundamental rights enshrined in Article 14, 15 and 16 guarantees the principle of equality before law, equality of sexes and equal opportunities in all walks of like. Effective steps were taken to improve the status and position of Women by envisaging equality before law and equal protection of laws in the constitution of India. There were

Abstract: Over the past decades there have been numerous outbreaks of serious infectious diseases across the world. Now we are dealing with corona-virus or covid-19 a serious outbreak through the world. The first case of Covid-19 in India was reported on January 30, 2020. (Rohit Kapur, 2020). The spread of the corona-virus has created a multi-dimensional crisis not only in India but in whole world. The pandemic covid-19 is endangering health and life of the people, financial insecurities, stress and uncertainty of employment, education, food insecurities, Public transport, farming sector etc. Earlier there were many outbreaks of serious infectious diseases across the world like Ebola, (H1N1) virus, swine flu, Zika, SARS, MERS, bird flu and noro-virus etc. The more serious outbreaks have cost thousands of lives and have devastated public health infrastructure in affected countries(Walsh, 2017). The main objective of this study is to investigate that how the pandemic Covid-19 has created a multi-dimensional crisis that is affecting Socio-economic & Psychological life of people around District Shimla of Himachal Pradesh. It would be very interesting to know that how do respondent feels during the lockdown period due to Covid-19 and for how long is it possible to maintain a lockdown without causing deadly damage to the society.

Keywords: Pandemic, epidemic, covid-19, corona-virus, lockdown, knowledge, social distancing, perceptions, Himachal Pradesh.

Introduction:

We live in an era when the explosion of trade, travel, and communications is spreading new cultural influences and lifestyles faster than ever before, and the division between domestic and international health problems is becoming increasingly obsolete. Globalization also permits the spread of risks, pathogens, and other threats. The ever-increasing movement of people everywhere increases the potential for epidemics. Travelers, refugees, and displaced people are more vulnerable to infectious diseases, and their movement contributes to spreading pathogens into new areas (Dean T. Jamison,Joel G. Breman,Anthony R. Measham,George Alleyne,Mariam

वर्तमान परिपेक्ष्य में भरमौर के गद्धी जनजाति के लोकगीतों की महत्ता

डॉ. शारदा देवी

लोकगीत लोक के गीत हैं जिन्हें कोई एक व्यक्ति नहीं बल्कि पूरा लोक समाज अपनाता है। सामान्यतः लोक में प्रचलित, लोक द्वारा रचित एवं लोक के लिए लिखे गए गीतों को लोकगीत कहा जा सकता है। लोकगातों का रचनाकार अपने व्यक्तित्व को लोक समर्पित कर देता है।[1]

लोकनृत्य लोक संस्कृति के अभिन्न अंग होते हैं। इसे यूँ भी कहा जा सकता है कि लोकनृत्यों से उस स्थान विशेष की लोक संस्कृति की झलक मिलती है। विभिन्न राज्यों केलोकनृत्यों की अपनी विशेष पहचान है। हि. प्र. के लोकनृत्यों की बात आते ही पहाड़ों, नदियों, सीढ़ीनुमा छोटे-छोटे खेतों और बर्फ से ढकी पर्वतों की चोटियों एवं देवभूमि की स्मृति किसी के भी मानसपटल पर उभर सकती है। हिमाचल प्रदेश के लोकनृत्य में कांगड़ा का झमाकडा, बिलासपुर का गिद्धा व लुड्डी तथा ऊपरी शिमला की नाटी आदि का अपना ही अलग महत्त्व है। इसी तरह गद्धी लोकनृत्य की झलक पाते ही व्यक्ति चंबा के गद्धी जीवन की लोक संस्कृति में खोता सा चला जाता है। वास्तव में लोकनृत्यों में लोक संस्कृति के गीतों, रस्सों-रिवाजों पहनावे आदि का भी परिचय प्राप्त होता है।[2]

गद्धी भारत के हिमाचल प्रदेश और जम्मू कश्मीर राज्यों में रहने वाले खत्री राजपूत, राठी और ब्राह्मणों की उपजाति है।[3]

वर्तमानगद्धी भारतीय में दोनों के उन जाति-विहीन धूमंतू चरवाहों में से एक की संतान है जो कभी राजस्थान के बाड़मेर क्षेत्र के आसपास रहते थे और विभिन्न वेशभूषा और सामान की समानता से वह प्रभावित होता है।[4]

भारत की 2011 की जनगणा के अनुसार गद्धी की जनसंख्या हिमाचल प्रदेश में 178130 थी। हिमाचल प्रदेश में गद्धियों का लिंगानुपात 1014 और साक्षरता दर 73.3 थी। इन्हें भारत की आरक्षण प्रणाली के तहत अनुसूचित जनजाति के रूप में वर्गीकृत किया गया है। गद्धी जनजातियों की अधिकता मुख्य रूप से हि. प्र. राज्य के धौलाधार श्रेणी के दोनों किनारों पर पाई जाती है। काफी संख्या में गद्धी जनजातियाँ मुख्य रूप से चंबा जिले के भरमौर क्षेत्र में, रावी नदी के ऊँचे क्षेत्रों में बुधिल नदी की घाटियों में भी बसती है। अन्य क्षेत्रों में काँगड़ा जिला शामिल है, जो मुख्य रूप से तोता रानी, खनियारा धर्मशाला के करीब के गाँवों में है।

लोकगीत मानव जीवन की अनुभूत अभिव्यक्ति और उद्‌गारों का साफ दर्पण है जिसमें समाज का प्रतिविंब दिखाई देता है। लोकगीत ही लोकजीवन की वास्तविक भावनाओं को प्रस्तुत करता है। इसमें मनुष्य के पारिवारिक, सामाजिक जीवन का भावनात्मक चित्रण रहता है। जीवन के सभी पहलुओं एवं विभिन्न परिस्थितियों में मनुष्य के मानसिक एवं शारीरिक व्यापार जैसे ही होते हैं, उनका वास्तविक चित्रण लोकगीतों में देखने को मिलता हैं जनसमाज के अपने गीत होते है जिनमें किसी विशेष समाज की जीवनुभूति की अभिव्यंजना होती है। लोकगीतों में सामाजिक प्राणियों के सुख-दुख, आशा-निराशा, रोग अवसाद आदि सभी की अभिव्यक्ति होती है। लोकगीत अपनी सरलता और स्वाभाविकता के कारण ही मोहक होता है। यहाँ हम विशेष रूप से हिमाचल प्रदेश में भरमौर के गद्धी जनजाति के लोकगीतों के महत्व पर चर्चा करेगें। हिमाचली लोकगीतों में गद्धी जनजाति के लोकगीतों का अपना एक विशेष स्थान है। गद्धी युवकों के बारे में एक विद्वान का कहना है कि गद्धी युवक लोकगीतों के इतने शौकीन होते हैं कि हर एक युवक के पास सदा ही एक बाँसुरी पाई जाती है। वह किसी भी अपने काम में सलग्न हो, खेत, खलियान, धार-नगार आदि में उन्हें जब भी अपने काम से समय लगे वह अपना मनोरजंन करने व थकावट जो दूर करने के लिए बाँसुरी की तान तत्काल आरंभ कर देते हैं।[5]

इसी संदर्भ को आगे बढाते हुए डॉ. सूरत ठाकुर लिखते हैं, इनके लोकगीतों में शौर्य, साहस, मिलन व विरह और त्याग की भावना मुखरित होती है। जिस कारण इनके लोकगीतों ने सम्मान व ख्याति अर्जित की है वह किसी अन्य क्षेत्र में नहीं की है। गद्धी समुदाय के लोकगीत व लोकनृत्य सुनने व देखने में बड़ा आनंद आता है। ये लोकगीत प्रायः नृत्य के साथ-साथ गाए जाते हैं व कुछ धार्मिक अनुष्ठानों पर लोकगीत अपने मनोरंजन के लिए भी गाए जाते हैं।[6]

डॉ. गौतम व्यक्ति ने इनके लोकगीतों को वर्गीकृत करते हुए ढोलरू, बसोआ पत्रोड़ू, श्राद्ध, सैर, लोहड़ी, शिवरात्रि, राधाष्अष्टमी, भरमौर, मणिमहेश व छतराड़ी

ROLE OF MEDIA IN PUBLIC AWARENESS DURING COVID-19

Tara Hetta
Dr. Sharda Devi

The aim of this study is to examine the effective role of media in public awareness about covid-19 among the public, their perception and attitude, and govt. action plan in district Shimla, Himachal Pradesh. Cross-sectional survey questionnaires were distributed to 130 respondents about accessing the public awareness of modes of corona-virus transmission, perceptions and attitudes towards people getting infected with corona-virus, as well as understanding of public about the government action plan to break the chain of covid-19. People belong to various social background and different professional streams were the sources of information seeking on covid-19.Most of the respondents were aware of the modes of covid-19 transmission. However, they were few respondents who still have misconceptions about the modes of transmission. Most of the respondents were supporting government's action plan in the region. Overall, the respondents had certain knowledge about the transmission modes of covid-19 and highly positive perceptions and attitudes towards the control of infectious covid-19. The further studies could be conducted to examine about how media effectively played its role to elevate people's from covid-19 and take it to the normal track as it was earlier.

Keywords: attitudes, covid-19, corona-virus, knowledge, social distancing, perceptions, Himachal Pradesh

Introduction

The media coverage is the most important factor responsible for the dissemination of awareness of the infectious disease and its transmission, it is a very important issue which has to be taken care of seriously because it can prevent epidemic. In the case of a large number of infected cases, on one hand, the media coverage may cause the panic of the society, while on the other hand, it can certainly reduce the opportunity and probability of contact transmission among the alerted susceptible populations, which in turn helps to control and prevent the disease from further spreading.(Jingan Cui,1,2 Yonghong Sun,3 and Huaiping Zhu4,5,6,

लीलाधर जगूड़ी की कविता में विसंगति बोध

-वीरेंद्र सिंह

इस मनुष्य-जीवन में कुछ प्रश्न ऐसे होते हैं, जिन्हें सुलझाने के लिए हम पूरा जीवन लगा देते हैं लेकिन उनका उत्तर हमें नहीं मिलता। कुछ प्रश्न तो इतने उलझाते हैं कि उनसे पार पाने के लिए हम दार्शनिक भी बन जाएँ, तो भी कुछ नहीं होगा। ये मानुष-जीवन भी ऐसी ही एक पहेली है, जिसे सुलझाने में न जाने कितनी सदियाँ और युग बीत गए और यह आज भी हमें चिढ़ाती मुँहबाये खड़ी है। क्या है ये मनुष्य-जीवन? यदि गहन चिंतन-मनन कर देखा जाये, तो यह नाना प्रकार की विसंगतियों, विडंबनाओं, विरोधाभासों, अंतर्विरोधोंका पुंज है, जिसके अपने ही धूपछाँही रंग हैं। इसे जानने का जितना भी प्रयास करें, परिणाम शून्य ही होता है। बस इसके इंद्रधनुषी रंगों में से जो भी नसीब हो, उसका भरपूर आनंद लेना ही जिंदगी है।

मनुष्य ने विवेक पाया है और इसी के सहारे जब भी उसने मनुष्य-जीवन को समझने का प्रयास किया, हर बार उसे विडंबनाओं और विसंगतियों से भरा पाया। 'विसंगति' समकालीन जीवन की वह स्थिति है, जहाँ प्रत्येक मूल्य या धारणा का ठीक उलटा रूप दिखाई पड़ता है; एब्सर्डिटी।'[1] इसे विसंगति, असंगति, एब्सर्डिटी कुछ भी कह दीजिये लेकिन इस बात से इनकार नहीं किया जा सकता कि यह आज के आपाधापीयुक्त जीवन का एक अनचाहा सच है। आज मनुष्य-जीवन के दो चेहरे हैं- एक दृश्य और दूसरा अदृश्य। दूसरे शब्दों में इन्हें काल्पनिक और वास्तविक कह सकते हैं। 'नकली चेहरा सामने आए, असली सूरत छुपी रहे' गीत के मायने इस मनुष्य-जीवन पर सही बैठते हैं। आजमानव-जीवन मुखौटाधारी हो गया है जहाँ हर चेहरे पर न जाने कब से नकाब चढ़ा है। कोविड-19 महामारी ने तो इस नकाब को उघाड़कर सिर्फ इतना संकेत किया है कियह नकाब मानव-जीवन का अभिन्न हिस्सा हो गया है जिसे अब उसे स्वीकार कर लेना चाहिए। आज मनुष्य की कथनी और करनी, चेहरे और चरित्र में विरोधाभास है। वह जो कुछ कहता या जैसा दिखता है, होता उसके बिल्कुल उलटा है। ऐसे में आप तय नहीं कर पाते कि सच क्या है और झूठ क्या? कभी-कभार तो वास्तविक सच को ही संदेह की दृष्टि से देखने को हम मजबूर हो जाते हैं और परिणामस्वरूप गलत निष्कर्ष निकाल बैठते हैं।

आज का यथार्थ बड़ा जटिल और संगुम्फित है और साहित्य हमें इसे समझने की दृष्टि देता है। कविता इस जटिल यथार्थ की अभिव्यक्ति का सब से सशक्त माध्यम है जिसकी घड़ी का पेंडुलम समय के तीन ध्रुवों पर एक साथ अपने घंटे बजाता है। स्मृति और स्वप्न के बीच कविता वर्तमान होती है'[2] और यह धारणासमकालीन हिंदी कविता को बखूबी स्पष्ट करती है। इस कविता में विसंगति का स्वर तभी से वर्तमान है जब धूमिल ने 'बीस वर्ष बाद' जैसी कविताएँ लिखकर भारतीय जीवन की देशव्यापी विसंगतियों का बेबाकी के साथ पदार्फाश किया था।

स्त्री की विरल तस्वीर : कुमार कृष्ण की कविता

वीरेन्द्र सिंह*

शोध सारांश

इस आधुनिक समय में सर्वाधिक प्रताड़ित वर्ग में स्त्री भी आती है और उसकी विविध छवियाँ हिंदी हिंदी कविता में आज तक बनती रही हैं। कवि कुमार कृष्ण ने स्त्री को समग्र रूप में अपनी कविता में शामिल किया है। इतना अवश्य कहा जा सकता है कि उनकी कविता मे स्त्री का प्रधान रूप पत्नी का ही है और फिर अन्य। उन्होंने स्त्री का समाज–सापेक्ष चित्र ही प्रस्तुत किया है, जिसमें न तो उनकी रूढ़िवादी सोच झलकती है और न ही स्त्री का एकांगी चित्र ही है। पत्नी के रूप में उनकी स्त्री प्रसाद की 'श्रद्धा' और दिनकर की 'औशीनरी' के करीब तो है पर बिलकुल वैसी ही नहीं है । उनकी स्त्री अपने पति, परिवार और समाज में सम्मान पाती है इसलिए राग ही राग लुटाती है। वह आधी नर में है और आधी नारायण में। यह सही है कि महानगरीय जीवन में ढली स्त्री यहाँ मुखरित नहीं हुई है और इसका कारण है– एक तो यह कि कवि को स्त्री का ऐसा रूप कभी काम्य नहीं रहा और दूसरे यह कि महानगर की जीवनशैली की झलक भी हिमाचल प्रदेश जैसे पहाड़ी राज्य में अब तक दिखाई नहीं दी है।

Keywords : समकालीन कविता, स्त्री–विमर्श, देहवाद।

जिस धरती पर **'यत्र नार्यस्तु पूज्यन्ते, रमंते तत्र देवता'** और **'जननी जन्मभूमिश्च स्वर्गादपि गरीयसी'** जैसे जीवन–मूल्यों की बात हो, वहाँ आज के दौर में स्त्री की चिंताजनक स्थिति से अंतरात्मा कराह उठती है। भूमंडलीकरण के इस दौर में मनुष्य उपभोक्ता–संस्कृति की गोद में जी रहा है। आज संसार में हर वस्तु की तरह आदमी भी बाजार की एक वस्तु हो गया है– स्त्री भी । मानव–सभ्यता के आदिकाल से लेकर अब तक का इतिहास इस बात का गवाह है कि इस पुरुष–प्रधान भारतीय समाज में स्त्री को भोग–विलास की वस्तु मात्र समझा जाता रहा। एक विहंगावलोकन कीजिये, तो पाएंगे कि भारतीय समाज में स्त्री सदा से ही उपेक्षित वर्ग में रही है। धर्मग्रंथों के विधान से लेकर आज की व्यवस्था तक में यही परिदृश्य सामने आता है जिसका परिचय समय–समय पर मिलता रहता है। वैदिक काल भारतीय इतिहास में स्त्री समाज का उत्कर्ष काल माना जा सकता है जिसके बाद स्त्री के लिए परिस्थितियाँ बद से बदतर होती चली गयी हैं।

हिंदी साहित्य के अब तक के इतिहास में भी स्त्री की इतिहासपुष्ट तस्वीर प्रतिबिंबित होती रही है। इसका आदिकाल स्त्री–समाज के लिए 'जा घर देखी सुंदर नार, ता घर जाय धरी तलवार' कहावत को चरितार्थ करने वाला दिखाई देता है। जैन, सिद्ध व नाथ साहित्य में भी स्त्री के प्रति कोई अच्छी धारणा नहीं दिखाई देती। भक्तिकाल में स्त्री को विद्या–अविद्या दोनों रूपों में देखा गया ; एक तरफ जहाँ उसे महाठगिनी' और 'विष की बेल' तक कहा गया तो दूसरी ओर उसमें राधा और सीता जैसे पात्र भी उभारे गए। इसी कालखंड में पद्मावती का चरित्र भी अनेक संभावनाओं के साथ अस्तित्व में आता है। मीराबाई तो स्वयं ही स्त्री–समाज के लिए एक आदर्श बन गयी थीं हालांकि उन्हें भी इस समाज की पुरुषवादी मानसिकता का शिकार कई बार होना। रीतिकाल में स्त्री का चित्रण उसकी देह से ऊपर उठकर लगभग हुआ ही नहीं, हालांकि रीतिमुक्त काव्य इसका अपवाद है। आधुनिक काल में पद्मावती और मीराबाई के चरित्र को कुछ दिशा मिलती दिखाई देती है। इसी समय हरिऔध के 'प्रियप्रवास' में राधा के रूप में स्त्री का चरित्र एक प्रेयसी से ऊपर उठकर एक समाज–सेविका के रूप में भी सामने आया जिससे स्त्री की समाज–सापेक्ष छवि को उभारा गया। आगे चलकर छायावाद में उसके 'श्रद्धा' और 'इड़ा'' दोनों रूप सामानांतर उभारे गए, चारदीवारी की कारा से उसकी मुक्ति के स्वर उठने लगे। निराला ने 'विधवा' और 'तोड़ती पत्थर' कविताओं में स्त्री की एक अलग ही छवि उभारी और फिर 'कामायनी' में चित्रित स्त्री के दोनों रूपों का विकास दिनकर की 'उर्वशी' में देखा जा सकता है। प्रयोगवाद और नयी कविता के समय स्त्री फिर से देह बनती दिखाई देती है किन्तु समकालीन हिंदी कविता में स्त्री के दोनों रूपों की एक बार

एक सिक्के के दो पहलू : मीडिया तथा साहित्य

◆ डॉ. संदीप कुमार

मीडिया और साहित्य समाज का दर्पण है। ये माध्यम सामाजिक परिस्थितियों, घटनाओं और विचारों को जनता के समक्ष यथार्थ रूप में प्रस्तुत करते हैं। ये एक ही सिक्के के दो पहलू हैं। दोनों का उद्देश्य समाज में घटित सम्पूर्ण घटनाओं का विवरण पूर्णतः से उद्घाटित कर उनकी वास्तविक तस्वीर जनता के समक्ष प्रस्तुत करना है। सीप में जैसे मोती का विकास होता है उसी प्रकार प्रत्येक व्यक्ति के व्यक्तित्व का विकास उसके सामाजिक वातावरण में होता है। अतः व्यक्ति के विकास में समाज की महत्वपूर्ण भूमिका रहती है। समाज के अन्तर्गत परिवार एवं उनमें प्रचलित परम्पराएँ, रीति-रिवाज इत्यादि सम्मिलित होते हैं। ये समाज में रहने वाले भिन्न-भिन्न व्यक्तियों और समुदायों को एक धागे में पिरोए रखते हैं। समाज में निरन्तर परिवर्तन होते रहते हैं। समय-समय पर साहित्य और मीडिया इन्हीं परिवर्तनों को अवलोकित कर साक्षात् रूप में जनता के सम्मुख उजागर करते हैं। अतः ये दोनों साधन मनुष्य, समाज, सभ्यता, संस्कृति और राष्ट्र को अपनी भूमिका से प्रभावित करते हैं तथा इसके परिवर्तन और विकास का पर्याय बनकर लोगों को सामाजिक चेतना प्रदान करते हैं। भूगोल, इतिहास, संस्कृति और कला, साहित्य एवं मीडिया से अछूता नहीं है। प्राचीन समय में मीडिया आधुनिक युग की तरह इतना समृद्ध और सशक्त नहीं था लेकिन समयानुसार उचित था। संदेश भेजने के लिए घुड़सवारों, कबूतरों एवं पत्रों का प्रयोग किया जाता था। वैदिक युग में लेखन की अलग शैली थी। पत्राचार के लिए ताड़ के पत्तों या छाल और शिलालेखों का प्रयोग किया जाता था। लोग संदेश भेजने के लिए दूतों के माध्यम से विशेष चिन्हों का प्रयोग करते थे। वे ज्ञानार्जित संपत्ति को संजोने के लिए हस्तलिखित सामग्री का प्रयोग करते थे।

साहित्य में प्रगतिशील मूल्यों का चित्रण तभी हो सकता है जब वे मूल्य समाज में विद्यमान होंगे। अतः साहित्य समाज का दर्पण मात्र ही नहीं अपितु वह उसकी आलोचना भी है। आलोचना और कला शक्ति के कारण साहित्य सामाजिक मूल्यों में परिवर्तन के साथ-साथ नये मूल्यों के निर्माण में भूमिका निभाता है। अतः साहित्य और समाज का घनिष्ठ सम्बन्ध है। साहित्यकार सामाजिक परिस्थितियों से प्रभावित होकर साहित्य रचना करता है और व्यक्ति तक धारा के समान प्रवाहित होता है। साहित्य का सम्बन्ध मानव से है और यह पूर्णतः मानव केन्द्रित होता है। साहित्य की जिस समाज में रचना हुई, उस समाज के सम्बन्ध में निरूपित है कि यह, समाज का समग्र ब्योरा प्रस्तुत करता है। साहित्य व्यक्ति की अभिव्यक्ति है, समष्टि के लिए। वह किसी आदेश पर लाखों हाथों का एक हाथ की तरह उठ जाना नहीं है, अपितु वह अन्तःकरण का हजारों-लाखों अन्तःकरणों में विसर्जित हो जाना। अतः पुराने समाज के भीतर ही नये समाज के बीज अंकुरित होते हैं। ये विकासमान अंकुरण नये वस्तु तत्वों और रूपों के स्तर पर दिखाई देते हैं। पुराने और नये सामाजिक सम्बन्धों के तनाव के बीच साहित्य का जन्म होता है। साहित्यिक रचना

आधुनिक युग में मीडिया समाज के महत्त्वपूर्ण घटक के रूप में अवतरित हुआ है। यह एक ओर तो लोगों के मनोरंजन का साधन है तो दूसरी ओर ज्ञानवर्द्धन में भी सहायक है। वस्तुतः किसी भी देश में मीडिया की भूमिका जनहित के पक्ष में होती है। इसलिए इसे देश का आधारभूत स्तम्भ कहा जाता है। आज मीडिया की व्यापकता धर्म, पर्यावरण, राजनीति, अर्थतंत्र, संस्कृति और साहित्य को प्रभावित कर रही है। वर्तमान समय में यह लोगों की मानसिकता बदल कर सामाजिक सम्बन्धों को नया रूप प्रदान कर रहा है। समसामयिक युग में सामाजिक ढाँचे को परिवर्तित करने में मीडिया ने महत्त्वपूर्ण भूमिका निभाई है और लोगों को जागृत करके समाज को बदलकर नई दिशा प्रदान की है।

पौराणिक परिप्रेक्ष्य में पुरुषार्थ चतुष्टय : एक अध्ययन

डॉ० विपन कुमार

पौराणिक संस्कृत वाङ्मय में जीवन दर्शन के प्रभूत संकेत विद्यमान हैं। वैदिक युग से लेकर अर्वाचीन काल तक मानव जीवन का उद्देश्य पुरुषार्थ चतुष्टय अर्थात् धर्म-अर्थ-काम तथा मोक्ष की प्राप्ति करना रहा है। भारतीय संस्कृति उपर्युक्त बिन्दुओं की धुरी पर परिक्रमण करती है। यही सनातन धर्म के आधारभूत स्तम्भ के रूप में दृष्टिगोचर होते हैं। मानव इन तत्वों को जीवन पद्धति में सहज रूप से आत्मसात् कर सकता है। पुराण वस्तुत: अतीत को वर्तमान से जोड़ने वाली कनकमयी श्रृंखला है। यह भारतवर्ष की धार्मिक, दार्शनिक, सांस्कृतिक, सामाजिक और राजनैतिक विचार-सम्पदा का अक्षय भण्डार हैं। भारतीय जीवन दर्शन में पुरुषार्थ चतुष्टय, संस्कृति एवं सभ्यता के स्रोत वेदों में सन्निहित हैं। प्रस्तुत शोध-पत्र में उक्त वर्ण्य विषय पर प्रकाश डाला गया है।

धर्म-

धर्म शब्द व्युत्पत्ति की दृष्टि से "धृ" धारणे धातु से मन् प्रत्यय लगाने से निष्पन्न होता है। इसका अभिप्राय है "ध्रियते लोकोऽनेन" 'धरति लोकं वा' अर्थात् जिसके द्वारा यह लोक धारण किया जाता है। इस प्रकार लोक की धारक शक्ति को ही धर्म कहा गया है।[1] वेदों में धर्म शब्द का प्रयोग वेद विहित धार्मिक, विधियों तथा संस्कारों के रूप में हुआ है।[2] पी०वी० काणे के अनुसार व्यक्ति समाज का सदस्य होने के कारण उसकी समस्त क्रियाओं को नियमित करता है। जिसका लक्ष्य व्यक्तित्व को प्राप्त करना है।[3] वाल्मीकिरामायण में कहा गया है कि संसार में धर्म ही सर्वश्रेष्ठ है, वही परम गति है, धर्म में ही सत्य प्रतिष्ठित है।[4] याज्ञवल्क्यस्मृति में श्रुति, स्मृति, सदाचार एवं आत्मा की तुष्टि के साथ संकल्प से उत्पन्न इच्छा को धर्म का मूल कहा गया है।[5] देवीभागवतपुराण में उल्लिखित है कि धर्म का नाश नहीं होना चाहिए, त्याग होने में हानि नहीं है। त्याग की अपेक्षा मरण श्रेयस्कर है, मनुष्य को धर्म हानि नरक के निमित्त ले जाती है।[6] दुर्गा ने स्वयं कहा है कि वह शत्रुता रहित होकर धर्म रक्षा के निमित्त इस संसार में विचरण करती है। साधुओं की रक्षा करना उनका व्रत है तथा सदैव इसका पालन करती हैं।[7] गरुड़पुराण में धर्म को पापों का विनाशक तथा भुक्ति-मुक्ति प्रदाता कहा गया है।[8] भगवान ने स्वयं कहा है कि वह ही धर्म हैं। समस्त वर्णों एवं आश्रमों का सनातन धर्म भी वही है।[9] धर्म के संबंध को मनुष्य से स्थापित करते हुए कहा गया है कि अर्जित किए हुए धन का मनुष्य को दान करना चाहिए। क्योंकि यदि दान को एक ओर तथा भयभीत की प्राण रक्षा का दूसरी ओर तोल किया जाए तो दोनों सम होते हैं।[10]

भारतीयशास्त्र परम्परा में पर्यावरण चिन्तन

*डॉ. विपन कुमार**

आज पर्यावरण शब्द जिस अर्थ में प्रयुक्त हो रहा है, अब से तीन चार दशक पूर्व उसका ऐसा कोई पारिभाषिक अर्थ नहीं था। प्राचीन संस्कृत-हिंदी कोशग्रंथों में अद्यावधि ही यह शब्द उपलब्ध नहीं होता।इसका मूल कारण यह है कि यह शब्द उस समय तक किसी भी अर्थ में पारिभाषिक रूप से प्रचलित नहीं हो पाया था। अतः प्राचीन कोशकारों ने इसका कोई विशेष अर्थ प्रस्तुत नहीं किया। तथापि पर्यावरण शब्द की उत्पत्ति परि "आ" उपसर्ग पूर्वक 'वृञ् आच्छादने" धातु से होती है।

पर्यावरण शब्द एवं उसका अर्थ अत्यंत व्यापक है, जिसमें संपूर्ण ब्रह्मांड समाहित हो जाता है।परि अर्थात् हमारे चारों ओर का आवरण(ढकना) ही पर्यावरण है। समस्त मानव जाति एवं सृष्टि पृथ्वी-जल-तेज- वायु-आकाश, वन, वृक्ष, नदी, पर्वत तथा पशु-पक्षी इत्यादि से आवृत्त है। उपर्युक्त समस्त तत्वों तथा पदार्थों का समग्र रूप अथवा समुदित रूप जो पर्यावरण है, उसी में जीवों की उत्पत्ति होती है। इस प्रकार समस्त कार्यों की पूर्ति पर्यावरण में ही सम्वर्धित है। अतः समाज एवं जीवन-दर्शन हेतु पर्यावरण का संरक्षण एवं पोषण नितान्त आवश्यक है। प्रस्तुत शोध-पत्र में वैदिक कालखण्ड से लेकर अर्वाचीन काव्यों में वर्णित पर्यावरण शिक्षा से सम्बंधित विषयों पर प्रकाश डाला जाएगा।

प्रकृति से हमें उतना ही लेना चाहिए, जिससे हमारी मूलभूत आवश्यकताओं की पूर्ति हो सकती है। हमारे पूर्वजों ने हमारे भविष्य की चिंता की और प्रकृति की धरोहर को संजोकर रखा जबकि आधुनिकतावाद की दौड़ में मानव जाति प्राकृतिक संसाधनों का भरपूर दोहन करने में लगी है।एक बार गांधी जी ने दातुन मंगवाई। किसी ने नीम की पूरी टहनी तोड़ कर दे दी, यह देख कर गांधीजी उस व्यक्ति पर क्रोधित हुए। तब उसे डांटते हुए उन्होंने कहा- "जब छोटे से टुकड़े से मेरा काम चल सकता था तो पूरी टहनी क्यों तोड़ी? यह न जाने कितने व्यक्तियों के उपयोग में आ सकती थी।" गांधीजी की इस फटकार से हम सब को भी सीख लेनी चाहिए। प्रकृति से हमें उतना ही लेना चाहिए, जिससे हमारी आवश्यकताओं की पूर्ति हो सकती है।

'वेद' वह ज्ञान है जिसको सर्वप्रथम ऋषि महर्षियों ने खोजा। वेद सम्पूर्ण वाङ्गमय का बोधक शब्द है। ऋषियों ने जिस परमात्मास्वरूप ज्ञान का साक्षात्कार किया वह प्रकाशपुञ्ज वेद भारतीय ज्ञान गंगा का उत्स हैं जो स्वयं अपनी दिव्य आभा से भासित हैं, अपौरुषेय और अनादि हैं इसलिए वे स्वयंभू, स्वयं प्रकाश और स्वतः प्रमाण हैं। भारतीय संस्कृति के इतिहास में वेदों का स्थान अत्यंत गौरवपूर्ण है।

प्रकृति भारतीयों के लिए सदा से पूजनीय रही है चाहे कांति प्राप्ति के लिए सूर्य का पूजन हो नारी को ,स्वामी की दीर्घायु का वरदान मांगना हो या निर्धन को कुबेर बनने का स्वप्न अथवा विद्यार्थी को विद्या प्राप्ति की कामना अथवा हमें जीवन प्रदान करने वाली नदियों की उपासना हो, इन सबके लिए हमें वेदों की शरण में जाना ही पड़ता है वेदों में वर्णित नदी ,सागर ,सूर्य ,चंद्र ,जल और वायु - ये सभी हमारी आस्था के स्रोत रहे हैं हमने तो वृक्षों से वरदान मांगना भी अपनी संस्कृति में समाहित कर लिया है।

जनसंचार माध्यमों में हिन्दी साहित्य के बदलते परिदृश्य

डॉ. भवानी सिंह

साहित्य का स्वरूप : समाज में रहकर ही साहित्यकार सुख-दुःख की परिस्थितियों और घटनाओं से जूझता है तथा युग का घटनाक्रम साहित्य को प्रभावित करता है। उन्हें देखता या सुनता है। वह सामान्यजन से अधिक संवेदनशील होता है। इसलिए प्रत्येक परिस्थिति या घटना को अधिक सूक्ष्मता से ग्रहण कर उसकी तह में घुस जाता है और फिर अपनी सूक्ष्म संवेदना को अपने साहित्य में मूर्त रूप देकर समाज के समक्ष प्रस्तुत करता है। रचनाकार अपनी लेखनी से अपनी प्रतिक्रिया को प्रकट कर आत्माभिव्यक्ति को समाज की अभिव्यक्ति देता है। उसकी सभी रचनाएं कलमबद्ध होकर समाज द्धकी रचनाएं बन जाती हैं। तुलसीदास जी के अनुसार, 'हित अनहित पशु पक्षिहुं जाना' अच्छे-बुरे का ज्ञान, हित एवं अहित का ज्ञान पशु-पक्षियों को भी होता है। फिर मनुष्य तो सर्वश्रेष्ठ जीव है।' अतः उसका समाज भी पशु-पक्षियों से श्रेष्ठ होगा। इसी समाज की सच्ची तस्वीर साहित्य प्रस्तुत करता रहा है। किसी विद्वान् ने कहा है कि 'संगीत, साहित्य कला विहीना, साक्षात् पशु पुच्छ बिना हीना।' अर्थात् संगीत, साहित्य और कला से विहीन मनुष्य उस पशु के समान है, जिसके पास न तो सींग हैं और न ही पूंछ। अतएव साहित्य के विषय में यही कहना उपयुक्त होगा - 'हितेन सहितम्, साहित्स्य भावः साहित्यम्।' साहित्य हमारी कौतूहल और जिज्ञासा वृत्तियों को शान्त करता है। ज्ञान की पिपासा को तृप्त करता है और मस्तिष्क की क्षुधापूर्ति करता है।

हिन्दी साहित्य का आधुनिक काल, जो हमारी नई सोच और नए दृष्टिकोण का प्रतिनिधित्व करता है, उसके लिए तत्कालीन विभिन्न राजनीतिक, सामाजिक, धार्मिक, आर्थिक परिस्थितियों तो उत्तरदायी थीं ही, साथ ही उन परिस्थितियों के ग्रहण के लिए वह अंग्रेजी सत्ता जिसने वास्तव में हमें प्रत्यक्षतः तथा परोक्षतः पुनर्जागरण के लिए उत्तेजित किया। इसमें हमारे साहित्यकारों ने विभिन्न परिस्थितियों से परिचित होकर अपनी महत्त्वपूर्ण भूमिका निभाई और उनसे प्रेरित हो साहित्य के क्षेत्र में आधुनिकता का आह्वान किया। इस काल खण्ड में नवचेतना के उदय से जीवन के प्रायः सभी क्षेत्रों में व्यापक परिवर्तन हुए। शिक्षित जनता की बदली हुई मनोवृत्ति ने साहित्यिक गतिविधियों को बहुत प्रभावित किया। फलतः इस युग में रचे गये साहित्य में पूर्ववर्ती रीतिकालीन काव्य की पुरानी प्रवृत्तियों को अपदस्त कर नये आयामों को प्रशस्त करने की चेष्टाएं परिलक्षित हुईं। नये पुराने के सम्मिश्रण में से अपेक्षित वस्तुओं को ग्रहण और अनपेक्षित वस्तुओं को त्यागकर

जिसको प्रचारित और प्रसारित करने में आधुनिक जनसंचार माध्यमों की अहम भूमिका है। जनसंचार माध्यम में आज के दौर में हिन्दी का व्यापक प्रयोग हो रहा है। भले ही यह हिन्दी शुद्ध न हो, लेकिन हिन्दी की एक नई शैली विकसित हो रही है, जिसमें आज का युवा रचनाकार हिन्दी साहित्य की विभन्न विधाओं में निरन्तर सृजन करता जा रहा है, जो शायद आज के वैश्वीकरण के दौर में हमारी जरू रत बन गई है। लेकिन हमें इस बात से भी सचेत होने की आवश्यकता है कि संचार माध्यमों की अति उदारता के चलते हम हिन्दी भाषा तथा साहित्य के वास्तविक स्वरूप को न खो दें, क्योंकि विभिन्न संचार माध्यमों में हिन्दी के अलग-अलग रूप प्रयुक्त होते हैं। रेडियो श्रव्य माध्यम है। अतः इसकी भाषा केवल सुनी जा सकती है। इसलिए यह अन्य माध्यम, विशेषकर दृश्य माध्यम से भिन्न है। समाचार-पत्र और पत्रिकाओं की भाषा काफी हद तक परिष्कृत होती है।

परिणामस्वरू प वैश्वीकरण के प्रभाव ने संसार की सीमा को तोड़ दिया है। इसको तोड़ने में संचार के प्रमुख माध्यम तथा जनसंचार क्रान्ति के औजार कंप्यूटर, इंटरनेट, रेडियो, टेलीविजन, वेबसाइट, टेलीफोन, मोबाइल फोन, ई-मेल तथा सामाजिक माध्यमों में मोबाइल, फेसबुक, वंट्सऐप, ट्वीटर, यूट्यूब और इन्स्टाग्राम आदि ने प्रमुख भूमिका निभाई है। हालांकि आरम्भ में इन पर अंग्रेजी भाषा का ही अधिकार था। लेकिन धीरे-धीरे हिन्दी ने इसका अधिकार समाप्त कर दिया है। आज भारत में ही नहीं अपितु विदेशों में भी हिन्दी साहित्य में रुचि पैदा हो रही है, विशेषकर हिन्दी फिल्मों ने पूरे विश्व में अपना परचम लहरा दिया है। यह हिन्दी साहित्य ही है जिसने अपनी भाषा शैली कथावस्तु से समाज को जागरु क करने का काम किया है और इसको विश्व के कोने-कोने तक पहुँचाने की भूमिका जनसंचार माध्यमों ने बखूबी निभाई है। आज हमारे पास आधुनिक जनसंचार के विभिन्न माध्यम उपलब्ध हैं। यदि हम गुणवत्तापूर्ण तथा सामाजिक सरोकार से युक्त और समाज में पनप रही कुरीतियों से सम्बन्धित साहित्य का सृजन करेंगे तो वह तुरन्त करोड़ों लोगों तक पहुँच जाएगा। लेकिन कुछ रचनाकार साहित्य सृजन में उपभोक्तावादी संस्कृति की ओर मोड़ रहे हैं, जो पाठकों को ग्लैमरस तथा तथा वासना की ओर ले जा रहा है और जिसमें इन जनसंचार माध्यमों की भूमिका भी लगातार बढ़ती जा रही है। अतः इस ओर आज के साहित्यकारों, रचनाकारों और जनसंचार के माध्यमों का संचालन करने वाले विद्वानों को गौर करना भी अत्यावश्क है ताकि समाज को उपभोक्तावादी संस्कृति से काफी हद तक बचाया जा सके।

सहायक पुस्तकें :

1. अवतार अग्निहोत्री, आधुनिक हिन्दी सिनेमा का समाजिक व राजनीतिक अध्ययन।
2. चंद्रकांत सरदाना-कृ.शि. मेहता, जनसंचार आज और कल।
3. जवरीमल्ल पारख, हिन्दी सिनेमा का समाजशास्त्र।
4. जे दुबे, भारतीय फिल्म और समाज।
5. बलराम अग्रवाल (संपादक) प्रेमचन्द की सर्वश्रेष्ठ कहानियां।
6. महेन्द्र मित्तल, भारतीय चलचित्र।
7. रामधारी सिंह दिनकर, साहित्य और समाज।
8. रीश कुमार, सिनेमा और साहित्य।
9. विवेक दुबे, साहित्य, समाज और सिनेमा
10. सुदेश, साहित्य के विविध आयाम।

सहायक व्याख्यान

1. डॉ. अमर नाथ अमर, साहित्य और समाज के ऊत्थान में मीडिया की भूमिका (विशेष संदर्भ : दूरदर्शन द्वारा प्रसारित कार्यक्रम)।
2. अशोक श्रीवास्तव, मीडिया और बाज़ार।
3. प्रो. करु णाशंकर, बदलता भारतीय परिदृश्य : साहित्य, संस्कृति, संचार और मनोविज्ञ।
4. तेजेन्द्र शर्मा, हिंदी सिनेमा के गीतों में साहित्य ।
5. संजीव झा, साहित्य और सिनेमा ।

मधु काँकरिया के 'सलाम आखिरी' उपन्यास में अभिव्यक्त वेश्या जीवन

कुमारी पूनम चौहान

सहायक प्रोफेसर, हिन्दी विभाग, हिमाचल प्रदेश विश्वविद्यालय, समरहिल, शिमला-171005

वेश्यावृति भारतीय समाज में नारी जीवन की अभिशप्त अंग है। यह प्राचीन काल से समय-समय पर अपने स्वरूप और उद्भव स्रोतों में
साथ चली आ रही हैं इतिहासकारों के अनुसार वैदिक काल में गणिकावृति अस्तित्व में थी। वेदों में प्रयुक्त पुनश्चली, महानग्नी और राष्ट्रा
कोटि की गणिकावृति के ही सूचक है। जैन और बौद्ध धर्म की जातक कथाएँ गणिकाओं के उल्लेख से भरी पड़ी हैं। भारत में दरअसल
द्वारा गणिकावृति को स्वीकृति इसी युग में मिली। राज्य की देखरेख में ही वे पनपीं। उस युग की सुसंस्कृत एवम् कला की आराधक
गणिकाओं की जोड़ी की थी। दरअसल भावना प्रधान हमारे देश में काम जीवन सदैव ही अमर्यादित रहा, विश्रृखंलित रहा। इसीलिए यहां
रहीं बस नाम बदलते रहे। कभी उन्हें देवदासी, सर्वभोग्य, रूपजीवा-तो कहीं उन्हें नृत्यांगना, गणिका, नगरवधू तो कभी तवायफ, वारांगना,
कसबिन एवम् पतुरिया कहा जाता रहा, अन्तर केवल यह है पहले काम के अलावा रिझाने की दुकान लगती थी, वहाँ अब सिर्फ काम की
है अर्थात् पहले वेश्या अपनी चाटुरता बुद्धि से अपने ग्राहक को लुभाती थी, नृत्य करती थी परन्तु वर्तमान समय में इनका रूप कामवासना
वह केवल भोग की वस्तु मात्र बनकर रह गई। वेश्या बनना या होना नारी के लिए एक बहुत बड़ा कलंक है। समाज और धर्म के सामने
घृणा और अपमानजनक ही है। वेश्या का समाज में कोई स्थान नहीं होता। वह तो केवल विलासी पुरुषों का मनोरंजन का साधन मात्र बन

मधु जी का 'सलाम आखिरी' उपन्यास में वेश्वावृति एवम् उससे सम्बन्धित समस्या को उजागर किया है। मधु जी स्वयं इन लालबत्ती इलाकों
वेश्याओं का साक्षात्कार लिया। लेखिका ने इस उपन्यास की मुख्य पात्र सुकीर्ति के माध्यम से अपने विचार कि अभिव्यक्त किया। जो कलकत्ता
बहुबाजार कालीघाट, बैरकपुर, खिदिरपुर आदि रेड लाइट एरिया में जाती है और वेश्याओं से मिलती हैं। उपन्यास में उन्होंने वेश्यावृति और
संघर्ष की गाथा को यथार्थता के साथ चित्रण किया है तथा इसके साथ ही उन्होंने उनसे जुड़ी समस्याओं को जानने की कोशिश करती है।
और वेश्यावृति के पूरे परिदृश्य को देखते हुए हमारे भीतर उन असहाय स्त्रियों के प्रति करूणा पैदा करने की कोशिश करता है जो किसी
में जुड़ गई हैं। कलकता के सोनागाच्छी एरिया का सीधा साक्षात्कार कराते हुए लेखिका सभ्य समाज की संवेदनहीनता और कठोरता से
नग्न यथार्थ चित्रण उन्होंने अपने इस उपन्यास में किया है। इस समस्या का मूल कारण प्राय: आर्थिक, आधारहीनता, गरीबी, अशिक्षा है।
उपन्यास में भी दर्शाया गया है कि किस तरह गरीबी, धन की कमी, अशिक्षा के कारण स्त्री वेश्या बनती है। सुकीर्ति जब अपने घर में काम
आया की बेटी को ढूंढने के लिए सोनागाच्छी जाती है तब वह वहाँ एक वेश्या से प्रश्न करती है "तुम्हें डर नहीं लगता अपनी इज्जत को इस
मर्द के हवाले करते..." तो वह वेश्या उतर देती है "क्यों नहीं लगता है, बहुत लगता है एकदम शुरू- शुरू में तो बोटी-बोटी अकड़ गई थी।"

"तो फिर क्यों करती हो तुम ऐसा?"

"क्योंकि इससे भी ज्यादा डर एक और चीज है, उससे लगता है।"

"क्या है वह?"

"भूख!"

इससे स्पष्ट होता है निर्धनता के कारण ये वेश्याएँ वेश्यावृति को अपनाती है। आज भी भारत में असंख्य लड़कियां ऐसी है जो अपने परिवार
उठाती है और इस पेशे की राह पर चलती है। उपन्यास में रमा भी अपने परिवार का पालन पोषण स्वयं करने के लिए हर महीने, घर भेजती है
पिता को लगता है कि वह कारखाने में काम करती है। इसी सन्दर्भ में रमा कहती है "मैं हर महीने अपने गाँव, अपने माँ बाप को छोटे भाई-बहनों
हजार रूपये के आसपास भेजती हूँ। यह कहकर कि मैं किसी कारखाने में काम काम करती हूँ और अठारह सौ रूपये महीने कमाती हूँ। यदि
जाएं उन्हें कि मैं कैसे कारखानें में हूँ तो मेरा मुंह तक न देखें वे... पैसा लेना तो दूर।"[2] वेश्याओं को समाज सहज रूप से स्वीकार नहीं करता
कि उनका परिवार भी स्वीकार नहीं करता जिनका वह पालन पोषण करती है। नूरी भी अपने परिवार की जिम्मेदारियों के कारण इस व्यवसाय
है।

इन चकले में रहने वाली लड़िकयों के जीवन की ही यह समस्याएँ नहीं ये तो चकले के मालकिन की भी वही स्थिति है। अपने छोटे भाई
बाप के खातिर बर्तन चौका करने वाली मीना को धोखे से इन गलियों में बेच दिया जाता है। 15 वर्ष की उम्र में ही वेश्या बनी मीना पूरी तरह
अधंकार में डूब जाती है। "अब कोई भी लड़का तुमसे शादी नहीं करेगा, क्योंकि पन्द्रह वर्ष की उम्र में ही तुम वेश्या हो गई हो। अच्छा है, ई
कमाने के लिए करो और छः महीने तक मुझे पुरी तरह से भोग - भागकर, अघाकर एक रात वह भी मुझे इन्हीं अंधेरी गलियों में बेच गया।"

कुछ वेश्याएं ऐसी भी होती है जो उनके पति द्वारा जबरदस्ती वेश्याएँ बना दी जाती है। उपन्यास में नलिनी, गायत्री भी उपने पति द्वारा इस व्यवसाय में धकेल दी जाती है। 30 वर्षीय गायत्री तीन बच्चे की माँ है और पति द्वारा छोड़ने पर वह इस पेशे में आई। गायत्री किसी चकले में काम नहीं करती। वह बरेल स्टेट की लाइनवाली है। उसे चकले की भाषा में फ्लाइंग वेश्या कहते है। वह पास के ही गाँव मागराघाट से सुबह ग्यारह बारह बजे तक आती है और जो ग्राहक मिलते है उन्हें किराया के मकान में ले जाती और धंधा करती है। गायत्री पति के द्वारा छोड़ देने के बावजूद भी वह पति के नाम का सिन्दूर लगाती है। वह सिन्दूर के माध्यम से अपने आपको सुरक्षित मानती है क्योंकि समाज उसी स्त्री की इज्जत करता है जिसके पीछे पुरुष हो। गायत्री कहती "मैं प्रतिदिन गाँव से आती हूँ वहाँ सब जानते है कि पति ने मुझे छोड़ दिया है, फिर भी यदि मैं सिन्दूर नहीं लगाऊँगी तो लोग मुझे बदचलन समझेंगे, फब्तियाँ कसकर जीना हराम कर देंगे। मेरी सास मुझसे सम्बन्ध तोड़ लेगी।" गायत्री के इन शब्दों को सुनकर लेखिका को बेहद दुःख हुआ और वे कहती है "भारतीय समाज का यह एक और विरोधाभास! जो स्त्री अपने परिवार को भूखमरी से बचाने के लिए अन्तिम विकल्प के रूप में अपनी अस्मिता तक को दाव पर लगाने का साहस कर पाती है वह भी बिन सुहाग चिह्नों के अपनी बिरादरी वालों मे आँख मिलाने की हिम्मत नहीं बटोर पाती। भारत की आत्मा, ये ग्रामीण स्त्रियाँ और भारत के ये गाँव जहाँ आज भी स्त्री का आँकलन उसकी जुझारू प्रवृति, उसकी कर्मठता, श्रम और परिवार के लिए किए गए उसके त्याग के आध पर नहीं होकर उसके सतीत्व के आधार पर ही होता है।"[5] नलिनी की कहानी भी कुछ ऐसी ही है। उसे भी उसके पति के द्वारा इन गलियों में बेच दिया था। नलिनी एक बड़ी उम्र के मर्द के प्यार में पड़ जाती है और वह उसके साथ घर से भागकर कलकता आ जाती है। उसके पति ने नलिनी के साथ कुछ दिन तक शादी का नाटक किया और अंत में उसने उसे एक दिन बहुबाजार के चकले में बेच दिया। नलिनी की तड़प "आज भी जब-जब दिन के पहले ग्राहक के पास जाती हूँ तो उसके नाम पर अपने उस पहले मर्द पर एक बार थूक अवश्य देती हूँ।"[6] नलिनी का दुःख तथा क्रोध देखा जा सकता है। कोई भी स्त्री उस व्यक्ति को कभी भी क्षमा नहीं कर पाती है, जो उसे वेश्या बनाता है। कुए वेश्याएँ ऐसी होती है जो न तो किसी मजबूरी में वेश्या बनती है और न ही उन्हें धोखे से चकले मे बेचा जाता है वे स्वयं सहर्ष वेश्यावृति को स्वीकार करती है। इस उपन्यास की पात्र पिंकी भी सहज रूप से वेश्यावृति स्वीकार करती है। पिंकी की माँ भी वेश्या थी उसने भी पहली बार अपनी आँखे तो इसी माहौल में खोली। वेश्या जीवन के संस्कार उसे अपनी मां से विरासत में मिले थे। गायत्री, नूरी या चम्पा की तरह न तो उसे अपने पेशे से घृणा थी और न ही आक्रोश और न ही जमाने से किसी प्रकार का गिला शिकवा और न ही बातचीत में कोई दैन्य भाव। अशिक्षा वेश्यावृति का मूल कारण रहा है परन्तु अब अशिक्षित वेश्याओं के अतिरिक्त शिक्षित लड़कियाँ भी इस पेशे को अपनाने के लिए बाध्य है। "कालेज पढ़ने वाली शिक्षित लड़कियाँ तक पार्ट टाइम के हिसाब से इस पेशे को अपनाने को बाध्य हैं। आपने पढ़ा होगा 23 अगस्त 2000 का टेलीग्राफ। कालेज में पढ़ रही लड़की अपनी ट्यूशन फीस किताबें और कपड़ों के खर्च के लिए इस पेशे को अपनाने को बाध्य थी।"[7]

वर्तमान समय में नाबालिक लड़कियों को वेश्याएं बनाया जा रहा है तथा इनकी मांग भी अधिक है। नेपाल, बांग्लादेश आदि कई देशों से इन गरीब लड़कियों को लाया जाता है तथा इन बच्चियों को अप्राकृतिक ढ़ंग से बच्ची से औरत बनाया जाता है। उपन्यास में भी दर्शाया गया हे कि किस तरह छोटी बच्चियों को अप्राकृतिक ढंग से औरत बनाया जाता है तथा उन्हें वेश्यवृति के लिए तैयार किया जाता है। सुकीर्ति जब कालीघाट में वेश्या माया से मिलती है तो उसे ज्ञात होता है कि किस प्रकार बच्चियों को वेश्याएँ बनाया जाता है। माया कहती है "किसी भी छुकरी के उस अंग में (आँख के इशारे से समझा देती है वह वह कौन सा अंग) शोला (कागज का बना पदार्थ जो पानी पड़ने से ही गल जाता है, जिसे बंगाली भाषा में शोला कहा जाता है) घुसा दिया जाता है फिर उन्हें पानी के टब में बैठा दिया जाता है। जैसे-जैसे पानी में शोला फूलता है वैसे-वैसे गुप्तांगों में भी फैलाव आता जाता है। इसी प्रकार पुराने जमाने की औरतें अपने कानों के छेदों को बड़ा बनाती थी। मोटे जेवर घुसेड़ने के लिए। करीब पाँचवे-छठे महीने में लड़की पूरी तरह तैयार हो जाती है।"[8] सुकीर्ति यह सुनकर स्तब्ध हो गई उसे वहां की वायु प्रदूषित लगने लगी तथा साँस लेने में कठिनाई होने लगी। उसे अपनी नजरों के सामने टबों में बैठी दस ग्यारह बर्षीया लड़कियाँ ही लड़कियाँ दिखाई देने लगी और वह मन में सोचती है कि "हे भगवान् गुड़ियाँ! खेलने की उम्र और इतनी दरिन्दगी! कैसे जीती होंगी वे।"[9]

आजीविका के पर्याप्त साधन न होना वेश्यावृति की मूल समस्या है। कोई भी नारी वेश्यावृति को अपनाने के लिए तैयार नहीं होती उसे मजबूरी में इस व्यवसाय को अपनाना पड़ता है। ये न तो अधिक शिक्षित होती है और न ही इनके लिए समाज तथा सरकार द्वारा आजीविका कमाने के साधन उपलब्ध करायें जाते हैं। सुकीर्ति विजय से कहती हैं "देखो, यह समस्या आज इतनी व्यापक और इस कदर समाज के अन्दर तक जड़ जमा चुकी है कि मान लो आज एक रात में ही किसी चमत्कारिक ढंग से वेश्यावृति को रोक दिया जाएं, तो ये वेश्याएँ भूखी मर जाएँगी, न कोई शिक्षा इसके पास, न कोई विकल्प न ही किसी का संरक्षण इनके पास।"[10] जीविका के पर्याप्त साधन न होने के कारण इन्हें जीवित रहने के लिए वेश्यावृति अपनानी पड़ती है।

स्वास्थ्य सम्बन्धी ज्ञान का अभाव के कारण वेश्याएँ एड्स जैसी बीमारियों से रोगग्रस्त हो जाती है जिसके कारण अल्पायु में इनकी मृत्यु हो जाती है। उपन्यास में बताया गया है पिंकी नामक वेश्या एक साधारण से क्लीनिक में अपना गर्भपात करवाती है, उसके रक्त का रिसाव नहीं रूकता तथा उसकी मृत्यु हो जाती है। पिंकी की मित्र रेश्मी सुकीर्ति से कहती है "यह कोई विशेष घटना नहीं यहाँ के जीवन की। आधी से ज्यादा गरीब वेश्याओं का भाग्य ऐसा ही होता है। चालीस पैंतालीस तक कई मर मुरा जाती हैं या अपंग या सड़-गल जाती है। यदि यह नहीं हुआ तो पागल या भिखारिन ही बन जाती है। पिंकी थोड़ा जल्दी मर गई। अरे, यदि सेप्टिक और रक्तस्राव से नहीं मरती तो कुछ सालों बाद एड्स या सिफलिस से संक्रमित होकर मर जाती। जानती है चालीस तक आते-आते बहुत सारी वेश्याएं सड़-गल कर तीन चौथाई मर चुकी रहती है, शरीर और मन दोनों से।"[11]

किसी भी स्त्री का वेश्या जैसा व्यवसाय अपनाने के बाद उसका इस दलदल से बाहर निकलना असम्भव हो जाता है क्योंकि समाज और परिवार अपनी विकृत सोच के कारण उसे स्वीकार नहीं करता और वह इसी व्यवसाय को वापिस अपनाने पर मजबूर हो जाती है। इसी सन्दर्भ में इन्द्राणी सुकीर्ति से कहती है:- "हाँ, कई जगह, छोटी जगहों पर बात के बहुत फैल जाने पर सामाजिक डर के चलते भी माँ-बाप वेश्या बन चुकी अपनी लड़की को वापस नहीं ले पाते हैं कि यदि ऐसा किया तो उनके बाकी बच्चों का भविष्य, शादी-ब्याह दाँव पर लग जाएगा। लोगों के कटाक्ष ताने उनका जीना हराम कर देंगे।"[12]

वेश्याओं के जीवन की यह भी त्रास्दी है कि उनके इस पेशे का प्रभाव उनके बच्चों पर भी पड़ता है क्योंकि उन्हें न तो पिता अपने नाम का पता है और न ही उन्हें समाज में प्रतिष्ठा मिलती है। लेखिका ने भी उपन्यास में वेश्या के बच्चों की मनोदशा को दर्शाया हैं पिंकी नामक वेश्या कहती है "मेरा पता नहीं किसकी औलाद हूँ। औलाद का पता नहीं किस बाप से है, साला बाप नहीं कोई खुदा हुआ, बस सुना ही सुना, देखा तो आज तक तो नहीं।"[13] रेडलाइट एरिया में स्वयं जाकर लेखिका ने यह भी पाया वेश्या का जीवन चाहे कितना भी जिल्लत भरा हो परन्तु वह अपने बच्चों को अपने जीवन की

छाया मात्र से भी दूर रखती है। अधिकांश वेश्याएं अपने बच्चों के लिए आपसी सहयोग से एक अलग उनके रहने की व्यवस्था करती है। [illegible] देवनार भी अपनी बच्ची को अपने पास नहीं रखती। माया 10-11 वर्षीया कम उम्र की बच्चियों को अप्राकृतिक ढंग से औरत बनाकर [illegible] है परन्तु उसने अपनी पुत्री को अपने गाँव में अपनी बहन के पास छोड़ रखा था। हर महीने वह उन्हें खर्च भेजती तथा अपने धंधे के [illegible] उनसे मिल जाती थी परन्तु एक दिन माया बीमार पड़ गई वह एक दो महीनों से अपनी बच्ची से सम्पर्क नहीं कर पाई। उसकी बच्ची [illegible] माहौल में आ गई और माया की अनुपस्थिति में किसी ने उसी की चौदह वर्षीय पुत्री को वेश्या बना डाला। माया का दर्द फूट पड़ता है और [illegible] "जैसी करनी वैसी भरनी। इतनों को वेश्या बना डाला तो खुद की पुत्री को कैसे बचाती।"[14]

वेश्याओं को समाज में उचित स्थान नहीं मिलता। समाज में ऐसा कोई स्थान या व्यक्ति नहीं होता जहाँ वे सुरक्षित महसूस कर सकें। [illegible] गया है बैरकपुर की एक महिला राहगीरों को परेशान करने के आरोप में पुलिस उसे पकड़ लेती है तथा उसके उपरान्त पुलिसवालों ने [illegible] बलात्कार किया। जब उसने हिम्मत करके कहा कि वह इसकी शिकायत सीनियर पुलिस से करूँगी, तो पुलिस वाले हँस पड़े। [illegible] सुकीर्ति जब उससे मिलने जाती है तो उसने पहले तो बात करने से मना कर दिया परन्तु बाद में उसने दुःख बयान किया उसने कहा, "[illegible] एक मालिक होता है, एक ठौर ठिकाना होता है, हर कोई उसे हडका नहीं सकता। पर हमारा क्या है, रास्ते में पड़ी कुतिया से भी बदतर [illegible] कोई भी मार दे ठोकर। जो भी डाल दे दो पैसे, बस उसी के आगे बिछ जाना पड़ता है क्योंकि हम किसी की भी नहीं है। न माँ की, न बाप [illegible] की, न बहन की, न हिन्द की और न ही हिन्दुस्तान की। किसी भी की नहीं।"[15] इससे हमें वेश्या की पीड़ा का ज्ञान हो जाता है कि वेश्याओं [illegible] भी सामाजिक सुरक्षा नहीं होती।

समय के साथ-साथ वेश्यावृति में भी बदलाव हो रहें हैं। प्राचीन समय में वेश्याएं नृत्य करती थी, चाटुकारिकता के माध्यम से व्यय, विद्वत [illegible] समाज में भी इनका स्थान इतना निकृष्ट नहीं था जितना आधुनिक समय में है। इन वेश्याओं का जीवन तो भूख और कामवासना है। [illegible] रहा है कि कामवासना की प्रवृति बढ़ गई है। अब केवल काम को ही महत्त्व दिया जाता है। लेखिका ने उपन्यास में भी बताया है किस [illegible] में भी बदलाव आया है। सुकीर्ति विजय से कहती है "पहले की वेश्याएं तो फिर भी रिझानें, जलाने और तड़पाने के गुर जानती थी पर आज की [illegible] तो खुद ही इतनी जली-भुनी चिड़ि चड़ी एवम् तपी रहती है कि यह भी नहीं समझ पाती है कि ग्राहक इसमें, सिर्फ देह ही नहीं इनके [illegible] को भी भोगने आता है।"[16]

निष्कर्षत

यह कहा जा सकता है उपन्यास के माध्यम से लेखिका ने वेश्या जीवन के उस यथार्थ को दिखाने का प्रयास किया है। जो कहीं अंधेरी [illegible] हुए है। मधु जी ने लालबती इलाकों में जाकर वेश्या जीवन के यथार्थ को गहराई से जाना तथा उपन्यास के माध्यम से पाठकों के समक्ष प्रस्तुत किया [illegible] के जीवन की यह दर्दनाक दास्तान शायद ही पहले किसी ने इस तरह बेबाक पदति से पाठकों के सामने रखी है। वेश्याओं से जुड़े इन बहुआयामी [illegible] ों लेकर लेखिका की चिंता को कोई भी कैसे अनदेखा कर सकता है। समाज में वेश्याओं की मौजूदगी एक चिरन्तन सवाल है जिससे हर समाज [illegible] अपने-अपने ढंग से जूझता रहा हैं वेश्या को कभी लोगों ने सभ्यता की जरूरत बताया है। कभी कलंक बताया। समाज में सभी रूढ़ियों के उन्मूलन [illegible] की जाती है चाहे वो सती प्रथा, बहुविवाह, बाल विवाह आदि हो परन्तु वेश्याओं के उन्मूलन की कोई बात नहीं करता और न ही समाज तथा [illegible] ओर से कोई ठोस कदम उठाए गए हैं।

Work Life Balance (WLB)in Relation to Family Variables: A Study of Himachal Pradesh Police Personnel

Authors

DR. POONAM KAUSHAL[1]
DR. JAI SINGH PARMAR[2]

Abstract

Policing has long been recognized as a stressful, emotionally wearisome, and sometimes dangerous occupation. An imbalance in work life and other aspects of life is related to several harmful outcomes for officers, and ultimately to police organizations and nation at large. Various workplace factors have been studied to see what relationship they have with WLB (work life balance) of police officers. There has been far less research on how family related variables might be linked to WLB of police officers. Thus, keeping this fact in mind, this research work sought to discover the nexus of various family related variables with wok life balance of police personnel. Data was gathered from781police personnel of Grade-II employed in Himachal Pradesh, India. Various statistical tools viz. Pearson correlation coefficient, one way- ANOVA and Post Hoc were employed with the help of SPSS 21. The outcome of research reveals that spouse support and WLB is significantly positively correlated, whereas family role overload and WLB is significantly negatively correlated. The research further shows that WLB of police personnel vary significantly at different extents of spousal support and family role overload.

Keywords: *Work- life balance, work- family conflict, spouse support, family variables*

Introduction

In the past, people often attend one major role in their life, i.e. career or housework, etc., rather than to several (e.g., to a career, being a mother, being happy as an individual. etc) (Mescher et al., 2009). In the last few years, a remarkable revolution has occurred in the workforce and this leads to changes in the demographic profile of workers. People have modified their traditional manly 'breadwinner' viewpoint to dual-earner couples and single parental families (Walia, 2011). This makes a single person to play multiple roles of an employee, boss, subordinate, spouse, parent, friend, sibling, member of the club and others. Relative to the working environment, organizations are demanding an increase in employees' work timing, flexibility and productivity. Arulkumar (2015) expressed that conventional phenomenon of one job for whole life has changed and now there is an environment of volatility, instability and job uncertainty. Employees' viewpoint and prospects towards work have also changed. Contemporary orientations towards lifetime learning, individual and professional advancement, and an increased understanding and the need for a balance between work and life have influenced the working environment in which organizations now operate which

is totally different from any time in history (Shoemaker, Brown, & Barboer,2011).All these factors leads to creation of a world called VUCA world for modern organization where V stands for volatile, U stand for uncertainty, C for complex and A stands for ambiguous.

Naithani (2010) and Naithani and Jha (2009) specified that from 1950's up to the early years of the 21st century an extensive changes have occurred in socioeconomic factors which are influencing the work and personal life of employees. They categorized these factors into three groups viz. family domain, work domain and other factors. *Family domain factors* include the influx of women in the labour force, employment of working mothers, dual earner couples and single parents. This trend increased the child and elder care burden on a large number of staff and created new challenges in balancing work and family life. Work domain factors include extended working hours' culture, changing work time, unpaid overtime and work escalation. These *work domain factors* resulted in increased work strain, less time for home and family responsibilities. *Other factors* influencing work and family life include ageing population, shortage of skill, technological complexities of the workplace, and the growth of service sector industry and lack of social support network, globalization and liberalization (Naithani, 2010).

The above mentioned factors influencing work and family life reflect the belief that work and family lives are interdependent. The difficulties of coordinating these two domains of life (work and family domain) have become a challenge for the majority of Indian working families. In the new VUCA economy, with its focus on 365 working days has affected the employees' family relationship. Large number of employees now a days have family responsibilities regardless of gender, and maximum employees who are married have an employed spouse but jobs are not still modified and carrying the same design and structure considering as employees have no family responsibilities. Thus, managing work domain and family domain, and lessening the conflict between these two domains have become a vital issue. It is especially essential to the police personnel that are compelled to deliver their work with the best attainable quality and additionally to the organizations and governments that hire them and are concerned with nation security and expect top quality services from them.

Literature Review

In the last few years time span, an enormous number of studies have been completed to inspect the work life and family life balance of employees employed in various organizations. These investigated studies have investigated the connection between different family related factors and WLB. **Frone, Yardley & Markel (1997)** in a study on employees who were married and/or parents found a circuitous reciprocal relation between work-to-family conflict and family-to-work conflict. The study prescribed that family-related help may diminish family-to-work struggle fundamentally by lessening family misery and parental over-burden. **Kim & Ling (2001)** in their study examined the sources and type of work-family conflict among married Singapore women entrepreneurs and found that the spousal emotional and attitudinal support had a significant negative relation with work-family conflict. **Mesmer-Magnus &Viswesvaran (2006)** in their study examined the value of facets of family friendly work environment, i.e., work/family policies and programs, including flexibility and dependent care and family-friendly culture, including work/family culture, supervisor support and co-worker support in reducing worker reports of work/ family conflict. The study found spousal support to be strongly related to family work conflict. In addition, small relationship was found between dependent care assistance and work/family conflict.

Kinnunen, Feldt, Mauno, &Rantanen (2010) made an attempt to analyze the relationships between work-family conflict and well-being in the domains of work (job satisfaction) and family (parental distress) among dual-earner couples. The study revealed that high family to work conflict was related to high work to family conflict in both partners, and family to work conflict of the wife was linked to her decreased job satisfaction. Furthermore, family to work conflict was also related to job distress and depression. **Razak, Omar & Yunus (2010)** examined the relationship between spouse support, parental demand and family involvement (family issues) with the two dimensions of work-family conflict [work interference with family and family interference with work]. The study found a significant and positive relationship between parental demands and work interference with family and family interference with work. In addition, a significant and negative relationship was found between spouse support and family interference with work. **Michel, Kotrba, Mitchelson, Clark & Baltes (2011)** examined an organizing framework and theoretical model of work-family conflict. The study found family role stressors (family stressors, role conflict, role ambiguity, role overload, time demands, parental demands, number of children / dependents), family social support (family support, spousal support), family characteristics (internal locus of control, negative affect/ neuroticism) as antecedents of family-to-work conflict (FWC). **Abendroth & den Dulk, L. (2011)** in their study on 'relevance of different types of support for satisfaction with WLB' reported a positive

impact of emotional family support on work-life balance satisfaction while found no impact of instrumental family support on WLB satisfaction of workers.

Rana & Adhikari (2013) examined the role of work and family domain variables in explaining the work family conflict. The results showed that work-family conflict is significantly positively associated with work role conflict and significantly negatively associated with family support. The study further concluded that social support variables such as work support and family support are significant negative predictor of work-family conflict. The study also found no significant role of parental demand in explaining work-family conflict. **Russo, Shteigman & Carmeli, (2015)** study contributes to a better understanding of social support role in balancing work and non-work life of employees. They found that support from work and nonwork sources (family support) plays an essential role for the pursuit of employees to achieve balance in the spheres of work and life and suggest that the WLB helps in the development of psychological availability and augmenting employee positive energy.WLB, psychological availability and positive energy, which is requisite for ensuring people's productivity and development. **Sharma & Parmar (2017)** explored the relationship between family related variables and WLB. The study discovered a significant and positive correlation between spouse support and WLB. The study further reported a significant and negative correlation between family role overload and WLB. The study found no significant correlation between family related variables viz. parental demands, household responsibility and WLB.

Need For Study

The police force in India is over burdened, especially at lower levels where constabulary is forced to work continuously 14-16 hrs and also for 7 days a week (Yadav, Times of India, 2016). It adversely impacts their performance and personal life. The pressure of work has been escalating over the years and it is affecting the work as well as life beyond work of the police personnel. Timely intervention can prevent much of the damage caused by work stress. Many research studies reported social support as one of influencing factors that might minimize the impact of stress (Cobb, 1976; Kaufmann &Beehr, 1989). The employees who availed more social support were found to have a better life than those who availed less social support (Cohen & Wills, 1985; Gansteret. al., 1986). Many research studies conducted in the past have indicated that family support is related negatively to work-family conflict (Parasuraman, Greenhaus, &Granrose, 1992; Frone, Yardley & Markel, 1997). Spouse support was found as the most significant source of family support. Spouse support doesn't only minimize the negative effects of work-family conflict, but also acts as a moderator when work stress is high. Lord (1996) found that work and non-work support from spouse had a positive impact on the police officer's attitude and performance. Keeping these facts in mind, the present study is an attempt to examine the relationship between spouse support and WLB; and WLB of police personnel at varied levels of spousal support.

Further, the demographic and structural changes in the family need to be taken into account; while understanding the need for having a balanced life. In Western industrial culture, there is an increase in the number of childless singles, single-parent families, and single-earner families, along with increased demands of child care, elder care and increasing participation of women population in the labour market (Ferber, O'Farrell & Allen, 1991; Guest, 2002). In the Indian context too, changes in the family structure are evident. The traditional joint and extended families are vanishing and their place is taken by the nuclear families (Rajadhyaksha, 2004). Another change is the influx of women in the workforce in a big way, while still continuing with their earlier role of a homemaker. So, now more employees are now engaged in a dual- earner lifestyle where both partners work and share responsibility for family care-giving (Greenhaus et al., 2000). A research conducted by Bond et al. (1998) found that 85% of employees report having some day-to-day family responsibilities. These changing demographic trends, coupled with greater family involvement by men (Pleck, 1985) have significant impacts on how work and family life relate to each other. Keeping these facts in view, the existing studies on WLB with reference to increased family obligations (viz. household responsibilities, parental demands, family role overload etc.) are available in very limited numbers in India and specifically in Himachal Pradesh. Hence, through the present study, an attempt has been made to examine the relationship of WLB (WLB) with family related variables.

Objectives

The present study was undertaken keeping in view the following objectives:

- To study the relationship between family related variables and WLB of police personnel of Himachal Pradesh.
- To study the difference in WLB of police personnel at varied levels of family related variables.

Hypotheses

In order to meet the objectives of the study, the hypotheses were formulated as under:

H_1: Spouse support will be significantly and positively related toWLB of police personnel.

H_2: Household responsibility will be significantly and negatively related to WLB of police personnel.

H_3: Parental demands will be significantly and negatively related to WLB of police personnel.

H_4: Family roles overloads will be significantly and negatively related to WLB of police personnel.

H_5: There will be a significant difference in WLB (and its dimensions) among police personnel at varied levels of spouse support (i.e., low, average and high spouse support)

H_6: There will be a significant difference in WLB (and its dimensions) among police personnel at varied levels of parental demands (i.e., low, average and high parental demands)

H_7: There will be significant difference in WLB (and its dimensions) among police personnel at varied levels of household responsibility (i.e., low, average and high household responsibility)

H_8: There will be significant difference in WLB (and its dimensions) among police personnel at varied levels of family role overload (i.e., low, average and high family role overload)

Methodology

In this research, exploratory approach and hypotheses testing were employed. The primary data was collected from non-gazetted police personnel of Grade-I employed in Himachal Pradesh state of India. In order to get the required information, a well designed questionnaire was prepared and distributed among the respondents. Questionnaires were distributed among 1040 police personnel on the basis of convenience and judgment sampling. Total no. of questionnaires considered for analysis purpose was 781 after removal of incomplete and irrelevant questionnaire. thus yielding a response rate of 75%. Various statistical tools viz. Pearson correlation coefficient, one way-ANOVA and Post hoc test were used with the help of SPSS 21 to analyze the data. Different standardized reflective scales were used (see Table 1) to collect required information. Negative items were reverse coded.

Table 1: Scales used and their reliability (Cronbach's alpha coefficients)

S.No.	Factor	Scale used	No. of items	Cronbach's alpha coefficients
1.	Work Life Balance (WLB)	Hyman(2005)	15	.86
2.	Family Related Factors			
i.	Spouse support	Caplan et al. (1975)	4	.82
ii.	Family role overload	Beehret al.(1976)	3	.70
iii.	Household responsibility index	Hyman et al., 2003	6	.70
iv.	Parental demands	Walia (2010)	6	.85

Results and Discussion

The useful questionnaires in present study were 781. The demographic characteristics of respondents are as: 78.9% (616) of respondents were male; 21.14% (1654) of respondents were female. The average age of the respondents was 32.58 years (S.D. =7.50). In terms of marital status, 57.6% (450) of respondents were married and 42.4% (331) were single or widowed, or divorced.

Relationship between Family Variables and WLB

In order to find out the relationship between family related variables and WLB of police personnel, Pearson correlation coefficient was employed and the results are shown in Table 2. From the results, Spouse support (SS, r =.172**, p<0.01) was found to be significantly and positively correlated with WLB. Family role overload (FRO, r =-.090*, p<0.05) was also found related to WLB of police personnel, although the relationship was not strong. Further, WLB showed no relationship with family related variables viz. parental demands and household responsibility. Hence, the hypothesis H_1i.e. *'Spouse support will be significantly and positively related to WLB of police personnel' is accepted. The hypotheses H_2i.e. 'Household responsibility will be significantly and negatively related to WLB of police personnel' and H3i.e., 'Parental demands will be significantly and negatively related toWLB of police personnel' are rejected.*

Table 2: Correlation among Variables

Family Related Variables	WLB
SS***	.172**
PD***	-.086
HHR***	.004

*Correlation is significant at the 0.05 level (2-tailed).
*** SS- Spouse Support, PD-Parental Demands, HHR-Household Responsibility, FRO-Family Role Overload

WLB of Police Personnel at Varied Levels of Family Variables

One-way ANOVA was applied to find whether there is any significant difference in WLB among police personnel at varied levels of family related variables. For this, police personnel were categorized into three categories on the basis their family related variable scores (see Table 3):

(a) Low spouse support, parental demands, household responsibility and family role overload: Score< (Mean – 0.5 S.D.)

(b) Average spouse support, parental demands, household responsibility and family role overload: Scores between (Mean and 0.5 S.D.)

(c) High spouse support, parental demands, household responsibility and family role overload: Score > (Mean + 0.5S.D.)

Table 3: Categorization of police personnel based on their family related variable scores

Family Related Variables	Low			Average			High		
	N	%	Mean	N	%	Mean	N	%	Mean
SS	104	23.1	10.64	226	50.2	14.52	120	26.7	18.11
PD	112	28.1	11.28	180	45.2	17.48	106	26.7	24.0
HHR	240	30.7	10.85	327	41.9	15.98	214	27.4	21.24
FRO	203	26.0	4.74	447	57.2	8.19	131	16.8	11.04

Note: SS- Spouse Support, PD-Parental Demands, HHR-Household Responsibility, FRO- Family Role Overload

One of the assumptions of ANOVA is that variances of the groups should be similar. As indicated in the results of Levene's Test of Homogeneity of Variances (see Table 4), the sig. value was found to be less than 0.05 for spouse support, thereby violating the assumption of homogeneity of variance. Therefore, adjusted F statistic can be used for spousal support which is provided by Welch and Brown-Forsythe test (see Table 5). The sig. value was found to be greater than .05 for parental demands, household responsibility and for family role overload; hence, the assumption of homogeneity of variance is supported.

Table 4: Test of homogeneity of variances – Family related variables (NGOs Grade-II)

Family related variables	Levene Statistic	df1	df2	Sig.
SS	8.362	2	447	.001
PD	2.419	2	395	.090
HHR	2.041	2	778	.134
FRO	1.175	2	778	.309

Table 5: Robust test of equality of means – Spousal support (NGOs Grade-II)

Family related variable	Robust Test	Statistic	Df1	Df2	Sig
SS	Welch	3.282	2	226.346	.039
	Brown-Forsythe	3.933	2	315.532	.021

As per the results of robust test of equality of means (see Table-5), F value was found to be significant for spouse support ($F= 3.28$, $p< 0.05$). The result shows that there is a significant difference in WLB among NGOs Grade-II at low, average and high levels of spouse support.

Table 6: ANOVA Table for WLB of police personnel at varied levels of family related variables

Family Related Variables	Sources of Variance	Sumof Squares	Df	Mean Square	F	Sig.
PD	Between Groups	463.659	2	231.829	1.061	.347
	Within Groups	86322.895	395	218.538		
	Total	86786.555	397			
HHR	Between Groups	372.570	2	186.285	.990	.372
	Within Groups	146326.676	778	188.080		
	Total	146699.247	780			
FRO	Between Groups	1876.429	2	938.214	5.040	.007
	Within Groups	144822.818	778	186.147		
	Total	146699.247	780			

The results of ANOVA analysis (see Table 6) shows that F value wasnot found significant for parental demands (F=1.061, p> 0.05) and household responsibility(F=.990, p>0.05) which further imply that there is no significant difference in WLB among police personnel (NGOs Grade-II) at varied levels of parental demands and household responsibility. Hence the hypotheses H_6 i.e.,*there will be a significant difference in WLB (and its dimensions) among police personnel at varied levels of parental demands (i.e., low, average and high parental demands) and* H_7 *i.e.,there will be a significant difference in WLB (and its dimensions) among police personnel at varied levels of household responsibility (i.e., low, average and high household responsibility*) were rejected.

Further, F value was found significant for family role overload (F=5.04, p<0.05) which indicates significant differences in WLB among police personnel (NGOs Grade-II) with low, average and high levels of family role overload.

Post Hoc Test

Since WLB of police personnel was found to significantly different at varied levels of spousal support(in robust tests) and family role overload (in ANOVA), thus, post hoc tests were employed to identify the pair of groups that contributed to significant differences. The results of the comparison are summarized in Table 7.

Table 7: Post hoc examinefor assessment of WLB of NGOs Grade-II at varied levels of spousal support and family role overload

Games Howell							
	Groups		Mean Difference (a-b)	Std. Error	Sig.	95% Confidence Interval	
	(a)	(b)				Lower Limit	Upper Limit
SS	Low (57.78)	Average	-0.924694	1.551385	.822	-4.587183	2.737796
		High	-5.004487*	2.042098	.040	-9.823668	-0.185306
	Average (58.70)	Low	0.924694	1.551385	.822	-2.737796	4.587183
		High	-4.079794	1.828957	.069	-8.399461	0.239874
	High (62.78)	Low	5.004487*	2.042098	.040	0.185306	9.823668
		Average	4.079794	1.828957	.069	-0.239874	8.399461
Tukey HSD							
FRO	Low (61.90)	Average	2.851809*	1.15473	.037	0.140249	5.563369
		High	4.568307*	1.52903	.008	0.977816	8.158799
	Average (59.04)	Low	-2.851809*	1.15473	.037	-5.563369	-0.140249
		High	1.716498	1.35551	.415	-1.466517	4.899514
	High (57.33)	Low	-4.568307*	1.52903	.008	-8.158799	-0.977816
		Average	-1.716498	1.35551	.415	-4.899514	1.466517

Note: Values in parenthesis indicate means

* The mean difference is significant at the 0.05 level

The results of Games-Howell post hoc analysis (see Table-7) shows that in case of spousal support, the p-value of low-high group was found to be less than 0.05, indicating that the mean scores between low-high groups differed significantly at the 5% level of significance. However, the p-value for low-average and average-high groups was found to be greater than 0.05, showing that there is no significant difference among these groups. The result infers that the WLB differed significantly among police personnel with low-high spouse support, at the same time, does not vary significantly among police personnel with low-average and high-average spouse support. WLB was found to be highest among groups with high spousal support (M_H=62.78), followed by average (M_A= 58.70) and low spousal support (M_L= 57.78).

The results of Tukey HSD post hoc analysis (see Table 7) revealed that in case of family role overload, the p-value of low-average and low-high groups were less than 0.05, showing that the mean scores between low-average and low-high groups differed significantly at the 5% level of significance. However, the p-value for average-high group was found to be greater than 0.05, showing that there is no significant difference in this group. The result infers that WLB differed significantly among police personnel with low-average and low-high family role overload, however, does not differ significantly among police personnel with average-high family role overload. The WLB was found to be highest among groups with low family role overload (M_L= 61.90), followed by average (M_A= 59.04) and high family role overload (M_H= 57.33). Hence, the hypothesis H_5 i.e., there will be a significant difference in WLB (and its dimensions) among police personnel at varied levels of spouse support (i.e., low, average and high spouse support) and H_8 i.e., there will be a significant difference in WLB (and its dimensions) among police personnel at varied levels of family role overload (i.e., low, average and high family role overload) were accepted.

Conclusions and Implications

The present study was carried out to inspect the WLB of police personnel in relation to various family related variables. The study found a significant and positive correlation between spouse support and WLB which further indicate that higher the spousal support higher will be the WLB of employees. The finding of the present study corroborates the studies made by Lord (1996) who found that work and non-work support from spouse had a positive impact on the police officer's attitude and performance. Jackson (1992) found that support from spouses reduces the negative impacts of work stress. Aycan & Eskin (2005) reported a negative association between spouse support and family to work conflict. Further, in the present study, a negative relationship was found between family role overload and WLB. This result is in consistent with the studies made by Frone et al., (1997) and Kopelman et al. (1983) who observed that the increasing dual career responsibilities make it difficult for an individual to maintain a balance between family and work responsibilities. Responsibilities towards family/ house interfere with workplace responsibilities.

The difference in WLB of police personnel at varied levels of family related variables viz. spouse support, parental demands, household responsibility and family role overload was also examined. The study found a significant difference in WLB of police personnel at low, average and high levels of spousal support and family role overload indicating these two family related variables as significant predictors of WLB of police personnel. These predictors cannot be directly managed by the organizations, though; organizations can make an effort to manage the impact of these predictors on WLB. For example, family room, sick leave to take care of children, provisions for child care referral services, parenting or family support programs and crèches may help in managing the affect of family demands on WLB. In family, the demands have increased as a consequence of changes in demographic profile of the workforce and changes in family structure such as a dual-earner couples, single-parent families and nuclear families. This trend has created new challenges in balancing work and other domains of life. Riley (2012) reported that even with reliable work-family arrangements, conflict can arise from sporadic events such as deadlines at workplace and sudden illness of children. Therefore, support from non-work based sources (such as spouse, children, and friends) help to reduce the conflict between work and life domains. Spouse support was found as the most significant source of family support. Spouse has a better understanding of the family environment and provides appropriate support in family domain. Spouse support doesn't only minimize the negative effects of work-family conflict, but also acts as a moderator when work stress is high. This fact would be especially important for police officers as there is a significant spillover between work and family in police work (Roberts & Levenson, 2001). If police personnel receive the needed support from spouse, it may become easier to maintain a balance in their life. Education for family members of police personnel is recommended regarding the work of police and vigorous demands of the job that may enable loved ones to provide support that is most appropriate to the officer's need.

Exploring Consumer Psychograph and Positioning Opportunities in Urban Markets

Kshemendra Mishra* and J S Parmar**

Himachal Pradesh University Business School, HPU, Shimla 171 005 (Himachal Pradesh)

ABSTRACT

Formulation of a thoughtful marketing strategy is of utmost importance for the success of any industrial venture. No matter which sector of our economy we talk about, a lot depends on the marketing strategies adopted. With the ever expanding movement of man, money and machinery the concept of markets has also changed. Today, markets are not geographically-bound; rather globalization has outstretched the horizons of markets both in vertical and horizontal domains. Though there has been an exponential increase in terms of the opportunities available, the fierce competition pooling from all around the globe has also increased. Focus and adoption of innovative techniques for production is necessary but in no ways sufficient. The undertaken research focuses on the analysis of consumer's psychographic profile in Shimla district of Himachal Pradesh in resonance to the marketing strategies that are currently employed and can be adopted to yield better results to the rural producers. A sample of 100 respondents was selected randomly to map their psychographic profile and correlate various factors that influence their buying decision.

Key Words: Analysis, Consumer, Cognitive Profile, Product Positioning, Psychograph, Strategic Marketing.

INTRODUCTION

The steady growth of the Indian economy is supported by the abundant manpower available within the country, constituted of both skilled and unskilled labour. Taking into account the projected trend, it is expected that, in 2020, the average age of an Indian will be 29 yr; thus making India one of the youngest and most dynamic nation in the world.

Even the contribution of the Agriculture sector in the Indian economy is much higher than world's average (6.4 %) standing at 15.4 per cent of the country's GDP. Further, the population distribution of India indicate that there are twice as many people living in the rural parts of the country compared to the ones residing in the urban parts. According to the findings of the 2011 Census, the rural to urban population of India was roughly 68.84**:**31.16 per cent.

Most of the people living in the rural parts of the country earn their livelihood from agriculture, livestock, forestry, hunting, beekeeping, fishing and pisciculture. Agriculture itself plays a vital role in the Indian economy with over 70per cent of the rural households directly dependent on it. Presently, India is among the top two farm producers in the world and provides approximately 52 per cent of the total number of jobs available in the country both directly and indirectly. Agriculture is the only means of living for almost two-thirds of the employed class in India and the agriculture sector occupies almost 43 per cent of India's geographical area. Clearly a major chunk of rural India engages itself in the primary sector and contributes a lot to the country's GDP.

Today we live in the age of open markets where instead of having monopoly or oligopoly

Table1. 2011 Census-Population distribution data (in crore).

Net Population	2001	2011	Net Change
India	102.9	121	18.1
Rural	74.3	83.3	9
Urban	28.6	37.7	9.1

we have existence of perfect competition, not only coming from within the country, but from multiple competing nations. Whether we talk about the production of rice, tea, coffee beans, almonds or any other primary sector based product, our local producers face stiff competition from multinational firms and companies. In most of the cases the foreign agriculture and farm based products that are sold in the Indian markets, are supported by extravagant financial lobbies that employ multiple strategists and marketing teams to handle the success of their products. In contrast, the domestic producer no matter how big or small whether with the availability of funds or not, fails to capture the mass market due to lack of proper marketing and positioning strategy. Grahovac (2005), Acharya and Agarwal (2006) reported that rural marketing in India is characterized by two main activities as selling of agricultural and rural items in the urban areas & selling of manufactured products in the rural regions. The selling of manufactured products in the rural areas is further categorized as the selling of urban manufactured products in rural markets & the selling of rural manufactured products in the rural markets.

The marketing and the sales of the urban products in the rural markets saw an exponential rise in the early 2000s estimated by Singh and Sharma (2012), in response to the extensive research and marketing strategies adopted by multinational giants like, Proctor & Gamble, HUL, TATA, Dabur etc. in the FMCG sector, along with companies like John Deere, Ford and Mahindra in tractor manufacturing sector; but when it comes to the marketing of rural products (whether consumables or durables) in the urban markets there is still a long uphill battle that needs to be fought.

MATERIALS AND METHODS

Exploratory research was conducted to analyze the consumer's psyche and product perception. This research is characterized by the use of questionnaire and successive responses generated by the targeted population to draw meaningful conclusion. This research is based on the primary data collected by the means of questionnaire and first hand interview. A standardized questionnaire was prepared to conduct this research focusing on the key parameters that dictates the purchase decision of buyers. Common Indian consumers and retailers were interviewed to gather reliable data. Non Probabilistic sampling strategy was followed where techniques like convenience sampling, snowball sampling and quota sampling were applied to fulfill the research objective. A sample size of 100 individuals was considered for this research.

Table 2: Population distribution and income status of respondents.

Income status respondents	Number of respondents
Below Rs 20,000	19
Rs 20,000 – Rs 35,000	22
Rs 35,000 – Rs 50,000	46
Rs 50,000 & Above	13

Demography

In order to correlate the psychographic profile of the urban consumers to the sale of rural commodities in the market, it was important to look into the demographic profile of the respondents. The set of believes, values, attitude and perception of a person depends on multiple factors like the level of education, age of a person, his/her corresponding exposure to the outside world along with the

location where he/she lives. Since the targeted population for this research pertained to the Shimla urban area (H.P), most of the correspondents were either graduate or above belonging to different age groups and varying professions.

Table 3: Population distribution according to the age group of respondents.

Age groups of respondents	Number of respondents
Below 20	17
20 -35	32
35 – 50	23
50 & Above	28

The varying income status of the respondents provided a deep understanding of the key factors that consumers consider before buying any commodity viz. packaging, quality and price etc.

RESULTS AND DISCUSSION

Product packaging and presentation

Based on the survey 81per cent of the respondents considered seal-packed agro products like dairy products, soya bean nuggets etc. to be of superior quality when compared to the unpacked sales of the same products at various kiryana stores. Simply put, air tight packaging of agro products inspires more confidence in urban population. Also correlating to previously conducted research by Pawan Kumar & Neha Dangi in 2011, focusing on Rural Marketing in India, Challenges and opportunities

Product quality assurance and certification significance

Product quality and authenticity plays a very vital role in the sale of any commodity hence 93 per cent of the surveyed population considered buying only those agro products that carry certification by agencies like FSSAI and AGMARK.

Online market and its significance

Technological development and growth of online shopping sites has made life easier for lots of people. Shimla, not being a big metro city doesn't enjoy facilities of online mega grocery retailers like Grofers, Godrej Nature's Basket, Big Basket etc.

but E Commerce giants like Amazon and Flipkart do carter the needs of the urban population. Thirty eight per cent of respondents agreed buying agro-products like honey, chia seeds, fruit jams and juices etc. directly from E Commerce websites.

Significance of branding

Seventy three per cent of the surveyed population considered brand name as an important factor that influences their purchase decision. A brand promoted by a famous public figure or one which has been there in the market for a considerable duration of time promotes trust in buyers and helps in the acceleration of sales for that product.

Price and quality perception

The asking price for a commodity can create a make or break situation for that particular product, especially when there are multiple competing brands in the market. In rural regions where earning per person is on the lower side people prefer to buy products that require minimum expenditure but interestingly when the urban surveyed population was asked to rank the quality of three competing almond brands based only on their perception the results were eye opening. Apart from the brand name the only information provided to the respondents was the MRP of the three competing brands. In absence of any other parameter for judgment, 92 per cent respondents considered the most expensive almond brand to be of superior quality when compared to the other two brands; but shockingly even with that perception only 12 per cent of the respondents considered buying it in future. Whereas the most affordable brand that was considered inferior to the other two brands by 79 per cent of the people, still had higher consideration for buying, voted by 21 per cent respondents. On the other hand the brand that existed in the middle of the price spectrum was ranked 2nd by 82 per cent respondents and more importantly was considered by maximum 67%

Table 4. Quality perception with respect to price.

Brand Name (500g)	MRP	No. of Respondents Ranked 1	No. of Respondents Ranked 2	No. of Respondents Ranked 3	Consideration for Buying
Solimo Almonds	705	3	82	15	67
Wonderland Premium Almonds	1399	92	3	5	12
Saptrishi Almonds	530	5	16	79	21

Table 5. Monthly earnings and buying choices of urban population.

Monthly Earnings (in Rupees)	Branded Agro-Product Buyers	Unbranded Agro-Product Buyers	Row Total
Below Rs 20,000	7	12	19
Rs 20,000 –Rs 35,000	13	9	22
Rs 35,00 –Rs 50,000	29	17	46
Above 50,000	8	5	13

Calculating the expected value

people for future purchase. It simply suggested that knowingly or unknowingly people do associate the quality of a product with its price but that does not necessarily mean that they would definitely buy it. What people look for, is the balance between good quality and reasonable price for that commodity.

In order to understand the current status and performance of rural-agro products in the urban market, specific questions were added to the questionnaire targeting urban retailers and whole sellers. Based on the feedback from the whole sellers and retailers, locally produced commodities like soya-badi, pine nut, dried lentil badi, spices etc. face stiff competition from seal packed branded commodities. 68 per cent respondents agreed to the fact that urban households prefer to buy branded packaging instead of going for the locally produced commodities, vegetables being the exception.

Coming to the marketing part, almost all the retailers confirmed constant efforts on part of big FMCG companies like ITC, MDH, Dabur etc. for the promotion of their agro products by the means of free gift schemes, installation of advertisement hoarding in shops, festivity offers etc. On contrary local rural producers do not involve themselves with any kind of product promotional activity as stated by 84% retailers.

Market coverage and dispersed presence of the rural products is another important factor that determines the success of product sales as stated by marketer Semenik J Richard, in his research work based on product promotion and integrated marketing . Out of 25 surveyed shops and shopping complexes local soya nuggets brand "A-1 Soya Chunks", had market presence of just 8% in contrast to brands like Fortune and Saffola with over 80% cent market presence. Clearly with all the data and seller's response, it would not be wrong to say that the current marketing strategies adopted by the local rural producers were not up to the mark with 86 per cent of the sellers confirming the fact themselves.

Effect of income level of urban respondents on the purchase decision of unbranded rural products:

Table 6. Calculation of expected values.

Monthly Earning (in Rupees)	Branded Agro-Product Buyers	Unbranded Agro- Product Buyers	Row Total
Below Rs 20,000	57x19/100 = 10.83	43x19/100 = 8.17	19
Rs 20,000 – Rs 35,000	57x22/100 = 12.54	43x22/100 = 9.46	22
Rs 35,000 –Rs 50,000	57x46/100 = 26.22	43x46/100 = 19.78	46
Above Rs 50,000	57x13/100 = 7.41	43x13/100 = 5.59	13

Computation

Monthly Earnings (in Rupees)	Branded Agro-Product Buyers (O-E)	Unbranded Agro-Product Buyers (O-E)	Branded Agro-Product Buyers $(O-E)^2/E$	Unbranded Agro-Product Buyers $(O-E)^2/E$
Below Rs 20,000	-3.83	3.83	1.35	1.79
Rs 20,000 – Rs 35,000	0.46	-0.46	0.01	0.02
Rs 35,000 –Rs 50,000	2.78	-2.78	0.29	0.39
Above Rs 50,000	0.59	-0.59	0.05	0.06

Calculation of Probability value (P value)

Therefore Chi square = (Observed frequency-Expected Frequency)^2 Expected Frequency 1.35 +0.01 +0.29 +0.05 +1.79 +0.02 +0.39 +0.06 **= 3.96**

From the Chi^2 table for the value **3.96,** with **the** degree of freedom, **df** = 3 & level of significance **(α) = .05,** the **P Value** comes out to be **.2632**

Interpretation:

Since the Chi^2 value is > P value therefore the result is not significant at p <.05

This implies: Buying of unbranded rural commodities by the urban buyers is independent of their income status. Hence we accept the Null hypothesis.

Based on cumulative responses for the asked questions, it can be easily understood that the urban buyers not only buy agro products rather they focus on buying brands, which simply means buying products from a reputed company that has been around for a considerable duration of time and has positive buyer's opinion so as to ensures proper quality and safety of the consumers. Urban buyers do acknowledge and support the use of indigenously produced agro products but when it comes to making the purchase decision, the origin of the products doesn't carry much weightage as long as the products meet the quality standards and are marketed at a reasonable price.

More or less, all human beings are judgmental by nature. Urban buyers being no different, make the buying decision even before trying out the other products just on the basis of how the product and its packaging looks. As a result in case of agro products, packaging and presentation does play a crucial role.

CONCLUSION

The Indian urban market with its vast size and heterogeneous demand base offers great lucrative opportunities to marketers. In India there are twice as many people living in the rural parts of the country compared to the ones residing in the urban

parts, most of which directly or indirectly depend on agriculture for their livelihood. Agriculture is the only means of living for almost two-thirds of the employed class in India and provides approximately 52% of the total number of jobs available in the country. With all the necessary potential and available opportunities, there also exists stiff competition, pooling into the Indian markets from all around the globe. As a result to tackle this competition, it becomes absolutely necessary for the rural Indian producers to adopt various positioning strategies in order to make a mark for themselves in the urban markets. The Urban consumers of present day India are very informed and expect nothing less than perfection. They have access to a wide variety of products, produced both nationally and internationally. Hence to satisfy their needs, and to help the small rural producers of India earn well, it is very crucial to share the importance of incorporating marketing strategies along with focusing on the production process.

Quality of Work Life in Transport Sector - A Comparative Study of Himachal Road Transport Corporation and Punjab Roadways

*Rama Sharma

**Prof. (Dr.) Jai Singh Parmar

ABSTRACT

Organizations cannot run without the precious sources called workforce. A high quality of work life (QWL) is essential for organizations to continue to attract and retain employees. QWL is an all-inclusive program designated to improve employee satisfaction. The aim of this research paper is to understand and compare the quality of work life of employees in Himachal Road Transport Corporation (HRTC) and Punjab Roadway (PR) and to assess the attitudes of the employees towards the welfare and safety measures, the physical facilities/working conditions, and social security and welfare measures in HRTC and Punjab Roadways. It was found from the results that the employees of both the organizations were not satisfied with the quality of work life in their respective organizations.

Keywords: Quality of work life, Working conditions, Human Resource Management Practices.

INTRODUCTION

Quality of work life (QWL) refers to the favorableness or unfavorableness of a job environment for the employees working in an organisation. It basically deals with the methods in which an organisation can ensure the holistic well-being of an employee instead of just focusing on work-related aspects. It includes the physical, social, economic, psychological and cultural well-being of employees. Quality of work life efforts are systematic efforts made by an organisation to give its employees a better opportunity to contribute towards the overall effectiveness of their organisation. A happy and healthy employee will give better turnover, make good decisions and contribute positively towards the organizational goals. An assured good quality of work life will not only attract young and new talent but

*Research Scholar, Himachal Pradesh University, H.P. E-mail:sharma.rama1983@gmail.com

**Director, HPUBS, Summer Hill, Shimla, H.P. E-mail: parmarjaisingh@gmail.com

CamScanner

also retain the existing experienced talent. So the organizations should always provide better quality of life and working conditions to its employees so that they can utilize other resources efficiently and effectively. Efforts towards QWL measurement help in efficient and effective allocation of resources to enhance productivity and stability of the workforce.

REVIEW OF RELATED LITERATURE

Singh & Maggu (1980), Kaushal (1997), Singh, S. (2014) found out that managerial experiences, hierarchy and remuneration do not significantly influence the perceived quality of work life. The high QWL was the result of the fact that organization took care of its workers in respect of pay, working conditions etc. Job enrichment, job enlargement and quality circles can contribute a lot. There is need to have customized work life balance policy considering the age groups of present work force. Tan & Akhtar (1992), Gani(1993) in their study revealed that the selected HRM practices like job security and satisfying work relationships are generally valued by employees and do contributes towards employee retention. The wage discontent, deplorable working and living conditions, job security and poor industrial relations climate continue to be the major considerations in employees working lives. Parmar (2002), Singh (2000), Gupta, S.(2007) found that the new vistas in QWL areas would be explored with the advancement in the technology, more autonomy at the work place and more participative decisions making. The work culture in private sector is characterized by challenging work, opportunity for growth and learning, freedom to act and congenial work conditions. Whereas public sector work culture were found to be related to high job security, moderate chance for promotion and better policies and administration. The participation in problem solving strengthens organizational commitment in both private and public sectors.

Panda(2004), Ghosh (2008), Krishnan(2010),Sarkar (2010) in their study emphasized on the industrial relation environment in terms of structural mechanisms for industrial relation management, trade unions and collective bargaining, workers participation in management and union management

relationship. Sharma, R.R.(2006), Kanwar, Y.S.P. et.al.(2009) found out that poor quality of work life resulting in stress and strain coupled with burnout has far reaching consequences on both the individual employees and the organization in terms of low motivation and productivity, increase in health cost, low engagement and employees' turnover. K., Sreenath and Annalakshmi (2010) in their study revealed that employees with high level resilience show high quality of work life.

OBJECTIVES OF THE STUDY

Following are the objectives of the study:

To find out and compare the satisfaction level of employees with quality of work life in HRTC and Punjab Roadways.

To assess the attitudes of the employees towards the welfare and safety measures, the physical facilities/working conditions, and social security and welfare measures in HRTC and Punjab Roadways.

HYPOTHESIS

$\mathbf{Ha}_{QWL1}$: There is a significant relationship between the age and satisfaction of employees with the quality of work life in HRTC.

$\mathbf{Hb}_{QWL1}$: There is a significant relationship between the age and satisfaction of employees with the quality of work life in PR.

$\mathbf{Ha}_{QWL2}$: There is a significant relationship between the salary and satisfaction of employees with the quality of work life in HRTC.

$\mathbf{Hb}_{QWL2}$: There is significant relationship between the salary and satisfaction of employees with the quality of work life in PR.

$\mathbf{Ha}_{QWL3}$: There is a significant relationship between the different categories of staff and satisfaction of employees with the quality of work life in HRTC.

$\mathbf{Hb}_{QWL3}$: There is significant relationship between the different categories of staff and satisfaction of employees with the quality of work life in PR.

CamScanner

RESEARCH METHODOLOGY

This research is conducted in selected depots of HRTC and Punjab Roadways. Sampling is defined as a practice of taking a small part of a large bulk to represent the whole. In a statistical inquiry when only a part of the population or only a group of units is taken into consideration, it is called sample method of inquiry (Ghosh, 1987).

HRTC has a three tier structure. The corporate office at Shimla control 4 Divisional Offices located at Shimla, Mandi, Hamirpur and Dharamshala. In all there are 27 depots, which are operating in HRTC. Out of 27 depots, 6 depots were selected on random basis including head office. Similarly Punjab Roadways has two tier set up. First tier is headed by Director State Transport. The second tier in the set up is depot management. There are 18 depots of Punjab Roadways. Out of 18 depots, 5 depots were selected including head office as shown in on random basis for the purpose of the study.

A total sample of 550 employees was taken with the help of convenience-cum–judgment sampling technique which was comprised of 300 from HRTC and 250 from Punjab Roadways. The relevant data for the study has been collected from both primary and secondary sources. For the purpose of this study, a well structured interview schedule was used for the data collection which increased the quality of the result and helps to justify the use of this research. This structured interview schedule was pretested and partially modified before its final administration to the respondents.

The secondary sources of data collection comprised of the corporate offices of HRTC and Punjab Roadways, books, magazines, newspapers, journals, websites and other published reports and gazettes by different department.

In this study data was analyzed using Statistical Program for the Social Science (SPSS 20) software. Various statistical tests were applied to analysis the data collected from the respondents such as percentages, frequency, mean, standard deviation, chi-square, Spearman correlation, skewness and kurtosis etc. for better understanding and interpretation.

RESULTS AND DISCUSSION

Keeping in view the existing level of quality of work life in the HRTC and PR in this section an attempt has been made to analyze the demographic characteristics viz. age, salary and categories of staff vis-a-vis satisfaction with quality of work life in HRTC and PR.

Table 1: Age vis-a-vis quality of wok life in HRTC & PR

Age	HRTC			Punjab Roadways		
	Satisfaction with the Quality of Work Life		Total	Satisfaction with the quality of work life		Total
	Yes	No		Yes	No	
18-25 Years	14 (70.0)	6 (30.0)	20 (100.0)	2 (7.7)	24 (92.3)	26 (100.0)
26-35 Years	17 (34.0)	33 (66.0)	50 (100.0)	46 (55.4)	37 (44.6)	83 (100.0)
36-45 Years	14 (25.9)	40 (74.1)	54 (100.0)	24 (53.3)	21 (46.7)	45 (100.0)
46-55 Years	27 (19.9)	109 (80.1)	136 (100.0)	16 (32.7)	33 (67.3)	49 (100.0)
55 and above	7 (17.5)	33 (82.5)	40 (100.0)	27 (57.4)	20 (42.6)	47 (100.0)
Total	79 (26.3)	221 (73.7)	300 (100.0)	115 (46.0)	135 (54.0)	250 (100.0)
	χ^2=25.731	P=0.000		χ^2=25.294	P=0.000	

Note: Figures in parenthesis shows percentages

In order to find out the relationship between the age and satisfaction of employees with the quality of work life, the following hypotheses were formulated:

Ha_{QWLI}: There is a significant relationship between the age and satisfaction of employees with the quality of work life in HRTC.

Hb_{QWLI}: There is a significant relationship between the age and satisfaction of employees with the quality of work life in PR.

It is clear from the table 1, that the value of χ^2 test is 25.731 for HRTC and 25.294 for PR and its corresponding p value is 0.000<0.05 and 0.000<0.05 for

CamScanner

HRTC and Punjab Roadways respectively. ***Since the p value is less than 0.05, the*** Ha_{QWL1} ***and*** Hb_{QWL1} ***hypotheses are accepted*** meaning thereby there is significant relationship between the age and satisfaction of employees with the quality of work life in both the organizations understudy. Hence, it can be stated that the concept of QWL is very significant to all the age groups of employees. It is clear from the analysis that employees from the lower age group in HRTC were satisfied than the old age group of employees. Whereas in PR, it was reverse of it. Therefore, employees always expect good QWL before joining any organization. In case of HRTC the large majority of respondents (82.5 percent) in the age group of 55 & above have expressed their viewpoints that they are not satisfied with the quality of work life in the organization. Whereas 70 percent respondents in the age group of 18-25 years pointed out that they are satisfied with the quality of work life in HRTC. Whereas in case of PR the majority of respondents (92.3 percent) in the age group of 18-25 years have said that they are not satisfied with the quality of work life in the organization. Whereas 57.4 percent of respondents in the age group of 55 & above have replied that they are satisfied with the quality of work life in PR. The overall perception of employees was unfavorable (73.7 percent) in HRTC and (54 percent) in PR regarding the satisfaction with quality of work life.

Table 2: Salary vis-a-vis Quality of Work Life in HRTC & PR

Salary(Rs.)	HRTC			Punjab Roadways		
	Satisfaction with the Quality of Work Life		Total	Satisfaction with the quality of work life		Total
	Yes	No		Yes	No	
Below 10000	26 (38.2)	42 (61.8)	68 (100.0)	11 (18.6)	48 (81.4)	59 (100.0)
10001-20000	5 (38.5)	8 (61.5)	13 (100.0)	3 (50.00	3 (50.0)	6 (100.0)
20001-30000	1 (3.3)	29 (96.7)	30 (100.0)	7 (41.2)	10 (58.8)	17 (100.0)
30001-40000	19 (17.9)	87 (82.1)	106 (100.0)	50 (54.9)	41 (45.1)	91 (100.0)
40001-50000	13 (25.0)	39 (75.0)	52 (100.0)	21 (70.0)	9 (30.0)	30 (100.0)
50001 & above	15 (48.4)	16 (51.6)	31 (100.0)	23 (48.9)	24 (51.1)	47 (100.0)
Total	79 (26.3)	221 (73.7)	300 (100.0)	115 (46.0)	135 (54.0)	250 (100.0)
	χ^2=25.816	P=0.000		χ^2=30.684	P=0.000	

Note: Figures in parenthesis shows percentages

In order to find out the relationship between the salary and satisfaction of employees with the quality of work life, the following hypotheses were formulated:

Ha_{QWL2}: There is a significant relationship between the salary and satisfaction of employees with the quality of work life in HRTC.

Hb_{QWL2}: There is significant relationship between the salary and satisfaction of employees with the quality of work life in PR.

From the table 2, the value of χ^2 test is 25.816 for HRTC and 30.684 for Punjab Roadways and its corresponding p value is 0.000<0.05 and 0.000<0.05 for HRTC and PR respectively. ***Since the p value is less than 0.05, the*** Ha_{QWL2} ***and*** Hb_{QWL2} ***hypothesis are accepted*** meaning thereby that there is significant relationship between the salary and satisfaction of employees with the quality of work life in both the organizations. On the basis of this information, it can be inferred that the quality of work life depends on the salary of the employees as adequate and fair compensation is one of the dimension of quality of work life. The dissatisfaction level of the employees with QWL in higher salary group is less as compare to the employees of lower salary groups. In case of HRTC the large majority of respondents (96.7 percent) in the salary group of 20001-30000 have expressed their view that they are not satisfied with the quality of work life in the organization. Whereas 48.4 percent respondents in the salary group of 50001 & above pointed out that they are satisfied with the quality of work life in HRTC. Whereas in case of PR the large majority of respondents (81.4 percent) in the salary group of below 10000 have said that they are not satisfied with the quality of work life in the organization. Whereas 70 percent of respondents in the salary group of 40001-50000 have replied that they are satisfied with the quality of work life in PR. Considering the majority (73.7 percent in HRTC and 54 percent in PR) it can be concluded that employees working in both the organizations understudy are not satisfied with the existing measures of QWL provided by these organizations.

CamScanner

Table 3: Categories of staff vis-a-vis quality of work Life in HRTC &PR

Categories of Staff	HRTC			Punjab Roadways		
	Satisfaction with the Quality of Work Life		Total	Satisfaction with the quality of work life		Total
	Yes	No		Yes	No	
Workers	32 (21.3)	118 (78.7)	150 (100.0)	48 (38.1)	78 (61.9)	126 (100.0)
Trade Union Leaders	15 (20.0)	60 (80.0)	75 (100.0)	25 (40.3)	37 (59.7)	62 (100.0)
Management Personnel	32 (42.7)	43 (57.3)	75 (100.0)	42 (67.7)	20 (32.3)	62 (100.0)
Total	79 (26.3)	221 (73.7)	300 (100.0)	115 (46.0)	135 (54.0)	250 (100.0)
	χ^2=13.798	P=0.001		χ^2=15.773	P=0.000	

Note: Figures in parenthesis shows percentages

In order to find out the relationship between different categories of staff and satisfaction of employees with the quality of work life, the following hypotheses were formulated:

Ha_{QWL3}: There is a significant relationship between the different categories of staff and satisfaction of employees with the quality of work life in HRTC.

Hb_{QWL3}: There is significant relationship between the different categories of staff and satisfaction of employees with the quality of work life in PR.

From the table 3, the value of χ^2 test is 13.798 for HRTC and 15.773 for PR and its corresponding p value is 0.001<0.05 and 0.000<0.05 for HRTC and PR respectively. ***Since the p value is less than 0.05, the Ha_{QWL3} and Hb_{QWL3} hypothesis are accepted***. On the basis of this information, it can be inferred that there is significant relationship between the different categories of staff and satisfaction of employees with the quality of work life in both the organizations. The management personnel are dissatisfied less with quality of work life at workplace as compared to workers and trade union leaders in HRTC whereas in PR management personnel are satisfied with QWL. The reason may be the difference in their working environment and the facilities being provided to them. In case of HRTC, the majority of trade union leaders (80 percent) have stated that

they are not satisfied with quality of life at workplace in the organization. Similarly 78.7 percent of workers and 57.3 of the management personnel have shown the same view that they are not satisfied with quality of life at workplace in HRTC. Whereas in case of PR, the majority of workers (61.9 percent) followed by the trade union leaders (59.7 percent) have stated that they are not satisfied with quality of life at workplace. While 67.7 percent of management personnel have pointed out that they are satisfied with quality of life at workplace in PR. The overall perception of employees was unfavorable (73.7 percent) in HRTC and (54 percent) in PR regarding the satisfaction with quality of work life.

ATTITUDES OF RESPONDENTS TOWARDS THE WELFARE AND SAFETY MEASURES IN HRTC AND PR

The attitude of employees of HRTC and PR towards welfare & safety measures followed by their respective organization has been analyzed through 11 statements using five point Likert scale. The information regarding this has been presented in table 4. The opinions of the majority of the respondents regarding the statement that *'The organization provides proper facilities and amenities to its employees and their families'* is falling towards lower side. The value of mean score is 2.89 and 2.73 for HRTC and PR respectively which is less than the mean standard score 3.00. Further the positive value of skewness (0.030 in HRTC & 0.308 in PR) also reveals that the opinions of respondents are scattered more towards a lower side of the standard mean score. The calculated value of the kurtosis (-1.407 in HRTC & -1.396 in PR) shows that the distribution of the responses is platykurtic in both the organizations. The calculated value of the χ^2 test is significant as the as the p value is less than 0.01. It reveals that the opinions of the respondents are not equally distributed in the organizations. In HRTC 39.7 percent and 11.7 percent of the respondents disagree and strongly disagreed respectively to this statement. Whereas in PR 52.8 percent and 8.0 percent of respondents disagree and strongly disagree to this statement. Thus it can be concluded from this analysis that proper facilities and amenities are not being provided by HRTC and PR to the employees and their families.

CamScanner

It is evident that the mean score of the employees' viewpoint regarding the statement *'The appropriate steps are taken to ensure that employees enjoy their work at workplace'* is 2.46 and 2.59 in HRTC & PR respectively, which is less than the average standard score 3.00 on the five-point scale. The standard deviation is (1.14 in HRTC & 1.12 in PR), the positive value of skewness (0.827 in HRTC & 0.474 in PR) and the kurtosis is (-0.371 in HRTC & -1.160 in PR). This indicates that their opinions have scattered towards the lower side of the mean score in both the organizations. The χ^2 test of goodness of fit also shows a significant difference in the opinions of the employees in the organizations and it further supports the above findings. Thus it can be concluded that employees of both the organizations are dissatisfied with the statement that the appropriate steps are taken to ensure that employees enjoy their work at workplace.

While analyzing the views of the respondents regarding the statement *'Union-management relations are cordial in the organization'* it is noted that the mean value is the 3.57 and 3.46 in HRTC & PR respectively, which is higher than the average standard score 3.00. The standard deviation is 1.03 in HRTC and 1.06 in PR and the negative value of the skewness (-1.131 in HRTC & -0.660 in PR) shows that the opinion of the respondents is scattered towards the higher side of the mean standard score. The value of the kurtosis (0.580 in HRTC & -0.718 in PR) shows that the distribution of the responses is leptokurtic in HRTC and platykurtic in PR which also supports the above viewpoint. The calculated value of the χ^2 test is significant as the as the p value is less than 0.01. Thus it can be concluded from this analysis that relations between union-management are cordial in both the organizations.

The mean score of the responses relating to the statement, *'Welfare facilities provided are better in comparison to other similar organizations'*, is 2.52 in HRTC and 2.65 in PR, which is less than the average mean value 3.00. It depicts that the opinion of the employees is largely divided between disagree to strongly disagree. The standard deviation is 1.06 in HRTC and 1.13 in PR. The positive value of the skewness (0.634 in HRTC & 0.350 in PR) supports that the majority of the responses of the employees are skewed more towards the lower side. The calculated value of the kurtosis is (-.513 in HRTC & -1.305 in PR) which

depicts that the distribution of the responses is platykurtic. The calculated value of the χ^2 test is highly significant at 1 per cent level of significance. It can be concluded that the opinion of the employees is not equally distributed over this statement and the majority of the employees either disagree or strongly disagree with the opinion that the welfare facilities provided by the organizations are better in comparison to other organizations.

The result clearly indicates that 48 percent respondents disagree and 25 percent respondents strongly disagree with the statement *'Safe and sound working conditions are prevailing in the organization'* in the HRTC. The mean score value is 2.30 which less than the standard average score i.e. 3.00 at five point Likert scale which supports the above analysis. The positive value of the skewness 0.775 supports that the majority of the responses of the employees are skewed more towards the lower side of standard mean score. The calculated value of kurtosis -0.531 shows that the distribution of the responses is platykurtic. Whereas in case of PR, the opinion of majority of respondents (66.8 percent agree) is falling towards higher side in case of PR. The mean score value 3.28 and negative value of skewness -0.866 supports that the majority of the responses of the employees are skewed more towards the higher side of standard mean score. The calculated value of kurtosis is -0.784 which shows that the distribution of the responses is platykurtic. The calculated value of the χ^2 test is significant as the p value is less than 0.01 in both the organizations. It reveals that the opinions of the respondents are not equally distributed in the organizations. Thus it can be concluded that the majority of the employees agree with the statement that safe and sound working conditions are prevailing in PR whereas in case of HRTC the majority of the employees either disagree or strongly disagree with the opinion that the safe and sound working conditions are prevailing in the organizations.

Majority of the respondents in HRTC have given the mixed opinion regarding the statement *'Management of the organization is deeply concerned with the job security of its employees'*. The mean score is 2.88 which is less than the average standard score 3.00 in five point scale. The variation in the opinion of the respondents is recorded at 1.24. The negative value of the skewness -0.64

CamScanner

shows that the opinion of the respondents is scattered more towards a higher side of the standard mean score. This shows that the opinion of the respondents is mixed towards this statement. The calculated value of the kurtosis is -1.488, which shows that the distribution of the responses is platykurtic. Whereas in case of PR majority of respondents agree to this statement. The higher value of the mean (3.22) and the negative value of the skewness -0.637 depicts that the majority of the respondents are on the higher side of mean which supports the above analysis. The negative value of the kurtosis shows that the distribution of the responses is platykurtic. The calculated value of the χ^2 is significant at 1 per cent level of significance in the organizations. Thus it can be concluded from this analysis that majority of employees agree to the statement that the management of the organization is deeply concerned with the job security of its employees in PR as compared to the HRTC.

It is evident that in case of HRTC, the mean score of the respondents' views regarding the *'Organization provides attractive retirement benefits'* is 2.97 which is nearest to the standard average score. The standard deviation and the skewness are 1.12 and 0.081 respectively. It exhibits that the majority of the respondents have expressed feeling of disagreement with this statement. The calculated value of the kurtosis -1.346 reveals that the distribution of the opinion is scattered towards the lower side of the mean score which supports the above opinion. Whereas in case of PR, the mean score value 3.19 and negative value of skewness -0.262 supports that the majority of the responses of the employees are skewed more towards the higher side of standard mean score. The calculated value of kurtosis is -1.433 which shows that the distribution of the responses is platykurtic. The calculated value of the χ^2 test is significant as the p value is less than 0.01 in both the organizations. It reveals that the opinions of the respondents are not equally distributed in the organizations. Thus it can be concluded that the majority of the employees in PR agree with the statement thatorganization provides attractive retirement benefits whereas in case of HRTC the majority of the employees either disagree or strongly disagree with the opinion that the organization provides attractive retirement benefits.

Further, the results for the statement *'Management stands out to safeguard the interests of employees in risky situations'* shows the mixed opinions of the respondents (41.7 percent agree, 6.3 percent strongly agree, 4.3 percent neutral, 35.3 percent disagree, 12.3 percent strongly disagree) in case of HRTC whereas in PR 56.8 percent of respondents agree to the statement that management stands out to safeguard the interests of employees in risky situations. The value of mean score, standard deviation, skewness and kurtosis supports the above analysis in both the organizations. The highly significant value of χ^2 test reveals the responses of respondents are not equally distributed. Hence, it can be concluded that majority of employees in PR agree to the statement that management stands out to safeguard the interests of employees in risky situationsas compared to the employees of HRTC.

It reveals from the table that *'There exists proper coordination between management and employees in both of the organizations.'* 60 percent of respondents were agreed to the statement in HRTC while in PR 80 percent of respondents agree to this statement. The mean value is the 3.30 and 3.59 in HRTC & PR respectively, which is higher than the average standard score 3.00. The standard deviation is 1.09 in HRTC and 0.96 in PR and the negative value of the skewness (-0.517 in HRTC & -1.588 in PR) shows that the opinion of the respondents is scattered towards the higher side of the mean standard score. The value of the kurtosis (-0.989 in HRTC & 1.372 in PR) shows that the distribution of the responses is platykurtic in HRTC and leptokurtic in PR which also supports the above viewpoint. The calculated value of the χ^2 test is significant as the as the p value is less than 0.01.Thus it can be concluded that there is a proper coordination between management and employees is HRTC as well as in PR as stated by the respondents.

It is noted that the majority of respondents of both of the organizations disagree with the statement *'congenial and hygienic work environment is provided to them by the organizations'*. The 81.6 percent respondents of the HRTC and 69.2 percent respondents of PR either disagree or strongly disagree to this statement. The mean score value is 2.14 and 2.46 in HRTC & PR respectively,

CamScanner

which is less than the average standard score 3.00 on the five-point scale. The standard deviation is (0.93 in HRTC & 1.14 in PR), the skewness (1.183 in HRTC & 0.553 in PR) and the kurtosis is (1.182 in HRTC & -0.999 in PR). This indicates that their opinions have scattered towards the lower side of the mean score in both the organizations. The χ^2 test of goodness of fit also shows a significant difference in the opinions of the employees in the organizations and it further supports the above findings. Thus, it can be concluded that the majority of the employees of HRTC & PR do not agree with the statement that congenial and hygienic work environment is provided to the employees by the organization.

Further the satisfaction level of employees is noted regarding the statement *'Employees are satisfied with the welfare activities and measures adopted by the organization'*. shows the majority of the employees of HRTC and PR are dissatisfied with statement. The mean score value is 2.30 in HRTC and 2.62 in PR, which is less than the average mean value 3.00. It depicts that the opinion of the employees is largely divided between disagree to strongly disagree. The positive value of the skewness (0.951 in HRTC & 0.326 in PR) supports that the majority of the responses of the employees are skewed more towards the lower side of standard mean score. The calculated value of the kurtosis also supports the above findings. The calculated value of the χ^2 test is highly significant at 1 per cent level of significance. It can be concluded that the opinion of the employees is not equally distributed over this statement and the majority of the employees either disagree or strongly disagree with this statement that employees are satisfied with the welfare activities and measures adopted by the HRTC and PR.

Table 4: Attitude of Employees towards Welfare and Safety measures in HRTC & PR

(HRTC, N= 300, Punjab Roadways, N =250)

S. No	Statements	Organization	Frequencies					Mean	S.D.	Skewness	Kurtosis	Chi-Square	P. Value
			Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree						
1	Organization provides proper facilities and amenities to its employees and their families	HRTC	18 (6.0)	119 (39.7)	9 (3.0)	119 (39.7)	35 (11.7)	2.89	1.22	.050	-1.405	199.200	0.000

Note: Figures in parenthesis shows percentages,
S.D - Standard Deviation

ATTITUDES OF RESPONDENTS TOWARDS THE PHYSICAL FACILITIES/WORKING CONDITIONS IN HRTC AND PR

The opinion of the respondents regarding the physical facilities/working conditions prevailing in the HRTC and PR has been analyzed by the 6 statements. The information regarding this has been presented in table 5. In case of HRTC, majority (56.6percent) of the respondents have expressed their disagreement (46.3 percent disagree and 10.3 percent strongly disagree) with the statement '*There is sufficient office space at the workplace*'. The mean value is 2.83 which is lower than the average mean value 3.00. It depicts that the opinion is largely divided between disagree to strongly disagree. The standard deviation is 1.22. The positive value of the skewness 0.206 supports that the majority of the responses of the employees are skewed more towards the lower side. The calculated value of the kurtosis is -1.387 which depicts that the distribution of the responses is platykurtic. Whereas in case of PR, 57.2 percent (52 percent agree and 5.2 percent strongly agree) of the respondents of PR have expressed their agreement towards this statement. Also the mean value is 3.11 which is more than the mean standard score i.e. 3 at five point likert scale. The variation in the opinion is noted at 1.19. Further the negative value of skewness -0.375 states that opinion is scattered more towards higher side of mean standard score. It is also supported by the calculated value of kurtosis which shows distribution the responses is platykurtic. While applying χ^2 test of goodness of fit, it is significant implying that the opinion of the respondents is not equally distributed in both the organizations. Thus it can be concluded that there is sufficient space at workplace in PR, while in case of HRTC majority of the respondents stated that there is no sufficient space at the workplace.

Further, majority of the respondents of both of the organizations have shown their disagreement with the statement that *'Adequate restroom facilities are provided to employees'* at workplace. The mean score of the responses is 2.44 in HRTC and 2.62 in PR which is less than the average standard score 3 in five-point scale. The positive value of the skewness (0.530 in HRTC & 0.322 in PR) also supports the above viewpoint. The calculated value of the kurtosis shows that

CamScanner

distribution of responses is platykurtic in both the organizations. While applying $\chi 2$ test of goodness of fit, it is significant implying that the opinion of the respondents is not equally distributed. In HRTC, majority (66.7 percent) of the employees disagree (45.7 percent disagree and 21 percent strongly disagree) to this statement while in PR, 62.4 percent of respondents disagree (45.2 percent disagree and 17.2 percent strongly disagree) with this statement. Thus it can be concluded from the results that both the organizations are not providing adequate restroom facilities to its employees at workplace. There should be proper provision of the restrooms so that the employees can take rest during the working hours.

It is revealed from the table that in case of HRTC, majority of respondents (95 percent) have shown their disagreement (56 percent disagree and 39 percent strongly disagree) regarding the statement that *'Crèche facility is provided by the organization'* while in PR, 94.8 percent were disagree (70.8 percent disagree and 24 percent strongly disagree) with this statement. The low value of mean (1.71 in HRTC & 1.84 in PR) and standard deviation (0.71 in HRTC & 0.60 in PR) shows that the distribution of the responses is towards the lower side of the standard mean score. Further, the positive value of skewness, the value of kurtosis and χ^2 test of goodness of fit also supports the results. Thus it can be concluded that none of the organizations provide crèche facility to their employees.

It is evident from the table that the majority of respondents have shown their disagreement regarding the statement *'Residential facilities are adequately provided by the organization'*. The calculated value of mean, skewness and kurtosis also shows that that the responses of the respondents are skewed towards the lower side of the standard mean score in both the organizations. The χ^2 test of goodness of fit also shows a significant difference in the opinions of the employees in the organizations and it further supports the above findings. In case of HRTC 35 percent and 18.3 percent of respondents disagree and strongly disagree respectively with this statement. Whereas in PR 49.2 percent and 13.6 percent of respondents disagree and strongly disagree respectively with this statement. Thus it can be concluded that residential facilities are not provided

adequately by the organizations to their employees.

Furthermore, the results regarding the statement *'Canteen facilities are existing in the organization'* clearly indicates that the mean value is 3.37 for this in HRTC which show responses of majority of the respondents is falling towards higher side of the standard mean score 3.00. The negative value of skewness -0.916 also reveals that the opinions of respondents are scattered more towards the higher side of the standard mean score. The calculated value of the kurtosis is -0.484 which shows that distribution of responses is platykurtic. Majority of respondents of HRTC agree (63 percent agree & 5.3 percent strongly agree) with this statement that the canteen facilities are existing in the organization which supports the above findings. Whereas in PR, 59.6 percent respondents have shown their disagreement (22.4 percent disagree and 37.2 percent strongly disagree) to this statement that canteen facilities are existing in the organization. The mean score of the responses related to this is 2.44 in PR which is less than the average standard score 3.00 in five-point scale. The standard deviation is 1.36, this shows that the variation is towards the lower side of the mean standard score. The positive value of the skewness 0.234 also supports the above viewpoint.The χ^2 test of goodness of fit states that it is significant implying that the opinion of the respondents is not equally distributed in the organizations. Thus it can be concluded that the respondents of the HRTC agree with the statement that the canteen facility are existing in the organization whereas in case of PR, majority of the respondents disagree to this statement.

Majority of the respondents in both of the organizations have shown agreement to the statement that *'Computers and online connectivity is available in the organization'*. In HRTC, 74 percent of respondents agree (24.7percent strongly agree and 49.3percent agree) to the statement while in PR 94.8 percent of respondents agree (17.2percent strongly agree and 77.6percent agree) to this statement. It is noted that the mean value is the 3.68 and 4.06 in HRTC & PR respectively, which is higher than the average standard score 3.00. The standard deviation is 1.20 in HRTC and 0.68 in PR and the negative value of the skewness (-0.798 in HRTC & -2.230 in PR) shows that the opinion of the respondents is

CamScanner

scattered towards the higher side of the mean standard score. The value of the kurtosis (-0.557 in HRTC & 9.120 in PR) shows that the distribution of the responses is platykurtic in HRTC and leptokurtic in PR which also supports the above viewpoint. The result of χ^2 test has shown that there is statistically significant difference of opinions of the respondents as the p value is less than 0.01. Hence, it can be concluded that computers and online connectivity is available in both the organizations.

Table 5: Attitude of Employees towards Physical Facilities / Working Conditions in HRTC & PR

(HRTC, N= 300, Punjab Roadways, N =250)

S. No.	Statements	Organization	Frequencies					Mean	S.D.	Skewness	Kurtosis	Chi-Square	P-Value
			Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree						
1	There is sufficient office space at the workplace.	HRTC	20 (6.7)	110 (36.7)	-	139 (46.3)	31 (10.3)	2.83	1.22	.206	-1.387	137.093	0.000
		Punjab Roadways	13 (5.2)	130 (52.0)	3 (1.2)	80 (32.0)	24 (9.6)	3.11	1.19	-.375	-1.323	231.080	0.000
2	Adequate restroom facilities are provided to the employees.	HRTC	10 (3.3)	76 (25.3)	14 (4.7)	137 (45.7)	63 (21.0)	2.44	1.17	.530	-.958	180.167	0.000
		Punjab Roadways	10 (4.4)	84 (33.6)	-	113 (45.2)	43 (17.2)	2.62	1.22	.322	-1.315	98.384	0.000
3	Crèche facility is provided by the organization.	HRTC	2 (0.7)	10 (3.3)	3 (1.0)	168 (56.0)	117 (39.0)	1.71	.71	1.497	4.223	400.433	0.000

SATISFACTION LEVEL OF EMPLOYEES TOWARDS SOCIAL SECURITY AND WELFARE MEASURES IN HRTC & PR

The satisfaction level employees towards social security and welfare measures in the HRTC and PR has been analyzed by the different factors and presented in table 6. The table clearly indicates that majority of the respondents were not satisfied at all (88 percent in HRTC and 98.8 percent in PR) with '*The sports and recreational activities*' in both of the organizations. The mean score (1.15 in HRTC & 1.01 in PR) is also lower than the mean standard score i.e. 3.00 at five point Likert scale. The variation in the opinion is noted at 0.48 and 0.11 in HRTC & PR respectively. Further the positive value of skewness states that opinion is scattered more towards lower side in both the organizations. It is also supported by the calculated value of kurtosis which shows that distribution of responses is leptokurtic. While applying χ^2 test of goodness of fit, it is significant implying that the opinion of the respondents is not equally distributed in the organizations. Thus, it can be concluded that the employees are not satisfied with the sports and recreational activities in both the organizations.

It is observed that mean value of the opinions regarding the '*The education facilities provided for children*' is 1.23 in HRTC and 1.01 in PR which is less than the average standard score 3 in five-point scale. The positive value of the skewness (2.312 in HRTC & 9.018 in PR) also supports the above viewpoint. The calculated value of the kurtosis shows that distribution of responses is leptokurtic in both the organizations. While applying χ^2 test of goodness of fit, it is significant implying that the opinion of the respondents is not equally distributed. The 80.7 percent respondents in HRTC and 98.8 percent in PR are not at all satisfied with the education facilities for children. Thus it can be concluded that the employees of both the organization are not satisfied with the education facilities for their children.

It is noted that the mean score of the responses related to the *'Canteen facility'* is 2.93 and 2.72 in HRTC & PR respectively. This indicates that the opinion of the respondents is scattered towards the lower side of the standard mean score 3.00. The positive value of the skewness shows that the responses are skewed more towards the lower side. Further, the negative value of kurtosis in HRTC shows that the responses of the respondents are platykurtic which shows that the opinion of the respondents is shifted from 'to moderate extent' to 'not at all'. Whereas in case of PR, the positive value of the kurtosis shows that the responses of the respondents are leptokurtic which shows that the opinion of the

respondents is shifted from 'to some extent' to 'not at all'. The calculated values of the χ^2 test are significant at 1 percent level of significance. It reveals that the opinions of the respondents are not equally distributed. Thus it can be concluded that the satisfaction level of the employees regarding the canteen facility is towards the lower side in both the organizations.

The employees in both of the organizations are not satisfied with the *'Library and reading room'* facilities provided by the organizations. Majority of respondents (86.7 percent in HRTC and 90 percent in PR) are not satisfied at all with the library and reading room facility at all. The calculated value of mean, standard deviation, skewness and kurtosis also supports the above results.

Also the extent to which the employees are satisfied with the '*Medical facilities*' is falling towards higher side with a mean score of 3.53 in HRTC and 3.76 in PR which is more than the mean standard score i.e. 3.00. The negative value of skewness (-0.739 in HRTC and -1.634 in PR) states that opinion is scattered more towards the higher side. It is also supported by the calculated value of kurtosis. While applying χ^2 test of goodness of fit, it is significant implying that the opinion of the respondents is not equally distributed. Thus it can be inferred that employees of both the organizations are satisfied from high to moderate extent with the medical facilities provided by the respective organizations.

Further, the result clearly indicates that amenities like '*Proper drinking water*' are prevailing in the organizations under study. It is noted that the mean score of the responses related to the facility of drinking water is 3.63 in HRTC and 3.18 in PR which is more than the mean standard score 3.00. The negative value of skewness in both the organizations show that the opinion of the respondents is scattered more towards the higher side of the standard mean score. The positive value of the kurtosis shows that the distribution of the responses regarding the drinking water facility is leptokurtic. While applying the χ^2 test, it has been found significant as the p value is less than 0.01. Thus, it can be concluded on the basis of the above analysis that the satisfaction level of the employees is shifting lies between high to some extent regarding the drinking water facility provided to the employees by the organization. It shows that the drinking water is provided by the organization.

Majority of the respondents in the HRTC and PR have shown dissatisfaction with the facilities like '*entertainment, cooperative society, vehicle loan, home loan and personal loan*'. The mean values of the responses regarding

CamScanner

different welfare practices like entertainment, cooperative society, vehicle loan, home loan and personal loan are less than the mean standard score 3.00 on the five point scale. The variations in the opinion of the respondents are noted to be less for all the facilities. This indicates that the opinion of the respondents is scattered towards the lower side of the mean score. The positive values of the skewness show that the opinion of the respondents is between 'low extent' to 'not at all'. Further, the positive values of the kurtosis show that the responses of the respondents are leptokurtic. The calculated values of the χ^2 test are significant implying that the opinions of the respondents are not equally distributed. It can be concluded that the employees are not satisfied with the facilities like entertainment, cooperative society, vehicle loan, home loan and personal loan in both the organizations.

However the respondents of both the organizations have shown their satisfaction with the different benefits like '*TA/DA, compensatory leaves and retirement benefits*'. The table infers that the mean value of the opinion regarding the benefits like TA/DA (3.77 in HRTC and 3.69 in PR), compensatory leaves (3.76 in HRTC and 3.73 in PR) and retirement benefits (3.36 in HRTC and 3.10 in PR), are more than the standard mean score 3.00 in five point scale. The negative values of skewness in both the organizations regarding these benefits show that the opinion of the respondents is scattered more towards the higher side of the standard mean score. It exhibits that the distribution of the responses is scattered towards the higher side of the mean. The positive value of the kurtosis shows that the distribution of the responses regarding the benefits is leptokurtic. The results of χ^2 test shows that there is statistically significant difference of opinions of the respondents as the p value is less than 0.01. It exhibits that employees of HRTC and PR are satisfied with the benefits like TA/DA, compensatory leaves and retirement benefits.

Table 6: Satisfaction level of Employees towards Social Security and Welfare measures in HRTC & PR

S. No	Statements	Organization	Frequencies					Mean	S.D.	Skewness	Kurtosis	Chi-Square	P-Value

CONCLUSIONS AND SUGGESTIONS

Quality of work life is very essential for the smooth running for an organization and as well as for the success of its employees. The work life balance must be ensured in the organizations so that the employees can work up to their full potential and are free from any type of stress. QWL can effects the productivity, commitment, absenteeism and satisfaction of the employees. The overall perception of employees was unfavorable in HRTC and PR regarding the satisfaction with quality of work life. There is significant relationship between the age, salary and categories of staff vis-a-vis satisfaction of employees with the quality of work life in both the organizations understudy.

On the basis of the information regarding the welfare & safety measures followed by HRTC & PR, it was found that employees were not satisfied with the welfare and safety measures adopted by the organizations. However, the cordial union management relationship and proper coordination between employees & management exists in both the organizations as stated by the respondents. Both the organizations should maintain the *congenial and hygienic work environment* so that the employees can work in healthy work environment and *appropriate steps should be taken to ensure that employees enjoy their work at their workplace*. Whereas in case of HRTC there is a need of improvement in the area like *working conditions, job security of the employees, retirement benefits and to safeguard the interests of employees in the risky situations*. On the basis of information regarding the different physical facilities/working conditions prevailing in the HRTC and PR, it can be inferred that in the majority of statements it was found that both the organizations are not providing proper physical facilities/working conditions to the employees as stated by the respondents. So in both the organization attention should be given to provide the *adequate restroom facilities, residential facilities and crèche facility* to the employees. However, *the computers and online connectivity* is available in both the organizations as stated by the respondents. In case of HRTC the focus should be on providing *the sufficient space at workplace* while in case of PR, there is need to improve the *canteen facility* in the organization as stated by the

respondents. On the basis of the information analyzed regarding satisfaction level of employees towards social security and welfare measures adopted by the HRTC & PR, it can be inferred that the organizations are not following the proper welfare and social security measures. The employees were satisfied with some of the welfare and social security measures like *medical facilities, drinking water, TA/DA and compensatory leaves*. Whereas, it was found that employees have shown their dissatisfaction towards the social and welfare facilities like *sports & recreational, library & reading room, canteen, cooperative society, entertainment* and *availability of different types of organizational loans (personal, home & vehicle loan)* in both the organizations. So the management of both the organizations should try to improve these facilities for the well being of their employees.

PERSONALITY TRAITS AND WORK ENGAGEMENT: A CASE STUDY ON FEMALE BANK EMPLOYEES IN BANKING SECTOR

Ms. Esha Bansal*1, Dr. Yashwant Gupta*2

*1Research Scholar, HPUBS, HPU, Shimla,H.P, India

*2Professor, HPUBS, HPU, Shimla,HP, India

ABSTRACT

The purpose of the present study is to explore whether there is any qualifying relationship between personality traits and work engagement, also, the level of work engagement and big five personality traits among female employees in Himachal Pradesh. Relevant data through questionnaire was collected from 150 female employees working in 3 different Public sector banks namely State Bank of India, Punjab National Bank and UCO Bank in the state of Himachal Pradesh. The results of the study specified that there were a significant positive relationship between work engagement and big five personality traits. Extraversion, Agreeableness, conscientiousness, and openness were significantly related to work engagement and its dimensions namely vigor, dedication and absorption whereas neuroticism was found to be negatively related to the work engagement and the three dimensions of it. The level of work engagement was high in public sector whereas extraversion, conscientiousness, neuroticism and openness were average except the agreeableness trait of personality was high.

Keywords: Big five personality traits, work engagement, vigor, dedication and absorption

I. INTRODUCTION

The contemporary world of work has witnessed dramatic ups and downs over the preceding decades whether the reason behind that is innovation in technologies, meeting the demands of increasingly diverse personnel or any superfluous economic factor like globalization of business (Burke and Cooper 2005; Cooper and Burke 2002). Organizational agility is continuously looking out for the employees who bubble, sparkle or effervesce with dynamism, enthusiasm, energy, employees who believe in themselves and their abilities (Bakker and Schaufeli, 2008). This implies that in order to achieve competitive edge organization need to have engaged employees who are willing to put in that little bit extra for business. Bleeker & Roodt, 2002; Schaufeli & Bakker, 2004 stated the importance for managers of fostering the growth of work engagement as disengagement or alienation is the central problem of workers' lack of commitment. Literature highlighted that research on work engagement has been done in various professions like nursing (Montgomery et al., 2015) police officers (Rothmann S., & Storm K. 2003) & Louw G.J. 2014), school principals, teachers (Hakanen et al., (2006); Zaidi et al., 2013, Sarath P & Manikandan K. (2014), including banking personnel (Koyuncu et al., 2006).

The issues in work engagement among banking personnel specially the female employees has received important responses these days because of the economic pressure of inflation, the acts upon of other women's movement and the psychological need to spring up one's self identity.. This brings us to a very important question as to why certain female employees show signs of work engagement while others exhibit no signs of work engagement. For Instance two employees working in the same environment may have different levels of engagement and this individual difference can exist because of their different personality traits" (Ozgur Ongore, 2014). It thus, implies that Personality plays a significant role in the engagement process and it can be considered as an important variable to affect the engagement level because individuals enter the workplace with their own sets of personality characteristics. Therefore it becomes important to study the relationship between personality traits and work engagement.

a) Work Engagement

Engagement is an important concept to study and analyze because it is associated with the positive individual and work related outcome as focused by Maslach et al., (2001). Engaged employees confirm themselves quickly to changes in their surroundings, and pass easily from one activity to the other as compared to their counterparts Laangelaan et al., (2006). It is defined as a "positive, fulfilling work related state of mind that is characterised by vigor, dedication and absorption" (Schaufeli, Salanova, Gonzalez-Roma & Bakker, 2002, p. 74).Vigor pertains to high levels of vim, dynamism, zip and mental exuberance while actively engaged in work. Vigor perhaps is

delineated as a pool of energy possessed by the employees and that could be used when dealing with demanding and stimulating situations (Shirom 2007 p. 86). Dedication refers to an intense work involvement and comprehends feeling of self-respect and personal worth, pride, enthusiasm, significance and challenge. Absorption which is the last variable of work engagement is characterised as being totally focused on one's work as the time appears to pass quickly and one finds it increasingly hard to detach oneself from work. In short, engaged employees work hard; they are passionate about their work; and are fully plunged in their work activities (Bakker and Demerouti, 2008).

b) Personality Traits

Traits or attributes are the fundamental building blocks of personality and refer to as the static perceptual structure, the manner in which the individuals think, feel and behave (Pervin et al., 2005). Individual differences cover a broad array of factors that gives the description of the way in which behaviour and performance of human beings differ from each other (Hogan, Harkness and Lubinski 2000). Personality refers to cognition and perceptual structure of behaviour that depicts constancy or stability throughout time and across situations (e.g. Cattell 1965) .

Extraversion is a personality trait that is characterized by warmth, assertiveness, gregariousness, talkative, enthusiastic, active, energetic, expressive etc. (Costa & McCrae, 1992). This variable consists of two components, Ambition (initiative, surgency, ambition and impetuous) and Sociability (social, exhibitionist and expressive) (Hogan 1986).

Neuroticism represents individual differences indicating general tendency to be anxious, tense, hostile, impulsive, vulnerable, self-consciousness etc. (Costa & McCrae, 1992). Any individual who scores high on Neuroticism indicates that a person is prone to have irrational ideas, being less able to control impulses, and is grappling badly with stress Rothmann et al., (2003).

Agreeableness is the propensity to be sympathetic, kind, generous, modest, compliant, altruism, considerate etc. (Costa & McCrae, 1992). Agreeableness is required to work in peace and to conclusively settle the conflicts. (Ozgur Ongore, 2014).

Conscientiousness individuals are efficient, responsible, self-disciplined, compliant, organized, and reliable (Costa & McCrae, 1992). Hence, individuals who scores high on conscientiousness should report more engagement in their work due to their sense of duty towards every role they take on. Openness to Experience is qualified by being artistic, introspective, and curious and values and intellectual matters. (Costa & McCrae, 1992).It includes traits such as imagination, curiosity, and creativity (Goldberg, 1993).

c) Literature

Work Engagement: Several research studies have been conducted by various research groups who provided thorough insight for understanding work engagement in conceptual terms.

Enumerate research has been done to examined the potential antecedents and consequences of work engagement Koyuncu et al., (2006), Oliver (2007) and Burke et al., (2010 & 2013. Only one variable of work engagement i.e. vigor has been focussed by Shirom (2004, 2007), Sonnentag et al., (2008). Someone who's suffering from burnout have less mitigating resources like social support than those who execute their duties vigorously Louw G.J. (2014). The creativity and charisma among female leaders and the role of resources and work engagement among 84 female school principals and 190 teachers were examined by Bakker et al., (2013).Job resources facilitate employees' sense of self-efficacy and resiliency, and consequently foster work engagement Bakker et al., (2013).

Big Five Personality Traits*:*

Managers who are emotionally stable, open to experience and agreeable tend to perform better than those who measured lower on these dimensions Rothmann et al., (2003). Bakker et al., (2006), examined the relationship between burnout and big five personality traits: extraversion, agreeableness, conscientiousness, emotional stability, and intellect/autonomy whereas openness to experience was not included in the study. A large number of studies have been done on personality traits and burnout Kim et al., (2007); Kaja et al., (2015); Alarcon et al., (2009); Zellar (2000); Joseph et al., (2011). The relationship among conscientiousness, neuroticism and burnout

in healthcare staff of private hospitals was examined, leaving out the remaining three personality traits (extraversion, agreeableness, openness to experience) which was not included in the study S. M. Azeem (2013).

Work Engagement and Personality traits:

Research has shown strong relationship between individual differences e.g. personality characteristics and burnout (Allen and Mellor, 2002). If personality traits can facilitate in predicting level of burnout among employees, it is fair enough to assume that attributes of personality can equally anticipates the level of work engagement by employees. Ongore (2014) investigated the relationship between personality traits and job engagement. Rantanen et al., (2013) explored the relations between personality, role engagement and four dimensional typology of work life balance. Woods et al., (2013) examined the association of personality traits with work engagement. Relevance of the variables of big five taxonomy when studied in relation with engagement is yet to be determined. For Instance, Langelaan et al., (2006) considered only two of those, whereas, Kim et al., (2009) considered conscientiousness to be significant and also, Kim et al., (2008) focused on the relationship between job burnout, job engagement and the big five personality dimensions which included extraversion, agreeableness, conscientiousness, neuroticism and openness to experience. Bozionelos (2004) explored the relationship between the big five personality and work involvement.

Akhtar et al., (2015) & Neha &Venkatesh (2015) investigated the relationship between personality and work engagement. The interactive effect of personality and employee engagement on organizational citizenship behavior has been investigated. Organizations should recognize the relationship between employee engagement and organisation citizenship behavior and should take efforts to enhance the employee engagement drivers, which will contribute to better performance Savitri J.J (2015).

d) Objectives

To measure the level of work engagement and personality trait among women employees in banking sector.

To find out the relationship between personality traits and work engagement.

e) Hypothesis

Ho1: There is no relationship between work engagement and extraversion.

Ho2: There is no relationship between work engagement and neuroticism.

Ho3: There is no relationship between work engagement and agreeableness.

Ho4: There is no relationship between work engagement and conscientiousness.

Ho5: There is no relationship between work engagement and openness to experience.

II. METHODOLOGY

a) Respondents

A survey was conducted to collect the data from 150 female employees working in three different public sector banks in the state of Himachal Pradesh namely State Bank of India, Punjab National Bank and UCO bank. The respondents were given standard based questionnaires comprising questions related to personality traits and work engagement.

Measures:

Respondents filled out the standard questionnaires containing statements related to work engagement and big five personality traits respectively. Work Engagement was assessed with the validated 17-item Utrecht Work Engagement Scale (UWES', whereas the big five personality traits was evaluated with the Big five Inventory (BFI). It included total of 44 statements. Demographic attributes such as name, age, marital status, job experience, designation, salary and total work experience were measured in the first section of the questionnaire.

a) **Cronbach's alpha:** To measure the validity and reliability of the variables of work engagement cronbach's alpha were used. The cronbach's alpha for all the variables of work engagement and the five big personality traits was between α.84 to .61

b) Statistical analysis:

Firstly, mean and standard deviation was calculated for work engagement and personality. These measurement tools helped in finding the level of the work engagement and its three dimensions namely vigor, dedication and

e-ISSN: 2582-5208
International Research Journal of Modernization in Engineering Technology and Science
Volume:02/Issue:08/August -2020 Impact Factor- 5.354 www.irjmets.com

absorption and also of the big five personality traits namely extraversion, agreeableness, conscientiousness, neuroticism and openness. Skewness and Kurtosis showed the normal distribution of the data. Further, Pearson correlation method was used to explore the relationship between the work engagement and its three variables namely vigor, dedication and absorption with the big five personality traits.

III. RESULTS AND DISCUSSION

Results of the present study suggest that five factor model can be used as an important tool to find out the levels of work engagement. The hypotheses were tested with the help of bivariate correlation method.

a) Descriptive statistics:

Table 1: Mean and Standard Deviation

	N	Mean	Std. Deviation	Skewness	Kurtosis	Minimum	Maximum
Vigor	150	3.791	.6526	-0.16	-0.45	2.0	5.0
Dedication	150	4.128	.7358	-0.93	0.31	2.0	5.0
Absorption	150	3.939	.6303	-0.40	-0.24	2.2	5.0
Work Engagement	150	3.791	.6526	-0.56	-0.25	2.0	4.9
Extraversion	150	3.508	.5754	-0.14	-0.04	3.0	5.0
Agreeableness	150	4.106	.4462	-0.09	-0.69	1.6	5.0
Conscientiousness	150	3.981	.5918	-0.64	1.26	1.0	4.3
Neuroticism	150	2.530	.7036	0.01	-0.60	2.9	4.8
Openness	150	3.855	.3950	0.11	-0.22	2.0	5.0
Personality Traits	150	3.508	.5754	-0.08	-0.50	2.0	5.0

Table 1 reveals the descriptive statistics of vigor, dedication, absorption, work engagement, extraversion, agreeableness, conscientiousness, neuroticism, openness and personality traits of women employees of public banks. The above table explicit that for public banks, the average value of vigor was 3.791 with standard deviation of .6525, average value of dedication was 4.128 with standard deviation .7358 and the average value of absorption was 3.939 with standard deviation .6303. Whereas, mean of work engagement for public banks is 3.791 with standard deviation .6526. While for public banks, average value of extraversion is 3.508 with standard deviation .5754, average value of agreeableness is 4.106 with standard deviation .4462, average value of conscientiousness is 3.981 with standard deviation .5918, average value of neuroticism is 2.530 with standard deviation .7036 and average value of openness is 3.855 with standard deviation .3950.

However, mean and standard deviation of personality traits for public banks are 3.508 and .5754, respectively. Since coefficient of skewness of vigor (-0.16), dedication (-0.93), absorption (-0.40), work engagement (-0.56), extraversion (-0.14), agreeableness (-0.09), conscientiousness (-0.64) and personality traits (-0.08) are less than 0, therefore distributions of vigor, dedication, absorption, work engagement, extraversion, agreeableness, conscientiousness and personality traits for public banks are negatively skewed. But distributions of neuroticism and openness for public banks are positively skewed with coefficient of skewness 0.01 and 0.11, respectively. Curves of vigor, absorption, work engagement, extraversion, agreeableness, neuroticism, openness and personality traits for public banks are plattykurtic as values of kurtosis for these variables are (-0.45 -0.24, -0.25, -0.04, -0.69, -0.60, -0.22 and -0.50) are less than zero. However curves of dedication and conscientiousness for public banks are leptokurtic with coefficient of kurtosis 0.31 and 1.26, respectively.

b) Level of Work Engagement and Personality Traits

Table 2 Level of Work Engagement and Personality Traits

Variables		Frequency	Percentage	Normal Range
Vigor	Low	45	30.0%	Below 3
	Average	52	34.7%	3-4

e-ISSN: 2582-5208
International Research Journal of Modernization in Engineering Technology and Science
Volume:02/Issue:08/August -2020 Impact Factor- 5.354 www.irjmets.com

	High	53	35.3%	Above 4
Dedication	Low	47	31.3%	Below 4
	Average	41	27.3%	4-5
	High	62	41.3%	Above 5
Absorption	Low	43	28.7%	Below 3
	Average	56	37.3%	3-4
	High	51	34.0%	Above 5
Work Engagement	Low	34	22.7%	Below 3
	Average	52	34.7%	3-4
	High	64	42.7%	Above 4
Extraversion	Low	54	36.0%	Below 3
	Average	51	34.0%	3-4
	High	45	30.0%	Above 4
Agreeableness	Low	42	28.0%	Below 3
	Average	41	27.3%	3-4
	High	67	44.7%	Above 4
Conscientiousness	Low	34	22.7%	Below 3
	Average	48	32.0%	3-4
	High	68	45.3%	Above 4
Neuroticism	Low	52	34.7%	Below 3
	Average	37	24.7%	3-4
	High	61	40.7%	Above 4
Openness	Low	32	21.3%	Below 3
	Average	57	38.0%	3-4
	High	61	40.7%	Above 4
Personality Traits	Low	36	24.0%	Below 2
	Average	61	40.7%	2-3
	High	53	35.3%	Above 3
Total		150	100%	100

Table 2 depicts the descriptive statistics giving information about the level of work engagement, personality traits and its variables' among women employees of public banks. From table 2, we can conclude that majority of women employees of public banks i.e. 35.3%, are highly vigorous. Similarly, majority of 41.3% women employees of public banks are highly dedicated. Whereas 37.3% women employees of public banks were averagely absorbed in their work and 42.7% women employees had high level of work engagement in banking sector. However level of extraversion in banking sector was low i.e. 36% women employees of public banks were extrovert. According to 44.7% women employees their level of agreeableness in banking sector was high. Although according to 45.3% women employees of public banks their level of conscientiousness in banking sector was high. Similarly, level of neuroticism in banking sector was high, as 40.7% women employees were highly neurotic. Likewise, according to 40.7% women employees of public banks their level of openness in banking sector was high. Level of personality traits in banking sector was average; according to majority of 40.7% women employees of public banks. Thus, it implies that overall level of work engagement is high and personality traits in public sector bank are average.

**. Correlation is significant at the 0.01 level (2-tailed).

*. Correlation is significant at the 0.05 level (2-tailed).

Work engagement and Extraversion:

The above table signifies the correlation values between the variables of work engagement (vigor, dedication, and absorption) with one of the variable of big five personality traits namely extraversion of public sector banks. Vigor was significantly positively correlated with dedication, absorption, work engagement and extraversion with coefficient of correlation 0.746, 0.680, 0.909 and 0.395, respectively i.e. ($p<0.001$). Similarly, dedication has positive relationship with absorption (0.621, $p<0.001$), work engagement (0.900, $p<0.001$) and extraversion (0.425, $p<0.001$).

There was a significant positive relationship between extraversion and work engagement with correlation coefficient 0.449, p<0.001). Absorption was positively correlated with extraversion and work engagement as the correlation of coefficient was found to be 0.854 and 0.373, respectively i.e. (p<0.001).

Work engagement and agreeableness:

Table 3 reveals the correlation values between the variables of vigor, dedication, absorption, workout engagement and agreeableness of public banks. Agreeableness was positively correlated with vigor (0.371, p<0.001), dedication (0.274, p<0.001), absorption (0.366, p<0.001) and work engagement (0.376, p<0.001). Absorption had a significant positive relation with both dedication and vigor as their coefficient of correlations was found to be 0.621 and 0.680 respectively i.e. (p<0.001). There was a significant positive relationship between dedication and vigor with correlation coefficient 0.746, p<0.001). However work engagement was positively correlated with vigor, dedication and absorption with coefficient of correlation 0.909, 0.900 and 0.854, respectively i.e. (p<0.001).

Work engagement and conscientiousness:

Table 3, depicts the correlation values between the variables of vigor, dedication, absorption, workout engagement and conscientiousness of public banks. Vigor was significantly positively correlated with dedication, absorption, work engagement and conscientiousness with coefficient of correlation 0.746, 0.680, 0.909 and 0.369, respectively i.e. (p<0.001). Similarly, dedication has positive relationship with absorption (0.621, p<0.001), work engagement (0.900, p<0.001) and conscientiousness (0.363, p<0.001). There was a significant positive relationship between conscientiousness and work engagement with correlation coefficient 0.401, p<0.001). Absorption was positively correlated with conscientiousness and work engagement as the correlation coefficient was 0.335 and 0.854, respectively i.e. (p<0.001).

Work Engagement and Neuroticism:

Table 3 explicit the correlation values between the variables of vigor, dedication, absorption, work engagement and neuroticism of public banks. Neuroticism has negative relationship with vigor (-0.342, p<0.001), dedication (-0.303, p<0.001), absorption (-0.215, p<0.001) and work engagement (-0.324). On the contrary, work engagement has a significant positive correlation with vigor, dedication and absorption with coefficient of correlation 0.909, 0.900 and 0.854, respectively. There was a significant positive relationship between dedication and vigor with correlation coefficient 0.746. Absorption has significantly positive relationship with dedication and vigor with coefficient of correlation 0.621 and 0.680, respectively i.e. (p<0.001).

Work Engagement and Openness to experience:

Table 3 concludes the correlation values between the variables of vigor, dedication, absorption, workout engagement and openness of public banks. Vigor was significantly positively correlated with dedication, absorption, work engagement and openness with coefficient of correlation 0.746, 0.680, 0.909 and 0.395, respectively i.e. (p<0.001). Similarly, dedication has positive relationship with absorption (0.621, p<0.001), work engagement (0.900, p<0.001) and openness (0.3401, p<0.001). There was a significant positive relationship between openness and work engagement with correlation coefficient 0.357, p<0.001). Absorption was positively correlated with openness and work engagement as correlation coefficient was 0.289 and 0.854, respectively i.e. (p<0.001).

Work Engagement and Personality Traits:

The correlation values between the variables of vigor, dedication, absorption, workout engagement and personality traits of public banks are presented by table 7. Personality traits had a positive relationship with vigor (0.420, p<0.001), dedication (0.401, p<0.001), absorption (0.442, p<0.001) and work engagement (0.473, p<0.001). Likewise Absorption was significantly positively correlated with dedication and vigor with coefficient of correlation 0.621 and 0.680, respectively i.e. (p<0.001). Work engagement has positive relationship with vigor, dedication and absorption with coefficient of correlation 0.909, 0.900 and 0.854, respectively i.e. (p<0.001). There was a significant positive relationship between dedication and vigor with correlation coefficient 0.746, p<0.001).

IV. CONCLUSION

The present study was conducted in banking sector which is one of the emerging and an impressive sector for the youth of country especially the females but the tremendous change in the sector has developed a need to study work engagement and the role played by the big five personality traits. The result of the present study suggests that there was a significant positive relation between work engagement and big five personality traits. The level of work engagement was found to be high in the banking sector which implies that the female employees working in this sector are satisfied with their job and are fully vigorous, dedicated and are absorbed. Though the level of personality traits were average but agreeableness was found to be high which implies that the respondents are more motivated and positive towards resolving the conflicts. Thus, the present study may help in future reviews and this study in other institutes need to be done.

ASSESSING THE ROLE OF SERVICE QUALITY IN ENHANCING CONSUMER SATISFACTION IN FOOD AND GROCERY RETAILING

[1]Amit Chopra, [2]Professor Yashwant Kumar Gupta

[1]Research Scholar, HPUBS, HPU, Shimla
[2]HPUBS, HPU, Shimla

Abstract
This paper explores service quality in food and grocery retail outlets its influence on customer satisfaction. RSQSscale (Dhabolkar et al., 1996)been used for measuring service quality.Involving the five dimensions of service quality i.e.Policy, Reliability, Personal Interaction,PhysicalAspects and Problem Solving. Customer satisfaction was measured by a four-item scale adapted from Oliver, 1980. The data was then analyzed using Karl-pearson coefficient of correlation and Multiple regression analysis to understand the effect of service quality on customer satisfaction. The outcomes as derived from regression analysis suggest that all five dimensions of service quality influence customer satisfaction. The information provided by this research can be used while designing marketing strategies to improve customer satisfaction in food and grocery retailing.

Key Words: Food and Grocery, Service Quality, Policy, Reliability, Personal Interaction,PhysicalAspects and Problem Solving Customer satisfaction.

1. Introduction

Indian Retail industry occupies a substantial position and is undeniably one of the fastest thriving industries across the globe. This sector is indeed placed at the cusp of unlocking novel frontiers in form of supermarkets, departmental stores and hypermarkets. These emerging modern shopping formats are proving to be the best one shop destination for shopping, entertainment and food. It has been estimated that by 2022,the Indian organized retail sector is anticipated to expand its retail space by 39 million sq ft**(Economic times, 2019).**The Retail industry being one of the India's largest employers has been providing approximately 8% of the total employment in addition to excellent business opportunities to millions of people across the length and breadth of the country. According to a report by (**IBEF,2019),** Indian retail industry's contribution to Gross Domestic Product (GDP) of the country stands close to 10% where India enjoys a sturdy fifth rank in terms of an emerging global destination in the retail space**(Delloite Report, 2018).** It was also anticipated to become the world's fifth largest economy by 2019, touching a total of GDP exceeding $3 trillion(The Livemint 2019). During the past decade India has observed an astonishing shopping revolution with substantial transitions in consumer buying behaviour patterns (Sharad Venkta,2017). Indian Retail Industry has experienced a booster through a collaborative impact of digitization, fast paced urbanization, rising disposable incomes and drastic lifestyle changes amongst the middle-class segment in the recent past. With this, the projected rise in the Indian consumer expenditure is expected to reach –approx. USD 3,600 billion by the end of 2020 (ShephaliKapoor)

2. Food grocery retailing in India

India's food and grocery retail sector accounts for approx. U.S. $380 billion(Shubhi and Anthony, 2018). Nearly 91% of the total retailing pie is predominated by unorganized neighbourhood shops(Care Rating 2017). It has been projected that the market share of modern retail formats will double to approx. four percent by 2020 (Shubhiand Anthony , 2018). As per the report, 44.63 percent of the household expenditure is spent on food and beverages. Emerging Investments in latest technology, robust expansion strategies, introduction of private labels with home delivery options, have largely aided the growth of this segment (Crisil Report, 2018). Apart from the Kirana stores, food and grocery is being readily sold in India through modern formats like supermarket, hypermarket, discount stores and convenience stores(Mukherjee and Zameer (2011].India's big blue-chip companies like Reliance, Bharti and RPG have diversified and indeed value added to their portfolios by venturing into retail domains. Big Bazaar, the flagship brand owned and controlled by Future Group is the leading brand in grocery retailing. Its share, though small, is growing year on year. It has now become a synonym with modern grocery retailers as being considered a pioneer in organized retail segment to make inroads in Indian territory (Euromonitor Report, 2017).It is anticipated that the grocery retailers in India will witness an enlarged footfall during the forecast period in 2021 due to the rise in health awareness (FICCI and PWC Report 2012). As lifestyles continue to change, Indian consumers are transforming to healthy eating habits with preferred home cooked food which in turn would push the consumers to purchase groceries and other household supplies on a more regular basis from these food and grocery retail outlets. Marketers need to strive hard to ensure the customers' delight level in theeir purchase journey. Retailers call such milestones as

ISSN- 2394-5125 VOL 7, ISSUE 16, 2020

"trustpoints" instead of "touchpoints (Accenture Report). Diverse planned initiatives by the Governments clubbed with developmental incentives has led to a multiplier effect in increasing movements of goods, services especially in food and grocery segment.

3. Review of literature

Systematic review of literature reveals that various studies have been conducted across the global concerning the behavioural aspect of consumers while taking retail purchase decisions. The consumer behaviour changes based on the place of shopping and level of involvement while buying merchandises (Berman and Evans, 2005). Kiranas have proved to be better performers in terms of location but poorly on cleanliness, offers, quality and helpful trustworthy salespersons (Panda 2013). However, Service quality helps in better understanding of the association between service delivery and the customer expectations (Parasuraman et al , 1988). Mom & pop stores are crafted in order to provide a well tailored product service to their local communities. Consumers often prefer to visit a store which is in the close vicinity of their house (Sinhaetal., 2002). Further, as highlighted by (Deka,2019) the shoppers give high weightage to store interiors and ambience while making purchase decisions. (Goswami and Mishra,2008) opined that consumers are loyal towards grocery outlets which are centrally located with supportive staff and clean hygienic interiors. (Banerjee and Dasgupta,2010) observed that consumers prefer to shop at the new format shopping malls as they are air-conditioned, well designed and provide better quality goods, value added services, risk free transactions, self-service, ample parking facilities, technology based operations along with convenience of shopping. (Kushwaha et al.,2017) explored that the tangible and intangibles elements clubbed with relevant promotional offers are the key factors in attracting larger customer footfall into the malls. However on the flip side many consumers perceive in-store shopping as time consuming,chaotic, tiring, frustrating and stressful, especially amid huge traffic inside the store (Buttle and Coates, 1984; Aylott and Mitchell, 1998; Roberts et al., 2003). Many researchers have also analysed that consumers consider food and grocery shopping as an unavoidable monotonous task (Corral, 1999; Geuens et al., 2003) that leads to sheer wastage of time (Picot-Coupey et al., 2009). (Buttle and Coates,1984) opined that consumers don't consider grocery buying as a form of 'shopping'. Instead, grocery shopping is often considered by many as a core household chore that is compulsive, mundane and a necessary evil (Buttle and Coates,1984).
So our study will furnish valuable insights regarding modern food and grocery retail format which are working hard to satisfy young consumer's hedonic and utilitarian needs especially in emerging economies like India. Customers expect an enhanced product quality along with excellent service as a hallmark of value for money (Singh, 2013). Expectations of the customers varies across diverse retail stores for different types of customers needs (Paul, 2016)

3. Service Quality Dimensions:

3.1 Physical Aspects

A physical aspect of a store is considered to be a multi facet concept. In addition to attractive physical amenities, it also includes convenient store layout and comfortable zone for public resting, latest equipment and fixtures (Martinelli, 2012),. Substantial evidence from the extant literature (Tanwar et al., 2013; Sam, 2011; Dabholkaretal., 1996) proves that attractive and pleasant services capes is the most favourable determinant for rich shopping experience(Kim and Jin, 2002;Malhotra et al., 1994), customer satisfaction and repurchase intentions(siu 2004) particularly in the countries where organized retail is at its nascent stage. Apart from enhancing the store image, these physical aspects render primary cues for customers to pursue the retailers' service offerings.

3.2 Reliability

The proficiency of various service organisations in achieving an assured service level in an utmost adequate fashion elaborates the concept of Reliability. In its broadest sense, reliability measures the speed of service, accuracy of transactions and speed of outcome. It also includes that food and grocery retailer would deliver the merchandise at the promised time with an appropriate problem resolution mechanism in case of any discrepancy. The employees should provide error free billing; honest and appropriate feedback about the product and sales-staff should have adequate product knowledge. The retail stores should be made accident proof by installing requisite surveillance devices and fire-fighting equipments. Its a combination of not only keeping promises but a commitment of "doing the right things". The retailer should refrain from over charging and deliver core service attributes at the right time at the right circumstances to the right customers.

3.3 Personal interaction

The interaction among store staff and store customers plays a significant role for attaining customers' loyalty if the store personnel are warm, friendly, and impulsive. (Bellenger et al, 1976) Simmers and Keith (2015) had defined the personal interaction dimension for retail stores that have empathetic employees, well equipped with product / service knowledge, ready to extend a helping hand when required with a proactive approach to resolve customer's queries. It also incorporates providing customer's individualised attention thereby showing

ISSN- 2394-5125 VOL 7, ISSUE 16, 2020

courteous behaviour as desired. Store managers should leverage their store assistants for enhancing their customer interactions though pro active approach.

3.5 Problem solving

The problem-solving dimension includes the willingness of retailers to process returns and exchanges in a hassle free manner and an earnest keenness in solving customer grievances along with establishing a decent dialogue with the customer. Sheth (1976), defined interaction quality as combination of rules, regulations and mannerism clubbed with appropriate content for communication. Firstly a healthy dialogue shapes up a positive outcome through buyer-seller interaction. Secondly employee competence could be gauged from the knowledge and skills that employees possess to effectively assess the needs of its client, their appropriate knowledge about products and services offered and delivered efficiently and if they could communicate effectively with customers. A competent employee is expected to provide prompt service and handle customer complaints efficiently.(Herling, 2000)

3.5 Policy

Store policy dimension captures the retailers' code of conduct and corporate narratives that reflects the organizations ethos and values. It includes quality merchandise, convenient operating timings, and acceptance of major credit cards/ digital payments. Requisite policy and procedures should be drafted to define the distinct levels of authority and accountability at the retail outlets.(Bailey, D. 1994) that should be dealt fairly, carefully and confidentially, managed in a way not against the legal conditions and the company policy, necessary reforms and checks should be carried out constantly to avoid the occurrence of the repetitive dissatisfaction. Transparency is predicated upon customer relations and resolving all customer dissatisfactions, perceived as the main principle.

4. Customer satisfaction

Customer satisfaction is the primary factor that aids in realizing organizational objectives, meeting standard of efficiency that mirrors hallmark of excellence for any organization (Gerson, 1993; Munusamy and Chelliah, 2011). Customers unanimously rank service quality as a nexus between customer satisfaction, and, consequently gaining competitive advantage.(Martinelli201). Customer satisfaction fosters an evaluative judgement for any service/ product performance which results in meeting or exceeding the customer's expectations (Kumar, 2012; Lombard, 2009; Santouridis&Trivellas, 2010(Kumar, 2012; Lombard, 2009; Santouridis&Trivellas, 2010). The Review of literature highlights different perspectives about customer satisfaction (HennigThurau& Klee, 1997; Groonroos, 2007). Few authors states that customer satisfaction stems from a positive affirmation about offers by the consumers (Oliver, 1997). Others argue that customer satisfaction/dissatisfaction is a perfect blend of experiences by perceived quality of the offer (Bitner, 1990; Bolton & Drew, 1991; Hennig-Thurau& Klee, 1997). The third group considers both constructs as one and the same (Gummesson, 1987; Spreng& Singh, 1993)..(martinelli201)Satisfied customers tend to be more loyal, less price sensitive, show stable demand patterns and engage in positive recommendation to other(Anderson et al., 2004;Matzler et al., 2008). Customer Satisfaction acts as a holy grail for modern retailers (Fornell, 2007), checking and improving the current as well as potential performance of businesses (Zairi, 2000).

5. Scope of the study

Since organised retailing is still in its nascent stage in Indian context,it is believed that food and grocery sector is the one of the most promising segment to set up retail venture for both indigenous and MNCs in Indian subcontinent. This fact is validated by the inroads made by domestic players like Reliance and foreign giants like Walmart and METRO. This is huge gulf in the research area concerning Indian context as limited empirical research have been done that contributes to the existing literature. Hence, this study aims at deciphering the key factors concerning service quality issues in food and grocery retailing in India. Reviewing service quality dimensions can help the managers to focus on weaknesses and chalk out a corrective action plan as desired. The geographical scope of the study is confined to the tri cities of north India i.e. Chandigarh, Mohali and Panchkula.

6. Objective of the study

- To understand the relationship between constructs of service quality and customer satisfaction
- To explore the important determinants of Service Qualityfor measuring customer satisfaction in Indian organized food and grocery retailing.
- To suggest the measures that can lead to increase of customer satisfaction in Indian organized food and grocery sector.

ISSN- 2394-5125 VOL 7, ISSUE 16, 2020

7. Hypothesis

H1: Physical Aspects as service quality dimension has a significant influence on customer satisfaction in Indian organized food and grocery retailing.
H2: Reliability as service quality dimension has a significant influence on customer satisfaction in Indian organized food and grocery retailing.
H3: Personal Interaction as service quality dimension has a significant influence on customer satisfaction in Indian organized food and grocery retailing.
H4: Problem solving as service quality dimension hasa significant influence on customer satisfaction in Indian organized food and grocery retailing.
H5: Policy as service quality dimension has significant influence on customer satisfaction in Indian organized food and grocery retailing.

8. Methodology

8.1 Measurement Instrument

In this study, a structured questionnaire was developed to collect the data for understanding the cues of service quality dimensions for enhancing customer satisfaction in food and grocery retail outlets. The questionnaire is divided into two sections.The first section was used to determine the respondents' perceived importance of service quality cues. 28 items were used to measure the holistic response of respondents' on a 5-point Likert scale where "Strongly disagree" is represented as 1 and "Strongly agree" is represented by 5,(Dhabolkaret al. 1996)Retail Service Quality Scale (RSQS)was used in the present study. This scale was further adapted and modified to suit the Indian food and grocery retail scenario for measuring in-store customer satisfaction parameters. 4 items of customer satisfaction was adopted fromOliver, 1980 .the second section of the questionnaire inquired about the respondents' basic demographic characteristics such as age, gender, education, annual household income,The instrument was pre-tested on 154 consumers. Based on the Pre-testing feedback, the instrument was revised to improve the clarity of the questions and to increase the content validity of the measurement instrument

8.2 Sampling and data collection

A quantitative based research approach was used for the study to test the stated hypothesis.Self-administered structured questionnaire wasframed to collect the data. Survey participants were randomlyselected from outside the supermarkets of Chandigarh, Panchkula and MohaliIndia.The participants wereinitially briefed about the aim of the study, anonymity, and the voluntary nature of participation before requesting them to fill the questionnaire The study's dataset includes 473 valid participant responses out of 550 resulting a yield rate of 86%.Khare (2012) assessed that the demographic and cultural factors deeply influence customer's preference to shop from small retail outlets in developing countries like India.Hence it becomes indispensable for retailers to value the true drivers of food and grocery shopping behaviour in the Indian retailing perspective (Sinha and Banerjee, 2004).The basic demographic profile is summarized in Table 1.which illustrates that 58.1% of the respondents are males, maximum respondents (39.32%) fall in the age bracket of 31-40 yrs.whereas71.04 % respondents are married and are58.56 % of respondents possess postgraduate degree. 40.08 % of the respondents earn a monthly income between 50000 -75000 per month and 46.09 % of respondents earn their living through a private job. eThe responses obtained were later analyzed using Karl Pearson coefficient of correlation along with regression analysis was . Data coding, recording and analysis were conducted with the help of SPSS 26 software

Table 1: Demographic profile

Demographic Characteristics		Frequency	Percentage

8.3 .Research instrument

Eysteinsson and Bjornsdottir (2012) concluded in their research, that the dimensions of service quality particularly in retailing differ as per the culture and type of retail outlet. So,principal component of factor analysis with varimax rotation was conducted to identify the dimensions of service quality and customer satisfaction in food and grocery retail outlets. In factor analysis, factors with eigenvalues greater than 1.0 and items with rotated factor loadings of 0.50 or greater were retained for further analysisas they are considered statistically and practically significant (Hair et al., 1998).Exploratory factor analysis shows that Bartlett's test of Sphericity was 0.00 (significant) The Chi-square value is 11389.875, df is 378 and Kaiser Meyer Olkin (KMO) value is .847indicating a good sampling adequacy. EFA extracted 5factors with cumulative variance extracted 69.713%.The first factor is identified with 9 variables and factor loadings ranged from .852 to .701. All the 9 variables in this factor relate to the Personal Interaction aspect of food and grocery retail outlets and explains the variance of 20.543with an Eigen value of 5.752 The second factor is identified with 6 variables and factor loadings ranged from .930 to .788.All the 6variables in this factor relate to the Physical aspect of food and grocery retail outletsand explained variance of 15.605% with an Eigen value of 4.369. The third factor is identified with three variables and factor loadings ranged from .935 to .784.All the five variables in this factor relate to Reliabilityof food and grocery store explained variance of 13.583with an Eigen value of 3.803.The forth factor is identified with five variables and factor loadings ranged from .806 to .670. All the five variables in this factor relate to policy aspect of food and grocery store and explained a variance of 11.219 with an Eigen value of 3.141. The fifth factor is identified with three variables and factor loadings ranged from .920to .804. All the 3 variables in this factor relate to problem solving aspect in food and grocery store and explained variance of 8.763 with an Eigen value of 2.454.

Where asExploratory factor analysis of customer satisfactionconstruct shows that Bartlett's test of Sphericity was 0.00 (significant) The Chi-square value is 2543.374, df is 10 and Kaiser Meyer Olkin (KMO) value is ..785. andcommunalities ranged from. .551 to .899 indicating good sampling adequacy. EFA extracted 1 factors with cumulative variance extracted 71.174% and eigenvalue 3.559.the factor loading ranged from .948 to .694.

The measurement instrument was tested for reliability usingCronbach alpha. This was done to estimate the degree to which the observed variables measure the true and error free value preferably in likertscale. Factor Analysis and Reliability results are summarised in Table 2. All the variables shows that the Cronbach alpha values were well above the customary cut-off limitoff 0.6 (Griethuijsen et al., 2014) indicating a satisfactory level on internal consistency.

9. Correlation analysis

The outcomes as derived, clearly exhibited support for all the specified hypothesis i.e. from H1 to H5.Hence it could be deduced that all thementioned proposed constructs i.ePhysical Aspect(r=584 p≤0.05), Personal Interaction (r=.456 p≤0.05), Reliability(r=..441 p≤0.05), Policy(r=..422 p≤0.05) Problem Solving (r=..350 p≤0.05) were found to have positive effect on customer satisfaction in food and grocery retail in India . Preliminary analysis revealed that there was no violation of the assumption of linearity and homoscedasticity and all associations were found to be significant at 95% level

10. Regression Analysis

In the consecutive step, to explorethe aspects of specified service quality parametersi.ePhysical Aspect, personal interaction, policy, reliability and problem solving whichshow a stronger influence on the customer satisfaction in food and grocery retail outlets multiple regression analysis was implemented. In the model, five dimensions of service quality were measured by 28 itemswhichwere considered as independent variables and customer satisfaction dimension was measured by 5 items whichwere considered as the dependent variables. The model was found significant at p≤.05 level and the adjusted R^2 =0623 .Table 6 shows theunstandardized beta coefficients illustrating the independentvariables" explanatory power. Five constructs were found to be impactful($p \leq 0.05$ level) in elaborating customer satisfaction in food and grocery retailing . The specified constructs based on their significance as exhibited through their unstandaizedbeta coefficients, are Physical aspect quality (β=0.392),Personal Interaction (β=.508), Reliability(β=.246) and Problem solving (β=.192) and policy (β=.221). All of the coefficients were found to be in expected direction. The results show support for hypotheses, H1, H2, H3, H4.H5

The final Regression Equation can be summed up as:

Customer satisfaction =2.575 + 508 (Personal Interaction) + .392 (Physical Aspects) +.246(Reliability) .221 (Policy) +.192 (problem Solving)

The independent variables were also checked for multicollinearity. A multicollinearity problem is likely to occur when explanatory variables correlate with each other. If a high degree of correlation exists, it is then difficult to determine the contribution of each independent variable, because their

ISSN- 2394-5125 VOL 7, ISSUE 16, 2020

effects are confounded (Hair et al., 1995). A common measure for assessing pairwise and multiple variable collinearity is the variance inflation factor (VIF), which tells us the degree to which each independent variable is explained by the others. Normally a set of explanatory variables is highly correlated if tolerance is low and VIF exceeds ten, thus presenting a multicollinearity problem (Hair et al., 1995). The tolerance of an independent variable (TV) is an additional method to measure the effects of multicollinearity in a data set. The closer the tolerance of variable value to one indicates independence, and if the tolerance value is close to zero, the variables are multicollinear. HenceTolerance Value (TV) and Variance Inflation Factor (VIF) for each explanatory variables were used to measure multicollinearity. The multicollinearitydiagnostis statistics were listed in Table 6. It can be seen that tolerance value is towards the higher side and VIF does not exceed the recommending limit.

Stepwise Regression Results Relationship between service quality dimensions (independent Variable) and Customer satisfaction (Dependent Variable)						
	Unstandardized Coefficients				Collinearity Statistics	
Independent Variables	B	Std. Error	t	Sig.	Tolerance	VIF
(Constant)	2.575	.273	9.421	.000

11. Results and Discussion

Our research findings are in line with the existing literature that service quality is crucial predictor of customer's satisfaction which not only help retailers to gain competitive advantage but also for enhancing performance outcomes in food and grocery retailing. Service quality has been shaped as an indispensable construct that retailers must religiously adhere to if they really wish to satisfy the needs/ wants of their clients, to retain their share of wallet, expect positive word of mouth and finally increased footfall and sales in the grocery outlet.

Service quality index works as an important diagnostic tool for grocery retail managers for monitoring, improving customer satisfaction. Results are in line with previous studies highlighting the direct implication of service quality on customer behaviour (Cronin et al., 2000; Sirohi et al., 1998). Food and grocery retailers should make a consistent endeavour to understand the impact of each construct of service quality, so as tolay the foundation of a persistent and profitable relationship with their clients. (Lovelock and Wright, 2002).Markets these days are characterized by cut throat competition and high-demanding customers. So by providing idyllic retail setting, not only customer satisfaction and loyalty be enhanced but also consistent store traffic and a high share of customer shopping spending is ensured.

The result from the hypothesis testing of research model reveals that the most important constituent of service quality which has the effect on customer satisfaction is personal interaction that plays a crucial role in gaining customer satisfaction As, grocery shopping behaviour is unplanned buying (Park et al., 1989) and different customers have different motivations aspects linked to shopping. This may range from diversion from monotonous tasks, gathering knowledge about new products, to enjoy the bargaining process etc. (Tauber, 1972). So, in this case interaction with Sales personnel plays a key role in delivering right experience in form of customer service to its client and magnifying post purchase satisfaction. The store personnel attitude and treatment towards its customers (Gagliano and Hathcote, 1994) can make or lose the customer for lifetime. The employees should be trained to be more responsive towards customer's queries, pay them individual attention, being empathetic and courteous towards the customers.It was also noteworthy that Physical Aspects has a positive effect on customer satisfaction. The store should adorn itself with latest equipment, fixtures and furniture. The physical facilities inside the store should be visually appealing so as to convert a walker by into a stopper and stopper into a shopper. The restrooms and fitting rooms should be easily located within the outlets, the store personnel ought to be well-dressed as they serve as primary cues for shoppers to appraise the retailers' servicescape to mould the customers repurchase intentions in favour of the retail outlet, the Service provider should work wholeheartedly tomatchthetasteandpreferenceoftheircustomersto win their loyalty.Results show

ISSN- 2394-5125 VOL 7, ISSUE 16, 2020

that Reliability too plays a pivotal role in enhancing customer satisfaction.Grocers should make a note of the personal preferences of their customers that they do not walk out of the store because of stock out. Retailer should keep its promisesofproviding right assortment of goods and services along with consistent supply of fresh and dry grocery,appropriate sales record and safety in transitions. The findingswere found to be in sync as those found by (Huddleston et al.,2004).Another important dimension of retail service quality is Policy. Retailers should work on framing a comprehensive return and exchange policy to facilitate any issues concerning the products sold in the outlet. They should also adhere to convenient opening and closing hours and rules for accepting major debit/ credit cards which will help in predicting future purchase behaviour (Kasper, 1988). Last but not the least the results also indicate that problem solving too has an effect on gauging the service quality. In this today's competitive world customer always want everything under one roof along with convenience of location). Knowledgeable and helpful sales personnel are viewed as the strongest pillar of customer satisfaction (King and Ring, 1980).It was also found that store personnel should take sincere interest in solving service failures and should go an extra mile to satisfy the problem of the client.

Customer Satisfaction Indices: A Study of Organized Retail Stores in the Tri-city

Amit Chopra,
Research Scholar,
HPUBS, HPU, Shimla

Yashwant Kumar Gupta,
Professor
HPUBS, HPU, Shimla

Abstract:

The world of retailing is currently undergoing a rapid transition, with both customers and retail stores responding to changing market scenarios and customer preferences (Goyal & Aggarwal: 2009). In today's IT enabled world, traditional retailing formats are facing strong competition from the fast emerging retail experiences offered by online and digital retailers (Bhattacharya, 2001). More than ever before, customer satisfaction has become the defining feature that helps traditional retailers sustain and still grow.

Customer satisfaction continues to remain a primary and powerful tool by which the retailer can ensure that clients return to their stores even in a climate of extreme transition and change as IT enabled retail makes massive inroads into the traditional retail segment and categories. Novel strategies, more responsible, responsive and enhanced service and greater returns on every rupee spent are some of the strategies that are being utilized by retail outlets to retain customers.

This study, conducted across a large sample in the Tri-city comprising Chandigarh, Mohali and Panchkula aims to determine the success of the strategies being employed by the big organized retail outlets and the degree of customer satisfaction that these retail organizations are able to achieve. The study also identifies areas and indices that the organized retail outlets need to develop and improve to enhance their customer satisfaction scores in the future.

Keywords: Retail, Organised Retail, Customer satisfaction, Tricity, competition

Introduction

Retailing can be explained as business activity that primarily involves selling products and services to consumers directly for their personal, family or household usage (Berman and Evans, 2001). Traditionally, businesses have tended to focus on one financial metric as the determinant of all strategy and plans. This variable is also considered the indicator of success. The bottom-line or the profit margin has long been the financial indicator that has guided all business decisions and policies (Wong, Sohal, A & Amrik: 2003).

In a changing world, the profit margin can no longer be considered the be-all and end all of business strategy. As competition increases to unprecedented levels in the retail space, with more responsive and customer friendly business models such as hypermarkets and superstores making deep inroads into not only towns, but also small cities and rural markets, the rules of the game have changed drastically (Rigby, 2011). With the retail business becoming more competitive as hypermarkets and supermarkets invade the traditional retail space, retailers are now offering more freebies, value additions and enhanced services to the consumers.

Copyright @ 2020 Authors

Recent research has shown that retail companies are losing majority of customers on average in five years (Rigby, 2011). The causes for these are not far to seek as new strategies, attractive discounts, better services and enhanced customer focus becomes the cornerstones of retail amid cutthroat competition. (Fernandes et al.,2000). Customer satisfaction is the one tool that retailers have in measuring the degree of the customers' satisfaction in real time, analyzing their expectations for the mid and long term and devising novel effective retention strategies for the future.

Customer satisfaction is not just another variable now. It is an inalienable and critical part of not just the branding, sales and marketing strategy, but the crux of the business that guides all decisions. This has now become essential for survival as differentiation from the competition, brand value more than mere advertising or marketing and on the ground visible and effective improvements that help businesses retain clients and also boost sales. (Ramaswamy and Namakumari, (2002).

Price Water Coopers, in a study in 2018 concluded that bad customer service experiences are driving people away faster and conclusively than ever before. Retail businesses need to realize that clients can walk away from a beloved brand after just one bad experience in an era where they have unlimited choices to opt from. In the United States, 59% of the customers walk away from a well established brand they have been loyal to after multiple bad experiences. In Latin America, this percentage is even higher as 49% of the customers were found willing to walk away from a brand after just *one* bad experience.

In India, this scenario is fast getting replicated as customers venture beyond the traditional neighborhood stores and experience organized retail. The task of retaining customer in traditional retail formats is made even more challenging by the presence of online retail which is mushrooming at a fast pace. As more and more customers become tech savvy and online global giants such as Amazon, Ikea, Walmart etc make rapid inroads into the Indian Retail space, clients are taking full ademerging online platforms.

The current study aims to delve into the components of retail customer experience and explore the impact of such indices on customer satisfaction as a core for any retail business survival. This study can potentially help the retailer identify factors that induce customer satisfaction and loyalty in the long run.

Review of Literature

A review of Literature is necessary to understand the various dimensions of the research that has already been done by various scholars on the subject in recent times.

Reddy, Suresh Jakka. (2013) in his path breaking book "Customer Satisfaction in Organized Retailing: A practical book to know Customer Satisfaction factors in the retail sector" has outlined the gap between the perceptions and expectations of the customers and the actual products that are delivered to them. The book has been written from the perspective of the Indian customer and offers insights on how to bridge the gap between customer expectations and actual experience. For the purpose the author surveyed 1200 customers from three retail shopping malls in Hyderabad and analyzed the data through various tools. He found that the Indian consumer has become much more aware and exacting now with high expectations which retailers must exceed or at least meet in order to retain customer loyalty.

Dr. S. Rosita et al, (2014) carried out research in India to understand the customer perceptions and satisfaction in organized retail. In their study carried about 6 years ago, they found that the expansion of organized retail formats to be rapid and impactful. As foreign companies and global corporate hone in on India as one of the biggest global markets, insightful market research and data analysis is the need of the hour. As demographics, lifestyles and purchasing power undergoes fast changes, customer satisfaction and retention hinges on detailed analysis. This study found that Indian consumers and customers gave a lot of importance to factors such as quality of the merchandise, physical surroundings, promotional schemes and personnel interaction. In addition to the service, the Indian consumer also is concerned about after sale service, entertainment and security arrangement.

Copyright @ 2020 Authors

Rao, Ajit and Chandra, Subhash (2013) in their 180 page book titled The Little Book of Big Customer Satisfaction Measurement, use their expertise as being senior management and strategic thinkers working in top positions in an Anaytics firm, The Neilson Company, to pinpoint the various methods and tools that can help retailers gauge and improve their customer satisfaction results. The authors have explained how the various tools of qualitative research can be utilized to understand customer needs and evolve methodologies to meet and exceed client expectations.

Statement of the Problem

The retail landscape is undergoing constant change and correction. Customer retention is increasingly getting more dependent on forming a deeper understanding of what customers are seeking from in-store experiences. With immense competition emerging from new spaces such as online retail, in-store retailers have to constantly keep engaging with their current customers, so as to keep closely attuned to their needs and wants.

Further, it is essential to take feedback and pointers of the pain points which the customers feel, so to remove these at the earliest. The strategies for the future can also be devised after taking adequate feedback about the current situation and perceived challenges (Coughlan, Anderson, Stern and El-Ansary, 2001). The various elements and attributes that add up to create a satisfying shopping and retail experience for the clients are essential to generate more sales, and retain customer engagement &loyalty (Kline, R.B 2005). Region, climate and cultural practices also have a role to play in dictating customer behavior in a certain geography (Mulky and Nargundkar 2003), as they have different demographic features. In order to determine the affiliations, wants, needs, expectations of the residents of the Tri-city, a detailed study was essential.

Objective of the Study

The major objectives of the study:

1. To ascertain if the customers in the Tri-city are satisfied with the organized retail outlets.
2. To determine the major factors which play a role in customer satisfaction.
3. To ascertain the specific indices that affect customer satisfaction the most.

Research Methodology and Design

The Tri-city refers to the Union Territory and combined capital of Punjab and Haryana, Chandigarh and the adjoining cities of Mohali in Punjab and Panchkula in Haryana. Collectively, these three cities form a homogenous and compact urban metropolis that is referred to as the Tri-city.

This study is based on Primary data that has been painstakingly collected across the Tri-City. The respondents were randomly selected and approached inside the hypermarket and supermarket retail stores. Primary data was collected by interviewing select respondents to provide detailed responses to a questionnaire with both closed and open ended questions, and demographic details.

Secondary data was collected from various sources that include books, journals, newspaper articles and trade reports etc. Simple random sampling was carried out on a sample of 200 customers in retail stores.The data was analyzed and statistically tested to ascertain the viability of the statements.

Hypothesis of the study

H1: The goods available in the stores are not adequate.
H2: The Store is not easily assessable and approachable.

 Copyright @ 2020 Authors

H3: The store doesn't provides prompt customer services
H4: The store doesn't provides enough coupons and membership cards

Limitations of the Study

1. The Study was conducted only at organized retail outlets in the Tri-city
2. The Survey was confined to the limits of the Tri-city that includes area of Chandigarh, Mohali and Panchkula.

Analysis

Bain and Company, the top global market research firm, has already predicted that rapid innovation, absolute scale and customer data analytics are the new norms for retail success.

Market share of the organized Retail Stores surveyed in Tri-city

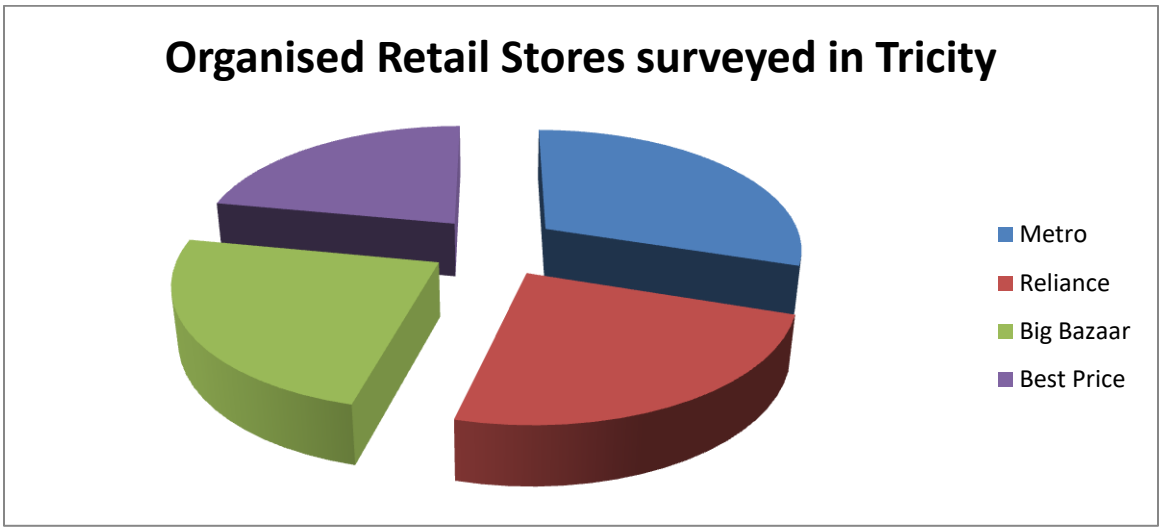

Table 1

Market share of the Organized Retail Stores surveyed in Tri-city

S no	Retail Store	Customers	Valid %age	Cumulative %age
1	**Metro**	60	30%	30%
2	**Reliance Supermart**	48	24%	54%
3	**Big Bazaar**	48	24%	78%
4	**Best Price**	44	22%	100%
		200	100%	

Source: Original primary data gathered by the researcher

Inference of Table 1

In recent years, organized retail in India has seen an unprecedented boom. There has been a rapid inroad made, not only in the metropolises such as Delhi NCR, Kolkata, Mumbai and Chennai, but also in Tier 2 cities such as the Chandigarh. From the above table, it becomes clear that organized retail chains with a pan India presence such as the

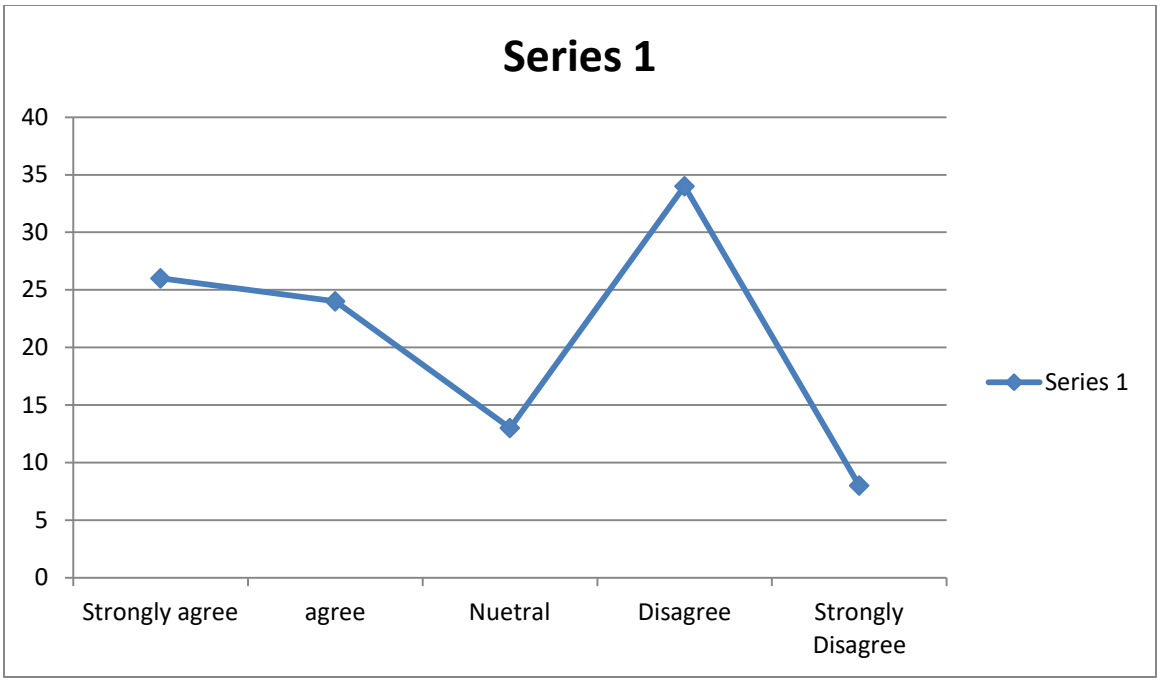
Copyright @ 2020 Authors

four surveyed in the present study have been well established in the Tri-city. Many have been present here for almost a decade now, and have had ample time and opportunity to attract and retain customer loyalty. As clear from the table, the retail chains which were surveyed for this study included Metro, which had the largest number of 60 customers. Reliance Supermart and Big Bazaar, both multi utility stores had 48 customers each out of the 200 surveyed and Best Price as the fourth with 44 customers.

Customer Satisfaction Indices

The four indices on which the customer satisfaction was surveyed in a study of 200 customers across the Tri-city who frequently visited the organized retail outlets were adequate goods availability, store's accessibility, customer service and provision of membership and coupons.

The customers ranked their satisfaction with these aspects on a 5 point likert scale ranging from Strongly Agree (5) to Strongly Disagree (1).



1) Assessing the goods availability at the stores.

	Frequency	Valid % age	Cumulative %age
Strongly agree	55	27.5%	27.5%
Agree	47	23.5%	51%
Neither agree nor disagree	25	12.5%	63.5%
Disagree	69	34.5%	98%
Strongly disagree	4	2%	100%
Grand Total	200	100%	

Source: Primary data collected by Researcher

The availability of goods and the choices available as desired is a crucial criteria in customer satisfaction. Customers must feel that they have adequate choices and the product will be available without delay and be delivered on time as promised (Coughlan, et al, 2001). The immediacy and vast scale of organized retail stores such as Reliance Megamart, Big Bazaar, Best price and Metro is one of the biggest attractions of these stores. The results showed that customers were overall satisfied with the goods availability wherein 27.5% of the customers strongly agreed that there were adequate goods available in the store and 23.5% percent agreed to this statement. 34,5% customers felt that the store did have adequate goods and choices available and only 2% strongly disagreed that there were adequate goods available. 12.5% were non-committal in their response. The response to this statement indicates that majority of customers are satisfied with this parameter.

Copyright @ 2020 Authors

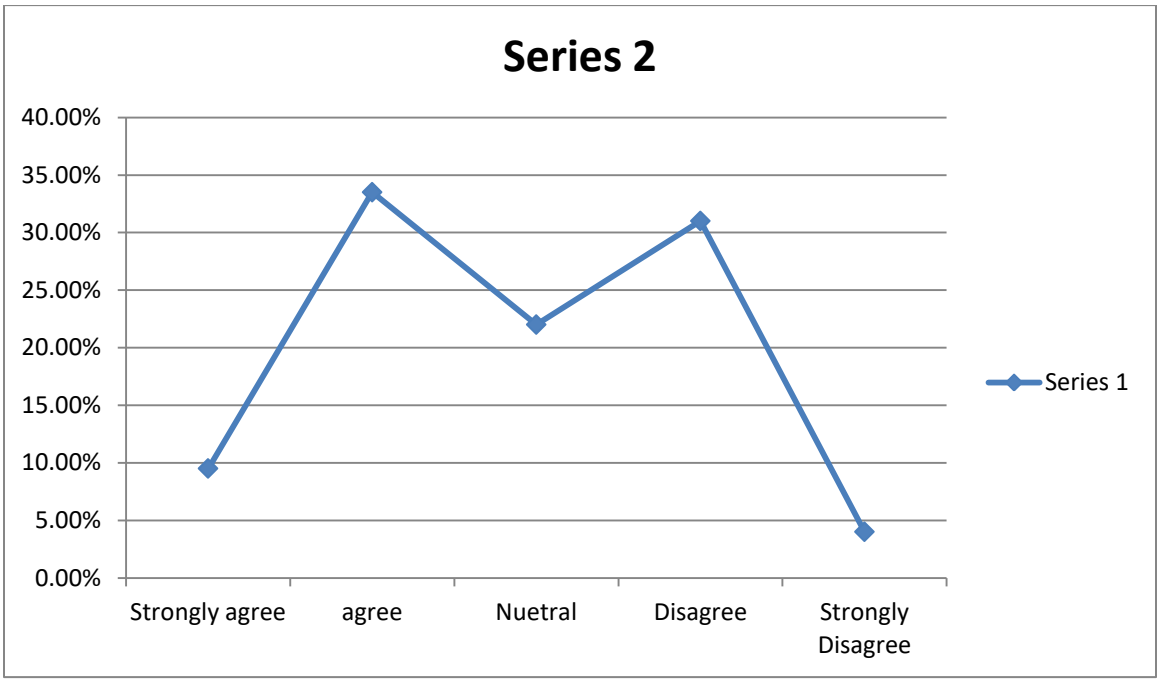
One-Sample Statistics

	N	Mean	Std. Deviation	Std. Error Mean
Goods Availability	200	3.400	1.2681	.0897

One-Sample Test

	Test Value = 3					
	t	df	Sig. (2-tailed)	Mean Difference	95% Confidence Interval of the Difference	
					Lower	Upper
Goods Availability	4.461	199	.000	.4000	.223	.577

Copyright @ 2020 Authors



The t value came out to be 4.461which is statistically significant at .05 level of significance. Thus the null hypothesis stands rejected and we can conclude that consumers are satisfied about the adequate availability of the goods at the retail stores. The mean score is 3.4 shows a higher level of satisfaction.

2) Assessing the store's approachability and accessibility

	Frequency	Valid % age	Cumulative %age
Strongly agree	19	9.5%	9.5%
Agree	67	33.5%	43%
Neither agree nor disagree	44	22%	65%
Disagree	62	31%	96%
Strongly disagree	8	4%	100
Grand Total	200	100	

Source: Primary data collected by Researcher

At a time when the increasing traffic snarls make even grocery shopping and parking a hassle, the approach road and ease of access of a retail destination can make or break the customer satisfaction response (Dabas, Sternquist & Mahi, 2012). In response to the statement that the store is easily available and accessible, only 9.5% customers agreed strongly. 33.5% agreed and 22% were non-committal in their response, 35% customers were of the view that the approach was difficult and store was not accessible (with 31% of customers disagreed and 4% strongly disagreed). This means that these customers would have switched to another retail store in the proximity that might be more easily accessible and approachable (Radhakrishnan 2003). However, on the whole, the customers seem to be satisfied with the approach and accessibility of the stores.

One-Sample Statistics

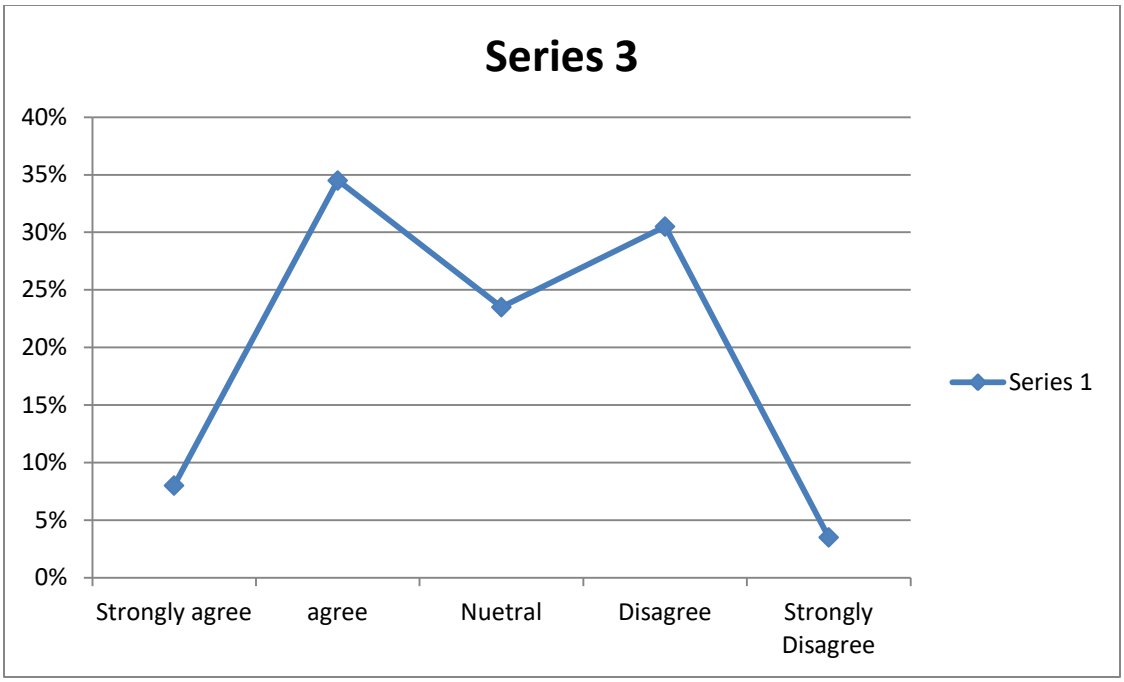
Copyright @ 2020 Authors

	N	Mean	Std. Deviation	Std. Error Mean
Store Accessibility	200	3.135	1.0829	.0766

One-Sample Test

	Test Value = 3					
	t	df	Sig. (2-tailed)	Mean Difference	95% Confidence Interval of the Difference	
					Lower	Upper
Store Accessibility	1.763	199	.079	.1350	-.016	.286

The t value came out to be 1.763 which is statistically insignificant at .05 level of significance. Thus the null hypothesis stands rejected and we can conclude that the consumers are satisfied with respect to accessibility of retail stores. However, there is scope for improvement on this parameter..



3) Assessing the prompt customer services of the store

	Frequency	Valid % age	Cumulative %age
Strongly agree	16	8%	8%
Agree	69	34.5%	42.5%
Neither agree nor disagree	47	23.5%	66%
Disagree	61	30.5%	96.5%
Strongly disagree	7	3.5%	100%
Grand Total	200	100	

Source: Primary data collected by Researcher

Many customer satisfaction studies attest that the emphasis on Prompt customer services is a key denominator in the success of any retail enterprise (Gupta, Chaturvedi, 2008). Service is a very critical component, especially in the Indian retail market (Sharma, 2000). In the context of the present study, it was analyzed by the responses of the respondents that on this statement that the store provides prompt services, the customers were largely satisfied. 4% of the customer strongly agreed with the statement and another 34.5% agreed, which means that a cumulative of 42.5% was satisfied with the service provided. 23.5% neither agreed nor disagreed. 30.5% disagreed that the services were prompt and 3.5% of the customers strongly disagreed with the statement. The graphical depiction of the results is as follows

Copyright @ 2020 Authors

One-Sample Statistics

	N	Mean	Std. Deviation	Std. Error Mean
Consumer Service	200	3.130	1.0481	.0741

One-Sample Test

	Test Value = 3					
	t	df	Sig. (2-tailed)	Mean Difference	95% Confidence Interval of the Difference	
					Lower	Upper
Consumer Service	1.754	199	.081	.1300	-.016	.276

The t value came out to be 1.754 which is statistically insignificant at .05 level of significance. Thus the null hypothesis stands rejected and we can conclude that consumers are satisfied about the level of consumer services offered by the stores.

4) Assessing provision of coupons and membership cards by the store.

	Frequency	Valid %age	Cumulative %age
Strongly agree	81	40.5%	40.5%

Copyright @ 2020 Authors

Agree	51	25.5%	66%
Neither agree nor disagree	35	17.5%	83.5%
Disagree	33	16.5%	100%
Strongly disagree	0	0%	100%
Grand Total	200	100	

Source: Primary data collected by Researcher

A definite advantage that organized retail has is that the bigger retail stores offer many advantages that also work to retain customers and attract new ones (Ganguli and Kumar, 2008). One of these is the coupons or member shop systems wherein the customer is rewarded every time he buys from the store and builds up a bank of rewards in terms of points which can be redeemed at a future date. In this way, the organized retail is able to retain more and more clients and ensure that they keep coming back multiple times for more goods (Aggarwal, 2000). In this respect, when asked to respond to the statement that the Store provides various coupons and membership cards, 40.5% of the respondents strongly agreed. Another 25.5% agreed while 17.5% remained neutral. Here 33% were in disagreement with the statement, while none strongly disagreed. Hence overall, the satisfaction levels seem to be high for this parametre amongst the residents of the Tricity.

One-Sample Statistics

	N	Mean	Std. Deviation	Std. Error Mean
Cards and Coupons	200	3.900	1.1118	.0786

Copyright @ 2020 Authors

One-Sample Test

	Test Value = 3					
	t	df	Sig. (2-tailed)	Mean Difference	95% Confidence Interval of the Difference	
					Lower	Upper
Cards and Coupons	11.448	199	.000	.9000	.745	1.055

The t value came out to be 11.448 which is statistically significant. The null hypothesis stands rejected. The observed value of mean came out to be 3.9 which show that the overall the consumers of Tri-city are very satisfied with the kind of coupons and other cards etc provided to the consumers.

Understanding the overall level of Customer satisfaction

Causal Relationship to be tested with four independent variables namely Availability of Goods, Store's accessibility, Consumer Service and Store incentives like coupon and cards.

H0: Customers are not satisfied with the organized retail stores in the tri-city.
HA: Customers are satisfied with the organized retail stores in the tri-city.

One-Sample Statistics

	N	Mean	Std. Deviation	Std. Error Mean
Customer Satisfaction	200	3.260	1.0235	.0724

One-Sample Test

	Test Value = 3					
	T	Df	Sig. (2-tailed)	Mean Difference	95% Confidence Interval of the Difference	
					Lower	Upper
Customer Satisfaction	3.592	199	.000	.2600	.117	.403

The mean value for overall customer satisfaction came out to be **3.260.** The t value for it was 3.592 which is statistically significant at .05 level of significance. We can conclude that the satisfaction is slightly above the satisfactory stance towards the positive side with a scope for improvement.

Modern organized retail has certainly induced a dynamic new approach to the retail scenario. This has been achieved by opening much more convenient, well stocked, attractively showcased and merchandised and superior

Copyright @ 2020 Authors

shopping experiences that have lured the consumer from the traditional retail formats which have held sway till now. By opening new format stores that offer convenient, bigger, better and superior shopping experience which is gradually changing the consumer preferences for grocery shopping in local *kirana* stores to organized convenience stores. It is also identified that the factors that influence consumers' preference for supermarkets are add-on benefits, general services and variety in merchandise.

Conclusion

Traditionally, customer satisfaction has been the long cherished and primary goal of all retail businesses. This especially holds true even today where there are numerous retail avenues and novel strategies and schemes competing vigorously not only for the attention, but also for the loyalty and long term engagement of every client.

The interpretation of the data collected shows that the majority of the customers in the Tri-city are quite satisfied with the level of service and kind of products and goods that are offered by the retail organizations operative here. The organized retail brands are some of the biggest in the business, and the level of customer satisfaction was found to be high. When the data was statistically tested, the analysis and interpretation of the data was found to be satisfactory.

The overall level of the customer satisfaction on the basis of the statements in the Tri-city were quite positive which indicates that people as a whole are quite satisfied and happy with the level of goods and services that are offered by the organized retail stores. On the statement that the goods were adequate, the retail store was easily approachable, there was good customer service provided and that the stores provided enough cards and coupons, the majority expressed their satisfaction.

On the premise that there was adequate goods available in the stores, the response was largely satisfactory, while the question of if the approach and accessibility of the store was fine, was found to elicit satisfactory response, with scope for improvement. The prompt and good service was also statistically proved, which means that there is a lot of scope for the organized retail stores to improve on this premise. To the last indice of whether the customers were satisfied with the coupons and cards which were provided by the stores, the response was largely satisfactory again. All four factors were found to play a major role in the overall customer satisfaction.

The two variables which proved to be the most significant in the statistical co-relation of the four indices to the calculation of the overall satisfaction scores were the adequate availability of the goods and the store accessibility.

Based on the results, it can be suggested that the retail organizations will do well to focus more on these two vital parameters. Overall, the statistical average of 3.260 above the mean of 3 indicates above non committal stance which means that the consumers are moderately satisfied overall. Since the response is non committal on two indices, which are approach and accessibility and prompt service. This means that with an improvement in these indices, the overall satisfaction score of the Tri-city consumers can be significantly increased.

The study clearly proves that retail stores of Tri-city have been able to generate a very positive response amongst its customers. However, there is always a lot of scope for improvement to satisfy the customers fully. There is also a word of caution for the traditional retails formats. In the face of increasing competition from other shopping formats such as online shopping platforms, it is very vital for the traditional retail setups to realize the critical position they are in. The brands need to work tirelessly to maintain and improve their rankings on the customer service indices in order to be able to not only attract new customers but also keep the old customers loyal and coming back. (Sinha, Bannerjee, Uniyal, 2002).

Copyright @ 2020 Authors

The appropriateness of the sales and marketing decisions, identification of the real needs of the clients, timely corrective actions and responsive and flexible sales strategies depends on reliable collection and analysis of customer data (Venugopal,2001). As the customer becomes increasingly the central focus than ever before, customer satisfaction can make or break any retail business that will thrive has already realized this fact. The Organized Retail outlets in the Tri-city can derive important learning and insight from such studies and develop more effective and profitable strategies to ensure improvement in consumer satisfaction indices for the future.

Occupational Stress in Himachal Pradesh Police Constabulary

Shyam L. Kaushal* **and Stuti Jalan****

ABSTRACT

Constabulary forms the foundation of the police organization in India. They are also known as field personnel who act as the facilitators of all the directions issued by the decision-makers at the ground level. Various researches have acknowledged that policing is a stressful occupation. Owing to differing work patterns of each rank, the stressors can be different for the constabulary. The study aims to investigate the level of stress and stressors in Himachal Pradesh police constabulary in general and demographic analysis in particular. The results revealed that the constabulary is facing a high level of stress. It was also found that males, married, postgraduates, younger age groups and those with less experience were more stressed. To manage stress, it has been suggested to ensure effective workforce planning, implementation of the shift system, recruiting personnel as per the sanctioned strength, outsourcing non-core activities and organizing need-based training.

KEYWORDS: Constabulary, Police Constables, Stress, Occupational Stress, Stressors, India

Introduction

Indian police organization has a structure analogous to a pyramid, wherein the constabulary forms the base of it. The constabulary, also known as the lower subordinates includes the officers in the position of Constables and Head Constables. The total strength of police in our country is approximately 20, 67, 270. Out of this, the constabulary accounts for a total population of 17, 45,136. This means that the constabulary (Head constables and constables) comprises of about 84% of the state police force (BPR&D, 2019). Constables are also known as field personnel; working on the ground level and assisting their supervisors. Constabulary is usually the first point of contact between the department and the general public. Head Constables have three primary roles -police station duty, maintaining records at the police station and in charge of outposts. Constables are involved in assistance, surveillance, escorting and performing tasks assigned to them. The constables are recruited directly subject to the eligibility criteria laid down by their respective states. In the case of Himachal Pradesh, the eligibility is between 18-23 years, with a height of 5'6" and chest between 31-32 inches. The

Women Empowerment through Self Help Groups in HP: An Analysis

SHYAM L. KAUSHAL AND NIVEDITA SHARMA

Women empowerment is a buzzword around the globe including India. Here, many initiatives are taken for this purpose and among those, Self Help Groups (SHGs) have emerged as one of the important options. Basically, empowerment refers to social and political succession that is dependent on economic empowerment. It consists of income and livelihood on one side, and freedom to spend income and control over resources on the other. Review of literature witnessed that education, access to resources, nutritional food, health care facilities, decision-making power and self-employment are the basic tenets and the Self Help Group movement paved the way to empower women in India. Further, the studies show direct relationship between growth of SHGs and women empowerment. But women empowerment in a patriarchal society remains a critical challenge in reality, and time to time attracts academicians and policy makers to debate the issue. The present paper is an endeavour to study the women empowerment through SHGs by examining its growth pattern in HP. The data and information were collected from primary and secondary sources like books, magazines, journals, newspapers, websites and MIS/offices circulars etc. The collected data was analysed with suitable statistical tools.

From the data analysis, it is concluded that SHGs are spreading throughout the country including HP but their formation and growth prototype is uneven. However, upward trend clearly hint that SHGs are helping significantly in financial inclusion of poor women. In consequence to their association with SHG movement, women have started saving small amounts of money for their future needs, linked themselves with formal banking system and availed micro credit on easy terms. Thus, it demonstrates that SHGs are not only solving their routine problems but also improving their decision-making and risk-taking habits. However, its growth pattern was not same in all areas in the country. In the same vein, in Himachal Pradesh where 33 per cent SHGs were formed in two districts of the state could be a pointer to prevalent irritants and bottlenecks in other regions. However, the fact is that need-based training capsules and access to economic resources at affordable rates motivate women to start new economic units collectively under the ownership of SHGs, which improved their confidence levels, moral strengths, leadership qualities, managerial and entrepreneurial skills and decision-making skills. Yet, a need has been felt to educate women about government policies, training programmes, banking system and interest rates for attaining real objectives of SHGs and consequently achieving the cherished goal of women empowerment in reality. But from the analysis, it can be concluded that women have diversified their sources of income by looking beyond agricultural activities and became financially independent on one side, and paved way to their social and political advancement.

Introduction

Women comprise almost half of the Indian population. After independence, socio-economic role of women have changed a lot but still needs to achieve equality. With the changing scenario, the Government of India has changed its focus from welfare to development and now to empowerment of women. Similarly, the government had declared 2001 as year of Women Empowerment[1]. According to Oxford dictionary, empower means to give authority to someone or to give power to someone. The World Bank defines empowerment as "the process of increasing the capacity of individuals or groups, to make choices and to transform those choices into desired actions and outcomes. Central to this process are actions which both build individual and collective assets and improve the

ABSTRACT

Working women significantly contributes to the growth of the economy of the Nation. Women as teachers not only impart knowledge but are also epitome of empathy and morals to the youths who are the future Nation builders. Their health and well being is of utmost importance, especially during the time of 'new normal' of work. Work from home or remote working has questioned various parameters of work life balance and well being of working women who are facing the brunt of both paid work and household and family responsibilities. This study analyses the Stress and its impact on Work Life Balance of 200 women teachers in the private education sector while working from home. It was found that Work Life Balance of women teachers is significantly predicted by paid work related stress and household & family responsibilities related stress.

KEYWORDS: *Work Life Balance, Stress, Work from Home, Covid-19, Women Teachers, Private Education Sector.*

1. INTRODUCTION

Work-life balance is a significant dimension of a healthy work environment at work. Attaining work-life balance helps overcome stress and hence prevents the situation of burnout at the workplace. The chronic stress impacts mental health negatively as it is linked to a higher risk of depression, anxiety and insomnia irrespective of any gender and geographical considerations. The term WLB (work-life balance) describes the state of equilibrium where a person equally prioritizes the demands of one's career and the demands of one's personal life (Schwartz et al., 2018).The previous studies witness some of the common reasons that lead to a poor work-life balance which are increased responsibilities and long working hours. Moreover the circumstances like COVID-19 pandemic have added to many miseries of employees especially working women.

Work Life Balance has always been a problem for women ever since they have moved out of their homes for paid work. But unpaid work, which they perform at home, apparently has not

A STUDY ON FINANCIAL PLANNING AMONG WORKING WOMEN IN THE EDUCATION SECTOR

Taranjit Kaur Kainth[*] & Dr. Puneet Bhushan[†]

Abstract

Personal financial planning is essential for the financial well-being of both men and women. Personal financial planning is attributed to differences in skills, knowledge, attitude, approaches, as well as opportunities presented. Various studies have established beyond any measure of doubt that women's participation in financial planning is very low. In comparison to men, women have to take breaks from their work due to marriage, childbirth, childcare, and elderly care at home. This interruption in their career leads to less earning and less saving opportunities for women as compared to men. Sometimes, women have to permanently leave their jobs due to family responsibilities. The life expectancy of women is more as compared to men and they thus need mandatory financial planning for their financial well-being and retirement. Also, women earn less and get fewer opportunities to get financial awareness which is a very important aspect of financial planning. Many initiatives are taken by the government to improve financial awareness among women in our country but the level of financial awareness is still alarmingly low. There is a need to make women financially independent and at the same time making them financially literate. This study is an attempt to ascertain the preferences of women working in the education sector of Punjab and Himachal Pradesh states towards financial planning. The financial planning aspects are analysed based on the understanding of financial terms, financial planning, tax

management, liability management, insurance, retirement planning, and estate planning. The results of the study indicate that women are not participating actively in personal financial planning and a majority of them have little to no knowledge about financial aspects. There is a need to encourage working women towards participation in financial planning for their secure future.

Keywords: *Financial Planning Perception, Investment Preferences, Working Women Financial Planning,*

1. Introduction

Financial planning is a process of assessing the short- term and long-term financial goals of the client arising at different stages of life based on the client's income, savings and investments to achieve the financial goals (Sinha, 2008). It can also be understood as deciding what investments and activities would be most suitable under both personal and broader economic circumstances to achieve financial goals. Financial planning can be short-term and long-term. Short-term financial planning is less uncertain than long-term financial planning because of an increased uncertainty because of changing socio-economic scenario. Women are good at household budgets and money management, while men are good at making long-term investment decisions (Hung, et al., 2012). In a study conducted by a large fund house, around 77 percent of working or earning women in India were found to be dependent on their father, spouse, or other male members in the family to make investment decisions for them. Out of the remaining 23 percent working women, 18 percent were single working women. Financial or investment-related decisions in our country are generally informed to women without considering their opinions. The primary reason behind women not taking investment or financial decisions is that women are risk-averse and are thereby reluctant to take any risk. Systematic saving comes naturally to women and is very much helpful in planned investments. Many studies show that majority of the women don't

start savings early on in their careers or life and don't have proper retirement plans (Andrade, 2016). Women generally have low financial awareness and possess a low confidence when it comes to making financial decisions themselves. This scenario is also prevalent among working women who are earning and still reluctant to take financial decisions independently. In this study, working or earning women are considered for understanding their financial behaviour and factors affecting their financial planning.

2. Literature Review

Women generally have low confidence and are less inclined to learn about personal financial planning (Chen & Volpe, 2002). Women are less financially literate and less involved in retirement planning. Thus, there is a need to improve financial literacy level among women (Lusardi & Mitchell, 2005). Financial knowledge and financial planning are closely related. Women who possess higher financial literacy are more likely to successfully plan their retirement (Lusardi & Mitchell, 2008). Women are to a great extent lacking when it comes to retirement planning and are less active in financial matters as compared to males. Workshops and seminars are required to improve money-related knowledge among women (Klatt, 2009). Women need to be more confident and educated to achieve financial independence (Malhotra & Witt, 2010). Individuals who are more financially literate focus more on personal financial planning to avoid the adverse impact that poor personal financial planning might have on their life (Boon, et al., 2011). Women are good at household money management but lacking in critical areas of financial planning and investments. Effective education programs and the development of high-level policies are the need of the hour (Hung, et al., 2012). Women are conservative while taking financial decisions. There is a need to develop investment instruments that suit the risk-taking characteristics of women (Bhushan & Medury, 2013). There is a need to improve the financial literacy level among people and the focus should be on developing a positive financial behaviour and attitude

towards investments (Bhushan & Medury, 2014). Basic financial knowledge is essential for every woman. Apart from this, its application needs to be understood as well as practiced by them. The government should empower women and women need to continuously try to improve their financial well-being for a better future (Mishra, 2015). Women are conservative and prefer traditional investment modes such as bank deposits, insurance, gold, real estate and don't invest in derivatives, stocks, or mutual funds. There is a need to educate women about financial instruments so that they are able to trade-off between risk and returns (T.S & S, 2015). Women are dependent on their male family members for finance-related matters, which causes and further propagates less awareness among them. The active involvement of government, private sectors as well as employers, in the case of working women, in conducting financial literacy workshops can help spread awareness (Arora, 2016). With the government initiatives towards financial inclusion and financial literacy, there is a need to acknowledge the importance of women's financial literacy separately (Baluja, 2016). There is a need for financial education and customized financial products for women (Saviano, et al., 2017).

3. Research Objectives

- To study the preference towards financial planning among working women in the education sector.
- To analyze the effect of financial literacy level on financial planning among working women in the education sector.

4. Hypothesis:

- **H_{01}:** There is not a significant difference between levels of financial literacy and financial planning among working women in the education sector.

- **H_{02}:** There is not a significant difference between levels of financial literacy and management of taxes among working women in the education sector.
- **H_{03}:** There is not a significant difference between levels of financial literacy and managing liabilities among working women in the education sector.
- **H_{04}:** There is not a significant difference between levels of financial literacy and managing insurance among working women in the education sector.
- **H_{05}:** There is not a significant difference between levels of financial literacy and managing investment among working women in the education sector.
- **H_{06}:** There is not a significant difference between levels of financial literacy and managing retirement among working women in the education sector.
- **H_{07}:** There is not a significant difference between levels of financial literacy and estate planning among working women in the education sector.

5. Research Methodology

Working women in the education sector from Punjab and Himachal Pradesh are considered for this research study. The data has been collected through primary and secondary sources. For primary data, a close-ended structured questionnaire is used for the survey comprising closed-ended questions, attitude rating questions, and financial knowledge testing questions. To measure the women's financial literacy level, the financial literacy scale developed by Lusardi and Mitchell (2007) has been used. Based on the financial literacy scores, the women respondents were grouped into three categories namely High financial literacy, Medium financial literacy, and Low financial literacy. The maximum possible score for financial literacy was 10 (5 for basic financial literacy and 5 for advanced financial literacy). Preference towards financial planning is measured using

5 points Likert scale divided into 7 components of financial planning. The study employed the non-random convenience sampling method for data collection of 135 working women of the education sector from Punjab and Himachal Pradesh. The primary data has been analyzed using statistical tools like percentages, bar charts, quartile, and mean scores. The hypothesis has been formulated and tested at a 5% significance level and conclusions are then drawn.

6. Data Analysis and Results:

6.1 Demographic Detail: The demographic profile of working women respondents is shown below in Table 1.

Table 1: Demographic Detail of Women Respondents

Variable	Category	Frequency	%	Variable	Category	Frequency	%
Organizational Type	Public	41	30%	Educational Qualification	Graduate	46	34%
	Private	94	70%		Post Graduate	82	61%
Place	Punjab	77	57%				
	Himachal Pradesh	58	43%		Doctorate	3	2%
					Others	4	3%
Marital Status	Married	65	48%	Monthly Personal Income	Less than Rs.25,000	72	53%
	Single	68	50%		Rs.25,000 to less than Rs.50,000	35	26%
	Others	2	1%				
Employment Status	Contractual	58	43%		Rs.50,000 to less than Rs.75,000	14	10%
	Permanent	77	57%		Rs.75,000 or more	14	10%
Age	21 -30 Years	85	63%				
	30-40 Years	41	30%				
	More than 50 years	9	7%				

The demographic profile shows that a majority of women in the education sector are working in private institutes (70%) and a few have government

jobs (30%). A majority of the respondents are young (63%) and a few are above 50 years of age (30%). Also, most of the women respondents are post-graduate (61%) and a few (2%) have done a doctorate (Ph.D.). Earning status is not good as around half o the respondents, about 53% of them earn less than 25000 per month, followed by 26% respondents earning between 25000 to 50000, while 10% respondents earning between 50000 to 75000 and more than 75000 per month each. The marital status shows that 50% respondents were single, 48% were married and the remaining 2% respondents were either divorced, separated, or widow. Overall, a majority of the working women employed in the education sector who participated in the study work are young, working in private institutes, and earning less than 25000 monthly.

6.2 Perception of Personal Financial Planning: The perception of personal financial planning among working women of the sampling area for the study is shown in Table 2.

Table 2: Perception of Personal Financial Planning Among Working Women in the Education Sector

Component	Subject	Mean score
Financial Planning	Understanding of financial planning.	3.37
	Set financial goals and objectives for life	3.42
	Gather data and analyze current financial position before making a financial decision	3.51
	Execute the financial plan with the help of experts	3.05
	Review the financial plan periodically after the implementation.	3.3
Managing Taxes	Utilize the various tax relieves and rebate entitled to while filing the tax return.	3.31
	Happy to pay tax as the amount is very minimal as compared to others.	3.29
	Manage their taxes.	3.19

Managing Liabilities	Pay off the full credit card outstanding amount every month.	3.39
	Interest charged by financial institutions on credit card outstanding amount is reasonable.	2.85
	Pay mortgage and hire purchase instalments on time every month.	3.44
	Personal loans offered by financial institutions are a convenient tool to use and to borrow.	2.9
Managing Insurance	Have sufficient insurance coverage in the event of death, disability, or sickness	3.02
	Have only life insurance, no other type of insurance	2.73
	Can distinguish the different types of insurance policies offer in the market.	3.28
	Do not have any insurance.	2.34
Managing Investment	Invest money based on the opinions of others.	2.7
	Understand my risk profile- high-risk taker, medium risk-taker, or the low-risk taker.	3.34
	Invest in different investment instruments	2.68
	Appreciate the interest compounding effect	3.16
	If given a lump sum of money, know how to use it properly	3.29
Managing Retirement	Know the amount needed to fund a comfortable retirement.	3
	Have started planning for retirement.	2.9
	Have a formal retirement plan that was developed in consultation with a financial professional	2.6
	Employee Provident Fund contributions are sufficient for retirement.	2.67

Estate Planning	Have a will.	2.46
	Understand what trust is.	2.99
	Estate planning is important	3.1
	Estate planning leave the peace of mind	3.12

Note: "1" = Strongly agree; "2" = Agree; "3" = Neutral; "4" = Disagree; "5" = Strongly disagree

The perception towards financial planning among working women in education sector is measured using 5 points Likert scale divided into 7 components of financial planning. Respondents with mean score less than 3 are considered as having low preference towards financial planning and those with more than median score are considered as having high preference towards financial planning. Respondents with a mean score of 3.37 are considered aware of financial planning and the ones with a mean score of 3.42 have set financial goals for life. The ones with a mean score of 3.19 are considered to be able to manage taxes. With a mean score of 3.39, respondents are paying credit cards outstanding on time and with a mean score of 3.44, they pay other instalments on time. Respondents with a mean score of 3.02 are carrying insurance for the coverage of events like sickness, disability, and death and with a mean score of 3.16, they appreciate interest compounding effect. Responders, with a mean score of 3, are aware of the amount needed for retirement but a fewer number of respondents have started retirement planning with a mean score of 2.9 and few have retirement planning after consultation with financial professionals with a mean score of 2.6. Respondents are also aware that estate planning is important (mean score of 3.1) and few have a will (mean score of 2.46). The mean score of working women respondents shows that they have an understanding of financial planning and have financial goals. They are able to manage liabilities and investments but only a few of women respondents have formal retirement plans.

6.3 Relationship between Women's Financial Literacy and Personal Financial Planning:

The relationship between financial literacy and personal financial planning among working women in the sampling area of the study is shown below in Table 3.

Table 3: Financial Literacy Effect on Personal Financial Planning

Components of Personal Financial Planning		High Financial Literacy	Medium Financial Literacy	Low Financial Literacy	F Value	Significance
Financial Planning	Mean	3.84	3.1094	3.027	11.14	0.000

	N	45	53	37		
	Std. Dev.	0.69167	1.03934	0.86792		

Firstly the women respondents were categorized into low, medium, and high literacy levels based on their financial literacy scores and quartiles. Women who scored more than 7 out of 10 are categorized under high financial literacy. The ones scoring between 4-6 are categorized under medium and those who scored 3 or less than 3 are categorized into low financial literacy. To test the hypothesis of whether the survey results are

significant or not, the ANOVA test was applied with a 5% significance level ($p<0.005$). The results are as follows:

H_{01}: There is a significant difference between levels of financial literacy and financial planning among working women in the education sector.

H_{02}: There is a significant difference between levels of financial literacy and management of taxes among working women in the education sector.

H_{03}: There is a significant difference between levels of financial literacy and managing liabilities among working women in the education sector.

H_{04}: There is a significant difference between levels of financial literacy and managing insurance among working women in the education sector.

H_{05}: There is a significant difference between levels of financial literacy and managing investment among working women in the education sector.

H_{06}: There is not a significant difference between levels of financial literacy and managing retirement among working women in the education sector.

H_{07}: There is a significant difference between levels of financial literacy and estate planning among working women in the education sector.

7. Findings and Suggestions

The study has found that financial planning is perceived as important among working women in the education sector of Punjab and Himachal Pradesh. It was found that while women are educated, the financial literacy level is not high among the majority of the women working in the education sector of these states. It was also found that working women with high literacy levels actively participate in financial planning and have a formal financial plan for long-term goals like marriage, child education, and

retirement. Women with low financial literacy are on the other hand found to be less active in financial planning activities and do not have any formal financial plan. The results of hypothesis testing and ANOVA test bring forth a positive relationship between financial literacy and financial planning. Based on these results, it is concluded that financial literacy has a significant effect on financial planning among women. Thus, by improving the financial literacy levels among women, their financial participation can be improved. Considering the importance of financial literacy and financial planning, it is suggested that the government should step forward to improve the financial literacy level among women. There is an evident need for formal training and refresher programs to enhance financial literacy and personal financial planning among working women in the education sector.

8. Discussion

In the current study, close-ended structured questionnaire was used to collect the primary data from the working women of Punjab and Himachal Pradesh. By arguing that financial literacy level doesn't affect women's participation in financial planning, a structured questionnaire was designed to know the financial literacy level, the effect of financial literacy, and financial participation among working women. The results of the study indicate that women have basic financial knowledge but do not possess sound advance financial literacy. Nonetheless, the results agree with the argument from the existing literature that women possessing high financial literacy tend to participate in financial planning (Lusardi & Mitchell, 2008); (Sinha, 2008); (Sykes, et al., 2005); (Hung, et al., 2012) ; (Roy & Jain, 2018). While distinguishing the working women's financial planning based on their financial literacy level, the results of the study suggest that financial literacy level directly affects the preference towards financial planning. Our results contradict the existing research (JULIA, 1998); (Sykes, et al., 2005) which suggests that there are other factors such as social, cultural, and emotional factors that affect financial planning among women. Our observations signify the need for financial education programs and training

for women for their secure future from a financial standpoint. Government and organizations should also initiate for creating awareness (Malhotra & Witt, 2010); (Bhushan & Medury, 2013); (Mishra, 2015); (Baluja, 2016) ; (Saviano, et al., 2017). The study has used a close-ended structured questionnaire and the possibility of misinterpretations of the survey questions. Also, there are chances of biased responses from the respondents.

9. Conclusion

The level of education plays an important role in financial planning and decision making. The study shows that women with high financial literacy are more focused on personal financial planning in comparison to those who have less financial knowledge. Income also plays an important role in financial planning. The study shows that women with higher income levels are also actively focused on personal financial planning than women who earn less. Literature reviews on women's financial literacy and financial planning also indicate that there is a need to enhance the financial literacy among women for the improvement of their financial planning participation. There is a need for active, rigorous and continuous initiations from the government and other institutions towards the conduction of workshops and seminars on women financial literacy and financial planning participation. This goes on to confirm that financial literacy is a useful indicator of an individual’s financial planning decision. When effective financial planning becomes widespread among women, women will be more independent and empowered, thereby stimulating economic growth.

ABSTRACT

The financial well-being of women is dependent on their financial planning. Many studies have confirmed that the participation of women in financial planning is very low. Women have been known to take more breaks as compared to men to marry, childbearing, and care as well as elderly care in the family. As a result of this sabbatical or interruption in their career, women earn comparatively less to men and hence have fewer opportunities to save. Oftentimes, owing to obligations in the family or responsibilities in the family, women leave their jobs permanently. Women have a higher life expectancy in comparison to men and hence the need for financial planning among women is more urgent to ensure financial well-being and stress-free retired life. With fewer opportunities for financial awareness and lesser earnings, women currently lag concerning financial planning. Despite numerous initiatives undertaken by the government both at the state and national level to better the financial awareness among women, it continues to stay alarmingly low. There is an increasing urgency in making women financially literate and economically independent today. This research paper is an endeavor to determine the level of financial literacy in women from various professions and walks of life encompassing privately employed working professionals, entrepreneurs, teaching community, and self-employed women in the Tricity area of Chandigarh, Mohali, and Panchkula. The study attempts to understand the need to improve the financial literacy levels among women, reasons for lack of financial literacy, and also determine the ways to improve the financial literacy levels, both basic and advanced among women. The study highlights that while some women have a basic understanding of financial instruments, they lack knowledge and understanding of advanced investment avenues and products such as mutual funds, shares, and debentures.

KEYWORDS

Financial Literacy, Personal Financial Planning, Women Financial Literacy, Women Financial Planning Participation, Working Women Financial Literacy Level.

INTRODUCTION

The financial well-being of both genders is heavily dependent on personal financial planning.

Knowledge of financial products, attitude towards financial instruments/ approaches, individual skills, and available opportunities/ investment opportunities constitutes personal financial planning. Financial planning is a systematic process of assessing long-term financial goals that arise during life intervals. Financial planning ensures that the investor has a sufficient amount of money at the right time to fulfill his/her long-term goals (Sinha, 2008). Personal financial planning helps in managing major financial planning issues of individuals and families (Billingsley, et al., 2016). Financial planning is important for everyone to have a comfortable life after retirement. Many studies show that women do not actively participate in the financial planning process. The results of a study conducted by a fund house show that around 77 percent of working women in India are dependent on their male family members for making financial investments. The other 23 percent of working women, 18 percent are single. In India majority of the financial decisions are made without considering their opinions. This is because of our social-cultural environment, which is male dominating. Women also do not actively participate in investment decisions as they are risk-averse and are more comfortable in making short-run or household budgets. As per Andrade (2016), the majority of women do not start planning their retirement at an early age and face problems later. The current study is an effort to understand the women's financial literacy level, which is an important factor for financial planning as well as women's participation in the financial planning process.

LITERATURE REVIEW

Women are good at making short-run or household budgets. While men are good at making long-term financial decisions and investments (Hung, et al., 2012). Women live longer as compared to men and have low earnings than men. The majority of women do not plan their retirement successfully. Financial literacy and financial planning are closely related.

Abstract

Organizations of all types are vulnerable to frauds. Banks contribute to a significant extent in a country's economic development by generating a large part of revenue in the service sector. Deterrence of fraud is impossible without understanding it. The present study attempts to extract themes by highlighting the major areas of the bank fraud literature within a specific time frame of 2000–2019 and finding the research gaps citing the future scope for research. Post the review of existing literature, using thematic analysis, two major themes were observed by the author, namely, "regulatory and compliance"–based studies and studies related to the "socio psychological" aspect of the literature. An examination of themes indicated that the popularity of the research areas shifted from accounting frauds or balance sheet frauds in early 2000s to areas such as cyber frauds and identity theft at the later decade. The present study paves way forward for future research on the bank customer's vigilance, experiences and perspectives on frauds. Other significant areas of research include coping mechanisms with the various challenges faced by banks in marketing themselves after any major fraud occurrence.

Keywords Frauds · Thematic analysis · Banking institutions · Research gaps · Regulatory and compliance · Sociopsychological

Introduction

Financial frauds are at their peak in present times and have come centre-stage on the economic agenda. This is due to outburst of many large value frauds which derailed the

financial health and reputation of banks and the economy (Gupta and Gupta, 2015). Fraud is defined by Cambridge Dictionary as anything or any act with the intent of deceiving others, by unjustifiably claiming or being credited with accomplishments (Alleyne et al., 2010). Frauds in the banking sector have always been one of the key concerns for the governments all across the globe (Kaveri, 2014). While the banks always try to improve their fraud risk management framework in response to regulatory directives and/or rising incidents of fraud, it is quite evident that there is a dire need to integrate a larger financial crime compliance agenda working across a wider arena (Ghosh & Bagheri, 2006). The thought-provoking questions still remain intact such as are regulators doing enough? Is the internal control framework effective? What are the major challenges faced by the banks to detect and prevent frauds? Are banks aware of the possible new fraud arenas? Do the banks have necessary capability to identify "red flags" proactively? (Khanna & Arora, 2009).

The last decade involved a significant coverage of banking frauds by the global media. While the governments enact several laws aimed at restraining fraud, their meager enforcement has attenuated the intended impact. With the rise of digital transactions backed by technology, frauds have spread to new areas. The banking institutions act as financial intermediaries and providers of capital for major economic activities (Costa and Wood, 2014). Finding modes of preventing and detecting bank frauds is thus vital. The most critical challenge for banks still remain in developing exhaustive fraud risk management controls to prevent and detect frauds (Boateng et al., 2010).

The banking frauds landscape

While some of the risks in the financial sector have existed since inception, they keep changing with the constantly evolving technology standards. The evolution of frauds from Hawala transactions, ponzi schemes, and inadequate due diligence to money laundering, identity theft, and cyber crime have put a serious issue in front of the regulators to tackle financial crimes more diligently than ever. The common types of financial frauds committed are listed below:

1. Money laundering: Addressing the threat of money laundering is a matter of priority for financial institutions on multiple fronts. Money laundering can be defined as a process where the proceeds of crime are transformed into apparently legitimate money or other assets (Swamy, 2011). The complexity of money laundering is the highest in bigger institutions with multiple business lines, areas, and geographies, as they need to comply with multiple legal and regulatory requirements. Though the regulators have tightened controls, still, the banks are facing increased entanglement on customer identification and monitoring programs (Bhasin, 2015).
2. Fraudulent loans and advances: Loans and advances constitute a major proportion of the total bank frauds. Advance-related frauds might occur due to a breach of trust of collusion with internal sources, leading to misuse of financial tools such as Letters of Credit, Bills Discounting, submission of fake documents, mortgaging fake assets. (Reurink, 2018). In such cases of frauds, the internal control systems operating in the banks are of utmost importance.

Author's personal copy

3. Bribery and corruption: Several reports over the years are indicative of the growing risks of fraud and corruption in the banking and financial services industry. The primary and biggest challenge is that the bank employees conspire with third parties providing them undue or illegal benefits in exchange of monetary or non monetary bribes (Milan, 2018). It significantly leads to an increase in the risk exposure of the organization's credibility and puts its compliance with rules and regulations at stake.
4. Identity theft: Fraudsters use identity theft to impersonate the identity of a person and commit frauds. The major frauds can be listed as stealing passwords and making payments via the internet, opening a bank account on a person's name, operating someone's account for withdrawing money or buying stuff (Song et al., 2018). This is an extremely dangerous form of fraud which might lead to a person's loss of all her had earned money.
5. Accounting frauds: The type of accounting based frauds may range from overstating sales and income, inflating the worth of the company's assets, to showing false profits. The false data might be used to seek an investment or to make fraudulent loan applications in order to obtain more money to delay the collapse of an unprofitable or mismanaged firm.
6. Phishing and online banking frauds: Phishing can be defined as an attempt to obtain secretive information of individuals with fraudulent motive. The information obtained might be their usernames, passwords, and credit/debit card details by camouflaging as a trustworthy entity on internet. It is largely done by email spoofing directed at the users tricking them to enter their personal information at a fake website impersonating the legitimate site.

According to the PwC, 2014, cybercrime was one of the top economic crimes reported by organizations across the world. In 2019, KPMG conducted a comprehensive survey and published their report on global banking frauds, across 43 retail banks out of which 13 belonged to Asia Pacific region, 5 were American banks, and 25 banks were from European and Middle East and Africa region. Out of the total banks, 18 had revenues of more than US$10 billion, and 31 of the banks gave employment to more than 10,000 people across the globe. The report highlighted that banks globally were experiencing a boost in the number of frauds, and in most of the regions, cyber frauds was found to be most challenging. It was further suggested that since customers were found to be the key in prevention and detection of frauds in their accounts, they must be made more aware and vigilant by giving them necessary education.

Figure 1 shows that cyber-related fraud risks pose the most significant challenge to banks in all the three regions. The digital connection of the top 5 frauds listed in all the regions is quite evident. With a rapid digital transformation in banking operations and service sector all across the globe, designing a comprehensive and sustainable risk management framework is becoming essential more than ever.

This paper explores the phenomenon of fraud in the context of banking operations. Financial fraud has clearly become a widespread obstruction in the growth of the global banking industry. The aftermath of many significant reports published on the banking fraud landscape revealed a great number of scandals. Incidentally, with the clear observance of this trend, the mainstream academic research on financial frauds has largely covered a few major segments of bank frauds. The study describes the empirical

Author's personal copy

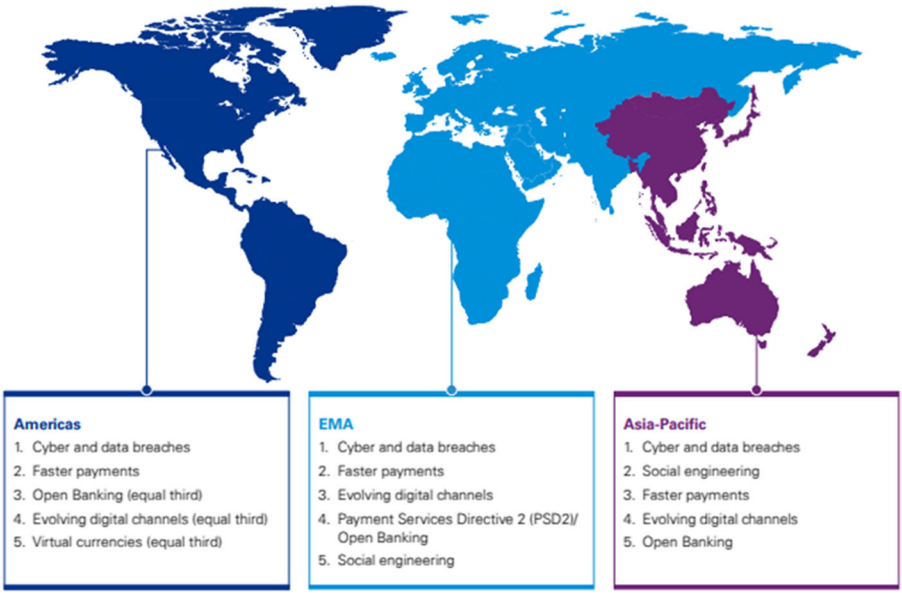

Fig. 1 Region-wise fraud typology trends. Source: Global Banking Fraud Survey, KPMG International, 2019

universe of banking fraud as it has been documented in the literature in a wide variety of disciplines. It attempts to provide a descriptive account of the different forms of fraudulent behavior as identified by previous research.

The literature on bank frauds and fraud detection methods has grown immensely in the past decade. As the volume and scale of frauds became extensive, several researchers began to explore the phenomenon. As stated by Rossouw (2000, p. 885), fraud is a worldwide phenomenon that ruins the profitability, reputability, and legitimacy of organizations wherever it occurs. As the researchers explore different arenas of financial frauds, the fraud theories became more sophisticated which describe fraud and its motivations thoroughly.

Objectives of research

1. To carry a structured review of various researches on the financial frauds in the banking industry
2. To collate and create theme-based parameters to ascertain the types of research undertaken

Research methodology

Thematic synthesis has been explained through three stages by Thomas and Harden (2008). The initial stage involves coding of text from each line. This leads to descriptive themes which are grouping of same types of narratives of ideas. Finally, stage will be the analysis and creation of analytical themes. The study in itself may involve primary or secondary literature. This study has carried out a sequential and thematic study of various issues related to the scope of paper and collated these into themes.

Author's personal copy

A systematic literature review–based approach was followed as per the guidelines proposed by Kitchenham (2004). The method includes developing a review protocol to guide in the search and selection of relevant studies. The scope of the review was limited to the time frame of 2000–2019 to provide a fair representation of existing research on banking frauds. Data sources were largely electronic libraries considering the fact that academic literature on bank fraud taken is fairly current and would be expected to have been published digitally. Digital libraries containing scientific, engineering, and technology publications were chosen. Results yielded four electronic databases (1) Proquest, Scopus, and EBSCO.

In each electronic database, publications were searched using the search strings "fraud," "financial fraud," and "banking fraud." Articles published between 2000 and 2019 were defined in a search query. The search query was only applied to article abstracts, titles, and keywords so as to minimize the chance of retrieving irrelevant publications. This means that an article was selected for review if the abstract or title or keyword(s) contains the defined search string.

The selected articles were then uploaded to Endnote bibliographic software. With the assistance of this software, duplicate records were located and removed. An inclusion and exclusion criteria were developed to aid in filtering out the relevant publications. Those included for the review had to be written in English, formed part of original work, published between January 1, 2000 and December 31, 2019. The excluded publications were masters' theses, doctoral dissertations, news reports, textbooks, duplicates, and those without authors or abstracts.

In order to facilitate the discussion, the research focused on identifying themes within the literature using thematic analysis. Thematic analysis refers to identification of different patterns or themes within a qualitative dataset. Suggest that "it provides core skills that are essential for developing a baseline for other kinds of analysis" (p.78).

The objective of a thematic analysis is to identify themes, which can be defined as the patterns in data that are distinguished, important, and interesting. The themes are then used to address the research or say something about an issue. At the conclusion of the analysis, the major findings along with the research gaps are identified and listed to discover least-explored or new areas of research in the discipline.

The financial fraud literature

For this study, extensive review has been undertaken in order to gain insights into various perspectives in relation to financial frauds. Seventy research papers pertaining to the topic were selected for review. The papers were selected by the use of keywords like "Frauds," "Financial Frauds," "Bank Frauds," in K-Hub, Proquest, Ebsco, Google Scholar, Shodhganga and also in the library containing finance and banking journals. In order to keep the research latest, the papers were selected between the years 2000–2019. The detail of all papers reviewed is attached in Appendix 1.

Many researchers examined the impact of regulatory framework in curbing financial frauds. Ribstein (2002) and Yallapragada et al. (2012) discussed the reforms that emerged post financial misconducts focused on mitigating frauds. The author specifically focused on the infamous Enron and Worldcom cases with a special reference to the provisions of the Sarbanes Oxley Act 2002. Desai (2015) and

Author's personal copy

Malhotra (2013) stressed upon the regulatory and legislative landscape of financial frauds and assessed the impact of regulatory framework in curbing financial frauds with special reference to the amendments made in the Indian Companies Act, 2013.

Gupta and Gupta (2015), Bhasin et al.,(2016) stated that while factors like poor job practices, ineffective employee training, and weak internal control systems were found to be most significantly enhancing the chances of occurrence of frauds, Khanna and Arora (2009); Ganesh and Raghurama (2008); Livshits et al. (2015) in their respective studies indicated that lack of training, overburdened staff, competition, and low compliance level were the main reasons for bank frauds.

A lot of researchers focused on the regulatory role of central bank in the detection and prevention of frauds. Ghosh and Bagheri (2006) revealed with reference to a case study that regulatory loopholes and lack of proper supervision by the central bank led to the fraud. Subbarao (2009), and Ciobu and Timuş-Iordachi (2019) deliberated on the minimal standards of fiduciary responsibility in detecting frauds and stressed upon the vital role of central banks in monitoring the banking system efficiently to reduce the likelihood of frauds.

Kaveri (2014) revealed that majority of the fraud cases reported by the banks were related to technological loopholes in online banking. Baz et al. (2016) developed a thorough framework using 2 mechanisms, namely, administrative controls and technical controls in order to navigate frauds timely. Yamamura et al. (2019), Rahman and Saha (2019), and Arhin (2019) assessed the fraud detection network system and fraud detection methods including ATM frauds, mobile payments, and cyber crime.

Several researchers studied the drivers, consequences, and provisions for prevention of frauds. McCusker (2005); Zoubi and Al-Khazali (2007); Jackson et al. (2010); Aris et al. (2013); Soltani (2013); and Lokare (2014) analyzed the provisions to reduce risks to financial system and conflicts of interest that exist in banking. The studies disclosed that frauds predominantly occurred due to inadequacy of supervision of senior management and technological loopholes in online banking systems, and the banks neglected the due diligence processes.

Many researchers also focused on the auditor's role in coping with financial frauds. Schiehll et al. (2007); Goel and Gangolly (2011); Swamy (2011); and Dantas et al. (2014) studied accounting frauds and financial statement fraud and the role of auditors in detection and prevention and finding regulatory loopholes. Prawitt et al. (2008) precisely pointed out to the significance of quality audit practices to reduce fraudulent activities. Zhou and Kapoor (2011); Costa and Wood (2014); Kranacher and Riley (2019); Gee and Button (2019); and Kazemian et al. (2019) focused on forensic accounting and assessment of financial cost of frauds and asset misappropriation and the role of auditors and management in pointing out the same.

The findings showed that enhancement in employee capabilities and advancement in technology could decrease banking frauds up to a significant level, hence decreasing the overall negative impact.

Bossard and Blum (2004); Moyes (2007); Yang et al. (2009); Sandhu (2016); Magro and Cunha (2016); and Moyes et al. (2019) discussed the importance of effectiveness of management and employee red flags in detecting and preventing frauds. Yusof and

Author's personal copy

Lai (2014) created an integrated model to predict frauds which included identification of red flags and unusual behaviors among employees.

Gender diversity and demographics of fraudsters were discussed by Uzun et al. (2004); King et al. (2005); Steffensmeier et al. (2013); and Hilliard and Neidermeyer (2018) assessed the role of gender gap and involvement in organizational fraud.

Treviño et al. (2006); Cohen et al. (2012); Umphress et al. (2010); Ramamoorti et al. (2014); Omar et al. (2015); Strawhacker (2016); Spicer (2016); and Matthews (2018) stressed up on the significance of establishing a sense of behavioral ethics in organizations and enforcing positive reciprocity beliefs on unethical pro-organizational behavior.

Adequate importance was given to the dilemmas among employees in relation to whistle blowing and making tough choices in exposing fraud, waste, and abuse on the job (Miethe, 2019). OGW et al. (2019) laid emphasis on employee unethical behavior and corruption in Kenya. Several studies assessed the applicability of Cressy's theory of fraud triangle (Mackevičius, Giriunas 2013; Roden et al. 2016) and perception of bankers with reference to their responsibility in preventing frauds and its impact on their customer relationships and corporate social responsibility of the organizations (Nabhan & Hindi 2009; Hoffmann & Bimbrich 2012; Harjoto 2017).

Anand et al. (2015) talked about different areas in fraud research. The paper attempts to highlight the diversity within fraud literature studied. The findings of the literature review state a number of recent developments that researchers have studied which facilitated the occurrence of financial fraud, including the fundamental conflicts of interest, an influx of unknown, gullible participants, the increasing complexity involved in financial transactions, and rapid technological, legal, and financial innovations in novel banking arenas.

After a thorough review of the studies mentioned above, it was observed that most of the studies showed some common ground around which the research was conducted. Hence, to structure the discussion, a conceptual distinction is made between two broader areas identified by the author: the regulatory aspect of financial frauds and sociopsychological aspect of financial frauds. The papers classified under the recognized themes are given in Appendix 2.

Data analysis

As shown in the Table 1, the data analysis involved the similar approach as used by Gary et al. (2011) involving the following steps: (1) defining a tentative phenomena using topics identified from literature review, (2) analyzing text to identify fraud topics, (3) developing fraud themes, and (4) continually refining themes until all articles were accounted for.

The final classified fraud topics and themes are shown in Fig.2.

Studies focused on regulations and compliance mainly included the regulatory and legislative landscape of financial frauds and stressed up on the impact of and loopholes in regulatory framework in curbing financial frauds. The papers mainly presented the causes of detection of financial frauds and suggested improvements in regulatory body's preventive measures.

Author's personal copy

Table 1 Approach used for Data Analysis

Step	Additional description	Illustration
Defining a tentative phenomena	Formulating provisional statements about the phenomenon	The review of the fraud literature provided with a working list of over 20 fraud topics, like determinants of fraud, methods of fraud prevention, and motivational factors in bank frauds.
Analyzing text to identify fraud topics	Creating descriptive codes that require little or no inference beyond the text itself	Line-by-line coding was conducted to focus on the content of the text in the line and to identify fraud areas in the selected articles.
Developing fraud themes	Creating inferential codes that pull together text into smaller and more meaningful units	Analysis of the fraud areas and their comparison across various articles was conducted. The analysis finally led to derive two major research themes.
Continually refining fraud themes until all were accounted for	Refining and substantiating the emerging themes	The iterative process continued until it was possible to comprehensively explain the two fraud research themes.

Source: Summary of data analysis procedures adopted in thematic analysis, Gary et.al (2011)

The research focused on the sociopsychological aspect contains broad areas related to an ethical organizational culture, red flags, and behavioral characteristics of fraudsters. These studies basically highlighted the organizational frauds where employees and/or management were involved and stressed up on the significance of establishing a sense of behavioral ethics in organizations in order to prevent financial frauds.

Discussion

The themes identified in the study are central to the articulations and findings. The findings demonstrate the diversity in fraud research areas and scope for further

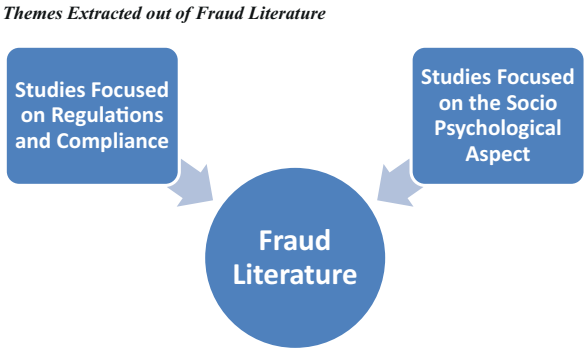

Fig. 2 Themes extracted out of fraud literature. Source: Author's compilation

Author's personal copy

research. The present study addresses this limitation of previous studies and establishes the different parameters of research under the identified themes. Somewhat similar themes in fraud literature were identified by Corritore et al. (2003) and Gary et al. (2011) stating the various types of frauds being categorized as per some common ground.

The regulatory studies mainly focused on the causes and preventive measures to be opted to reduce financial frauds (Khanna and Arora, 2009; Ganesh and Raghurama, 2008; Livshits et al., 2015). The authors mostly focused on what happened (case-based approach) (Ghosh and Bagheri, 2006; Swamy 2011), what should have been done (Compliance based approach) (Ribstein, 2002; Yallapragada et al., 2012; Khanna and Arora, 2009; Ganesh and Raghurama, 2008; Livshits et al., 2015), and what should be done in the future (suggesting preventive measures) (Baz et al., 2016; Baz et al., 2016).

It was quite interesting to note that in case of studies related to bank frauds, with the change in technology, the cases became more sophisticated and complex. The popularity of the research areas thus shifted from accounting frauds or balance sheet frauds in early 2000s (Ribstein, 2002; Uzun et al., 2004; King et al., 2005), to areas such as cyber frauds and identity theft in the later decade post 2010 (Jackson et al., 2010; Aris et al., 2013; Soltani 2013; Lokare 2014; Yamamura et al., 2019; Rahman & Saha 2019; Arhin 2019). While the regulatory studies mostly focused on rules and regulations, internal controls, and their implementation or non-implementation, the sociopsychological researchers mostly focused on the complex behavioral patterns of people indulged in fraudulent activities.

Majority of the studies focused on the sociopsychological aspects were causal and descriptive and in nature. The behavioral studies in the fraud literature covered the "human side" of frauds (Bossard & Blum 2004; Moyes 2007; Yang et al., 2009; Sandhu 2016; Magro and Cunha, 2016; Moyes et al., 2019). The researchers cited the person-specific areas such as describing characteristics of the fraudsters as identified by their peers, behavioral red flags alarming the fraudulent acts of individuals, studies citing the demographics of the fraudsters such as gender, and age-based comparisons (Uzun et al., 2004; King et al., 2005; Steffensmeier et al., 2013; Hilliard and Neidermeyer, 2018). The sociopsychological studies widely covered the impact of organizational culture and ethical practices on the mindset of their employees and the likelihood of frauds.

Scope for further research

It was observed that research on comparing the counter fraud strategies used in the public and private sectors was relatively rare. Very few studies included the bank customers' perspective on frauds considering they can also be subject to third party frauds. The negligence of bank employees being highlighted in various studies, the researchers did not focus much on the challenges or difficulties faced by the bank employees in preventing and detecting frauds. The social research areas could not identify much on the behavioral patterns of the fraudsters, apart from the previously proven theories. Not much was found on

Author's personal copy

the awareness levels of bank employees as well as customers on the issues related to vulnerability to corporate fraud.

The researchers can explore these areas further, and considering the huge uprising of cyber frauds over the last decade, research on the sophisticated techniques used by the fraudsters exposing banks and their customers to a huge risk of financial frauds can be pursued.

Practical implications

The study is useful to academic researchers to understand the various constructs of fraud literature and to explore the research area further in order to gain new insights based on the research gaps found. It is equally useful for the regulatory authorities in order to provide them with a reality check to analyze the current withstanding of banking institutions with regard to their current compliance level and additional measures required along with determining the further steps to be taken in order to prevent frauds from occurring in future.

Although the existing literature in bank frauds has covered many significant areas, there is much left to do. For instance, future research can include bank customer's awareness, experiences, and perspectives on frauds. Another area of research could be the identification and coping mechanisms with the various difficulties faced by bank employees.

Limitations of the study

The study suffers from some limitations. The study identifies the themes but does not comment on the various variables identified within the themes. Although the transition and shift in research areas was highlighted, it needs to be further explored to understand the trend and changing scenario for future researchers. The study also leaves scope to study the intensity of the themes identified.

Conclusion

Though the risks in financial sector have always existed, the scenario keeps changing with the change in technology (Singh et al., 2016). The chronological advancement of bank fraud cases from Hawalas and ponzi schemes to identity theft and cyber frauds has pushed the regulators to tackle bank frauds more cautiously than ever. The study has many notable findings such as shifting of the fraud literature areas from conventional frauds to cyber frauds and identification of two major themes around which most of the literature revolves gaining new insights onto the scope for further research on many areas keeping in mind the impact on various banking stakeholders.

Abstract
The National Food Security Act (NFSA), 2013, which is, also known as Right to Food Act is a significant Act of Parliament of India that targets to provide subsidized food grains to around 1.2 billion people or two thirds of Indian population. This review paper presented and analyzed The National Food Security Act, 2013 in a detailed manner. The impact of NFSA, 2013 on the economy is relatively high and significant as it drastically changes the entire public distribution system in India. The role of both the Central and State Government is important to maintain a proper balance between the distribution and allocation of food grains. It has been realized that the individuals entitled with this Bill can attain food grains at a reasonable price along with effective provisions for pregnant and lactating women. The economic implications of the Act are also significant in both the agricultural sector as well as it increases the subsidies which creates pressure on both the Central and State Governments of India. The pros of the Act are that it offers food grains to the poor people those cannot afford high value items. Further benefits relating to the National Food Security Act, 2013 are women empowerment, reasonable pricing of food grains and improving the economic structure of India. The cons of this Act is the imperfect implementation by the government machinery. In addition, the Public Distribution System has several issues where recycling of food grains from public agency storehouse is abandoned. Hence, it can be stated that appropriate strategies and techniques must be integrated for the successful execution of the Act in India.

Keywords: National Food Security Act, Distribution, Economic implications, Inefficient, Strategies.

Introduction

The Government of India enacted National Food Security Act, 2013 which provides subsidized food grains to around 67 percent of India's population. It was signed on 12th September 2013 by the Government of India. Based on the provisions of the bill, the beneficiaries can purchase 5 kilograms bowls of cereal per month as per eligibility (Banerjee *et al,*2014). On the other hand, certain categories of children, pregnant women as well as lactating mothers are eligible for obtaining daily free meals. In addition, better health is one of the primary aspects that act as a necessary precondition for the development of the economy. This bill is potentially a radical one that has a significant impact on the economy of India (Upadhyay&Palanivel, 2011). Hence, the requirement of effective and successful execution in every region of India can transform and enhance the lives of people. The objective and salient features of the Act highlighted by the Lok Sabha Committee report is food security represents the availability of adequate food grains to meet the demand of domestic people and access the entity level to deliver sufficient quantities of food at reasonable prices (Brahmanand *et al,*2013). In addition, the salient features of the Act also highlights that 50% urban and 75% of the rural population are entitled to 3 years from enactment offering 5 kg food grains every month (Chandrasekhar *et al,*2017). However, the eligibility of individuals is determined by the State government. On the other hand, 600 calories or Rs 6,000 for six months of the ration is allowed for pregnant and lactating mothers. Other than that, the food security allowance is also available for the beneficiaries for whom the food grains cannot be supplied.

The bill has been greatly controversial as it has a significant impact on the economy as well as the environment of our country India, due to poor management of resources and materials by the distribution agencies (Guérin& Srivastava,2012). (Kareemulla*et al,*2013) highlighted that this bill have been passed in order to deal with deficiencies in India where it has been analyzed that around 40.4% of children are underage under the age of three. In addition, the condition of women and children of other age groups have been also found critical due to lack of basic amenities which is food (Sen,2011). Furthermore, (Rai *et al,*2015) also suggested that the relationship between health and economic growth is unidirectional. Hence, improving economic conditions can certainly lead to better health. In other words, it can be also stated that through better health, economic conditions can be improved. The National Security Food Act is a potentially controversial bill as it can have a significant impact on the economy (Reddy *et al,*2011). However, if such a bill is well crafted as well as successfully implemented, then the condition of the lives of people can be enhanced towards betterment leading to improved economy of India. Likewise, (Narayanan, 2015) also highlighted that the potential of this bill is unlimited if it is executed appropriately in order to manage the issues related to health in India. The rationale for addressing this topic is to provide in-depth understanding and analysis about the appropriateness of The National Food Security Act, 2013 within the economy and environment of India. In relation to such context, this review paper highlights the role of central and state government based on The National Food Security Act, 2013. In addition, the implications of the bill towards the economy of India have been significantly

highlighted in this review paper. After reviewing the existing studies on NFSA, four categories has been identified and these are: role of central government for food security, role of state government for food security, economic implications of this Act and lastly pros and cons of the Act.

Objectives of the Study

Keeping in view the significance of National Food Security Act, it is essential to know the role of Government towards this Act and its implications. In relation to the literature related to NFSA, 2013, the followings are the objectives of this study:

1. To identify the role of the Central and State Governments towards execution of The National Food Security Act in India;
2. To analyze the economic implications of The National Food Security Act in India;
3. To analyze the positive and negative impacts of The National Food Security Act.

Role of Central Government for food security

The role of the central government to promote The National Food Security Act, 2013 is significant. The role and responsibility of the central government is to protect the current food grain and maintain the appropriate allocation to each state. Other than that, the Bill does not have any particular criterion for the identification of households that are suitable for public distribution system entitlements (Chavan *et al,*2015). In relation to such context, the role of the central government is to mitigate the state wise coverage of the public distribution system based on the appropriate proportion of the rural and urban population. This, in turn, would assist to analyses the number of eligible individuals which are extracted from the Census population figures (Sharma,2011). Other than that, the central government needs to monitor that the individuals those are entitled with the supply of food grains are either attaining the materials at subsidized rate or non-supply of the quantities of food grains of meals should compensate with food security allowance (Ramsundar& Jaydeb,2011). The role of the central government in managing the public distribution system for enhancing the economy and environment structure of the country is significant (Patel *et al,*2014). In addition, it has also been analyzed that the full transparency of records along with appropriate management of fair price shops have tobee followed based on the policies and framework put forward by the central government. Hence, it can be stated that the role of the central government for effective management and execution of entire processes of food security and its distribution is significant for exploiting the opportunities associated with the Bill, (Gustafson,2013). On the other hand, the major role and obligation of the central government is to provide food grains or appropriate funds to the state governments at the prices indicated in the Schedule I of the Bill in order to implement the primary entitlements. In addition, the rules and policies that are framed under this Bill have to be consulted with the State government in order to successfully execute the plan.

On the other hand, the role of central government under the food security act includes preparation of adequate amount of cereals which will be available for every individual based on the bill for

safeguarding survival (Masiero,2015). In addition, (Pal,2011) also highlighted that the Central Government is responsible to manage sufficient availability of cereals and pulses. The food security bill also entails availability of milk and milk products, pulses and cereals in order to enhance the condition of the people in our country India. Other than that, the Central Government of India has enacted this bill for laying a basic foundation to augment production of pulses and cereals. It thus becomes the role of Central Government to support production increase across the regions of India in an adequate manner (Kumar &Mohanty,2012). The major role of central government in managing the act is to accumulate the investment of both public and private investment for delivering appropriate service delivery. Furthermore, effective planning and strategic management by Central Governmentis highly required within India for facilitating the services offered by this to every region of India. The Central Government should consult the State Governments and other advisory bodies while implementing NFSA for taking complete advantage of the bill and contributing in development of the economy (Varadharajan *et al,*2014).

Role of state government for food security

NFSA, 2013 highlights the role of state Government for ensuring food security. The food security allowance needs to be provided by the state Government to the respective beneficiaries when the supply of food grains is limited(Kareemulla *et al,*2013). This role of state government is imperative to fulfill in order to accomplish the overall objective of the Act. Other than that, the identification of eligible households specifically for the entitlement of lactating and pregnant women are left to the state government. It has to be done within 365 days and the lists of suitable households have to be displayed prominently with an adequate supply of food grains and essentials (Kumar *et al,*2012). Furthermore, as the Bill is defined based on two-tier grievance redressal system, the integration of State Food Commission and District Grievance Redressal officer of the state is highly significant. The State Government must also put in place appropriate internal grievance redressal machinery to assist the people in need and utilise the benefits offered by such Act through help lines and call centers (Lawford*et al,*2013).

In addition, it has been also evident that limited resources and exponentially increasing population, poor performance of Public Distribution System, lack of infrastructure and operational inefficiencies within the state government highly impact the execution of this bill (Kishore *et al,*2014). Other than this, previous studies have also highlighted the need of major reforms in distribution, procurement and movement food grain strategies for sustainability of the act in every state. Hence, the need for appropriate execution of the Bill in the entire regions of each State is highly significant. It is also imperative that the role and responsibilities of the State Government are maintained appropriately (Tanksale& Jha,2015). The complaints must be heard accordingly and appropriate obligatory actions have to be taken by the State Government based on the norms and rules along with the integration of State Food Commission. Hence, the role of the State government is imperative in executing the Bill successfully; however, consultation with the Central Government is also required for formulating any rules and norms (Yu *et al,*2015).

It has been well identified by (Kumar & Ayyappan,2014); that the role of State Government is significant for its substantial influence on the foods delivered for human consumption. In addition, it is the significant responsibility of the State Government to be concerned with the supply of foods by assisting the farmers in maintaining a fair standard of return. This can certainly assist to achieve the mission of food security bill in India (Atteridge *et al,*2012). Other than that, the involvement of State Government towards analyzing the quality of food as well as protect consumers from unfair trading practice is also significant duty and responsibility of state government (Drèze& Khera,2017). Likewise, the responsibility of the government to deliver explicit information on nutrition and food to the consumers of respective state is highly significant in order to safeguard their livelihoods. In other words, it can be stated that rational Government involvement by respective state can certainly assist to provide better nutrition for the population which in turn can stimulate the agricultural industry efficiently (Dobe ,2015). As agricultural industry is highly related towards delivering adequate resources to the individuals, the state government must ensure to provide adequate assistance to the farmers accordingly.

Economic Implications of National Food Security Act, 2013

India has newly been experiencing high food inflation with record creation of food grains, buffer stocks. An unique trait of recent food inflation has been the continued value pressure in protein rich things (pulses, milk, fish, meat and eggs). As per RBI, the inflationary effect of NFSB will rely upon how much it will raise interest for foodgrains comparative with the ordinary increment in supply. This will create demand pressures, which will typically spread out to market costs of food grains (Badgaiyan& Singh,2015). Further, the subsidies are increased through this Bill. As a result, the need for huge funds from the Central Government is highly required for the Food and Security Bill, 2013. In addition, the pressure on food prices due to inflation is relatively high as a significant impact of the Bill. In relation to the RBI, the inflationary effect of the Bill would certainly depend on the degree by which the rise in demand for food grains would be relative to the increase in supply (Kishore *et al,*2014). This, in turn, it critically generates huge pressure on the demand side affecting the market prices of food grains. The burden of food subsidy would be also relatively high on the funding as it lifts up the fiscal deficit leading to inflationary pressures at the macro level.

The public investment in agriculture is only approximately one-fourth of total agri-GDP (Khera ,2013). This is the philosophical nature of the imbalances between the investment and the use of subsidies as the policy instruments for agricultural growth. Other than that, during the last five year plans, the agricultural sector has gained moderate growth of 4% in which, between the years 2010-2011, the GDP ratio of agriculture accounted for 12.4 percent (Rai *et al,*2015). On the other hand, it has been also comprehended that the Bill is expected to decrease the natural process of agriculture and at places can even annul this particular trend in India. The major economic implication of this Bill is it has created a forcible low-equilibrium trap for the agricultural sector in India (McMichael & Schneider,2011). Other than that, the government is trying to reverse the movement of Indian agriculture form high value items towards food grains. This will certainly

impact the agricultural sector as the returns of valuable items are relatively high in revenue compared to food grains. Other than that, the food economy is expected to cripple the level of competition (Hertel,2015). As the wheat crop is abundant, the increasing demand side is critical to fulfill. In the last three months, the wheat price also increased by 20% due to such criticality in the wheat market. This in turn critically impacts the availability of food grains appropriately which affects the domestic grain market.

Pros and Cons of the National Food Security Act, 2013

The implication of The National Food Security Act, 2013 towards the economy and environment of India is significant as the law grants food grain at greatly discounted prices which is affordable to the lesser income people (Haddad,2011). The benefits associated with The National Food Security Act, 2013 are women empowerment, reasonable pricing of food grains and enhancing the economic structure of India (Misselhorn *et al,*2012). The major advantages of the bill is it is a very crucial law initiated by the Government of India in order to ensure security of food of the 75% population of the country (Gahukar,2011). In addition, it can certainly assist in analyzing the number of malnutrition children and assist to enhance the health of child accordingly below five years as well as pregnant and lactating mothers in the entire country (Dreze& Khera,2015). The empirical study conducted on the benefits of the bill highlights that the around 47% of children in India is experiencing malnutrition had also is the home of the underweight children at an elevated level compared to other countries in the global world (Sandhu,2014). Through the use of both quantitative and qualitative analysis in the study based on pre-published journals and statistical tools, the results attained highlights the need of effective execution policy of the bill for enhancing the livelihood of people specifically the poor and informal sector.

The cons of The National Food Security Act, 2013 is the flawed implementation by the Government machinery. In addition, the Public Distribution system has several issues where recycling of food gains from state agency storehouse is unrestrained (Desai & Vanneman,2015). Hence, it needs to be successfully executed in the entire regions of India for enhancing the economy and lives of people in India. Furthermore, the food grains are reaches to the private traders and do not reach to the shops of fair price due to such distribution issues leading to economic vulnerability (Saxena,2018). The other issue is food grain production. Through in population is exceeding the supply of food grain as the number of administrative machinery in relation to manpower, logistics and warehouses in highly limited (Dev &Sharma ,2010). Other than that, (Brauw & Suryanarayana,2015); highlighted that as the food grains will be distributed through PDS, there is a huge possibility that the resources may not reach to the respective individuals due to corruption or leakages of food grains. The each number of poor individual is not estimated accurately as different departments have different numbers which requires significant concentration. In addition (Banik,2011); stated that the implementation cost is relatively high which can burden the government leading to fiscal deficit. Further, the economy is also under big threat as the food grains will be produced by the government reducing the exports. Hence, it can be stated that The National Food Security Act, 2013 has both pros and cons.

Conclusion

This paper has a huge contribution for transforming the lives of people as it promotes the right to food for each individual residing in India. It also brought forward significant knowledge about the bill that has drastically transformed the economic structure of the country. In this review paper, the relevant past studies of The National Food Security Act, 2013 have been investigated through analyzing their results and effectiveness. The success of executing the bill in the entire regions of India is highly needed for exploiting the opportunities associated with it. On the basis of entire review of studied literature, it has been observed that a lot of work has been done in this area. Further Analyzing its implications and execution strategy can provide a wide area for future researcher to conduct a study in this particular field of investigation. Hence, the need of appropriate strategies and policies have to be framed for the successful implementation of this Act and followed by the central and state legislative agencies appropriately.

UNDERSTANDING PERCEPTIONS OF KEY BANKING STAKEHOLDERS USING TEXT ANALYSIS

Pallavi Sood* & Puneet Bhushan†

Abstract

Fraud literature suggests that the perceptions of banking stakeholders play a significant role in identifying the major areas of concern. Given this consideration, the present study qualitatively explores the perceptions and views of the key banking stakeholders namely, management, auditors and customers who have personally investigated or closely observed a fraud using Text Analysis conducted through QSRNvivo12 software. The analysis of thirty interviews helps condense some of the interesting and in depth viewpoints on banking frauds. The broad areas concerning fraud vulnerability, accountability, impact and prevention of fraud are central to the articulations of the respondents' views. The results are likely to help capture significant areas of direct concern and improve proactive preparations related to frauds, both from an organizational and regulatory perspective.

Keywords: *Text Analysis, QSRNvivo12, Fraud, Stakeholders, Perceptions*

Introduction

Fraud is defined by Cambridge Dictionary as a phenomenon intended to deceive others, typically by unjustifiably claiming or being credited with accomplishments or qualities (Alleyne, Persaud, Alleyne, Greenidge, & Sealy, 2010). The ACFE further explains that the financial frauds can be regarded as an inevitable and undesired concomitant of economic development (Mathews, 2018). Financial frauds have emerged in various forms and valuations, throughout global financial history. Robert Shiller, a

*Research Scholar, University Business School, Himachal Pradesh University
†Assistant Professor, University Business School, Himachal Pradesh University, email: pbsud.sml@gmail.com

top housing expert in the United States wrote in Global Research that the mortgage fraud was a lot like the fraud which occurred during the Great Depression in 1930s (McCarty, Poole & Rosenthal,2013).

Some of the most notable and expensive corporate fraud scandals throughout the world including the cases of fraudsters like Charles Ponzi, Madoff, Jordan Belfort, Enron & WorldCom have been due gross mismanagement as well as lack of financial awareness (Straney, 2010). The last decade involved a significant coverage of banking frauds by the global media.

While the governments enact several laws aimed at restraining fraud, their meager enforcement has attenuated the intended impact. With the rise of digital transactions backed by technology, frauds have spread to new areas. The banking institutions act as financial intermediaries and providers of capital for major economic activities (Costa & Wood, 2016). Finding modes of preventing and detecting bank frauds is thus vital.

In India, the financial framework is as old as early Vedic period. The book of Manu contains reference with respect to stores progresses, promise strategy of advance, and pace of intrigue. From the earliest starting point of twentieth century banking has been created to such an extent that truth be told, has come to be designated "LIFE BLOOD" of exchange and business (Sharma, 2007).

In India, banking has created from the crude stage to the advanced arrangement of banking in a manner that has no equal on the planet history. With the beginning of autonomy, changes of huge size have occurred in India. After freedom India propelled a procedure of arranged financial action so as to conquer the large number of issues it looked as an immature country (Goyal & Joshi, 2012). The expanding rhythms of financial movement lead to enormous increment in the volume and unpredictability of banking action. Along these lines, the job of banks grew at a quick pace.

Figure 1: Number of banking frauds and amount involved

Reeling Under the Pressure

Bank Group/ Institution	2017-18		2018-19	
	Number of Frauds (₹ cr)	Amount Involved (₹ cr)	Number of Frauds (₹ cr)	Amount Involved (₹ cr)
Public Sector Banks	2,885	38,260.87	3,766	64,509.90
	-48.8	-92.9	-55.4	-90.2
Private Sector Banks	1,975	2,478.52	2,090	5,515.10
	-33.4	-6	-30.7	-7.7
Foreign Banks	974	256.00	762	955.30
	-16.5	-0.6	-11.2	-1.3
Financial Institutions	12	164.70	28	553.40
	-0.2	-0.4	-0.4	-0.8
Total	5,916	41,167.00	6,801	71,542.90

Source: The Economics Times, October 9, 2019

The above figure clearly indicates towards an increase in both the number of frauds and amount involved from 2017-18 to 2018-19, the public sector banks being the worst affected of all comparatively.

Fraud and its redressal is a major concern area for the banking sector and across all portfolios - retail, corporate, and priority sector. Some of the recent fraud incidents in India reported by the media relate to fixed deposits, loans disbursement or extending credit facilities for bribes, phishing and other internet/ ATM based frauds.

Figure 2: *Current fraud risks that are of high concern to banks*

Source: Jeyanthi, Mansurali, Harish, & Krishnaveni (2020)

Risks are inherent in the banking business, but with frauds on the rise, organizations need to put their business in order by having effective control mechanisms in place. There are a number of different "stakeholders" or interested parties in the banking sector. These stakeholders include customers and depositors, regulators, investors, taxpayers, politicians and the directors and staff of banks. All stakeholders, though, have an interest in the proper functioning of the banking system, none operates in isolation. Although each of the stakeholders differ in terms of control and expectations, each of the stakeholders seek returns that maximizes and safeguards their interest.

The risks taken by the banking sector are still worrisome, although there has been a bit of moderation. The same has been indicated by the bank stability. Banks were also worried due to poor quality of assets. The proportion of stressed assets has increased significantly in the past years. Given the amount of transactions in banking, it is imperative that banks implement a dynamic monitoring mechanism so as to remain vigilant to early signs of distress in the borrower accounts.

Keeping all this in mind, to find and implement an effective coping mechanism is therefore, not an option but the need of the hour. A significant aspect to enhance accountability and transparency within the banks may prove to be an effective mechanism to enable and empower the employees to raise and voice their concerns internally in an effective manner when and if they discover any malpractice. The study emphasizes on the perceptions of various banking stakeholders giving it a 360 degree overview of the current situation and issues. Their perspectives are extremely essential in accentuating their contribution in mitigating banking frauds.

Defining the key stakeholders

As of late, India has enacted laws explicitly supporting endeavors towards forestalling corporate extortion, negligence, and wrongdoing. This is an indication that controllers know about the difficulties looked by associations in checking misrepresentation and are resolved to guarantee business is led morally. The Prevention of Corruption (Amendment) Act, 2018 is currently increasingly extensive and targets pay off suppliers as well, with the goal of

guaranteeing that associations progress in the direction of setting up satisfactory techniques intended to forestall pay off. The Fugitive Economic Offenders Bill, 2018 is relied upon to stop people engaged with misrepresentation and other financial offenses.

Similarly, the changing consumer preferences and advanced technology have further elaborated the risks. With the huge surge in the cases of bank frauds, existing approaches seem to have become less effective at detecting and mitigating the risks. Now is the time to re-examine the overall approach, to review what risks are emerging and what responses are necessary.

It is also significant to explore how various stakeholders perceive their own responsibility towards preventing frauds. The senior management officials in banks have huge responsibility of monitoring the operations at various branches and taking necessary action in order to curb the growing cases of bank frauds. Auditors play a major role in intensive examination of large-value accounts, the nature of security provided by borrowers as well as financial statements of borrowers. With cyber frauds and identity theft on the rise, it has become more and more imperative for the bank customers to understand and be proactive against any kind of frauds they might encounter.

Research Objective

To analyze the perceptions of key stakeholders' on financial frauds in banks.

Literature Review

The literature on bank frauds and fraud detection methods has grown immensely in the past decade. As the volume and scale of frauds became extensive, several researchers began to explore the phenomenon. As stated by Rossouw (2000, p. 885) fraud is a worldwide phenomenon that ruins the profitability, reputability, and legitimacy of organizations wherever it occurs. As the researchers explore different arenas of financial frauds, the fraud theories became more sophisticated which describe fraud and its motivations thoroughly.

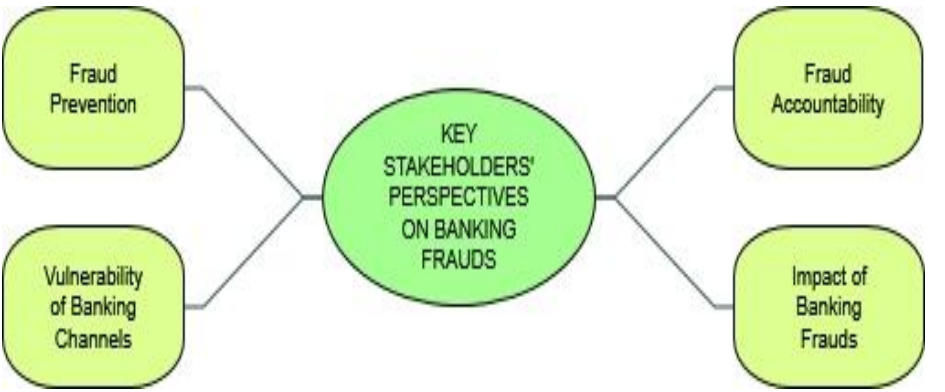
Subbarao, (2009) enumerated the moral hazard problem in the banking system as privatization of profit and socialization of costs. Sandhu, (2016) conducted in depth interviews of the close coworkers of the offenders who identified certain behavioral red flags among their colleagues. The findings of the study highlighted certain common and significant factors identified among the offenders such as strong ambition, financial problems at home and dissatisfaction with the work. Yusof & Lai, (2014) presented an integrated model to predict financial fraud in their paper. The study incorporated three major theories of fraud namely, 'Theory of reasoned action, Theory of planned behavior and The fraud triangle (Zoubi & Khazali 2007). It was found that both individual and organizational factors impacted the indulgence of employees in financial frauds. Strawhacker, (2016) suggested that the organizations must embed ethical elements in the organizational culture to influence employee behavior in an optimistic manner.

Harjoto, (2017) revealed that the businesses scoring high in CSR activities had lower rate of financial frauds. Spicer, (2016) discussed the elements of the fraud triangle theory and their presence in the extracted cases. It was revealed that the theory was applicable where the fraudster had personal financial crisis at home.

Anderson, (2009) stated the factors such as over reliance on senior officers and outside experts as well as weakness in the regulatory system inducing the chances of occurrence of financial frauds. Yang, Moyes, Hamedian & Rahdarian, (2009) investigated the relationship between the professional demographics of auditors and their effectiveness in identifying red flags to detect financial frauds. Bossard & Blum, (2004) stressed upon the role of auditors to maintain professional skepticism and identify the fraud risks. Magro & Kunha, (2016) found that the internal auditors attributed greater importance to red flags associated with operational activities and internal control procedures.

Singh et.al, (2016) focused on the various kinds of phishing techniques used by the fraudsters in order to cheat the bank customers. Various cases reported by many private and public sector banks reported the existence of fake websites and emails which led to huge losses to their customers. On

similar lines, Thangamuniyandi & Ragavan (2016) stated that in order to have maximum access to security from phishing, the banks must focus on educating their customers to distinguish between original and fake websites and URLs. Also, the bank employees handling and controlling the systems must be adequately trained and aptly selected.



It was quite interesting to note that in case of studies related to bank frauds, with the change in technology, the cases became more sophisticated and complex. The popularity of the research areas thus shifted from accounting frauds or balance sheet frauds in early 2000s Ribstein, (2002); Uzun, Szewczyk & Varma, (2004); King, Nuxoll & Yeager, (2005) to areas such as cyber frauds and identity theft in the later decade post 2010 Jackson, Holland, Albrecht & Woolstenhulme, (2010); Aris, Othman, Ali & Rahman, (2013); Soltani, (2013); Lokare, (2014); Yamamura, Nishida & Kawamorita, (2019).

Research Methodology

The present research qualitatively explores the perspectives of the banking stakeholders. The data for the study was collected with the help of both Face to Face and telephonic interviews conducted by the author between January 2020 and July 2020. Post Covid 19, mixed interviews approach was considered particularly suitable for the present research since it permitted the respondents to completely articulate their own experiences from their homes via telephones and effectively convey their perceptions on the same (Ross & Squires, 2011).

The respondents of the study were selected by using purposive sampling techniques. The confidentiality of their responses was assured to the interviewees. Out of 41 people approached, 9 refused to participate in the study and 2 were unable to communicate due to connectivity issues. The good response rate is indicative of the willingness of the participants to share their perspectives on the subject matter. The interviewees were requested to provide the contact information of potential participants, in case the interviewee knew any. A total of 30 semi-structured interviews were conducted. The duration of the interviews ranged between 18 to 30 minutes. The interview schedule covered four broad areas given in the figure below.

Figure 3: Mind Map generated for broad areas covered under interview of key banking stakeholders

Source: QSRNvivo12 Output

S. No.	Gender	Age	Stakeholder Profile	Mode of Interview
1	Male	31	Bank Customer	Face to Face
2	Male	47	Bank Customer	Face to Face
3	Female	51	Senior Manager	Telephonic
4	Male	36	Bank Customer	Face to Face
5	Male	45	Senior Manager	Telephonic
6	Male	54	Senior Manager	Face to Face
7	Female	56	Senior Manager	Face to Face
8	Female	34	External Auditor	Telephonic
9	Male	53	Senior Manager	Telephonic
10	Male	54	Senior Manager	Telephonic
11	Female	43	External Auditor	Face to Face
12	Female	41	External Auditor	Telephonic

13	Male	52	Senior Manager	Telephonic
14	Male	38	External Auditor	Telephonic
15	Male	30	Bank Customer	Face to Face
16	Female	30	Bank Customer	Face to Face
17	Male	31	Bank Customer	Face to Face
18	Male	29	Bank Customer	Face to Face
19	Male	30	Bank Customer	Face to Face
20	Female	32	External Auditor	Telephonic
21	Female	38	External Auditor	Face to Face
22	Female	51	Senior Manager	Telephonic
23	Male	31	Bank Customer	Face to Face
24	Male	54	Senior Manager	Telephonic
25	Female	33	External Auditor	Telephonic
26	Female	36	External Auditor	Telephonic
27	Female	37	External Auditor	Telephonic
28	Male	47	External Auditor	Telephonic
29	Male	35	Bank Customer	Face to Face
30	Male	51	Senior Manager	Telephonic

The above table describes the demographic characteristics of the individuals interviewed by the author. Out of all the stakeholders, there were 18 and 12 male and female respondents respectively belonging to varied age groups and designations. The sample respondents belonging to varied categories were deliberately chosen equally by the author for interview (10 each).

Data Analysis

In the data analysis stage, two qualitative softwares were used to transcribe and analyze the data. The first software used was NVivo Transcription, which was used to transcribe the recorded interviews. The software assisted in converting the audio files into MS-Word files. The other software was

NVivo 12 which was utilized in the analysis of the transcribed data. NVivo is an information management tool especially useful for the qualitative research. The transcribed files were imported to NVivo and various analysis techniques namely, Word Frequency, Text Query, Word tree and cloud tags were applied to the collected data.

Word Cloud: A word cloud is a collection, or cluster, of words depicted in different sizes. The bigger and bolder the word appears, the more often it's mentioned within a given dataset.

Figure 4: Word Cloud as per most frequently used words by the respondents

Source: QSRNvivo12 Output

The word cloud in the above figure helps in capturing the whole view of responses in a single sight. The above figure shows the most common words uttered by respondents during interviews. It can be seen that the respondents focused upon data related frauds, use of analytics in fraud prevention, cybercrime, sophisticated technologies, business risks, etc.

Text Search Query: Text search queries aim at search for words or phrases in the data. It includes exploration of the usage of words while the researcher derives the context and meaning out of it.

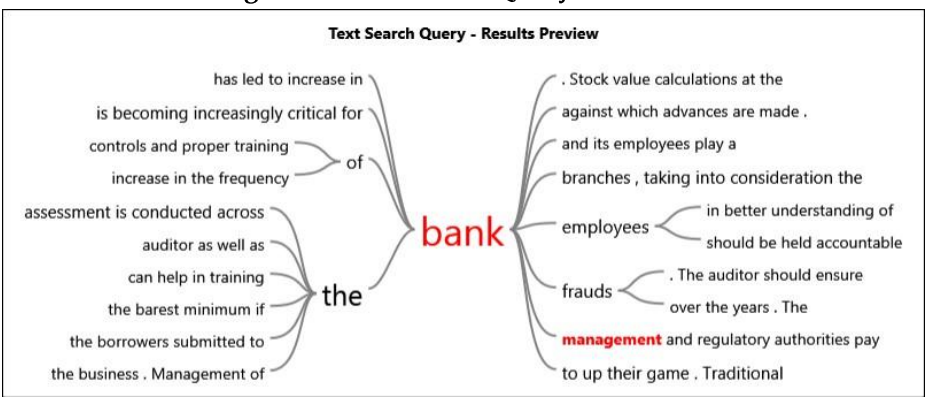


Figure 5: Text Search Query for 'Fraud'

Source: QSR NVivo12 output

The above figure shows the word tree which was generated by text search query for the word 'Fraud'. There are several associations which can be easily drawn out of this query such as 'advances being more prone to bank frauds', 'cyber frauds can be prevented through data analytics', 'identification of various red flags to reduce fraud incidences, schemes and sophistication of fraud techniques, etc.

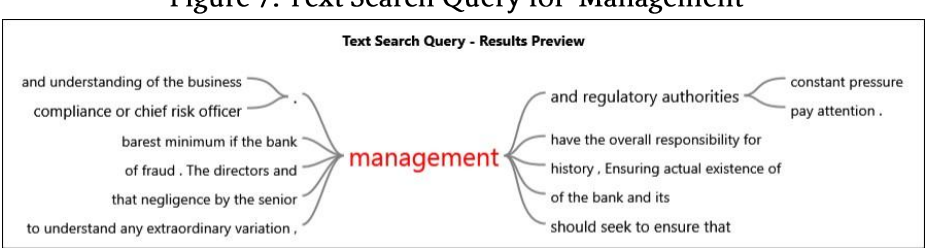

Figure 6: Text Search Query for 'bank'

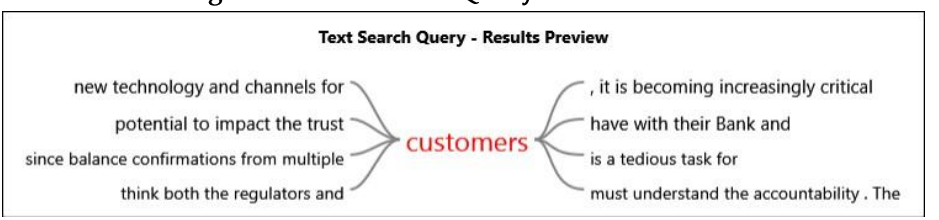
Source: QSR NVivo12 output

Many inferences can be drawn from the above figure by adjoining sentences like 'Auditors as well as the bank employees should be held accountable in case of oversight of discrepancy', 'A better understanding of bank frauds is becoming increasingly critical for bank management', Bank frauds can be at barest minimum if the management and regulatory authorities pay attention', etc. Text queries for individual stakeholders are given below.

Figure 7: Text Search Query for 'Management'



Source: QSRNvivo12 Output

A lot of perceptions are highlighted in the above figure like, 'Negligence by the senior management at times', 'The directors and management are under constant pressure', 'To understand any extraordinary variation, management and regulatory authorities should pay attention', 'compliance or chief risk officer have the overall responsibility to prevent frauds', etc. A few notable mentions which were repetitively frequent in the interviews were "Most of the frauds that got reported were credit related so I think both the regulators and customers must understand the accountability", "I think setting up of a

Special Surveillance Cell with forensic trained staff with a proactive approach is the main requirement". "There are inadequate tools and technologies in place to detect early warning signals and red flags pertaining to different frauds".

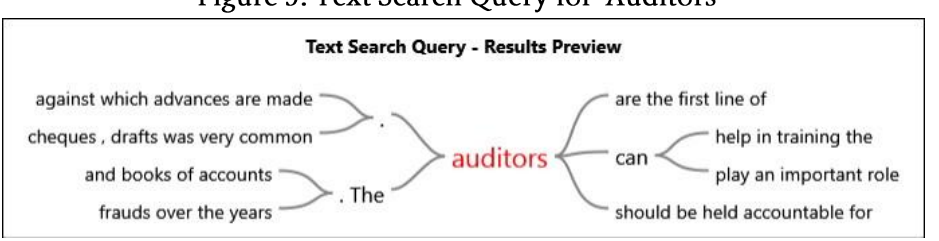


Figure 8: Text Search Query for 'Customers'

Source: QSRNvivo12 Output

The above figure containing text query depicts the most frequent perceptions of bank customers. Various issues have been highlighted such as 'increasing usage of new technology and channels', 'fraud has the potential to impact the trust customers have with their bank', 'both regulators and customers must understand their accountability' etc. A notable reference in one of the interviews was the "Due to sophisticated technologies and usage of various electronic channels, the consumers are not given due attention in terms of enhancing the knowledge on security measures especially in rural areas. This is something the banks definitely need to improve."

Figure 9: Text Search Query for 'Auditors'

Source: Nvivo12 Output

Text query search for the word 'Auditors' described various perceptions such as 'Cheques and draft based frauds were found to be very common by the auditors', 'Auditors are the first line of defense', 'The Auditors can help in training the bank employees to remain vigilant', 'The auditors should be held accountable for identification of fraudulent transactions in books of

accounts', etc. Banks would only be able to reduce the occurrence of frauds by ensuring competent working of staff, whereas, if we talk about the detection of frauds, the importance of the auditors' role can never be denied. Armed with specialized combination of skills, these financial detectives are significant assets.

Findings

1. The stakeholders' perceptions on fraud prevention majorly stressed upon the usage of data analytics to prevent cyber frauds.
2. It was highlighted that in case of internal bank frauds, identification of various red flags to monitor the employees may drastically reduce fraud incidences.
3. Auditors as well as the senior management considered themselves accountable in case of oversight of internal discrepancy
4. Repetitively, the respondents from banks' senior management, focused upon setting up of a 'Special Surveillance Cell' with forensic trained staff having a proactive approach and inadequacy of tools and technologies to detect early warning signals and red flags pertaining to different frauds.
5. With fraud techniques being complex and sophisticated, a better understanding of bank frauds is becoming increasingly critical for bank management.
6. Bank customers' perception mainly highlighted the fact that fraud has the potential to impact the trust they have with their bank.
7. Bank customers' sentiment also reflected upon complexity of sophisticated technologies and stressed that the consumers must be given due attention in terms of enhancing the knowledge on security measures especially in rural areas.
8. Cheques and draft based frauds were found to be very common by the auditors
9. Auditors considered themselves as the first line of defense and a few expressed interest in volunteering for training the bank employees to be careful.
10. Overall, the fraud incidences encountered by the stakeholders were most frequently found to be of cyber frauds and frauds pertaining to loans and advances were found more frequent than others.

Suggestions

1. Since frauds related to loans and advances were found quiet frequent, due diligence for sanctioning of loans as well as end use of funds must be done periodically and observations of bank's system and procedures should be thoroughly checked.
2. Implementing an employee whistle blowing hotline can prove to be an effective measure to curb internal bank frauds so that the employees anonymously report malpractices without fear.
3. Auditors must conduct a thorough fraud risk assessment using data analytics to identify and address high-risk areas to cater to cyber frauds.
4. Retired and credible bank officers can be hired to facilitate the internal audit of the bank. Since they possess the required operational and regulatory knowledge, they must be empanelled.

Practical Implications

The Indian banks are marching through an increasingly difficult scenario with increased financial frauds and low recoveries. The stakeholders' perceptions highlighted by the author in this study facilitates an in depth understanding of various facets of banking frauds and clearly raise concern to work on the increased regulatory scrutiny with respect to modus operandi and extent of accountability of the respective stakeholders. Recent banking frauds and willingness to gain a deep understanding of various facets related to bank frauds served as the prime motivation to carry out this detailed study. The research is useful to the banks and regulatory authorities as it as a reality check to analyze the current withstanding of these institutions with regard to their current compliance level as perceived by their key personnel of interest and to determine the further steps to be taken in order to prevent frauds from occurring in future.

Conclusion & Scope for future research

The potentially greater impact from frauds is reputational damage and diminished customer and investor confidence. These issues have the potential to impact the trust customers have with their bank and in worst cases, it may lead to an overall systemic crisis. The accountability is not of a

single individual. Risks are definitely inherent in the banking business, with frauds on the rise, effective control mechanisms are definitely required to be put in place. Banks need to take a comprehensive view of their and relook at their anti-fraud measures. Having an adequate prevention method in place makes it harder for fraud to be committed. With fraud schemes and the sophistication of fraud perpetrators constantly evolving, analytical tools provide the ability to discern anomalies, across available data that might otherwise go unnoticed. Also, with cyber crimes on the rise, the customers have to ascertain to remain vigilant and secure at all times while using any of the E-banking channels. Though the overall sentiment of all the key stakeholders were found to be optimistic about prevention of banking frauds, certain areas still need specific attention like new technologies, new entrants into the industry, new regulations and changing consumer preferences which may combine to disrupt the existing approaches towards banking frauds.

The study leaves the scope for further research. One interesting area of research can be the identification and coping mechanisms of various difficulties faced by bank employees. The present study highlights the growing sentiment and concern of stakeholders regarding cyber frauds, therefore the researchers can further explore the upcoming areas of data analytics, artificial intelligence and other sophisticated techniques to decrease the frequency of frauds and their detection time.

Abstract

The purpose of the present study is to explore whether there is any qualifying relationship between personality traits and work engagement, also, the level of work engagement and big five personality traits among female employees in Himachal Pradesh. Relevant data through questionnaire was collected from 150 female employees working in 3 different Public sector banks namely State Bank of India, Punjab National Bank and UCO Bank in the state of Himachal Pradesh. The results of the study specified that there was a significant positive relationship between work engagement and big five personality traits. Extraversion, Agreeableness, conscientiousness, and openness were significantly related to work engagement and its dimensions namely vigor, dedication and absorption whereas neuroticism was found to be negatively related to the work engagement and the three dimensions of it. The level of work engagement was high in public sector whereas extraversion, conscientiousness, neuroticism and openness were average except the agreeableness trait of personality was high

Keywords: Personality traits, work engagement, vigor, dedication and absorption

1. *Introduction*

Organizational agility is continuously looking out for the employees who bubble, sparkle or effervesce with dynamism, enthusiasm, energy, employees who believe in themselves and their abilities Bakker and Schaufeli, (2008). This implies that in order to achieve competitive edge organization need to have engaged employees who are willing to put in that little bit extra

for business. Bleeker & Roodt, (2002); Schaufeli & Bakker, (2004) stated the importance for managers of fostering the growth of work engagement as disengagement or alienation is the central problem of workers' lack of commitment. Literature highlighted that research on work engagement has been done in various professions like nursing (Montgomery et al., 2015) police officers (Storm K. & Rothmann S. (2003) & Louw G.J 2014), school principals, teachers (Hakanen et al., (2006); Zaidi et al., 2013 and Manikandan K. & Sarath P (2014), including banking personnel (Koyuncu et al., 2006).

The issues in work engagement among banking personnel specially the female employees has received important responses these days because of the economic pressure of inflation, the acts upon of other women's movement and the psychological need to spring up one's self identity.. This brings us to a very important question as to why certain female employees show signs of work engagement while others exhibit no signs of work engagement. Personality plays a significant role in the engagement process and it can be considered as an important variable to affect the engagement level because individuals enter the workplace with their own sets of personality characteristics. Therefore, it becomes important to study the relationship between personality traits and work engagement.

1.1 *Work Engagement*

Engagement is an important concept to study and analyze because it is associated with the positive individual and work related outcome as focussed by Maslach et al., (2001). Engaged employees confirm themselves quickly to changes in their surroundings, and pass easily from one activity to the other as compared to their counterparts Laangelaan et al., (2006). It is defined as a "positive, fulfilling work related state of mind that is characterised by vigor, dedication and absorption" (Schaufeli, Salanova, Gonzalez-Roma & Bakker, 2002, p. 74).Vigor pertains to high levels of vim, dynamism, zip and mental exuberance while actively engaged in work. Vigor perhaps, is delineated as a pool of energy possessed by the employees and that could be used when dealing with demanding and stimulating situations (Shirom 2007 p. 86). Dedication refers to an intense work involvement and comprehends feeling of self-respect and personal worth, pride, enthusiasm, significance and challenge. Absorption, which is the last variable of work engagement is characterised as being totally focused on one's work as the time appears to pass quickly and one finds it increasingly hard to detach oneself from work. In short, engaged employees work hard; they are passionate about their work; and are fully plunged in their work activities (Bakker and Demerouti, 2008).

1.1.2 Personality Traits

Personality refers to cognition and perceptual structure of behaviour that depicts constancy or stability throughout time and across situations (e.g. Cattell 1965)

Extraversion is a personality trait, which is characterized by warmth, assertiveness, gregariousness, talkative, enthusiastic, active,

energetic, expressive etc. (Costa & McCrae, 1992). This variable consists of two components, Ambition (initiative, surgency, ambition and impetuous) and Sociability (social, exhibitionist and expressive) (Hogan 1986).

Neuroticism represents individual differences indicating general tendency to be anxious, tense, hostile, impulsive, vulnerable, self-consciousness etc. (Costa & McCrae, 1992). Any individual who scores high on Neuroticism indicates that a person is prone to have irrational ideas, being less able to control impulses, and is grappling badly with stress Rothmann et al., (2003).

Agreeableness is the propensity to be sympathetic, kind, generous, modest, compliant, altruism, considerate etc. (Costa & McCrae, 1992). Agreeableness is required to work in peace and to conclusively settle the conflicts. (Ozgur Ongore, 2014).

Conscientiousness individuals are efficient, responsible, self-disciplined, compliant, organized, and reliable (Costa & McCrae, 1992). Hence, individuals who scores high on conscientiousness should report more engagement in their work due to their sense of duty towards every role they take on. Openness to Experience is qualified by being artistic, introspective, and curious and values and intellectual matters. (Costa & McCrae, 1992).It includes traits such as imagination, curiosity, and creativity (Goldberg, 1993).

2. *Literature*

2.1 Work Engagement: Several research studies have been conducted by various research groups who provided thorough insight for understanding work engagement in conceptual terms.

Enumerate research has been done to examined the potential antecedents and consequences of work engagement Koyuncu et al., (2006), Oliver (2007) and Burke et al., (2010 & 2013. Only one variable of work engagement i.e. vigor has been focussed by Shirom (2004, 2010), Sonnentag et al., (2008). Someone who's suffering from burnout have less mitigating resources like social support than those who execute their duties vigorously Geritt J. Louw G.J. (2014). The creativity and charisma among female leaders and the role of resources and work engagement among 84 female school principals and 190 teachers were examined by Bakker et al., (2013).Job resources facilitate employees' sense of self-efficacy and resiliency, and consequently foster work engagement Bakker et al., (2013).

2.2 Big Five Personality Traits:

Managers who are emotionally stable, open to experience and agreeable tend to perform better than those who measured lower on these dimensions Rothmann et al., (2003). Bakker et al., (2006), examined the relationship between burnout and big five personality traits: extraversion, agreeableness, conscientiousness, emotional stability, and intellect/autonomy whereas openness to experience was not included in the study. A large number of studies have been done on personality traits and burnout Kim et al., (2007); Kaja et al., (2015); Alarcon et al., (2009); Zellar (2000); Joseph et al., (2011). The relationship among conscientiousness, neuroticism and burnout in healthcare staff of private

hospitals was examined, leaving out the remaining three personality traits (extraversion, agreeableness, openness to experience) which was not included in the study Azeem S. M. (2013).

2.3 Work Engagement and Personality traits:

Ongore (2014) investigated the relationship between personality traits and job engagement. Rantanen (2008) explored the relations between personality, role engagement and four dimensional typology of work life balance. Woods et al., (2013) examined the association of personality traits with work engagement. Relevance of the variables of big five taxonomy when studied in relation with engagement is yet to be determined.

For Instance Langelaan et al., (2006) considered only two of those whereas for Kim et al., (2009) considered conscientiousness to be significant.

Inceoglu & Warr (2011). Langelaan et al., (2006) studied whether burnout and work engagement could have been differentiated based on Eysenck's two- dimensional model of personality which included extraversion and neuroticism whereas agreeableness, conscientiousness and openness to experience have not been included. Kim et al., (2009) focused on the relationship between job burnout, job engagement and the big five personality dimensions, which included Extraversion, Agreeableness, Conscientiousness, Neuroticism and openness to experience. Bozionelos (2004) explored the relationship between the big five personality and work involvement. Individuals suffering from burnout have less mitigating resources like social support that those who execute their duties vigorously (Louw G J. 2014).

Neha &Venkatesh (2015) investigated the relationship between personality and work engagement. The interactive effect of personality and employee engagement on organizational citizenship behavior has been investigated.

3. *Objectives*

1. To measure the level of work engagement and personality trait among women employees in banking sector.
2. To find out the relationship between personality traits and work engagemen

3.1 Hypothesis

H01: There is no relationship between work engagement and extraversion.

H02: There is no relationship between work engagement and neuroticism.

H03: There is no relationship between work engagement and agreeableness.

H04: There is no relationship between work engagement and conscientiousness.

H05: There is no relationship between work engagement and openness to experience.

4. Method

4.1 Respondents

A survey was conducted to collect the data from 150 female employees working in three different public sector banks in the state of Himachal Pradesh namely State Bank of India, Punjab National Bank and UCO bank. The

respondents were given standard based questionnaires comprising questions related to personality traits and work engagement.

4.3 Measures:

Respondents filled out the questionnaires containing statements related to work engagement and big five personality traits respectively. Work Engagement was assessed with the validated 17-item Utrecht Work Engagement Scale (UWES), whereas the big five personality traits was evaluated with the Big five Inventory (BFI). The scale characterizes big five personality traits i.e. Extraversion, Agreeableness, conscientiousness, neuroticism and openness to experience, it included total of 44 statements. Demographic attributes such as name, age, marital status, job experience, designation, salary and total work experience were measured in the first section of the questionnaire.

4.3 Cronbach's alpha: To measure the validity and reliability of the variables of work engagement cronbach's alpha were used. The cronbach's alpha for work engagement and big five personality traits lies between $\alpha = .84$ to .61

4.4 Statistical analysis:

Firstly, mean and standard deviation were calculated for work engagement and personality. These measurement tools helped in finding the level of the work engagement and its three dimensions namely vigor, dedication and absorption, and also of the big five personality traits namely extraversion, agreeableness, conscientiousness, neuroticism and openness. Further, Pearson correlation method was used to explore the relationship between the work engagement and its three variables namely vigor, dedication and absorption with the big five personality traits.

5. Results:

Results of the present study suggest that five factor model can be used as an important tool to find out the levels of work engagement. The hypotheses were tested with the help of bivariate correlation method.

5.1 Descriptive statistics

Table 1 depicts the descriptive statistics of vigor, dedication, absorption, work engagement, extraversion, agreeableness, conscientiousness, neuroticism, openness and personality traits of women employees of public banks. The above table explicit that for public banks, average value of vigor is 22.75 with standard deviation 3.92, average value of dedication is 20.64 with standard deviation 3.68 and average value of absorption is 23.63 with standard deviation 3.78. Whereas mean of work engagement for public banks is 67.02 with standard deviation 10.10. While for public banks, average value of extraversion is 28.07 with standard deviation 4.60, average value of agreeableness is 36.58 with standard deviation 4.21, average value of conscientiousness is 35.83 with standard deviation 5.33, average value of neuroticism is 20.24 with standard deviation 5.63 and average value of openness is 38.97 with standard deviation 4.36.

However, mean and standard deviation of personality traits for public banks are 159.69 and 11.57, respectively.

Table 2 depicts the descriptive statistics giving information about level of work engagement, personality traits and its variables among women employees of public banks. From table 2, we can conclude that majority of women employees of private banks i.e. 35.3%, are highly vigorous. Similarly, majority of 41.3% women employees of public banks are highly dedicated. Whereas 37.3% women employees of public banks, averagely absorbed in their work in banking sector and 36.7% women employees had high level of work engagement in banking sector. However level of extraversion in banking sector is average, according to 42.7% women employees of public banks. According to 35.3% women employees their level of agreeableness in banking sector is high. Although according to 37.3% women employees of public banks their level of conscientiousness in banking sector is average. Similarly, level of neuroticism in banking sector is average; according to majority of 36.7% women employees. Likewise, according to majority of 42.7% women employees of public banks, level of openness in banking sector is average. Level of personality traits in banking sector is average; according to majority of 36% women employees of public banks. Thus, it implies that overall level of work engagement is high and personality traits in public sector bank are average.

5.2 Hypothesis Testing: Correlation between Personality Traits and Work Engagement: The Pearson correlation method is used to find out the correlation between the work engagement and the various personality traits using SPSS statistics 23.

5.2.1 Work engagement and Extraversion.

The above table signifies the correlation values between the variables of work engagement (vigor, dedication, and absorption) with one of the variable of big five personality traits namely extraversion of public sector banks. Vigor is significantly positively correlated with dedication, absorption, work engagement and extraversion with coefficient of correlation 0.746, 0.680, 0.914 and 0.395, respectively i.e. ($p<0.001$). Similarly, dedication has positive relationship with absorption (0.621, $p<0.001$), work engagement (0.886, $p<0.001$) and extraversion (0.425, $p<0.001$).

There is a significant positive relationship between extraversion and work engagement with correlation coefficient 0.447, $p<0.001$). Absorption is positively correlated with extraversion and work engagement as the correlation of coefficient is found to be 0.864 and 0.373, respectively i.e. ($p<0.001$).

5.2.2 Work engagement and agreeableness.

The correlation values between the variables of vigor, dedication, absorption, work engagement and agreeableness of public banks. Agreeableness is positively correlated with vigor (0.368, $p<0.001$), dedication (0.260, $p<0.001$), absorption (0.398, $p<0.001$) and work engagement (0.386, $p<0.001$). Absorption had a significant positive relation with both dedication and vigor as their coefficient of correlations was found to be 0.621 and 0.680 respectively i.e. ($p<0.001$). There is a significant positive relationship between dedication and vigor with correlation coefficient 0.746, $p<0.001$).

However work engagement is positively correlated with vigor, dedication and absorption with coefficient of correlation 0.914, 0.886 and 0.864, respectively i.e. ($p<0.001$).

5.2.3 Work engagement and conscientiousness.

The correlation values between the variables of vigor, dedication, absorption, workout engagement and conscientiousness of public banks. Vigor is significantly positively correlated with dedication, absorption, work engagement and conscientiousness with coefficient of correlation 0.746, 0.680, 0.914 and 0.369, respectively i.e. ($p<0.001$). Similarly, dedication has positive relationship with absorption (0.621, $p<0.001$), work engagement (0.886, $p<0.001$) and conscientiousness (0.363, $p<0.001$). There is a significant positive relationship between conscientiousness and work engagement with correlation coefficient 0.400, $p<0.001$). Absorption is positively correlated with conscientiousness and work engagement as the correlation coefficient is 0.335 and 0.864, respectively i.e. ($p<0.001$).

Work engagement and Neuroticism.

The correlation values between the variables of vigor, dedication, absorption, work engagement and neuroticism of public banks. Neuroticism has negative relationship with vigor (-0.342), dedication (-0.303), absorption (-0.215) and work engagement (-0.323). On the contrary work engagement has a significant positive correlation with vigor, dedication and absorption with coefficient of correlation 0.914, 0.886 and 0.864, respectively. There is a significant positive relationship between dedication and vigor with correlation coefficient 0.746. Absorption has significantly positive relationship with dedication and vigor with coefficient of correlation 0.621 and 0.680, respectively.

5.2.4 Work Engagement and Openness to experience.

The correlation values between the variables of vigor, dedication, absorption, workout engagement and openness of public banks. Vigor is significantly positively correlated with dedication, absorption, work engagement and openness with coefficient of correlation 0.746, 0.680, 0.914 and 0.385, respectively i.e. ($p<0.001$). Similarly, dedication has positive relationship with absorption (0.621, $p<0.001$), work engagement (0.886) and openness (0.389). There is a significant positive relationship between openness and work engagement with correlation coefficient 0.424, $p<0.001$) . Absorption is positively correlated with openness and work engagement as correlation coefficient is 0.355 and 0.864, respectively i.e. ($p<0.001$).

5.2.5 Work Engagement and Personality Traits.

The correlation values between the variables of vigor, dedication, absorption, workout engagement and personality traits of public banks are presented by table 3. Personality traits had a positive relationship with vigor (0.439, $p<0.001$), dedication (0.430, $p<0.001$), absorption (0.476, $p<0.001$) and work engagement (0.505, $p<0.001$). Likewise Absorption is significantly positively correlated with dedication and vigor with coefficient of correlation 0.621 and

0.680, respectively i.e. (p<0.001). Work engagement has positive relationship with vigor, dedication and absorption with coefficient of correlation 0.914, 0.886 and 0.864, respectively i.e. (p<0.001). There is a significant positive relationship between dedication and vigor with correlation coefficient 0.746, p<0.001).

Conclusion:

The present study was conducted in banking sector which is one of the emerging and an impressive sector for the youth of country especially the females but the tremendous change in the sector has developed a need to study work engagement and the role played by the big five personality traits. The result of the present study suggests that there is a significant positive relation between work engagement and big five personality traits. The level of work engagement was found to be high in the banking sector which implies that the female employees working in this sector are satisfied with their job and are fully vigorous, dedicated and are absorbed. Though the level of personality traits were average but agreeableness was found to be high which implies that the respondents are more motivated and positive towards resolving the conflicts. Thus, the present study may help in future reviews and this study in other institutes need to be done.

ABSTRACT

The fact is well known that fruits provides important vitamin and minerals, in some cases fruits are even considered as the healer for various diseases. Among all these benefits horticulture industry provides great benefit to the GSDP of the country. Horticulture products plays and important role in commerce trade and food processing industry. However currently horticulture industry is not delivering according to its potential due to the problem and challenges it has with respect to the distribution and marketing channels in the state. Not only in the state, when it comes to the marketing and distribution of horticulture crop, it has been a major problem in India as well. Marketing is the process of movement of goods from produces to consumer at the desired time, place and form. In view of this, this research paper tries to express the dynamics of horticulture produce marketing in the state of Himachal Pradesh. This research paper also tries to put some emphasis on the marketing aspects of horticulture produce of the state as it is not to mention that livelihood of the state depends on it. The focus on the marketing aspect will enhance the potential of this industry and will generate enormous amount of opportunities.

KEYWORDS

Himachal Pradesh, horticulture produce marketing.

JEL CODE

INTRODUCTION

Himachal Pradesh is a state which possess its economic strength in the activities related to agriculture, horticulture, animal husbandry, limestone mines and allied activities in the primary sector. Among other states of the country Himachal provides one the best horticulture environment. Horticulture industry of Himachal Pradesh provides fruits, vegetables, species, floriculture and coconut etc. the state of Himachal provides diversified climate conditions and wide range of soils to accommodate the horticulture industry. When it comes to Horticulture Himachal provides fruits, vegetables, species, Floriculture and coconut etc. and it also has diversified climate conditions and wide range of soils to accommodate the horticulture industry. It also provides many experienced and skilled workers (ranging from officer class to labour class), so it will generate high employment to the state post COVID-19.

Horticulture contribution towards the state domestic product

1. HP is the only state in the country whose 89.96% of population lives in rural areas (census 2011)
2. It provides 62% of the total workers of the state.
3. Till now about 10.4% of total GSDP comes from the agriculture and its allied sectors.

Total geographical area of the state is 55.67 lakh hectares, out of which operational holding is of 9.55 lakh hectares, which is being operated by 9.61 lakh farmers (land holdings according to 2010-11). 87.95 % of the holdings are of others (agriculture census). 11.71 percent of holding are owned by semi medium and medium farmers and 0.34 percent is by large ones. Economic survey of India (2008) provides data regarding the growth rate of food grain products which is decelerated to 1.2 percent from 1990-2007. The population of India is increasing and is estimated to touch 1370 million by 2030. Demand will rise and to meet this demand production of food grains needs to be 289 mt, which is matter of concern.

On the basis of past studies, it can be stated that very few studies have been conducted in the area of marketing of horticulture produce in Himachal Pradesh which involves problems related to marketing of horticulture produce of the state, awareness about the government policies provided by the state government as well as the centre government, problems in the existing techniques used for the marketing of horticulture products. Keeping these facts in mind, there is a need of improvement in the area of marketing of horticulture produce and thus the study on marketing of horticulture produce in Himachal Pradesh is required in order to develop new strategies for the solution of problems in the future.

Marketing of Horticulture produce is a complex phenomenon. Marketing pattern of horticulture is different from other agriculture commodities. Every horticulture produce has its own different pattern cum channel of distribution. For example, Apples are first brought to the nearby wholesale markets and from there to the terminal markets. The dispersion channel is totally different in case of apples. In similar manner for other horticulture produce dispersion channel is different from one another. Middleman plays a vital role in the trade of horticulture produce i.e. between the producers and the consumers. Horticulture produce marketing in Himachal Pradesh is carried out by private sector which involves pre-harvest contractor, forwarding agent, commission agents, wholesalers and retailers. Due to involvement of middlemen there is exploitation of producers and this effects the profit margin one can get from their crop.

On the basis of past studies, it can be stated that very few studies have been conducted in the area of marketing of horticulture produce in Himachal Pradesh, which involves problems related to marketing of horticulture produce of the state, awareness about the government policies provided by the state government as well as the centre government, problems in the existing techniques used for the marketing of horticulture products. Keeping these facts in mind, there is a need of improvement in the area of marketing of horticulture produce and thus the study on marketing of horticulture produce in Himachal Pradesh is required in order to develop new strategies for the solution of problems in the future. The fact is well known that fruits provides important vitamin and minerals, in some cases fruits are even considered as the healer for various diseases. Among all these benefits horticulture industry provides great benefit to the GSDP of the country. Horticulture products plays and important role in commerce trade and food processing industry. However currently horticulture industry is not delivering according to its potential due to the problem and challenges it has with respect to the distribution and marketing channels in the state. Not only in the state, when it comes to the marketing and distribution of horticulture crop, it has been a major problem in India as well.

* i.e. Alumnus (Male Alumni), Alumna (Female Alumni), Student, Research Scholar (M. Phil), Research Scholar (Ph. D.), JRF, Research Assistant, Assistant Lecturer, Lecturer, Senior Lecturer, Junior Assistant Professor, Assistant Professor, Senior Assistant Professor, Co-ordinator, Reader, Associate Professor, Professor, Head, Vice-Principal, Dy. Director, Principal, Director, Dean, President, Vice Chancellor, Industry Designation **etc**. ***The qualification of author is not acceptable for the purpose***.

NOTES:

a) The whole manuscript has to be in ***ONE MS WORD FILE*** only, which will start from the covering letter, inside the manuscript. ***pdf. version is liable to be rejected without any consideration***.

b) The sender is required to mention the following in the **SUBJECT COLUMN of the mail**:

New Manuscript for Review in the area of (e.g. Finance/Marketing/HRM/General Mgt./Engineering/Economics/Computer/IT/ Education/Psychology/Law/Math/other, please specify)

c) There is no need to give any text in the body of the mail, except the cases where the author wishes to give any **specific message** w.r.t. to the manuscript.

d) The total size of the file containing the manuscript is expected to be below **1000 KB**.

e) Only the **Abstract will not be considered for review** and the author is required to submit the **complete manuscript** in the first instance.

f) ***The journal gives acknowledgement w.r.t. the receipt of every email within twenty-four hours*** and in case of non-receipt of acknowledgment from the journal, w.r.t. the submission of the manuscript, within two days of its submission, the corresponding author is required to demand for the same by sending a separate mail to the journal.

g) The author (s) name or details should not appear anywhere on the body of the manuscript, except on the covering letter and the cover page of the manuscript, in the manner as mentioned in the guidelines.

2. **MANUSCRIPT TITLE: The title of the paper should be typed in **bold letters**, **centered** and **fully capitalised**.

3. **AUTHOR NAME (S) & AFFILIATIONS: Author (s) **name**, **designation**, **affiliation** (s), **address**, **mobile/landline number** (s), and **email/alternate email address** should be given underneath the title.

4. **ACKNOWLEDGMENTS: Acknowledgements can be given to reviewers, guides, funding institutions, etc., if any.

5. **ABSTRACT: Abstract should be in **fully Italic printing**, ranging between **150** to **300 words**. The abstract must be informative and elucidating the background, aims, methods, results & conclusion in a **SINGLE PARA**. ***Abbreviations must be mentioned in full***.

6. **KEYWORDS: Abstract must be followed by a list of keywords, subject to the maximum of **five**. These should be arranged in alphabetic order separated by commas and full stop at the end. All words of the keywords, including the first one should be in small letters, except special words e.g. name of the Countries, abbreviations etc.

7. **JEL CODE: Provide the appropriate Journal of Economic Literature Classification System code (s). JEL codes are available at www.aeaweb.org/econlit/jelCodes.php. However, mentioning of JEL Code is not mandatory.

8. **MANUSCRIPT: Manuscript must be in ***BRITISH ENGLISH*** prepared on a standard A4 size ***PORTRAIT SETTING PAPER***. *It should be free from any errors i.e.* ***grammatical, spelling*** *or* ***punctuation.*** *It must be thoroughly edited at your end*.

9. **HEADINGS: All the headings must be bold-faced, aligned left and fully capitalised. Leave a blank line before each heading.

10. **SUB-HEADINGS: All the sub-headings must be bold-faced, aligned left and fully capitalised.

11. **MAIN TEXT:**

THE MAIN TEXT SHOULD FOLLOW THE FOLLOWING SEQUENCE:

INTRODUCTION

REVIEW OF LITERATURE

NEED/IMPORTANCE OF THE STUDY

STATEMENT OF THE PROBLEM

OBJECTIVES

HYPOTHESIS (ES)

RESEARCH METHODOLOGY

RESULTS & DISCUSSION

FINDINGS

RECOMMENDATIONS/SUGGESTIONS

CONCLUSIONS

LIMITATIONS

SCOPE FOR FURTHER RESEARCH

REFERENCES

APPENDIX/ANNEXURE

The manuscript should preferably be in ***2000 to 5000 WORDS***, But the limits can vary depending on the nature of the manuscript.

12. **FIGURES & TABLES:** These should be simple, crystal **CLEAR**, **centered**, **separately numbered** & self-explained, and the **titles must be above the table/figure**. **Sources of data should be mentioned below the table/figure**. *It should be ensured that the tables/figures are referred to from the main text*.

13. **EQUATIONS/FORMULAE:** These should be consecutively numbered in parenthesis, left aligned with equation/formulae number placed at the right. The equation editor provided with standard versions of Microsoft Word may be utilised. If any other equation editor is utilised, author must confirm that these equations may be viewed and edited in versions of Microsoft Office that does not have the editor.

14. **ACRONYMS:** These should not be used in the abstract. The use of acronyms is elsewhere is acceptable. Acronyms should be defined on its first use in each section e.g. Reserve Bank of India (RBI). Acronyms should be redefined on first use in subsequent sections.

15. **REFERENCES:** The list of all references should be alphabetically arranged. ***The author (s) should mention only the actually utilised references in the preparation of manuscript*** and they may follow Harvard Style of Referencing. **Also check to ensure that everything that you are including in the reference section is duly cited in the paper**. The author (s) are supposed to follow the references as per the following:

- All works cited in the text (including sources for tables and figures) should be listed alphabetically.
- Use (**ed.**) for one editor, and (**ed.s)** for multiple editors.
- When listing two or more works by one author, use --- (20xx), such as after Kohl (1997), use --- (2001), etc., in chronologically ascending order.
- Indicate (opening and closing) page numbers for articles in journals and for chapters in books.
- The title of books and journals should be in italic printing. Double quotation marks are used for titles of journal articles, book chapters, dissertations, reports, working papers, unpublished material, etc.
- For titles in a language other than English, provide an English translation in parenthesis.
- ***Headers, footers, endnotes*** *and* ***footnotes*** *should* ***not be used*** *in the document****.*** However, **you can mention short notes to elucidate some specific point**, which may be placed in number orders before the references.

ABSTRACT

The fact is well known that fruits provides important vitamin and minerals, in some cases fruits are even considered as the healer for various diseases. Among all these benefits horticulture industry provides great benefit to the GDP of the country. Horticulture products plays and important role in commerce trade and food processing industry. However currently horticulture industry is not delivering according to its potential due to the problem and challenges it has with respect to the distribution and marketing channels in the state. Not only in the state, when it comes to the marketing and distribution of horticulture crop, it has been a major problem in India as well. Marketing is the process of movement of goods from produces to consumer at the desired time, place and form. In view of this, this research paper tries to express the dynamics of horticulture produce marketing in the state of Himachal Pradesh. This research paper also tries to put some emphasis on the marketing aspects of horticulture produce of the state as it is not to mention that livelihood of the state depends on it. The focus on the marketing aspect will enhance the potential of this industry and will generate enormous amount of opportunities.

KEYWORDS

Himachal Pradesh, horticulture produce marketing.

JEL CODES

Q13, M31.

INTRODUCTION

Himachal Pradesh is a state which possess its economic strength in the activities related to agriculture, horticulture, animal husbandry, limestone mines and allied activities in the primary sector. Among other states of the country Himachal provides one the best horticulture environment. Horticulture industry of Himachal Pradesh provides fruits, vegetables, species, floriculture and coconut etc. the state of Himachal provides diversified climate conditions and wide range of soils to accommodate the horticulture industry. When it comes to Horticulture Himachal provides fruits, vegetables, species, Floriculture and coconut etc. and it also has diversified climate conditions and wide range of soils to accommodate the horticulture Industry. It also provides many experienced and skilled workers (ranging from officer class to labour class), so it will generate high employment to the state post COVID-19.

Horticulture contribution towards the state domestic product

1. HP is the only state in the country whose 89.96% of population lives in rural areas (census 2011).
2. It provides 62% of the total workers of the state.
3. Till now about 10.4% of total GSDP comes from the agriculture and its allied sectors.

Total geographical area of the state is 55.67 lakh hectares, out of which operational holding is of 9.55 lakh hectares, which is being operated by 9.61 lakh farmers (land holdings according to 2010-11). 87.95 % of the holdings are of others (agriculture census). 11.71 percent of holding are owned by semi medium and medium farmers and 0.34 percent is by large ones. Economic survey of India (2008) provides data regarding the growth rate of food grain products which is decelerated to 1.2 percent from 1990-2007. The population of India is increasing and is estimated to touch 1370 million by 2030. Demand will rise and to meet this demand production of food grains needs to be 289 mt, which is matter of concern.

On the basis of past studies, it can be stated that very few studies have been conducted in the area of marketing of horticulture produce in Himachal Pradesh, which involves problems related to marketing of horticulture produce of the state, awareness about the government policies provided by the state government as well as the centre government, problems in the existing techniques used for the marketing of horticulture products. Keeping these facts in mind, there is a need of improvement in the area of marketing of horticulture produce and thus the study on marketing of horticulture produce in Himachal Pradesh is required in order to develop new strategies for the solution of problems in the future.

Marketing of Horticulture produce is a complex phenomenon. Marketing pattern of horticulture is different from other agriculture commodities. Every horticulture produce has its own different pattern cum channel of distribution. For example, Apples are first brought to the nearby wholesale markets and from there to the terminal markets. The dispersion channel is totally different in case of apples. In similar manner for other horticulture produce dispersion channel is different from one another. Middleman plays a vital role in the trade of horticulture produce i.e. between the producers and the consumers. Horticulture produce marketing in Himachal Pradesh is carried out by private sector which involves pre-harvest contractor, forwarding agent, commission agents, wholesalers and retailers. Due to involvement of middlemen there is exploitation of producers and this effects the profit margin one can get from their crop.

On the basis of past studies, it can be stated that very few studies have been conducted in the area of marketing of horticulture produce in Himachal Pradesh, which involves problems related to marketing of horticulture produce of the state, awareness about the government policies provided by the state government as well as the centre government, problems in the existing techniques used for the marketing of horticulture products. Keeping these facts in mind, there is a need of improvement in the area of marketing of horticulture produce and thus the study on marketing of horticulture produce in Himachal Pradesh is required in order to develop new strategies for the solution of problems in the future. The fact is well known that fruits provides important vitamin and minerals, in some cases fruits are even considered as the healer for various diseases. Among all these benefits horticulture industry provides great benefit to the GDP of the country. Horticulture products plays and important role in commerce trade and food processing industry. However currently horticulture industry is not delivering according to its potential due to the problem and challenges it has with respect to the distribution and marketing channels in the state. Not only in the state, when it comes to the marketing and distribution of horticulture crop, it has been a major problem in India as well.

REVIEW OF LITERATURE

Parmar (2005) reported in his study "Marketing Operations of Himachal Apple- An overview" that a good production of apple and the marketing problems of growers are increasing day by day with the increase in the production of apples.

Dastagiri,M.B and Kumar Ganesh. B., (2010) reported in "Innovative Models in Horticulture Marketing in India "India produces around 111.8 MT of vegetables and 57.73 MTs of fruits (2006-07).

Ahmad, and Rifat, **(2012),** stated in "Marketing of Fruit Products: A case of Apple Fruit in Himachal Pradesh" marketing efficiency is important for increasing production and fair returns to apple growers. They talked about three marketing channels and have concluded that marketing channel i.e., Growers to consumer is having less price spread and more returns to growers, but is in rare practice due to lack of marketing information, credit and institutional facilities, small holdings.

Bowman, and Zilberman, **(2013)** research findings "Economic factors affecting diversified farming systems. Ecology and Society", had concluded that the expansion and adoption of DFS is limited by a number of factors, including still-limited demand for products produced via DFS, supply-side constraints such as high costs of tilling or harvest in multiple crop systems, and policies such as subsidies and crop insurance which discourage diversification.

Gaurav Bera, **(2015)** "An assessment of apple cultivation in Kalpa (Kinnaur Distt.) Himachal Pradesh". This research mentioned that horticulture has great future prospect in terms of exports. It also mentioned that horticulture does affect the socioeconomic life of inhabitants of Kalpa.

Tripathya, and Manjunath, **(2014)** investigation of the study "Operational semi-physical spectral-spatial wheat yield model development" had identified the existing farming systems in 12 major states of India at district level using remote sensing and ancillary data, delineated 44 farming systems with the help of GIS it became possible for integrating different enterprises

Chatterjee et al., **(2015)** in "Methodology of identification and characterization of farming systems in irrigated agriculture: Case study in West Bengal State of India" had identified four distinct farm types, namely, farms growing food grain and jute, farms with animal husbandry and fishery based diversification with high off-farm income, farms with crop based diversification with off-farm income, and farms growing vegetables and fruits and also concluded that farm type identification and characterization based on estimates of income from different farm components allows simplifying diversity in farming systems.

Parrey, and Hakim, **(2015**) States in). "Exploring marketing activities of apple growers: Empirical evidence from Kashmir" that apple grower has strong incentive to apple sale information, investigating price and demand changes by using all the available information sources. However, low availability of market information and high cost on analysis and recognition of getting signals cause such problems, including convergence of information sources, limitation in the local market, and low reliability of information.

Goswami et al., **(2014)** in their study "Farm types and their economic characterization in complex agro-ecosystems for informed extension intervention: study from coastal West Bengal, India of research findings" had identified four major types of farms, based on the source from which maximum gross income was earned by the farmers. Those were – rice-based farming system (34 households), vegetable - based farming system (70 households), fishery - based farming system (10 households) and farming system based on off - farm income (20 households).

Lokesh, and Hira.S, **(2014)** in his research paper entitled, "Horticulture development in Himachal Pradesh: An Empirical Analysis", the contribution of the horticulture within primary sector has risen from 18.53 percent in 2000-01, 26.98 per cent in 2009-10. In terms of contribution to GSDP and NSDP, horticulture sector demonstrates a phenomenal place during the span of ten years.

Iles and Marsh, **(2012)** findings of the study "Nurturing Diversified Farming Systems in Industrialized Countries: How Public Policy Can Contribute" had concluded diversified farming systems depends on the willingness and capacity of farmers to diversify their farms, but they need support and incentives to help survive the risks of changing from conventional to alternative production practices and to work together more collaboratively at the landscape level.

Khatun and Roy, **(2012)** in their study "Rural livelihood diversification in West Bengal: Determinants and constraints" conducted in the state of West Bengal had shown that household-head experience(age), educational level, social status, training, asset position, access to credit, rural infrastructure, agro climatic condition and the overall level of economic development of a region are the main driving force towards livelihood diversification in the state.

OBJECTIVES OF THE STUDY

The objectives of the study are to analyse the horticulture produce marketing in the state which will involve the existing marketing practices, and also to analyse the government aids with respect to horticulture produce.

1. To analyse the government aids by the state government with respect to horticulture industry.
2. To analyse the distribution channels of different horticulture produce.
3. To analyse the contemporary marketing issues with respect to horticulture produce.

RESEARCH METHODOLOGY

This research paper is an analytical study which is based on secondary data. Secondary data means which is already available, it refers to data which has been collected and analysed by someone else. Certain types of secondary data such a product details of the company, main aspects of the research, data about the marketing of new products, essentials of advertisements in marketing etc. For meeting the objectives of the study, the secondary data of last 10 years related to production of various horticulture produce of Himachal Pradesh has been analysed. The data for this purpose has been collected from the secondary sources such as official websites, reports, journals and newspapers etc.

ANALYSIS AND DISCUSSION

1. GOVERNMENT AIDS

A. MISSION FOR INTEGRATED DEVELOPMENT OF HORTICULTURE(MIDH)

Mission for integrated development of horticulture sector is a sponsored scheme for the overall growth of this sector which covers fruits, vegetables, root & tuber crops, mushrooms, spices, flowers, aromatic plants, coconut, cashew and cocoa.

Under MIDH there are further five more schemes on horticulture:

i) National Horticulture Mission (NHM)
ii) Horticulture Mission for North East and Himalayan States (HMNEH)
iii) National Horticulture Board (NHB)
iv) Coconut Development Board (CDB)
v) Central Institute of Horticulture (CIH), Nagaland

In MIDH, Govt. of India (GOI) contributes 60% of the total outlay and 40% of the total outlay is provided by the state governments. For the North East States and Himalayan States, GOI contributes 90%. Under the above mentioned 5 schemes GOI contributes 100%. The total Budget allocated for this is Rs. 2160.25 crore has been earmarked for 2020-21. And as on 31st December, 2020 Rs. 857.47 crores have been released under MIDH, i.e. Rs. 495.13 crore for NHM, Rs. 197.75 crore under HMNEH, Rs. 80.00 crore under CDB, 77.42 Crore to NHB and Rs. 7.17 crore to CIH, DCCD & DASD.

i. NATIONAL HORTICULTURE MISSION(NHM):

NHM comes under MIDH which is centrally sponsored scheme and was launched in 2005-06, it aims at the overall development of the horticulture, through cluster approach which ensures forward and backward linkage and also the active participation of all the stake holders. 384 districts in 18 states and 6 union territories were covered under NHM. There are total of 16 national level agencies (NLAs) that were included under this Mission.

A. PHYSICAL PROGRESS

TABLE 1: PHYSICAL PROGRESS UNDER NHM

S. No.	Components	Unit	Progress during 2020-21 (as on 31st December, 2020)
1	Area Expansion	Ha.	80406
2	Rejuvenation	Ha.	6783
3	Protected Cultivation	Ha.	9450
4	Integrated Pest/ Nutrient Management	Ha.	35460
5	Nurseries	No.	14
6	Water Resources	No.	1213
7	Beekeeping	No.	49194
8	Horticulture Mechanization	No.	4081
9	Post Harvest Management		
	(i) Pack House	No.	661
	(ii) Cold Storage	No.	29
	(iii)Primary/mobile processing units	No.	117
10	Rural Market	No.	1

Source: as per the data uploaded by State Govt. on MIDH web portal

B. FINANCIAL PROGRESS

During 2019-20, as on 31st March, 2020, funds to the tune of Rs. 800.13 crore have been released to States/ UTs/NLAs for implementing NHM scheme against BE of Rs.1217.00 crore and RE of Rs 1065.00 crore. During 2020-21, an amount of Rs. 1363.62 crore has been allocated for NHM, against of which an amount of Rs. 495.13 crore has been released as on 31st December, 2020.

ii. HORTICULTURE MISSION FOR NORTH EAST AND HIMALAYAN STATES (HMNEH):

HMNEH is a scheme under MIDH which is also a centrally sponsored scheme for North East and Himalayan states. Earlier this scheme was known as Technology Mission for Integrated Development of Horticulture in North Eastern States only, since 2001-02. During the X plan (2003-04) this scheme was extended to three Himalayan states namely: Himachal Pradesh, Jammu and Kashmir and Uttarakhand. This scheme covers full spectrum of horticulture, from the planting to the consumption with the forward and backward linkage. HMNEH subsumed under MIDH from 2014-15.

A. PHYSICAL PROGRESS

TABLE 2: PHYSICAL PROGRESS UNDER HMNEH

S. No.	Components	Unit	Progress during 2020-21 (as on 31st December, 2020)
1	Area Expansion	Ha.	3843
2	Rejuvenation	Ha.	300
3	Protected Cultivation	Ha.	125
4	Integrated Pest/Nutrient Management	Ha.	6730
5	Nurseries	No.	5
6	Water Resources	No.	15
7	Beekeeping	No.	0
8	Horticulture Mechanization	No.	1067
9	Post Harvest Management		
	(i) Pack House	No.	32
	(ii) Cold Storage	No.	0
	(iii) Primary/Mobile Processing Units	No.	0
10	Rural Market	No.	0

B. FINANCIAL PROGRESS

During 2019-20, as on 31st March, 2020, funds to the tune of Rs. 326.74 crore have been released to States implementing HMNEH scheme against BE of Rs.415.00 crore. During 2020-21, an amount of Rs. 470.00 crore has been allocated for North Eastern States and Himalayan States (including PMDP), against which an amount of Rs. 197.75 crore has been released as on 31st December, 2020.

iii. NATIONAL HORTICULTURE BOARD

Government of India started National Horticulture Board (NHB) in 1984 as an autonomous body under Ministry of Agriculture and Farmers Welfare and registered under societies registration act 1860 and re-registered under the Haryana Registration and Regulation of Societies Act 2012. The NHB aims at the commercial horticulture development by creation of production hubs, post-harvest infrastructure and cold chain facilities, promotion of new crops and promotion of growers' associations.

A. PHYSICAL PROGRESS

1. Under the scheme of Commercial Horticulture Development through Production and Post-Harvest Management, board sanctioned 249 projects as on 31 December, 2020, which involves subsidy of Rs. 3219.50 Lakh.
2. Under the Capital Investment Subsidy for construction/ expansion/ modernization of cold storages for horticulture produce scheme, board sanctioned 06 projects of cold storages/CA storages which involves subsidy of Rs. 32122 MT as on 31.12.2020.
3. Under the scheme of Technology development and Transfer for promotion of Horticulture, board sanctioned 04 projects for New technology introduction, progressive farmers visit, horticulture sangam, various awareness programs which involves financial assistance of Rs. 11.21 Lakh as on 31.12.2020.

B. FINANCIAL PROGRESS

For the period 2020-21, total of Rs. 77.42 crore has been released to NHB against BE of Rs. 170.00 crore.

2. MARKETING AND DISTRIBUTION CHANNEL

A Horticulture produce marketing agency have many activities and operations like procurement, packing, storage, transportation, processing and marketing of produce related to horticulture sector. Marketing strategy for horticulture produce, if it is efficient, rely on the decisions related to where, when and how much to market. The horticulture products pass through different channels on their way to final consumer and the profit share of producers depends on the channel followed.

i. DISTRIBUTION STRATEGIES FOR HORTICULTURE PRODUCES

Distribution, as the name suggest, is the process of making a product available for final consumer. It is very important to have a good distribution channel for every product. Horticulture produce involves perishable products, therefore, distribution is considered to be very important element. Due to perishability, the distribution channel of these products needs to be as fast as possible.

There are so many factors which plays an important role in the distribution of horticulture produce such as nature of produce, Competitors choice of selection of channel, financial resources, transportation saving, storage facilities, market knowledge, High marginal cost, image of the producers, price and convenience. The large chain of commission agents affects the profit of orchardists, so choosing a cost saving channel is always considered to be the best channel. Distribution

channel also involves commission agent, wholesaler, private companies HPMC, and retailers. Majority of horticulture produce growers consider commission agent and wholesaler as the most efficient channel.

ii. DISTRIBUTION CHANNELS OF HORTICULTURE PRODUCE

Marketing of any consumer good comprises of the movement that good from producer to consumer, and in case of Horticulture produce one can say from grower to consumer. Distribution is important because it decides the almost everything in any business. Distribution channels one is using needs to be efficient and cost effective so that growers/producers can get the maximum benefit out of it. In the state of Himachal Pradesh there are so many problems in when it comes to distribution due to its geographical situation. It is very challenging for the producers to manage the supply chain in the state. In this chain of distribution there are various agencies involved like growers, pre-harvest contractors, wholesalers, retailers and consumers. The following are the existing channels used for the purpose,

1. Channel A: Producer-wholesaler-retailer-consumer
2. Channel B: Producer-primary wholesaler-secondary wholesaler-retailer-consumer
3. Channel C: Producer-pre harvest contractor-primary wholesaler-secondary wholesaler- retailer-consumer
4. Channel D: Producer-retailer-consumer

iii. MARKETING FUNCTIONS

Marketing in case of Horticulture produce involves various marketing function. After growing the produce has to be prepared for the market which involves picking, assembling, grading, packing, transportation, loading/unloading, storage etc. These marketing functions are important determinants for setting up the prices of horticulture produce. Being careful in performing these function helps in setting up the good tone for the net returns and vice-versa.

i) **Harvesting**: marketing function starts from the picking function and hence it is important to depicts the correct time for picking to ensure its quality and maximum storage life. The picking stage also depends on the time lag between the expected arrival of the produce in the market and picking. The horticulture produces are considered to be very susceptible to bruising and other mechanical injuries and therefore, should be handled carefully. If any damage cause due to rough handling, it will reduce the value of the horticulture produce.

ii) **Grading**: Grading is considered to be the second important marketing function. Grading is not considered for every horticulture produce as it varies from produce to produce, for example in case of apples, apples are classified into different grades on the bases of quality, sizes.

iii) **Packing**: packaging is considered to be very important marketing function as it is the package which appears in front of consumer. Horticulture produce involves perishable items which are fragile in nature, and needs to be transported to different locations therefore it is very important to have a good packaging material which can protect and preserve its quality during transportation and handling.

iv) **Transportation**: transportation is another function in marketing which adds utility and need to be done carefully. Managing the supply chain is very important as horticulture produces are perishable and fragile in nature.

CONCLUSIONS AND SUGGESTIONS

Himachal Pradesh provides wide variety of soils and diversified climate conditions for the horticulture produces in the state. Geographical area of the which ranges from Lower hills (Shivalik range), Inner Himalayas (mid-mountains) and Greater Himalaya (Alphine zone) makes it suitable to produce variety of horticulture produce within the state itself. Horticulture produce in the state is having very wide range i.e. Apple, Plum, Peach, Apricot, Pear, Cherry, Kiwi, Pomegranate, Olive, Persimmon, Strawberry, Almond, Walnut, Pecannut, Hazulnut, Mango, Litchi, Guava, Papaya, Jackfruit, Aonla, Grapes, Loquat, Ber, Banana, Karonda, Fig, Spota, Deon, Bael, Harad, Jamun, Baherba, Orange/Kinnow, Malta/Musambi, Kagzi Lime, Galgal, Grape fruit, etc. There are approximately 38 varieties of fruits only.

Among other issues related to horticulture sector, marketing and distribution channel in the state needs to be improved. Focusing on Marketing channels will open many opportunities to the growers as well as towards the economy of the state. The existing marketing practices needs to revisited by the government as well as the growers. Innovative strategies and new marketing tools available in the market needs to be utilized by the horticulture sector as well. Centre as well as state governments are providing so many facilities to the growers but many of the growers are not aware of it. Awareness programs should be provided to the growers. Supply chain facility which will manly focus on the transportation related issues needs to be addressed. E-Marketing as well as direct marketing will enhance the states potential in the horticulture sector. Niche marketing and in case of premium quality produce can also be considered. Also, advertising and promotional activities needs to be focused and increased.

REQUEST FOR FEEDBACK

Dear Readers

At the very outset, International Journal of Research in Commerce & Management (IJRCM) acknowledges & appreciates your efforts in showing interest in our present issue under your kind perusal.

I would like to request you to supply your critical comments and suggestions about the material published in this issue, as well as on the journal as a whole, on our e-mail **infoijrcm@gmail.com** for further improvements in the interest of research.

If you have any queries, please feel free to contact us on our e-mail **infoijrcm@gmail.com**.

I am sure that your feedback and deliberations would make future issues better – a result of our joint effort.

Looking forward to an appropriate consideration.

With sincere regards

Thanking you profoundly

Academically yours

Sd/-
Co-ordinator

ABOUT THE JOURNAL

In this age of Commerce, Economics, Computer, I.T. & Management and cut throat competition, a group of intellectuals felt the need to have some platform, where young and budding managers and academicians could express their views and discuss the problems among their peers. This journal was conceived with this noble intention in view. This journal has been introduced to give an opportunity for expressing refined and innovative ideas in this field. It is our humble endeavour to provide a springboard to the upcoming specialists and give a chance to know about the latest in the sphere of research and knowledge. We have taken a small step and we hope that with the active co-operation of like-minded scholars, we shall be able to serve the society with our humble efforts.

डॉ. हरिदत्त शर्मा के एकाङ्कियों में प्रतिपादित समस्याएँ

डॉ. देवराज*

२१वीं शताब्दी के साहित्यकारों में डॉ. हरिदत्त शर्मा भी अग्रपंक्ति के साहित्यकारों में से एक हैं। इनका जन्म उत्तर प्रदेश के हाथरस नगर में २७ सितम्बर १९४८ ई. को हुआ। इनके पिता का नाम लहरीशंकर शर्मा तथा माता का नाम हरप्यारी देवी था। डॉ. शर्मा बचपन से ही मेधावी छात्र रहे हैं। इनकी उच्चतर शिक्षा इलाहाबाद विश्वविद्यालय से पूर्ण हुई है। इन्होंने संस्कृत काव्य एवं संस्कृत साहित्य में विशेष अध्ययन किया जिसके कारण इन्हें अनेकों सम्मान प्राप्त हुए हैं। इनकी अनेकों रचनाएँ जिनमें निबन्ध-निकुञ्जम्, गीतकन्दलिका, उत्कलिका प्रमुख रूप से प्रकाशित हुई है। इसके अतिरिक्त त्रिपथगा और आक्रन्दनम् एकाङ्की संग्रह प्रमुख है। त्रिपथगा में तीन तथा आक्रन्दनम् में चार एकाङ्कियों का संग्रह है। इनका प्रत्येक एकाङ्की किसी न किसी समस्या पर आधारित है। इसी कारण से इनके एकाङ्कियों में प्रतिपादित समस्याओं को उजागर करने का प्रयास किया जा रहा है।

भारत में सामाजिक समस्याएँ हमारे जीवन का अविभाज्य अंग बनकर रह गई हैं, क्योंकि मानव समाज इन समस्याओं से न तो कभी पूर्णतया मुक्त रहा है और न ही कभी इन समस्याओं से मुक्त हो पायेगा। यद्यपि आधुनिक भारत में जन संचार और शिक्षा के माध्यम से मानव इन समस्याओं के प्रति सजग और संवेदनशील तो हो गया परन्तु ये समस्याएँ आज भी हमारे समाज में विद्यमान है। जिस प्रकार समाज में परिवर्तन तीव्र गति से हो रहा है उसी प्रकार समस्याएँ भी बढ़ती ही जा रही हैं। मानव समाज इन समस्याओं के निराकरण के लिए सदा प्रयत्नशील भी है; क्योंकि ये समस्याएँ समाज में विघटन की स्थिति पैदा करती हैं जिससे समाज के अस्तित्व को खतरा पैदा हो जाता है।

भारतीय समाज में आज अनेकों समस्याएँ विकराल रूप लिए खड़ी हैं। यद्यपि राज्य एवं समाज इन समस्याओं के निराकरण के लिए प्रयासरत हैं फिर भी इन समस्याओं से सम्प्रति समाज ग्रसित ही है। डॉ. हरिदत्त शर्मा ने भी किसी न किसी समस्या को लेकर अपने एकाङ्कियों की रचना की है। **त्रिपथगा** इनका प्रथम एकाङ्की संग्रह है जिसमें 'साक्षात्कारीयम्' पहला एकाङ्की है। यह एकाङ्की हमारे समाज में व्याप्त भ्रष्टाचार की समस्या को उजागर करता है।

भ्रष्टाचार की समस्या

भ्रष्टाचार दो शब्दों के मेल से बना है - भ्रष्ट+आचार। भ्रष्ट का अर्थ होता है- पतित और आचार का अर्थ होता है - चरित्र। इसलिए पतित चरित्र वाले व्यक्ति को भ्रष्ट आचार वाला कहा जाता है। व्यक्ति जिन कर्मों से समाज और राष्ट्र का बुरा सोचता है ऐसे कर्मों का भ्रष्टाचार कहते हैं। भारत में भ्रष्टाचार ने अपनी जड़ें मजबूत की हुई है। आज भारत में मध्यमवर्गीय व्यक्ति अपनी आवश्यकताओं को पूर्ण करने तथा अपने

प्रशान्तराघवम् नाटक की कथावस्तु का नाट्यशास्त्रीय विवेचन

–डॉ. देवराज

सहायक आचार्य, संस्कृत, अन्तर्राष्ट्रीय दूरवर्ती शिक्षा एवं मुक्त अध्ययन केन्द्र हिमाचल प्रदेश विश्वविद्यालय शिमला

प्रशान्तराघवम् नाटक अभिराज राजेन्द्र मिश्र का प्रथम नाटक है। इसकी रचना नाट्यकार ने 2008 ई. मं की है। यह नाटक सात अंकों में विभक्त है। इस नाटक का उपजीव्य काव्य रामायण है। वाल्मीकि रामायण में सीताविषयक लोकापवाद के लिए श्रीराम को सीता का परित्याग करते हुए देखा जा सकता है किन्तु अभिराज राजेन्द्र मिश्र ने अपनी प्रतिभा से इस प्रसंग को अनूठा बना दिया है।

नाटककार ने विदेहनन्दिनी सीता के प्रति अयोध्या में रजकापवाद का निवारण अपनी अनूठी कल्पना से शान्त किया है। इसके निराकरण के लिए नाटककार ने ऐसे पात्र का चयन किया है जिसके अकाट्य तर्कों का कोई भी खण्डननहीं कर सकता। वह गुरु वशिष्ठ के माध्यम से सीता की महाविष्णुता तथा लक्ष्मीभाव की विश्वसनीयता तथा दिव्यचरित्र की प्रतिष्ठा को साक्ष्यों और अकाट्य तर्कों से सिद्ध करते हैं। जनसभा में उपस्थित सभी जनों और रजक में सीता–राम के प्रति अखण्ड आस्था तथा श्रद्धा जगा दी जाती है। इस प्रकार सीता के प्रति लोकनिन्दा का निराकरण तृतीय अंक में ही हो जाता है। इसके पश्चात् नाटककार अपनी कल्पना से देवर्षि नारद और ब्रह्मा का संवाद परिकल्पित कर घटना को नया मोड़ देता है। उनके संवाद से देवी सीता के जुड़वे पुत्रों के जन्म तथा कुमार भरत के द्वारा इस अवसर पर अयोध्या में एक महोत्सव आयोजित करने की सूचना मिलती है। षष्ठी महोत्सव के इस अवसर पर ऐन्द्रजालिक अपनी विद्या से अनूठे चमत्कार प्रदर्शित करता है। यह दृश्य हर्षदेव की रत्नावली नाटिका का स्मरण करवाता है। हो सकता है कि नाटककार उनसे प्रभावित हुआ हो जिससे उसने यह कल्पना कर डाली हो। रामायण में लव–कुश के जन्म की घटना वाल्मीकि के आश्रम में होती है किन्तु प्रशान्तराघव में नाटककार ने इस घटना को अयोध्या में ही घटित दिखाया है। उसने वाल्मीकि आश्रम का चयन केवल लव–कुश की शिक्षा निमित्त ही किया है।

महर्षि वाल्मीकि स्वयं ही अयोध्या आकर लव–कुश को शिक्षा निमित्त ले जाते हैं। सीता भी अपने पुत्रों के साथ वाल्मीकि आश्रम को जाती है। वाल्मीकि रामायण की सीता अन्त में पृथ्वी में समाहित हो जाती है किन्तु प्रशान्तराघव की सीता राम के विछोह में दुःखी रहती है। श्रीराम भी बच्चों और सीता के वियोग रात्रि व्यतीत करते हैं। श्रीराम नाटक के अंत में स्वयं ही वाल्मीकि आश्रम से सीता के ले जाते हैं।

भारतीय नाट्यशास्त्र की दृष्टि से नाटक के तीन तत्त्व होते हैं – वस्तु, नेता और रस। यही तत्त्व हैं जो एक नाटक को दूसरे से भिन्न करते हैं। कथावस्तु को यदि नाटक का शरीर कहे तो कोई अतिशयोक्ति नहीं होगी। कथावस्तु के बिना नाटक की कल्पना उसी प्रकार नहीं की जा सकती जिस प्रकार बिना शरीर के प्राणी की कल्पना नहीं की जा सकती। दशरूपक में कथावस्तु के दो भेद किए हैं– आधिकारिक और प्रासंगिक। प्रधानभूत कथावस्तु को आधिकारिक और अप्रधान कथावस्तु को प्रासंगिक कहते हैं।

प्रशान्तराघव नाटक में श्रीराम और सीता के वृत्तान्त से सम्बन्धित सभी घटनाएँ आधिकारिक है जिसके अन्तर्गत

EFFECT OF CONSTRUCTIVIST TEACHING ON THE ACADEMIC ACHIEVEMENT OF ELEMENTARY SCHOOL STUDENTS IN RELATION TO THEIR SOCIO ECONOMIC STATUS

PROF. NAIN SINGH DEPARTMENT OF EDUCATION, HP UNIVERSITY, SHIMLA-5.
DR. SHER SINGH PRINCIPAL, HIMACHAL COLLEGE OF EDUCATION, NALAGARH, DISTT SOLAN, HP-174101.

ABSTRACT

BACKGROUND OF THE STUDY: The National Curriculum Framework (NCF-2005) has recommends that curriculum should help the learners to become constructors of knowledge and emphasizes the active role of teachers in relation to the process of knowledge construction. The quality of education in schools and especially the effectiveness of teaching and learning have drawn the attention of educational policy planners and practitioner. Researchers conducted by NCERT and other research institutes in the context of minimum levels of learning (MLL), District Primary Education Programme (DPEP) midterm Assessment surveys and achievement surveys indicate the attainment of students is much below the desired levels.

AIM: The present study was undertaken to study the effect of teaching methodology i.e. Constructivist teaching on the academic achievement of elementary school students in relation to their Socio Economic Status.

METHOD AND PROCEDURE: The present study was experimental in nature. Quasi experimental research design was used to achieve the purpose of the present study. The study was designed on the basis of Non equivalent pretest- posttest control group design. The study was conducted on 140 6th grade students of A Government and A private Senior Secondary School in District Solan of Himachal Pradesh. The sample of the study was divided in to two groups termed as 'Experimental Group' (70)and this group was given treatment through new methodology based on constructivist Approach while the other group continued with the routine and conventional activities of the school and termed as 'control group'(70). Tools which are used in the study are: **.i.** Verbal Intelligence test by R.K. Ojha and K.Ray Choudhury **ii.**Socio-economic status scale R. L. Bharadwaj **iii.**Science Achievement test iv.Lesson Plans based on Constructivist Paradigm

MAJOR FINDINGS: There was no a significant difference between the mean achievement scores of the Upper class, Upper middle class, Middle class, Upper lower class and Lower class Socio economic status students of experimental and control group at Pre test level however a significant difference was found at Post Test and Delayed Post test level of all the categories of SES (Upper, Upper middle, Middle, Upper lower, Lower), when the students were taught by using new and traditional Interventions.

CONCLUSION: On the basis of the analysis and interpretation of the collected data and information it was concluded that teaching methodology (Constructivist Teaching) has a positive effect to enhance the academic achievement of elementary students in relation to all the classes of the their Socio Economic status,. Which reflects the effectiveness of the new intervention, hence it is being suggested that such kind of intervention should be encouraged to be used by the teachers in the teaching learning process at all the level of education to realise the goals of education.

KEY WORDS: CONSTRUCTIVIST TEACHING, ACADEMIC ACHIEVEMENT, ELEMENTARY SCHOOL STUDENTS

ABSTRACT

In the present pandemic situation, human being is facing many problems related to their economic status, ethical values, day today's life, physical problem professional issues because this pandemic has crushed the whole world and it is affecting the lifestyle, goals, relationships, attitude of the people as wel professionals like doctors, engineers, teachers etc.. It is decreasing the emotional and spiritual values among people. So in this crucial stage yoga has come as medicine to maintain the intellectual powers of the professionals. Yoga is practising by the whole world because yoga is considered as "controlling of the mind the reunion of the body, mind and spirit. Yogic practice includes specific techniques such as "Asanas", "Pranayama" and "Dhyana". These are true medicines to the highest level of consciousness and to balance the emotional intelligence. Emotional intelligence consist empathy, self-control, successful relationships and motivation. But due to rapid change in the world, these values are decreasing. Emotional intelligence is an ability to monitor once on and other's feelings and emoti Studies reveal that emotional intelligence is the key to success. It is necessary for teachers to balance their emotions so that they could maintain their intelle powers. It is possible through the yogic practices that are helpful to maintain the emotions.

KEY WORDS: Yogic practices, emotional intelligence, intellectual powers, pre-service teachers.

INTRODUCTION:

Yoga is considered as the "controlling of the mind". It is also considered as the foundation of Indian philosophy and ancient technique that involves physical exercises, relaxation of the body and mind through meditation. It is a technique to balance our internal and external environment (Joseph & Fincey, 2019). Yoga comes from the Sanskrit word "YUJ" which mean "union", spiritual union of the individual soul with the universal soul (Jha, 2015). Yoga affects the aspects of our mind i.e. intellect, ego, reason and sub consciousness. These aspects make an individual empathetic, motivated and self-considered (Bulut Jakavljevic, 2011). Patanjali yoga sutra considered yoga as the central context of the yoga; Patanjali follows eight spiritual practices i.e Yam, Niyam, Asana, Pranayama, Pratyahara, Dharna, Dhyana and Smadhi that help in the internal and external purification. (Joseph, Fincy, 2019).

Yogic practices:

The root of yoga is *'Hinduism'* but it is not a religion. It is a variation of methods, exercise and practice of life with religious and spiritual goals (Bulut,2011). Yogic practices help to increase purity. The three levels of purification i.e. body, nervous system, and mind (Joseph Fincey, 2019). Yogic practices include the three basic aspects such as *"Asanas"* (posture), *"pranayama"* (breathing) and *"dhyana"* (meditation) (Patanjali Yoga sutra).

Asana:

Asana is referred to the sitting position. Posture is that where there is no trembling of body (Jha, 2015). It is a posture that opens the energy channels and psychic centres (Hath yoga Pradipika, 2013). Asana is a method to purify and strengthen the body (Joseph and Fincey, 2019).

Some techniques of Asanas:-

Asanas	Benefits
Padamasana	Disorder of disease, change in the metabolic structures and brain patterns, balance in the whole system of the body (Muktibodhnanda, 2012).
Swastika Asana	Induces fertility, creativity and auspiciousness, Essential for meditation, straighten the spinal cord; can pass nervous impulses freely to the brain.(muktibodhnanda,2012).
Bhujanga Asana	Improves and deepens breathing systems, removes back ache, tones gynaecological disorder.(saraswati,2015).
Shavasana	Useful for awareness of body and mind, revitalise the entire system of the body, useful in yogic management of high blood pressure, anxiety, cancer, hysteria and neurosis, relaxes the mind and develops dharna and dhyana (muktibodhnanda, 2012).

Meditation:

Meditation is the fixing of the mind on a definite locus. When there is one- pointedness, uniform flow – uninterrupted by any other cognitions of the contemplation of the contemplated object on that locus that is meditation (Jha, 2015).

Some techniques of meditation:-

Meditation	Benefits
Mindful meditation	Treats four areas of mind: anxiety, somastication, depression and social dysfunction (Yunesian et al, 2008).
Transcendental Meditation	Effective treatment for cardio vascular diseases, effects on right orbito-frontal cortex, right thalamu left temporal, gyrus inside the brain. Improves me well-being and sleep pattern (Balaji, 2012).
Mantra Meditation	"Sound can help and sound can heal", activates the frontal gyrus, pre-frontal cortex, middle cortex, pre central cortex (Tomasino et. Al.2013) used in depression and epilepsy, remove negative thoughts, create positive energy and find peace (Mehta, 2010
Vipasana Meditation	Reduces anxiety, increase productivity, facilitates t clarity of thoughts, concentration, better-decision making, reduce physical and psychological distress.(Chandiramani,1994).

Emotional Intelligence:

Emotional intelligence is an ability to motivate oneself and persist in the face frustration, to control impulse, to regulate one's mood and read and deal effe tively with other people's feeling (Goleman, 2013). Emotional intelligence defined by five elements given by Goleman i.e. self-regulation, self-awarenes social-awareness, self-motivation and empathy (Goleman, 1995).

- Self – regulation is an ability to monitor one's own emotions and to iden tify and name that state of emotion.
- Self-awareness is an ability to understand and recognise the personal moods, drives and emotions.
- Social awareness is an ability to manage the relationships and build rap port in the society.
- Self-Motivation means to direct one's emotions to recognise the oppor tunities and to achieve goals.
- Empathy is a skill to understand the emotional state of other people and act accordingly.

Relation between Yogic Practices and Emotional Intelligence:

Yogic practices and emotional intelligence is integrated as a whole; yoga teaches to regulate and control instincts in order to gain master over one's self (Joseph & Fincey, 2019). Practicing the yoga that is considered as the way of life bring

A STUDY OF TEACHER EFFECTIVENESS OF SECONDARY SCHOOL TEACHERS IN RELATION TO THEIR GENDER, LOCALE, EDUCATIONAL QUALIFICATION AND TEACHING EXPERIENCE

*Kashmir Singh & **Dr. Ajay Kumar Attri,

*Ph.D. Research Scholar, H.P.University, Shimla-5;

**Professor ICDEOL H.P.University, Shimla-5

ABSTRACT

Teachers are the strengths of any country. They are charged with the greatest responsibility for "Nation Building". The teacher plays an essential role in increasing the efficiency of the school. An effective teacher is one who has a repertoire of various organizational strategies and teaching techniques. In the present investigation an attempt has been made to study teacher effectiveness among secondary school teachers in relation to their gender and stream. The survey method of the research has been utilized as a part of this research study. To collect the data, Teacher Effectiveness Scale (TES) developed and standardized by Puri and Gakkhar (2010) was used. For this study, a sample of 400 secondary school teachers was selected by using systematic random sampling technique from the two districts Chamba and Solan of Himachal Pradesh. The information collected was broken down by using mean, standard deviation and 't' test.

KEY TERMS Teacher Effectiveness, Secondary School Teachers, Gender, Locale, Educational Qualification and Teaching Experience.

Introduction

Teacher has a pivotal role in the educational system. The quality of teachers to a large extent depends upon the quality of teaching. At the root of teacher lies the learning, unless a teacher is not willing to learn. Teachers use a range of teaching strategies to effectively meet the needs and solve problems of individual learners. A school may have excellent material resources, equipments, building, library and other facilities along with a curricular appropriately adopted to suit the community need but if teacher are not effective and efficient and they are misfit, unsatisfied and indifferent to their responsibilities the whole programme is likely to be ineffective and wasted. For teaching the students effectively the teachers have to be effective.

The teaching is the fundamental duty of a teacher and it has to be made effective in order to make a successful teacher. The main important function of a teacher is to create a good learning environment that motivates the students to learn better. Only an effective teacher can meet the growing needs and challenges of the present scenario. An effective teacher can respond to rapidly changing cultural, economic, sociological and economic developments. A successful teacher can be understood as a teacher who helps to improve essential skills, understanding, appropriate propensities, attractive attitudes, self-esteem and sufficient individual change of learners. Effective teachers also encourage better school performance and an overall improvement in learners.

Need of the Study

Every year a large number of studies are allocated to educational issues of teachers, students and for the strategies for improving educational standards. In the educational system, teachers are playing a role in the forefront of educational reforms. But it is noteworthy that how far the teachers insist on the requirements of their profession and act as active agents, faithful to the goals of the educational system and how much they have internalized their professional values, and to what extent this internalization of professional values has affected their effectiveness. Teacher effectiveness is the competence and ability of a teacher to teach effectively. Teacher effectiveness is a matter of central importance to all educational institutions as it affects the process of learning and classroom management. Numerous theorists and researchers identified a variety of individual factors essential for facilitating student's achievement in terms of cognitive, affective and psychomotor learning or in promoting effective learning. Teacher effectiveness involves a set of teaching behaviors which are especially effective in bringing about desired changes in student's learning. In order to identify the teacher effectiveness the role and contribution of the teacher to the product of education needs to be examined. This enfolds that good teachers should possess the knowledge of learners characteristics learning process, classroom management, requisite skills to contribute significantly to the outcomes of educational process which is the growth of students in the right direction. Keeping this into view it is worthwhile to investigate the teacher effectiveness of secondary school teachers with other demographical variables.

Related Literature Review

Mohanta (2017) studied teacher effectiveness of secondary school teachers in relation to gender location and academic stream. For this study a sample of 130 secondary and higher secondary school teachers were randomly selected in and around Nadia and Murshidabad districts of West Bengal. The Teacher Effectiveness Scale developed by Kulsum (2006) was used for collecting the data. The data was analyzed by using mean, standard deviation,'t'- test and co-relation. The study highlights that the male school teachers and female school teachers do not differ significantly in their teacher effectiveness. The study uncover that there is a significant difference in teacher effectiveness among the school teachers with respect to locality, class handled (secondary and higher secondary) and academic streams (arts and science).

Chahal (2017) studied teacher effectiveness in relation to type of school and level of experience in Sirsa district of Haryana. The sample of the study was randomly selected 100 secondary school teachers. The tool used for the purpose of data collection was Kulsum's Teacher Effectiveness Scale by Kulsum (2011). The

data was analyzed by using mean, standard deviation and't'- test. Study found that the teacher effectiveness of government school teachers is higher than private school teachers, gender and locality does not have any significant role in teacher effectiveness. Results of the study revealed that the teachers having more than 10 years of experience are highly effective as compared to those having less than 10 years of experience in secondary schools.

Sharma (2018) studied teaching effectiveness of secondary school teachers in relation to demographical factors. For this study a sample of 400 secondary school teachers were selected through multistage probability sampling technique. To collect data Teacher Effectiveness Scale developed and standardized by Puri and Gakhar (2010) was used. The data was analyzed by using mean, standard deviation and't'- test. Study found; (i) Significant difference between male and female secondary school teachers, male teachers were found to be more effective than female teachers. (ii) Significant difference between govt. and private teachers, govt. secondary school teachers were more effective than private teachers.

Kavita (2019) studied teacher effectiveness of secondary school teachers in Panjab. For this study a sample of 186 teachers were selected by adopting simple random sampling technique. Teacher effectiveness scale constructed and validated by Kumar and Mutha (1999) was used to collect the relevant data. The data was analyzed by using mean, standard deviation and't'- test. It was found that the secondary school teachers have high level of effectiveness. Analyses were also done by testing the hypothesis to find out the significant difference in which it was found that there was no significant difference in their effectiveness level with reference to their gender, educational qualification, stage in which they are teaching. However there was a significant difference found in the level of effectiveness of teachers based on the years of their experience.

Objectives of the Study

The investigator of the present study has formulated the following objectives;

1. To compare the teacher effectiveness of secondary school teachers in relation to their gender (Male and Female).
2. To compare the teacher effectiveness of secondary school teachers in relation to their locale (Rural and Urban).
3. To compare the teacher effectiveness of secondary school teachers in relation to their educational qualifications (UG and PG).
4. To compare the teacher effectiveness of secondary school teachers in relation to their teaching experience (<10 and >10 years).

Hypotheses of the Study

The following hypotheses have been designed to achieve the objectives of the study;

Ho:1 There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their gender (Male and Female).

Ho:2 There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their locale (Rural and Urban).

Ho:3 There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their educational qualifications (UG and PG).

Ho:4 There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their teaching experience (<10 and >10 years).

Research Method

The present study was conducted by adopting descriptive survey method of research.

The Sample

To obtain the required information from the respondents, the researcher selected 400 secondary school teachers from two districts of Himachal Pradesh by adopting the procedure of systematic random sampling technique.

The Tool Used

Following tool was used to collect the relevant data for the study;

1. Teacher Effectiveness Scale by Puri and Gakkhar (2010).

Statistical Techniques Used

For hypothesis testing, data analysis were made employing descriptive statistics such as, Mean, Standard Deviation, inferential statistics such as test of significance difference between two groups means i.e. 't' test.

Data Analysis

Hypothesis 1, "There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their gender (Male and Female)."

Table 1

Comparison of Teacher Effectiveness Scores on the Basis of Gender

Gender	N	Mean	SD	't'-Value	Level of Significance
Male	200	245.78	14.98	1.30	NS
Female	200	247.965	18.05		

NS-Not Significant

The table no 1, shows that't'-value of teacher effectiveness of male and female secondary school teachers is found to be 1.30, which is less than the tabulated value (1.97) at 0.05 level of significant with df (198). It means the teacher effectiveness of male secondary school teachers (M=245.26) is do not differ significantly from their counterpart (M=248.49) female secondary school teachers. So first hypothesis, "There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their gender (Male and Female)" was accepted. Further, the result shows that teacher effectiveness of male and female secondary school teachers is equal.

Hypothesis 2, "There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their locale (Rural and Urban)."

Table 2

Comparison of Teacher Effectiveness Scores on the Basis of Locale

Locale	N	Mean	SD	't'-Value	Level of Significance
Rural	200	245.21	15.83	2.03	0.05**
Urban	200	248.53	17.16		

****Significant at 0.05 Level**

The table no 2, shows that't'-value of teacher effectiveness of rural and urban secondary school teachers is found to be 2.03, which is more than the tabulated value (1.97) at 0.05 level of significant with df (198). It means the teacher effectiveness of rural secondary school teachers (M=245.21) is differ significantly from their counterpart (M=248.53) urban secondary school teachers. So first hypothesis, "There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their locale (Rural and Urban)" was rejected. Further, the result shows that teacher effectiveness of rural and urban secondary school teachers is not equal. It means that urban secondary school teachers have better teacher effectiveness than rural secondary school teachers.

Hypothesis 3, "There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their educational qualifications (UG and PG)."

Table 3

Comparison of Teacher Effectiveness Scores on the Basis of Educational Qualification

Educational Qualification	N	Mean	SD	't'-Value	Level of Significance
PG	200	248.04	18.63	1.82	NS
UG	200	245.35	14.17		

NS-Not Significant

The table no 3, shows that't'-value of teacher effectiveness of post graduate and undergraduate secondary school teachers is found to be 1.82, which is less than the tabulated value (1.97) at 0.05 level of significant with df (198). It means the teacher effectiveness of post graduate secondary school teachers (M=248.04) is not differ significantly from their counterpart (M=245.35) undergraduate secondary school teachers. So first hypothesis, "There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their educational qualification (PG and UG)" was accepted. Further, the result shows that teacher effectiveness of postgraduate and undergraduate secondary school students is equal.

Hypothesis 4, "There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their teaching experience (<10 and >10 years)."

Table 4

Comparison of Teacher Effectiveness Scores on the Basis of Teaching Experience

Teaching Experience	N	Mean	SD	't'-Value	Level of Significance
<10 Years	200	248.49	17.79	2.09	0.05**
>10 Years	200	245.26	15.13		

****Significant at 0.05 Level**

The table no 4, shows that't'-value of teacher effectiveness of <10 years teaching experience and >10 years secondary school teachers is found to be 2.09, which is more than the tabulated value (1.97) at 0.05 level of significant with df (198). It means the teacher effectiveness of >10 years secondary school teachers (M=248.49) is differ significantly from their counterpart (M=245.26) >10 years secondary school teachers. So first hypothesis, "There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their gender" was rejected. Further, the result shows that teacher effectiveness of secondary school teachers having <10years teaching experience and >10 years secondary school teachers is not equal. It means that <10years teaching experience secondary school teachers have better teacher effectiveness than <10years teaching experience.

Findings of the Study

The major research findings are;

1) There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their gender (Male and Female). It means that teacher effectiveness of male and female secondary school teachers is equal.
2) There is significant difference in the teacher effectiveness of secondary school teachers in relation to their locale (Rural and Urban). Further, the result shows that teacher effectiveness of rural and urban secondary school teachers is not equal. It means that rural secondary school teachers are less effective than urban secondary school teachers.
3) There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their educational qualifications (UG and PG). The result of the study shows that teacher effectiveness of postgraduate and undergraduate secondary school teachers is equal.
4) There is no significant difference in the teacher effectiveness of secondary school teachers in relation to their teaching experience (<10 and >10 years). The result of the study shows that teacher effectiveness of above 10 years teaching experience secondary school teachers and below 10 years teaching experience secondary school teachers is not equal. Thus, it means teacher having <10 years and above teaching experience are more effective than less than >10 years teaching experience.

Suggestions for Future Research

Following are the suggestions for future research;

1) The present study is just limited to a population of 400 secondary school teachers. The same can also do with a larger population.
2) The study could be extended to other parts of country and different other grades of educational institutions i.e. primary or even at the college levels.
3) The present study shows the result for only two districts i.e. Chamba and Solan of Himachal Pradesh. A study with more districts can also be done.
4) Similar study can be done with some other variables like age, marital status and social category etc.

Conclusion

In the light of above findings it can be concluded effective teaching leads to engaged and intelligent learning. Effective teaching consists of those teaching decisions about actions, routines and techniques that increase the decision making capabilities of students. Teacher effectiveness at secondary stage is likely to have significant influence on the performance and future prospects of individual students as well as over all development of the school in the immediate future.

CONSTRUCTION AND STANDARDIZATION OF TEACHER EMPOWERMENT SCALE FOR SECONDARY SCHOOL TEACHERS

*Kashmir Singh & **Dr. Ajay Kumar Attri,

*Ph.D. Research Scholar, H.P.University, Shimla;

**Professor ICDEOL H.P.University, Shimla-5

Abstract

This research paper highlights the process of construction and standardization of a scale for secondary school teachers to measure their teacher empowerment. Initially, a pool of items was formulated by reviewing related literature, which was then given to the experts for analyzing the content. After preliminary try out and item analysis was done, only items with‘t’ value 1.75 and above as suggested by Thurstone and Chave (1929) were retained for the final form of the scale. The final form of the scale thus consists of 49 items. The reliability of the scale was ascertained by Karl Pearson’s Product Moment Correlation, Test-Retest method and Spearman-Brown Prophecy Formula of Split Half method and it was found to be relatively high. As far as validity is concerned, the content validity and face validity were also established. Norms were also established for the interpretation of the obtained score.

KEYWORDS Teacher Empowerment, Secondary School Teachers, Reliability, Validity and Norms

Introduction

Teachers need to be empowered so that they can develop the competence to take charge of their growth and be able to resolve their problems in their everyday practice. To develop skills and competence needed in making important collaborative decisions and a display of commitment that in turn will create room for significant collaborative participation and democratic understanding. It enables teachers to exercise power over their educational lives and even resists controls that are detrimental to their work. Research supports the assumption that teacher empowerment relates to greater organizational effectiveness (Barth, 1990; Blase & Blase, 2001. Teacher empowerment has also been defined as the possession and exercise of power in the pursuit of occupational improvement, professional autonomy, and the overall improvement of the educational process (Smith & Lotven, 1993). Empowerment also means simply to be able to effect change (Kreisberg, 1992). In the above definitions, empowerment is both the knowledge that one can make a difference and the actual ability to act (Kreisberg, 1992). Dunst (1991) suggested that empowerment consists of two issues; (i) enabling experiences, provided within an organization that fosters autonomy, choice,

control, and responsibility, which (ii) allow the individual to display existing competencies that support and strengthen functioning. Starratt (2004) conveyed that a leader's 'enabling presence' may empower teachers to participate in addressing school issues, own their professional development, and bring to the effort of school improvement their talents and creativity (p.103).

In education, teacher empowerment has less to do with the ability to boss others but more to do with teacher professionalism (Blase & Blase, 2001). It is the ability to exercise one's professional ability with quiet confidence and to help shape the way the job is done by having meaningful input into the decision-making process and policy development (Maeroff, 1988). Also, teachers who perceive themselves as empowered have improved motivation, self-esteem, confidence, commitment, innovation, autonomy, and reflection (Blase & Blase, 2001). Bolin (1989) stated that teacher empowerment requires, 'investing in teachers the right to participate in the determination of school goals and policies and the right to exercise professional judgment about the content of the curriculum and means on instruction' (p.83). Teacher empowerment provides teachers the opportunities for choice and autonomy in the workplace to demonstrate their competencies as educators (Short, 1994; Zimmerman & Rappaprt, 1988). According to Kirby (1991), three key elements in teacher empowerment are; a) the ability to act, b) the opportunity to act, and c) the desire to act. Empowerment involves both personal and organizational issues. Empowerment focuses on the development of personal competence, as well as the opportunities a person have within the organization to demonstrate competence (Short, 1998). In other words, empowered teachers are highly competent and work in schools that provide opportunities to show competence (Short, 1998). A school that values the empowerment of teachers and students will be better at finding and developing resources than a school that does not support or hold an empowerment philosophy (Short, 1998). Glenn (1990) suggested that the real power behind the construct of teacher empowerment is authority derived from teacher command of the subject matter and essential skills necessary to successfully teach students. Empowered teachers believe they have the skills and knowledge to act on a situation and improve it (Short, 1994).

Rationale for Construction of the Tool

The demand and need for the development of the new and standardized tool are growing to a certain extent because most of the tools are having reliability and validity in the context of a particular area only. Though several scales and questionnaires are there to measure the principal's empowerment and women empowerment we all know that teachers are the custodian of the future so they need to be empowered. Besides; most of the assessable questionnaires/scales are foreign tools which are not fit Indian conditions. Only a few Indian tools are there out of which most of them are meant for school principals and for empowering women. So, no recent reliable and valid tools are available which is solely meant for assessing teacher empowerment. Hence, for accomplishing his research investigator intended to construct a tool that is solely meant for assessing the empowerment of secondary school teachers.

Objectives

The following were the objectives of the study;

1. To prepare the preliminary draft of the teacher empowerment scale for secondary school teachers.
2. To carry out item analysis of a preliminary draft of teacher empowerment scale.
3. To estimate the reliability of the teacher empowerment scale through test-retest and split-half methods.
4. To ascertain the validity of teacher empowerment scale.
5. To establish the norms for interpretation of scores obtained on the teacher empowerment scale.

Methodology

For construction and standardization of teacher empowerment scale, a survey technique under the descriptive method of research was used.

Sampling

In this study, the sample was drawn from the secondary school teachers. The sample for this investigation was drawn by employing multistage sampling along with purposive sampling techniques. Firstly, for item analysis of the preliminary draft, samples of 130 secondary school teachers working in govt. schools of Solan district, of Himachal Pradesh, were taken. At the second stage, a sample of 50 secondary school teachers to compute test-retest reliability and 100 secondary school teachers working in govt. schools of Shimla district of Himachal Pradesh, purposively selected to estimate split-half reliability. At the last stage, samples of 1360 secondary school teachers were chosen from 6 districts of Himachal Pradesh for its norms establishment.

Preparing and Editing the Scale

There are no universal traits/qualities of empowering teachers but certain requirements for teacher empowerment do exist across diverse situations. Therefore, a continuous effort for enumerating qualities/dimensions of teacher empowerment has been witnessed since the time of emergence of study on teacher empowerment. In this connection, different sources i.e. relevant literature, different research studies, existing inventories, questionnaire scales on teacher empowerment, were reviewed. In this way, 125 dimension wise statements were prepared. The statements were written in Hindi and English both languages. More than five rounds of checking and reframing of statements were made to ensure the appropriateness and uniqueness of the statements. The list of positive and negative statements so prepared was reviewed. The statements were judged from a language point of view. Based on experts' opinion the preliminary draft of the scale consisted of 79 test items.

Try Out of Preliminary Draft of Teacher Empowerment Scale

For carrying out item analysis, the preliminary draft of the Teacher Empowerment Scale was tried out on a sample of 130 secondary school teachers. After getting the filled upscale from the respondents, the scoring was done. The responses of the subject were rated on a five-point rating scale ranging from; Strongly Agree, Agree, Undecided, Disagree, Strongly Disagree. The scoring pattern for positively worded items was done by awarding 5 to Strongly Agree, 4 to Agree, 3 to

Undecided, 2 to Disagree, and 1 to Strongly Disagree. For the negatively worded items, the scoring pattern was reversed in order. The scoring for positively and negatively worded items was given in such a way that the higher the score more is the empowerment of secondary school teachers.

Item Analysis

Afterward, the scoring of the Teacher Empowerment Scale for each respondent was done by following the procedure mentioned earlier. The total score on the preliminary draft of the Teacher Empowerment Scale ranged from 79-395. The researcher further proceeded with the technique of item analysis for the selection of the statements for the final draft of the Teacher Empowerment Scale. To compute 't' value, the top 27% of secondary school teachers (36 teachers) with the highest total score and the bottom 27% (36 teachers) of secondary school teachers with the lowest score on the teacher empowerment scale were taken. These two groups were named as 'top group having high score' and 'bottom group having low score' respectively. The high and low scorer groups were considered for item analysis as they provide criterion groups in terms of which to evaluate the individual statements. The middle 46% of booklets were discarded and not considered for further analysis. The value for all 79 statements was computed and arranged in an order to form the final scale. Thurstone and Chave (1929) suggested that 't-value' equal to or greater than 1.75 may be consider significant. So the statements having 't' value equal to or greater than 1.75 were selected for the final draft of the Teacher Empowerment Scale and other having 't-value' less than 1.75 were rejected. The calculated 'value' of each 79 statements is given in table 1.

Table 1: 't' Values in Respect to 79 Items of Final Format of Teacher Empowerment Scale

Item No	't' Value	Item No	't' Value	Item No	't' Value	Item No	't' Value
1.	3.12	21.	2.71	41.	*1.66✘*	61.	*1.37✘*

Note:** 't' values shown in bold and Italic letters indicate rejected items* ***(t<1.75)

Final Draft of the Teacher Empowerment Scale

After analysis of the first draft of item analysis, the final form of the scale was prepared. Out of 79 items, 49 items were retained and 30 items were rejected. Dimension wise distributions of items in Teacher Empowerment Scale after item analysis given in table 2.

Table 2: Dimensions wise Distribution of Teacher's Empowerment Scale

Sr. No.	Dimensions	Positively Worded Items	Negatively Worded Items	Total
1.	Self Esteem	06	03	09
2.	Team Working Skill	07	03	10
3.	Teacher Morale	07	04	11
4.	Communication Skill	06	03	09
5.	Decision Making	07	03	10
	Total	33	16	49

Reliability of Teacher Empowerment Scale

The reliability of the scale was determined employing two methods of reliability i.e. test-retest method and split-half method.

1. **Test-retest Reliability:** The test-retest reliability of the teacher empowerment scale was estimated by administering the final draft of the scale on 50 secondary school teachers with a time gap of approximately three weeks. For this purpose, the scale was administered on those 50 secondary school teachers who had not been included in the initial draft of the test. The test-retest reliability was measured by calculating the value of the correlation between scores obtained by secondary school teachers at the first administration and second administration of the scale. For this, the method of Karl Pearson's Product Moment Correlation was applied. The dimension wise and overall value of the correlation coefficient is shown in table 3.

Table 3: Dimensions Wise Test-Retest Reliability of the Teacher Empowerment Scale

Sr. No.	Dimensions	Test-retest Reliability	Total Reliability
1.	Self Esteem	0.77	0.82
2.	Team Working Skill	0.81	
3.	Teacher Morale	0.76	
4.	Communication Skill	0.84	
5.	Decision Making	0.83	

2. **Split Half Reliability**: For estimating the reliability of teacher empowerment scale by the split-half method was administered on a sample of 100 secondary school teachers. In the split-half method, the test was first divided into two equivalent halves and the correlation was calculated for those half tests.

The reliability of the scale was obtained by correlation scores on the odd and even numbers. To calculate the reliability co-efficient through the split-half technique, the Spearman-Brown Prophecy Formula was used. The reliability coefficient obtained for dimension wise and total teacher empowerment scale is given below in table :4

Table 4: Dimensions Wise Split-Half Reliability of the Teacher Empowerment Scale

Sr. No.	Dimensions	Split Half Reliability	Total Reliability
1.	Self Esteem	0.79	0.84
2.	Team Working Skill	0.83	
3.	Teacher Morale	0.81	
4.	Communication Skill	0.85	
5.	Decision Making	0.83	

The Validity of the Teacher Empowerment Scale

The validity of the Teacher Empowerment Scale was ascertained in terms of item validity, content validity, and cross validity and cross validity. The teacher empowerment scale was considered valid enough in terms of item validity because only those items were retained in the final draft of the scale which was having 't' values equal to or greater than 1.75 (highly discriminating items). The content validity of the teacher empowerment scale was established by carrying out critical discussions with field experts at the time of development of the preliminary draft of the scale. The experts of the opinion that the statements in the teacher empowerment scale were appropriate and relevant to measure the empowerment of secondary school teachers. In addition to this, only those statements were retained in the preliminary draft of the teacher empowerment scale for which there has been approximately 90% agreement among a panel of experts. Thus, the teacher empowerment scale was found to possess adequate content validity. Furthermore, the teacher empowerment scale can be considered to have adequate intrinsic validity because the split-half reliability of the scale was found to be 0.84 which showed a very high correlation index. The cross validity of the teacher empowerment scale was ensured by taking entirely different samples of secondary school teachers to carry out item analysis, establishing reliability, and developing norms.

Norms for Interpreting Teacher Empowerment Score

Before establishing the norms for interpretation of teacher empowerment scores obtained by secondary school teachers, the obtained data is verified for possessing normality. This was done by computing the values of skewness and kurtosis for overall scores of sampled teachers (N=1360) on the scale. The value of skewness came out to be .0.96. It is showing that the distribution of total teacher empowerment scores is normally skewed. In addition to this, the value of kurtosis was calculated to be 0.67. It also indicates that the distribution of the total teacher empowerment score is somewhat mesokurtic. Further, based on collected data, the mean and standard deviation in respect of teacher empowerment scores of all sampled teachers were calculated which came out to be 175.04 and 18.524

respectively. Then, the raw teacher's empowerment scores were converted into z-scores by taking into consideration the values of the mean and standard deviation to establish norms for interpretation of obtained teacher's empowerment scores.

Table 5: Z- Score Norms for Teacher Empowerment Scale

Raw Score	Z-Score	Raw Score	Z-Score	Raw Score	Z-Score	Raw Score	Z-Score	Raw Score	Z-Score
117	-3.13	**140**	-1.89	**163**	-0.65	**186**	+0.59	**209**	+1.83
118	-3.07	**141**	-1.83	**164**	-0.59	**187**	+0.64	**210**	+1.88
119	-3.02	**142**	-1.78	**165**	-0.54	**188**	+0.69	**211**	+1.94
120	-2.97	**143**	-1.73	**166**	-0.48	**189**	+0.75	**212**	+1.99
121	-2.91	**144**	-1.67	**167**	-0.43	**190**	+0.80	**213**	+2.04
122	-2.86	**145**	-1.62	**168**	-0.38	**191**	+0.86	**214**	+2.10
123	-2.80	**146**	-1.56	**169**	-0.32	**192**	+0.91	**215**	+2.15
124	-2.75	**147**	-1.51	**170**	-0.27	**193**	+0.96	**216**	+2.21
125	-2.70	**148**	-1.46	**171**	-0.21	**194**	+1.02	**217**	+2.26
126	-2.64	**149**	-1.40	**172**	-0.16	**195**	+1.07	**218**	+2.31
127	-2.59	**150**	-1.35	**173**	-0.11	**196**	+1.13	**219**	+2.37
128	-2.53	**151**	-1.29	**174**	-0.05	**197**	+1.18	**220**	+2.42
129	-2.48	**152**	-1.24	**175**	-0.02	**198**	+1.23	**221**	+2.48
130	-2.43	**153**	-1.19	**176**	+0.05	**199**	+1.29	**222**	+2.53
131	-2.37	**154**	-1.13	**177**	+0.10	**200**	+1.34	**223**	+2.58
132	-2.32	**155**	-1.08	**178**	+0.15	**201**	+1.40	**224**	+2.64
133	-2.26	**156**	-1.02	**179**	+0.21	**202**	+1.45	**225**	+2.69
134	-2.21	**157**	-0.97	**180**	+0.26	**203**	+1.50	**226**	+2.75
135	-2.16	**158**	-0.92	**181**	+0.32	**204**	+1.56	**227**	+2.80
136	-2.10	**159**	-0.86	**182**	+0.37	**205**	+1.61	**228**	+2.85
137	-2.05	**160**	-0.81	**183**	+0.42	**206**	+1.67	**229**	+2.91
138	-2.00	**161**	-0.75	**184**	+0.48	**207**	+1.72	**230**	+2.96
139	-1.94	**162**	-0.70	**185**	+0.53	**208**	+1.77	**231**	+3.02
								232	+3.07

The following range of z-scores on a continuum can be used as suggestive norms for interpreting scores obtained on the scale for measuring teacher's empowerment given in table 6.

Table 6: Norms for Interpretation of Level of Teacher's Empowerment Scale

Sr. No.	Range of Z-Score	Scores	Levels of Teacher's Empowerment
1.	**+2.01 and Above**	**216 & above**	**Extremely High Teacher Empowerment**
2.	**+1.26 to +2.00**	**200-215**	**High Teacher Empowerment**
3.	**+0.51 to +1.25**	**184-199**	**Above Average Teacher Empowerment**
4.	**-0.50 to +0.50**	**168-183**	**Average Teacher Empowerment**
5.	**-0.51 to -1.25**	**152-167**	**Below Average Teacher Empowerment**
6.	**-1.26 to 2.00**	**136-151**	**Low Teacher Empowerment**
7.	**-2.01 and Below**	**120 & below**	**Extremely Very Low Teacher Empowerment**

Conclusion

The present study was done to construct and standardized a scale for measuring teacher empowerment of secondary school teachers. The Teacher Empowerment Scale (TES) is very reliable and valid in terms of item, content, and face validity. Moreover, norms have been established which serves as a frame of reference for interpreting the obtained scores. Therefore, Teacher Empowerment (TES) is reliable and valid and can be used by administrators, school principals, policymakers and other researchers are who are interested in finding out the empowerment of teachers.

PROFESSIONAL COMMITMENT OF GOVERNMENT SENIOR SECONDARY SCHOOL TEACHERS IN RELATION TO GENDER IN HIMACHAL PRADESH

Chaman Lal

Assistant Professor, Department of Education, ICDEOL, Himachal Pradesh University, Shimla, India

Received: 03 Oct 2020 **Accepted:** 06 Oct 2020 **Published:** 20 Oct 2020

ABSTRACT

The present study aims to study the level of professional commitment of male and female senior school teachers on the basis of sex.100 Sample male and female School teachers were selected by randomly by the draw of lots. 50 male and 50 female teachers were selected from the each selected school through systematic random sampling technique. Professional Commitment Scale for Teachers (PCST) developed by Ravinder Kaur, Sabjit Kaur Ranu and Sarvjeet Kaur Brar (2011) was used for data collection. To study the significant difference between professional commitment of male and female senior secondary schools teachers, significant difference between commitment to the learner, commitment to the society, commitment to the profession,, commitment to achieve excellence, commitment to basic human values of male and female senior secondary schools teachers, In these cases, t-test was used. Major findings of the study were: The male and female government senior secondary school teachers do not differ from each other on the level of professional commitment. The male and female government senior secondary school teachers do not differ from each other on the level of commitment to the learner. The male and female government senior secondary school teachers do not differ from each other on level of commitment to the society. The male and female government senior secondary school teachers do not differ from each other on the level of commitment to the profession. The male and female government senior secondary school teachers differ from each other on the level of commitment to achieve excellence and the male and female government senior secondary school teachers do not differ from each other on the level of commitment to basic values.

KEYWORDS: *Professional Commitment, Government Senior Secondary school teachers, Gender and Himachal Pradesh*

INTRODUCTION

Education moulds the behavioural and personality attributes of children and prepares them to become well adjusted, productive and meaningful members of their social orders. "Profession is a special type of occupation, one whose members exhibit high levels of such characteristics as expertise, autonomy, a belief in the regulation of the profession by its members" **(Kerr, 2005)** Commitment is part of a teacher's affective or emotional reaction to their experience in a school setting. It is a part of a learned behaviour of a teacher. Teachers make conscious and subconscious decisions about their level of willingness from these affective reactions. **Basu (2016)** studied the professional commitment and job satisfaction of secondary school teachers and the relationship between them. The study was conducted on 98 secondary school teachers from Bareilly district. The findings of the investigation reveal that while gender and length of teaching experience influenced the professional commitment of secondary school teachers, the type of school did not have any significant effect. Also gender, type of school and length of teaching experience were found to be significant factors which influence the job satisfaction of the secondary school teachers. **Gill &**

Kour (2017) have conducted studies on the professional commitment among senior secondary school teachers. Found out that there was no significant interaction effect of (a) gender & teaching experience, (b) stream and teaching experience on professional commitment among college students. **Habib (2019)** have conducted a study on the professional commitment of secondary school teachers working in government schools of district Ganderbal, Jammu &Kashmir. The findings of the investigation revealed that female secondary school teachers have higher professional commitment as compare as to male secondary school teachers and no significant difference found in the Self-efficacy of secondary school teachers and significant positive correlation was found between Professional Commitment and Self-efficacy of secondary school teachers **Malik (2020)**studied the professional commitment among secondary school teachers of Gurugram district in relation to personal stress in covid-19 pandemic. The main aim ofthe study was to assess both direct and indirect relationship between Professional Commitment and Personal Stress in secondary school teachers of Gurugram district.The findings of the investigation revealed thatProfessional Commitment is influenced by the Personal Stress of a teacher. Secondary school teachers with Low Personal Stress were having less Professional Commitment as compared to Secondary school teachers with High Personal Stress and Professional commitment is influenced by personality, teaching attitude, sense of humour, occupational stress, self-efficacy, teacher freezing and in return influences the teaching effectiveness of teachers.

OBJECTIVES

- To compare the overall level of professional commitment of male and female government senior secondary school teachers.
- To compare the level of commitment to the learner of male and female government senior secondary school teachers.
- To compare the level of commitment to the society of male and female government senior secondary school teachers.
- To compare the level of commitment to the profession of male and female government senior secondary school teachers.
- To compare the level of commitment to Achieve Excellence by male and female government senior secondary school teachers.
- To compare the level of commitment to Basic Human Values of male and female government senior secondary school teachers.

HYPOTHESES

H_{01}: There is no significant difference between professional commitment of male and female government senior secondary schools teachers.

H_{02}: There is no significant difference between commitment to the learner of male and female government senior secondary schools teachers.

H_{03}: There is no significant difference between commitment to the society of male and female government senior secondary schools teachers.

H_{04}: There is no significant difference between commitment to the profession of male and female government senior secondary schools teachers.

H_{05}: There is no significant difference between commitment to achieve excellence of male and female government senior secondary schools teachers.

H_{06}: There is no significant difference between commitment to Basic Human Values of male and female government senior secondary schools teachers.

TOOLS

"Professional Commitment Scale for Teachers (PCST-KRB)" Hindi/English developed by Ravinder Kaur, Sarbjit Kaur Ranu and Sarvjeet Kaur Brar (2011) was used to assess the professional commitment.

METHODOLOGY

To achieve the objectives effectively the descriptive survey research method was followed.

SAMPLING

In the present study,only two districts namely Shimla and Solan out of the twelve districts of Himachal Pradesh were selected randomly by the draw of lots. From the selected Districts,only 08 government senior secondary schools were taken on the basis of convenience. From the government senior secondary schools 'Shimla and Solan', a sample of 50 male and 50 female teachers were selected from the each selected school through systematic random sampling technique. In this way, 100 secondary school teachers were selected by constituted the final sample for the present study.

STATISTICAL TECHNIQUE

The scores obtained were subject to statistical treatment using proper statistical techniques. For this purpose Mean, Standard Deviation, t- test, was used.

Variables

- Independent Variables: Gender (Male and Female)
- Dependent Variable: Professional Commitment.

RESULTS AND DISCUSSIONS

H_{01}: There is no significant difference between professional commitment of male and female government senior secondary schools teachers.

The mean scores of professional commitment of male and female government senior secondary school teachers along with number, S.D., SE_{DM}, df and t-value are given in Table 1 below:

Table 1 shows that t-value for comparison of professional commitment scores at two levels of gender, male and female teachers came out to be 1.14, which is non-significant at 0.05 level of significance for 98 df.

This indicates that there is no significant difference in the professional commitment scores of government senior secondary school teachers at two levels of gender i.e., male and female.

Hence the H_{01}as stated above: "There is no significant difference between professional commitment of male and female government senior secondary schools teachers" was accepted.

From Table 1, it can be seen that the means on professional commitment scores for government senior secondary school male and female teachers are 170.08 and 174.0 respectively.

Figure 1 is also indicating of the fact that the mean scores mean scores of professional commitment of government senior secondary school male and female teachers do not differ significantly.

Table 1: Gender Wise Difference in Professional Commitment of Government Senior Secondary School Teachers

Variable	Gender		SE_{DM}	df	t-value
	Male (N=50)	Female (N=50)			
Professional Commitment	Mean=170.08	Mean=174.00	3.414	98	1.14
	S.D.=17.00	S.D.=17.14			

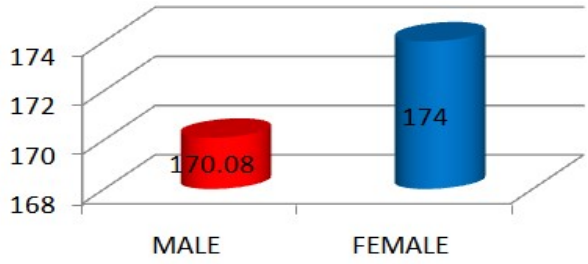

Figure 1: Mean Scores for Government Senior Secondary School Male and Female Teachers on Professional Commitment.

From the above Analysis, it may be Interpreted that:

The male and female government senior secondary school teachers do not differ from each other on the level of professional commitment.

H_{02}: There is no significant difference between commitment to the learner of male and female government senior secondary schools teachers.

The mean scores of commitment to the learner of male and female government senior secondary school teachers along with number, S.D., SE_{DM}, df and t-value are given in Table 2 below:

Table 2 shows that t-value for comparison of commitment to learner scores at two levels of gender, male and female teachers came out to be 0.86, which is non-significant at 0.05 level of significance for 98 df. This indicates that there is no significant difference in the commitment to learner scores of government senior secondary school teachers at two levels of gender i.e., male and female.

Hence the H_{02} as Stated Above: "There is no significant difference between commitment to the learner of male and female government senior secondary schools teachers" was accepted.

From Table 2, it can be seen that the means on commitment to learner scores for government senior secondary school teachers are 36.08 and 35.32 respectively.

Figure 2 is also indicating of the fact that the mean scores of commitment to the learner of government senior secondary school teachers do not differ significantly.

Table 2

Variable	Gender		SE_{DM}	df	t-value
	Male (N=50)	Female (N=50)			
Commitment to the Learner	Mean=36.08	Mean=35.32	0.874	98	0.86
	S.D.=4.503	S.D.=4.235			

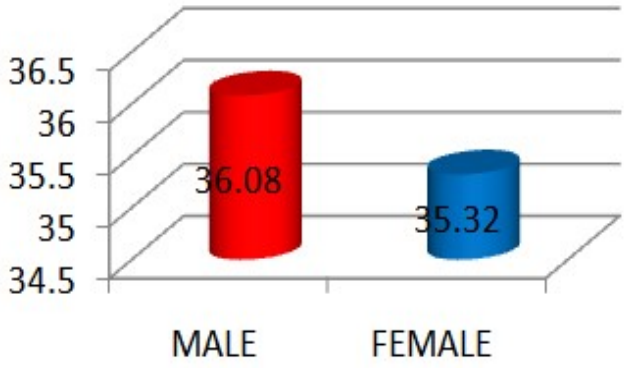

Figure 2: Mean Scores for Government Senior Secondary School Male and Female Teachers on Commitment To The Learner.

From the above Analysis, it may be Interpreted that:

The male and female government senior secondary school teachers do not differ from each other on the level of commitment to the learner.

H_{03}: There is no significant difference between commitment to the society of male and female government senior secondary schools teachers.

The mean scores of commitment to the society of male and female government senior secondary school teachers along with number, S.D., SE_{DM}, df and t-value are given in Table 3 below:

Table 3 shows that t-value for comparison of commitment to the society scores at two levels of gender, male and female teachers came out to be 0.13, which is non-significant at 0.05 level of significance for 98 df. This indicates that there is no significant difference in the commitment to the society scores of government senior secondary school teachers at two levels of gender i.e., male and female.

Hence the H_{03}as Stated Above: "There is no significant difference between commitment to the society of male and female government senior secondary schools teachers" was accepted.

From Table 3, it can be seen that the means on commitment to the society scores for male and female government senior secondary school teachers are 34.48 and 34.34 respectively.

Figure 3 is also indicating of the fact that the mean scores of commitment to the society of male and female government senior secondary school teachers do not differ significantly.

Table 3

Variable	Gender		SE $_{DM}$	df	t-value
	Male (N=50)	Female (N=50)			
Commitment to the Society	Mean=34.48	Mean=34.34	1.037	98	0.13
	S.D.=5.38	S.D.=4.98			

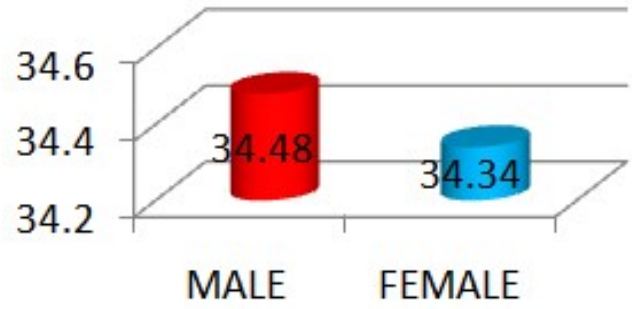

Figure 3: Mean Scores for Government Senior Secondary School Male and Female Teachers on Commitment to the Society

From the above Analysis, it may be Interpreted that:

The male and female government senior secondary school teachers do not differ from each other on level of commitment to the society.

H_{04}: There is no significant difference between commitment to the profession of male and female government senior secondary schools teachers.

The mean scores of commitment to the profession of male and female government senior secondary school teachers along with number, S.D., SE $_{DM,}$ df and t-value are given in Table 4 below:

Table 4 shows that t-value for comparison of commitment to the profession scores at two levels of gender, male and female teachers came out to be 1.52, which is non-significant at 0.05 level of significance for 98 df. This indicates that there is no significant difference in the commitment to the profession scores of government senior secondary school teachers at two levels of gender i.e., male and female.

Hence the H_{04} as stated above: "There is no significant difference between commitment to the profession of male and female government senior secondary schools teachers" was accepted.

From Table 4, it can be seen that the means on commitment to the profession scores for male and female government senior secondary school teachers are 33.26 and 34.66 respectively. Figure 4 is also indicating of the fact that the mean scores of commitment to the profession of male and female government senior secondary school teachers do not differ significantly.

Table 4

Variable	Gender		SE $_{DM}$	df	t-value
	Male (N=50)	Female (N=50)			
Commitment to the Profession	Mean=33.26	Mean=34.66	0.919	98	1.52
	S.D.=4.26	S.D.=4.90			

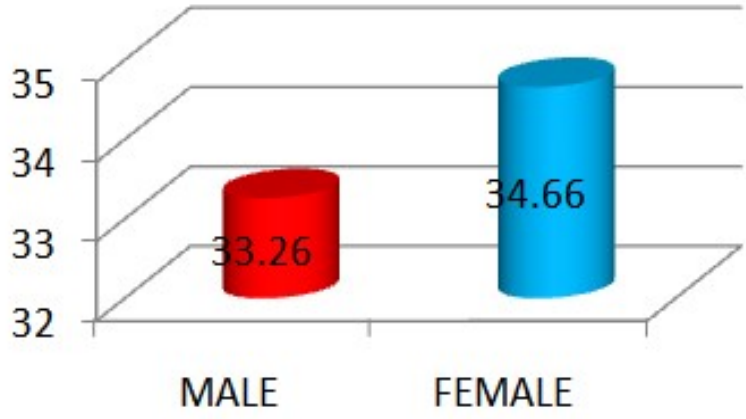

Figure 4: Mean Scores for Government Senior Secondary School Male and Female Teachers on Commitment to the Profession

From the above Analysis, it may be Interpreted that:

The male and female government senior secondary school teachers do not differ from each other on the level of commitment to the profession.

H_{05}: There is no significant difference between commitment to achieve excellence of male and female government senior secondary schools teachers.

The mean commitment to achieve excellence of male and female government senior secondary school teachers along with number, S.D., $SE_{DM,}$ df and t-value are given in Table 5 below:

Table 5 shows that t-value for comparison of commitment to achieve excellence scores at two levels of gender, male and female teachers came out to be 3.65, which is significant at 0.05 level of significance for 98 df. This indicates that there is significant difference in the commitment to achieve excellence scores of government senior secondary school teachers at two levels of gender i.e., male and female.

Hence the H_{05}as stated above: "There is no significant difference between commitment to achieve excellence of male and female government senior secondary schools teachers" was not accepted.

From Table 5, it can be seen that the means on commitment to achieve excellence scores for male and female government senior secondary school teachers are 31.46 and 34.58 respectively.

Figure 5 is also indicating of the fact that the mean scores of commitment to achieve excellence of male and female government senior secondary school teachers differ significantly.

Table 5

Variable	Gender		SE_{DM}	df	t-value
	Male (N=50)	Female (N=50)			
Commitment to Achieve Excellence	Mean=31.46	Mean=34.58	0.853	98	*3.65
	S.D.=4.44	S.D.=4.08			

* Significant at 0.05 level of significance for 98 df.

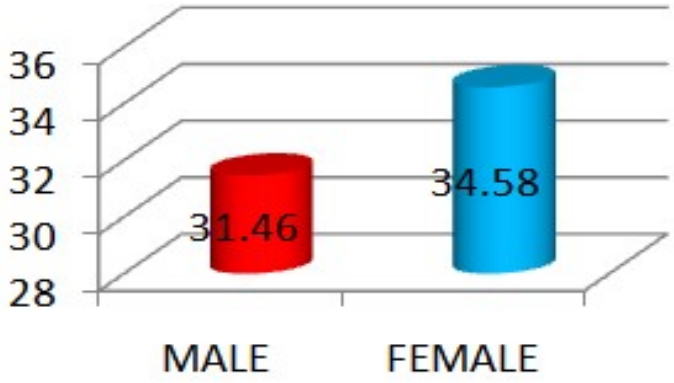

Figure 5: Mean Scores for Government Senior Secondary School Male and Female Teachers on Commitment to Achieve Excellence

From the above Analysis, it may be Interpreted that:

The male and female government senior secondary school teachers differ from each other on the level of commitment to achieve excellence.

H_{06}: There is no significant difference between commitment to Basic Human Values of male and female government senior secondary schools teachers.

The mean scores of commitment to basic human values of male and female government senior secondary school teachers along with number, S.D., SE_{DM}, df and t-value are given in Table 6 below:

Table 6

Variable	Gender		SE_{DM}	df	t-value
	Male (N=50)	Female (N=50)	0.840	98	0.35
Commitment to Basic Values	Mean=34.80	Mean=35.16			
	S.D.=4.495	S.D.=3.887			

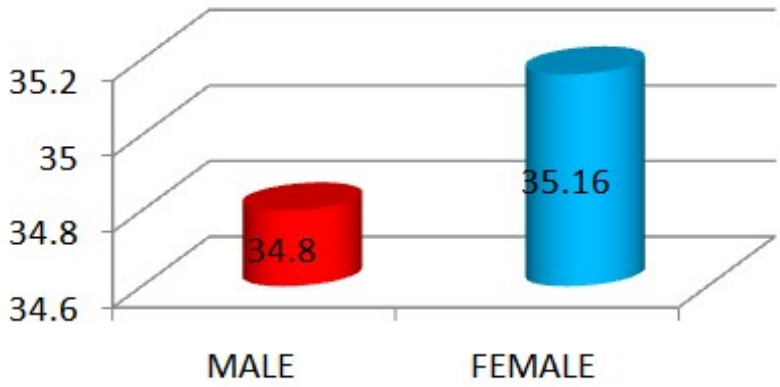

Figure 6: Mean Scores for Government Senior Secondary School Male and Female Teachers on Commitment to Basic Human Values

CONCLUSIONS

On the Bases of the Results of the Study, Following Conclusions have been Drawn.

- There is no significant difference in the professional commitment scores of government senior secondary school teachers at two levels of gender i.e., male and female. The male and female government senior secondary school teachers do not differ from each other on the level of professional commitment.
- There is no significant difference in the commitment to learner scores of government senior secondary school teachers at two levels of gender i.e., male and female. The male and female government senior secondary school teachers do not differ from each other on the level of commitment to the learner.
- There is no significant difference in the commitment to the society scores of government senior secondary school teachers at two levels of gender i.e., male and female. The male and female government senior secondary school teachers do not differ from each other on level of commitment to the society.
- There is no significant difference in the commitment to the profession scores of government senior secondary school teachers at two levels of gender i.e., male and female. The male and female government senior secondary school teachers do not differ from each other on the level of commitment to the profession.
- There is significant difference in the commitment to achieve excellence scores of government senior secondary school teachers at two levels of gender i.e., male and female. The male and female government senior secondary school teachers do differ from each other on the level of commitment to achieve excellence.
- There is no significant difference in the commitment to basic human values scores of government senior secondary school teachers at two levels of gender i.e., male and female. The male and female government senior secondary school teachers do not differ from each other on the level of commitment to basic values.

STUDY AND COMPARE ENVIRONMENTAL AWARENESS OF SENIOR SECONDARY SCHOOL STUDENTS IN RELATION TO GENDER AND TYPE OF SCHOOL IN SHIMLA DISTRICT OF HIMACHAL PRADESH

Dr Chaman Lal
Assistant Professor,
Department of Education,
ICDEOL,
Himachal Pradesh University, Shimla-171005, India.

Abstract

The present study aims to study the level of environmental awareness of senior secondary school students in relation to gender and type of school in Shimla district of himachal Pradesh. The sample of the study comprised of 160, 11th and 12th Class students studying in different government and private senior secondary schools of Shimla district of Himachal Pradesh. 80 male and 80 female students were selected from the each selected school through systematic random sampling technique. Environmental awareness is taken as the scores obtained by the senior secondary school students on environmental awareness. "Environmental awareness scale for students" by Taj, Haseen (1981) was used to collect the data for the purpose. The data were analyzed using descriptive (Mean, Standard Deviations) and inferential ('t'- test) statistics. The findings of the present study revealed that there is no significant difference in environmental awareness of senior secondary school students across gender i.e. boys and girls. From analysis of result, it was found that there were significant differences in the environmental awareness of senior secondary school students at two levels of type of school i.e. government and private.

Keywords: *Environmental Awareness, Senior Secondary School Students, Gender, and Type of School.*

Introduction

The origin of life on the earth was decided and controlled with a set of environmental condition. Through these past millions of years, for the sustenance of life environment has played a major role, and it will continue to be so for all the times (Gouri, 2007). Man, ever since appeared on the surface of earth became a part of his environment. Awareness of his physical and biological environment was not something new for him. He observed and enjoyed nature. Today he is living in a world of crisis. i.e. environmental pollution. Man thought himself to be a master, not slave and he started utilizing his environmental resources to meet his ever-increasing wants for a better living. But for satisfying our desire we exploit our natural as well as

artificial environment. Pareek & Kumar (1998) conducted a study of environmental awareness among secondary school students. Their result shows that 40 percent students showed poor environmental awareness and the remaining 60 percent students were well versed with their surroundings and had appreciable good to excellent knowledge about various environmental issues. Rajinder and Manpreet (2009) conducted a survey on environmental awareness of secondary and senior secondary students. Result shows that rural students and urban students studying in government schools were still not aware of the various threats of environment, natural calamities and most of the government , rural schools did not possess basic literature related to environment. Poonam (2012) compare the environmental awareness between Govt. and Private Secondary School Students along with the different dimensions. Found that there exists a significant difference between government and private secondary school students on environmental awareness and its components. Dhanya and Pankajam (2017) assessed the environmental awareness among secondary school students. The investigator adopted survey method to study the environmental awareness among secondary school students. For this study a sample of 300 secondary students. Their result shows that there is no significant environmental awareness among secondary school students. Rathee, Neeru and Thakran, Suman (2017) examine the Environmental Awareness among secondary school students of Rohtak district of Haryana. Environmental Awareness Ability Measures (EAAM) by Praveen Jha was used on sample of 80 students to measure environmental awareness. Their result shows that there exists no significant difference in environmental awareness of rural and urban secondary school students and also found that there exists no significant difference in environmental awareness of male and female secondary school students. Environment, Environmental Awareness, Secondary school students. Mittu (2019) studies the attitude of secondary school students towards environmental pollution with respect to locale and type of school. To study the attitude of secondary school students towards environmental pollution descriptive survey method has used as research method. A sample of 200 secondary school students. Their result shows that there exists statistical significant difference in attitude of urban and rural secondary school students towards environmental pollution; and there exists statistical significant difference in attitude of private and government secondary school students towards environmental pollution.

Objectives:

1. To study and compare the environmental awareness among male and female senior secondary school students.

2. To study and compare the environmental awareness among government and private senior secondary school students.

Hypotheses:

H_{01}: There will be no significant difference between environmental awareness of boys and girls senior secondary school students.

H_{02}: There will be no significant difference between environmental awareness of government and private senior secondary school students

Tools:

Environmental Awareness Scale developed by by Dr. Haseen Taj (1981) was used to assess the environmental awareness.

Methodology:

To achieve the objectives effectively the descriptive survey research method was followed.

Sampling:

In the present study, only one district namely Shimla out of the twelve districts of Himachal Pradesh was selected randomly by the draw of lots. From the selected District, only 10 schools were taken on the basis of convenience. However, while choosing the schools it was observed that they are well distributed in the District, are situated at a considerable distance from each other, represent boys and girls. The investigator selected five government and five private senior secondary schools. Boys, girls were selected from the each selected school consisting of studying in 11^{th} and 12^{th} class through systematic random sampling technique. The sample of present study consisted of 160.

Statistical Technique :

The scores obtained were subject to statistical treatment using proper statistical techniques. For this purpose Mean, Standard Deviation, t- test, was used.

Variables: (i) Independent Variables:

1. Gender: Gender refers to the male and female students.

2. Type of School: Students who are studying in 11th and 12th class of government and private senior secondary school students of Shimla district of Himachal Pradesh.

(ii) Dependent Variable: Environmental Awareness.

Environmental awareness is taken as the scores obtained by the senior secondary school students on Environmental awareness Scale developed by Taj, Haseen (1981).

Results and Discussion:

H_{01}: There will be no significant difference between environmental awareness of boys and girls senior secondary school students.

The mean scores of environmental awareness of boys and girls along with number, S.D., SE_{DM}, df and t- value are given in table 1

TABLE 1

Gender Wise Difference in environmental awareness of boys and girls senior secondary school students

Gender			SE DM	df	t-Value
Variable	Boys (N=80)	Girls (N=80)	1.284	158	0.974
	Mean=84.01	Mean=82.76			
Environmental Awareness	S.D.=8.39	S.D.=7.83			

Table 1 shows that the computed value of t- value for studying the significance of the difference between means of environmental awareness senior secondary school boys and girls come out to be 0.974, which is non – significant at 0.05 level of significance for 158 df.

This indicates that there is no significant difference in the environmental awareness of senior secondary school students at two levels of gender i.e. boys and girls.

Hence the hypothesis (1) as stated above: **"There will be no significant difference between environmental awareness of boys and girls senior secondary school students"** was accepted.

From Table 1, it can be seen that the means of environmental awareness of senior secondary school boys and girls are 84.01 and 82.76 respectively.

Figure 1

Mean scores for senior secondary school boys and girls on environmental awareness

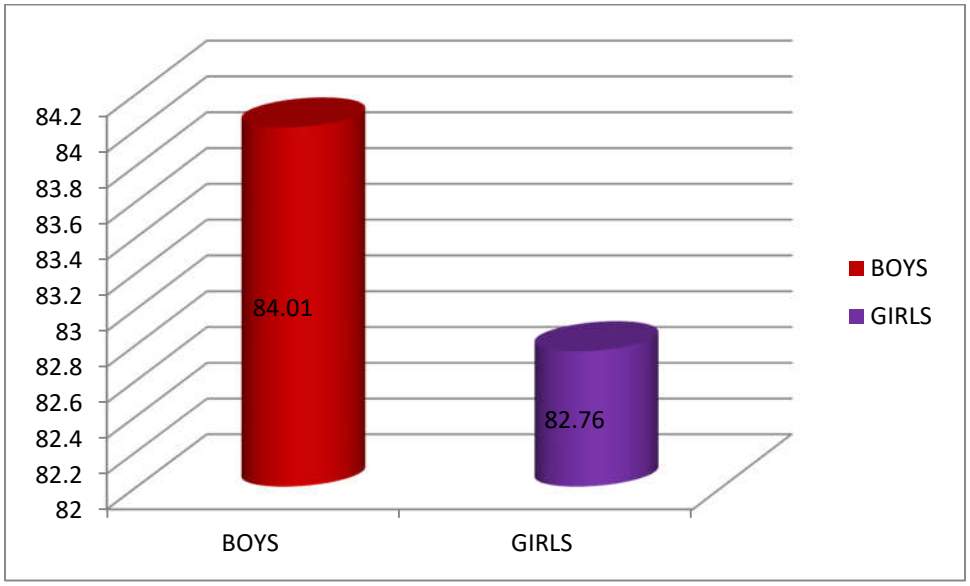

Figure 1 is also indicating of the fact that the mean scores of environmental awareness of senior secondary school boys and girls do not differ significantly.

From the above analysis, it may be interpreted that:

The senior secondary school boys and girls do not differ from each other on the environmental awareness. But, it is evident that the boys (84.01) are more aware about environmental awareness than girls (82.76) .

H_{02}: There will be no significant difference between environmental awareness of government and private senior secondary school students.

The mean scores of environmental awareness of type of school i.e., government and private high school students along with number, S.D., SE_{DM}, df and t-value are given in the table 2 below:

Table 2

School wise difference in environmental awareness of government and private senior secondary school students

Type of School			SE_{DM}	df	t-Value
Variable	Government (N=80)	Private (N=80)	1.330	158	*2.359
	Mean=85.90	Mean=82.76			
Environmental Awareness	S.D.=8.94	S.D.=7.83			

* Significant at 0.05 level of significance for 158 df.

Table 2 shows that the computed value of t- value for studying the significance of the difference between means of environmental awareness of government senior secondary school and private senior secondary school come out to be 2.359, which is significant at 0.05 level of significance for 158 df.

This indicates that there is significant difference in the environmental awareness of senior secondary school students at two levels of Type of school i.e. government and private.

Hence the hypothesis (2) as stated above: "**There will be no significant difference between environmental awareness of government and private senior secondary school students"** was not accepted.

From Table 2, it can be seen that the means of environmental awareness of government senior secondary school students and private senior secondary school students are 85.90 and 82.76 respectively.

Figure 2

Mean scores for government senior secondary school students and private senior secondary school students on environmental awareness

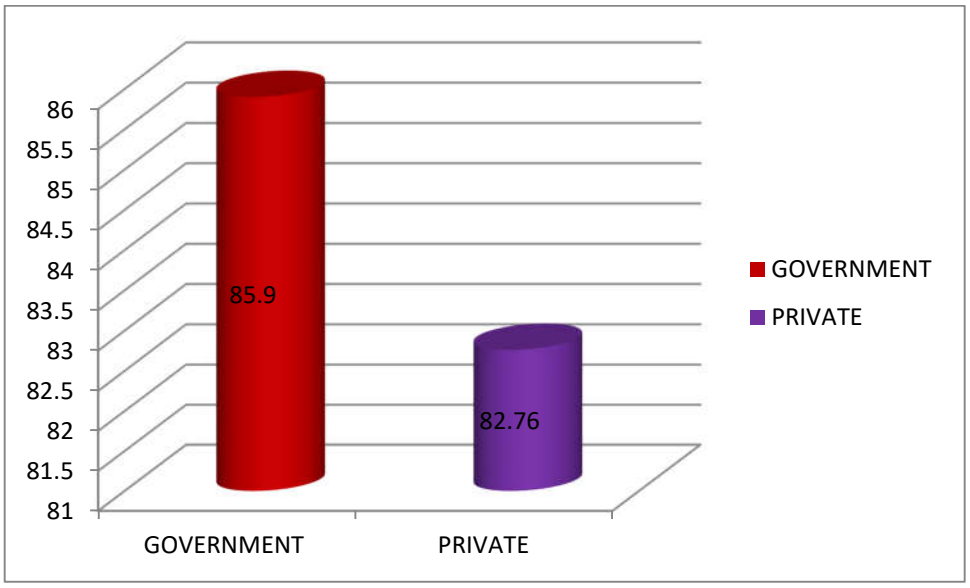

Figure 2 is also indicating of the fact that the mean scores of environmental awareness government senior secondary school students and private senior secondary school students do differ significantly.

From the above analysis, it may be interpreted that:

The government senior secondary school students and private senior secondary school students do differ from each other on the environmental awareness. It is evident that the government senior secondary school students (85.90) more aware about environmental awareness than private senior secondary school students (82.76).

Conclusions:

On the bases of the results of the study, following conclusions have been drawn.

- There is no significant difference in the environmental awareness of senior secondary school students at two levels of gender i.e. boys and girls. The mean scores of environmental awareness of senior secondary school boys and girls do not differ significantly.
- There is significant difference in the environmental awareness of senior secondary school students at two levels of Type of school i.e. government and private. The mean scores of environmental awareness government senior secondary school students and private senior secondary school students do differ significantly

Teachers' Perception towards National School Lunch Programme (Mid-Day Meal Scheme) In District Kangra of Himachal Pradesh at Elementary Level

Chaman Lal
Assistant Professor, Department of Education, ICDEOL, Himachal Pradesh University, Shimla-171005, India

Abstract

The purpose of this study was to study the teacher's perception towards national school lunch programme (mid-day meal scheme) in district kangra of Himachal Pradesh at elementary level. A sample of 100 teachers, which included 74 female and 26 male teachers, were selected using purposive sampling technique. Teachers' perceptions towards national school lunch programme (Mid-Day Meal Scheme) studied by using questionnaire. The information collected through teacher's questionnaire, was put to percentage analysis to give meaning to data. This study will be very helpful to the teachers, policy makers and all others who are concerned with the mission to develop elementary education and reach the goal of universalization of Elementary Education in India.

KEYWORDS: Teachers Perception, National School Lunch Programme, MDM, Elementary level Himachal Pradesh.

Introduction

The Mid day Meal Scheme was launched by Government of India with the objective of giving a boost to universalisation of education by increasing enrollment, attendance and retention and simultaneously improving the nutritional status of students in primary/upper primary classes. Mid Day Meal in schools has had a long history in India. In 1925, a Mid Day Meal Programme was introduced for disadvantaged children in Madras Municipal Corporation. Levinger (1994) the impact of School Feeding Programmes (SFPs); National Council of Educational Research and Training (2000) improve the enrolment and retention of girls in schools; Grewal et al. (2004) Nutritional Status of Rural Punjabi Children; Rana (2005) Utilization of Resources at Primary Stage; De et al. (2005) Mid Day Meal Scheme (MDMS) ; Kumar (2005) Effectiveness of National Programme of Nutritional Support to Primary Education (Mid Day Meal scheme); Gangadharan (2006) Mid Day Meal Scheme (MDMS) (termed as noon-meal scheme in Kerala); Gupta (2006) Effectiveness of National Programme of Nutritional Support to Primary Education (Mid Day Meal scheme); Deodhar (2007) Mid Day Meal Scheme; Hadi (2009) Mid Day Meal Schemes; Sharma et al. (2010) Impact of wholesome mid day meal (MDM) program; Mehta and Kour (2012) The nutritional contribution of MDM to the actual daily dietary intake of children; Paul and Mondal (2012) Impact of Mid-day Meal Programme on Academic Performance of Students; Kales (2014) Mid-day meal scheme; Chhabra and Rao (2014) The Challenges and interventions in meeting delivery of nutrition in mid-day meal scheme; Grover and Kaur (2014) examine the execution of Mid Day Meal Scheme; Lalita (2016) examine the nutritional contribution of MDM norms at Upper primary Classes; Jayalakshmi and Jissa

(2017) The Nutritional status of Mid-Day Meal programme beneficiaries and Samal and Dehury (2017) Family Impact Analysis of Mid-day Meal (MDM) Scheme in India with Special Focus on Child Education and Nutrition.

Need:

Almost all of the above studies were conducted on enrolment and retention, utilization of Resources at Primary Stage, effectiveness of national programme of nutritional support to primary education (Mid Day Meal scheme) and no efforts have so far been to see the teachers perception towards national school lunch programme (mid-day meal scheme). So, to study the teachers perception at elementary level this study was selected.

OBJECTIVES:

1. To study teachers' perceptions towards national programme of nutritional support to elementary education in Kangra district of Himachal Pradesh with regard to achievement of objectives of mid day meal scheme.

2. To study teachers' perceptions towards national programme of nutritional support to elementary education in Kangra district of Himachal Pradesh with regard to quality of meal provided under mid day meal scheme and its preparation.

3. To study teachers' perceptions towards national programme of nutritional support to elementary education in Kangra district of Himachal Pradesh with regard to perceived effect of value inclination and development of hygienic habits among students.

4. To study teachers' perceptions towards national programme of nutritional support to elementary education in Kangra District of Himachal Pradesh with regarding their own role.

5. To study teachers' perceptions towards national programme of nutritional Support to elementary education in Kangra District of Himachal Pradesh with regard to perceived effect of mid day meal scheme with respect to some miscellaneous factors.

Tools:

To conduct the study effectively a questionnaire was developed by the researcher for the purpose of obtaining responses from the teachers. This questionnaire consisted of three parts in which Part-I is introductory, Parts-II consisted of closed type 30 items concerning all the important aspect of Mid-Day Meal Scheme and Parts-III consisted of open ended questions in which teachers were allowed to write down freely the problems related to implementation of Mid-Day Meal Scheme and also the suggestions for its improvements and making the scheme more effective.

Methodology:

To achieve the objectives of the present study effectively survey technique under descriptive method of research was used.

Sampling:

A sample of 100 Government primary school teachers both 26 males and 74 females was selected by using purposive sampling procedures.

Statistical Technique:

The data collected through questionnaire was analyzed. In the study percentage was used for the interpretation of data. The percentage means that the results are calculated and discussed from per 100 in order to understand the results in a better manner.

Results and Discussion:

Major Findings of the Study based on Teachers' Perceptions towards national school lunch programme (mid-day meal scheme) in district Kangra of Himachal Pradesh at elementary level

- 92% government elementary school teachers were of the view that Mid Day Meal Scheme is helping to achieve the goals of Universalization of Elementary' Education and 53% teachers responded that there is no increase in enrolment at all.
- Maximum 59% teachers responded that there is no increase in the attendance of students as a result of Mid Day Meal Scheme and 80% of the teachers are against the reduction in number of dropouts.
- Improvement in learning levels as per the reviews maximum number of 80% teachers responded that there is very little improvement in learning levels and 49% government school teachers were of the view that a very little improvement in nutritional status by the Mid Day Meal Scheme.
- 98% government elementary school teachers were of view that Mid Day Meal scheme is helping to balanced and nutritious diet and 90% school teachers are in favour whereas rest 10% teachers are of the view that Mid Day Meal scheme is helping to some extent only.
- 98% government school teachers are in favour that the quality of food grains (rice) provided by F.C.I. is good in quality and 99% teachers are with the view that all the precautions has been adopted by the staff while preparing Mid Day Meal.
- 98% teachers are in favour of inculcation of values through this Mid Day Meal scheme and as per the statistic 100% teachers are in favour of scheme to eradicate discrimination.
- Sitting arrangement of children from different castes as per the result 100% teachers are in favour of sitting together children of all caste.
- 100% teachers of the government school supported the idea of development of hygiene habits through this Mid Day Meal and 82% teachers are not taking the Mid Day Meal as a problem whereas 14% teachers are taking it as a problem.

- 91% teachers responded that they should be free from the responsibility of Mid Day Meal Scheme and 77% teachers are no problem of motivation for proper implementation of Mid Day Meal Scheme.
- 88% teachers that implementation of various schemes like Mid Day Meal . Sarav Shiksha Abhiyan etc. scheme is primary concern in government elementary schools and 82% teachers were in favour of Mid Day Meal Scheme in Himachal Pradesh they realized its need in the H.P.
- 91% teachers were that Mid Day Meal Scheme is not a wastes the teaching-learning time of teachers and students and 95% teachers were in favour of providing hot cooked mid day meal daily to the students in the school.
- 97% teachers were that after the launching of cooked Mid Day Meal Scheme there is inspection by parents/guardian of children in the context to this scheme and 63% teachers have expressed that students do not feel sleepy after taking mid day meal.
- 100% teachers perceived that the meal, which is provided to the children under Mid Day Meal Scheme is liked by the students and 100% teachers responded that there is no help received on the part of local people for the implementation of Mid Day Meal Scheme.

Major Findings of the Study based on Problems Related to Mid-Day Meal Scheme in district Kangra of Himachal Pradesh at elementary level

- In district Kangra mostly there is no separate kitchen in the elementary schools for preparation of mid day meal and the preparation of meals in the same surrounding near the classes disturb the students and teachers.
- The attention of students is distracted due to this inappropriate distance of kitchen from classrooms.
- Proper storage provisions are not available in most of the elementary schools.
- There are no safety provisions in case of any accident like fire, leakage of gas cylinder etc.
- The grant for National School Lunch Programme (Mid Day Meal) is not made available timely by the concerned department dealing with Mid Day Meal Scheme.
- There is no participation and help received from the local community for the implementation of National school lunch programme (Mid-day meal).

Major Findings of the Study based on Suggestions for Making the Scheme More Effective in district Kangra of Himachal Pradesh at elementary level

1. Elementary School Teachers should be relieved of all National School Lunch Programme (Mid Day Meal) responsibilities, except supervising the preparation and distribution of mid day meal.

2. Separate kitchen-cum- store should be made available to all government elementary schools and it should be at an appropriate distance from the classrooms.

3. The National School Lunch Programme (Mid Day Meal) should be implemented in such a manner that in any circumstances it does not adversely affect teaching-learning activities in schools.

4. The grant for National School Lunch Programme (Mid Day Meal) should be increased by taking into consideration the inflation rate and should be provided monthly well in time.

5. Encourage the participation of the local school management committee in the implementation of National School Lunch Programme (Mid Day Meal).

ART & AESTHETICS IN INDIAN ART

Sangram Singh

Assistant Professor, Art History (Deptt. of Visual Arts) Himachal Pradesh University, Shimla, H.P, Indi

"This is an art, which does mend nature, change it rather, but the art itself is nature ..."

Shakespear

We have examples of pre-historic art, but they are rare, and the context of their production and use is not very clear, so we ca little more than guess at the aesthetic doctrines that guided their production and interpretation.

India is a land of very rich diversity. Various culture, religions or languages have built up our country and bound each other in th inspirations of various different customs and beliefs, arts, way of life and the India's natural features from study deserts to tropic rainforest & Himalayan snows, is extremely huge, different types of its nature & every region has its own style and pattern of art culture & heritage that's attract the every people of the world.[1]

The notion of traditional concept in art is flourished since time immemorial, when man assumed to create beauty out of his sense and enjoyed pleasure out of his delight. "Any subject is available for beauty if it is treated beautifully". It is clear concept aesthetic, richness of art has nothing to do with the expression of its subjects many times. It is prevalent everywhere, either it assumed out of tradition or out of contemporary trends. A creative work of art is a form of the existence of art, a system beautiful artistic mages, which add up to a single notion of expression. All creations of art, to whatever expression tradition contemporary style they belong. Express creative and permanent values, if they have the breath & quality of life, they are p excellent in their attractiveness & charisma. Therefore it is possible for the onlooker or visualiser to enjoy a concept designed o of traditional forms and thoughts and figurative or non-figurative painting (arts) with abstract appeal contemporary aesthet trends.[2]

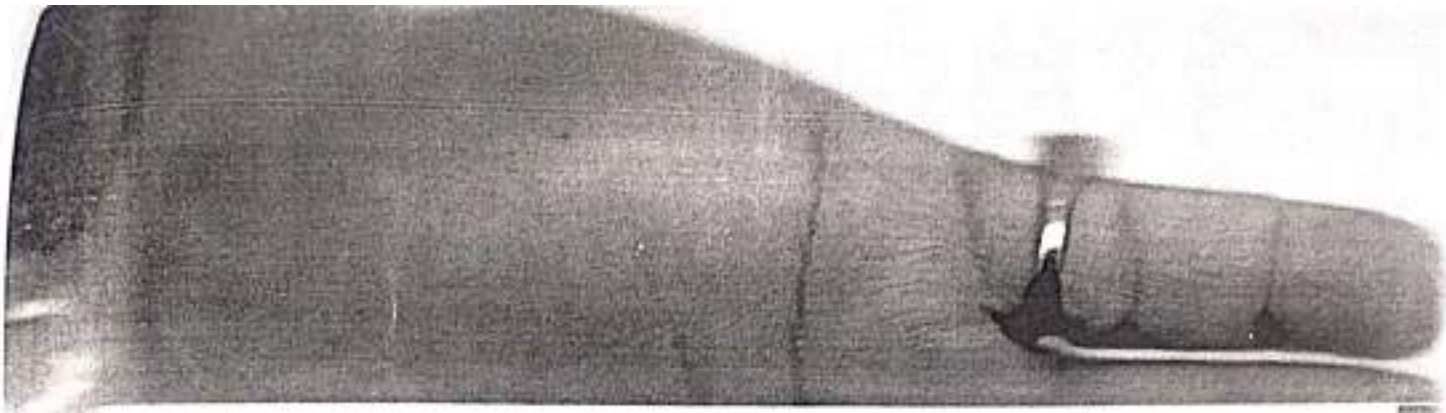
Art is not stone, brick, words or tricks of trade, it is above all the reflection of the artists soul, the visible expressions of the force which drive him" (Gosland, 1965, 254-255).

Art helps in spiritual upliftment, as we know that Indian art is derived from the philosophy & not from the external beauty. Truth goodness and beauty is the base of all the art. God is described the most beautiful in Indian theory and art. So art is more spiritu in nature. It is also considered essential for spiritual upliftment. An artist feels oneness with god and with nature through art.

Art helps in the finding the truth, it is art which helps person to found reality of the world or life. Art pieces are the result of a artists independent thinking, truthfulness and knowledge clear and strong. Art makes a person socially reliable & self-dependen In the realm of art, the manual work of great importance but in one society it was seen as degraded job, but nowadays, an arti enjoys an covalent status as a man with highly designated.

Art develops aesthetic sense, art helps in the development of aesthetic sense in human being, with this sense a person is able t appreciate or criticize the hidden civility behind the art piece that is architecture, sculpture, painting & many more.

Philosophical aesthetics not only has to speak about art and produce judgements about art works but also has to give a definitio of what art is. Art is an autonomous entity for philosophy, because art deals with the senses (i.e. the etymology of aesthetics) an art is such free of any moral or political purpose.



Indian art evolved with an emphasis on inducing special spiritual or philosophical states in the audience, or with representing ther symbolically. According to Kapila Vatsyayan. "Classical Indian architecture, sculpture, painting, literature (*Kāvya*), music, an dancing evolved their own rules conditioned by their respective media, but they shared with one another not only the underlyin spiritual beliefs of the Indian religio-philosophic mind, but also the procedures by which the relationships of the symbol and th spiritual states were worked out in detail."

Of particular concern to Indian drama and literature is the term *rasa* referring generally to the emotional flavors crafted into th work by the writer and relished by a 'sensitive spectator' or *sahridaya*. Poets like Kālidāsa were attentive to rasa, which blossome into a fully developed aesthetic system. Even in contemporary India the term *rasa* denoting "flavor" is used colloquially t describe the aesthetic experiences in films; "masala mix" describes popular Hindi cinema films which serve a balanced emotiona meal, savored as rasa by the spectator.

Rasa theory blossoms beginning with the Sanskrit text Nāṭyashāstra (*nāṭya* meaning "drama" and *shāstra* meaning "science of"), work attributed to Bharata Muni where the Gods declare that drama is the 'Fifth Veda' because it is suitable for the degenerate ag as the best form of religious instruction. While the date of composition varies wildly among scholars, ranging from the era o Plato and Aristotle to the seventh century CE. The Nāṭyashāstra presents the aesthetic concepts of rasas and their associated bhāva in Chapters Six and Seven respectively, which appear to be independent of the work as a whole. Eight rasas and associated bhāva are named and their enjoyment is likened to savoring a meal. rasa is the enjoyment of flavors that arise from the peopc

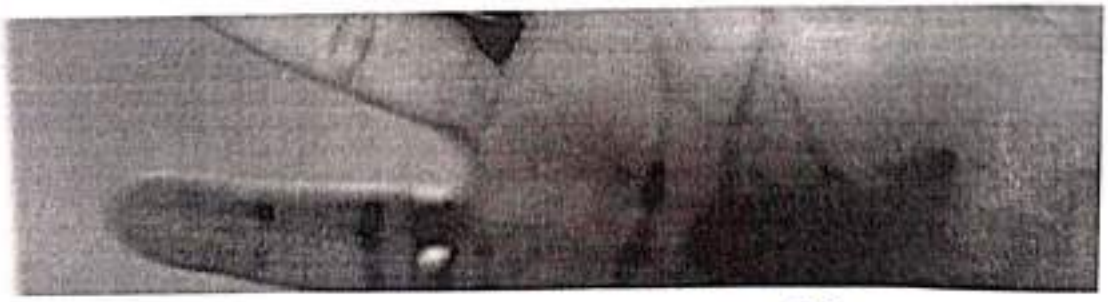
शोध-आलेख सार

मानव सौन्दर्य के प्रति सदैव सजग रहा है, आदिकाल से जब भी मानव ने रचना की, सर्वप्रथम जाने पहचाने रूपों की ही रचना की, सदियां एवं शताब्दियां बीत गयी लेकिन रूपों की रचना नहीं रूकी। उसने आस पास की दुनियां में ही सौन्दर्य की तलाश की तथा अपने वातावरण को सौन्दर्यमय बनाना। आदि मानव के सौन्दर्य का स्रोत जंगली जानवर एवं उसकी अपनी स्वत: जरूरत थी ।

मुख्य-शब्द : कला, सौन्दर्य, वातावरण, आनन्द ।

Beauty is that wine which intoxicates both the holder & beholder.

- Shakes



मानव इतिहास का प्रथम अध्याय कला के द्वारा ही लिखा गया। जब मानव का भाषा तक ज्ञान नहीं था, उसने तब भी चित्र बनाए। उसने अपनी इच्छाओं को व्यक्त करने के लिए चित्रों एवं प्रतीकों का लिया। आदि मानव ने जीवन के संघर्ष, हर्ष एवं संताप तथा इच्छाओं को कला रूप में धारण करके नि में अमरत्व प्राप्त कर लिया।

मानव सौन्दर्य के प्रति सदैव सजग रहा है, आदिकाल से जब भी मानव ने रचना की, सर्वप्रथ पहचाने रूपों की ही रचना की, सदियां एवं शताब्दियां बीत गयी लेकिन रूपों की रचना नहीं रूकी आस-पास की दुनियां में ही सौन्दर्य की तलाश की तथा अपने वातावरण को सौन्दर्यमय बनाना। आदि म सौन्दर्य का स्रोत जंगली जानवर एवं उसकी अपनी स्वत: जरूरत थी।

सौन्दर्य के लिए मानव सदैव पिपासु रहा है। कलाएं सौन्दर्य का स्रोत रही है। पाषाण काल से मानव द्वार कन्दराओं में जंगली पशुओं के चित्र और आखेट के दृश्य अगर आप देखें तो आपको किसी (कहने) पूछने और समझने की जरूरत नहीं पड़ेगी।

'सौन्दर्य एक भावना है। हम संसार में अनेक वस्तुएँ देखते है। इन वस्तुओं के हमारे मन पर जो पड़ते है उनमें से एक सुन्दरता का प्रभाव भी है। इस दृष्टि से हम वस्तुओं को सुन्दर कहते है। अनेक की सुन्दरता के अनुभव के आधार पर हम सभी वस्तुओं में निहित एक सामान्य सौन्दर्य गुण को कल्पि है। पर यह सौन्दर्य गुण रूप में कहीं भी उपलब्ध नहीं है। इसका कुछ अंश ही उपलब्ध होता है "सौन्दर्य" एक काल्पनिक प्रत्यय मात्र है जो वस्तुओं की सुन्दरता के आधार पर विकसित हुआ है।

सौन्दर्य के विषय में दो मत है : एक मत यह है कि सौन्दर्य वस्तु में निहित होता है। इस सौन्दर्य कहा जा सकता है। दूसरा अभौतिक अथवा मानसिक सौन्दर्य है। इन दोनों भेदों को क्रमश: (objective) तथा आत्मगत (subjective) सौन्दर्य भी कहा जा सकता है।

Art as a Discipline

Dr. Sangram Singh
Assistant Professor
Art History (Deptt. of Visual Arts)
Himachal Pradesh University
Shimla (Himachal Pradesh)

Abstract

Art is a phenomenon from which people perceive the work) aesthetically. Art can be recognized in every moment of a human life. Humans can see it in a morning breakfast plate or in their clothes (Brommer and Horn, 1985; as cited in: Mercin and Alakus, 2007). Since the evolution of mankind, art has been defined in various ways. It would be useful to touch some definitions of art to elicit further understanding of this discourse. Schiller defines art as a "path to freedom and self-actuality". For Read, art "provides a governing mechanism for life; without art, all living creatures lose their balance. They are faced with social and spiritual confusion" (as cited in Artut, 2001: 19). Art helps individuals to balance and organize their emotional world.

Key-Words : Literature, Music, Culture.

"Literature, music, and the arts, all are necessary for the development and flowering of a student to form an integrated total personality" - Rabindraitath Tagore

In a globalized world, art is becoming like any other commodity or product exported and imported worldwide. Small artists benefit from a larger platform to sell their works and, if successful, they can reach anyone, anywhere in the world. Larger corporations that deal in the buying and selling of artwork are weathering the economic storm innovating with the Internet to expand their marketplace. The Internet is equalizing the art world allowing anyone anywhere to buy and view pieces; no longer is the art world constrained by location.

Not all of the impacts are positive, as local cultures suffer when their art treasures leave their borders and the local people are not able to see these pieces in accessible, local museums and galleries. Others benefit as they learn about other cultures and societies through seeing the artwork. One thing is certain; artwork of high quality is still a good investment.

Fine Arts, Applied Arts and Crafts, According to Herbert Read, an eminent art historian:

The actual phrases, 'Fine Art' and 'Applied Art' may be largely the creation of the machine age, but the underlying distinction is a product of the Renaissance. Before the Renaissance, the so-called Fine Arts (architecture sculpture, painting, music and poetry) were not explicitly named nor distinctly recognised, as a separate class; even in classical Greece there was only one word 'techne', for both kinds of art... The use of the term 'Fine Arts' is closely bound up with the history of academics of art, which is usually academics of 'Fine Art'. The first use of the phrase in English recorded by the Oxford English Dictionary is in 1767. The Royal Academy in England was founded in 1768. It was, of course, preceded by similar academies abroad—at Vienna and

About the Book

It is essential to emphasize and understand gender equality in the 21st Century. Even in the developed countries where females legislatively have equal rights with males, discrimination also appears prominently. The best way of ensuring equality is to start living and asking ourselves what each one of us can do to contribute to an equal society where individuals, regardless of any external attributes, can live and thrive without any distinction.

The present volume titled "Gender Issues and Discourse in 21st Century: Inter and Trans Disciplinary Perspectives" is the outcome of selected research papers from the International Interdisciplinary Webinar, Organized by IQAC, Kanya Mahavidyalaya, Guwahti, Assam and IQAC, Bilasipara College, Bilasipara, Dhubri, Assam on the subject, Gender Issues and Discourse in 21st Century as a follow up of the UGC Directive.

About the Editor

Guptajit Pathak, IQAC Co-ordinator and Assistant Professor, Department of History, Kanya Mahavidyalaya (Affiliated to Gauhati University), Guwahati, Assam, India is a bilingual contemporary poet, story writer, script writer, lyrics writer, author, translator, reviewer, resource person as well as a prominent editor. His poems, songs, stories, articles, reviews and research papers are published in many regional, national and international journals of repute & comes and translated into different languages. Mr. Pathak has bagged the honour of "Outstanding Researcher in History" Award for his contribution in historical research conferred by Global Outreach Research & Education Association in the 3rd Global Outreach Research and Education Summit on 31st July, 2019 at Bengaluru. He has acted as a resource person in National Seminar titled "Visionary Emperor Anna Bhau Sathe" on 1st & 2nd May, 2022 at Arts & Commerce College (Affiliated to University of Mumbai), Phondaghat, Maharashtra, India. At present, he is a Doctoral Research Scholar in the Department of History, Assam University (Central), Silchar, India and the convener of National and International Workshops, Seminars, and Conferences and is working as a Section Editor of INSIGHT: An International Multilingual Journal for Arts and Humanities, Peer Reviewed and Refereed, ISSN: 2582-6832, University Research Publications, Ernakulam, Kerala, India.

Abstract

The Indian republic had started its journey with the ideals of liberty, equality and gender justice, making the Indian women feel secure with promises of survival. By thinking about the arc of women's studies, feminist thinking and gender studies, it is quite spontaneous that this gender studies has always been an interdisciplinary field of study. The article aims to open up debate over what the constructive possibilities are of a focus upon gender, and what the relationship is between theory and activism. Society has fixed standards and rules to validate both masculine and feminine identities. We are expected to perform these individual roles and reproduce the very conditions that perpetuate it. Gender studies, therefore, is a study of production, reproduction, and resistance to norms that produce inequality between men and women.

Gender facilitates greater understanding of social relations and divisions as well as describing them. A focus on gender generates different and often innovative methodologies as well as a plurality of theoretical approaches, which are directed at making sense of inequalities and at celebrating the experiences and contributions of hitherto marginalized groups. Gender studies offer scope for innovation in methods as well as having established a tradition of mixed methods in response to social change. The development of gender studies as an interdisciplinary field retains the dynamism of different and often very productive conversations, across generations, empirically in terms of lived experience and theoretically through intellectual dialogues. I wish to quote here, "Men Are from Mars and Women Are from Venus," It means that most relationship problems occur between men & women due to the psychological differences. Hence they both are from different planets. In nutshell, this article encompasses the gender studies chronology along with societal expectations vis-à-vis to the present scenario of gender complexities and inequality in India.

Keywords: *Feminist, Interdisciplinary, Resistance, Inequalities, Social Change.*

Introduction

Women's studies have provided new and improved perspectives on major themes – women's issues, gender, sexuality, caste to name a few – that have a significant impact and role to play in society. It has also long been a part of the larger feminist movement in India. Since long, Women's Studies has been referred to as "multidisciplinary, intradisciplinary, neo-disciplinary, trans disciplinary, cross-disciplinary, critical interdisciplinary, intersectional, intertextual, and pluri-disciplinary" (Ginsberg, 2008, p. 13). The proponents, favouring Women's Studies as a discipline, argue that Women's Studies programs will never receive the time or resources they deserve if faculty members have a primary obligation to serve another department and if program directors must constantly negotiate for consistent degree requirements and sufficient funding (Schmitz, Butler, Rosenfelt, & Guy-Sheftall, 1995). A second debate that shaped the evolution of Women's Studies involved differing opinions about the primary goal of women's efforts in changing the higher education curriculum. Some argued that the ultimate goal should be transformative curriculum change and that women should focus on revising the traditional male-dominated curriculum.

Gender has become the preferred term for referring to social difference, partly because of its wider scope. Women's studies and feminism not only put gender into the agenda but also offered new ways of understanding gender as a social, cultural and political process and structure through which societies are organized. Although many earlier accounts suggested a division between sex as anatomical and biological and gender as the social and cultural manifestations of sex, there are strong arguments for sex as shaped by cultural forces and made through social practices. One of Butler's major contributions to gender studies and to the study of social relations and the operation of power across disciplines is her critique of sex and sexuality as well as gender as performative. Sex, as much as gender, is produced by the processes and practices through which it is defined and classified. Butler's (1990,1993) work has generated questions and debates about the materiality of sex, the fluidity and the transgressive properties of sex, gender and sexuality. Debates within gender studies about the nature of sex and gender invoke the need for interdisciplinary approaches as well as drawing upon a range of disciplines and theoretical frameworks.

To radically change the existing systems of oppression and discrimination, some worried that the movement would lose its political mission if it had to conform to the preexisting patriarchal structure of higher education.

Women Studies Vs. Gender Studies

Despite this success, Women's Studies practitioners continued to struggle with the debates from previous decades, such as what the primary agenda of Women's Studies programs should be, how to define women, and where Women's Studies belonged in relation to the overall higher education curriculum. A new debate began in the 1990s and early 21st century on whether the programs should still have Women's Studies as a title. Some within the field have proposed to changing the name from Women's Studies to Gender Studies. By broadening

the title, the field could appear more inclusive to different gender and sexual identities. Also, proponents of a broader title argue that a title focused solely on women will perpetuate the idea that men are the norm and that women can only be the focus of study in special programs.

Although the debate over the appropriate placement of Women's Studies programs within the structure of higher education continues, the ultimate focus should be ensuring that these programs exist in the future. Students of all genders should have a community within their academic institution that encourages them to reflect on their personal experiences, values their individual perspectives, fosters an understanding of diversity and social justice issues. Women's Studies programs have given women a voice in the society, and until all forms of oppression have ended, it is essential for that voice to be heard.

Gender studies have incorporated studies of masculinity (Connell, [1995] 2005, 2014) and interdisciplinary approaches have stressed the possibilities of transformation of traditional stereotypical masculinities (Hooks, 2004). Gender is not just about women, as has so often been the case in the promotion of policies of equal opportunities in neo-liberal democracies in recent times. Men are gendered too and the interrogation of hegemonic masculinity raises challenges to power structures in a vast range of social, economic, cultural and political systems where traditional, seemingly gender neutral norms are called into question. Gender is both an empirical category and a theoretical conceptualization, which facilitates greater understanding of social relations and divisions as well as describing them.

Gender Studies as Interdisciplinary Approach

Interdisciplinary approaches also need to be necessitated through the exploration of some of the interrelationships between biology, genetics, bodies and social systems. Gender studies have been most creative and productive in embracing mathematics, science, psychology and technology to understand how sex and science and technology are enmeshed, for example, in Harraway's (1997) work on technoscience and Franklin's (2013) research on genetics.

Gender studies offer scope for innovation in methods as well as having established a tradition of mixed methods in response to social change. The development of gender studies as an interdisciplinary field retains the dynamism of different and often very productive conversations, across generations, empirically in terms of lived experience and theoretically through intellectual dialogues (Woodward and Woodward, 2009).

Gender studies also offer a means of exploring what is involved in interdisciplinary work and the relationship between multidisciplinary and trans disciplinary approaches, which emerge from interdisciplinary studies as an established field of enquiry with its own capacities and distinct features. Gender is itself a contested category an exploration of which creates new ways of thinking about the relationship and interdependence between gender and society. Gender is both an empirical category and a theoretical conceptualization, which facilitates greater understanding of social relations and divisions as well as describing them. A focus on

gender generates different and often innovative methodologies as well as a plurality of theoretical approaches, which are directed at making sense of inequalities and at celebrating the experiences and contributions of hitherto marginalized groups.

THE ECONOMIC DIMENSIONS OF GENDER INEQUALITY IN INDIA .

In India, discriminatory attitude towards men and women have existed for generations and thus it affect the lives of both genders. Although the constitution of India has granted men and women equal rights, but gender gap still remains. Female discrimination violates human rights. Women have been actively involved in economic activities and labor force in contemporary times. In the agriculture sector for instance, 74% of the labor force consists of women. Yet, the wage gap between men and women across the Indian economy despite the active involvement of reformists and feminists who have been fighting for equal pay.

Women are also discriminated in terms of credit lending and property ownership. This situation can be again drawn back to the patriarchal system prevalent in the Indian economy: women have always been disbanded from share in the properties as it is believed that men are the ones who actually carry their generation forward and earn bread and butter for the family, while women would just sustain upon the money earned by men.

Women also lag behind the corporate and government sectors. Various government programs and schemes have been launched in an attempt to provide equal opportunities for men and women. Reservations have helped to rise the number of jobs of women in government sector. This growing trend also lead to changes in the corporate sector. Earlier, not a single woman was to be seen in the top tier of the corporate world. Today, there has been escalation in the number of woman in these top sectors. Even though there have been reforms and number of women have increased in jobs but still they lag behind in the total percentage of jobs.

These issues are very debatable why women still lag behind men despite the increase in the number of opportunities and affirmative action programs. These debates in my opinion would always lead to the issue of patriarchy. Patriarchy, according to me is so entrenched in the Indian society that even though one may try their hardest to uplift women to the level of men, patriarchy would pull them down. I believe until and unless patriarchy is removed, nothing can bring equality among men and women.

In India as well as other lesser developed countries, commonly, a male child is considered a blessing and his birth is celebrated as opposed to a female child where her birth is not celebrated and is considered more of a burden. The 2011 Indian census shows there are 940 females per 1000 boys. Similarly, educating a boy is seen as an investment as they are expected to earn and provide for their ageing parents. Whereas, an educated girl will have a higher dowry expense because they need an educated partner. It is also believed to be a waste of resources to educate a girl child as she will eventually get married and be a homemaker. If a family cannot afford to educate all their children, the male child will get preference.

Finally, a nationwide campaign is needed to reignite India's core values and traditions that respect and nurture women and children. This can only be borne out of consensus in society. Awareness amongst men of the scope of this issue is critical. Men who turn a blind eye to such brutal acts in their own neighborhoods, communities and families are just as culpable as those that perpetrate these acts. Action from courts and police will not suffice if the community remains defiantly opposed to change.

Conclusion

Gender studies are part of a developing field, which retains the excitement of interdisciplinary innovation, which characterizes feminism and women's studies, but extends this field of research by presenting engagements with pressing contemporary debates and issues. Many of the tensions and contradictions of gender studies are those of interdisciplinary studies at a time when there has also been a move towards the reinstatement of single disciplines in the field of higher education suffering from financial constraints and reduced resources. Gender studies present productive possibilities for contributions to knowledge, which are distinctively interdisciplinary and go far beyond attempts to mainstream gender into conventional disciplinary structures.

Gender inequality subsists in Indian economy and prevails in all sectors of life like health, education, economics and politics. Men have always had the upper hand in these fields, depicting how deeply patriarchy is entrenched in India. Even though gender equality soars to great heights in post-independence era, many steps have been taken in various sectors of life to bridge the gap between men and women and to bring them up to the same level. In nutshell, I wish to quote the following lines of Lord Denning in reference to the present article and in the favour of both the pillars of the society i.e. gender equality:

"A woman feels as keenly, thinks as clearly, as a man. She in her sphere does work as useful as a man does in his. She has as much right to her freedom - to develop her personality to the full - as a man. When she marries, she does not become the husband's servant but his equal partner. If his work is more important in the field of the community, her is the more important in the life of the family. Neither can do without the other. Neither is above the other or under the other. They are complementary to each other. They are equal."

ABSTRACT

The biometric based large scale civilian identification system in India i.e. Aadhaar is based on the centralized database architecture. An identification system that uses centralized database architecture lacks locality of reference. Aadhaar has been implemented to provide unique digital identity to the individuals of the country, to enable them to access various welfare and non- welfare services extended by the government and non- government organizations. In a biometric based identification system, the major processes that take place are: **(i)** de-duplication, carried out to facilitate the process of identification, **(ii)** authentication, carried out to establish unique identity of an individual, and **(iii)** the processes of update/ correction of the biometric/ demographic data. In all the three types of the processes, the biometric/ demographic data about the residents is captured by the respective organizations and it is communicated to the centralized identity data repository for the purpose of processing. Majority of the welfare and non- welfare services extended by the government and non- government organizations are accessed by the residents locally i.e. near the place of their living. In any of the processes, if it is identification, authentication or update/ correction, the need for a particular process starts near the place of living of the residents and the request is processed by the centralized identity database. In general, the distance between the source of data and the processing unit plays a major role in determining the performance of the system in terms of response time, throughput and accuracy. The current architecture of Aadhaar, in which the resident centric data is kept in the centralized identity database has affected the performance of Aadhaar in terms of various implementation challenges, such as poor coverage of the population for the purpose of enrolment, poor recording of births (i.e. enrolment of children at the time of birth), non- cancellation of Aadhaar numbers of those who have ceased to exist, delays in update/ correction, accuracy in terms of false rejection and false acceptance and the problem of single point of failure etc. With the introduction of internet and eventually the evolution of the distributed computing, the principle of locality of reference has proved to be the basis to determine the performance of the systems that fit in the paradigm of distributed computing. The present paper has discussed various resident centric services that uses Aadhaar to ensure unique identification of the residents and proposed a modified distributed database architecture to re- implement Aadhaar in India, based on the principle of locality of reference, in order to address various implementation challenges.

Keywords: *Aadhaar, Authentication, Database, De- Duplication, Distributed Database, Locality of Reference.*

1. INTRODUCTION

Aadhaar is inevitably employed by most of the government and non- government organizations in order to establish unique identity of the residents, in the process of extending various resident centric services such as the welfare and non-welfare services [1]. The welfare services extended by the government to the residents of the country can be categorized as **(i)** cash based welfare services, such as scholarships and welfare pensions, **(ii)** subsidy based welfare services, such as Public Distribution System (PDS), LPG subsidy, subsidy to farmers on seeds and equipment, and **(iii)** the social welfare services, such as to provide land to the landless poor, homes to the homeless people and work to the unemployed individuals [2]. The non-welfare services include the services related to income tax, to issue a SIM card, to open a bank account etc. In either of the services, if it is a welfare service or a non-welfare service, the primary job of the concerned organization is to uniquely identify the legitimate beneficiaries so that the benefits/ services should reach the intended individuals [3]. In most of the cases people access services near the place of living and therefore the process to establish his/ her unique identity also starts locally. This unveils the fact that the resident centric data, already stored in the centralized identity database, is referenced from the locality of the residents i.e. villages and towns. In the existing identity system of India i.e. Aadhaar, the credentials (biometric and demographic data) of the residents are kept in the centralized data depository, known as Central Identity Data Repository (CIDR). The central identity data repository is responsible to carry out the operations of: **(i)** authentication of identity of the individuals, as requested by various government and non-government organizations in an electronic mode, while extending services to the individuals, and **(ii)** to carry out the operations of de-duplication, when a new person has to be enrolled in to the identification system, in order to provide him/ her, the unique digital identity. The centralized identity database i.e. CIDR is also responsible to execute the operations of update and correction [4]. The term 'de-duplication' is concerned with the process of enrolment of an individual into the identification system. 'De-duplication' ensures that no duplicate identity be issued to the already enrolled individuals by comparing the credentials of an individual as read by the scanner at

©2012-20 International Journal of Information Technology and Electrical Engineering

any terminal across the country with the already stored credentials of the individuals, who are already enrolled into the identification system. In order to enrol a new person into the identification system, the answer to the question '*Who Am I*' is sought with high degree of certainty to be '*You Are Not Known*' using 'de-duplication'. Once such an answer is given by the identification system, the credentials of the individual are added to the identity database. The present paper explores various services, where Aadhaar is used to establish unique identity of the individuals in section 2. Section 3 discuss various implementation challenges that are related to the performance of the identification system i.e. Aadhaar that arise due to the underlying centralized architecture. The solution to various implementation challenges are discussed in section 4 and section 5 is about the conclusion and the future scope.

2. USE OF AADHAAR IN THE SERVICE DELIVERY SYSTEM

As soon as, an individual is enrolled into the identification system and is provided identity in the form of 12 digit unique identity number, the enrollee and the identification system set up a long term, legal relationship with one another. It is the service provider agencies that come in to picture and start utilising Aadhaar number of the individuals in order to uniquely identify them, so that services should reach the legitimate beneficiaries. Presently, almost every government/ non- government organizations have made it mandatory for the applicants/ beneficiaries to have Aadhaar number at the time of requesting a particular service. The launch of Digital India has widened the scope of the use of Aadhaar, as a unique digital identity. Some of the resident centric services that uses Aadhaar as a proof of unique identification of the individuals are studied and are discussed. Against every service discussed, the tables have been given (where applicable) that contains the relevant fields (demographic data and Aadhaar number about the residents) that are required to be filled up by the applicants, to request for a particular service.

2.1 BETI HAI ANMOL YOJNA

Table 1 and Table 2 corresponds to the "Beti Hai Anmol Yojna" [5], which was launched by the Government of Himachal Pradesh to provide financial assistance to the girl child of BPL families in Himachal Pradesh and mainly to combat the female foeticide [6].

The fields along with their descriptions are enlisted as follows:

Table 1: The Application Form to fill up the Details of the Mother of the Girl Child

Field Name	Description
Aadhaar Number	Enter Aadhaar number of the mother
First name	Enter first name of mother
Middle Name	Enter middle name of mother
Last Name	Enter last name of mother
Number of Daughters	Enter the number of daughters
Mobile Number	Enter the mobile number of mother
E-Mail	Enter the e-mail ID of mother
BPL Number	Enter BPL number of family
Image of Mother	Upload the image of the mother

In order to enter the BPL Number, one has to search and fetch the family details either by opting Aadhaar Number or family number or by the name of the family member. Table 2 corresponds to the details about the Girl Child.

Table 2: Details of the Girl Child that are to be Filled Up in the Application Form

Field Name	Description
Aadhaar Number	Enter the Aadhaar number of the girl child
Date of Birth	Enter the date of birth of the girl child
First Name	First name of the girl child
Middle Name	Middle name of the girl child
Last Name	Last name of the girl child

2.2 RATION CARD (CONSUMER CARD) UNDER PUBLIC DISTRIBUTION SYSTEM

In this section the application form for Ration Card has been explored [7], which is used to access the services under Public Distribution System (PDS), which is the oldest welfare scheme of the Government of India.

Table 3: Particulars of Family Members for which Ration is required

Field Name	Description
Name of Family Members	Enter the names of the family members in the space provided
Relationship with Head of Family	Specify the relation of each family member with the head of family
DoB	Enter the date of birth of every member of the family
Aadhaar No.	Enter the 12 digit Aadhaar number of every member of the family
Mobile No.	Enter the mobile number of every member of the family

It has been specifically mentioned in the application form to give consent to use Aadhaar number and biometric details for getting ration under. As a practical scenario, the ration is delivered to a particular family after getting the biometric details verified in the real time of any family member.

2.3 DIGITAL LOCKER

ITEE Journal
Information Technology & Electrical Engineering

ISSN: - 2306-708X

©2012-20 International Journal of Information Technology and Electrical Engineering

Digital Locker commonly known as DigiLocker is an Aadhaar enabled initiative under the Digital India Program to empower the residents of the country to store the documents such as documents of academic qualifications, driving license, vehicle registration certificate etc. in digital form in the cloud database, provided by the government. The stored digital documents can be used as and when required by the requesting authority in an online mode thereby enabling the residents not to hold the physical documents all the times. In order to register in DigiLocker, it requires authenticating the mobile number of the intended individual. The next step is to submit the Aadhaar number in order to be linked with the DigiLocker account and this completes the process of the registration [8]. It has proved to be the digital empowering tool to the residents of the country. The process followed for registering in the DigiLocker is shown as follows:

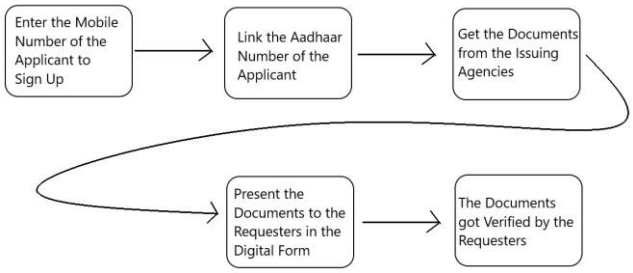

Figure 1: Use of Aadhaar as the Unique Identity, for using services of DigiLocker [8]

2.4 PRADHAN MANTRI JAN DHAN YOJNA (PMJDY)

PMJDY is an initiative of the Government of India to provide bank accounts to the financially excluded segment of the population, those who were not having bank account. The proof of identity was the major reason, people could not have procured the bank account to meet the financial needs. Prior to the launch of Aadhaar, only a few number of the identity documents were in practice to open the bank account such as PAN card, Passport, voter card and driving license etc. More importantly the Know Your Customer (KYC) was one of the major barriers behind getting a bank account by the poor and marginalized people in the country [9]. Government of India has launched PMJDY as a welfare scheme, for the financial inclusion of the residents of the country. Aadhaar has enabled the residents of the country to prove their unique identity. Table- 4 represents the application form that has to be filled up by the applicant under the scheme.

Table 4. Application Form to be filled- Up for the Registration into Pradhan Mantri Jan Dhan Yojna (PMJDY) [10].

Field Name	Description
Full Name	Enter full name of the applicant, who wish to open a bank account for the financial inclusion
Marital Status	Enter the marital status of the applicant
Name of Father/ Spouse	Enter either the name of the father or the spouse
Address	Enter the complete address of the applicant
Pin Code	Enter the Pin Code
Telephone and Mobile Number	Enter the contact number of the applicant
Aadhaar/ EID Number	Enter either the Aadhaar number of the applicant or the Enrolment ID Number
MNREGA Job Card Number	Enter the job card number of the applicant.
Occupation/ Profession	Enter the occupation of the applicant
Annual Income	Enter the annual income of the applicant
Number of Dependents	Enter the number of dependents on the applicant
Detail of Assets	Enter the detail of assets the applicant owns
Existing Bank Account of Family Members/ Household	Enter the details of the bank account numbers of the family members of the applicant
Kisan Credit Card	Enter the detail of the Kisan credit card, if the applicant holds

Most of the times, the services discussed above are availed by the common residents near the place of their living, as the common people are not much mobile. As a result thereof, the need to establish unique identity of the residents also arises locally. As a corollary to this, in the process of establishing unique identity of the residents, it requires references to the already stored data in CIDR, from the locality of the residents i.e. villages and towns.

The next section discuss various implementation challenges that arise due to the centralized architecture of the large scale civilian identification system of India i.e. Aadhaar.

3. IMPLEMENTATION CHALLENGES WITH AADHAAR

Implementation challenges, as the name implies are the difficulties that are faced by the residents, the government and the service provider agencies, with the operation of a large scale civilian identification system. Over the passage of time, with the operation of Aadhaar, various implementation challenges have come into picture, that are: **(i)** Poor coverage of the population of the country for the purpose of enrolment into Aadhaar, **(ii)** Poor recording of births (i.e. enrolment of newly born children) into Aadhaar, **(iii)** Distantly located enrolment centres from the place of living, **(iv)** Non- cancellation of Aadhaar of the individuals, who are not alive, **(v)** Aadhaar saturation more than 100%, **(vi)** Delay in update and correction in the credentials of the residents in the already issued Aadhaar, and **(vii)** Poor Reliability due to the errors

Volume 9, Issue 5
October 2020

ITEE Journal
Information Technology & Electrical Engineering

ISSN: - 2306-708X

©2012-20 International Journal of Information Technology and Electrical Engineering

of false acceptance & false rejection and the single point of failure that persists in Aadhaar, because of the centralized architecture.

The present paper discuss the issues of Poor coverage of the population of the country for the purpose of enrolment into Aadhaar, abnormality in Aadhaar saturation, delayed process of update/ correction and poor reliability in the following sections.

3.1 POOR COVERAGE FOR ENROLMENT

Enrolment is very first step which is carried out by the enrolment agencies that are set up or accredited by the foundational identification system. It is by virtue of the enrolment of the residents into the identification system, that the residents get unique identity. The successful implementation of an identification system can be assessed in terms of the capabilities of an identification system to cover the entire population of the country for the purpose of enrolment. The statistics about the enrolment of the residents into Aadhaar is released by UIDAI as 'Aadhaar Saturation Report'. The statistics reveal that many of the states/ union territories of India are having very poor performance in terms of the enrolment. Some of the states/ union territories show good performance in terms of the enrolment of the residents into the identification system and the numbers of enrolments comes out to be close to 100%. In case of an identification system, in which the enrolments approaches 100%, seems to be showing good performance in terms of the statistics. However, for an identification system to be truly inclusive, the enrolment must be exactly 100% and every individual of the country must have been enrolled and have got unique identity. The poor rate of enrolment is also attributed to the fact of difficulties faced by the residents in order to approach the distantly located enrolment centres, among others.

3.2 ABNORMALITY IN AADHAAR SATURATION

The percentage of enrolment of the residents can either be 100% or less than 100%. In no case, it must cross 100%. It is revealed by the Aadhaar saturation report that some of the states/ union territories show very abnormal behaviour towards enrolment, as the enrolment of the residents has crossed the limit of 100% [Figure 1]. The enrolment of the residents into identification system more than 100% i.e. more people are enrolled into the identification system in a region than the actual population of the respective region, raises serious concerns over the actual enrolment. The abnormality in Aadhaar saturation is primarily due the fact that there is no provision in Aadhaar for the automatic recording of deaths of the residents and without having such mechanism, it is not possible to figure out the Aadhaar numbers of those, who are not alive, in the centralized database of Aadhaar. It is certain that in the existing Aadhaar, the percentage of enrolments also includes the residents who are not alive. In order to count the exact enrolment of the residents into the identification system, it needs to revisit the enrolment data and to suggest and devise mechanisms for the automatic recording of deaths.

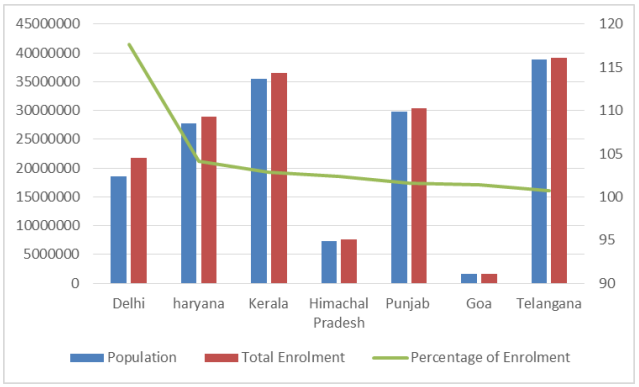

Figure 2. More Enrolments than the Actual Population of a Region [15].

3.3 DELAYS IN THE PROCESS OF UPDATE AND CORRECTION

As with the software systems, maintenance plays a major role in the successfulness of the software and its longevity to provide services for which it is developed. This holds true for an identification system as well. When an individual is enrolled into the identification system, he/ she is provided with a unique identity. With the passage of time, the need may arise to update and/ or correct the biometric and demographic details about an individual. The change in the living place of an individual and the requirement to update the biometric details of an individual leads to the process of update to be followed. Errors in name or in other such details leads to the process of correction to be followed. However, in order to realize the update/ correction in the credentials of the individuals, it takes a long period and as specified by UIDAI, it may take up to 90 days [16]. For instance, if the fingerprints of an individual fail to establish his/ her unique identity in the process of authentication and he/ she follows the process of update of the fingerprints, the Aadhaar authentication suspends till the update is materialized. In practicality, it has been identified that most of the people have experienced repeated efforts to ensure update/ correction.

3.4 POOR RELIABILITY

A number of cases of false rejection and false acceptance have been reported from the study. If the identification system fails to establish the unique identity of a legitimate individual, it deprives him/ her from accessing the services, for which he/ she was otherwise legally eligible. The error is known as false rejection and if during the process of de- duplication, the identification system incorrectly responds 'you are known', it will deny an individual from getting enrolled into the identification system and in turn it will deprive him/ her from getting unique identity. In a biometric based identification system, the rate of false acceptance increases with the increase in the size of the identity database i.e. with increase in enrolments. The errors of false acceptance can be mitigated by way of filtering based on the demographic

©2012-20 International Journal of Information Technology and Electrical Engineering

data; however, it increases the rate of errors of false rejection [11]. The denial of services to the residents by the service provider agencies, due to the problem of authentication failure i.e. false rejection is quite common in the welfare and non- welfare service delivery system. Shailesh Gandhi, former Central Information Commissioner, faced the issue of false rejection. While completing his know-your-customer (KYC) procedure at HDFC bank, the system refused to validate his Aadhaar through fingerprints. After the incident, he wrote, "I could do my KYC with other documents, but the horror of this hit me. If the system cannot recognize people from its database with the fingerprint impression, what would happen to those whose food grains, pensions or employment guarantee scheme, wages depend on it?" [12].

The study reveals that the people who were able to enrol with all their biometrics, many have troubled with the fingerprint authentication issues. The government has admitted high authentication failures and the UIDAI's statistics show that the Aadhaar-based biometric authentication for government services has a 12% failure rate [13]. In another statement issued by UIDAI, it has been stated that 100% authentication rate is not possible. Under Aadhaar authentication, the performance of the identification system depends upon various variables such as network connectivity and the machine failures etc. [14].

4. LOCALITY OF REFERENCE AS THE BASIS TO MODIFY AADHAAR ARCHITECTURE

Locality of Reference commonly known as Data Locality is a fundamental principal of computing [17]. The principal of locality of reference refers to the fact of predictability that exists in the sequence of accessing the memory addresses during the execution of a program. It is mainly of two types: temporal locality of reference and spatial locality of reference. During execution of a program, when the same memory locations are accessed multiple times over a small interval of time, the program is said to exhibit temporal locality of reference, such as the execution of a loop. The spatial locality of reference refers to the fact that during the execution of a program, when the data from a particular memory location is accessed, there is a probability that the nearby memory locations will be accessed over a small period of time. The systems/ programs that exhibit this type of the behaviour are referred to as exploiting the spatial locality of reference [18].

The principle of locality of reference finds its applications in various fields of computer science, to name a few, such as cache memory in processors to hold the most referenced data, in web browsers to hold the recent web pages and in search engines to find the most relevant responses to the queries [16]. In essence, the principle of locality of reference states that the data should be kept near the place, where it is most likely to be used. Inherently, the resident centric data is generated near the place of living of the individuals. Most of the times, an individual avails various types of the services offered by the government and non- government organizations, near the place of living. Eventually, the need to establish unique identity arises locally i.e. villages and towns, in order to avail the services, which is also evident from the discussion in section–2. In the existing Aadhaar architecture, every time one has to authenticate his/ her identity, the service provider entities communicates with the centralized identity data repository (CIDR), which is prone to failure due to various variables such as network failure, low internet bandwidth and/ or machine failure, software failure, virus attack, militant attack and the size of the centralized database etc. Therefore, it requires to have changes on the architectural level in the existing Aadhaar architecture.

In order to address various implementation challenges effectively, as are observed in the foundational identification system of India i.e. Aadhaar, the principle of locality of reference has been proposed as the base model to modify the architecture of Aadhaar from centralized database architecture to distributed database architecture. It has been envisaged that the credentials of the residents should be kept and managed near the place of the living of the residents i.e. the place where residents live and avail services, which are offered by various government and non-government organizations, so that the identity of the individuals can be authenticated by using the locally available data about the residents. This can be accomplished using distributed database technology, allowing the local bodies (Panchayats/ Municipal Corporations etc.) to maintain data about the residents of their jurisdiction. Keeping data about the residents locally, it will address various implementation challenges effectively.

In the modified architecture of Aadhaar, the database systems at the local body level will: **(i)** execute the operations of authentication, **(ii)** capture the resident centric data for the purpose of enrolment, **(iii)** issue Aadhaar number, **(iv)** execute the operations of update and correction, and **(v)** recording of births/deaths into Aadhaar.

In addition to the identity database systems at the local body level, identity database systems at the district body level will also be set up. The database systems maintained at the district body level will: **(i)** execute the operations of de- duplication to facilitate enrolment, **(ii)** generate Aadhaar number for the newly born child, and **(iii)** segment out the biometric and demographic data about the deceased individuals from the active identity database tables. The identity database tables that are actively involved in the process of identification and authentication have been referred to as the active identity database tables.

4.1 ENROLMENT IN THE MODIFIED AADHAAR

The data generation about the residents is a continuous process. It is the local bodies that keep the data about its residents, such as the data about births, data about deaths and the data about the parentage. Whenever,

©2012-20 International Journal of Information Technology and Electrical Engineering

a birth/ death takes place, along with updating data in to the official documents of the local bodies, the data will be updated in the identity database systems maintained at the local body level. Every time a birth is registered with the Panchayat/ Municipal Corporation, a unique ID, to be called as *Birth Id* will be generated, with the issuance of the birth certificate and the details of the child will be communicated to the district level database to issue unique identity to the child. It will help and will ensure identity to every child. In case of enrolment of the residents (except newly born children), their credentials will be captured at the local body level and will be synchronized to the respective identity database system at the district body level for the purpose of de- duplication. Designating the local bodies as the enrolment centers will help people to approach to the office of a local body easily and conveniently, as the local bodies are always located in the periphery of the living place of the residents and therefore will ensure the universal coverage of the residents for the purpose of enrolment.

4.2 IDEAL AADHAAR SATURATION

In case of a deceased individual, at the time of issuance of death certificate at the local body level, a unique id to be called as *Deceased Id* will be generated, which will be synchronized to the respective identity database system at the district body level, to segment out the credentials of the deceased individual from the active identity database tables to the inactive identity database tables. It will help to achieve the ideal state of the Aadhaar saturation and in turn, will help to identify the individuals who don't have unique identity.

4.3 REAL TIME UPDATE AND CORRECTION IN BIOMETRIC/ DEMOGRPHIC DATA

In modified Aadhaar, the update and correction in the biometric and demographic data of an individual could be materialized at the local body level in real time, because of the availability of the already stored credentials with the local bodies. If the fingerprints of an individual do not work for the purpose of authentication, he/ she could approach the Panchayat/ Municipal Corporation as the case may be, and could request for the update and/ or correction in the biometric and demographic data. Allowing the local bodies to facilitate update and correction will help the common people of the society to avail uninterrupted access to welfare and non- welfare services, delivered by various government and non-government organizations.

4.4 IMPROVED RELIABILITY IN THE MODIFIED AADHAAR

The principle of locality of reference will ensure the availability of data about the residents near the place, where it is to be used to establish unique identity of the residents through the process of authentication, in order to avail various welfare and non- welfare services. Since, authentication is a multi- time process, allowing the local bodies to execute the operations of authentication, will overcome the adverse impacts of the variables, such as network failure, low internet bandwidth, machine failure, software failure, virus attack, militant attack and heavy size of the identity database system. The modified distributed architecture will handle the processes of authentication and identification at separate database systems. It will reduce the size of the identity database systems, equal to the population of a local body/ district body, and therefore it will directly benefit to mitigate the high rate of false acceptance and false rejection.

5. CONCLUSION AND FUTURE SCOPE

A foundational large scale civilian identification system has the responsibility to provide unique digital identity to every resident of the country and mechanisms to authenticate identity thereof, in order to enable them to access various welfare and non- welfare services, extended by the government and non- government organizations. The existing identification system of India i.e. Aadhaar is based on the centralized database approach that has raised various implementation challenges. The principle of locality of reference has been proposed to modify the existing centralized architecture of Aadhaar to the distributed database architecture. As a future scope of the present research work, research could be extended in the direction to provide security to the distributed setup of Aadhaar that will include the communication security and the security of the resident centric data spread over various identity database systems, at the local bodies and district bodies.

A framework on energy efficient routing protocol in wban

Author: Rajat Sharma and Aman Kumar Sharma

Subject Area: Physical Sciences and Engineering

Abstract:

In this paper, we have examined various routing protocol of wireless body area network (WBAN), and find out the optimum protocol for its domain. The comparison of different routing protocols has been done on various performance measuring metrics and parameters. And we have also improved existing routing protocol with help of different parameter. During the last few decades, Wireless Body Area Networks (WBAN) have appeared into many applications such as medical, military, sports, entertainments, traversing and monitoring. Due to improvement in wireless technology small sensor nodes with less power, lightweight, interfering or non-interfering are deployed in, on or around the human body to monitor the health situation. Basically, WBAN work on three different Tier Architecture. Tier-1 as Intra-body Communication, and also called sensor nodes. Tier-2 as Inter-WBAN or Internet. Tier-3 as Extra-Body Area Network and also called the servers communication. In this each server like medical server communicate with in its own domain. Routing protocols play very significant role to improve the overall performance of the network in terms of throughput, path loss, residual energy, packet dropped, network lifetime and to improve the different quality of services (QoS) in WBAN. Routing in WBAN is categorized as Postural based, Temperature aware, Cross layer network-based, Clusters-based routing, QoSbasedrouting. These categories are further divided into various protocols. This paper also a review of some of the existing routing protocols of WBAN. Also, the comparison of SIMPLE (Stable Increased-throughput Multi-hop Protocol for Link Efficiency) and IEE-SIMPLE (Improved Energy Efficient-Stable Increased-throughput Multi-hop Protocol for Link Efficiency) protocol has been done by simulating in MATLAB.

Supervised Machine Learning Classifiers: Computation of Best Result of Classification Accuracy

Himanshu Thakur[1], Aman Kumar Sharma[2]

[1,2] *Department Of Computer Science, Himachal Pradesh University, India.*

Received Date: 07 September 2020
Revised Date: 09 October 2020
Accepted Date: 15 October 2020

Abstract *- Sentiment Analysis is one of the fastest spreading research fields in computer science, originating it demanding to observe the trace of all the activities in the region. The focus of sentiment analysis is to release data on the features of the author or speaker about an exclusive subject or the total variance of a record next to examine textual data assemble from the countless origin. The indicated paper is conferring an equivalent study to evaluate and formulate a list of three supervised machine learning techniques (Support vector machine, K-Nearest Neighbor, and Random Forest) based on a literature survey that has opted in this research work. To evolve and validate a mechanism to compute better classification accuracy results from among the selected best-supervised machine learning classifiers.*

Keywords *- Sentiment Analysis, Sentiment Classification, Opinion Mining, Feature selection, Machine Learning, Supervised Learning, Support Vector Machine, K- Nearest Neighbor, Random forest, Ensemble learning, Jupyter Notebook.*

I. INTRODUCTION

Sentiment Analysis, also called opinion mining, is the evolution of determining and detecting emotional information using natural language processing, text analysis. Opinion mining is an especially narrow NLP issue because the framework only needs to acknowledge the polarity of emotion, i.e., positive or negative opinion of each sentence and the target entities or aspects. The entity can symbolize individuals, events, or topics. These topics are usually acceptable to be covered by reviews. The two indications of SA or OM are equivalent. They signify the same meaning. However, some researchers stated that OM and SA have marginally singular perceptions [1]. The particular public ideas are acquired from certain network 2.0 and appearance-related blogs, online data sets, movie reviews, and brand review slots [2]. Its use of NLP andarithmeticstrategies to automate the set of judgments from ordinarily unstructured text.OM is a series of strategies and tools for finding and extracting specific information, such as perspective and conclusion, from language [3]. Usually, emotions have been

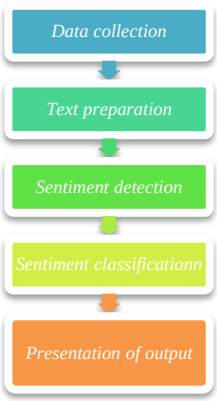

Fig. 1 Sentiment Analysis Process

along with opinion polarity, i.e., positive, neutral, or negative opinions regarding something [4]. Sentiment analysis is a varied transaction with five phases for indexing sentiment data.

Sentiment analysis can occur at different levels: document -Levelpurpose to categorize review as positive, negative, or neutral. The main operation of the document level sentiment classification is to relate the similarityof User Generated Content (UGC).The sentence-level aims to identify the relationship between each sentence is calculated.Sentence-level objective to allocate ideas communicate in an individual sentence. Essentially the first step is to determine even if the sentence is biased or unbiased. Wilson et al. [5] obtain that learning statements are not fundamentally based on nature. After all, inside no symbolic characteristics between document and sentence level arrangement because sentences are brief equitable documents. Aspect-level objective to allocate opinions with respect to specialized aspects of existence. Firstly it classifies

This is an open access article under the CC BY-NC-ND license (http://creativecommons.org/licenses/by-nc-nd/4.0/)

the substance and then aspects because the judgment titleholder can allow the various suggestions for different aspects of the equivalent entity.

Opinion mining is not only enforced on a production survey but can also be activated on traditional business [6, 7], broadcast things [8], or official arguments [9]. Feature selection in sentiment classification. The first step in the SC problem is to take out and select text features. Some of the current features are Term presence and frequency: The present simulation consists of uni-gram or n-Grams and their frequency. *Parts of speech Information:* Identification words to the POS identity help express differently and assist in leading feature selection. Including POS identification, the whole world in order is indicated as a label, and the label implements the format of the word in the grammatical text. *Negation* argument performs an essential appearance to appropriate into functions because negations accept possible to reversal the opinion. *Opinion Words and phrases* are exchanged and codified, examining either a positive or negative perspective. Dictionary-based and numerical based is the fundamental approach to classifying the linguistic direction of sentiment conversation.

Section II distributes a review of related work executed on a comparative study of SA approaches. Section III illustrate different SC techniques like Machine Learning, Lexicon Based Approach. The indicated paper only spotlights the supervised machine learning approach used for sentiment analysis and also grants a short introduction to other approaches. Section IV explains the methodology adopted. Section V portrays the simulation results of the experimental work. Section VI concludes the present research work, and Section VII is rapid describes the future scope of the study.

II. RELATED WORK

Opinion Mining originated its roadmap across the year 2000 &proceeding improvement in the research area over the last ten to fifteen years. OM is a sub-area of NLP, but it acquires that SA gets a more advancing trend than NLP in the earlier years. There are multiple articles introduced every year in the SA field, and the number of articles has been increasing over the years. The reader can find some refined and detailed surveys, including [10, 11]. Many research papers and survey papers have been published relevant to SA research work, and a few of the extensive papers from which the current study gets inspired are examined below:

Rehab M. Duwairi and Islam Qarqaz [12]carry out an anidenticalinquiry of three classifiers: Naive Bayes, SVM, and K-NN. They organize their intimate training dataset by assembling tweets and Facebook comments taken away from the internet. They form the use of the Rapid miner tool for this approaching study and regulate that SVM delivers the highest Precision, although K-NN contributes the highest recall.

Vinodhini and RM Chandrasekaran[13]provide a complete survey on SA and OM in their paper. The present survey paper talks about several opinion classification strategies and their challenges. The indicated study compared certain other papers written on SA and OM approaches based on four independent features accuracy, Precision, recall, and F1.

Nasukawa and Yi.[14]represent an opinion mining approach to take out sentiments associated with polarities of positive or negative for special subjects against a document, quite of classifying the entire document nearing positive or negative. The mandatory topics in opinion mining recognise how sentiments are indicated in texts and whether the expressions indicate favourable or unfavorablesentimentabout the subject.

Ding et al.[15]prefer an essential technique for recognizing semantic orientations of emotionextract by reviewers on outcome features. It is accomplished to examine two major problems with the existing methods, (1) sentiment words that semantic directions are situation dependent, and (2) combined multiple opinion words in a similar sentence. For (1), a holistic technique is suggested that can perfectly infer the semantic orientation of emotion based on the rating situation. For (2), a new function to combine multiple sentiments in the same sentence is present.

Van de Camp and van den Bosch. [16]introduce SVM and NN also used to categorise particular relations in biographical texts and establish historical biographical information expressing people in a specific state, zone, and time frame. They specify that their classifiers can label certain relations over a majority class baseline score. They show that SVM and one layer NN (1-NN) algorithm attain the highest scores.

Rui and Liu. [17] In their work, they were investigating whether and how twitter word of mouth (WOM) attacks movie sales by evaluating a dynamic panel data model. They used NB and SVM for the classification objective. Their results suggest that the effect of WOM on product sales from Twitter users with more followers is significantly larger than that from Twitter users with fewer followers and establish that the effect of pre-consumption WOM on movie sales is wise than that of post-consumption WOM.

Reyes and Rosso [18]aimed to define a feature model to mean part of the personal knowledge, which is key to such reviews and efforts to narrate salient characteristics of irony. They used NB, SVM, and DT for classification resolve, and the results with the three classifiers are adequate, both in terms of accuracy, as well as Precision, recall, and F-measure.

Cover and Hart [19]show the fault of the nearest neighbour rule is having bounds above by twice the Bayes

error below certain logical undertaking. Also, the error of the general KNN method asymptotically methods that of the Bayes error and can be nearly new to approximate it.

Pang et al. [20] used three supervised machine learning procedures to classify the text named SVM, Naive Bayes, and Maximum Entropy. In this paper, an individual feature selection technique was used, and results pinpoint that achievement of Naive Bayes classifier is gained on small feature set while the performance of SVM is adequate for the large feature set andmoreoveroriginate that Maximum Entropy has a better result than Naive Bayes for the large feature set.

Ashmeet Singh and R Sathyaraj [21]correlated three supervised machine learning algorithms that employ Rapid Miner named Naive Bayes, Random Forest, and Decision Tree based on six parameters such as accuracy, precision, recall, true positive, false positive, and f-measure. Two datasets, particularly a short and huge number of the pattern, were used for each classifier. In this paper, it has been established that Naive Bayes results in better achievement alternative two in the smaller dataset, although the Decision Tree is the best match for the large dataset, and Random forest executes as an average in both the cases.

Ashok Badresiya et al. [22]differentiate five review spam detection supervised learning capabilities for their execution. The five techniques were Naive Bayes, SVM, K-NN, Logistic Regression, and Decision Tree. In this relative study, they originate that SVM has greater accuracy (83.19%) than the substitute way and the Decision tree has very little accuracy, only 51.00 %.

Ghosh, Fassnacht [23] SVM is often claimed to be the finest at dealing with complex classification issues such as tree species differentiation, followed by RF using the information in a broader electromagnetic spectrum (450–2500 nm) focused on classifying five tree species in managed forests of central Germany using SVM and RF on Hyperion and HyMap data. Apply only spectral information. The overall classification accuracies on a 4-m pixel hyperspectral image were 71% for SVM and 72% for RF. Both classifiers showed similar results for this scale.

L. I. Kuncheva and J. J. Rodriguez et al. [24], among the few popular combination schemes, majority voting and weighted voting for classification are generally used. Simple majority voting is a decision rule that selects one of many alternatives based on the predicted classes with the most votes. The majority voting does not require any parameter tuning once the individual classifiers have been trained.

III. SENTIMENT CLASSIFICATION TECHNIQUES

Sentiment allocation procedure can be branched into machine learning techniques, dictionary-based techniques, and hybrid techniques [25]. Classification of text is done towards noticeable levels such as sentence based, document-based, and aspect or sentiment-based [26]. All the approaches and techniques this paper shows a comparison of supervised machine learning techniques, which are illustrated in this region down:

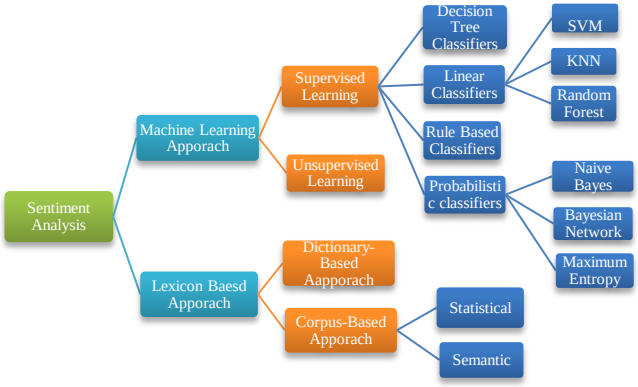

Fig. 2 Sentiment Classification Techniques

A. Machine Learning

Normally it depends upon the important machine learning approaches to figure out the SA as rectify text distribution drawback that makes use of static or pattern arrival. *Text distribution Problem Definition:* We have a set of training documents $D = \{Y_1, Y_2, \ldots, Y_n\}$ where the individual file is classified into a class. In a machine, learning-based classification requires two sets: One is the Training set, and another one is the Test set. A training set is used to set a mechanical classifier for learning the distinct features. A test set is employed for validating the presence of the classifier. The former is utilized by automated classifiers for learning the differentiable features of documents, while the latter is utilized for validating the performance of the automated classifier. Machine learning facilitates data processors to increase, customize, and determine, although they are identified as a unique input [27]. There are various groups of machine learning techniques classified as supervised and unsupervised learning described below:

In supervised learning, the training set (Xn, Yn), an algorithm, train a model that is efficient to predict the output for every new input, as displayed in fig.4. Supervised learning helps classification and regression facilities to develop a predictive model and depends on the labelled training documents containing words related to the topic as a key feature.

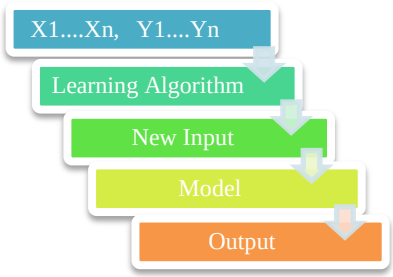

Fig. 3 Supervised Learning

Numerous supervised learning executions that acquire correlated in this paper are characterized below:

A linear classifier classifies an object into specific classes to whatever they apply according to the arrival or attributes. A linear classifier adopts a narrow arrangement of X and Y to create the distribution results. Three linear classifiers used in this study are SVM (Support vector machine), K-NN (K Nearest Neighbors), and RF (Random Forest):

a) SVM In machine learning, support vector machines (SVMs, also support vector networks) are supervised learning models with correlated learning algorithms that analyze data used for classification and regression analysis. The objective of SVM is to divide the datasets into classes to find a maximum marginal hyperplane (MMH). Support Vector Machines (SVM) [28] examine a must-try, and it offers one of the most robust and accurate methods among all well-known algorithms.

b) K-NN K-nearest neighbour is one of the simplest machine learning algorithms established on a supervised learning strategy and is mostly used for classification problems. K-classification [29,30] finds a group of k objects in training set near the test object and bases the allocation of a label on the predominance of a particular class in this neighbourhood. KNN is specifically well suited for multi-modal classes and applications in which an object can have many class labels. The K Nearest Neighbors Algorithm can feel the necessity for the recall division to inventory group of the knowledge, but only put away prediction (or study) when forecasting is essential.

c) Random Forest (RF) is one of the great machine learning algorithms used for supervised learning; this means learning from labelled data and making predictions established on the learned arrangements. A Random Forest is an ensemble technique efficient to accomplish both regression and classification missions with the use of multiple decision trees and a technique called Bootstrap and Aggregation, frequently known as **bagging**. However, it is mostly used for classification problems. The random Forest algorithm generates decision trees on data samples and then gets the prediction from each of them, and finally determines the best solution by means of voting. It is an ensemble method that is better than a single decision tree because it reduces over-fitting by averaging the result. In unsupervised learning, this technique is mainly used in the creation or design of trained class labelled documents that are investigated to the most complex method. Unsupervised learning is no pre-classified training samples or training datasets. This technique is used for the document-based clustering analysis as it does not depend on pre-defined labelled training documents.

Fig. 4 Unsupervised Learning

Clustering is the mechanism of combining similar entities and is also used in the classification text. K-means clustering is an unsupervised machine learning algorithm. The goal of this unsupervised machine learning procedure is to find the correlation in the data point and group corresponding data points together.

B. Lexicon-Based Approach

The lexicon-based approach depends on finding the opinion lexicon, which is used to analyze the text. There are also opinion phrases and idioms, which are called opinion lexicons. There are two methods in this approach. The dictionary-based approach depends on finding opinion seed words and then searching the dictionary for synonyms and antonyms. The corpus-based approach begins with a seed list of opinion words and then finds other opinion words in a large corpus to help find opinion words with context-specific orientations. This could be done by using statistical or semantic methods.

IV. METHODOLOGY

The indicated paper examines three supervised machine learning classifiers, especially SVM (support vector machine), K-NN (K-nearest neighbour), and RF (random forest), based on six parameters (Training Accuracy, Testing Accuracy, Total Accuracy, Recall, Precision, and F1 score). In this consideration, the Jupyter Notebook tool is used to examine these techniques. Jupyter is a part of Anaconda (prepackaged Python distribution).

Evaluation metrics involves using a combination of these individual evaluation metrics to test a model or algorithm. Using evaluation metrics are critical in ensuring that your

model is operating correctly and optimally. Entire parameters are established on Evaluation metrics, resulting in the execution of individual classifiers. These parameters are explained as follows:

- ***Training accuracy:*** It is usually the accuracy that applies the model to the training dataset.
- ***Testing accuracy:*** It is the accuracy of testing the data. Normally it is sometimes useful to compare these identify overtraining.
- ***Total accuracy****:* This parameter defines the number of classifications divided by the total number of documents.

  Accuracy = Number of correct predictions / Total number of predictions.

- ***Recall***: This parameter defines how many true positives were recalled (found). High Recall indicates the class is correctly recognized (a small number of FN).

  Recall= Total no. of correctly classified positive examples / Total no. of positives examples.

- ***Precision***: It is also called positive predictive value. We divide the total number of correctly classified positive examples by the total number of predicted positive examples. High Precision indicates that an example labelled as positive is positive (a small number of FP).

  Precision = Positive correctly classified / Total predictive positive.

- ***F1 Score:*** This parameter defines a weighted average or harmonic mean of precision & recall values and calculated as:

  F=2pr / (p+r), where p=precision& r=recall.

A.The stepping procedure for identification based on the above-mentioned performance is inclined in fig.5

In this study, we use seven datasets, and it consists of a collection of documents or files. All the datasets are accessed from Kaagle (ML). The names of the datasets are:

1. Iris dataset{Range Index: 150 entries (0 to 149) & Data column: 6}. [31]
2. Heart Disease {Range Index: 303 entries (0 to 302) & Data column: 14}. [32]
3. Breast Cancer Analysis and Prediction {Range Index: 599 entries (0 to 598) & Data column: 33}. [33]
4. Bank Marketing + Classification {Range Index: 41188 entries (0 to 41187) & Data column: 21}. [34]
5. Fake News Detection *{Range Index: 10240 entries (0 to 10239) & Data column: 2}. [35]*
6. COVID-19 *{Range Index: 368 entries (0 to 367) & Data column: 8}. [36]*
7. Instagram fake spammer genuine accounts *{Range Index: 120 entries (0 to 119) & Data column: 12}. [37]*

- All datasets consist of a collection of documents or files.
- Data preprocessing (clean and alter) the raw data in a useful and efficient format. Now use feature selections to enable the machine learning algorithms to train faster. It reduces the complexity of a model and improves its accuracy of the model.
- After this, use Label Encoder to convert the labels into a numeric form into a machine-readable form.
- In classifications, for each dataset, training the model by using machine learning techniques to find better accuracy.
- Use ensemble methods that combine the prediction of multiple machine learning models to improve predictions based on their highest probability.

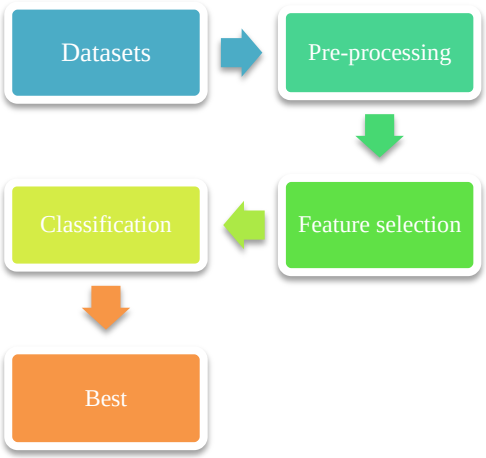

Fig. 5 Task Accomplishment Methodology

V. SIMULATION RESULTS

Simulation Results of Supervised Learning Techniques on various Datasets show the performance by utilizing their merits using the highest probability of being predicted by each classifier using ensemble methods.

Table 1. Simulation Results of Supervised Learning Techniques on various Datasets.

Algorithms	Iris	Heart Disease	Breast Cancer	Banking Marketing	Fake News Detection	COVID-19	Instagram fake spammer
SVM	1	81.97	97.87	85.56	54.58	71.31	50.00
KNN	1	90.16	96.27	90.48	55.08	95.90	80.00
RF	1	85.25	95.21	90.97	1	95.90	92.50
ENSEMBLE | VC	**1**	**90.16**	**97.87**	**90.97**	**1**	**95.90**	**92.50**

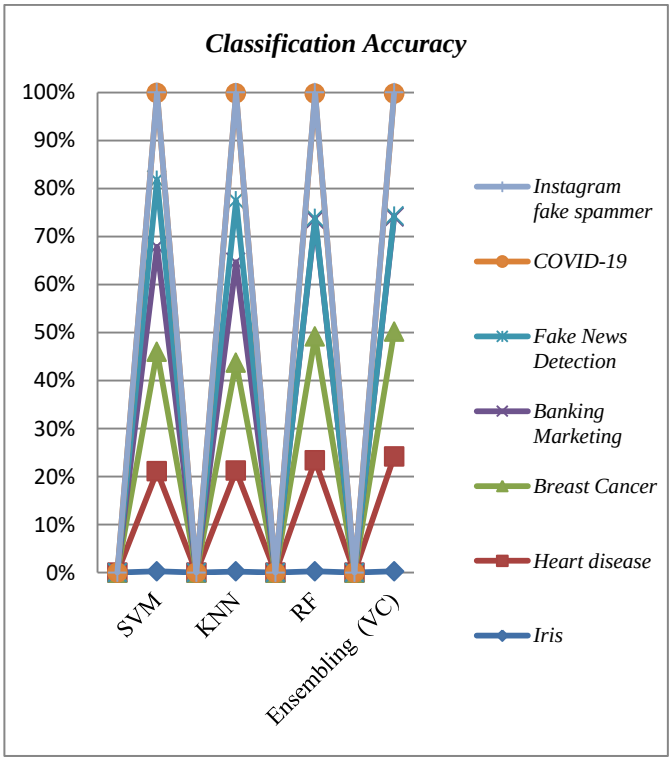

Fig. 6 Classification Accuracy on the line graph

Figure 6 shows the following results:

- Using simulation on various datasets, we have different Classification accuracy of SVM, KNN, and RF.
- They used ensemble learning to predict an output (class) based on the highest probability of chosen class as the output.
- It simply aggregates the findings of each classifier passed into Voting Classifier and compute the output class based on the highest majority of voting.

VI. CONCLUSION

Sentiment Analysis is a technique meanwhile that the polarity of unregulated textual data is resolute. Sentiment analysis has many applications in information systems, including classifying reviews, summarizing reviews, and other real-time applications. Sentiment Analysis is a part of Natural Language Processing. This research work describes a specific performance on sentiment analysis and various supervised machine learning algorithms used in Opinion Mining. This research work covers every aspect to understand the concept of sentiment analysis and its approaches. This work has considered three sentiment classification techniques, such as Support vector machine, k-Nearest Neighbor, and Random Forest, and has compared them using simulation in python. All the techniques are compared using simulation based on six parameters (Training Accuracy, Testing Accuracy, Total Accuracy, Recall, Precision, and F1 score) for different training datasets, which are used to train and test the various classification models that have opted. This paper gives a detailed stepwise step experimental implementation of the research work. Various results have been analyzed for all the sentiment classification techniques and conclude that:

- I am using ensemble learning to enhance machine learning models to produce better predictive performance compared to a single model, i.e., Improvement in predictive accuracy.
- It has been discovered that ensembles are often much more accurate than the individual classifiers, which make them up and also known as committee-based learning or learning multiple classifier systems, train multiple assumptions to clarify the close trouble.
- Generating models from data is called learning or training, and the learned model can be called a hypothesis or learner. The training algorithms that formulate a set of classifiers and later classify new data points by catching a choice of their predictions are known as Ensemble methods.
- Ensemble methods are well known for their ability to boost weak learners.

VII. FUTURE SCOPE

This study compares the Supervised Learning techniques that are used in Sentiment analysis. All these techniques are compared for their performance using simulation, but more future work is needed to improve the performance of such techniques further. This is a magnificent demand for the utilization of sentiment analysis because of the aim to reach and truly understand the significance of social media interactions. In the future, different kinds of approaches shall be combined to overcome their drawbacks and enhance their enforcement by utilizing their merits. In the future, a multiclass of a sentiment classification such as positive, negative, neutral, and so on might be considered. This will lead to a superior understanding of natural language

sentiments. The concept of Sentiment Analysis can also be added to the computer system being used nowadays like PDA (Personal Digital Assistants), computer systems, automatic cars, etc., which could detect the negative mood of an individual and respond positively.

DESIGN ENGINEERING

Generative Adversarial Networks in Security and Data Privacy Sector: A Survey

Shivam Sharma, Dr. Aman Kumar Sharma

PDF

ABSTRACT

In the modern era, most of the data exists in the digital form, however existing security measures are insufficient to protect this data since they do not have enough ability toanticipate malicious attacks. With an upsurge in the number of security challenges, data protection systems along with security defense and attack mechanisms must keep up with the rapidly changing threats. In this survey, we review the Generative Adversarial Networks (GANs) and its different variants that have been employed to provide data privacy protection to systems, security defense, along with security attack capability to systems. The main goal of this survey is to investigate the recent developments in the field of security along with data protection based upon GANs architectures. The GANs applications, challenges along with potential solutions from recent research developments have also been discussed in brief.

DESIGN ENGINEERING

A Comparative Study on Cross-Platform Development tools

Shivam Sharma, Dr. Aman Kumar Sharma

PDF

ABSTRACT

The tools available for cross-platform application development is rapidly increasing. Thus, it becomes important to properly understand the working, performance, ease of use, platforms support among other factors of each development tool before making the right choice. The research paper proposes to compare the six most popular cross-platform application development tools based on some reviews and also the above-mentioned parameters. As per the comparison, Flutter SDK has been found to have the best performance and is also among the most popular available frameworks.

Chapter Abstract:
With the growing rate of data increases in the education field in recent years, there is a need for intelligent data analytics (IDA), so that academic data can be used effectively to improve learning. Educational data mining and learning analytics are the fields of IDA that play important roles in the intelligent analysis of educational data. One of the real challenges being faced by students and institutions alike is ensuring the quality of their education. An equally important factor related to the quality of education is the performance of students in the higher education system. It is not difficult to comprehend that the quality of decisions that the students make about their choices while selecting their courses and areas of specializations is of grave concern here. In the absence of support systems, the students and the teachers/mentors fall short in making the right decisions at the right time for furthering their cherished career paths. Therefore, the authors felt a need to address the issue of this kind of support system by proposing a system that can guide the student to choose, and to focus on, the right course(s) based on their personal preferences. For this purpose, a system has been envisaged by blending the concepts of data mining and classification with those of big data. In this chapter, a methodology using MapReduce framework and association rule mining is proposed for deriving the right blend of courses for students to pursue appropriate courses/ training and to enhance their career prospects. For students, it will lead to a rational and justifiable decision-making support process from where they can give shape to their dream careers. It will also save the gullible students and parents from being misguided by unscrupulous players to opt for the courses not suitable/appropriate for the students, or even those courses/ training that are contrary to their preferences. The results of the experimentation have shown that the best rules can be derived fr...

Exploring the Possibility of Sybil Attack in Position Based Routing Protocols in VANETs: A Case Study of Greedy Perimeter Coordinator Routing (GPCR)

Nishtha & Manu Sood

Conference paper | First Online: 28 May 2020

688 Accesses | 2 Citations

Part of the Communications in Computer and Information Science book series (CCIS,volume 1230)

Abstract

Infrastructure-less Vehicular Ad hoc Networks (VANETs) in the absence of any centralized controlling authority are highly vulnerable to various types of malicious attacks. Amongst these attacks, Sybil attack is one such deadly attack that can disrupt the normal functioning of most of the VANET protocols without getting detected easily. In this attack, a legitimate vehicle with malicious intentions enters the network and can mischievously launch a few virtual vehicles camouflaging these virtual vehicles in such a way that these appear to be the legitimate vehicles for all other legitimate vehicles in the network. These superficial vehicles are known as Sybil vehicles and intend to affect the routing mechanism in a VANET by helping the malicious node to assume control of the network. In this paper, we have explored the possibility of Sybil attack disrupting the normal functioning of Position-Based category of Routing Protocols in a VANET. Our exploration here focuses only on one of the significant protocols in the category known as, the Greedy Perimeter Coordinator Routing (GPCR) protocol. With the help of the results of experimental setups, it has been shown that it is always possible for the Sybil attack to disrupt the functioning of GPCR protocol in a VANET. We are also in the process of exploring the impact of Sybil attack on other significant routing protocols for VANETs separately.

Performance Analysis of the ML Prediction Models for the Detection of Sybil Accounts in an OSN

Ankita Kumari & Manu Sood

Conference paper | First Online: 31 July 2020

760 Accesses | 1 Citations

Part of the Advances in Intelligent Systems and Computing book series (AISC,volume 1166)

Abstract

The Online Social Networks (OSNs) as such have significantly become huge platforms for information sharing and social interactions for a variety of users across the globe. In the backdrop of fast transformations, these OSNs are undergoing illegal activities especially in the form of security attacks, and have already started reflecting serious harmful effects on these interactions. One of the prominent attacks in such environments, the Sybil attack, is jeopardizing various categories of social interactions as the number of users having Sybil accounts on these social platforms is experiencing phenomenal growth. The existence of such Sybil accounts on OSNs may threaten to defeat the very purpose of these OSNs. The presence of these Sybil accounts of malicious users is really almost impossible to control and, very difficult to detect. In this paper, with the help of Machine Learning (ML), an attempt has been made to uncover the presence of such Sybil accounts on an OSN such as Twitter. After the acquisition and preprocessing of available datasets, the Correlation with Heatmap and Logistic Regression-Recursive Feature Elimination (LR-RFE) feature selection techniques were applied to get a set of optimal features from these datasets. Then the prediction models were trained on these datasets by using Random Forest (RF), Decision Tree (DT), Logistic Regression (LR) and Support Vector Machine (SVM) classifiers. Further, the effects of biasing of genuine accounts with fake accounts on feature selection and classification have been presented. It is concluded that the prediction models using the DT algorithm outperformed all other classifiers.

Implementation of Ensemble-Based Prediction Model for Detecting Sybil Accounts in an OSN

Priyanka Roy & Manu Sood

Conference paper | First Online: 31 July 2020

745 Accesses | 1 Citations

Part of the Advances in Intelligent Systems and Computing book series (AISC,volume 1166)

Abstract

Online Social Networks (OSNs) are the leading platforms that are being used these days for a variety of social interactions generally aimed at fulfilling the specific needs of different strata of users. Normally, a user is allowed to join these social networks with little or negligible amount of antecedent verification which essentially leads to the coexistence of fake entities with malicious intentions on these social networking websites. A specific category of such accounts is known as the Sybil accounts where a malicious user pretending as an honest user, creates multiple fake identities to manipulate/harm honest users, creating an illusion of the real users in the OSN that these are real identities. In the absence of stringent control mechanisms, it is difficult to identify and remove these malicious accounts. But, as every single interaction on a social media website leaves its digital trace and a huge number of such interactions every day culminates into huge datasets, it is possible to use Machine Learning (ML) techniques to build prediction models for identifying these Sybil accounts. This paper is one such attempt where we have used ML techniques to build prediction models that can predict the presence of Sybil accounts in Twitter datasets. After preprocessing the data in these datasets, we have selected an optimal set of features using one filter method namely Correlation with Heatmap and two wrapper methods namely Recursive Feature Elimination (RFE) and Recursive Feature Elimination with Cross-Validation (RFE-CV). Then using 8 classifiers (SVM, NN, LR, DT, RF, NB, GPC, and KNN) for the classification of accounts in the datasets, we have concluded that the Decision Tree classifier gives the best prediction performance among all these classifiers. Lastly, we have used an ensemble of 6 classifiers (SVM, NN, LR, DT, RF, and KNN) by using Bagging (max voting) to achieve better

results. But it can be concluded that due to the inclusion of weak learners like SVM, NN, and GPC in the ensemble, DT has given the best possible prediction outcomes.

Essential features for network performance monitoring

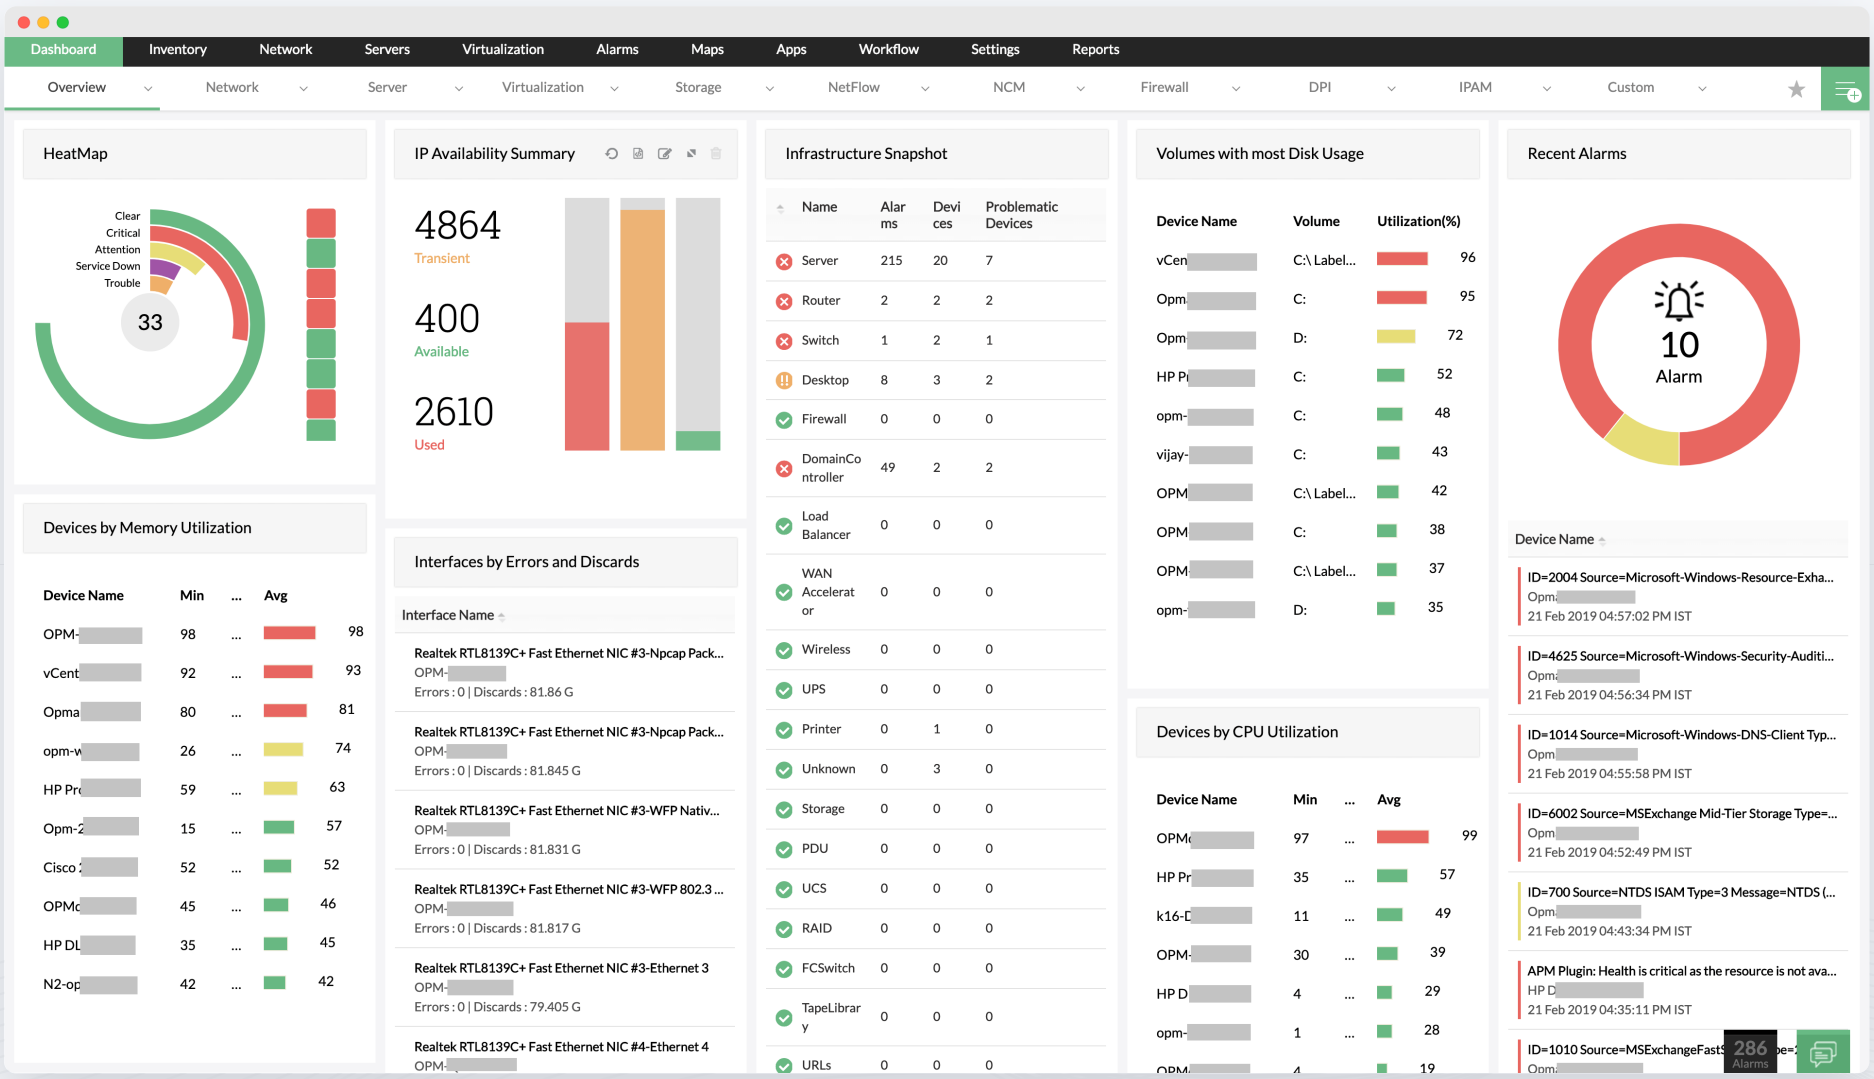
Monitor

Monitor all network devices, including routers, switches, servers, storage devices, VMs, and more.

Alert

Proactively alert on fault detection, thereby helping fix the issue well before it affects the end user.

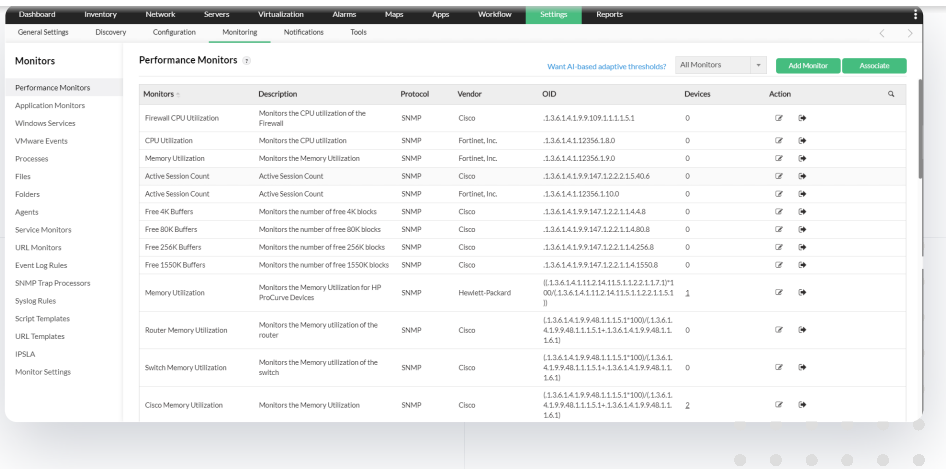
Visualize



Visualize performance of the entire network from a single intuitive dashboard.

Automate

Effortlessly automate troubleshooting and repetitive tasks.



Scalable, affordable and easy-to-use network monitoring solution for the enterprises

OpManager is a holistic blend of robust network monitoring tools that empowers network administrators to monitor the entire network in minutes. This network performance monitoring tool has a systematic approach to monitoring all network devices, making the process truly effortless.

Proactively monitor the performance of network devices

Proactively monitor the performance of network devices, including switches, routers, firewalls, VMs, storage devices, servers, printers, load balancers, wireless LAN controllers, by monitoring associated metrics at predefined intervals. In a nutshell, OpManager readily monitors any devices that is connected to the network using an IP address. Monitor performance metrics like CPU, memory, packet loss,and more.

Manage Multi-vendor devices

Adaptive thresholds

Pre-defined workflows

Exploring Feature Selection Technique in Detecting Sybil Accounts in a Social Network

Shradha Sharma & Manu Sood

Conference paper | First Online: 31 July 2020

747 Accesses | 2 Citations

Part of the Advances in Intelligent Systems and Computing book series (AISC,volume 1166)

Abstract

Machine learning (ML) provides us the techniques to carve out meaningful insights into the useful information embedded in various datasets by making the machine learn from the datasets. There are different machine learning techniques available for various purposes. The general sequence of steps for a typical supervised machine learning technique includes preprocessing, feature selection, building the prediction model, testing and validating the model. Various ML techniques are being used to detect the presence of fake as well as spambot accounts on a number of Online Social Networks (OSNs). These fake/spambot accounts especially the Sybil accounts appear in these networks with malicious intentions to disrupt or highjack the very purpose of these networks. In this paper, we have trained various prediction models using appropriate real-time datasets to detect the presence of Sybil accounts on online social media. Since the data is collected from various sources; it necessitates the preprocessing of the dataset. The preprocessing has mainly been carried out for (a) removing the noise from this data and/or (b) normalizing values of various features. Next, three different feature selection techniques have been used for the selection of the optimal set of features from the superset of features so as to remove the features that are redundant and irrelevant in making accurate predictions. The three feature selection techniques used are Correlation Matrix with Heatmap, Feature Importance and Recursive Feature Elimination with Cross-Validation. Further, K-Nearest Neighbor (KNN), Random Forest (RF) and Support Vector Machine (SVM) classifiers have been deployed to train the proposed prediction models for predicting the presence of Sybil accounts in the OSN dataset. The performances of the proposed prediction models have been analyzed using six standard

metrics. We conclude that the prediction model based on the Random Forest classifier provides the best results in predicting the presence of Sybil accounts in the dataset of an OSN.

Evaluating the Impact of Feature Selection Methods on the Performance of the Machine Learning Models in Detecting DDoS Attacks

Naveen BINDRA and Manu SOOD

Himachal Pradesh University, Shimla, India
E-mail: naveenjb@hotmail.com, soodm_67@yahoo.com

Abstract. Heaps of Data lie in network equipment of the organizations. To break down this information and reach some significant inferences is inconceivable for the present day IDS (*Intrusion Detection System*). Moreover, their signature-based defense mechanisms are ineffective in tackling emerging threats like DDoS attacks. The central premise of building Machine Learning Classifiers is to detect DDoS attacks efficiently and effectively. However, their accomplishment of machine learning models to distinguish DDoS attacks relies upon how one picks the 'relevant' and 'minimal' attributes in the network streams. The questions: "Does features choice influence the classification precision, to what extent and what is the best feature selection for boosting the performance of Machine Learning Classifiers in detecting DDoS attacks" motivate this investigation.

This paper presents how to apply ML techniques in detecting DDoS attacks. There are three feature selection categories and our work demonstrates the application of the feature selection methods, one each from the three categories. In addition, five machine learning models have been utilized in our work. Random Forest classifier with Lasso-RFE, a feature selection strategy beat others. The other significance of this research paper, we believe, is a first of its kind scenario, where a real-life multidimensional dataset having diverse network traffic and recent DDoS attacks have been used unlike in most of the studies carried out to date.

Key-words: DDoS detection, DDoS attack, machine learning, feature selection, SciKit-Learn, network traffic classification.

1. Introduction

Keeping computer network safe is a task for organizations. Complex and mutating DDoS attacks are the primary vectors for causing damage to the networks, data and, availability of services. With the development of Big Data, IoT (Internet of things) and BYOD (*Bring Your Own*

Device), and social networking applications, the network traffic has increased many folds and so are the network threats [1][2][3]. Traditional Intrusion Detection Systems are not that shrewd to recognize advanced attacks. Therefore, there is a need to devise new strategies/arrangement, which can go up against these threats. The other real obstacle in utilizing existing strategies is 'human intervention', which is required at present for the elucidation of threat recognition. With the establishment of a large campus-wide area network, internet facilities, Wi-Fi, attack-surfaces have multiplied.

Heaps of Data lie with any organizations' network equipment such as switches, firewalls, controllers and so forth. To break down this information and reach some significant inferences is inconceivable for the present day IDS (Intrusion Detection System) frameworks because of vast information estimate. Moreover, their signature-based defense mechanisms are ineffective in tackling emerging threats. Thus, analyzing the data and draw some meaningful conclusions is next to impossible for the present day IDS (Intrusion Detection System) systems. Filtering the relevant data requires a huge amount of human effort.

The role of machine learning in intrusion detection particularly DDoS attacks are now well established. Machine learning (ML) and the information mining techniques, together are exceptionally viable in such circumstances. The use of ML-based classifiers in getting rid of the need for human mediation is a potent way of recognizing inconspicuous attacks, which is yet odd for other security machines. The ML-based classifiers learn on the training data and anticipate the Intrusion identification and DoS attacks. The success of classifiers vastly depends upon relevant features and classification accuracy. Classification accuracy is the ratio of the number of correct predictions to the total number of input samples [4]. Feature selection helps in retaining only the meaningful features and drops the redundant and correlated features in order to boost prediction accuracy reduce computation complexities and prediction latency. To train the machine learning models attaining adequate accuracy need extensive data. Huge data generally has a noise that affects the performance of machine learning models adversely. Thus, the data need cleansing and removal of redundant and irrelevant features for machine learning models to make predictions with high accuracy. Redundant features are those, which correlate strongly, and removal of them does not affect the accuracy of the model. Similarly, many features in the dataset, which does not influence the prediction of machine learning models are termed as 'irrelevant' and are dropped during feature selection. Thus, 'noise removal' plays an important role in building ML models.

Optimizing the performance of feature selection techniques is an optimizing problem in mathematical terms. Feature selection has a three-fold impact on the overall performance of machine learning models: 1) increasing the accuracy of machine learning models, 2) helps in reducing the performance latency of various ML algorithms and 3) diminish the computational complexity to analyze their correlation.

This examination embarks to explore the aptness of machine learning in network traffic classification by using the results obtained from various feature selection methods. The contribution of this work can be summarized as below:

- We present a study of detecting DDoS attacks in an extensive dataset with diverse normal traffic and the latest DDoS attacks unlike other studies carried out to date.

- We present the study over the CICIDS2017 dataset, which is a real-life dataset with over 225,000 rows and over 84 features. To the best of our knowledge, this study is the first one where this contemporary dataset has been put to use. We also show the impact of feature selection and we were successful in achieving an accuracy above 95 and 96% using

just 12/15 features in case of KNN and Random Forest ML models respectively, without compromising on the accuracy.

This paper organizes into five sections. Section II outlines the work done by researchers in the literature to explore network flow classification. Section III of this paper gives an overview of the dataset chosen for this experiment, feature selection methods and classifiers used for the detection of DDoS. Section IV describes our experiment and the selection of tools for analysis. Of all the sections, section IV is the most vital section as it divulges details about the results and the manner they are obtained. Section V wraps up the work and also indicates the avenue for future work.

2. Related Work

Feature selection has an imperative impact in boosting the accuracy of a model. Recent studies have revealed that selected features were successful in increasing or maintaining the accuracy of the machine learning models.

N.T. Nguyen *et al.* [5] looked at the performance of feature selection approaches namely correlation-feature-selection (CFS) measure and the *minimal-redundancy-maximal-relevance* (mRMR) measure with SVM-wrapper, Marko blanket, and *Classification & Regression Trees* (CART) algorithms as well as the recently proposed *generic-feature-selection* (GeFS) method. They used the KDD dataset and were able to remove more than 30% features while achieving better classification accuracy. However, the results are based on the KDD dataset which is outdated now for not having the current DDoS attacks. H. Nkiama *et al.* [6] demonstrate the impact of recursive feature elimination with decision tree classifier for feature selection. The classifier showed good performance over the NSL-KDD dataset. They achieved more than 99% accuracy.

Feature selection methods like IG, Gain ration and relief F, etc. along with classifiers such as J48, random and one R etc. in [7] establish the relation between classifiers and feature selection methods.

Work in [8] contrasts different feature selection strategies to discover that entirety of term frequency. This work additionally examined the combined effect of multiple feature selection models and Osanaiye et al. in [9] even propose a multi-filter feature selection method and evaluated the feature selection methods like Info gain, gain ratio, chi-squared and relief. The metrics used were classification accuracy, detection rate, false alarm rate and time to build models. Similarly, Pekta *et al.* [10] talk about identifying prominent features for the detection of botnets in the network. They examined the execution of three feature selection algorithms namely Lasso, RFE, and decision tree-based feature selection. The metrics employed for their evaluation were precision, F1 score, recall, and accuracy. The Random forest was the best performer in their case. They could accomplish 93% accuracy in the case of random forest classifier, alongside the feature selection methods.

Peyman Kabiri and Gholam Reza Zarga [11] proposed a feature-based detection of DoS attacks where their work identified the relevant features for the detection of different classes present in the dataset using PCA (*Principal Component Analysis*). The accuracy achieved by the authors for this experiment was more than 97% which is very good.

Prafulla Kalapatapu1 et al. [12] compared various feature selection methods e.g. genetic algorithm, Forward feature selection, information gain and correlation based on four classifiers

Table 1. Features in cic ids 2017 dataset

(Decision tree C4.5, K-Nearest neighbors, neural network and support vector machine. They claim to achieve higher accuracy with these feature selection methods than otherwise.

This work is better on three grounds from similar works. First, the use of the CICIDS2017 data set, which has an edge over other datasets in terms of being realistic and entailing contemporary DDoS attacks. Secondly, it covers all the three categories of feature selection and finally, the feature selection, in our case we were able to remove 82% feature which is well below the works considered here.

3. Data Pre-processing and Feature selection

A. Dataset

Among the available choices for the IDS dataset, we picked CIC IDS 2017 dataset [13]. The dataset includes contemporary DoS attacks and benign network flows to imitate the real scenario [14]. The attacks used for the generation of data are Brute Force FTP, Brute Force SSH, DoS, Heartbleed, Web Attack, Infiltration, Botnet, and DDoS. The dataset involves about eleven criteria such as attack diversity, labeling, complete capture, complete interaction etc. the experimental setup was comprised of physical machines and tools like curl have been used to generate normal network traffic. The network topology used for capturing the network traffic includes most of the network devices and the dataset is complete capture. Network protocols *e.g.* HTTP, HTTPS, SSH, FTP, SMTP, IMAP, and POP3 have been used for the generated traffic to make it more real. They capture data for five days and we chose data captured on Friday for our experiments, which included dos attacks and benign traffic. The dataset runs into GigaByte and was provided as labeled data as a '.csv' file format. With about 85 features as mentioned in Table I, the dataset is an ideal choice for demonstrating the effect of feature selection on how five Machine Learning based classifiers are chosen for this study perform.

B. Feature selection

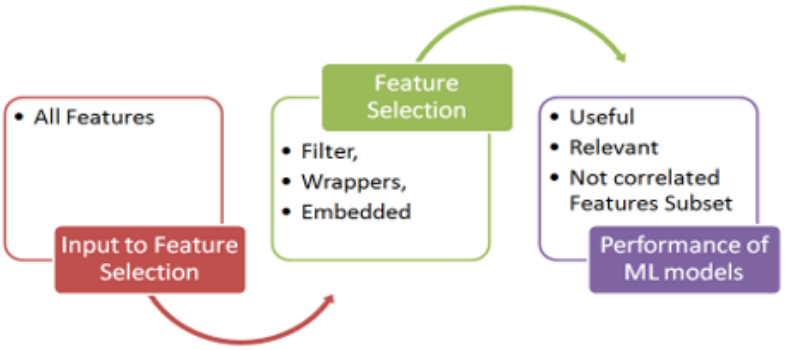

Fig. 1. Feature Selection Process.

Feature selection [15][22] as the name suggests, is the selection of the features out of the total available attributes or features in order to reduce the computational latency and complexity, increasing accuracy and doing away with 'overfitting'. It is three types 1) Filter methods, 2) Wrappers Methods and 3) embedded methods. In filter methods, correlation of the features with the dependent variable ascertains their relevance while wrapper methods use the actual classifier to weigh the worth in subset of the attributes. Filter methods are much faster and less computationally intensive as compared to the wrapper methods as they do not involve training the models. Feature selection methods [15] categorize into Filter, Wrappers, and Embedded Methods.

Recursive Feature Elimination [16] is an embedded method that works with machine learning algorithms like Support Vector Machines, Lasso, etc. Here the model construction happens by repeated removal of the features with low weights. Embedded methods have computational complexity between wrappers and filter methods.

Selectfrommodel [17] strategy is more or less the same as RFE but is less robust. Here the features are chosen in view of weights and as per the threshold. The estimator is a parameter for this method which is machine learning algorithms like Random Forest, lassoCV, etc.

SelectPercentile [18] is another feature selection method that can be implemented using Scikit-learn which assigns percentile to the features based on their score. Subsequently, features can be selected to a cutoff percentile considering the performance of a classifier.

PCA (Principal Component Analysis) [19] projects correlated features on a different plane making them uncorrelated i.e. with maximum variance. In mathematical terms, it can also be defined as an orthogonal linear transformation. For a given set of k-dimensional vectors of weights w(k) , there exists map x(i) from X to orthogonal vector Y(i) is represented by Y(i) = x(i).w(k). In PCA, the dimensionality of data is reduced but the original features are not retained by this method unlike in other feature selection methods.

C. Classifiers

A classifier in machine learning is a statistical function that classifies network traffic. We used five supervised ML-based classifiers for our study. These are Support Vector Machine (SVM), Gaussian Nave Bays (GNB), and K nearest neighbor and Random Forest. Support Vector Machine [20,21] is a supervised machine learning algorithm that finds a line of categories by

learning from the dataset. The major benefit of using this classifier is that it doesn't 'overfit'. The classification is carried out by searching for a hyperplane to classify the classes in the best possible way. We have used Linear SVM which is a type of SVM and is very efficient. Nave Bayes Classifier [20,21] is amongst the most prominent learning methods based on Bayes Theorem of Probability. It is a very fast method and is capable of making almost real-time predictions. The main downside of this method is its supposition regarding independent predictors which is not possible practically. Logistic regression [20,21] is a statistical method for analyzing the dataset having one or more independent variables for determining the outcome. Random Forest [20, 21] is the group learning method used for classification. Random Forest is a group learning method used for classification. It creates several decision trees during its training and uses votes from these decision trees for predicting an output. K-nearest neighbor algorithm [20, 21] is generally used for both classification and regression. This is also known as the lazy learning algorithm. It stores every single accessible case and predicts the class of the information in view of these cases.

4. Experiments & Results

A. Testbed

The experiments were carried out over Ubuntu (64-bit) based virtual machine having windows 10 as host. The memory of the physical machine was 4 GB. With a Core 2 Duo processor, it was a robust machine in the business segment and was tuned for best performance i.e. we disabled most of the graphics/ redundant processes running in the background. The software application was written by the authors in Python programming language using Scikit-learn Library [20]. The pseudo-code of the same is given in Fig. 2.

B. Metrics

We used five machine learning models and as many feature selection methods. The accuracy of the classifiers and number of the features selected by the feature selection methods without compromising on the accuracy of the classifier were utilized as metrics for the evaluation of our experiments. The accuracy of Machine Learning classifiers can be calculated as below:

Accuracy = correct predictions/ total number of instances

C. Outcome

We ran the experiment initially without pre-processed data; the results are illustrated in Fig. 3 & Table I. The drawback observed was the higher computational latency. The dataset was subjected to various data pre-processing techniques such as removing blank values and replacing NaN with median values and Infinity values with '0'. 'Infinity' values are very large values and NaN is 'Not a Number' generally creep in instead of the intended observation when something goes wrong during the happening of an experiment. It was logical to replace/drop these values with appropriate methods referred above.

A software module was written to compare the feature selection techniques. The same was developed using 'python' and python based libraries such as Scikit-learn [20], Numpy and Pandas, etc. The pseudo-code snippet in Fig. 2 depicts the logic of the code and Fig. 3 is the screenshot of the actual results obtained during the trial. We used 10 fold cross-validation, which

is a far advanced technique than 'train_test_split' strategy [23]. It divides the dataset into 10 segments of equal size and each segment is used iteratively for testing and training of the model. We picked classification accuracy as the metric to evaluate the performance of feature selection methods.

```
IMPORT important libraries including Scikit Learn
IMPORT the dataset
PRE-PROCESSING to impute missing values, replace NaN (Not a
Number) and Infinity values in the dataset
DROP redundant/ irrelavant features
SCALE the data
STOREvarious Machine Learning Models in a variable 'models'
SET scoring equal to accuracy, Name as name of the machine learning
models
FOR Name, Model in models:
      Store value of model  selection using 10 splits in a variable
       Calculate and store results using cross_val_score method of
        model_selection in sklearn by imputing Train and Testing data
        Append results in list of existing results
        Print mean accuracy and standard deviation
END FOR
```

Fig. 2. Pseudo Code snippet for DDoS traffic classifier.

It was observed that there was a clear difference in execution time in the two scenarios *i.e.* with and without scaling. Without scaling of data, the classifiers took longer to finish. However, after applying feature selection methods, the time taken by the model to finish was much shorter. Thus, we deduce that feature scaling and feature selection methods influence the performance of classifiers. We applied several feature selection methods *e.g.* Recursive Feature Elimination (RFE with Lasso and Linear SVC) 'SelectFromModel', 'SelectPercentile' and PCA (Principal Component Analysis). The results of the same have been illustrated in Table II.

It can easily be verified that the number of the features was reduced from 85 to 12/15 in most of feature selection methods without compromising on the accuracy of the classifier. We also replaced the categorical labels i.e. BENIGN and DDoS with '0' and '1' respectively as the machine learning models require float/ numerical values.

Apart from the application of feature selection methods, we also picked PCA for a comparison viewpoint. PCA is not a feature selection method per se but is a dimensionality reduction technique used by us to have a wider perspective of the reduced number of attributes over performance in classifying network flows in DDoS detection. The subsets selected using different feature selection methods are given in Table IV.

It can easily be verified that the number of the features was reduced from 85 to 12/15 in most of feature selection methods without compromising on the accuracy of the classifier. We also replaced the categorical labels i.e. BENIGN and DDoS with '0' and '1' respectively as the machine learning models require float/ numerical values.

Table 2. Experimental Results: Mean Accuracy of Classifiers alongside Feature Selection methods

#	Machine Learning Models	Without any feature selection with all 85 features		SS & Select Percentile (k=15)		SS & RFE (model= linearsvc and components=15)		SS & PCA(n=25)		SS and lasso CV select frommodel (threshold=0001) feature selected =12		SS with Lasso (alpha=.05) & RFE(feature to select=15)	
		Mean	SD	Mean	SD	Mean	SD	Mean	SD	Mean	SD	Mean	SD

Fig. 3. Screen Shot of results obtained in one of the Trials.

Apart from the application of feature selection methods, we also picked PCA for a comparison viewpoint. PCA is not a feature selection method per se but is a dimensionality reduction technique used by us to have a wider perspective of the reduced number of attributes over performance in classifying network flows in DDoS detection. The subsets selected using different feature selection methods are given in Table IV.

Table 3. Feature selected with different methods

#	Feature selection methods	Feature selected
[1]	Features selected using RFE witht linearsvc and n_features_to_select =15 and step=5 (pp StandardScaler)	11, 12, 13,15, 16, 33, 41, 47, 59, 60, 70, 72, 74, 75
[2]	Feature selected after using SelectPercentile(12 features percentile=15) and using standardscaler	3, 17', 19, 20, 23, 24, 25, 29 ,30, 61, 81, 83
[3]	Lasso cv(toi=.0001) with SelectFromModel(model,threshold=-05) and StandardScaler	3, 8, 9, 23, 24', 32, 34, 47, 54', 59, 60, 61
[4]	RFE (n_features to select 15) with Lasso(alpha=.05) and StandardScaler(results reverified)	3, 5, 6, 9, 10, 11, 12, 13, 19, 24 , 54, 61, 76, 81

We were able to show the following aspects of feature selection in this study:

a) Random Forest and KNN turned out to be the best Machine Learning model to detect DDoS attacks. With feature selection methods, the Random Forest classifier was top performer and KNN performed well without using any feature selection i.e. keeping all the 85 features.

b) The classifiers perform differently with different feature classification techniques i.e. Correlation exists between classifier and feature selection algorithm.

c) The Machine Learning classifiers performed fantastically with adequate prediction accuracy over a real-life dataset which entails contemporary DDoS attacks and diverse network traffic.

d) We were successful in reducing the feature from 85 to 12/15 without compromising on the accuracy of the classifier.

e) Feature selection does boost crease the performance and accuracy of the classifier.

f) We illustrated the effect of feature selection methods belonging to all three categories e.g. Filter, wrapper, and embedded methods.

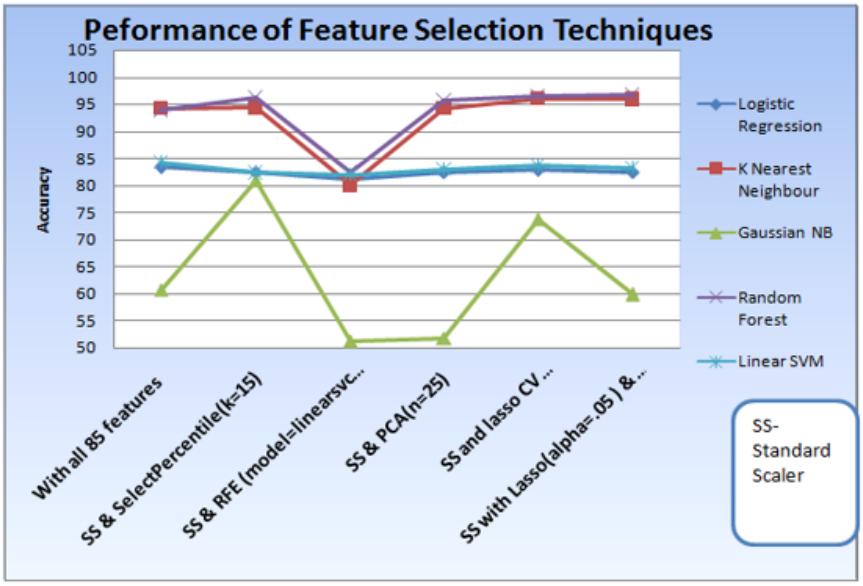

Fig. 4. Performance of machine learning models with different feature selection methods.

E. Discussion

We developed and used a Python-based software application for analyzing the network traffic dataset. The feature selection methods were chosen to evaluate all the three categories of feature selection/ elimination helped in generalizing the results. Results were obtained in a reasonable time frame. The finding of our experiments though ranked performances of the classifiers yet we cannot call any classifier 'the best' in every situation. Picking different machine learning algorithms alongside feature selection techniques altered the outcome which will be investigated in our future work.

In ordinary 'train_test_split' strategy', the machine learning models perform inadequately due to 'underfitting' or 'overfitting'. Overfitting refers to the learning of a machine learning model over the data and noise as well and adversely affects the performance of the models. Underfitting is another unwanted phenomenon when machine learning models fail to fit the training data well. There is every chance that the left-out data contain important patterns that induce the error by bias. Thus, we used K=10 Fold cross-validation for evaluation and comparison of our machine learning models and it indeed helps in avoiding these situations and results can be validated over the whole of the data.

F. Limitations

We evaluated our experiments with two metrics namely accuracy and number of features. More metrics as Precision, Recall, and F-measure can certainly present a more generalized view.

5. Conclusion

Feature selection is very vital from the perspective of the application of Machine learning algorithms. They boost the performance of these algorithms, reduces the complexity and time of execution. In other words, ML models become efficient with the application of feature selection. It removes irrelevant, redundant features without any considerable loss of information. Redundant features are those features that have do not have strong correlations with other features and thus their removal does not impact the outcome and the same applies to irrelevant features.

Detecting DDoS attacks at an early stage could spare the organizations from monitory, data and reputation loss. We evaluated feature selection methods one each from the entire three categories namely: Filter, Wrappers and Embedded methods. Our work has illustrated that feature selection has a direct impact on the outcome of machine learning-based classifiers for the detection of DDoS attacks. We validated the results using two metrics. The outcome of our experiments promptly concluded that KNN & Lasso CV with the SelectFromModel method and Random Forest alongside Lasso-RFE have performed better than the rest of the feature selection methods & classifiers. Further, we were successful in reducing the features from 85 to 12/ 15 without compromising on accuracy. Our results are more relevant as we used dataset having contemporary DDoS attacks. In fact, the accuracy of both the classifiers was improved with the feature selection. In the future, common features in multiple datasets will be evaluated as their impact on accuracy will be a fascinating study.

This research did not receive any specific grant from funding agencies in the public, commercial, or not-for-profit sectors. The data used to support the findings of this study are included in the article in table III. “The authors declare that there is no conflict of interest regarding the publication of this paper.”

Abstract

Deep learning is a powerful technique which is inspired by the structure as well as processing power of the human brain. This technique uses deep neural network to perform complex tasks such as time series prediction, image classification, and cancer detection. In this research work, we used Covid-19 time series datasets and with the help of deep learning we built the model for prediction of Covid-19 cases. For the model building, we used two deep learning neural networks, Recurrent Neural Networks (RNN) and Long Short Term Memory Networks (LSTMs). We built a prediction model using RNN in the first instance and subsequently the second model was built using LSTMs. Out of these two neural networks, we got promising results from the model based on LSTMs with an overall accuracy of 98%. As the cases of Covid-19 are increasing day-by-day at a very high rate, we proposed these models using neural networks to help in predicting the future trends of Covid-19 confirmed, deaths and recovered cases.

Abstract

In today's world, mobile devices and smartphones are used heavily and have become one of the essential requisites of everyday life. The development of several applications feasible for those devices has revealed that there is a huge demand for applications of mobile. A technology which aroused in the IT sector provides an opportunity to solve those issues, namely mobile computing and cloud computing. The modern mobile architecture integrates cloud computing and mobile technology to produce Mobile Cloud Computing (MCC). Processing, data storage, and computation accompanied by the applications are moved off the mobile device to be a robust centralized platform of computing that resides in the cloud. The significant risk of mobile cloud computing is securing remote applications and data from illegal access. There is a possibility of unauthorized access, which is accessed by third parties. Therefore the issue of security in mobile cloud computing becomes one of the major research areas. It is necessary to implement strict authentication controls in MCC. The proposed research work is an attempt for secure authentication in a mobile cloud by using a key server and AES-256 algorithm for cryptographic purposes.

Part of the Studies in Computational Intelligence book series (SCI,volume 941)

Abstract

With the exponential growth of data in electronic form, it becomes a complex and tedious task to extract meaningful information. The vast collection of data has resulted in big data that may be in indeterminate form. The challenge is to extract meaningful data from internet sources that are spreading across multiple domains and to enable consistent resource sharing, interoperability on multiple IoT platforms. The use of emerging technologies like Machine Learning and IoT is realized on multiple platforms, systems, and service applications. The introduction of predefined libraries on Natural Language Processing in Machine learning platforms has emphasized on the semantic web technologies and its IoT future directions. In this chapter, authors have discussed the role of the semantic web, three layered framework for IoT interoperability, and have framed a web ontology structure for semantic interoperability in IoT for the healthcare sector. Authors have also proposed the text analytics model for the healthcare sector and performed semantic data classification on synthesized healthcare dataset to predict the patient diagnosis using Machine learning techniques.

ABSTRACT

In the digital era, there is an accumulation of large volume of data, and the biggest challenge being faced by humans is to derive meaningful information from these data. In such a scenario, data mining techniques become important to unearth the hitherto unknown relationship from data. There is an urgent need for scientific research in education, as it aimed at enhancing student's cognitive learning and social development. With increasing educational institutions, the large amount of data is accumulated, which is unstructured and not useful neither for students nor for teachers. Therefore, the major stress is on improving the quality of learning in schools and institutions, and there is a need to make significant progress on access to schooling and quality of learning in students. The computational intelligence is achieved through data mining techniques, which can break down information to enable it to make predictions. This chapter aims at discussing the utilization of educational data mining, learning analytics, and predictive intelligence techniques in educational field and models of machine learning, that is, unsupervised and supervised learning. There are some inbuilt libraries, such as Tensor flow, Keras, and Python libraries, discussed in this chapter, which helps in building, training, and applying it into educational data classification.

Battery and Energy Management in UAV-Based Networks

Santosh Kumar, Amol Vasudeva, Manu Sood

Book Editor(s):Vandana Mohindru, Yashwant Singh, Ravindara Bhatt, Anuj Kumar Gupta

First published: 30 July 2021 | https://doi.org/10.1002/9781119769170.ch3

Summary

Unmanned aerial vehicles (UAVs) technologies are attracting great attention with growing demands for autonomy for commercial, military, and other purposes. UAV-based communication networks play an important role in application presently using UAVs and upcoming potential future applications. Besides the number of pros, there are many challenges like line-of-sight communication, distance from the data receiver, limited access to the communication spectrum, energy constraints, and most concerning limited battery power. The focus of this chapter is on studying the techniques available for effective battery and energy manage-ment in UAV-based communication networks. The mechanisms for the optimal utilization of energy resources by UAVs to maximize their lifespan or deployment in a network are critically examined. This helps in a significant reduction in the usage of network energy resulting in a prolonged network lifetime. Further potentially promising areas for future research are also explored.

Handling Security Issues in Software-defined Networks (SDNs) Using Machine Learning

Deepak Kumar & Jawahar Thakur

Conference paper | First Online: 31 March 2022

502 Accesses

Part of the Advances in Intelligent Systems and Computing book series (AISC,volume 1420)

Abstract

Software-defined networks are scalable, flexible, easier to manage, and also support adaptive nature. Our objective is to focus on how machine learning can make SDN more secure and robust. The use of machine learning not only increases efficiency but also helps to take optimal decisions. This is because machine learning algorithms can monitor each layer of the SDN paradigm and provide security both at the hardware and software levels. It also keeps track of packets flow and other malicious activities. The continuous flow of packets can be utilized as a datasets to train the SDN controller. Thus, using machine learning, we can make the controller intelligent to overcome security issues in a better way as it can detect abnormal behavior of devices, flooding of packet flows, and also it makes features such as load balancing, traffic classification, firewall monitoring, and QoS even more efficient. SDN has gained attention among researchers as its integration with emerging technologies make it more interesting. For emerging networks, SDN is the best available choice, as it is flexible, scalable, programmable, reliable, robust, and secure.

Preface

In the twenty-first century, organizations are facing many new challenges. Some people would argue that society and the economy have changed so radically that the last century's management practices and theories are no longer relevant. The truth is management has become more important than ever. Almost everything we do today as individuals or organizations requires us to interact with large-scale institutions, such as government agencies, banks, health-care providers, insurance companies, school systems, universities, online retailers, and technology service providers. How has management theory and practice evolved to manage this new organizational and business environment? Interestingly, it has become both more specific and more general.

Several forces are significantly shaping management practices today, including the pace of change, technology, globalization, diversity, and social expectations. Keeping these things in mind this book was conceptualized with an objective to publish the researches being done on various Advances in Management, Social Sciences and Technology. conference.

We hope that this book will be prove to be helpful to students, research scholars, academicians and business executives in having a better understanding of the concept of Advances in Management, Social Sciences and Technology.

Acknowledgements

I am really feeling very honored and privileged to express my gratitude to all those who supported me in my Journey of publishing this Edited book on "Advances in Management, Social Sciences and Technology".

Nothing can be possible without the Blessings of the Almighty. I bow to the supreme power for always being there with us in all our endeavors.

This Edited Book is the hard work of all the dedicated researchers. We are indebted to all of them for their quality work and for making this book a possibility.

I am thankful to my parents Ms. Nazma Rahman & Mr. Nakibur Rahman for making me understand the importance of education and for making me a confident individual.

I am indebted to my Mother-in- law Ms. Rumena Begum who has always supported in all my decisions. Without her support I could not have been able to pursue my professional career. I know she is always blessing us from the Heaven above.

My deepest gratitude is towards my Husband Dr. Akhter Alam and my Son Irfan Alam for always coping up with my erratic work schedules. They have been my pillar of strength. Without their motivation and support I would not have been able to complete this project.

Last but not the least, I express special thanks from the core of my heart to Mr. Arvind Kumar and Empyreal Publication House for their support to print and publish this book in a very short span of time.

Dr. Tazyn Rahman

A STUDY OF STRESS COPING SKILLS OF COLLEGE

Dr. Venkoba Narayanappa
Department of P. G. Studies in Education, Karnataka State Women's University, Jnanashakti Campus, Athani Road, Bijapur

ABSTRACT
In the present investigation an attempt has been made to measure the Stress coping skills of post graduate students of Bijapur city in Karnataka. Stress coping skills inventory by Jerabak, Answer sheet, Scoring key and Norms were used. The mean and standard deviations were computed from the raw data for the selected sample. To find out the significant difference between the sub-groups t-test was employed. The results show that there is a high level of Stress Coping Skill among college and university students of Bijapur city of Karnataka state. There is significant difference between sub-groups such as UG & PG, women university and Karnataka university, govt. college and private college, arts and science, arts and social science, arts and commerce, arts and education, education and commerce, arts and science, Govt. and private arts, science and commerce in their level of Stress Coping Skill. There no significant difference between Govt. college and Private college, arts and science, arts and social science faculties of women university in their level Stress Coping Skill. The is a significant deference between English and kannada, kannada and Bioinformatics, MCA and Pharmaceutical Chemistry, Economic sand Sociology, Economics and Women's studies, Economics and Social work, Sociology and Women's studies, Sociology and Social work, Women's studies and Social work, M.Ed, and M.Com, M.Com and MBA in their level of Stress Coping Skill.

INTRODUCTION
Stress is the demands placed on the individual that are perceived as threatening and demands that tax the individual's resources. Stress thus involves a perceived threat which an individual thinks that may strain or exceed his/her resources. Stress includes tightening of muscles, increased heart rate and breathing seems more rapid. Both the person who is lethargic to do anything and the person who always has to do something may be experiencing stress.

The term stress refers to situations that pose demands, constraints, or opportunities. However, a stress-arousing situation for one person might be a neutral event for another, whether a creation situation is stressful for us or not depends on how we appraise a life event and how we rate our ability to deal with it.

Coping Skills: Coping Skills are characteristic way of dealing with difficulties-influence how we identify and try solving problems. People who cope successfully do not only know how to do thing, they also know how to approach situation for which they do not have a ready available response.

Stress and illness: There is growing evidence that stress plays an important role in illness and health. Selye proposed a model of stress reaction in the body called the General Adaptation Syndrome(GAS) which has three phases; Alarm reaction, Resistance and Exhaustion. Alarms reaction is a familiar sensation to everybody and is best known as "fight" or "flight" responses. In resistance, the distinctive reactions of the alarm fade and disappear and the body seems to "return to normal". Exhaustion is one in which badly resources are depleted and the organism loses its ability to resist so that further exposure to the stress can lead to disintegration and death.

The causes of stress are many. Pressures or stresses also come from within,

ISBN: 978-81-949278-6-0

from the beliefs, attitudes and expectations about the world and ourselves from our habits and behavior and from our personality. Stress falls into different groups, physical, environment stresses, such as noise and pollution, cultural expectations and more personal social expectations from family, friends and colleagues. For many people, it is the small daily events which cause the most stress.

Stress affects both physical and emotional well-being of an individual. Coronary heart disease is prominent when it comes to them and stress along with hypertension following heart disease; the second most common stress-related illness and probably those of the alimentary canal ranging from indigestion to ulcer. Two major problems are peptic ulcer and irritable bowel syndrome. Other illnesses include certain skin disorders and various types of mental and emotional disorders.

Stressful Situations: Stress can have undesirable effects on behavior, thought, and bodily functioning, because different people react to stressors and their effects on the different bodily symptoms is often low. It is particularly hard for people to deal with several stressors that occur at nearly the same time.

Stress-arousing Situations: Stress can arise either from specific situations or from developmental transitions. Stressful events vary in several ways: duration, severity, predictability, degree of loss of control, self-confidence of the person, and suddenness of onset.

Life Transition: Life transitions, such as going to college, getting a job, having a baby, and moving, may also be stressful. Adolescence is a time of particular stress because of physical changes, role changes, and changes in parent-child relationships.

CLINICAL REACTIONS TO SRTESS

Among the disorders that seem most related to stress are adjustment disorders, posttraumatic disorders, and dissociative disorders.

Adjustment disorder: An adjustment disorder is a reaction to recent stress and usually disappears when the stress level decreases. Common symptoms of adjustment disorders are depression, anxiety, disruptive or reckless behavior, sleep problems, deterioration in performance, and social withdrawal.

Posttraumatic disorders: Posttraumatic stress disorder (PTSD) may after an extreme stress such as a natural disaster, a serious accident, or participation in battle or other war-related situations.

Dissociative disorders: Sudden temporary alterations of consciousness that bolt our painful experiences are characteristic of dissociative disorders

TREATING STRESS RELATED PROBLEMS

A variety of approaches are used other alone or in combination to treat stress-related disorders.

Supportive Therapy: In Supportive Therapy the therapist provides acceptance and a noncritical attitude in orders to give the clients an opportunity to relax enough to engage in problem solving.

Drugs and sedatives: Drugs and sedatives act on the nervous system to allow the person to feel a temporary decrease in stress. This treatment is often combined with a psychological therapeutic approach.

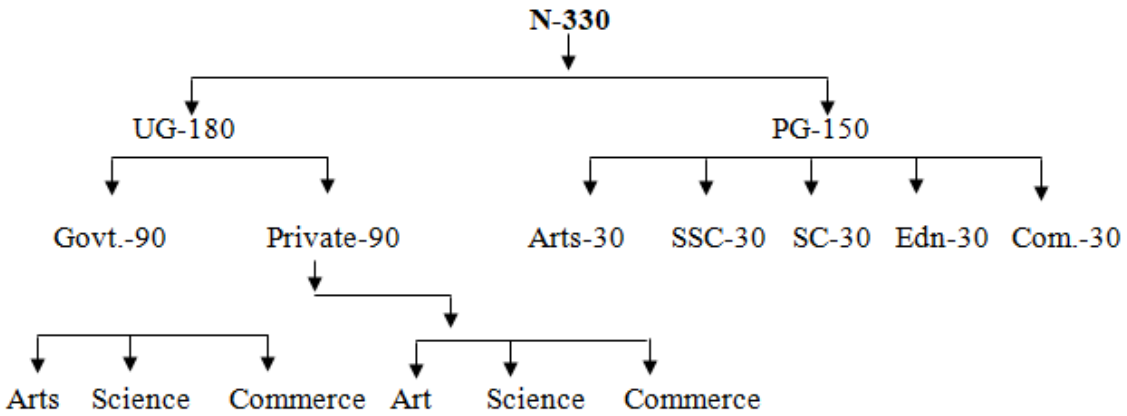
Relaxation Training: Relaxation Training is a structured approach to tension reduction that also helps to decrease feelings of stress enough that the person can focus on working out problems.

ISBN: 978-81-949278-6-0

Systematic Desensitization: Systematic Desensitization is a process designed to eliminate fear in specific types of situations by pairing relaxation techniques with imagining the presence of the anxiety-associated stimuli.

Cognitive Modification: Cognitive Modification **is** the process of learning to think about or construe anxiety-producing situations in a different way.

Social Intervention: Social Intervention involves treating not just the individual with the problem, but also involving family members in the treatment process.



1) STATEMENT OF THE PROBLEM:

"A Study of Stress Coping Skill of Graduates and post-graduate students of Bijapur City"

3) METHOD

a) Sample

The study was conducted on a sample of 330 under graduate and Post-graduate students of Bijapur city in the of Karnataka state. The stratified random sampling was adapted for the present study. The sample design is as follows:

b) Materials

Stress Coping skills inventory by Jerabak, Answer sheet, Scoring key and Norms.

c) Procedure

The students were seated comfortably; the answer sheet was given to the students and was asked to fill in the personal detail. Then the inventory was handed over and following instructions were given, "This test is designed to evaluate how you cope with your stress. Read every statement carefully and indicate how often it applies to you. In order for the test to be valid, all the questions must be answered. There is no time limit but usually this test can be completed within 20 minutes". After completion by the students, the responses were scored as given in the scoring key.

4) RESULTS AND DISCUSSION

The means and standard deviations were completed for the selected sample. To find out the significant difference between sub-groups 't'-test was employed.

Null hypothesis 1: There is no Stress Coping Skill among the college and university students.

Table-1: Mean score of Stress Coping Skill of college and university

Group	N	Mean	SD
All UG and PG students	360	223.16	41. 81

ISBN: 978-81-949278-6-0

As per the table-1, all post-graduate and under-graduate students fall under category high Stress coping skill. The Stress Coping Skill was dispersed widely in PG and UG students as per the standard deviation value cited in table-1. Hence, the null hypothesis was rejected in favor alternative hypothesis. Therefore it is concluded that there is a high level Stress Coping Skill among under-graduate and post-graduate of women's university of Karnataka state in India.

Null hypothesis 2: There is no significant difference between the respective sub-groups in their level of Stress Coping Skill.

Table 2: Significant difference between the different sub-groups in their Stress Coping Skill.

Variable	Sub-group	n	Mean	SD	Obtained 't'-value	Level of significance
level of education	Under-graduate	120	210.85	19.47	133.99	Significant at 0.05 level
	Post-Graduate	300	205.85	20.46		
Institution	Women university	300	224.96	37.51	21.87	Significant at 0.05 level
	Karnataka university	60	225.66	32.47		
level of education	Govt. college	40	220.5	29.15	0.46	Not Significant at 0.05 level
	Private college	60	238.33	39.37		
Faculty	KSWUB-ARTS	80	220.5	29.15	0.45	Not Significant at 0.05 level
	KSWUB-SCIENCE	40	229.5	29.71		
Faculty	KSWUB-ARTS	80	220.5	29.15	1.43	Not Significant at 0.05 level
	KSWUB-SOCIAL SCIENCE	40	213.0	34.88		
Faculty	KSWUB-ARTS	40	220.5	29.15	3.43	Significant at 0.05 level
	KSWUB-COMMERCE	60	221.0	37.13		
Faculty	KSWUB-ARTS	80	238.33	39,37	19.41	Significant at 0.05 level
	KSWUB-EDUCATION	60	229.5	29.71		
Faculty	KSWUB-EDUCATION	40	238.33	39.37	26.48	Significant at 0.05 level
	KSWUB-COMMERCE	60	213.0	34.88		
Faculty	GOVT.ARTS	40	238.33	39.37	13.8	Significant at 0.05 level
	GOVT. SCIENCE	80	221.0	37.13		
Faculty	GOVT.ARTS	40	238.33	39.37	13.8	Significant at 0.05 level
	GOVT.COMMERCE	80	229.5	34.88		
Faculty	GOVT.SCIENCE	40	238.33	29.71	87.65	Significant at 0.05 level
	GOVT.COMMERCE	40	221.0	37.13		

The table - 2 reverts that the obtained t – values such as 133.99, 21.87, 3.43, 19.41, 26.48, 13.8, 13.8, 13.8, and 87.65 are greater than the table t – values respectively. Hence the framed null hypothesis was rejected in faviour of alternative hypothesis. Therefore, it was concluded that there is a significant difference between the respective sub - groups in their level of Stress Coping Skill.

And the table – 2 also reveals that the obtained t – value0.46. 0.45 and 1.43 are less than the table t – value at 0.05 level of significance. Hence, the framed null hypothesis was accepted in the case of Arts and education students of Women's university Therefore, it was concluded that there is no significant difference between the respective sub - groups in their level of Stress Coping Skill

Null hypothesis 3: There is no significant difference between the respective sub-groups in their level of Stress Coping Skill.

ISBN: 978-81-949278-6-0

Table 2: Significant difference between the different sub-groups in their Stress Coping Skill.

Variable	Sub-group	n	mean	SD	Obtained 't'-value	Level of significance

ABSTRACT

Soil nailing is a development procedure used to upgrade the quality of ground that guarantees the security of new or existing area inclines. The fortifying activity of the ground is expanded by means of the nail inclusion process which in returns increments malleable power in soil nail. The principle part of the opposition becomes from the development of pivotal power, which is a strain power. In particular, cutting and bowing may contribute little to the obstruction. Various bars are introduced into a incline during the top-down unearthing. The exhuming support is a compelling and efficient approach to construct a maintenance divider to help peak, connect projections and parkways. This procedure is viable on lopsided soils, broken stone, shale and hard surface conditions. In this exploration, a physical model is readied that contains pressure measure, Acrylic sheet, flex sensor, Multimeter and steel bars. The soil for the model is gathered from the grounds of Chandigarh University. Strainer examination is performed to decide the sort of soil. To decide the adequacy of the readied mode various tests have been performed. Two materials named as Drainage Geo net and Expanded metal mesh were used with three different nail arrangements and for each nail arrangements Expanded metal mesh is able take more stress than the Drainage Geo net.

Keywords – Flexible materials, flexible facing, physical model, stress, strain

1. INTRODUCTION

The development of hilly and far-off areas, the dam's construction and hydroelectric projects in hard terrain, all needs stabilized ground in one way or another way. In the past, many stabilization methods have been developed to combat these situations. Stabilization of the Earth such as mechanical and chemical land stabilization, drilling, earthworks, crushed stone and ground gravel, are useful in providing structural and service-oriented stability. In this paper, the detail description of one such technique utilized for ground stabilization known as soil nailing is provided.

Soil nailing technology is employed to offer reinforcement for natural and steep slopes on site. If unstable existing grounds require support and nearby buildings are sensitive to deformation, the utilization of soil nailing provides stability through temporary construction or permanent support structures and take appropriate measures to decrease ground movement.

Soil nailing walls are a widely used technique for keeping vertical cuts on any slope that is even more vertical in the ground with vertical slopes and normal angles. A large part of the cost of landing is related to the construction of the reinforced concrete surface. Soil facing mechanism helps to provide the stability between soil and inserted nails. In addition, the top layer facilitates surface erosion, weathering and moisture loss from the surface of the soil nail system. In this manner, to get better stylish look of the nail structure, confronting assumes a significant job.

2. LITERATURE REVIEW

Soil nail innovation was first utilized in France to assemble a perpetual holding divider cut in delicate shake. The task, attempted in 1961, was where steel nails were utilized to fortify a

ISBN: 978-81-949278-6-0

holding divider. The main soil nail divider to utilize current soil nailing procedure was worked close Versailles in 1972. The method included introducing high-thickness, grouted soil nails into a 60-feet-high divider and confronting it with strengthened system.

G.L. SivakumarBabu., (2009) havestudiedsoil nailing is being utilized in numerous geotechnical applications to enhance dependability of unearthed vertical cuts and existing slants. This paper shows a couple of contextual analyses on the adjustment of a vertical cut and enhancement of incline security utilizing soil-nailing strategy. It was discovered that the vertical cut soundness/slant dependability enhanced because of the fortifying impact of nails. In the paper, a couple of contextual analyses on soil nailing have been displayed showing its points of interest. There is a need to utilize this strategy on vast scale in India in numerous framework extends wherever materials to understand the specialized and monetary favourable circumstances related with the procedure.

Cheng et al., (2015) have studied that the utilization of traditional steel in corrosive area faces many problems. Therefore it become essential to used shielded steel such as carbon fiber reinforced polymer (CFRP) / glass fiber reinforced polymer (GFRP) in loose fill soil. The test has been carried out with various materials and different kinds of steel bars in Hong Kong, Korea.

A.Karthikeyan Santosh Kumar (2017)in this investigation displayed a contextual analysis in which soil-nailed divider was planned and built. The dirt nailing was done in a mind boggling ground conditions having both soil spread and endured hard shake. The haul out test directed has affirmed that the structured nail limit. Cost investigation performed by looking at the structured soil-nailed divider and customary holding divider for this site showed that the dirt nailed divider was efficient for the present contextual investigation. Hence this technique ends up being progressively effective in holding steep slants where less space is accessible for development of ordinary holding dividers.

Rawat et al., (2018) presented a model to determine the failure of soil slope under various load conditions. In this research, the authors have inserted nails at different angle such as 10 degree, 15 degree and 30 degree respectively. Homogeneous soil slope has been prepared and subjected to various loads. The resistive as well as driving forces are taken into account for the calculation of safety. From the test it has been analysed that the safety factor has been lessen by increasing the seismic acceleration.

3. MATERIALS AND METHODOLOGY

Initially, the soil is collected from Chandigarh university campus and then various properties were studied on the basis of code (IS2720). The properties such as moisture content, specific gravity, compaction characteristics and unconfined compression strength have been analysed.

Table 1 Properties of soil

Properties	Values
Water Content (%)	11
Specific Gravity	2.56
Optimum moisture content (OMC)(%)	7.3
Maximum dry density(MDD) (g/cc)	1.98
Coefficient of Uniformity	5.6
Coefficient of Curvature	0.64
Unconfined Compressive Strength (Kg/cm^2)	0.118

From the above results the soil was categorized as poorly graded sand.

ISBN: 978-81-949278-6-0

Physical Model

A physical model was prepared with the Perspex sheet (acrylic sheet) of thickness 8mm. The dimensions of the model such as length, width and height were taken as 60 cm, 40 cm and 50 cm respectively. Three types of nail arrangements were used namely as square, rectangular and staggered. The dimensions and nail length were selected according to the soil nail manual.

The model drawing is shown is figure below

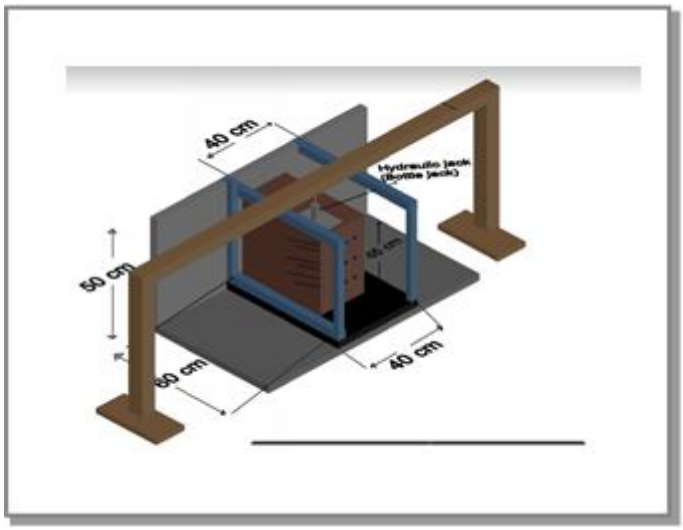

Fig 1. Physical Model Drawing

The various components used in the physical model are described below.

Pressure hydraulic jack (bottle jack)

Pressure hydraulic jack of bottle jack having weight 5 ton is used and placed in between the Perspex sheet. It is used to lift heavy loads and works on the principle of screw action.

Figure 2. Perspex sheet model and hydraulic jack

During the research, hydraulic jack is placed in between the Perspex sheet of 8mm thick as shown in above figure

Flex sensor

The flexible sensor is just like a variable resistor. As the nails bend, the resistance of the flexible sensor increases. Sensors like this are used in Nintendo Power Glove. A multi-meter is attached to the switch to measure the resistance sensed by flex sensor and then strain is calculated by using the formula written below:

ISBN: 978-81-949278-6-0

$$Strain = \frac{\Delta R/_R}{\Sigma_c}$$

Here Σ_c stands for gauge factor, its value lies between 2 to 2.5 and for 200 KΩ, the value of gauge factor is 2.1.

At last, the design model is tested, the tested setup of the proposed model. Copper wire is attached with each nail and resistance is measured using digital multimeter.

Various flexible materials used in this research work are as follow-

- Drainage Geo net
- Expanded metal mesh

These materials are chosen for the research work as these materials have tensile strength which is required to balance the tensile stresses that are acting on the slope.

4. RESULTS AND DISCUSSIONS

As mentioned above, two materials were used for this research and three types of arrangements i.e square, rectangular and staggered are discussed for both the materials.

DISCUSSIONS

We require facing material so as to hinder deformation thus limiting the mobilization of shear stress along nails. Flexible facing is designed to provide the necessary restrains to areas of slope between the bearing plates as well as erosion control.

From the above Tables it is found that Expanded metal mesh have taken up maximum stresses as compared to the Drainage Geo net. In general both the flexional and axial stiffness of facing controls the deformation.

ISBN: 978-81-949278-6-0

In the present research work we had studied three types of arrangements for soil nailing i.e square, rectangular and staggered arrangements and from the Table no 5,6 and7 it can be concluded that maximum stresses are taken up by the Expanded metal mesh as this particular material have higher stiffness as compared to other material, and further there is increase in normal force and shear resistance along the potential slip surface in frictional soil.

Further we can conclude that flexible facing approach also represents environmental benefits as it would allow the growth of vegetation and use of flexible materials may also provide significant savings. In addition to this if one nail becomes overstressed for any reason it will not cause failure in the entire system but it would redistribute its overstress to the adjoining nails.

5. CONCLUSIONS

- From the experiment performed on design model using different material, it can be concluded that the present study will lead to an increase in the soil slopes load handling and slope stability
- This research can be used as construction technique that even reflects cost-effective and low environmental impact.
- Maximum stresses are taken up by Expanded metal mesh for all the nail arrangements due to its higher stiffness.

6. CONFLICT OF INTEREST

- The author declares that I have no conflicts of interest.

A VOTING BASED CLASSIFIER FOR CREDIT CARD FRAUD DETECTION

Priya[1] and A.J. Singh[2]
[1]Research Scholar and [2]Professor, Department of Computer Science, Himachal Pradesh University, Shimla

ABSTRACT
Credit card fraud is a major problem now days and it is increasing day by day. The reason behind the tremendous increase in the credit card fraud is due to the rise of digital payment systems. Credit card frauds can be detected by previous history of transactions and also by analyzing the real time transaction details. Various simple and hybrid machine learning models are used in the past for detecting credit card fraud. In this paper a voting based classifier which is an ensemble model is used to detect the credit card fraud. Different machine learning classifiers like Naïve Bayes, Decision Tree, Random Forest, K Nearest Neighbors etc. are used in this voting classifier. The results of this study conclude that the ensemble of LR, RF and DT gives best results using hard voting.

Keywords: Credit card fraud, machine learning, Voting Classifier, KNN, DT, Hard Voting, Soft Voting.

I. INTRODUCTION
Credit card fraud is defined as the unauthorized use of other person's card. This type of fraud results in the large financial losses every year. The people are interesting in online shopping and cashless transactions now days. With the increase of interest of people in online and cashless transactions, the fraudulent activities are also increasing day by day. According to Federal Trade Commission, in 2018, they processed 1.4 million fraud reports which results in loss of $1.48 billion. Credit card fraud can be detected by many methods. The purchasing is done by credit card is either physically or virtually. In Physical card purchase, the cardholder presents the card to merchant physically. Here fraudster has to steal the card for attempting a fraud. In the second category which is of virtual card purchase, card is not needed physically. Only some of the important information about the card is needed. Fraudster has to obtain that important information for committing a fraud. Various machine learning algorithms are used in this paper. A voting classifier is used to detect the credit card fraud in this paper. Voting classifier mainly has two types hard voting and soft voting. This paper is mainly organized into sections six sections. The first section gives the introduction about the credit card frauds. The second section discuss about the related works and literature review regarding this problem. The third section gives the details about voting classifier and various machine learning classifier used in this study. In this study random forest, decision tree, Naïve Bayes, K Nearest Neighbors, Logistic Regression and Voting classifiers are used. The fourth section discusses about the experimental setup and dataset used and fifth section contains the results. The last section contains conclusion and future works.

II. RELATED WORK
Ghosh and Reilly used a fraud detection system based on neural network. They used a dataset of Mellon Bank's transactions of 2 months period. Neural network was trained on frauds due to lost cards, application frauds, stolen cards, counterfeit cards, mail order fraud and NRI frauds[1]. Leonard presents a rule based expert system. It helps to alert banks and other financial institutions for the fraudulent activities. It takes data from a real Canadian bank[2]. Chan, Luo, Liang, Lee presented an approach which prevents frauds before the initial use of cards. This approach does not use any real transaction data. They use SVM and ANN for

ISBN: 978-81-949278-6-0

investigating the time varying fraud problems[3]. Shen, Tong and Den tested three different classification models: Decision trees, neural networks and logistic regression for their applicability in credit card fraud detection and find that NN and LR performs better than D[4]. Gadi, Wang and Lago used 5 different classification methods for credit card fraud detection: Neural network, Bayesian Networks, Naïve Bayes, Artificial Immune System and Decision trees. They compare these classification models and conclude that DT and AIS are best methods in this experiment[5]. Panigrahi, Kundu, Sural and Majumdar presents a fusion approach using Dempster- Shafer theory, rule based filtering and Bayesian learning which combines the current as well as past behavior[6]. K.K and Chezhian constructs an efficient fraud detection system which taken into account behavior changes by combining classification and clustering techniques and then generate association rules. They use BOAT decision tree classification and K-means clustering technique[7]. Sahin and Duman developed classification models based on ANN and LR for detecting credit card fraud. The transactions are identified as legitimate or normal on the basis of the suspicion score produced by the classifiers[8].Salazar, Sofent, Soriano, Vergara presents an automatic credit card fraud detection data mining technique. It is linear signal processing technique. Discriminant based classifiers and advanced non-Gaussian mixture classification methods are used to classify the fraudulent and non fraudulent transactions[9]. Sahin, Bulkan and Duman used a cost sensitive decision tree approach for fraud detection. It minimizes the sum of misclassification costs. Here misclassification costs are taken as varying[10]. Olszewski presented a unsupervised method for fraud detection which is based on user accounts visualization and threshold type detection. Self organizing maps are employed as visualization technique here[11]. Pozzolo, Boracchi, Caelen, Alippi and Bontempi proposed a realistic fraud detection system. They address that delay in finding accurate labels and the interaction between alerts and supervised information have to considered[12]. Bahnsen, Aouada, Stojanovic, Ottersten proposed a credit card fraud detection system which taken into the account feature engineering strategies. They proposed a new set of features based on analyzing the behavior by expanding the transaction aggregation strategy[13]. Avoyemi, Adentumbi and Olowadara present a comparative analysis of credit card fraud detection using machine learning techniques. The performance of naïve bayes, k-nearest neighbor and logistic regression is evaluated and results show that naïve bayes performs better than other two[14]. Pumsirirat and Yan proposed a deep learning based models for detecting frauds in credit card. They used models of deep Auto-encoder and Restricted Boltzmann machine to find anomalies[15]. Randhawa, Loo, Seera et al. proposed a credit card fraud detection model using adaboost and majority voting and finds that majority voting is giving better results[16]. Kumar, Soundarya, Kavitha, Keerthika Aswini used Random Forest to detect credit card fraud and shows that it gives 90% accuracy[17].Table 1 gives the details about various related works in detecting credit card fraud.

TABLE I: LITERATURE REVIEW

S.No	Title of the Paper	Year	Techniques Used	Results
1	Credit card fraud detection with a neural network	11994	Feed forward neural network with 3 layers	Detected more fraud compared to rule based
2	Personalized approach based on SVM and ANN for detecting credit card fraud	22005	SVM and ANN	ANN has highest training accuracy
3	Credit card fraud detection using Hidden Markov Model	22008	Hidden Markov Model	System accuracy is close to 80%

ISBN: 978-81-949278-6-0

4	Boat Adaptive Credit Card Fraud Detection system	22010	K- means clustering and BOAT classification algorithm	High performance than existing decision tree algorithms
5	Detecting credit card fraud by using genetic algorithm and scatter search	22011	Genetic algorithm and scatter search	Performance of existing solution increased by 200%
6	A cost sensitive decision tree approach for fraud detection	22013	Cost sensitive decision tree	Performs better than traditional DT, ANN and SVM
7	Credit card fraud detection and concept-drift adaptation with delayed supervised information	22015	Sliding window approach and Ensemble Approach	Feedback on delayed samples provides precise results
8	Credit card fraud detection using machine learning techniques: A comparative analysis	22017	Naïve bayes classifier, k-nearest neighbor, logistic regression	Naïve bayes performs better than other two
9	Credit card fraud detection using Adaboost and majority voting	22018	Adaboost and Majority Voting	Majority voting is giving better results than Adaboost
10	Credit card fraud detection using Random Forest Algorithm	22019	Random Forest	Gives 90% accuracy
11	Credit card fraud detection using machine learning	22020	Random Forest and Adaboost algorithm	Random forest works better

III. VOTING CLASSIFIER

A voting classifier consists of ensemble of two or more classifiers. The prediction is made by each classifier and then voting based classifier gives the highest majority voting class as output class. In other words voting is the simplest way of combining the predictions from multiple machine learning algorithms. It is mainly of two types: Hard voting and Soft Voting. In a hard voting classifier, predicted output class is the one which has the highest majority of voting. And in the soft voting classifier, predicted output class is the average of the probabilities of all given classes. Various machine learning models for voting classifiers are used in this paper like Random Forest, Decision tree, K Nearest neighbor, Logistic Regression, etc.

Decision Tree: In decision tree model, algorithm is considered to be a decision tree. Decision tree models are used to develop classification systems. These classification systems are able to classify future observations on the basis of a set of decision rules.

Naïve Bayes: It is used for classification of data. The classification is done the basis of Bayes theorem. According to Bayes theorem,

ISBN: 978-81-949278-6-0

$$P(A|B) = \frac{P(A|B)P(A)}{P(B)}$$

Here probability of happening of A can we find when B has occurred. A is taken as hypothesis and B is taken as evidence. Features are independent here and they do not affect each other. This is the reason that it is called as naïve.

K- Nearest neighbors: K- nearest neighbor is a classification and regression method. It is a supervised machine learning algorithm. This method stores all the available cases and used to classify new cases based on the similarity with the stored cases.

Logistic Regression: It is a statistical model used to model the probability of any event or class. It uses a logistic function to model a binary dependent variable.

IV. EXPERIMENTAL SETUP

The experiment is performed in Python on Jupyter Notebook 6.0.1. Dataset is taken from Kaggle which contains the transaction of European cardholder done in 2 days in September 2013. It contains total of 284,807 transactions out of which 492 are fraud. 10 folds cross validation is used to carry out the experiment. A voting classifier has been used to find the best results and both the hard voting and soft voting has been performed. The machine learning classifiers used

in the voting classifier are decision tree(DT), Naïve Bayes(NB), Random Forest(RF), K Nearest Neighbor(KNN), Logistic Regression(LR), etc. The performance is evaluated on the base of cross validation score given by the different classifiers.

V. RESULTS

This study used various classifiers like Random Forest, Decision Tree, Naïve Bayes, Logistic Regression, K Nearest Neighbor, Voting Classifer. The cross validation score of each classifier is evaluated using the 10 folds cross validation. The results are compared on the basis of cross validation scores. It is clear from the results that the ensemble of Logistic Regression, Random Forest and Decision Tree using hard voting gives the best results as compared to individual classifiers. There is a slight difference in the score of hard voting and soft voting. Both hard and soft voting gives almost same results. Table II contains the results of individual classifiers and voting classifier respectively.

TABLE II: RESULTS OF INDIVIDUAL CLASSIFIERS

Classifier	**Cross Validation score**	
	Mean	**Standard Deviation**
Logistic Regression	0.967827	0.011632
Random Forest	0.865357	0.116833
K- Nearest Neighbor	0.954398	0.015488
Decision Tree	0.998640	0.000526
Naïve Bayes	0.873654	0.118756

The results of the individual classifiers show that decision tree gives the best cross validation score and random forest has the worst score. Table III contains the cross validation score (mean and standard deviation) when voting classifiers is used. The results shows that the ensemble of LR, RF and DT gives best results using hard voting when voting classifier is used.

VI. CONCLUSION AND FUTURE WORK

Credit card fraud detection is a challenging problem and increasing at a very fast rate due to the rise of digital payment systems. In this paper, voting classifier is used for detecting credit card frauds. Voting classifier is providing better results as compared to individual machine learning classifier. Here in this experiment we use the ensemble of 3 classifiers at a time. In future we can use the ensemble of more than 3 classifiers and check the effect on results.

AN EMPIRICAL STUDY ON THE FACTORS INFLUENCING WORKING WOMEN'S PREFERENCE FOR ONLINE SHOPPING OF DRESSES IN MUMBAI CITY

Mrs Nandini Jagannarayan[1] and Ms Aishwarya Kannan[2]
[1]Assistant Professor and Head, Department of B.Com (Banking & Insurance)[1], RJ College of Arts, Science & Commerce, Ghatkopar (West), Mumbai
[2]Ex-Employee, Thomson Reuters, Mumbai

ABSTRACT
Women are known to be fond shoppers of attires and accessories, especially those based in urban set up. more specifically, those who are working. With the evolution of online shopping, which offers safety, variety and trendy ways of shopping, many of the working lot have been offered a time-saving, safe shopping experience in platter. Studies have proved that working women prefer frequent shopping of dresses online through various apps than taking time out of their routine and physically going to shops. With e-commerce paving its way to the retailers, online shopping has become a way of life for most of the Indians especially working women. Indian online market is has grown extensively Main reasons of growing preference for online shopping are internet penetration, increasing number of e-tailors (online retailers), ease of shopping, flexibility in delivery, increasing purchasing power etc. According to Gizmobaba's report online transaction of women has doubled in past two years. As per one Google study, it is expected to drive 25 per cent of the total organized retail sales in India by 2020 and is expected to reach $60 billion in gross merchandising value. This study is an attempt to analyse online attire buying pattern of working women based in Mumbai during work from home period.

Keywords: attire shopping, e-commerce, online shopping, working women, e-tailers.

INTRODUCTION
Women are proven shoppers, be it attire, food or other essentials. Most of the women call "shopping a hobby, where they used to take time out to visit various shops, see, touch and feel every single product/ brand that they buy. Especially, when it comes to clothing and accessories, they, try out various outfits and then buy the product. Internet is redefining the shopping behaviour of people across the globe. It has become a hotbed of advertising, shopping and commercial activity (Rowley, 1998). People's daily life is influenced by internet more so as compared to past (Hsieh et al., 2013). Consumers are getting used to virtual experience from physical experience, adapting to online purchases. According to Lee and Zhang (2002) after e-mail usage, instant messaging and web browsing, online shopping is the third most popular internet activity. The process a customer takes to purchase a service or product over the internet is referred as online shopping (Jusoh & Ling, 2012) where a consumer buys from an online store from home at his/her convenience. Online shopping is growing in India (Suresh & Shashikala, 2011). According to the reports of IAMAI-KPMG[1], the total number of Internet users in India (out of a total population of 1.25 billion) would reach 600 million by 2020. According to PricewaterhouseCoopers[2] report, e-commerce sector in India has grown by 34% (CAGR) since 2009 and was expected to be in the range of USD 60-70 billion by 2019.

Extensive research on attracting and retaining consumers from a consumer-oriented or a technology-oriented view was triggered by the rapid growth of online shopping (Jarvenpaa & Todd, 1996). Examining consumers' prominent beliefs about online shopping, that may influence purchase channel selection is the focus of consumer-oriented view. Predicting consumer acceptance of online shopping by analysing technical specifications of an online store

ISBN: 978-81-949278-6-0

is the scope of technology-oriented view. Internet is being used as a channel of information and commerce in the rapidly growing online businesses.

Online shopping an E-Commerce form is on the roar and this trend is accelerating at a fast pace. This form of shopping has altered the perception of the people to shop and made them risk takers in this regard. This study is one of its kind in which the previous literature are studied in exhaustive form and different researcher' side as are put forth. The literature from the past studies was reviewed which impelled the researcher to conclude that the women play a dominant role when it comes to shopping, however in the context of Online shopping they are lagging behind the men. Online shopping proves to be convenient and time saving and no need to travel or wait in queue. They exist all time and they are available anytime and anywhere (Elizabeth Lloyd et. al., 2014). online stores extend consumers with unlimited and affluent information about products and services(Ward and Lee 2000). They furthermore have some online tools to 2 help consumers compare, make a purchase decision among various products and services. In the recent years, online buyers have more control and negotiating power than consumers of retail stores because the online shopping offers more communicating activities between consumers (Kumar and Maan 2014) and online retailers as well as greater accessibility of information about products and services (Delafrooz et. al., 2009).

Trust seems the main factor hindering the women to shop online. Most of the women especially young prefer to shop where there is positive word of mouth. The literature also reveals that the risk factor plays a dominant role in the women mindset due to the technicality of e-shopping sites.

Due to changes in the economic environment, the number of young working women are interested to shop over the internet (Hernandez et. al., 2010). In India, 80% women choose to interact with stylists while buying fashion and lifestyle products through online when given an option (Rajput et. al., 2012). Younger women felt that online shopping is a convenient shopping mode. However, nowadays most of the fashion portals have expert stylists who 3 help them to choose a product which perfectly suits their personality, hence making their online shopping experience much more stress-free and organized (Passyn et. al., 2011).

REVIEW OF LITERATURE

Marketing to women delivers a better return on the marketing dollar through both higher customer acquisition and greater customer retention. Because women are more inclined to long term brand relationships, enhanced loyalty means every marketing dollar invested in acquiring female customers' results in a higher retention rate (Barletta, 2003).

Studies on the women buying behavior dimensions suggest that Females are more pro-environmental while shopping than their male counterparts (Zelezny et al., 2000). Farhurst et al., (2007) concluded from their study that word of mouth from consumer families and friends can influence decision style, as what and where to buy.

Park and Lennon (2004) concluded that television advertisements can highly influence women buying behaviours along with information received from their friends (Sheers 2007), as females in comparison to males are highly knowledgeable about price and types of stores (Scheers, 2007), and hence this knowledge can influence the retailer management strategies.

Kassarjian (1981) has implied a positive relationship between socioeconomic status and purchasing involvement, and in fact describes his "low- low involvement" consumer as being a member of the lower socioeconomic class. This would lead to the assumption that higher income might be associated with higher purchasing involvement. The positive relation- ship found between income and search effort (Clax- ton, Fry, and Portis 1974) Newman and

ISBN: 978-81-949278-6-0

Staelin(1972) would provide some indirect support for this notion. However, it would seem that the marginal utility of purchasing involvement would be low for high in- come groups, since they can purchase almost anything they want and value their free time more than the money that they could save by wise purchasing. Thus it seems that a curvilinear relationship could be expected between purchasing involvement and income, with moderate levels of income producing the highest levels of purchasing involvement and low and high in- come groups relatively less involved.

RESEARCH METHODOLOGY

This research follows a relative logical strategy and attempts to observe the apparel shopping patterns and determinants of working women of various age groups of women during "work from home period" residing in select suburbs of Mumbai City.

AREA OF STUDY

Select suburbs of Mumbai (Mulund, Ghatkopar, Chembur and Matunga)

Primary Source

A purposive sampling method was adopted to elicit information from among working women in select suburbs of Mumbai City. The data collected by administering questionnaires through google forms to 150 women. Out of the total 100 surveys, some were incomplete and some were filled in an incorrect manner. Excluding these flawed surveys, 132 complete surveys were available to conduct the analysis.

Period of data collection

July 1, 2020 to July 31, 2020

Secondary Source

i. Data analysis

To evaluate the data, analysis is carried out, to acquire the results, a descriptive technique is used and inferential statistics such as Chi-Square test of association was employed.

OBJECTIVE OF THE STUDY

The objectives of the current study are –

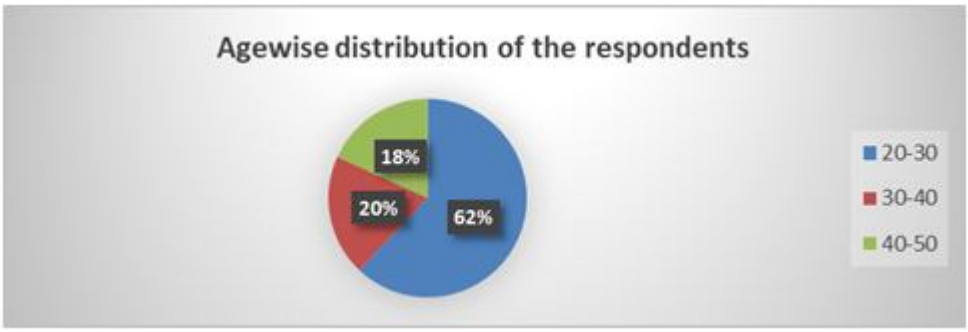
1. To ascertain the perception of working womens' shopping of attires online
2. To assess the factors influencing the respondents to adopt to shopping of dresses online
3. To ascertain the level of satisfaction of respondents on shopping dresses online.

Limitations of the Study

The following are the limitations of the present study:

1. The study covers the limited geographical area of select suburbs of Mumbai City. So, the result of the study may not be justified to other metros

2. The targeted population of the study is only the parents whose daughters of the age group 20 to 50 years old.

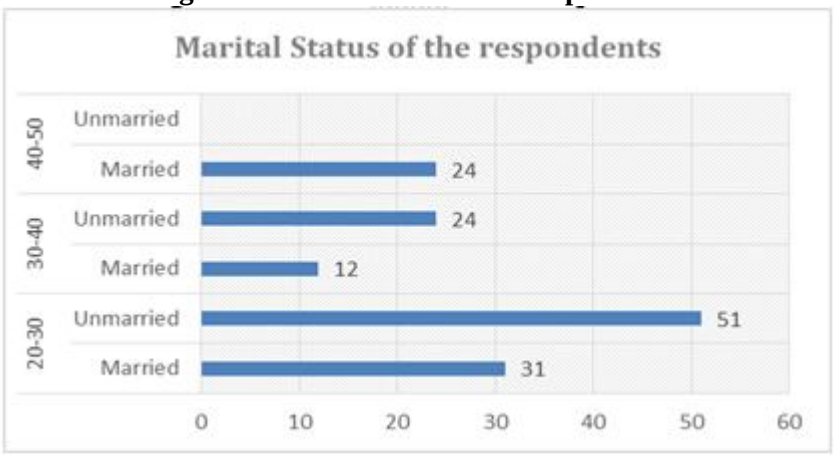


Current study is focused on highlighting how the shopping pattern of dresses of working women

RESULTS AND DISCUSSION

1. Demographic profile of the respondents

Figure 1 Age wise distribution of the respondents who shop dresses from online portals during work from home period



ISBN: 978-81-949278-6-0

Source: Analyses were based on the sample surveyed

2. Marital status of the respondents

Figure 2 Marital status of the respondents

Source: Analyses were based on the sample surveyed

Hypotheses Testing Using Chi-square Analysis

H0:There is no significant impact of respondents' income on their online shopping of attire.

Table 1: Chi Square analysis to test the significant association of respondents' income on their online shopping habit of dresses.

Income	Online shopping of dresses		Total	Chi-Square	Df	P value
	Yes	No				
Below2500	2	0	2	13.39	6	.0.05
2500-5000	20	22	42			
5000-10000	42	1	43			
10000-15000	27	0	27			
15000-20000	4	0	4			
25000-30000	3	10	13			
Above 30000	1	0	1			
Total	99	33	132			

Source: Analyses were based on the sample surveyed

From the above table it is observed that $p<0.05$, income plays an important role in the adoption of online shopping of dresses and proved that this is positively correlated with the income level of the respondent

ISBN: 978-81-949278-6-0

Table 4 Educational profile and their frequency of shopping dresses online while on work from home period

Education	frequency of shopping dresses online while on work from home period						
	Fortnightly	Monthly once	Once in two Months	Total	Chi-Square	Df	P value
High school	6	2	3	11	26.623	7	.006
UG	22	13	25	63			
PG	3	5	19	58			
Total	31	20	47	132			

Source: Analyses were based on the sample surveyed

From the above table it is observed that $p<0.05$, education also plays an significant role in the frquency of online shopping of dresses by working women during "work from home" period and proved that this is positively correlated with level of the respondent.

Respondents' perception about online shooping of dresses during work from home period

Source: Analyses were based on the sample surveyed

Over 80 percent of the respondents prefer shopping dresses online as it 24*7 access, time saving and its easy to learn and use the app. While over 33 percent of them opined that they use online ways to shop dresses because of propmt service, ease of transactions, high reliability and simple service.

ISBN: 978-81-949278-6-0

Cronbach's reiabilty show the factors resonsible for the popularity of online shopping of dresses by women. These six factors have contributed greatly to the popularity of online shopping of dresses habits among the respondents of the are.

Table 8 depicts the problemsor ceoncerns of digital shopping of attires as opined by the respondentsas perceived by them

Table-8 Accessibility factors

Concerns of the users	No of respondents
Safety of personal information and hacking	26
Worried about security IN transaction	27
Digital battery consumption of the apps	70
Customer queries getting resolved promptly	69

Source: Analyses were based on the sample surveyed

Over 70 percent of the respondents were worried about their safety and personal information getting leaked, how secure would their transactions be, avoiding getting hacked and dicsconnection of network or the specific transaction while transacting. They were a;so concerned about the receptivity of the services and how soon their queries would addressed by the customer care executives.

Table 9 Reliability Statistics for Accessibility factors

Cronbach's Alpha	Cronbach's Alpha Based on Standardized Items	No of Items
.710	.716	4

Source: Analyses were based on the sample surveyed

Their satisfaction parameters could be measured by frequency of usage. About 51 percent of them put through dress shopping transactions using their mobile phones everyday. While over forty per cent of them used it several times a day and they opine that ease of use, time saving factor and user friendly are the aspect that made them use online shopping apps.

Table -17 Chi-Square Test of Model Fit

Value	444.08
Degrees of Freedom	239
P-Value	0.00
χ^2 /df	1.86

Source: Analyses were based on the sample surveyed

The null hypothesis is that there is no difference between the patterns observed in these data and the model specified. So, unlike many cases where you are hoping to reject the null hypothesis, in this case, the null hypothesis cannot be rejected as the chi-square value above, this model is acceptable.

The Chi-Square Test shows the model fit and p value shows its signifinance level, Although the seems good, it is also appropriate to check the value of Chi-Square divided by df (Wheaton, Muthen, Alwin and Summers,1977) as the Chi-Square statistic is particularly sensitive to sample sizes (that is, the probability of model rejection increases with increasing sample size, even if the model is minimally false), and hence chi-square divided by degrees of freedom is suggested as a better fit metric (Bentler and Bonnett, 1980). It is recommended that this metric not exceed five for models with good fit (Bentler, 1989). For the current CFA model, as shown in above table Chi-Square is 1.86, suggesting acceptable model fit.

Another measure of goodness of fit is the root mean square error of approximation (RMSEA).

Table-18 RMSEA Test of Model Fit

Estimate	0.093	
90 Percent C.I.	0.079	0.11
Probability RMSEA	< 0.05	0.00

Source: Analyses were based on the sample surveyed

An acceptable model should have an RMSEA less than .05. You can see above that the estimate for RMSEA is .093, the 90 percent confidence interval is 0.11, .079 and the probability that the population RMSEA is less than .05.Again, consistent with our chi-square, the model appears to fit. This can be interpreted as meaning that the model explains the correlation to within an average error of 0.093 (Hu and Bentler, 1990). Hence the model shows an overall acceptable fit. The model is an over identified model.

Table-19 Inter Construct Correlation Matrix

	Convenience	**Accessibility**	**Risk**	**Receptive**	**Available**

*Significant at 0.01 level Source: Analyses were based on the sample surveyed

All hypotheses are accepted. Consumer intention to use online shopping portals/ apps for dresses is influenced by Convenience factor which contains 24h Accessability(β=0.43), travel saving (β=0.38), prompt service (β= 0.20), speedy retrieval of account information services(β=0.31),;easy and quick (β=0.071) and reliable (β=0.19). In according to accessibility is influenced by not much training (β=0.58), not require a mental effort(β=0.47), easy learning (β=0.26), and Simpler/clearer service (β=0.31). Under risk factors safe personel information (β= 2.53),security in transaction (β=0.063). Under Receptive factor Mobile banking inquiries receive responses within the stipulated turnaround time (β=0.61), Employees are knowledgeable to queries(β=0.68), customer concerns (β=0.57) and flexible to customers' need (β=0.072). In respective to availability factor, a high number of software's (β=0.47), wide range of anytime, anywhere access to all brands, any type of fashion/ fabric, (β=0.47), Bank providing information /data(β=0.49), Apps/ portals provides right details associated with its services related to the usage (β=0.24), Address security concerns by outlining security measures (β=0.26), Address security concerns by outlining security measures related to the usage of online shopping apps or portals.(β= 0.33) and Websites that allow an easy visualization related to the usage of Apps for shopping and payment (β=.31).

To sum up, the research was carried to have better understanding on the driving factors that influence the usage of online shopping of dresses by women . Here we classified the factors under five factors say convenience, accessibility, risk, receptive and availablility which helps to judge the intensity to adopt net banking were emprically validated with model fit for online shopping of dresses by women during work from home period was successfully verified.

CONCLUSION

The empirical results of the current study show that there is a direct relationship between online shopping habits of dresses of women and service quality, customer perception and satisfaction of the customers (in a metro city --Mumbai) dimensions and customer satisfaction with the online way . An understanding of the factors, revealed in the study, though there were security concerns, the advantages were more prominent than the drawbacks. This has led to the popularity of usage of online apps and portal for shopping by working women. Surprisingly, the

ISBN: 978-81-949278-6-0

trend to shop attires and the reasons for them to go in for online shopping of dresses did not go down, even though they are not going out much.

ABSTRACT
The problem of fake news gets worse every day and has very damaging effects in various fields such as politics. Due to the availability of social media, it is very easy to spread fake news and it becomes difficult to identify the culprit. Since the culprit of such action has not been identified, the problem remains. Therefore, it is necessary to identify the source or origin of such fake news in order to take the necessary actions. With microblogging platforms like Facebook, Instagram, Pinterest, Twittter, and Tumblr, users can write new posts that are publicly visible. Twitter has distinguished itself as an overwhelming press team providing information to the global..It is Not uncommon for users of this website indicate an advanced feature events such as natural disasters, political events, etc. Because of the popularity of Twitter, this led to the spread of false positive data on the accused. This in-depth program aims to reduce the spread of bugs on Twitter through an algorithm based blokcheyna and establish algorithms and machine learning. "Tweet" is generated based on the node checks blockchain. Commission acts on the basis of the concept of tweets.

Keywords: Blockchain, Microblogging, Politics, Sentimental Analysis, Tweet, Twitter.

I. INTRODUCTION
Based on the concept of blockchain in social media, our network uses the security, instability and transparency of blockchain to build trust between shared messages. We will focus on speculation that may be posted in selected areas of the community that verify the authenticity of other messages among users. For many of this generation, social media offers all kinds of world and local news. But this does not work if the person / organization uses him or her to spread false news. Because media click stories take less time to spread exponentially. The news goes viral around the world in a matter of days. These organizations allow other people to take advantage of people's desire to share interesting news without knowing the facts or the consequences.

Social media was interested in the introduction in 1840 of the Telegram to the United States, which united the country. Since then, the use of social networks is increasing daily [1].

The growing popularity of Twitter on social media is the reason why spammers spread false information. Therefore, Twitter needs to be protected from fraudulent information providers or spammers. Companies are working to fix fake tweets to make Twitter safer. For example, Trend Micro filters out unwanted URLs using the Web Replication Technology (WRP) encoding filter.

Due to time constraints, the URL could not be written before it reached the user. To solve this problem, researchers used algorithms based on the law to extract unwanted theta [7]. Because industries that rely on the media to run their business, having spam tweets is a major security breach. This necessitated finding ways to reduce and download spam. False stories are meant to mislead readers, and their circulation today is eighty-five percent more than it was in 2017. [8]

ISBN: 978-81-949278-6-0

There are many algorithms to detect inaccurate information, but it is very difficult to know the origin or origin of these records. So acquit the guilty. Access to social networks and open access to social networks have exacerbated this problem. Anyone can access the media, and thus the spread of false news quickly leads to more serious casualties. Because anyone can post on social media, the amount of false information is growing rapidly. The main purpose of this article is to study the literature on various forms and search for these styles. Once again, we have identified shortcomings and created a new type of problem-solving, carefully monitoring and evaluating text messages using blockchain technology. We believe that as soon as the origin of this type of untruth becomes known, the necessary steps can be taken to find it and the problem is gradually solved. Inspired by all the questions in this article, the goal is to reduce the spread of false news on Twitter with the blockchain Proof of Work (PoW) algorithm built into group algorithms and machine learning. .

II. RELATED WORK

There are a number of research studies on the discovery of lies in social media, other research studies have also used the blockchain approach for their own sake [7]. In a research study, Guild examined the use of different methods of false perception [8].

One search engine used the classic Naive Bayesian classifier to display incorrect text messages [9]. In the search study, the non-correlated non-K algorithm was used to compare faulty messages as reliable information [10].

Youngkyung Seo, Deokjin Seo, and Chang-Sung Jeong set the example by looking at false stories using storytelling. Shivam B. Parikh and Pradep K. Atreus conducted color studies to expose false stories [12].

In search of a veeter classifier for technological improvements [13].

Kai Shu, Huang Liu and Suhang Wang developed data with real knowledge [15]. In two customer interviews, they delivered two messages (false and real) [20]. One meeting had experienced clients (who easily see false news), and the other meeting was false (usually relying on false positives) [16]. They conducted similar surveys of these customer groups based on the strengths of those who are open and honest. Experiments showed that they were able to detect color mismatch messages from real text messages [18].

The authors have developed a new way of learning-finding the myths that are associated with this news story with high-profile sites. They made their contribution in the Facebook Messenger chat and approved it with the help of the program '. is true and shows an analysis of 81.7% of the results is a false conclusion [19].

Shaban Shabani; Maria Sokhn suspected fraud and provided the information available, promoting advice that evaluates public safety groups and considers whether public information is required or not.

Some developers have recently become addicted to the blockchain and have taken a different approach. For example, Shitang Yu; Bo Zhang; Zhou Shao and others created a character quo with a blockchain that surpassed the old version. They used the compliance agreement of the PBFT-DPOC agreement to understand the self-autonomy of electronic devices.

III. PROPOSED METHOD

When a user sends a tweet and accesses a Twitter server, the tweet is sent to the study section of the machine that converts the information into a political and apolitical message. Tweets that are advertised as non-political are advertised without continuous advertising or tweets. If the message is classified as a political message, it is displayed according to its hearing and is

ISBN: 978-81-949278-6-0

determined by the weight of the value. In the case of a tweet that is a period of time, the threshold is set by dividing the number of active N N sites in the blockchain area by 2, which is H. If 50% of the names agree that the tweet is true, it is considered reliable. Part of the threat tweet time - 25%. For example, imagine a tweet about someone's death. The tweet is then sent to the blockchain control node with a threshold set at the previous level. The control node sends a tweet to all corresponding nodes. Nodes then intensify the tweet and mark it as clear or unambiguous. Then they put the tweet and its digital signature on the blockchain. The nodes referred to here are personal or system nodes and false alarms that report information capabilities in real time. After a while, the control node touches the string. When the day of deportation arrives, the tlog is released. If the reliability number is below the threshold, the tweet will remain unsolicited and the user's role in disseminating false information will be announced on Twitter. The full functionality of the described mode is shown in Figure 1 in the architecture diagram.

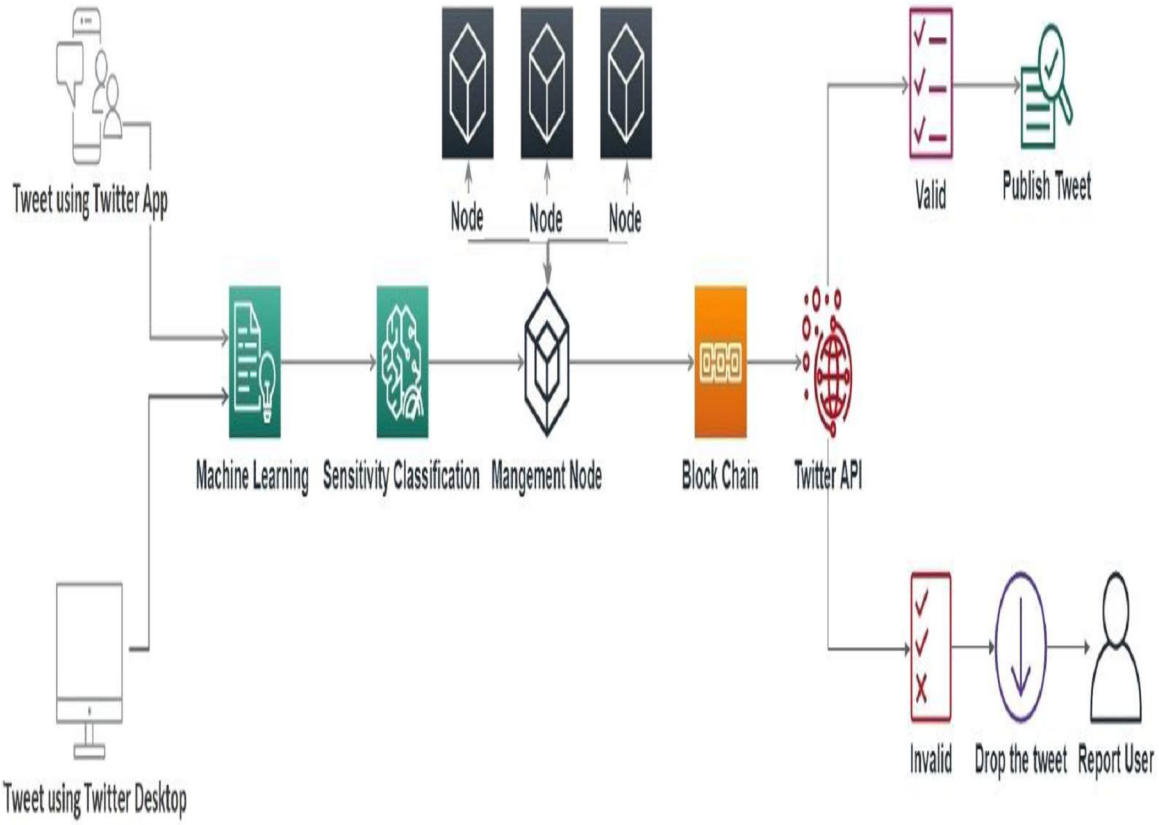

Fig. 1(a). Architecture diagram of the proposed system using blockchain

OBTAINING AND CLASSIFYING TWEETS

The experimental methods collected by the experiments were integrated using Python messaging using the Twitter library. Tweets are divided into political and non-political using machine learning algorithms designed using the same custom planning API. The data is generated as colored messages and is shown in Figure 3. The internal content is sorted according to the feel of the tweet and transferred to the blockchain authorization. In this program, the sound of a tweet is read using search terms that search for complex words, such as death, funeral, death, and so on. Based on a word list, and it certainly comes back when there are words in the description.

ISBN: 978-81-949278-6-0

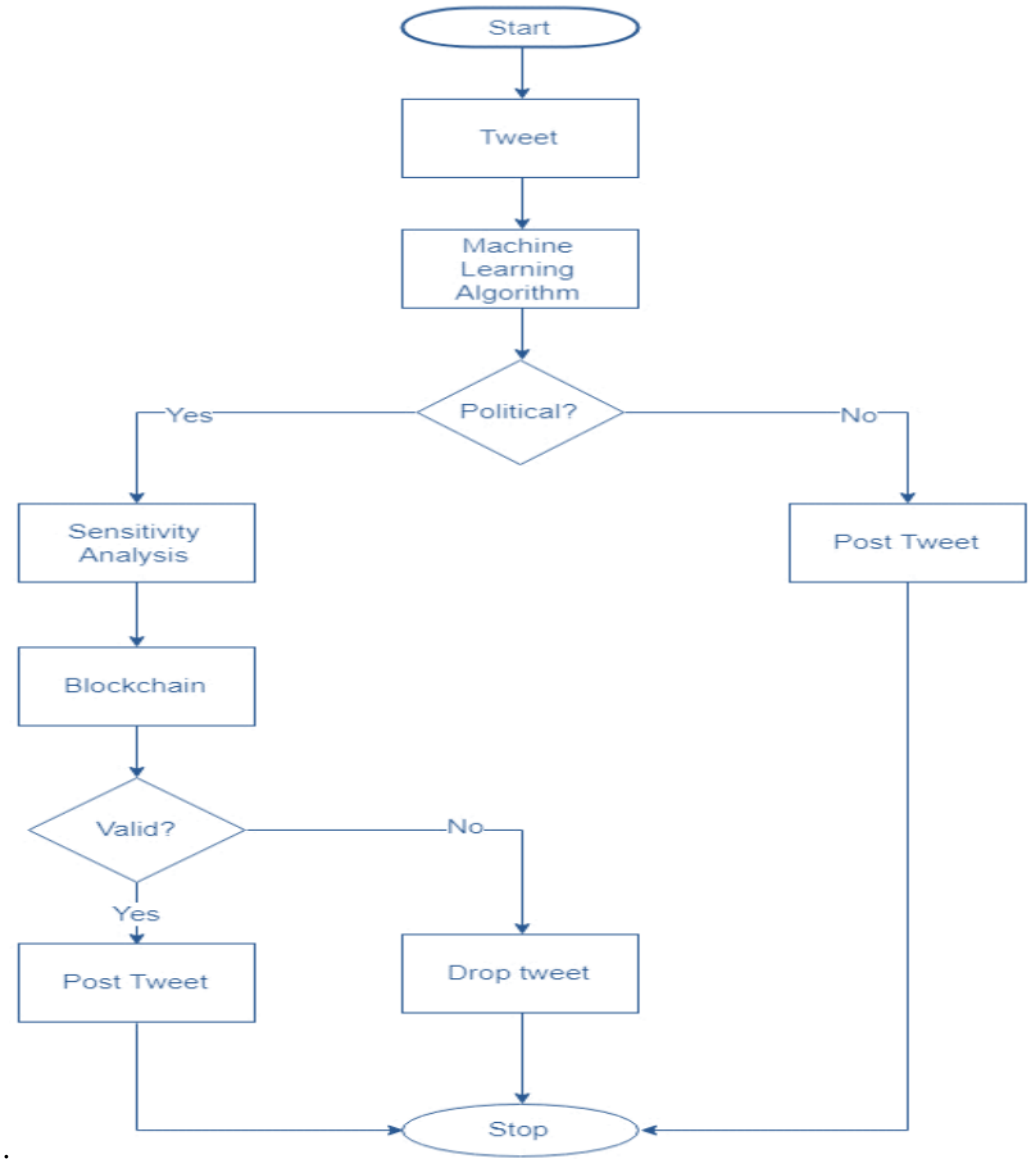

Fig 1(b). Working model of Proposed Method

IV. BLOCKCHAIN - PROOF OF WORK

These strategies are used to increase sales before adding them to the blockchain. This saves the log entry for all exchanges taking place. The valve will be designed for this information, and the miner will add to the curtain after adjusting the hash manual [11]. Bitcoin-based cryptographic methods are difficult to adapt due to the built-in protection against joint attacks, due to the large amount of pressure required to adjust the hash value [12].

Blockchain Buildings

The site is hosted by Node JS, which uses blockchain to interact with transparent, crypto-js, body-parser, ws (WebSocket) and file system library. It is the launch of HTTP and P2P services from two different angles. The HTTP service is used to communicate between a user and a node, while the P2P service is used to communicate between that node. When the server starts, the first block with this index, followed by the hash, timestamp, data, hash, and digital

ISBN: 978-81-949278-6-0

signature, enter the blockchain as parliament. The subscription sends all tweets to the appointed manager. Blockchain browsers use web links to interact with each other. Once the name is intended for management, it begins to interpret the tweet and then develops a broker with cut-out data and a digital signature of the names. This section is attached to the blockchain.

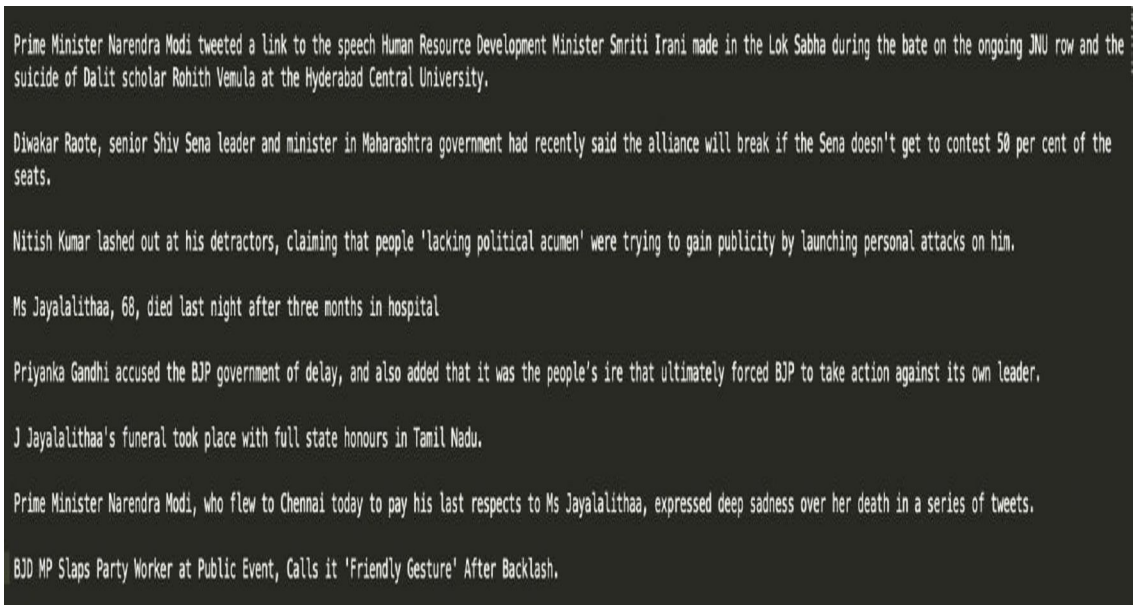

Fig 2. Loading of Sample Dataset

Figure 3 shows the tweet that was added to the blockchain after using node A. The cover is then sent to all connected nodes. Any node can save the lock and confirm the message as well. Figure 4 shows that Tweets are transmitted from node A to node B. After a while, the control node creates a chain and sends its capture and operation to the Twitter server.

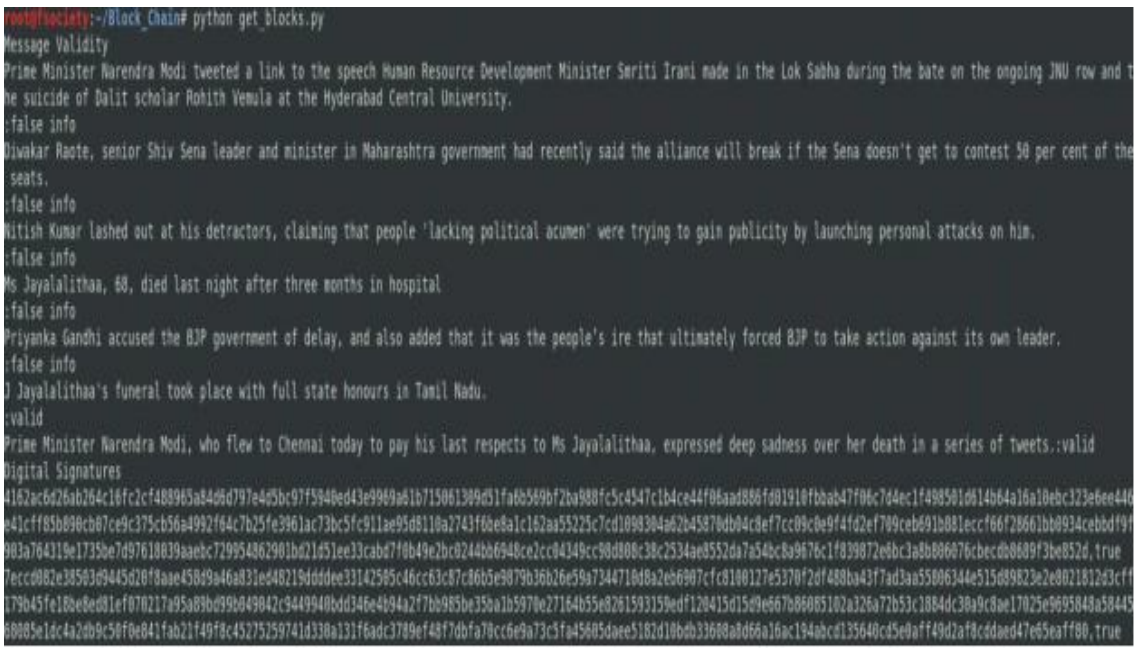

Fig. 3. Validation Message after broadcast by Node A

ISBN: 978-81-949278-6-0

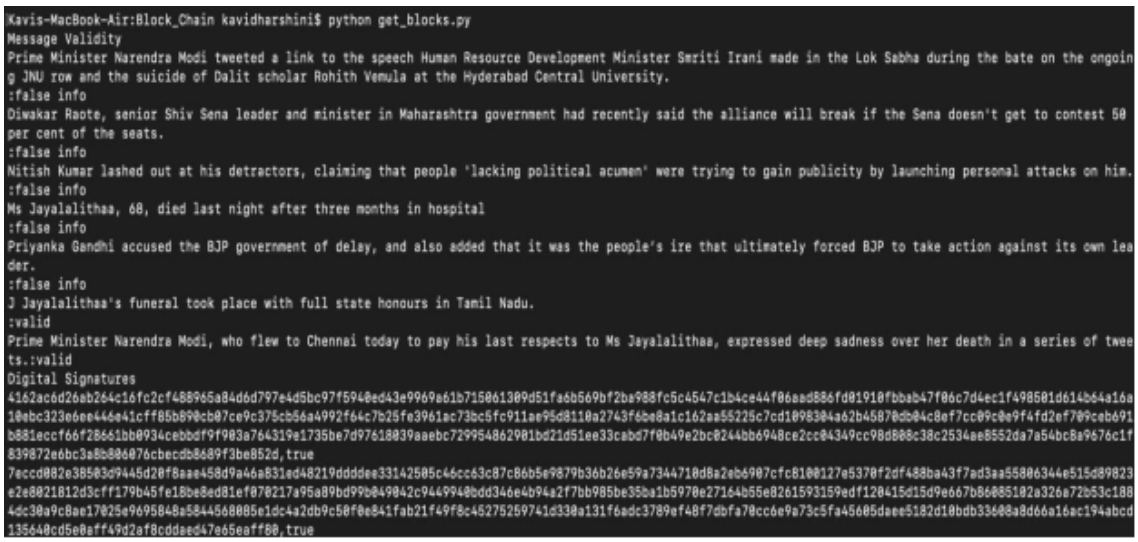

Fig. 4. Messages retrieved at Node B

WORKFLOW STEPS

Step- 1: Retrieve the Tweets from Twitter using the Python library.

Step- 2: Tweet the custom parallel authorization manager to classify it as Non-political and political.

Step- 3: Send the tweet as soon as it seems downloaded using the Tweepy Python library.

Step- 4: Insert the tweet into the sensitivity analysis algorithm and click on the tweet with the threshold from the sensor.

Step- 5: Tweet the Blockchain Nodes.

Step- 6: When the time is up, the blockchain nodes resend the the reliability of the tweet, as shown in Figure 5.

Step- 7: Post the tweet if it's valid by nodding using the Tweepy Python library. This is shown in Figure 6.

Step- 8: If the nodes say it is a fake, delete the tweet and warn the user on Twitter.

Fig. 5. Validation Result of the System

Fig. 6. Server posted the Tweet after validation

V. CONCLUSION

The aim of the current investigation was to investigate the use of a new blockchain-based algorithm to detect and prevent fake messages and misleading information on Twitter. In this study, I presented how the blockchain consensus algorithm Proof-of-Work (PoW) as well as classification and machine learning algorithms work. Extensive experiments with the data set collected on Twitter have shown that the system can prevent the spread of fake news better than the methods described in the literature.

BUILDING CAPACITY THROUGH INCREMENTAL LEARNING APPROACH (ILA) BY POSHAN ABHIYAAN IN NORTH LAKHIMPUR, ASSAM

Ritu Hazarika
Assistant Professor, Department of Home Science, North Lakhimpur College (Autonomous), North Lakhimpur, Assam

ABSTRACT

A key programme pillar under the POSHAN Abhiyaan is an innovative learning-by-doing approach called the Incremental Learning Approach (ILA). The approach aims at building the capacity and motivation of program functionaries, which is critical for effective service delivery and behaviour change at the community level. POSHAN Abhiyaan aims to reduce malnutrition, through a life-cycle concept, adopting a synergized and result-oriented approach. Implemented by the Ministry of Women and Child Development (MWCD), Government of India, the target of the mission is to bring down stunting in children 0-6 years of age from 38.4% to 25% by 2022. It also aims to reduce anaemia among women and adolescent girls in the age group of 15-49 years and reduce low birth weight. In this regards the District Social welfare office of North Lakhimpur, Assam in collaboration with Department of Home Science, North Lakhimpur College organized an Incremental Learning approach (ILA) training for the ICDS officials like the supervisor, Block Coordinator and Project assistant from different nine blocks of North Lakhimpur, Assam. Total participants for the training programme were 113 and the duration of the training was for four day. The ILA training framed some modules which focus on different contents like maternal, child health and nutrition umbrella under the POSHAN Abhiyaan. In order to make these sessions interactive and interesting, the experts used different participatory methods of training, such as role-play, group discussion, and periodic question and answer session. At the end of the training they were evaluated through an examination and the feedback shows a positive outcome. ILA has resulted in greater satisfaction among the participants as well as increased engagement during the training. Findings highlighted the perception of frontline functionaries in terms of the impact of these training on their day-to-day work. The participants felt that there has been an improvement in terms of clarity on the subject matter, their approach to home visits, and perceived effectiveness of their counselling to the beneficiaries.

Keywords: ICDS, ILA, Malnutrition, Poshan Abhiyaan,

Objectives of the paper

To enumerate the concept of ILA

To organized and evaluate the ILA training

INTRODUCTION

India embarked on an ambitious effort in 2018 – the Prime Minister's Overarching Scheme for Holistic Nourishment called POSHAN Abhiyaan -- to address multiple forms of malnutrition. Recognizing that malnutrition levels in India are high and have been slow to change over the last decade, this National Nutrition Mission attempts to address key essential components recognized to be critical in the fight against malnutrition. This is a flagship programme of the Ministry of Women and Child Development (MWCD), Government of India, which ensures convergence with various programmes i.e., Anganwadi Services.

The vision of Poshan Abhiyaan is to ensure attainment of malnutrition free India by 2022. The objective of POSHAN Abhiyaan is to reduce stunting in identified Districts of India with the

ISBN: 978-81-949278-6-0

highest malnutrition burden by improving the utilization of key Anganwadi Services and improving the quality of Anganwadi Services delivery. Its aim to ensure holistic development and adequate nutrition for pregnant women, mothers and children.

Poshan Abhiyaan envisages establishing a system where programme functionaries will become more effective to plan and execute each task correctly and consistently through methodical, ongoing capacity building, called **'Incremental Learning approach (ILA)'**. Such a system use opportunities in the form of existing supervisory interactions at different levels, through which practical and guided learning may be accomplished.

The proposed system envisages breaking down the total learning agenda into small portions of doable actions as the range of skills and tasks to be learnt is quite substantial, and since adults naturally learn by doing rather than through theory alone. The approach is to build incrementally on small amounts of learning at a time, until all skills, understanding and actions have been put into regular practice, and have been internalized by the functionaries and a supportive supervisory mechanism is put in place.

The ILA trainings are delivered in a cascade from state to sector level by the ICDS officials, and supervisors. The approach aims to create 'ongoing learning platforms' for field functionaries, where the face-to-face sessions help them imbibe and apply new knowledge to their day-to-day work, with time to reflect on whether and how the content of the training was useful in improving services.

The programme

- **Objectives:** The specific objectives of the ILA are:

o Build skills based on understanding of priorities among frontline workers, through a learning-by-doing approach;

o Strengthen supervisory structures and skills through a similar approach;

o Enable coordinated functioning of ICDS and health programmes to achieve common goals.

- **Key elements of the ILA**

o Structured supervisory interactions for ongoing learning, planning and review;

o Planned learning agenda with clearly defined outputs and outcomes;

o Use of evidence, for learning and improving performance;

o Mechanisms for enabling convergent actions between ICDS and health programmes;

o External facilitators/ resource persons

o Cascading system of controlled monthly inputs

o Technical and training responsibilities

o Administrative and managerial responsibilities

Thematic Content: ILA modules

The content focuses on the maternal, child health and nutrition umbrella under the POSHAN Abhiyaan. These topics have been organized in thematic modules or flipbooks, which contain detailed technical information related to each topic. A total of 21 such modules (Table 1) have been developed so far in Hindi, English, Marathi and Telugu. The key feature of these modules is the simple manner in which the technical information is explained. It also addresses locally prevalent myths and misconceptions. For the trainings at state and district level, a triad of

ISBN: 978-81-949278-6-0

modules on similar themes is covered. However, a single module per session is covered for the block and the sector level trainings.

An illustrated list of these 21 modules is shown in the table below.

Table 1: ILA MODULES

Modules	Topics
1.	Why this monthly meeting?
2.	Making or updating home visit planner & initiating home visits
3.	Planning and organizing Community Based Events at AWC
4.	Observing breastfeeding in newborn babies – Why and How?
5.	Identification and care of a weak newborn baby
6.	Complementary feeding: diet diversity
7.	Preventing anemia in women
8.	Assessment of growth in children
9.	Ensuring complementary feeding improves over time
10.	Ensuring exclusive breastfeeding
11.	Care of the weak newborn – How many weak babies are we missing?
12.	How to ensure timely initiation of complementary feeding?
13.	Identifying and preventing severe acute malnutrition
14.	Feeding during illness
15.	Supporting mothers with issues in breastfeeding
16.	How to take care of weak newborn with the help of Kangaroo Mother Care
17.	Identification and referral of sick newborn
18.	Preventing illnesses to avert malnutrition and death
19.	Prevention of anemia in girls and adolescents
20.	Birth preparedness – for institutional and home delivery
21.	Preparation during pregnancy – for newborn care and family planning

Source: ILA guidelines of Poshan Abhiyaan

Training Modality

Frequency

The training frequency and the volume of content covered under each session have been finalized based on the educational levels and learning capacity of the ICDS officials and functionaries. A two-day training session, covering three ILA modules, is organized every quarter for the state and district groups, while one thematic module is covered in each monthly cycle for the block level and the AWWs. This helps the participants absorb the technical knowledge thoroughly as well as develop skills to plan and deliver services to beneficiaries as envisaged. For AWWs, the monthly sector meetings are utilized to conduct these trainings.

Training session

Conducted by a facilitator and a co-facilitator, the sector level ILA training encompasses three crucial steps, as illustrated below. At the start of the session, the facilitator reviews the status of implementation of agreed actions in the last training. This is followed by covering the content of the selected topic, and finally guiding the participants to develop an action plan for implementing the acquired knowledge on the ground.

The actions planned for delivery/ implementation are the expected outputs for that month, and are monitored during supervisory interactions. Over a period of time, these actions are expected to produce changes in specific outcome indicators such as coverage of services and maternal

ISBN: 978-81-949278-6-0

nutrition practices as well as infant and young child feeding and caring behaviours. In order to make these sessions interactive and interesting, the facilitators are expected to make use of different participatory methods of training, such as role-play, group discussion, and periodic question and answer session.

Monitoring and supervision

Regular supervisory visits by the state/ district/ block ICDS officials and pre and post training assessments are undertaken to ensure quality of training delivered and to assess AWWs' knowledge and skills, respectively. Standardized reporting of these sessions is done through reporting formats. The reports are collated at different levels so that the status of implementation of the entire cascade is available with the state every month.

Methodology

Four days ILA training programme was organized by the Departments in North Lakhimpur College. Total participants were divided into two groups i.e., two days training for each group. It is important to do thorough planning for effective execution of the trainings. The preparatory steps include – sanction, allocation and timely disbursement of budget; translation of modules/ takeaways in local languages; printing and timely distribution of modules; preparing a calendar of sessions; and ensuring availability of facilitators**.** The agenda for the training were prepared by the officials such as District Resource Group (DRG) and programme coordinator. Out of 21 modules, seven modules were included in the agenda for the training. The modules include in-built questions, discussion points, and exercises to guide the facilitators. When followed, the sessions were delivered more effectively ensuring better understanding among the participants. The modules were simple to use and easily understandable. The details of the ILA training modules are listed below.

Table 2: ILA Modules for the training

Day 1		
TIME	SESSION	FACILITATOR/RESOURCE PERSON
10.00 am - 10.15 am	Inauguration of the program	Honorable Deputy Commissioner
10.15 am – 10.30 am	Welcome speech by DSWO and Introduction of participants along with 4 day orientation agenda.	District Social Welfare officer (DSWO)
	Overview on NNM and its key components- ILA, CAS, CBE, JAN ANDOLAN	
	Understanding about Maternal and Child Health Status & Importance of 1000 days interventions.	
10.30 am- 11.00 am	**Pre test**	
11.15 am – 12.15 am	**ILA Module 1**: Why this Monthly meeting?	CDPO (Karunabari block)
12.15 pm- 1.15 pm	**ILA Module 2:** Making or updating Home Visit planner & initiating Home visits.	Supervisor , Narayanpur ICDS
2.00 pm to 3.00 pm	**ILA Module 3:** Planning and Organizing Community Based Events at AWC.	CDPO (Nowboicha block)
3.00 pm to – 4.00 pm	Interaction and Discussion, wrap up for day 1	

ISBN: 978-81-949278-6-0

Day 2		
9.30 am – 10.00 am	Recap on Module 1,2, and 3	
10.00 am – 11.00 am	**ILA Module 4:** Observing Breastfeeding in Newborn babies – Why and How?	District Project Assistant
11.15 am- 12.15 pm	**ILA Module 5:** Identification and care of a weak newborn baby	District Coordinator
12.15 pm- 1.30 pm	**ILA Module 6:** Complementary feeding: diet diversity	HOD, department of Home Science, NL College
2.15pm – 2.30 pm	Orientation on Module 6 continued…..	HOD, department of Home Science, NL College
2.30 pm – 3.30 pm	**ILA Module 8:** Assessment of growth in children	District Coordinator
3.30 pm 4.00 pm	Post test	
4.00 pm – 5.00 pm	Planning Exercise for Sector level orientation	
	Feedback	

Evaluation

The ICDS officials (DPOs/ CDPs) are primarily responsible for supervision and review of the IL sessions and their quality of implementation. After every round of IL, structured review of process done in the subsequent rounds. Pre- and post- training assessments and field visits were undertaken to ensure quality of training delivered and to assess AWWs' knowledge and skills, respectively. Standardized reporting of these sessions is done through reporting formats. The reports are collated at different levels so that the status of implementation of the entire cascade is available with the state every month.

Results

Findings of the training highlight improvement in knowledge among functionaries as well as beneficiaries on aspects related to maternal and child nutrition. Some of these findings include, improved knowledge among the participants regarding care of weak newborns (percentage AWWs who responded that weak newborns should not be bathed immediately and not given anything other than breast milk increased from 50% to 65%), improved knowledge among pregnant women on exclusive breastfeeding (from 51% to 60%) and improved practice among lactating women on exclusive breastfeeding (from 48% to 56%).

ILA has resulted in greater satisfaction among the participants as well as increased engagement during the training. Findings highlighted the perception of frontline functionaries in terms of the impact of these trainings on their day-to-day work. The participants felt that there has been improvement in terms of clarity on the subject matter, their approach to home visits, and perceived effectiveness of their counselling to the beneficiaries.

Feedbacks

"Earlier we would give information to the beneficiaries even if we met them on the way. But now we prepare for home visits like we've been told in the ILA training. We first decide what we should say when we go to a lactating woman so that we don't miss any point. Also, we make sure to engage the family members in the discussion." - Participant

ISBN: 978-81-949278-6-0

"Earlier the pregnant women were not taking proper food, iron tablets, or rest during the day. But now they have started doing all of it. I guess it is partly because I have explained the importance of doing so, in great detail. Now these pregnant women willingly come to the AWC and ask us to update their names in the register for different services." - Participant

"After attending the ILA training, my concept on different topics is very clear. I'm very much benefited from this training and able to make understand others regarding mother's health, complementary feeding, breastfeeding, etc. " - Participant

CONCLUSION

The ILA has made way for a more creative, yet systematic method of capacity building, where a standard training package is delivered for every cadre in ICDS. It is participatory in nature and the focus is not just on the delivery of content, but also on the 'planning and use' of that content for effective service delivery and supporting behaviour change among beneficiaries.

The MWCD recognizes the importance of quality implementation of this capacity building intervention, which is critical in ensuring effective service delivery under the POSHAN Abhiyaan. The Ministry has issued guidelines and conferred with the states to help systematically plan and execute these trainings, along with the introduction of a simple quality checklist for the supervisory cadre.

EFFECTS OF HEALTH INSURANCE SCHEMES ON OUT-OF-POCKET SPENDING

BUREGEYA Etienne
PhD Scholar, Department of Public Administration, NIILM University, Kaithal, Haryana

ABSTRACT
Not only the World Bank had warned against the possible exclusion of the poor from having access and using health care services, it also strongly believed that the poor tend to suffer more from the kind of health problems that can best be addressed by government preventive programs. And also that the poor can also be protected through enrollment to health insurance companies or other risk sharing schemes. Rather than protecting the poor, the implementation of these measures did not abolish out-of-pocket expenses. Insurance companies for instance, do not cover small predictable costs such as low-cost curative care while inefficiencies and shortcomings of free health care schemes push beneficiaries to spending out-of-pocket money. And conditions for referral health care services and copayments are set to reduce the miss use of these services. Thus, rather than reducing financial burdens, health insurance mechanisms contribute in impoverishing their enrollees and beneficiaries. Analysis of existing literature on health insurance schemes in Burundi shows that this readymade model has failed to protect their members from illness risk and has caused them financial looses.

Keywords: Health insurance, protection of the poor, risk sharing

INTRODUCTION
Insured persons need health insurance companies for their health while health companies need contributions from enrolled members to sustain their businesses. However, this win-win situation is always complicated trough unilateral mechanisms aiming to limit expenses of the insurance company. The long waiting time at health care facilities resulting from a long list of documents and signatures, the limitation of health coverage, the balance health costs covered by the member in terms of percentage of the total cost, etc., are some of the major pushing factors to spending out-of-pocket money. In Burundi for instance, the financial burden of cost of inefficiencies of the mandatory government health insurance company and free health insurance funded trough taxes, is put on the shoulders of both the members and beneficiaries. This unproved situation in health Insurance business has financially ruined their members. For instance, despite the gaps between national health systems(NHS), insured persons in the North and uninsured persons in the South share in common that individual or/and households pay exorbitant out-of-pocket money for health care services. The narrow coverage network and the conditionality to limit the use of health services make some persons to avoid buying insurance or enrolling to government subsidized insurance because it makes no difference in terms of extra direct payments of out-of-pocket money on health care services. Also Specialty medicines are not included in the package list, the administrative burdens discourage the members to wait for long time, the unclear charges on generic medicines as the contribution of the member, etc., make the enrolled to spend either his savings, selling a portion of his property, taking loans, avoiding conventional health care services or simply waiting home hopelessly the will of the Almighty God. Instead, health insurance should result into significant reduction of cost barriers to receiving care services, including prohibitive out-of-pocket (OOP) payments. This paper explores the ways through which health insurance companies are making profits from deductions from employees' salaries and voluntary individual contributions. I have used the secondary data to analyze this confusing game in the health sector.

ISBN: 978-81-949278-6-0

1. Major social protection systems in Burundi

The country accounts for three major social protection systems that include social (i) insurance system based on employment and financed by both the employer and the employee; (ii) social insurance systems subsidized through taxes and (iii) private micro social insurance systems financed mainly by voluntary and individual social contributions.

1.1 Mandatory Government Health Insurance

Mutuelle de la Fonction Publique (MFP) is a government compulsory health insurance that enjoys autonomous management (PNDS 2006-2010). It was created to cover health care for public servants and their dependent, and it had a coverage network of 10 percent of the then total population. The employer contributes 6 percent while the employee pays 4 percent. This government health insurance company pays 80 percent of medical acts, hospitalization and pharmaceutical products but only 70 percent for specialty pharmaceutical products (PNDS 2006-2010). But due to some inefficiency some members choose to cover 100 per cent of the total cost of the health care services and pharmaceutical products. The MFP is the country's largest health insurance that covers a range of services provided by public and religious health facilities, both contributors are not associated in its management. The contribution required from members of MFP has not significantly changed in terms of percentage which remains comprised between 10 to 30 percent. However, from the 80s when MFP was created till today the nominal value of public servant salaries has dramatically changed due the devaluation of national currency and other economic related problems.

2. Social Insurance Systems Subsidized Through Taxes

2.1 The free care insurance was introduced in 2006 and it covers all pregnant women and children under five years across the country. In 2009, this policy was coupled with the Results based financing (RBF) to increase the demand and supply of curative health care services that provide direct benefits to the client(patient). As per this policy, beneficiaries pay zero fees at government or private health facility that implement it. But, due to inefficiencies in implementing this policy, beneficiary households are still making direct payments at local health centers. Pregnant women pay money on delivery to nurses on duty in order to receive good care. This amount paid depends on the ability of the family to pay and the nurse on duty. Household beneficiaries spend more money on drugs at private pharmacies (Buregeya E. and Mehender S. 2019). This free health care policy has failed to abolish direct and indirect payments from the patients making health centers and nurses benefiting from the policy. Thus, by trying to game this policy, the health care facilities try to illegally recover user fees from beneficiaries particularly in rural areas.

2.2 Medical Assistance Card (CAM) is a voluntary insurance scheme for the informal and rural sector, allowing families to enroll in the system. . The cost of one CAM is BIF 3000 (=$1.69) and is bought by household. The government pays subsidies to health centers according to the quantity of patients received. The beneficiaries of medical assistance card (CAM) include two categories of people: (i) children aged more than 5 years to 13 years old and from 14 years and above. Outpatient for the first category pays BIF 800 (=$0.45) while outpatient for the second category pays BIF 500 (=$0.25). And admitted patients for the two categories pays BIF 1000 (=$0.56) per day. And the government reimburses BIF 3200 (=$1.80) to health centers for health care services provided to a patient aged between 5 years and 13 years and BIF 2000 (=$1.12) for a patient aged 14 years and above. With regards to admitted patients, the government reimburses BIF 360 (=$0.20) per day.

ISBN: 978-81-949278-6-0

The problem with this insurance scheme is that decision makers did not take into account the real sources of income and the purchasing power of rural beneficiaries. The results of a 2019 study in one of the rural commune of Burundi show that 42 per cent of rural population had an monthly income comprised between zero US $ and five US$. The 20 per cent contribution exceeds the monthly incomes of most CAM holders and due to regular problems of stock-outs of drugs at local health centers and due to the non respect of government fixed tariffs, CAM holders have to pay extra money for their medical consultations and also buy all prescribed medicines at local private providers (Buregeya E. & Mahender S. 2019). Local health centers not only benefit from both reimbursements from the government and direct payments from CAM patients but also they rely on illegal user fees to buy drugs.

2.3 The indigent insurance. This income based insurance was introduced in 1984 and targeted indigent children enrolled in schools and any other poor person approved as such by both the current Ministry of National Solidarity and Health. Its care coverage includes consultation, drugs, childbirth, etc for health centers and district hospitals. Health care services are free of charge because they are paid by both the Ministry of National Solidarity and the balance by respective municipalities. A total of 10 percent of Burundi population was benefiting from this insurance scheme in 2012. Insufficient allocation of the budget for this insurance scheme and less than a dollar per indigent, limited number of hospitals to 2 per province where health care services can be provided to beneficiaries are the main reasons pushing these beneficiaries to spending out-of-pocket money at both government and private health care providers.

3. Private Micro Social Insurance Systems

3.1 Health Insurance in the Structured Private Sector

The formal private sector doesn't have health insurance in the real sense. The type of health insurance consists of direct payments to health care providers by employers. From 1993 until 2003, the association of employers of Burundi (AEB) has been trying unsuccessfully to set up an insurance system similar to the Mutuelle de la Fonction Publique (PNDS 2006-2010).

3.1.1 The country lacks a functioning national health insurance system though there is a presence of a range of private insurances that have been developed since 2010. They provide different arrangements for employers to cover their worker's health care costs, ranging from institutionalized care in large companies, to providing a purchase order or vouchers, establishing a custom designed health insurance fund in companies or contracting with a private insurance company. At the Mutuelle de Santé des Caféiculteurs du Burundi (MUSCABU), hospital expenses are capped at US$ 51 per year while at the Union pour la Coopération et le Développement (UCODE), private or denominational care is limited to US$ 20. These private insurance also have inefficiencies that make the member pay out-of-pocket expenses. For instance, there is lack of government capacity to control and enforce the law in terms of company's compliance. Another problem is due to the lack of central reporting and/or tracking system for the coverage of medical care by employers. The determination of care services coverage is left to the employer.

3.2 Health Insurance in the Informal Private Sector

Community health insurance (CHI) were created in few provinces but their number was still insignificant. This was related to the lowest purchasing power of the population and the high level of indigent persons due to political conflicts in the country (PNDS 2006-2010).

3.3 Community based insurance (CBI). The country accounts for over 30 community health mutual. They mainly cover health care services such as consultations, laboratory, hospitalization and medicines at public, private and non-profit health facilities and in some exceptional cases, they can cover inpatients care services. They target rural and informal populations who are

ISBN: 978-81-949278-6-0

entitled to make direct payments of 20 percent in government health facilities and 40 to 50 percent in private clinics depending on coverage conditions set by every mutual association.

CONCLUSION

All health insurance managers have set up sophisticated ways of recovering money through voluntary (or involuntary) created shortcomings and package lists that push members to making out-of-pocket expenses. The most common ones are (a) delays to issue good care ("*bon de soins*"), (b) insufficient reimbursements, (c) lack of sustainable funding, (d) low enrolment, (e) limited coverage network, and (f) outdated tariff system, (g) absence of regulation and (h) unclear responsibilities (UNICEF, 2017, Buregeya E. and Mahender S. 2019). These shortcomings are partially solved through different ways. Some health insurance company managers set up some strategies that save their businesses from collapsing on the one hand but which financially ruin their members. As results, members of government, private or community based health insurance scheme complain about out-of-pocket expenses. There is always mismatch between the money they contribute in health insurance and the benefits they receive from it.

All insurance schemes available in the country are not able to abolish direct payments from enrolled members. Those enrolled in mandatory government health insurance contribute predefined out-of-pocket money defined in terms of percentages set by the government. In the private sector, the limited health care services coverage to only curative health care services that provide personal benefits to the member and to a certain age group also constrain members to spending out-of-pocket money. I also found that all these schemes are characterized with all sorts of inefficiencies but which are beneficial to them. Members once they don't receive all required services from their insurance companies and in due time, they are constrained to get these services from other providers through direct payments from their savings or by taking loans to save their lives. And there is no room for members to claim refund of the money they spend in such circumstances. There is in fact a puzzling egg-chicken question here. The health insurance company's business and the members' health: which one is really insured? This question can also be raised at the community base insurance levels where they are supposed to work with poor people.

SCOPE FOR FURTHER RESEARCH

1. Further studies are needed to reduce inefficiencies of health insurance schemes in order to maximize benefits of the enrollees and beneficiaries and therefore create a win-win situation.

2. For mandatory health insurance schemes, further studies are needed to establish the final end of the money generated through lack of compliance of their agents to the existing rules and regulations.

3. Managers of community based insurance schemes are also making profits from contributions made by poor people due to lack of legal framework. There is a need for further studies to analyze their financial impacts on these voluntary enrollees.

ABSTRACT

Human Resources have always been a very important asset of an organization. Human Resource function should be aligned with business goals, employees should be treated as resource to have a competitive advantage and thus organizations can achieve success in the competitive market. HR analytics helps in aligning the HR strategy with the business strategy. HR managers use HR Analytics to formulate strategies that enable the organization to have competitive advantage over its competitors.HR Analytics helps in the improvement of workforce performance thus increasing the productivity of the employees which in turn increases revenue of organization. This paper highlights the integration of HR Analytics within a company and suggests some tools used in HR Analytics. The study includes the development of HR analytics is based on integration of data across disciplines and IT infrastructure. It identifies that HR analytics has different dimensional views. It is not restricted to data collection, measurements, statistical analysis and logical reasoning but also relevant capability set for organizations needs to be identified.

Keywords: HR Analytics, People Analytics, Workforce Analytics, Dimension

1. INTRODUCTION

Over the decade HR department has evolved as a vital function. Human Resources have always been a very important asset for an organization. With the emergence of new technology, much of the traditional work has been automated. It focuses on managing people within the organizations, emphasizing on policies and systems. Human Resource function should be aligned with business goals, employees should be treated as resource to have a competitive advantage and thus organizations can achieve success in the competitive market. HR analytics helps in aligning the HR strategy with the business strategy. HR managers use HR Analytics to formulate strategies that enable the organization to have competitive advantage over its competitors.

Human resource analytics refers to the application of the analytic processes to the human resource functions in an organization so as to improve the employee performance and therefore improving return on investment. HR Analytics, is the quantification of people drivers on business outcomes. Analytics tracks the impact of metrics on business performance. Decision making is one of the critical organizational processes including behavior, performance of motivation and stress of employees (Griffin and Moorland, 2011[18]). HR Analytics provides statistically valid data that can be used as an evidence for creating decisions and new strategies. it consists of various modeling techniques like behavioral modeling, predictive modeling, impact analysis, cost-benefit-analysis and ROI analysis (Levenson, 2005[34]) required for strategic HR decision-making. It helps managers to focus on hard facts instead of intuition (Falletta, 2014[14]). Though many organizations have started using the HR analytics but there still remains an immense room for growth in this area.

ISBN: 978-81-949278-6-0

The present study is aimed at exploring the existing literature about the relationship between Human Resource Analytics and the role it can play in improving the existing range of managerial and HR-related tasks. The investigation of this literature will be helpful in providing insight into to what extent organizations are using analytics in HR and its relevance in decision making. It highlights to what extend HR Analytics is used within a company and suggests some HR Analytics tools used in HR Analytics. It focuses on various dimensional views on HR analytics. HR analytics has a huge implication in improving the managerial decision-making process.

2. RESEARCH AIMS AND OBJECTIVES

The following research aims at exploring the existing literature to understand the relationship between human resource and analytics and analyzing the importance of its role in the improvement of the existing range of managerial and HR related research.

The present study enumerates the following objectives.

1. To examine the existing literature on the HR analytics, its evolution and how much is it implemented within the organizations and to evaluate the existing studies qualitatively.
2. To examine the various dimensional views on HR Analytics.

3. LITERATURE REVIEW

3.1 Integration of HR Analytics within a company

3.1.1 Term - HR Analytics

Analytics, in general, refers to "the use of analysis, data and systematic reasoning to make decisions" (Davenport, Harris, & Morison, 2010[10]).The term HR Analytics refers to the application, statistical and data mining techniques on the data concerned with the people working in the organization. HR Analytics is a process and not a tool as it produces valuable innovative insights (Smeyers & Delmotte, 2013[42]) into decisions made by the management. The "Garbage in –Garbage out" strategy can be applied here as the poor data when combined with the excellent analysis will produce results that are of of little value. The main objective of HR Analytics is to bring support in decision making regarding managing people in the organization. (KPMG, 2013 [31]).

Human resource analytics is an art of applying research and numerical processes to the human resource vertical of an organization with an intent of enhancing employee performance with a view to get a better ROI. HR analytics is the quantification of people drivers on business outcomes. Applying analytics helps to understand the impact of various metrics on the performance of the organization.

It helps to answer the following example questions:

1. How does learning & development investment impact sales performance for my account managers?
2. Will quicker promotions help us retain our top talent?
3. What can we do to retain employees and thus save money?
4. How can we best improve customer satisfaction through smart people processes?

HR Analytics represent statistical techniques and experimental approaches that can be used to show the impact of HR activities, including more sophisticated solutions, based on 'predictive models' and 'what-if scenarios.'

Few of the practices of human resources are empowered by information technology which utilizes descriptive, pictorial, and statistical analyses of Human Resources data like human

ISBN: 978-81-949278-6-0

capital, processes of human resources, performance of the organization to establish influence on business and facilitate decision-making that is data driven (Marler and Boudreau (2017)[37]).

Gustafsson(2012)[19], stated different terms for HR analytics that can be used interchangeably – Talent Analytics(Davenport, Harris and Shapiro, 2010[11]), HR Analytics (Mondore, Douthitt and Carson, 2011[40]), Talent Intelligence (Snell, 2011[43]), or Workforce Analytics (Hoffman, Lesser and Ringo, 2012[23]).

HR Analytics helps in forecasting the demand and supply of people, identifying training needs of employees, suggests suitable employments tests which suit applicant's profile, implementing performance related pay and maintains effective employee database. Overall it helps in decision making based on available data about career planning, trainings, rewards, recruitments, retention and organizational effectiveness and efficiency.

Figure 1: Human Resource Analytics

(Source : Analytics India magazine ,2015)

3.1.2 Evolution of HR Analytics

The history of HR analytics can be traced back to the late 1900‟s when Fredrick W. Taylor analyzed the job performance of the employees and laid down the measurement of performance to do the job in the factory in his Scientific Management studies. He also initiated time management exercises. Henry Ford measured the speed of assembly lines. Analytics received more attention as computer aided models in the form of decision support system came into existence during late 1960"s. Then in the early "80s when the reporting and basic metric capabilities were introduced, widespread use of HRMS - Human Resources Management System and benchmarking opportunity started happening. The prime focus was on the adoption of HRIS and automation of HR practices (DeSanctis, 1986[13]; Mathys & LaVan, 1982[39]; Lederer, 1984[33]; Magnus & Grossman, 1985[36]; Taylor & Davis, 1989[44]).In the year 1990, both academic research and organizations started collecting evidence on how to reduce the administrative tasks of HR process by using HRIS. Organizations started using computer systems in HRM (Kossek, et al., 1994[30]; Mathieson, 1993[38]; Hannon, Jelf, & Brandes, 1996[21]; Haines & Petit, 1997[20]).In the subsequent years, with the growth of internet, more companies started using HRIS. In 2000, a new term electronic HRM (e-HRM) was evolved. Although majority of the organizations used administrative e-HRM there was an increase in the use of strategic applications such as talent acquisition, performance management and compensation management (CedarCrestone, 2006[5]).

ISBN: 978-81-949278-6-0

Forward to today, 'Big Data' has made its entry in HR Operations and can be described as data that is very large in volume, diverse in variety, high in velocity, fine-grained in resolution, exhaustive in scope, relational in nature, but still it can be flexible in nature (Kitchin, 2014[29]).In addition to digitalization of HR, concept of HR Analytics has gained importance. Boudreau & Ramstad, 2005 argued that with such a paradigm shift – HR can be used as a strategic function such as finance and marketing to enhance decisions about people just as marketing enhances decisions about customers and finance enhances decisions about money (Boudreau & Ramstad, 2005[3]). Encouraged by many success stories of organizations using HR Analytics, generating savings up to $100 million and at the same time improving the retention rate and productivity of employees, advanced HR analytics is really becoming mainstream within no time (Fecheyr-Lippens, Schaninger, & Tanner, 2015[15]) and all the time more is considered as an essential HR tool (Boston Consulting Group, 2014[2]).

3.1.3 Comparison of HR Metrics and HR Analytics

HR Functions have a direct impact on organizational performance. The organizational performance is improved by the introduction of HR Analytics in HR functions. For this, proper HR metrics is required. Appropriate analytic models and measures of company performance are very necessary to evaluate the effectiveness of HR programs on company's performance

People generally interchangeably use the term metrics and analytics. However, it is very important to distinguish between HR metrics and HR analytics. Since the time, Jac Fitz-enzd(1984)[16] published 'How to Measure Human Resources Management' ,outlining the metrics that can be used to effectively measure employee performance and Kaplan and Norton's introduction on the concept of balanced scorecard (Kaplan & Norton, 1996[27]), the use of metrics in human resource management has gained a lot of popularity. Standard practices for calculating and reporting common metrics – like turnover, headcount and time to fill and financial based metrics such as cost per hire, led to efforts etc became very common. This data can be viewed from different perspectives and in different formats (Liberatore & Luo, 2010[35]) example through tables, charts and graphs; this data can be summarized in a more comprehensible manner. Metrics are just the measurements that help to evaluate the effectiveness and efficiency of a function. It helps to compare different data points. Metrics does not tell anything about a cause, why something is happening and what is the likelihood of any event to reoccur in future. Hence metrics precedes analytics. In HR Analytics, value chain evolves from opinions, data, metrics, analytics, and insights, and ultimately leads to actions (Dekas, 2011[12]). Hence it describes, input can be transformed into output which adds value to a product. HR Analytics helps the managers to make decisions based on changing state of Human Capital based on facts and figures. To evolve as a true strategic partner, Human Resource needs to develop better analytics and metrics (Lawler, Levenson, & Boudreau, 2004[32]). HR analytics capitalizes on the information retained on the human resource information system.

3.1.4 Types of HR Analytics

Different forms of analytics can be categorized into descriptive, diagnostic, predictive, and prescriptive analytics (Jim Watson 2016[46]). Descriptive Analytics is the first type of analytics. It involves understanding of past behavior and outcomes (Fitz-enz 2010[17]). It tells about what has already happened in the past and is happening in the current situation. Examples can be dashboards which gives details about how many people have left last month and how many people are currently employed. Based on this past data, predictive analytics can be done for the future. Secondly, Diagnostic Analytics is the causes of the event that has taken place. Example if employees have left the organization in past, then what is the reason they have left the organizations and then the causes are ranked accordingly. Thirdly Predictive Analytics can be

ISBN: 978-81-949278-6-0

used for identifying what might happen in future. Example who is the top performing employees in the organization and whether they will leave the organization or stay in the organization, how many people will leave the organization in next 30 days? Lastly, Prescriptive Analytics which suggests the decisions, options and actions to be taken based on predictions. Example what actions should be taken to retain top performing employees of the organization?

3.1.5 HR Analytical Tools

The major HR analytics vendors include Oracle (US), SAP (Germany), Infor (US), Workday (US), Sage Software (UK), Kronos (US), MicroStrategy (US), IBM (US), Tableau (US), Zoho (India), Crunchr (Netherland), Visier (Canada), TALENTSOFT (Paris), GainInsights (India), and Sisense(US). Oracle HR Analytics by Oracle is a solution tool which helps with data analysis of performances of employees, background screening, and suggests ways of encouragement. IBM Kenexa can significantly be used for retaining top employee talent and getting maximum output from their current workforce. SAP Success Factors Workforce Analytics provides tangible insights on the workforce data to assist business make important strategies not only for today but also that are future forward. R is the most widely used HR analytics tool which helps in statistical analysis and visualization of massive data sets. Python is another programming language and can be used for statistical analysis and visualization.

Jasmit Kaur and Alexis A. Fink (2017)[28] interviewed 22 respondents from 16 companies, found that for data analysis and visualization; most of the companies (94%) are using R Studio followed by Tableau (83%), Python for data analysis, data cleaning and data management. Traditional and trust worthy tools such as SPSS and Excel are also used by some companies for analysis. Few new technology tools such as Intel's Saffron, HireVue's video analytics, IBM's Watson Talent, are sanctioning Artificial Intelligence. However, HR analytics is still at experimentation stage and there is long way to go in the future.

3.2 Different Dimensional Views of HR Analytics

The development of HR analytical systems has been accelerated by technology, which is rapidly consolidating the analytics landscape. The future progression of HR analytics, which is conquered by models that basically focus on the progress of the analytical component itself. Jac Fitz-enz (2010)[17], in his book 'The new HR analytics', discussed the 5-step value ladder of measuring people analytics. The very first step marks the start of HR measurement which refers to the recording the HR data related work such as hiring, training, supporting or retaining. The second step links this recorded work to the objectives of an organization, which the managers set periodically and review on a regular basis. The third step involves the benchmarking process. Step four constitutes the descriptive analytics which analyses past behavior, outcomes, and trends of recorded HR data. The final step is predictive analytics, which transforms data into meaningful information by observing the patterns in the previous step of descriptive analytics and helps to predict the future based on data based models.(Fitz-enz, J. (2010)[17]).

Other models related to Hierarchy of analytics ascend from descriptive analytics, through correlation analytics, to predictive/prescriptive analytics (Sesil, 2014[41]), or from reactive - operational reporting, through Proactive - advanced reporting and Strategic analytics, to predictive analytics (Bersin by Deloitte, 2013[1]).Whatever hierarchy the organizations follow, they aim toward what can be considered as the holy grail of HR analytics: predictive analytics (Harvard Business Review, 2013[22]).

However, there is much more to HR analytics than measurements and statistics (Cascio and Boudreau (2011)[4]). Models need to be developed in logical manner so that the relationship between the variables can be analyzed truly. Thus the positioning of HR analytics within the HR

ISBN: 978-81-949278-6-0

department or within a general business intelligence department may be influenced considerably on the logically developed models.

Coolen and IJselstein (2015)[7] stated that HR analytics is not just restricted to measurements, statistics, and some logical reasoning. Identification of HR analytics relevant capability set for your organization is also very necessary. They introduce the HR analytics capability wheel and stated that "only those organizations that manage to create and maintain a balanced blend of different relevant capabilities will be successful in HR analytics" (Coolen & IJselstein, 2015[7]). These 'relevant capability set' were described as perspectives such as - the business perspective (doing research relevant to business); the human resources perspective (knowing about HR processes, available HR data, and ethics of examining employee data); the consultant viewpoint (selling HR analytics to business and presenting results in a conclusive manner); the data scientist view (conducting statistical analyses, and also being able to work with more cutting edge developments such as machine learning algorithms); the IT architect perspective (understanding the HR IT landscape and data warehousing); and the software perspective (in-depth knowledge of working with analytical software, depending on whether this is outsourced or conducted inhouse) (Coolen & IJselstein, 2015[7]). The last two perspectives indicate the use of Information technology in HR analytics. The next big thing Coolen (2015)[6] foresees is the use of analytical business-user-friendly self-service analytical software. Table 1 identifies various dimensions of HR Analytics according to various researchers.

Table 1: Dimensions of HR Analytics

1	•An evidence based view of HR Analytics
2	•Measurment of HR Functions using HR Metrics
3	•Roadmap for Decision Making
4	•Used as Predictive Analytics-Helps in Decision Making
5	•Necessary Logical Model Development for implemention
6	•Prioritization of HR Investments Patterns
7	•Balanced blend of different relevant capabilities
8	•Link between academic and industry interface

Source: Author's Research

4. CONCLUSION

HR analytics is therefore an evidence-based methodology for improving individual and organizational performance by making better judgments on the employee's side of the business. It can undoubtedly enhance the credibility of the HR functions by improving the HR effectiveness, policies and practices and contributing to the competitive advantage of organizations that develop it as a core competency. HR analytics expose the redundant efforts,

resources and budgets which are not producing any relevant impacts on productivity of the organization, and hence improves the effectiveness of HR. As such, HR functions and professionals can develop a strategic responsibility in collaboration with marketing and finance department and develop new skills and capabilities. Along the way, HR professionals will need to address ethical dilemmas. Undoubtedly; HR analytics takes effort to minimize these current challenges being faced by many organizations. An integrated IT infrastructure is required to assist the use of multi-source data in analyses. The data collected from all disciplines should be centralized in a single database to so that the combined analyses can be carried out. Today, every function has independent analytics team. In future, focus will be on a centralized analytics team for all functions in an organization. This team will then be focusing on identification of opportunities for improving business performance. Technology was seen as the main driver for the development of HR analytics. Developments are seen in the automation of data collection and data preparation activities, which are very time consuming. Furthermore, offering access of self-service applications to line managers may help to speed up the analyses and helps in development of HR analytics considerably.

IMPLEMENTATION OF AUTOMATIC IRRIGATION SYSTEM FOR GREEN HOUSE AND OPEN FIELDS USING IOT

Vandna[1] and K. L. Bansal[2]
[1]Department of Computer Science, Himachal Pradesh University Shimla
[2]Professor, Department of Computer Science, Himachal Pradesh University Shimla

ABSTRACT
Agriculture is very essential for the development of any country. India depends upon agriculture more than 50 % of Indian population works in the sector of agriculture. Agriculture sector or agribusiness can be strong if new and modern technologies were implemented to it, IoT can play a vital role in it. Sensor used for the implementation of the IoT circuits have the capability to sense the environment properly and provide the accurate information regarding their surroundings. IoT has the potential to reshape the world their role in the agri-sector can change the traditional methods used in.

Keywords: Internet of Things, sensors, smart agriculture.

1. INTRODUCTION
Agriculture products are the basic needs for any civilization this contains the clothes we wear two the food we eat agriculture is everywhere. Agriculture is very essential what the development of any country modernization of the Agri business is required because in India, we are still using the traditional methods for the agriculture. To develop this sector we need to develop the traditional methods of agriculture. Agriculture can be defined as the art science and occupation off growing various crops developing the dirt and raising animals this process includes:

- conservation of water resources
- financing cultivation marketing processing and the distribution of the products
- Small scale industries, supply, Farm production

In India the techniques used for the generation of crops are traditional and they are passeddown from generation to generation which is not effectiveshow me need to implement the current science and innovationin the agriculture sector to increase the cultivation show that farmers can take advantage using the common sources on which the agriculture and horticulture rely upon[1]. With the use of IoT we can keep an eye on our fields which are far away from the farmers home. IoT we can help in collecting, monitoring and processing the data related to the crops which we use to grow in our fields smart agriculture usesIoT and wireless sensor networks for the remote connectivity it not only enables the new techniques for the ranchers for farming their fields but it can also reduce the workload of the Ranchers[2].The base of IoT is embedded electronics or embedded system technology as it is a combination of both hardware and software, this allows the IoT systems to communicate in inside the environment and outside the environment [3]. Although it is easy to implement the IoT systems, these IoT devices also faces few challenges Like hardware systems, security issues, data analysis, Network challenges etc. Data analysis plays a vital role in almost all the applications of wireless sensor network and IoT as all the decisionsimplemented by the user directly depends upon the data collectedby the digital or analog sensors from its surrounding environment. All IoT gadgets are deployed in an open environmentso they may face the harsh conditions. These harsh conditions may damage the embedded system.Security plays a very important role in any industry similarly farmers need to have the knowledge about the security and safety of the technology used by them in a

ISBN: 978-81-949278-6-0

proper way to execute each and every instruction accurately. But in case of India most of the farmers do not have the proper knowledge regarding the technology as they are still using the traditional methods for the agriculture processing. In this paper we have proposed a system for the smart irrigation of open fields as well as a system for the green house to implement the smart irrigation in. we have used ESP8266, ArduinoMicrocontrollers to achieve this process in case of an open field scenario we have used soil moisture sensor, water flow sensorto control the ignition in the open field, whereas in case of a greenhouse we have used DHT22 a digital humidity and temperaturesensor to control the flow of irrigation hen greenhouse, later sections of this paper describes about literature survey propose system and conclusion.

2. LITERATURE SURVEY

Title	Author	Year	Sensors	Microcontroller	Findings System and achieved Result
Internet of Things-Based Hardware and Software for Smart Agriculture: A Review[1]	Brij Bhushan Sharma and Nagesh Kumar	Jan 2020	-	-	➢ IoT will play a vital role in smart agriculture process. ➢ Monitoring of Moisture Mineral Level, Humidity and pH level is required to implement IoT in agribusiness. ➢ IoT can reduce the workload of Rancher's
Applicability Of Wireless Sensor Networks & Iot In Saffron & Wheat Crops : A Smart Agriculture Perspective[2]	Mohammad Wasi Rasooli, Brij Bhushan Sharma, Nagesh Kumar	Feb 2020	-	-	➢ WSN and IoT applications are capable enough to enhance the agricultural fields. ➢ WSN and IoT can play a vital role in monitoring the properties of growth of the crops and soil. ➢ IoT devices are easy to Interface.
Opportunities and Challenges with WSN's in Smart Technologies: A Smart Agriculture Perspective[3]	Nagesh Kumar and Brij Bhushan Sharma	Jan 2020	-	-	➢ Agricultural machinery including IoT can be used to maintain the agricultural fields. ➢ Pest control and crop diseases can be controlled easily using IoT.
GREENHOUSE MONITERING	S.Muthupavithran, S.Akash,	Mar 2016	cozir sensor	cc3200 ARM cortex M4	➢ With the use of COZIR sensor and

ISBN: 978-81-949278-6-0

USING INTERNET OF THINGS[4]	P.Ranjithkumar			microcontroller	CC3200 ARM Cortex M4 Microcontroller designing of green-house automation is implemented ➢ Monitoring of the greenhouse is possible in all situations. ➢ Values of three parameters Temperature, carbon-dioxide, and humidity is analyzed and shown using graphs.
Do-it-Yourself Digital Agriculture Applications with Semantically Enhanced loT Platform[5]	Prem Prakash Jayaraman, Doug Palmer, Arkady Zaslavsky, Dimitrios Georgakopoulos	April 2015	Soil Moisture Sensor, Phenonet-OpenIoT	JAVA-based semantic sensor stream processor. Arduino	➢ Implementation of enhanced digital system for agriculture is presented. ➢ Open platform for IoT has been introduced in this paper.
IoT based Smart Greenhouse[6]	Ravi Kishore Kodali, Vishal Jain and Sumit Karagwal	Oct 2017	Temperature and Humidity, ultrasonic sensor	Intel Galileo Gen 2 and Arduino	➢ With the use of IoT advantage is introduced that smart devices in greenhouse can remove the insecticide and pesticides from crops. ➢ Hibiscus is grown under the generated environment, introduced implementation where authors have noted that they were able to reduce the water requirement upto 70 to 80%. ➢ Growth rate is also increased
DATA MINING TECHNIQUES FOR INCREASING SMART FARMING	Vandna, K.L. Bansal	Feb 2020	-	-	➢ Various Data extraction techniques were discussed for

ISBN: 978-81-949278-6-0

IN AGRARIAN SECTOR[7]					various parameters. ➢ They have shown that in case of agronomy lesser number of data mining techniques were introduced.
Internet of Things Based Smart Greenhouse: Remote Monitoring and Automatic Control[8]	Mohammad Woli Ullah, Mohammad Golam Mortuza, Md Humayun Kabir, Zia Uddin Ahmed, Sovan Kumar Dey Supta, Partho Das, Syed Mohammad Didar Hossain	2018	Soil Moisture Sensor, LDR, Temperature and Humidity Sensor	AtMega328	➢ Proposed model used to monitor the Temperature Humidity and Soil Moisture. ➢ For the future purposes database is introduced so that data can be used for the utilization of the system properly. ➢ They have compared the device with other devices and found that their system is more stable. ➢ They have used GSM AND GPRS MODULE to transmit the data over internet.
Internet of Things for Greenhouse Monitoring System Using Deep Learning and Bot Notification Services[9]	Nuttakarn Kitpo, Yosuke Kugai, Masahiro Inoue, Taketoshi Yokemura and Shinichi Satomura	2019	Temperature, Humidity and Illuminance	----	➢ IoT system is proposed for the agricultural solutions. ➢ Image analysis were performed using the deep learning in 6 growth stages of tomato. ➢ System is able to detect between green and red colors of the crop. ➢ System has a accuracy of 91.5% . ➢ Due to capability of the system to identify in between the red and green color harvesting date

ISBN: 978-81-949278-6-0

					can be predicted with accuracy of 91.5 %
IoT enabled Plant Sensing Systems for Small and Large Scale Automated Horticultural Monitoring[10]	Sherjeel Khan, Muhammad Mustafa Hussain	2019	Ultra-lightweight flexible sensory, Flexible lightweight plant growth monitoring sensor, LARGE SCALED REMOTE SENSING SENSORS, Winged Sensor Platform		➢ Lightweight platform can be placed on the plant's leaf to monitor the microclimate so that plant growth can be monitored as plant growth can only be monitored through leaf of the plant. ➢ Strain Sensor is used to measure the growth of the plant by measuring it on the micrometer scale. ➢ Flexible sensors are converted to lightweight platforms equipped with the wings made of paper. ➢ minimalistic compact dropping mechanism is used.
AGRO-TECH: A DIGITAL MODEL FOR MONITORING SOIL AND CROPS USING INTERNET OF THINGS (IOT)[11]	O.Pandithurai, S.Aishwarya, B.Aparna, K.Kavitha	2017	Humidity sensor (DHT11), Temperature Sensor (LM35), Soil moisture sensor, PH sensor	ArduinoUNO, AT89s52 MCU	➢ Authors have proposed a software names as AGRO-TECH ➢ Several sensors have been used like DHT11 for humidity and LM335 analog sensor for the temperature monitoring and
IOT Based Crop-Field Monitoring and Irrigation Automation[12]	Rajalakshmi.P, S.Devi Mahalakshmi	2018	Soil moisture Sensor, DHT11 Temperature and humidity Sensor, Light Dependent Resistor, Ultrasonic Sensor	Arduino Mega	➢ Mobile application and Web application have been developed by the authors to control the automation from anywhere. ➢ Ultra-sonic sensor has been used to

ISBN: 978-81-949278-6-0

					monitor the water level in the tank ➢ Water wastage has been removed as the system works in an effective manner.
IOT BASED SMART CROP-FIELD MONITORING AND AUTOMATION IRRIGATION SYSTEM[13]	R. Nageswara Rao, B.Sridhar	2018	Soil moisture sensor, Temperature sensor (LM35)	RASPBERRY PI 3 MODEL B	➢ Irrigation system based on Raspberry pi Microcontroller has been Implemented. ➢ For the storage of data cloud computing is used. ➢ Controlling of the irrigation process has been achieved
Agricultural Crop Monitoring using IOT- A Study[14]	Dr. D.K. Sreekantha, Kavya.A.M	2017	---	------	➢ IoT enables the crop monitoring in an easy and effective manner. ➢ Various Sensor can be used to fetch the data regarding agricultural parameters. ➢ There may be a challenge regarding the energy consumption
Effective Utilization of IoT for Low-cost Crop Monitoring and Automation[15]	Petcharat Suriyachai, Jakkapong Pansit	2018	DHT11	NodeMCU ESP8266	➢ Authors have designed and implanted IoT based crop monitoring system ➢ Temperature and Humidity value will be store to the cloud based platform. ➢ Open weather API has been used for the weather predictions
Rice Crop Monitoring System - A IoT Based Machine Vision	Tanmayee.P	2017	Webcam	Raspberry Pi	➢ The developed system is capable in monitoring and detecting the affective area.

Approach[16]					➢ It has the capability to moving in forward and backward directions. ➢ The webcamCapture the images and after processing these images, if affected area found then the system can spray the pesticide.
A Novel Framework for Smart Crop Monitoring Using Internet of Things (IOT)[17]	Kamal Kumar Ghanshala, Rahul Chauhan, R.C Joshi	2018	Metos NPK Sensor, Moisture Sensor, Humidity & temperature sensor, Soil pH	Arduino Mega2560	➢ Framework has been proposed in this paper to monitor the crops in agricultural fields. ➢ NPK values are measured so the farmer can have the knowledge regarding the fertilization requirement of the fields ➢ Soil Moisture Sensor and temperature sensor will provide the value of humidity and Temperature. ➢ Zigbee Protocol has been used with Arduino Mega for the communication purposes.
Design of IoT Blockchain Based Smart Agriculture for Enlightening Safety and Security[18]	M. Shyamala Devi, R. Suguna, Aparna Shashikant Joshi, Rupali Amit Bagate	2019	------	------	➢ Proposed system has been implemented by the authors using Ethereum Private Blockchain network ➢ IoT device were simulated using the LivCoAP.
IoT and Analytics for Agriculture[19]	Prasant Kumar Pattnaik Raghvendra Kumar Souvik Pal	2020	Soil moisture sensor	ESP8266, Arduino Uno	➢ Solar Power based automatic drip irrigation system has been implemented.

ISBN: 978-81-949278-6-0

	S. N. Panda				➢ Water flow from the overhead tank is controlled using the solenoid valve.
AgriSys: A Smart and Ubiquitous Controlled- Environment Agriculture System[20]	Aalaa Abdullah, Shahad Al Enazi and Issam Damaj	2016	Temperature, Humidity, pH, Soil Moisture, Light Sensor	Fuzzy Controller MIMO	➢ Authors introduced a system namely Agrisys based on Fuzzy Controller. ➢ Experimental results provide Increased productivity, Enhanced safety, Easier agriculture procedures, Instant interventions around the clock, Advanced lifestyle
Smart Farming – IoT in Agriculture[21]	Rahul Dagar, Subhranil Som, Sunil Kumar Khatri	2018	Water Volume Sensor, Motion Detector Sensor, Soil pH sensor, Soil Moisture Sensor, Air Temperature Sensor	Node MCU ESP8266	➢ Agricultural process can be made more efficient and accuracy can be increased. ➢ Various sensors have been used to monitoring the agricultural fields.
Smart Drip Irrigation System for sustainable Agriculture[22]	Kavianand G,Nivas V M,Kiruthika R,Lalitha S	2016	TemperatureLM35, humiditySY-HS-220, moisture, soil pH and soil nitrogen sensor	ARM9 processor AT91SAM9G45	➢ Fully automatic drip irrigation system has been introduced. ➢ ARM Processor has been used to fetch the real time controlling.
Implementation of an Automated Irrigation System for Agriculture Monitoring using IoT Communication[23]	Deep Rani, Nagesh Kumar, Brij Bhushan	2019	Soil Moisture Sensor, pH Sensor, water flow sensor	Arduino Uno and ESP8266	➢ A system is designed for the management of water supply to the paddy crops. ➢ ESP8266 provides the data to the server for further future proposes

3. PROPOSED SYSTEM

This paper proposes the system for the green house and open fields. The proposed system is based on the development of device by embedding various sensors, which can detect the various parameters like temperature, humidity, and moisture content of the soil to control the irrigation of the green-house and open-fields for agriculture.

ISBN: 978-81-949278-6-0

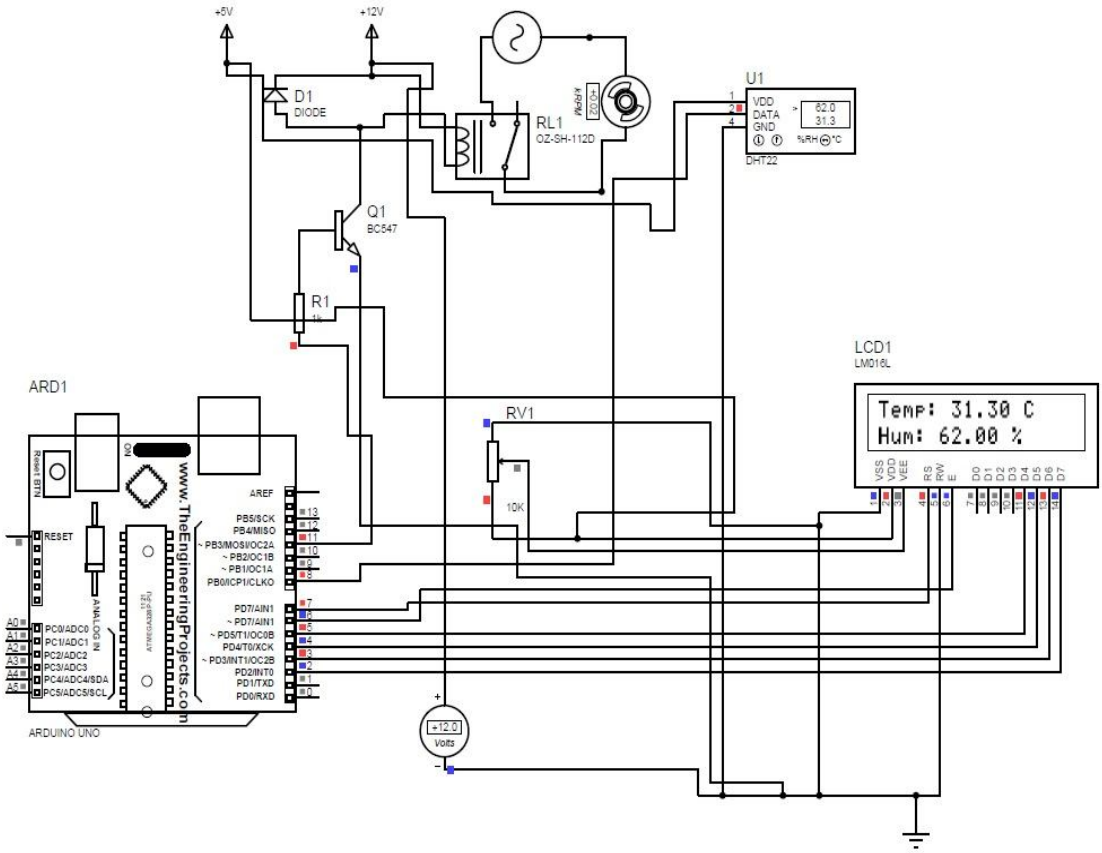

Figure 1. Circuit diagram of proposed system.

Hardware Description:

- Arduino Uno Rev3
- Node MCU ESP8266
- Solenoid Valve
- Relay Module
- Soil Moisture Sensor
- DHT22 (Digital Temperature and Humidity Sensor)
- 16X2 LCD

Software Description

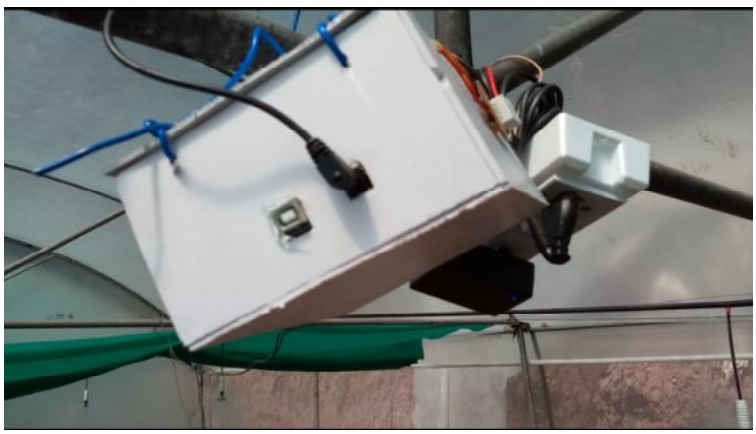
- Arduino IDE

Cloud Based Platform

- NETPIE

Working and Experimental Analysis

In the proposed system NodeMCU ESP8266 is used for the transmission of the data to the NETPIE where we can analyze the data for future purpose. After embedding the sensor to the system we have implemented it in a green-house where experimental results showed us that the



ISBN: 978-81-949278-6-0

system was perfectly controlling the irrigation, and we were able to control the supply of water for irrigation using a solenoid valve. If talk about the working of the circuit, DHT22 (Digital Temperature and Humidity Sensor) continuously monitors the parameter of humidity and temperature and at a specific value of the parameters it starts and stops the supply of water automatically, similarly to counter any false reading we have introduce the soil moisture sensor to this circuitry which will continuously monitor the moisture content of the soil. On the basis of the experimental setup in the green house we can say that our system provides:

- Easier agriculture procedures
- Fast response system
- Low-cost
- Reliable

(a) (b)

(c)

Figure 2. (a, b, c): Implemented project inside green house

Figure2. a, b, c represents the execution of the proposed system in greenhouse. Although during the implantation of this system we realized that we could switch to solar power for the working of the whole system. However, we also come to know that we need an open water tank to maintain the pressure of water in the sprinklers. As we had faced a problem to maintain the pressure in sprinklers with overhead water tanks due to the role of atmospheric pressure being not applied to the overhead water tanks as they are closed. Readings taken from the proposed system are shown below in table 2. We have checked the readings of the temperature and humidity every hour throughout a day from 6 AM to 7 PM.

ISBN: 978-81-949278-6-0

Table 2. Real Time Monitoring of the greenhouse

Temperature (℃)	Humidity (RH%)	Time	Status of Fogging System
19 ℃	65%	6 AM	OFF
19℃	65%	7 AM	OFF
19℃	68%	8 AM	OFF
20℃	68%	9 AM	OFF
24℃	71%	10 AM	OFF
26℃	75%	11 AM	OFF
30℃	78%	12 PM	OFF
33℃	80%	1 PM	OFF
35℃	85%	2 PM	ON
38℃	83%	3 PM	OFF
36℃	84%	4 PM	OFF
35℃	85%	5 PM	ON
34℃	84%	6 PM	OFF
32℃	84%	7 PM	OFF

ISBN: 978-81-949278-6-0

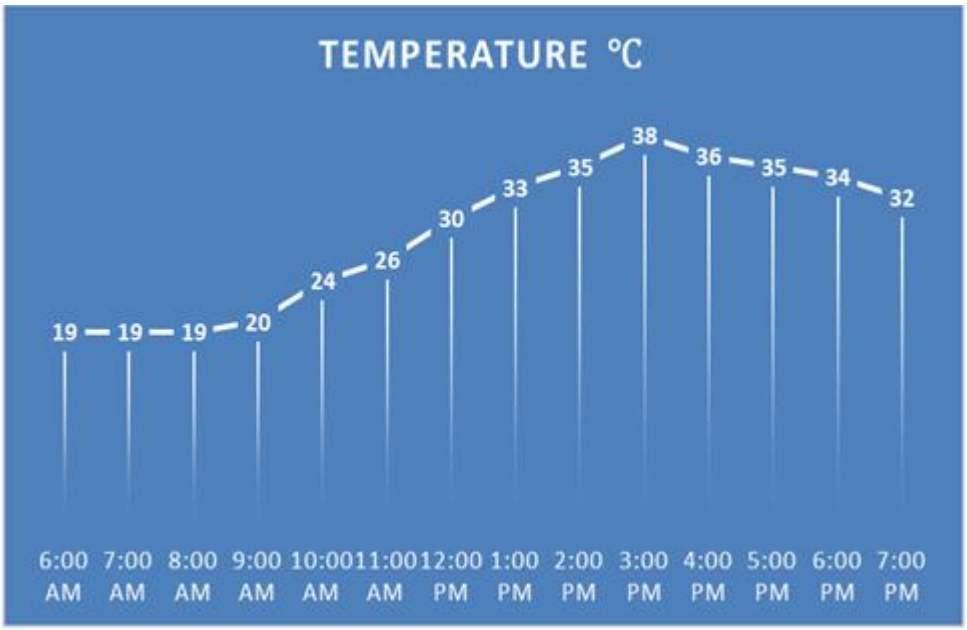

Figure 4: Temperature measured inside greenhouse

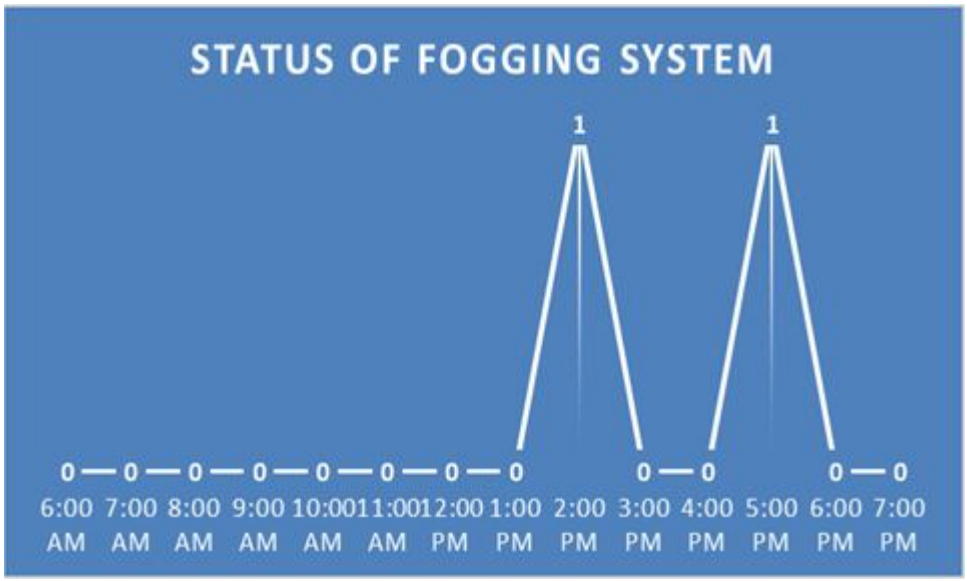

Figure 5: Status of the fogging System inside greenhouse

4. CONCLUSIONS

This paper has presented the design and Implementation of the IoT Based automatic irrigation system. In the proposed system various sensors like DHT22 and Soil Moisture Sensor have been used to sense the specific parameters. For the storage of data IoT Cloud based platform using NETPIE is used for future purposes. Real-time data reading was shown on the LCD screen, as the proposed system using soil moisture sensor and Humidity, temperature sensor we are able to reduce the wastage of water, which always takes place during the traditional methods of irrigation. So, we can say that we have designed and implemented a system for the farmers, which is low-cost device and requires almost zero knowledge of the electronics to use it.

ISSUES AND CHALLENGES OF WOMEN EMPOWERMENT IN KASHMIR: A STUDY

Zahoor Ahmad
Ph.D (Research Scholar), Department of History, Bhagwant University Ajmer

ABSTRACT
Women empowerment has been an issue of immense discussions and contemplation over the last few decades worldwide. Today the empowerment of women has become one of the most important concerns but practically women empowerment is still an illusion of reality. Women are the most vulnerable section owing to violence caused by armed conflict and militancy in Kashmir. They are facing many issues and challenges related to education, domestic violence, employment and economy. For human evolution and existence of humanity we need both men and women but still we have witnessed inhumane, unethical and immoral practices against women in Kashmir. It is the fact that women in Kashmir have been denied equal opportunities, equal status and equal position at mostly all sectors of our society especially in Kashmir.In this context, the present study has been prepared in order to know the various issues and challenges faced by women in Kashmir.Based on primary and secondary sources of data and other relevant sources wherever necessary the paper attempts to identify the status of Kashmiri women in the present day changing society related to health, domestic violence & job opportunities and to examine the significance of various policy measures which are being undertaken by the government for the upliftement of women.The author found that there has been a significant impact on these variables.

Keywords: Women, issues & challenges, empowerment, Kashmir

1. INTRODUCTION
History has ineffectively witnessed women's suffering in the formof discrimination, subjugation, exploitation, degradation, aggression and humiliation. In Kashmirwomen are regarded as the inferior. The society of Kashmir is multicultural in nature. Its socio – economic setup have also defined and shaped by varying indigenous and exogenous forces and factors such as political instability, conflict and unrest. Violence aganist women are a result of gender relations that assumes men to be superior to women. Given the subordinate status to women much of gender violence is considered normal and enjoys social sanction. Violence includes physical aggression, sexual abuse, burns, emotional and economic threats and control over speech and actions. Women have been confined within four walls and have limited exposure to modern communication tools, low level of education with limited freedom. Gender discrimination is on rise due to prevailing social, economic and political turmoil's. Women in Kashmir also face a lot of issues and challenges i.e.; domestic violence, unorganised health sector, lack of decision making authority, illiteracy and ignorance and also many cultural practices and customs hinder the women empowerment. Rising inequality can lead to social instability, undermining long term human development progress. The high male sex ratio at birth reflects women's status in society, entrenched patriarchal mores and prejudices, which are an aspect of deep rooted socio cultural beliefs. The key driver however is the combination of patriarchal mores and greatereconomic value of boys in the presence of a dowry system. In contemporary times women are suffering from the issues of domestic violence, sexual harassment, child marriage, female feticide/ infanticide, illiteracy etc. The women's world is limited within domestic sphere also in which for her every activity. She has to follow the patriarchal decisions. She is socialized in such a way that she could perform expected roles in proper manner. Consequently she has been put away from receiving education which restrict her

ISBN: 978-81-949278-6-0

to avail employment opportunity to be aware of her rights and duties and to participate in decision making and political affairs of the society in Kashmir. The condition of women is further wretched by the conflict situation. The conflicting situation of Kashmir has snatched women's rights and hit their hardships. A large number of women became widow and half-widows. Though for women empowerment in Kashmir requires strong and sustained commitment by governments and other stakeholders.

2. REVIEW OF LITERATURE

Bader, C (2013) the author stated under this research that women were not safe during the 18th century and that they had to face all sorts of social atrocities and the biggest one was prostitution. Not only women above the age of 18 years but girls who were as young as 10 years of age, were traded by the kashmiri men just because they were getting lucrative sum of money for selling women to the visitors as well as to the men of other states mainly Lahore, Calcutta, Bombay Delhi and Peshawar. Further Punjab, Lahore and Ludhiana were considered as the states where rein most prostitutes from Kashmir were sold. **Gopalan S (2001)** In their research mentioned that remarriage of a widow was banned in Jammu and Kashmir because any women who was widowed was considered as unfortunate for the family of her husband and so it was believed that remarrying her will ultimately lead to the death of her new husband too. All the women of Kashmir were made to pay the cost of superstition in which the people of Kashmir lived for years till they were made aware of the fact that remarrying a widow was not wrong and that women too deserved to live their life freely without any limitations on them. **Bhagat P (2002)** the study reveals that the Kashmir government earned a lot from the taxes that were paid by the registered prostitutes of the state but still the government was never bothered to spend for the empowerment of women. No emphasis was ever laid on the education or development of these women and rather they treated as machines which generated cash for the state irrespective the vegetative state that all the women in the state were living in.

3. RESEARCH METHODOLOGY

3.1. Universe of the study

The universe of the present study constitutes rural and urban areas of Srinagar district of Kashmir valley. As per the census, 2011 of Jammu and Kashmir the total population of Srinagar district is 1,180,570; of which male and female are 618,790 and 561,780 respectively. The literacy rate of women in Srinagar district is 61.81 percent and male literacy rate is 75.87. And the general sex ratio is 895.

3.2. Sampling plan and design of the study

The sampling plan of the present study is based on a sample of 150 respondent selected through stratified random sampling method from rural and urban areas of Srinagar district of Kashmir. Descriptive research design was used to get information from the respondents within the study area and the information was collected through interview schedule.The respondents are stratified on the basis of residence.

3.3. Hypotheses of the study

The hypotheses of the study are as under:

Women empowerment is a very serious issue in the present day changing society. From the past several decades, Kashmir has witnessed that women are suffering from various issues challenges due to domestic violence, unemployment and domestic violence. They are being discriminated in every sphere of life, their social and educational conditions are very miserabledue to the lack of awareness patriarchal nature of society and conservative approach of the people towards women empowerment. This kind of attitude of the people has hindered the

ISBN: 978-81-949278-6-0

process of women empowerment in Kashmir which has increased the vulnerable position and women are lacking behind in the process women empowerment.

3.4. Objectives of the study

1. Toanalyse the status of Kashmiri women in the present day changing societyand to identify the various issues and challenges related to health, domestic violence, economy job opportunities in the study area;

2. Toexamine the significance of various policy measures which are being undertaken by the government for the upliftement of women in the study area;

4. RESULTS AND DISCUSSIONS

The findings of the study are as follow:

4.1. High level of domestic abuse due to their vulnerable position

Domestic abuse is a major concern of the present society. Women are suffering from domestic abuse and these have been seen in past few years. In this context the respondents were asked to express their opinion which is shown in the below table:

Table 1: Domestic abuse & vulnerable position of women

S.No	Theme	Response	Number	percentage
High level of domestic abuse due to their vulnerable position		Yes	98	65.33
		No	52	34.66
Total			**150**	**100.00**

Source: Based on field study carried out in Srinagar, in the year 2020

The above table depicts that out of 150 respondents, 98 respondents (65.33 percent) are of the view that women in Kashmir are definitely subject to high level of domestic abuse specifically with rise in domestic violence cases that are extremely nerve wracking and also reveals the evil side of the society and the remaining 52 respondents (34.66 percent) are of the opinion that kashmiri women are extremely powerful and strong because of which today even after suffering from domestic violence they have the option of going to the court and claiming their rights. The study further reveals that the majority of the respondents show that women are definitely in a vulnerable position and this is the reason because of them being subjected to high amount of domestic violence that shall be eliminated by taking specific legal measures that could help and empower the status of Kashmiri women in the present contemporary era.

4.2. Kashmir conflict substantially impacted the position of women in present scenario

Kashmir conflict becomes an ongoing problem. It causes stress, depression, anxiety and resentment among all especially women. In this context the data is collected from the respondents shown in the below table:

Table 2: Kashmir conflict & the position of women in the present

S.No	Theme	Response	Number	Percentage
Kashmir conflict substantially impacted the position of women in present scenario		Yes	150	100
		No	0	0.00
Total			**150**	**100.00**

Source: Based on field study carried out in Srinagar, in the year 2020

The above table indicates that 150 respondents, (100 percent) of the respondents are of the view that the position of women has deteriorated substantially after the initiation of insurgency and conflict within the Kashmir. The study shows that all the women have definitely suffered a lot because of the state insurgency and conflict. The reason for such is that due to excessive and

ISBN: 978-81-949278-6-0

daily conflict women are unable to come out of their homes, thus hampering their ability to go out and work for their family.

4.3. Government policies implemented effectively for upliftement of women

There are number of government policies for the upliftement of women but these policies are not implemented effectively. In this context the respondents were asked to express their views which are shown in the below table:

Table 3: government policies for upliftement of women

S.No	Theme	Response	Number	Percentage
Government Policies implemented effectively for upliftement of women		Yes	60	40.00
		No	90	60.00
Total			**150**	**100.00**

Source: *Based on field study carried out in Srinagar, in the year 2020*

The above table shows that 60 respondents (40 percent) are of the view that many policies and measures are effectively implemented for the upliftement of women and 90 respondents (60 percent) are saying that the steps taken by the government are not implemented effectively. Thus the study indicates that most of the respondents are of the view that many policies and programmes for the upliftement of women are taken from time to time by the government but no such results of these policies has come out yet and despite these policies there is no improvement in the condition of the women. No doubt many policies and schemes benefited to some extend but still they are victims of many social evils like dowry, illiteracy, rape and molestation.

4.4. Government efforts to create better employment opportunities for women

Unemployment is a social issue of serious concern at the present both in Kashmir and national level. Work opportunities have not kept pace with the increasing population. Unemployment rate is high and the problem of unemployment is more prevalent among women in Kashmir. In this context the respondents were asked to express their opinion which is shown in below table:

Table 4: Employment opportunities and women

S.No	Theme	Response	Number	Percentage
Government efforts to create better employment opportunities for women		Yes	40	26.66
		No	110	73.33
Total			**150**	**100.00**

Source: Based on field study carried out in Srinagar, in the year 2020

The above table depicts that 40 respondents (26.66 percent) are of the view that the government is taking effort to create employment opportunities for women and 110 respondents (73.33 percent) are of the view that the government is not really taking any significant efforts for generating employment opportunities for kashmiri women. Thus the study shows that there is no employment opportunity for women and they believed that the opportunities which are available are not enough to provide them equal opportunity as opposed to men.

5. SUMMING UP

Thus the women in Kashmir are treated as inferior. She spends most of the time in domestic chores. They are confined into four walls of the houses. They are facing so many issues and challenges like sexual harassment, dowry system, economic and emotional threats, illiteracy, ignorance, domestic violence, molestation etc. the women condition further wretched by the conflict situation. This situation in Kashmir snatched all the rights and freedom of women and number of women becomes widow and half widow. The policies and schemes of the

ISBN: 978-81-949278-6-0

government try to address the issues and challenges of women to some extend but all these are not sufficient for women empowerment. There is need of the time that the government should take some concrete steps and remove all the barriers which comes into the way of women empowerment.

OUTLINE OF THE RAJBANSHIS CULTURE OF WEST DINAJPUR: A BRIEF ANALYSIS

Kartick Chandra Barman
Assistant Professor, Department of History, Krishna Chandra College, Hetampur, Birbhum, West Bengal

ABSTRACT
'Culture' means the life of creation. The inner idealism which manifested by the creation of a man is called 'culture'. People's livelihood, their eating habits, movements, mourning, joy, pain, education, language, dress, behavior, story-telling, daily work etc. are called together 'culture'. The culture of all humnan beings are not be the same, yet the citizens of the same country. There are different types of cultures in different geographical locations, different ethnic and religious groups of people. Although cultures flourish on languages yet, there noticed different cultures among the same language speaking communities due to the contrast on belief and attitude among them. Therefore, despite being the same caste or community, there is a distinction between the culture among them. That is why culture is not the same between the Bengali-language speaking Bengalee communities and Bengali-speaking Rajbanshi community. There may also be differences between Bengali-language speaking Rajbanshi people and Hindi-speaking Rajbanshi people. There are both similarities and differences between the culture of the Rajbanshis of different districts. It is true that the life of the people, the social and cultural characteristics of the people is different according to their geographical location, environment and surroundings. Therefore, the characteristics of the culture of the Rajbanshis is not the same of every districts of North Bengal. 'The outline of the Rajbanshis culture of West Dinajpur district' is formed by the ingredients of geographical location of West Dinajpur, surroundings of the district, life-style of the Rajbanshis, status of education, socio-economic condition, languages, rituals, customs etc.

Keywords: Rajbanshi, Indigenous People,Society, Culture, Formation,Transformation etc.

INTRODUCTION
Nobody is born as a caste on earth. After birth of a child, his identity sets up the existing social system. So a person's identity becomes changed in terms of time. As a result, a persons conduct and behavior may be differ among the ancestors and descendants, even the overall socio-cultural systems became fragile and took new identity of the human society. The identity of a strong group of people takes too much time to disappear, but relatively the less dominant group of people does not take much time to disappear. In terms of time or obligation, the identity of a person may be change. Many times the old identity disappears and they get new acquaintance in the society. In different historical periods, many tribal people abandoned their profession and took agriculture as a profession and later occurred evolution towards their caste and culture. So no caste on earth is a pure caste today. Every caste has become a mixed caste today.

In the discussion, the caste identity of the Rajbanshi might have been different and they has been named as "Rajbanshi" through the time of evolution. However, today the Rajbanshis are bear the identity of an established ethnic group of North Bengal. Rajbanshi refers to the descendants of the Kshatriya king and they are known as 'Rajbanshi Kshatriya'. Once they were the descendant of the Kshatriya ruler, so they are known as the 'Kshatriyas'. The Kshatriya kings were dominated in the early-medieval period. So their descendants and followers are known as 'Kshatriya Rajbanshi'.

ISBN: 978-81-949278-6-0

Rajbanshi refers to the descendent of the King. Those who belong to the king are called 'Rajbanshi'. The Rajbanshis are the descandents of which king, it is clearly not mentioned anywhere. In ancient times, various dynasties ruled in India and their followers were called themselves as descendants of that king. However,the real descandent of the king is hidden among the primitive caste and communities. Because there was no separate identity of every ethnic group during that time, identity of the other members of any community was revealed by the identity of their leader of the concerning tribe. Therefore, the people of every backward community were known to be the clerical leaders or the loyal subjects of the king. But when the king's fall, the common people were afraid of losing their identity. So they tried to find their existence by identifying the corresponding king. In this way, the Rajbanshi caste has emerged as a special follower of the king. Once the region of Dinajpur was known as Pundravardhana. So the people of this region were known as 'Pundra' or 'Pod'. And those who were associated with the Royal administration, they came to be known as Kshatriya or 'Paundra Kshatriya'. It is known from the sources that in the contemporary period of ancient Indus Civilization, a strong state was created in eastern India called '*Pundradesh*' or the land of 'Pundra',whose capital was named Mahasthangarh. The place is currently located in Bangladesh. An advanced civilization was developed centred by the capital named Mahasthangarh in the land of Pundra which spread throughout Pundra-Radha-Banga. The main center of this great civilization of Pundradesh was Kotivarsha. It was an ancient city and administrative center located in the middle of West Dinajpur.

Once the people of different blood group were lived in this region like, Australians, Mongolians, Alpine, Adi Ardic, Austric etc. In the era of the Mahabharata, there ruled a powerful king named Basudeva Pundra in this region. All the people of this land once used to bear the identity of the Kshatriya king.So the people of Pundradesh were called '*Pundra*'. The king of Poundra was himself belonged to Kshatriya, so he called the king of 'Poundra Kshatriya' and the people of that country were called '*Pandra Kshatriya'*. Among the Pundra Kshatriyas, there lived people belonging to different ethnic groups like *Andhra, Pundra, Sarbar, Pulind, Mutib, Ashura* etc. in the subsequent period, people of different ethnicities received different titles based on occupation and work. But the backward class of people who were majority of the society were not able to attain self-reliance in the society based on their own work or profession. They have been living in this region for a long time bearing the identity of the king.

Most of the ethnic group of people of that region, were belonged to Pundra, Kshatriya, Poundra Kshatriya etc. In the Maurya era, many people of Pundra's country were convinced in Ajibik, Sahajiya, Jaina, Buddhism and collected their own designations through the nature of their occupations. '*Pundradesh*' became 'Pundravardhana Bhukti' in Gupta era and most of the people of that region were converted into Vedic Brahminic religions and were employed in different occupations. Later, in the Pala period, the Pala kings were Buddhist, so some portion of the people were transformed into Buddhism. Some parts of Pundravardhana are included in the Varendra region during the Pala period. The people of this region were engaged in different occupations and activities in the Pala period and got separate identity. During the Sena age, the influence of Vedic Brahminic religion increased in this region. As a result, the people of these regions have an impact on religious and social life. But after the arrival of Islam in 1204, people have been suffering in the lives of local residents. Most local residents were converted to Islam due to fear the sword or influenced by the idealism of the Islam. Although they did not behave in Islam, their next descendants became converted to Islam. And those who could keep playing Kshatriya religion, one part of them is now living as the identity of other ethnic groups as the upper class of society. The rest of the people live in the name of 'Rajbanshi Kshatriya' or

ISBN: 978-81-949278-6-0

'Rajbanshi' with the name of the greater Rajbanshi community. They are the people of the Rajbonshi community recognized by the constitution today.

In the first half of the sixteenth century, the rise of the Koch-Dynasty in the centered by Kuch Bihar, led to the formation of a community as a follower of the king. In fact, the dynasty established by the King of Koch Bihar is known as 'Koch-dynasty'. The followers of the Koch-kingdoms were borne as the descendants of the Koch-King. As a result, the followers of the Koch-Kings were also revealed by self-expression as 'Rajbanshi'. But along with the Koch-dynasty, the existence of the 'Rajbanshi Kshatriya' caste was also present. Of course, the number of Kshatriya Rajbanshis was low. It is seen, in this way, people of different ethnic groups have become the followers of the king. Actually, instead of bowing down to Islam's strict repression in Bengal, most of backward people became a follower of the Koch-King. In this way, Kshatriyas were also got mixed with the followers of the Koch-dynasty. As a result, the Koches and the Rajbanshis became involved in the same society and culture. So, the British officials have identified of both of the 'Koch' and 'Rajbanshi' as the same ethnic group of people in different census repots.

Western part of greater Dinajpur,i.e.the land of West Dinajpur was under the administration of Islam rule for a long time, so there was no power and influence of the Rajbanshi people. The number of Rajbanshi families are reduced from the land of Dinajpur due to conversion into Islam. Therefore, the Rajbanshis of this region lived for a long time with their own society and culture as a minority community. It is worth noting that the Rajbanshi and Muslim villages were located nearby, but they did not have any communal disputes. Rather, social relationships were developed between them. Thus, some of the religious rituals of Islam have entered into the Rajbanshi society. Rajbanshis were minor, so it was possible. After the forty decade of the 20th century or since the beginning of India's independence, occurred penetration of the Rajbanshis to West Dinajpur. After 1947, the political and religious crisis was created in East Pakistan for various reasons during the years of 1952, 1962, 1971. As a result, the Rajbanshi people were entered to India from different districts like Dinajpur, Thakuragao, Panchagarh, Rangpur, Bogra, Naogaon, Gaibandha, Joypurhat, Nawabganj of East Pakistan. After entering India, they took shelter in various police stations of border areas of West Dinajpur. The density of population in this region of greater Dinajpur was not so much at that time. Though there was a large number of Muslim families, some of the prosperous families of Rajbanshis lived in this region. With the help of them, the Rajbanshi refugee families from the East Pakistan were took easy accommodation in West Dinajpur. Although many families of the refugee Rajbanshi took shelter in the government camp, some refugee Rajbanshi families were able to build houses on government vest lands by the help and sympathy of the local Rajbanshi Jotedar families.However, some Rajbanshi families were bought land in different areas of West Dinajpur with their own money. Ofcourse, only those who had relatives in West Dinajpur areas were successful.Later, they built houses in that field. In fact, the relatives of Rajbanshis were spread across different regions of undivided Dinajpur and in 1947, when their partition was done, their own relatives were divided in the same way. As a result, with the help of the Rajbanshis living in the Indian state of West Bengal, the Rajbanshis of East Pakistan were able to buy land in different parts of the state. It was also for the families of the non-Rajbanshi people.

Bangladesh was independent in 1971 but the refugees who came to India before 1971, they did not return to Bangladesh. They lived in different villages and tows in West Dinajpur district. Subsequently, they made Indian citizenship by submitting the receipt of land revenue or by the help of various political parties.Thus, in the period from 1947 to 1992, the number of Rajbanshis increased due to enter the Rajbanshis from the East Bengal to West Dinajpur district.

ISBN: 978-81-949278-6-0

So, after the subsequent census reports of 1941, it was found that the number of Rajbanshis of West Dinajpur district increased significantly. Thus, the number of Rajbanshis increased in the census report of 1971, 1991 and 1991. In the initial stage, there is a social and cultural conflict among the Rajbanshi families who had come from East Pakistan with the local Rajganshis, gradually they are mixed in the process of mutual coexistence and association with each other. The relations of both the Rajbanshis of two neighbouring countries have developed due to living in te same land and same environment for long time.The greater Rajbanshi society was developed in West Dinajpur district by organizing social programs, commuting, eating, and marriage. Rajbanshis are generally conservative in their social and cultural practices, customs, worship, popular culture etc. So it took a long time for easy interaction and coordination between the Rajbanshis of the two countries. However, among the Rajbanshis of West Dinajpur district, some non-Rajbanshi people have entered in different ways. The number of Rajbanshis has increased by establishing marital relations, getting the constitutional benefits, raising their social status, due to lack of census reports etc. Thus Rajbanshi society of the West Dinajpur district was formed with the Rajbanshis of the two countries today.

FORMATION OF THE RAJBANSHI CULTURE

The ancestors of the Rajbanshis lived in group-wise. If the number of families with general interest is more or less the share of each other, then the sum of families is called a group. But the term of the group can not last long. So at the same time, the same purpose, interests, thoughts and equal groups together form a separate society. The Rajbanshis have been formed in their own society beyond the greater society, by living the same geographical environment, same place for long and following the same language, the use of food, dress and customs, social customs, public beliefs and ideas of people etc. Various customs and rituals were introduced to the Rajbanshi society in different ways. These customs and rituals have long been well cared for and celebrated by them. By the way, those customs and rituals have become their own customs. Once these customs and rituals were not confined to the Rajbanshi society, it was spread out in the larger society. Other communities of greater society have become suitable for the era by adopting modern education. But for the conservative mindset, the Rajbanshis could not leave the old customs and rituals of the society. In the process, the social customs and rituals abandoned by the larger society have become the customs of Rajbanshi society.

It is true that, the characteristics of life, society and culture is varied according to geographical location. Therefore, the characteristics of the society, culture and living conditions of the Rajbanshis of all districts of North Bengal are not the same. A mixed culture has been created among the Rajbanshis of West Dinajpur district. In the mixed culture, there is seen to be touched of the Rajbanshi culture, Bengalee culture as well as Islamic culture. The word of 'culture' was first imported into English literature at the end of the sixteenth century by Francis Bacon. In the middle of the twentieth century, the use of the term 'culture' in the writings of English scholars in broad and deep sense by Robert Era Park and Tailor etc. The meaning of 'culture' means that any society or nation has a standard use rule in a matter, it is called the culture of the respective community of people in the form of a fairly universal character, behavior or attachment. In essence, culture is an individual personality, or culture of community and the community is culture. So in the life of the Rajbanshis of West Dinajpur district, there developed own culture by the ingredients of different communities cultures.

In every society, there are some disciplines that govern man's behavior, and a person follows the social customs in his conduct. These customs, which are common and established in the society and conduct the behavior of the dwellers of the society, are called Social Custom. According to E.S.Rogardus "Customs and traditions are group accepted techniques of control that have become well established that are taken from generation to generation." As the medium of social

ISBN: 978-81-949278-6-0

control, the influence of customs is observed in all societies of the world. Tradition is permissible by the society and the various rituals of acceptable conduct to the public. In the Rajbanshi society, they have to follow their customs and social customs in the society simultaneously.

People live in the environment of nature and have created some special methods of conduct for life and livelihood. Special behavioral methods have emerged in different areas of the life of the people which involved in society. Consumption of food items, preservation, preparation and adoption, marriage and sex life, dress-wear etc. All these methods of conducting behavior in different areas of society are followed in the society. These rituals are known as 'folklore' or popular usage. The folklore is not prescriptive but has existed in society for a long time and they got access to scripture by supporting a part of the priests.

The geographical location of West Dinajpur district is different from other districts of North Bengal, which is east of the long border of Bangladesh, Bihar on the west, Darjeeling district on the north and Malda district in the south. At the same time, the social, cultural and living conditions of residents of Bangladesh, Bihar, Darjeeling and Malda districts affect the residents of West Dinajpur. Rajnanshi is not majority in West Dinajpur, but their effect of work is not easy to influence on other communities. But in other districts of North Bengal, especially in the districts of Jalpaiguri and CoochBihar, their influence falls on other communities due to the majority people of the Rajbanshi community. Rajbanshis of West Dinajpur was deprived from other districts of North Bengal and completely outside the influence of Calcutta. As a result, the society and culture of the Rajbanshis of West Dinajpur have met together by the culture of local Rajbanshi people, the Rajbanshis of different districts of Bangladesh, culture of refugees, culture of Malda and Bihar residents. Besides, there has been the influence of Islamic culture among the local residents due to the continuation of Muslim rule in West Dinajpur region for a long time. Until the Partition of 1947, two types of cultures had high prominence in the adjoining West Dinajpur region. One Muslim culture and other is Rajbanshi-Polya culture. There was a similarity with the Rajbanshi-Polyaya culture of West Dinajpur to the culture of Rajbanshis in other other districts of North Bengal at that time. But since the independence, the cultural elements of this region have changed a little bit. Although the material of Muslim culture is one, but there imported different cultural ingredients into the culture of Hindu and Rajbanshi society.

So the information about the Rajbanshis is not available in various books to build the outline of the Rajbanshi culture of West Dinajpur. Most of the information is absent from Rajbanshi culture of West Dinajpur. Among the Rajbanshi cultures of West Dinajpur, there are 60 percent of the cultural elements are present from the Rajbanshis of North Bengal. Out of the remaining 40 percent of the cultural component, 20 percent cultural materials of the Rajbanshis of the eastern Bengal, 10 percent Vedic Hindu culture and 10 percent Islamic cultural elements have been entered into the culture of the Rajbanshis of West Dinajpur. As a result, the culture of the Rajbanshis of West Dinajpur, is not pure Rajbanshi culture. The culture of the Rajbanshi society of West Dinajpur has become a 'mixed culture'. Rajbanshis are usually simple and liberal in nature, so they can easily adapt any other culture of different communities. So the social relations between the Rajbanshis are very strong. In most Rajbanshi families, there is a virtuous priest who is called '*Guru Thakur'* or '*Guru*'. Once there were accustomed the '*Tradition of Jajamani'* among the Rajbanshis of the West Dinajpur. Rajbanshis of West Dinajpur were adopted discipleship with initiation of 'mantras' or 'chant' from '*Jajman*' or Priest. Naturally, according to the instructions of the 'Yajaman' or Priest, all family rituals and customs were run in the Rajbanshi familis. The virtuous priests or '*Jajmanas*' are usually the Brahmin clan. As a result, Brahmin culture and behavior were introduced in the Rajbanshi families through the

ISBN: 978-81-949278-6-0

Brahmin Priest. So, the ingredients of upper Hindu cultures are seen in the Rajbanshi culture of West Dinajpur.

Since 1947, Rajbanshi people came to West Dinajpur to the people of Hindu communities from East-Pakistan or present Bangladesh. People of the Rajbanshi community who came to West Dinajpur did not come from a particular region or districts. They came from different districts of East Pakistan or Bangladesh. Therefore, there was no similarity to the mutual cultural elements among the people of the Rajbanshi community coming from East Pakistan. Besides, along with the culture of local Rajbanshi-Poliya-Cultural component of West Dinajpur, combined with the cultural elements of the Rajbanshis people of East Pakistan or Bangladesh and formed rich Rajbanshi culture by mixed cultural elements. That is the Rajbanshi culture of West Dinajpur which combined with the culture of Greater Dinajpur, culture of Thakuragao district, culture of Panchagarh district, culture of Rangpur, Culture of Bogra, culture of Naogaon district, culture of Gaibandha region, culture of Joypurhat region, culture of Nawabganj region, culture of Rajshahi district is one of the them. It is not the end here, the cultural elements of the Rajbanshis of West Dinajpur have been combined with the culture of the neighbouring Bihar state and cultural elements of Malda district.

Since 1947, the traditional social customs and rituals of the Rajbanshi family came under coup. The people of the Rajbanshi community took shelter at West Dinajpur with the people of other communities of Hindu society from different districts of East Pakistan, like Thakurgao, Panchagarh, Rangpur, Bogra, Naogaon, Gaibandha, Joypurhat, Nawabganj, Rajshahi etc. due to partition of India in 1947.People of the Rajbanshi community who came from East-Pakistan or Bangladesh, they mainly took shelter in Rajbanshi villages of different blocks of West Dinajpur district. Once only the people of the Rajbanshi community were lived in the Rajbanshi inhabited villege and there did not live any families of other communities. Since 1947, Non-Rajbanshi people have started living in the Rajbanshi inhabited villages of West Dinajpur district. As a result, the customs and rituals of other communities have been infiltrated with the culture and society of the Rajbanshis of West Dinajpur.

INGREDIENTS OF THE RAJBANSHI CULTURE

Prior to 1947, the cultural elements of Rajbanshis were fairly similar in the adjoining areas of West Dinajpur district. But since 1947, cultural elements of the Rajbanshis of East-Pakistan or Bangladesh met together with the local Rajbanshi-Paliya cultural materials. Thus, the traditional culture of the Rajbanshi society of West Dinajpur came together with folk culture of the Rajbangshi families comming from different regions or districts of East-Pakistan or Bangladesh. As a result, the folk culture of West Dinajpur is full of variety of diversity. This cultural theme of West Dinajpur has been combined with the Islamic cultural element, the cultural elements of the lower caste Hindus and the cultural elements of upper-caste Hindus. The cultural elements are exchanged among the inhabitants of different religions and communities due to living together in the same land. As a result, the folk culture of West Dinajpur spread among the different religions communities and it is very difficult to separate them from the each communities. Although, most of the elements of folklore have disappeared among the various communities, it is remained as folkculture among the Rajbanshi community. Because the Rajbanshis have adopted and kept many aspects of their folk culture for decades. In course of time, folk cultural elements have become their own culture.

Thus, some folk dances were entered into the Rajbanshi culture, like *Palatia songs, Chikni dance, Ghamhira song, Behar dance, Hudum dao dance, Mashan dance, Mask dance* etc. Various folk games were involved in the Rajbanshi culture like, *Leaf hiding, Iching Biching, Jumping,* leaf, *Gollachat, Baichi, Hidding* and Dhappa, *Gadol, Ashkash, Marbel, Buraburi, Kut-*

ISBN: 978-81-949278-6-0

kut,ekka-dokka, Bag-Bakri game, danguli game etc.The rituals of ritualistic gods are mixed in the Rajbanshi culture. For example, *Lokbatta, Dala Puja, Nabnana, Amait or Ambubachi, Hudum Deo, Banger Biyao, Gumbhira Puja, Pusuna* or *Paush Parwan, Kashpuja, Gite Pooja, Gochhorpon or Gachibuna* etc. Besides, there includes in the Rajbanshi culture, like folk-riddles, folk tales, folk songs, folk fairs, crafts, tradesmiths, shola art, kantha art, idol industry etc. Among the Rajbanshis, there is a trend of folk dances such as *Gram Devata, Mashan Puja, Worship of Mather, Worship of Folk God* etc. There are some songs that are popular in the society, but they are found only in Rajbanshi society alone. For example, *Kandani Bishahari song*, song of Rice paddy cutting, song of the peasant etc. The use of different musical instruments such as *Do-tara, Khanjani* etc. have been used in the Rajbanshi society for a long time. Besides, the Rajbanshis have their own spoken language or mother language. In addition to speaking in Bangla, Rajbanshis used their mother tongue as Rajbanshi or Kamtapuri language as the medium of communication. Gearson First observed this language, according to him, "When we cross the river (Bhramhaputra) comming from Dacca,we meet a well marked form of speech in Rangpur, and the districts to the north and east. it is called Rajbanshi."

RECENT TRENDS

Rajbanshis are the original inhabitants of greater North Bengal. Rangpur, Dinajpur, Cooch Behar, Jalpaiguri, Rajshahi, Mymensing etc. are the original inhabitants of Rajbanshis. Community. The Rajbanshis living in the West Dinajpur district have coexisted together in greater Dinajpur, Thakuragaon, Panchagarh, Rangpur, Bogra, Naogaon, Gaibandha, Joypurhat, Nawabganj and Rajshahi districts of West Dinajpur. From the time of 1947, the evolution of the original inhabitants of the Rajbanshis took place and spread to abroad. Some families of Rajbanshis spread across Tripura, Assam, Bihar and West Bengal. After the central government's rehabilitation process, some displaced families were given rehabilitation in Orissa and Dandakaranya. In this way the life and livelihood of the Rajbanshis evolved. Once upon a time the Rajbanshis used to depend on the local economic source. So, the Rajbanshis did not have any particular occupation. Over time, the livelihood of the Rajbanshis has changed.

Since the seventy decades of the twentieth century, it has observed the tendency towards the Rajbanshi families to get out of their conservative mindset. For the conservative mindset, the Rajbanshis used to live for a long time continuing their primitive society, culture and way of life. Over time, all the primitive falk culture, the society and the cultural elements are identified as the culture of the Rajbanshi of the society. As a result, easily fall back to other communities of the contemporary. As a result, they were identified as a separate community of people in the larger society. However, they are the indigenous inhabitants of West Dinajpur district. Their overall development should be the first but they gone back to the last row of the society due to lack of modern education. The introduction of modern education among the Rajbanshi society and the changing of social customs and rituals were done in various ways. Thus, till 1947-1992, the traditional customs and rituals of the Rajbanshi society have been changed in different ways these are social customs, rituals, folk foods, cloths, folk technology, faith, cultural activities etc. As a result, some traditions and customs of Rajbanshi society were lost, and some of those were added.

In order to livelier, people collect cultural material from a larger society. In course of time those are turned into their own cultural materials. Various elements of folk culture of different districts of East-Pakistan or Bangladesh have been merged in the Rajbanshi society of West Dinajpur. But in time, all those folk cultures have become virtuous in the Rajbanshi culture. After a long time being implemented as a part of the Rajbanshi society, in course of time those cultural elements have changed. As a result of the entry of the light of modern education among

ISBN: 978-81-949278-6-0

Rajbanshi society, some elements of the cultural activities have eliminated from the Rajbanshi society. Again, some elements of Rajbanshi culture evolved and some gradually disappeared.

Gradually, the popularity of folk cultures like, *Palatia songs, Chikni dance, Ghamhira song, Behar dance, Hudum dao dance, Mashan dance, Mask dance* etc. were reduced in the Rajbanshi society. This folk dance has been completely closed from many areas of West Dinajpur district. Various people's activities in the Rajbanshi society, such as *Leaf hiding,Iching Biching, Jumping, Gollachat, Baichi, Hidding and Dhappa, Gadol, Ashkash, Marbel, Buraburi, Kut-kut,ekka-dokka, Bag-Bakri, Danguli* etc. were disappeared from the Rajbanshi society. Instead of these games, some popular game has introduced like, cricket, Football, Batminton etc. As a result, the compatibility of large-scale sports has been preserved.

Ritualistic rituals mixed in and adorned in the Rajbanshi culture. There is a decrease of some folk festivals like, *Lokbatta, Dala Puja, Nabnana, Amait or Ambubachi, Hudum Deo, Bunger Biyao, Gumbhira Puja, Pusubuna or Paush Parwan, Kashpuja, Gite Pooja, Gochhorpon or Gachibuna* etc. Once in every Rajbanshi family, it is a form of compulsory behavior, but these rituals are not present today.Many Rajbanshi families have no idea about those practices. These rituals seems to like a phantasy story to the new generation.

Apart from this, there is no practice towards some folk cultures among the Rajbanshi society today like, folk tales, folk songs, folk story listening etc. Folk festivals arose from the Rajbanshi society as well as cottage art,crafts,shoal art,idol art etc. At one time, many Rajbanshi families were engaged in crafts, cottage art, shoal art, and folk festivals. Rajbanshi elderly women used to stitch their Kanthas. When did sewing in exchange for his work and money. Those works were seen very often in the Rajbanshi villages.

Once upon a time, some songs were present on the occasion of various activities in Rajbanshi society. For example, Kandani Bishahari song, song of Rice paddy cutting, song of the peasant etc. In that village, the land is all but there is no longer a farmer or song. The use of different musical instruments during private or home occasion such as Dotara, Khanjani etc. were used in Rajbanshi society for a long time. When any program started at home, all those people would be doing domestic shows with musical instruments. Especially in the month of Bhadra(Bengali month), these songs were held in the program. But there is no practice pf those falk song in the Rajbanshi families today.

CONCLUSION

As a result of continuing to live in the same land and to follow the same social customs, rituals, beliefs, food clothes, language and culture, a separate society and culture have developed among the Rajbanshis. That is the Rajbanshi society and culture. This society and culture of the Rajbanshis possess a slightly different trait from the larger human society. Since the formation of West Dinajpur district in 1947, the society and culture of Rajbanshis of greater Dinajpur were divided. A stream of Rajbanshi culture was known as the Rajbanshi culture of Bangladesh and another stream of Rajbanshi culture was developed in the name of Rajbangshi culture of West Bengal. From the time of India's independence, elements of different cultures came into being in Rajbanshi culture and grew up in a mixed culture, which is different from the Rajbanshi culture of pre-independent India. In the culture of the Rajbanshis of West Dinajpur, the elements of the Hindu culture is seen as a variant of the Rajbanshi culture, and there are also some features of Islamic culture. However, the culture of the Rajbanshis of West Dinajpur district is composed by the Rajbanshi and Non-Rajbanshi cultural elements like, languages, food, clothing, rituals, customs, customs etc. But gradually the evolution of the culture of the Rajbanshis continued due to modern education. During the period from 1947 to 1980, the culture of Rajbanshis of West Dinajpur was formed with mixed elements of ther communities and since the 1980s, the

ISBN: 978-81-949278-6-0

Rajbanshi culture of this district has been started. Since that decade, the Bengali Hindu culture of West Dinajpur started entering. Even the differences between the culture of the residents of the town and the educated Rajbanshis and the culture of the little educated rural Rajbanshi people. As a result, the modern trend in the Rajbanshi culture and traditional and old continues simultaneously. As the rate of education increases among the Rajbanshis, the old trend continues to be decaying to the modern trend. So since the 1990s, the modern trend of Rajbanshi culture became strong and many elements of the old trend were suppressed. The number of old-fashioned holders and carriers continued to decline and the modern trend became the subject of Rajbanshi culture. So since 1947, different elements of Rajbanshi culture have changed in every decade. Of course, now many elements of Rajbanshi culture are extinct and there is an addition to the new cultural material. As a result, with the Rajbanshi culture component of West Dinajpur district, there is very little difference between Bengali Hindu culture. Although not only in the rural areas but also in rural areas of West Dinajpur.

PERFORMANCE EVALUATION OF APACHE HADOOP, APACHE SPARK, AND APACHE FLINK

Bhupender Singh Thakur and Dr. Kishori Lal Bansal
Department of Computer Science, Himachal Pradesh University

ABSTRACT

The applications of big data processing is continuously extending to wide range of areas such as social media analytics, public administration, Business analytics, scientific research, recommendation systems, human sentiment analysis, etc. Therefore there is an urgent need to have conclusive and decisive evidence to determine the big data tools which provide high performance mainly in terms of speed of throughput, scalability, type of data big data processing (static/stream). This study aims to provide an empirical support for the performance of three very widely used tools in big data. Apache Hadoop, Apache Spark, and Apache Flink have gained a lot of attention due to their distinct characteristics for processing and analytics of big data. Although these frameworks are independent of each other and based upon different working principles they can all be categorised as big data processing tools. All these tools can be used for batch data processing. However Hadoop Mapreduce framework ca not be used for stream data processing therefore in this study only batch data has been considered for performance evaluation.

Keywords: Big data processing, Business analytics, computational power, datasets, data analytics, decision making, performance.

1. INTRODUCTION

In the past decade the amount of data being created has skyrocketed. More than 30,000 gigabytes of data is generated every second [1], and the rate of data creation is only accelerating. The data we deal with is diverse. Users create content like blog posts, tweets, social network interactions, and photos. Servers continuously log messages about what they're doing. Scientists create detailed measurements of the world around us. Big data analytics is being used to monitor traffic and detect route damages in real time. Big data is also transforming many public administration sectors such as waste management, healthcare services, employment services, optimising tax collection [2]. Internet is the largest source of data and is continuously becoming incomprehensible. The alarming growth in data has deeply affected businesses. Services like social networks, web analytics, and e-commerce often need to manage data at an extensive scale which is too big for the traditional databases and a result complexity increases with scale and demand. Fortunately, scalability and simplicity are not mutually exclusive. Big Data systems use many machines working in parallel to store and process data, which introduces some fundamental challenges unfamiliar to most developers. Traditional database systems, such as relational databases, have been pushed to the limit and everywhere these systems are breaking under the pressure of Big Data. Traditional systems, and the data management techniques associated with them, have failed to scale to Big Data. To tackle the challenges of Big Data, a new class of technologies has emerged. Many of these new technologies have been grouped under the term NoSQL. In some ways, these new technologies are more complex than traditional databases, and in other ways they're simpler. These systems can scale to vastly larger sets of data, but using these technologies effectively requires a fundamentally new set of techniques. Big data industry is constantly increasing in size, applications and intensity. With broad range of services dependent on big data, the need for performant and cost effective big data processing techniques has surged tremendously. There are plenty of tools and techniques available in the market, each having its own usage and

ISBN: 978-81-949278-6-0

limitations. Tools are mainly divided into 3 broad categories on the basis of their usage: Data Management tools, Data storage tools, Data Analytics tools [3]. Organizations and individuals have variety of options to choose as per their requirements but the dilemma arises when there are multiple options for similar requirements. At this point the tools which best suites the needs of the user should be selected. Primary parameters are performance and cost-effectiveness and on top of that there are be more fine parameters for evaluating a tool based upon its category of usage. Suitability of a tool for specific type of tasks can be determined through research and development.

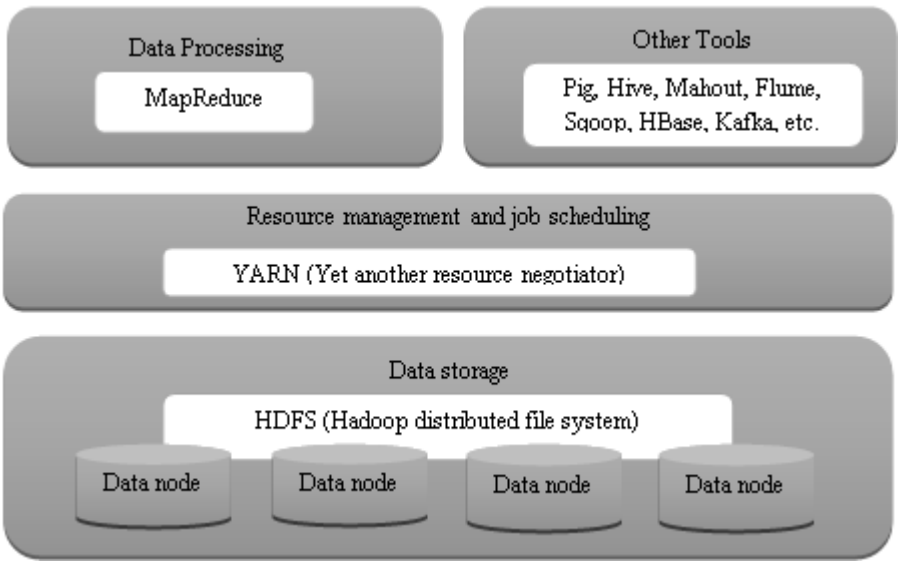
2. PREVIOUS WORK DONE

This Section provides an overview of the previous studies in this field. In [5] authors performed a comprehensive survey of big data processing techniques, technologies, challenges, and applications. Authors have discussed also discussed several underlying methodologies to handle the data deluge. In [6] authors conducted an extensive analysis of big data analytical methods and big data challenges in order to help others understand this landscape with the objective of making robust investment decisions. In the study [7] authors discusses the Big data technology along with its importance in the modern world and existing projects which are effective and important in changing the concept of science into big science and society too. The various challenges and issues in adapting and accepting big data technology, its tool are also discussed in detail along with the problems Hadoop is facing. The authors in [8] put their focus on three main things: why big data is different from past Very large database techniques and what the most challenging aspects of big data are, to determine how can industry and academia collaborate towards solving Big Data challenges, to consider the role of the data management community within the Big Data solutions ecosystem. The study [9] compares Apache Hadoop and Apache Spark frameworks and figure out their strengths, weaknesses, unique characteristics and try to answer whether Spark can replace Hadoop or not. In the study [10] authors reviewed recent trends of storage and computing tools with their relative capabilities, limitations and environment they are suitable to work with. It also aims to find some available computing and storage paradigms and tools that are being used in current scenario to address challenges of Big Data processing. Study [11]conducted a review on the key features of Apache Spark for big data analytics. This review focuses on the key components, abstractions and features of Apache Spark.

3. BIG DATA PROCESSING

Big data processing consists of both storage and processing the data for analysis. The traditional tools and techniques were based on the principle of simple data structure, but big data is mainly composed of unstructured data. Therefore, big data requires non-traditional technologies to gather, organize, process and to gain insight from large data sets.

Big data processing and analytics



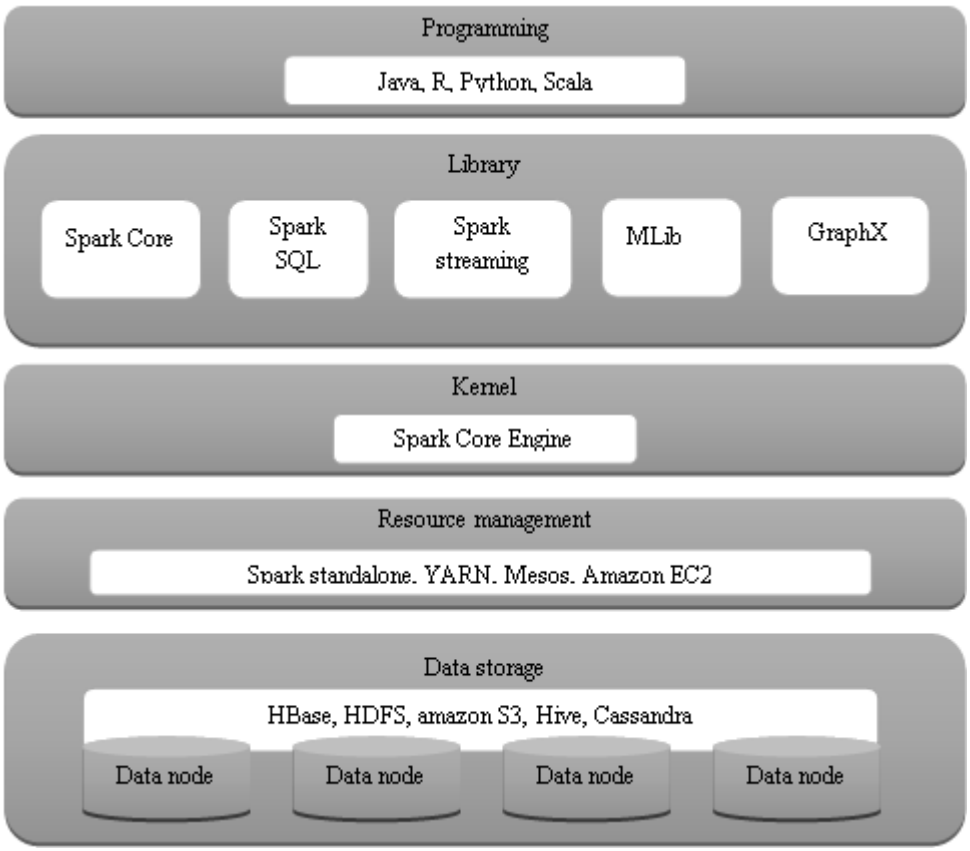
Big data processing includes collecting, storage and processing large sets of data of structured and unstructured data to gain useful insights and discover meaningful patterns which are otherwise hidden. The insights and patterns help businesses in the decision making process, improving their operational efficiency, and in gaining an edge over other business rivals. There are many open source big data analytics tools such as Apache Hadoop, Apache Spark, Apache Flink and others used by many large organizations for their big data processing

a) Apache Hadoop

Apache Hadoop is an open source architecture used for building big data processing systems. Hadoop is most widely used as batch/static big data processing framework. The key to its success is its distributed storage and parallel processing of data. Hadoop distributed file system

ISBN: 978-81-949278-6-0

is responsible for the distributed storage of data and MapReduce is responsible for the parallel processing of data. There are other components such as YARN (yet another resource negotiator), Hadoop Common libraries which are responsible for different services and functions in the Hadoop framework. Also on top of Hadoop many different abstractions have been developed which provides new capabilities to this framework and these abstractions on top of Hadoop forms the Hadoop ecosystem. Figure 1. Shows the Hadoop architecture [12].



The core concept of Hadoop is the distributed storage of data. The data is divided into blocks of equal sizes and each data block is stored in a replicated manner across different nodes. Splitting the data into static chunks and replication provides efficiency and fault-tolerance and also is very crucial for parallel processing of that data. The MapReduce framework is very efficient in processing large datasets in a scalable and fault-tolerant manner. The computation is done using map and reduce functions which make the use of Key-Value pairs. Hadoop program first determines the location of the input data and then launches multiple map tasks each for every node containing data blocks of the input file. Each of these tasks is assigned a subset of the input and executes map function on that subset of data. These map tasks produces key-value pairs as output which are sent to all the reduce tasks. The reduce tasks are responsible for sorting the key-value pairs by key. Each map task distributes its output to all the reducer tasks. Hadoop framework avoids a lot amount of data traffic on the network by dividing the tasks into smaller and independent tasks and sending the task functions to the nodes which contains the data.

b) Apache Spark

It is an Apache open-source in-memory cluster computing framework used for big data processing. Spark has received huge popularity in the field of big data processing mainly due to its ability to provide low latency and high throughput for huge data sets in contrast to many other frameworks. Spark provides a general-purpose framework suitable for different big data processing tasks such as batch processing, interactive queries, stream processing, graph processing, etc. Spark isn't any more general or scalable than Hadoop MapReduce, but its model allows it to have much higher performance for algorithms that have to repeatedly iterate over the same dataset because Spark is able to cache that data in memory rather than read it from disk every time. Many machine-learning algorithms iterate over the same data repeatedly, making Spark particularly well suited for such use cases.

ISBN: 978-81-949278-6-0

Spark uses in-memory cluster computing framework for big data processing. It is fundamentally based upon resilient distributed datasets (RDD) which are data sets stored in distributed fashion and available in read only mode. These datasets are maintained in a fault tolerant manner. Spark uses its own cluster management and hence cannot be categorised as modification of Hadoop. It can also use external cluster managers such as Hadoop YARN, Apache Mesos or Kubernetes. For distributed storage spark can use different interfaces such as HDFS, Alluxio, MapR File System, Cassandra, Amazon S3, and others.

c) Apache Flink

Apache Flink is an in-memory processing framework used for both batch and stream processing of big data. Flink provides high-throughput and low-latency output for both the real time and batch data types. Flink is highly fault-tolerant in case of machine failures. Flink Programs supports various programming languages such as Java, Scala, Python, and SQL. Flink has a specialized API for processing static data sets, uses specialized data structures and algorithms for the batch versions of operators like join or grouping, and uses dedicated scheduling strategies. The result is that Flink presents itself as a full-fledged and efficient batch processor on top of a streaming runtime.

Apache Flink is based on the distributed streaming data-flow engine. Flink provides 2 different APIs i.e. the DataSet API for processing static/batch data sets, and the DataStream API for processing unbounded/real-time data streams. Flink executes arbitrary dataflow in parallel and pipelined manner. There are 3 different types of processes in Flink. First is the client that takes the program code, transforms it to a dataflow graph, and submits it to the JobManager. The JobManager coordinates the distributed execution of the dataflow. It tracks the state and progress of each operator and stream, schedules new operators, and coordinates checkpoints and

ISBN: 978-81-949278-6-0

recovery. A TaskManager executes one or more operators that produce streams, and reports on their status to the JobManager. The TaskManager maintain the buffer pools to buffer or materialize the streams, and the network connections to exchange the data streams between operators. Flink's pipelined runtime system enables the execution of batch and stream processing programs. It has high fault tolerance to steadily recover the state of data streaming applications. This process creates continuous snapshots of the distributed data stream and operator state. In case of failure, the system can rely on these snapshots and revert back.

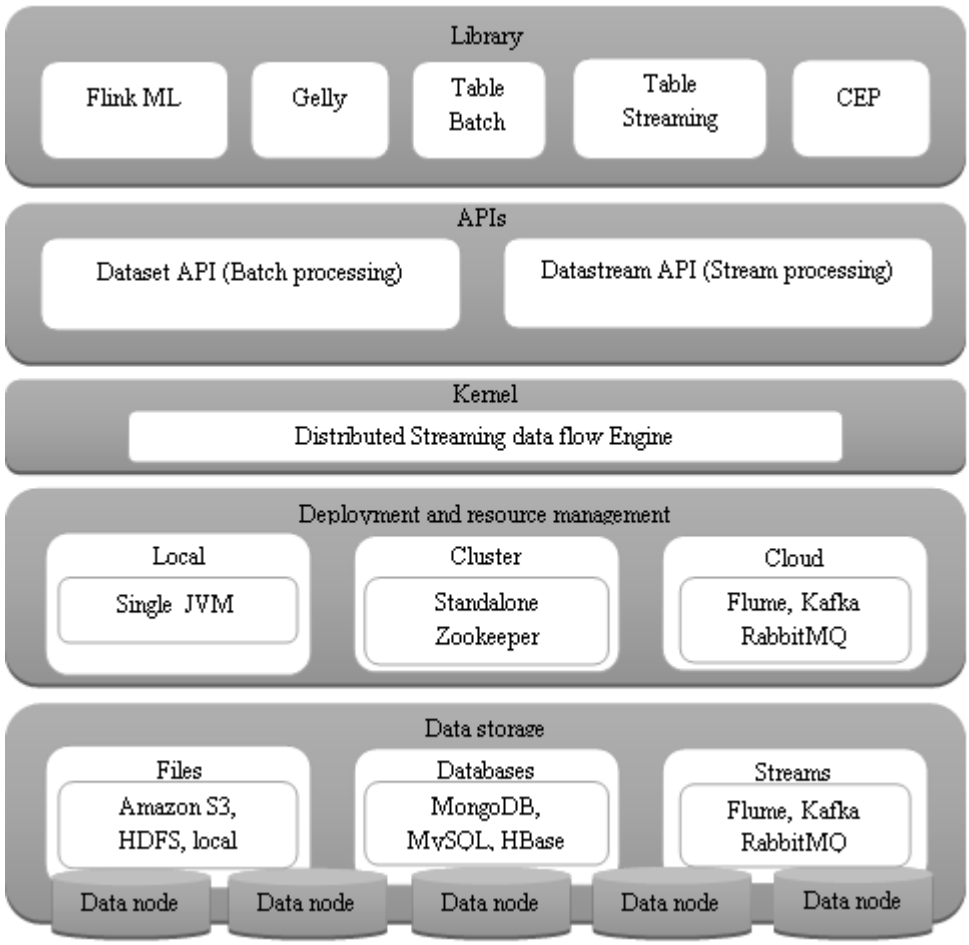


Figure 3. Flink Architecture [10]

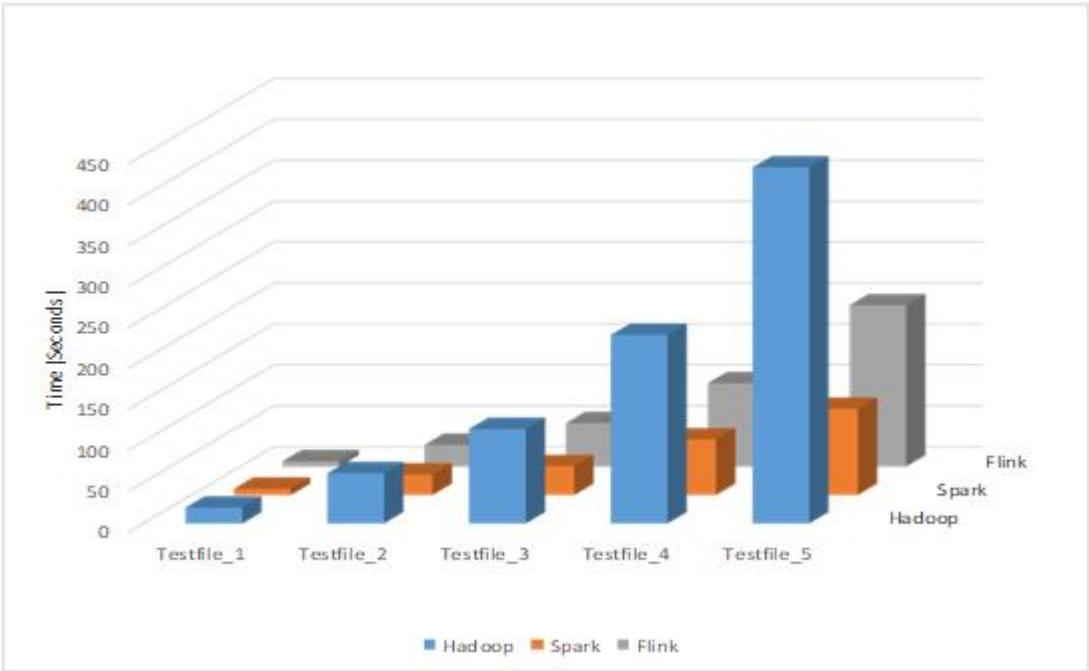
4. RESULTS

In this study the performance comparison of Hadoop, Spark and Flink has been done using the Word Count algorithm. For comparing and evaluating the performance of these tools, datasets of different sizes are used and there execution time of these different datasets is used for comparing the performance of these tools. A single node clusters is used for the purpose of running these tools. The performance of the word count algorithm for all the three tools i.e. Hadoop, Spark, Flink is compared using the runtime for different datasets. For the purpose of equitable & justified comparison following metrics have been applied while running these tools:

- All tools have been run as single node cluster.
- Tools ran on the same cluster machine

ISBN: 978-81-949278-6-0

- HDFS was used as the storage system for all 3 tools.
- Implementation of the algorithm used is based on the same programming language.



In this study, the performance comparison of Hadoop Map Reduce, Apache Spark and Apache Flink is done based on the execution time using the word count algorithm on the datasets of different sizes. Table x.1 shows the Execution time comparison of all the three tools for the datasets of different sizes. The observations are as follows:

Table 1. Word count execution time comparison table

Dataset	Dataset size	Execution time (seconds)		
		Hadoop	Spark	Flink
Testfile_1.txt	45.3 MB	19.506	7.792	6.542
Testfile_2.txt	185.6 MB	61.527	25.015	26.430
Testfile_3.txt	371.2 MB	115.480	35.263	53.048
Testfile_4.txt	748.5 MB	230.381	67.823	101.829
Testfile_5.txt	1.4 GB	434.997	105.216	197.110

The time taken for the execution of different datasets has been noted for all the three tools i.e. Hadoop, Spark, and Flink. Figure 1 shows the graphical representation of the results for the time taken for execution by all the 3 tools on the word count algorithm on different datasets.

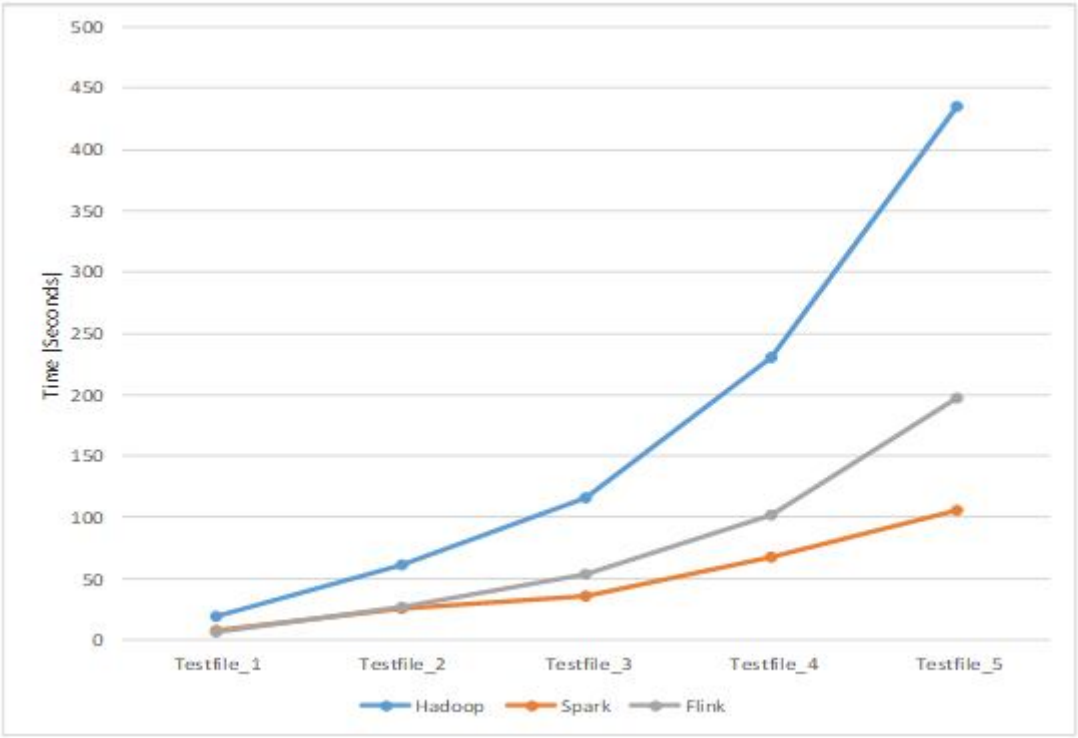


Figure 1. Column graph representation of word count execution time

From the above illustrated figure it is evident that as the size of the dataset increases, the difference in the execution time of different tools becomes significant. Spark has proved to be the most efficient batch processing tools among the three. The performance of Flink is also considerable as compared to the Hadoop. However Flink is primarily a stream processing tools which processes the static data (batch data) in the same manner as it does the stream processing. Although Apache Spark and Apache

ISBN: 978-81-949278-6-0

Figure 2. Line graph representation of Word Count execution time

Flink can be setup with different file systems, in this study for the purpose of non-biased comparison they have been used in integration with the Hadoop distributed file system. The performance of these tools in integration with different file systems can a topic for another research.

5. CONCLUSION

This study gives the empirical evidence for the performance of batch data processing using three different tools named Apache Hadoop, Apache Spark, and Apache Flink. A word count algorithm has been used for executing five dataset files of different sizes. From the results it can be concluded that Apache Spark gives the best possible performance for batch processing of text data files. The reason for the better performance of the Spark is the concept of resilient distributed datasets which are data sets stored in distributed and fault tolerant manner. These RDDs are available in read only mode. Spark is able to cache that data in memory rather than read it from disk every time providing it a high performance for tasks that have to repeatedly iterate over same datasets. The reason for the low performance of the Hadoop MapReduce is the working of map and reduce functions. Reduce function requires all values associated with a given key therefore a reduce task can't begin until all map tasks are complete which results in significant delay. Flink is based on Kafka architecture and is primarily a stream processing framework which processes the batch/static data as a special case of stream processing. Flink provides significantly improved performance than Hadoop. Although it is generally claimed that Flink is faster than Spark also but in our findings the Flink execution is slower than the Spark execution of datasets. This may be due to the case that we have used an older version of Flink due to its incompatibility with the integration of newer Hadoop version. Therefore older version of Hadoop had to be used for storing data in Flink.

ISBN: 978-81-949278-6-0

As the older version of Flink may have been a limitation for a non-biased evaluation of the performance of these tools therefore it can serve as a scope for future investigation into this area. Older Flink versions are available with pre-bundled Hadoop files however integrating newer Hadoop version with the new Flink version is a challenge that we were unable to address in this study. For future work Flink integration with Hadoop version should be considered.

USE OF MATHEMATICS IN COMMERCE: - A SHORT STUDY

G. K. Patil
Head, Department of Mathematics, ACS College Shankarnagar, Maharashtra

ABSTRACT
Mathematics is used in most aspects of day to day life. Mathematics plays important role in business, business mathematics and business management.Konwledge of mathematics is essential for understanding basic concept of commerce. Mathematics usually used in commerce includes elementary algebra and arithmetic, probability and statistics. Mathematics most effective by use of advanced mathematics such as fraction,decimal,percentage, matrix algebra, calculus, differential equation, integral calculus, numerical analysis, Linear programming. Mathematics is used by commercial enterprises is also known as Business Mathematics.

Keyword: Business, Mathematics, Application, University, Finance.

INTRODUCTION
Mathematics is, in fact, an independent subject. But subject like physics, chemistry, Computer Science of pure science, Economics and Commerce of social science are widely dependent on Mathematics. With the help of innovation of Mathematician, researchers of pure and social science proceed in their work. For example, the theories of economics and Business like 'Demand is dependent on price,' 'Saving is dependent on income" are dependent on the concept of functional relationship in mathematics. Also the concept of elasticity in economics is associated with the concept differential co-efficient or derivative of differential calculus. Now days, 'Mathematics is important part of commerce because without this subject commerce is not applicable.

It is clear that the use of mathematics tools has been on the increase day by day in Business arena and now a days Business mathematics is a compulsory course in all business related disciplines.

Mathematics scientists ***William L.Schaaf*** state that "*Mathematics is on the artistic side a creation of new rhythms, order, designs, harmonies, is a systematic study of various rhythms, orders.*

Following Universities in curriculum use mathematics paper

Business management can be made more effective in some cases by use of more advanced mathematics such as calculus, matrix Algebra and linear. Programming, Probability. Another meaning of business mathematics, some times called commercial math or consumer used in commerce and day to day life.

The practical application typically includes checking accounts, price discounts, markup and markdown, payroll calculations, simple and compound interest, consumers and business credit and mortgages. Mathematics provides many important tools for economics and other business field. All transactions within a business have to be recorded in the company accounts and quite often involve very large sum of money. If you work as sales assistant in many stores you now need to have the ability to calculate the cost of goods and change the customers requires without using the till. Understanding business mathematics is important to maintain profitable operation and accurate keeping of record .Mathematics plays a major role in business management because it helps maximize profit by using techniques such as analyzing production cost , determining ideal pricing, discerning sales patterns and projecting futures sales.

Some Mathematical application in Commerce

(1)Exponential & Logarithm function

The concept of exponential & logarithmic functions is very useful in various part of mathematics. We shall look at some very important application of these function here & mathematics of finance. Until forty years ago, student labored with extensive tables of logarithm & exponential values, but today we are fortunate to have these numerical values at our fingertips via the scientific calculator & computer.

Application of Logarithm in business

Problem on compound interest and annuity can be solved by using logarithm. We find there how the use of logarithm helps in solving problem on *compound interest and annuity*

(2) Combination of n thing not all different taken some or all at a time

Consider n thing of which are of one kind, q thing are second kind, r thing are of third kind and all the rest are different. Here $p+q+r \leq n$.

Consider first kind things. The p- things can be dealt in (p+1) ways, for we take 1 things or 2 things or 3 things or……. or p things or none n any selection. Similarly the like thing can be dealt in (q+1) ways and r like thing in (r+1) ways. Since each way of any kind must be associated with the ways of other kind things .the number of ways is (p+1) (q+1)(r+1).

The remaining {n-(p+q+r)} thing is different .So these things can be dealt in $2^{n-p-q-r}$ways . Since every thing is associated to each other the total number of ways

$= (p+1)(q+1)(r+1)2^{n-p-q-r}$

But this number includes the case in which all things are left. Therefore, the total number of combination of n things not all different taken some or all at a time

ISBN: 978-81-949278-6-0

$= (p+1)(q+1)(r+1)2^{n-p-q-r}-1.$

(3)Determinant and Matrix

The working knowledge of determinants and Matrices is a basic necessary for the students of mathematics, business mathematics, physics, chemistry, statistics, economics and engineering. In **1683** a Japanese Mathematician Kiowa first devised the idea as well as the notion of determinants and aj.aj.Sylvester was first man who introduced the word "Matrix **in1850.** Gabriel Cramer successfully applied determinants in solving system of linear equation in **1750.** At present matrix is a powerful tool of modern matrix.

(4)Function and equation

A function can be viewed as an input-output device. The significant relationship in mathematically model typically are represented by function. In business application, we sometimes are interested in determining whether there are values of variable, which satisfy several attributes. We will also be concerned with the process used to determine whether there are values variables, which jointly satisfy a set of equations.

(5) Mathematics of finance

Simple interest and the future interest, Bank discount, compound interest effective interest rate.

(6) Differentiation & its application

Differential calculation is the most important parts of mathematics. The word differentiation means the rate of change in one variable with other variables. then there is a dependent variables which gets an impulse for changing in the dependent variables. The differential calculus is concerned with the average rate of changes, whereas integral calculus, by it nature considered the total rate change in variables. It has a large use in business problems.

(7) Integration & its application

Integral calculus is also the most important part of mathematics. There are two types of integration 1. Indefinite 2. Definite Indefinite integration deals with the inverse operation of differentiation. Definite integration is the limit of a special type of addition process of infinite-simal part of region. So it may be expressed as the area enclosed by a set of curves. Integral calculus has a great use in business problems.

(8) Linear Programming

Liner programming is a technique for determing an optimum schedule (such as maximizing profit or minimizing cost) of interdependent a divities in view of the available resource.

The British and American military management invited large of scientists to apply a scientists techniques of resources allocation in a effective manner. All these techniques are known as operations Research techniques .linear programming is one of the most frequently used operation research operation research techaniques.It is used to allocate scarce resources in an optimal way so that the allocator can optimize the results in terms maximization of profit or minimization of cost. The Noble Laureate, *George B. Dantzing* innovated this techniques known as 'Simplex Technique' in 1947 while he was working for U.S Although initially this technique was applied to solve problem relating to assignment and transportation .yet, subsequently the application of this technique was extended to almost every functional area of management ,production planning and control ,personnel management ,advertising etc.

(9) Trigonometry

Trigonometry is the branch of mathematics which deals with the measurement of angles. It is most powerful tool of mathematics. But till now it has no mentiable application in business world.

ISBN: 978-81-949278-6-0

(10) Assignment problems

A special case of the transportation model is assignment in a situation, which involves the assignment to resources to tasks with minimum cost or maximum profit (e.g. assign n persons to n different task or jobs.) Also in production & human resource management it is very necessary to study assignment problems.

(11) Transportation problems.

It gets its form its application to problems involving transporting product form several origin (factories) to several destinations (market).The two common objectives of such problems either minimize the cost of shipping n units to m destinations or maximize the profit of shipping n units an especial types of liner programming problem.

CONCLUSION

We conclude that knowledge of mathematics should be made compulsory of Commerce and Management as it plays a key role in any business. Mathematical formulae use business to do financial analysis using ratios, percentage, equationsStatistcs uses in presentartion, collection analysis of data to arrive at conclusion. There are jobs around where you can escape from using any mathematics at all refuse collector, builder's, labouer, farm hand etc.

FACTORS IMPACTING THE PERFORMANCE OF WOMEN ENTREPRENEURS IN MSMEs

Ms. Reshmi Banerjee
Assistant Professor and Research Scholar, Department of MBA and School of Doctoral Research and Innovation Som-Lalit Institute of Management Studies and GLS University Ahmedabad

Dr. Avani Desai
Professor, GLS University Ahmedabad

ABSTRACT

The Indian economy is a homogenous mix of variety of segments which ranges across industries. A major contributor to the GDP is MSME segment which is rapidly growing. In today's moment of economic unrest due to the COVID pandemic, Indian government is focusing on the Mantra of AtmaNirbhar Bharat. Given this situation, the role of MSMEs becomes all the more crucial for building a sustainable tomorrow. Amongst these, a very important sub segment are the Women driven MSMEs.

However, the journey of a woman entrepreneur in the MSME segment is not the same as their male counterparts. Needless to say, even today India is a male dominating society and with a set of prejudices and expectations from women. Family and homecare is, till date, considered a women's primary responsibility and therefore career takes the backseat in many cases.

In these circumstances, there are a plethora of factors that come into play when a women entrepreneur's performance is measured. This research has identified 9 such factors through extensive study of available literature. Based on these factors, structured interviews were conducted to get first-hand responses. The focus was on understanding a pattern in the response, to know factors making the most impact on their performances.

The results of the study have given useful insights on how four specific factors, that fall under the common cluster of 'Core Factors' (based on results of Factor analysis), come out as the most impactful cluster. The factors in this cluster are Managerial Skills, Networking, Entrepreneurial Skills and Opportunity Recognition – all four directly impacting the business acumen of the entrepreneur.

However, the result showed another very astonishing fact. Though these factors came as dominant cluster, the most impacting factor was not a part of this cluster, it was a non-business acumen related factor – 'Family Support'.

The research concluded that despite core factors being the most important aspect impacting the performance of women entrepreneur, Family Support was rated of the highest importance. We can therefore safely conclude that even today in Indian society, women entrepreneurs perceive that their family's support is the key for their professional performance.

Keywords: Factors, Family Support, MSME, Performance, Women entrepreneur

1. INTRODUCTION

The year 2020 brought along a new set of challenges for world at large and India in specific, in form of the Covid-19 pandemic. While the pandemic affected health and lives primarily, a major impact is seen on the economic growth. India's response to this situation of unrest was the approach of 'Atma-nirbhar Bharat' (Self- dependent India). Due importance is given to the 'Made in India' initiatives. In this journey, along with large scale industries, a key role will be

ISBN: 978-81-949278-6-0

played by MSMEs (Micro, Small and Medium Enterprises). With 3.6 crores such enterprises employing over 8 crore people in India, MSMEs contribute to 37.54% of GDP and accounts for 45 % of total industrial production, 40% of total exports. (https://msme.gov.in/)

While these number justifies the role of MSMEs in making India Atma-Nirbhar, it is imperative to understand a sub section of MSME that is Enterprises driven by Women. In India, out of a total of 58.5 million entrepreneurs, 13.76%, i.e., 8.05 million are women. Studies show that 35% of start-ups in India are led by women entrepreneurs. This goes on to show how women are not just contributing to the economic growth of the nation but are also creating employment opportunities for others. As per a survey, around 71% women, employ around 5 or less people in India.(https://www.startupindia.gov.in/)

Though in this patriarchal society, women are gradually and consistently making a deep impact as entrepreneurs, their journey of growth is way different from that of their male counterparts. There are various factors that play a decisive role in the performances of the women entrepreneurs.

This paper predominantly focuses on 9 selected factors and tries to understand their impact on the performances of the women entrepreneurs. The paper also aims to understand the most important factor amongst these and study its relation with the demographic variables of the respondents of this empirical study.

2. LITERATURE REVIEW

According to the Global Entrepreneurship Monitor (2010), women represent more than one-third of all people involved in global entrepreneurial activity. However, the way women conceive their businesses is very different from the way men do. By the virtue of this difference the factors that impact business performances of women are also distinctive. Numerous studies have helped in bringing to life few factors that have irrefutable contribution in the success of women entrepreneurs.

Family Support - Eddleston & Powell (2012) mentioned in their study that family members' moral/emotional support may encourage women to become entrepreneurs or provide psychological help in dealing with business problems. Welsh, Kim, Memili, Kaciak, (2014) have found that in case of Korean female entrepreneurs' family support seems to be directed toward helping female entrepreneurs cope with their personal problems so that the female entrepreneurs can succeed in their ventures and increase rm performance. They also found that family moral support has no significant positive effects on rm performance but it appears that family support is effective in preventing negative effects of personal problems on rm performance. Cetindamar et al., (2012) analysed that for a woman entrepreneur to be able to launch and grow her business venture, family financial support may be valuable and indispensable.

Personal Problems - Welsh, Kim, Memili, Kaciak, (2014) have found that Korean female entrepreneurs' personal problems have negative effects on rm performance.

Financial Capital Assistance - A research by Omwenga, Mukulu & Kanali (2013) have found that the financial and capital assistance, networking, education, training and counselling are the determinants of performance of women-owned small and medium enterprises in Kenya. Mamun & Isidore (1996) examined the effects of education, entrepreneurial competencies and access to credit on microenterprise performance.

ISBN: 978-81-949278-6-0

Education - Omwenga, Mukulu & Kanali (2013) have found that the financial and capital assistance, networking, education, training and counselling are the determinants of performance of women-owned small and medium enterprises in Kenya. Mamun & Isidore (1996) examined the effects of education, entrepreneurial competencies and access to credit on microenterprise performance.

Training - Omwenga, Mukulu & Kanali (2013) have found that the financial and capital assistance, networking, education, training and counselling are the determinants of performance of women-owned small and medium enterprises in Kenya.

Networking - Boyd, (2005) said that networks have long been hailed as essential to the survival of female-run establishments. Carter et al., (2006) mentioned in their study that network is a critical element for entrepreneurs in gaining access to capital/loans, advice and information needed for initiating and operating a new venture easily. A research by Omwenga, Mukulu & Kanali (2013) have found that the financial and capital assistance, networking, education, training and counselling are the determinants of performance of women-owned small and medium enterprises in Kenya. Hisrich & Brush (1987) suggested that support systems, mentors, and advisors; business associates and friends; participation in trade associations and women's groups are the significant networks which are positively associated with business performance.

Opportunity recognition - Hasan & Almubarak, (2016) identified factors influencing women entrepreneurs' performance and corresponding challenges in SMEs in Bahrain. They also examined the opportunity recognition as a mediator between influencing factors and performance

Entrepreneurial Skills - Krishnan & Kamalanabhan, (2013) showed a significant direct relationship between entrepreneurial competencies like conceptual skill, strategic skill and learning leading to entrepreneurial success. Mamun & Isidore (1996) examined the effects of education, entrepreneurial competencies and access to credit on microenterprise performance.

Managerial Skills - According to Lerner and Hisrich (1997) conducted a study on Israeli women entrepreneurs and categorised the factors that affect their performance into five perspectives, that is, motivations and goals; social learning theory (entrepreneurial socialization) ; network affiliation (contacts and membership in organizations); human capital (level of education, business skills) ; and environmental influences (location, sectoral participation, and socio-political variables). (Birley & Norburn, 1987; Brush & Hisrich, 1991; Hisrich & Brush, 1984; Hoad & Rosko, 1964) have identified that managerial skills and particular strengths in generating ideas and dealing with people were important for a woman entrepreneur in establishing a business

Against this background, the researchers now turn to investigate the impact of the above-mentioned factors on the performance of women entrepreneurs in Gujarat.

3. RESEARCH OBJECTIVES

- To find out the most impacting cluster of factors affecting the performance of women entrepreneurs in MSMEs
- To understand the most important factor and study its relation with the demographic variables

4. RESEARCH METHODOLOGY

A survey of women entrepreneurs was conducted to understand the impact of factors affecting their performances. The area of the survey was Gujarat, covering the cites - Ahmedabad & Gandhinagar, Vadodara, Rajkot, Mehsana, Patan and Gandhidham. The respondents were

ISBN: 978-81-949278-6-0

women entrepreneurs from varied industries like Bakery & Fast food, Tiffin services, Health and Wellness, Boutique, Beauty parlour & Salon, Jewellery, Pre-school and Day care, Educationist, Toy rental services. Food blogger, Builder and Customised wooden gift articles manufacturer. The sample size of respondent was 100 and were selected using judgement sampling.

Primary data was collected by using structured personal interview. The questionnaire used in the interview focused on list of factors which were derived using literature review of existing theoretical and empirical research. The questions were designed to fetch responses based on the perceptions and experiences of the respondents. The factors affecting the performance of women entrepreneurs were measured with a 5 point Likert scale. The choice ranged from, for respective factor, least affecting to most affecting their performances.

Factor analysis was conducted in order to identify clusters of factors affecting the performance of women entrepreneurs that loaded onto each group. Descriptive Statistics was used to find the cluster, which most impacts the performance of the women entrepreneur. Also, the most impactful factor was found and its impact was studied in light of the demographic variables, using cross tabulation.

5. DATA ANALYSIS AND DISCUSSION

The data has been analysed in four sections. The first section presents the demographic profile of the women entrepreneurs which includes age, education, marital status and prior work experience. The second section presents the business profile of the women entrepreneurs. The third section discuss the factor impacting the performance of the women entrepreneurs. The fourth section presents the discussion of the data analysis.

5.1 Demographic Profile of Women Entrepreneurs

Table 1: Demographic Variables

Demographic Variable: Age			
Age	Frequency	Percent	Cumulative Percent
21-25	13	13	13
26-30	9	9	22
31-35	16	16	38
36-40	19	19	57
41-45	25	25	82
46-50	12	12	94
51-55	3	3	97
56-60	3	3	100
Total	**100**	**100**	

Demographic Variable: Educational Qualification			
Educational Qualification	Frequency	Percent	Cumulative Percent
Secondary	4	4	4
Higher Secondary	9	9	13
Graduate	31	31	44
Post Graduate	33	33	77
Technical/Professional	23	23	100
Total	**100**	**100**	

Demographic Variable: Marital Status			
Marital status	Frequency	Percent	Cumulative Percent
Married	75	75	75
Unmarried	20	20	95
Widow	1	1	96
Divorced	4	4	100
Separated	0	0	
Total	**100**	**100**	

Demographic Variable: Prior Work Experience			
Prior Work Experience	Frequency	Percent	Cumulative Percent
No	34	34	34
Yes	66	66	100
Total	**100**	**100**	

From the above table 1, it can be seen that the majority of the women entrepreneurs are in the age group of 41- 45 comprising of 25% of the total respondents, followed by the age group of

ISBN: 978-81-949278-6-0

36-40 comprising of 19% of the total respondents. The age of respondents varies from twenties to fifties. The lowest age of the respondent is 22 years whereas the highest age is 58 years.

Looking at the educational qualification of the respondents, it can be clearly stated that most of the women entrepreneurs surveyed are post graduate (33%) followed by graduates (31%) and Technical/professional (23%). Only 4% respondents amongst the sample are having secondary as their educational qualification.

Majority of the respondents participated in the survey are married (75%) followed by unmarried (20%). Remaining 4% and 1% respondents of the survey are divorced and widow respectively.

The maximum respondents (66%) are having prior work experience before starting their own entrepreneurship.

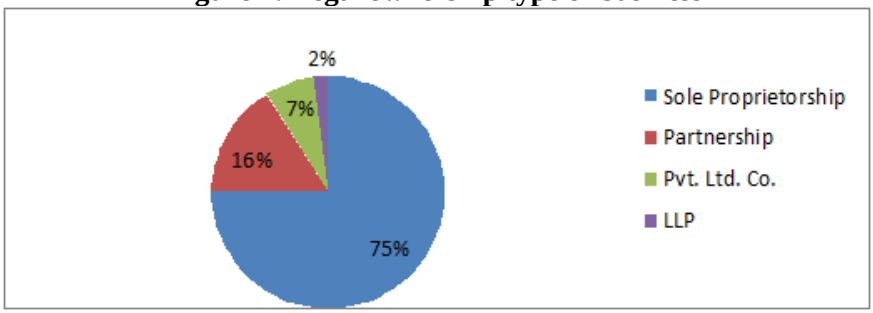
5.2 Business profiles of the Women Entrepreneurs

In the following section, the business-related profiles of the women entrepreneurs have been discussed.

5.2.1 Age of the entrepreneur at inception of the business

The following table 2, shows the age of the women entrepreneur at the time of inception of the business. It can the clearly seen that 37% of the entrepreneurs have started the business in the age group of 20-25 years followed by 20% in 31-35 years.

Table 2: Entrepreneurs age at the inception of business



Age	Frequency	Percent	Cumulative Percent
20-25	37	37	37
26-30	19	19	56
31-35	20	20	76
36-40	16	16	92
41-45	6	6	98
46-50	2	2	100
Total	**100**	**100**	

5.2.2 Legal ownership type of business organisation

From the below figure 1, it can be seen that the majority of the women entrepreneurs have the legal ownership of business in form of sole proprietorship (75%) followed by partnership (16%). The other forms are Pvt. Ltd. Co. (7%) and LLP (2%) respectively. One more type of business i.e Public Ltd co. was given in the survey instrument but none of the respondents were in the category.

The major reason for establishing the business under sole proprietorship type were ease in formation and ease in legal formalities as answered by the respondents.

Figure 1: Legal ownership type of business

ISBN: 978-81-949278-6-0

5.2.3 Nature of Business

As per, Micro, Small and Medium Enterprises Development Act, 2006) MSMEs are segregated in two types Manufacturing Enterprises and Service Enterprises.

From the below table 3 and 4, it can be seen that out of 100 respondents, 55 business enterprises are service enterprises and 43 are manufacturing. There are 2 enterprises which are manufacturing units and provide customised services as well. Out of the total manufacturing enterprises, 82% enterprises falls under the Micro enterprises category whereas 73.7% enterprises fall under Micro category out of the total service enterprises.

Table 3: Nature of Business

	Frequency	Percent	Cumulative Percent
Manufacturing and Service both	2	2	2
Manufacturing	43	43	45
Service	55	55	100
Total	100	100	

Table 4: Bifurcation within Manufacturing and Service industry

	Manufacturing			Service		
	Frequency	Percent	Cumulative Percent	Frequency	Percent	Cumulative Percent
Micro	37	37.0	82.2	42	42.0	73.7
Small	5	5.0	93.3	12	12.0	94.7
Medium	3	3.0	**100.0**	3	3.0	**100.0**
Total	45	45.0		57	57.0	

5.2.4 Source of Finance of the business

From table 5, it is clear that 46% respondents have used their own funds to commence with the business followed by 20% getting funding from their friends & relatives. This reflects how personal source of finance and savings of women is important compared to formal sources of finance in supporting entrepreneurship in the state. Only 14% of respondents have accessed finance from commercial banks followed by 4% from private money lenders, husband, family and father respectively. The pro le of the women entrepreneurs and the discussions in the previous researches shows that women in Gujarat have both their own funds and strong support from the family, friends and relatives. (Myers and Majluf, 1984) indicated that SME owners mostly depend on their savings or funds obtained from their family and friends as initial sources of finance. This was majorly because they have limited resources and their income from operations is not sufficient to repay their debt obligations.

Table 5: Source of Finance

Source	Frequency	Percent
Development Bank	3	3.0
Commercial Bank	14	14.0
Non-Banking Financial Institutions	1	1.0
Private money lenders	4	4.0
Friends & Relatives	20	20.0
Own fund	46	46.0
Father	4	4.0
Husband	4	4.0
Family	4	4.0
Total	100	100.0

ISBN: 978-81-949278-6-0

5.3 Factors affecting the performance of women entrepreneurs

Table 6: Survey Responses of women entrepreneurs regarding factors affecting their performance

Factors	Least Affecting(%)	Not Affecting(%)	Neutral (%)	Affecting (%)	Most Affecting(%)
Family Support	9	5	12	29	**45**
Personal Problems	14	18	22	**41**	5
Financial Capital Assistance	10	15	23	**37**	15
Education	20	18	**24**	21	17
Training	8	18	20	**36**	18
Networking	7	4	15	**48**	26
Opportunity Recognition	6	8	14	**48**	24
Entrepreneurial Skills	7	5	24	27	**37**
Managerial Skills	7	6	15	**38**	34

There are various factors which affect the performance of women entrepreneurs in the MSME sector. To understand the impact of the same, a factor analysis of the 9 factors impacting the performance of women entrepreneurs was conducted. The "best t" factor analysis accounts for 39.16 percent of the variance and was obtained by using principal component factor analysis with a Varimax with Kaiser Normalization rotation method. As recommended by Hair et al. (2006), all factor loadings are greater than 0.40, and all communalities exceed 0.50.

The Cronbach's alpha model was used and values over 0.50 were considered. The Cronbach's alpha of the entire instrument came as 0.775. The Cronbach's alpha-values for all the 9 factors impacting the performance of women entrepreneurs ranged from 0.719 to 0.797 indicating that the scale was internally consistent and reliable (Cronbach, 1951; Nunnally, 1978).

The table 7 of communalities which shows how much of the variance in the variables has been accounted for by the extracted factors. The top four variables are 80% of the variance in managerial skills, 78% in opportunity recognition and 73% in entrepreneurial skills and education is accounted for.

Table 7: Cronbach's alpha-value and Communalities

Factors	Cronbach's Alpha values	Communalities
Family Support	.763	.439
Personal Problems	.797	.721
Financial Capital Assistance	.770	.551
Education	.759	.738
Training	.750	.704
Networking	.740	.681
Opportunity Recognition	.733	.778
Entrepreneurial Skills	.740	.739
Managerial Skills	.719	.799

5.3.1. Descriptive Statistics

The descriptive statistics for all the variables under investigation are calculated below in table 8. The mean, standard deviation and number of respondents (N) who participated in the survey are given. Looking at the mean, one can conclude that family support is the most important variable affecting the firm's performance of women led businesses. It has the highest mean of 3.96.

ISBN: 978-81-949278-6-0

Table 8: Descriptive Statistics

	N	Minimum	Maximum	Mean	Std. Deviation
Family Support	100	1	5	**3.96**	1.263
Personal Problems	100	1	5	3.05	1.167
Financial Capital Assistance	100	1	5	3.32	1.197
Education	100	1	5	2.97	1.374
Training	100	1	5	3.38	1.204
Networking	100	1	5	3.82	1.086
Opportunity Recognition	100	1	5	3.76	1.093
Entrepreneurial Skills	100	1	5	3.82	1.192
Managerial Skills	100	1	5	3.86	1.164
Valid N (listwise)	100				

5.3.2. Kaiser-Meyer-Olkin: The KMO measures the sampling adequacy which should be greater than 0.5 for a satisfactory factor analysis to proceed. A common rule suggests that a researcher has at least 10-15 participants per variable. Kaiser (1974) recommend 0.5 as minimum (barely accepted), values between 0.7-0.8 acceptable, and values above 0.9 are superb. Here the KMO as per table 8comes out to be 0.755; hence we can go ahead to process with factor analysis

5.3.3 Bartlett's test: (Bartlett, 1954) is indication of the strength of the relationship among variables. This tests the null hypothesis that the correlation matrix is an identity matrix. An identity matrix is matrix in which all of the diagonal elements are 1 and all off diagonal elements are 0.We can see from the table 9 that, Bartlett's test of sphericity is significant. That is, its associated probability is less than 0.05. In fact, it is actually 0.00, that is significance level is small enough to reject the null hypothesis and accept the alternate hypothesis.

Table 9: KMO and Bartlett's Test

Kaiser-Meyer-Olkin Measure of Sampling Adequacy.		.755
	Approx. Chi-Square	314.825
Bartlett's Test of Sphericity	Df	36
	Sig.	.000

5.3.4 Factor analysis

Factor analysis is a statistical data reduction and analysis technique that strives to explain correlations among multiple outcomes as the result of one or more underlying explanations, or factors. The technique involves data reduction, as it attempts to represent a set of variables by a smaller number. Factor structures for the study were identified on the basis of significance and clarity of the factor loadings and the interpretability and meaningfulness of the factors within the theoretical framework. The final framework comprised three clusters with 9factors. The factor loadings are mentioned in the below table 10.

Table10: Results of Factor analysis

		Factors		
		1	2	3
6	Networking	**0.776**	0.252	-0.126
7	Opportunity Recognition	**0.875**	0.104	0.034
8	Entrepreneurial Skills	**0.856**	0.027	0.074
9	Managerial Skills	**0.834**	0.125	0.296
3	Financial Capital Assistance	0.01	**0.661**	0.338
4	Education	0.085	**0.846**	0.12

ISBN: 978-81-949278-6-0

5	Training	0.307	**0.767**	-0.147
1	Family Support	0.363	0.161	**0.531**
2	Personal Problems	-0.061	0.055	**0.845**

5.3.5 Factor Interpretation

The first cluster have been grouped as **"Core factors"** as they includes:

- Networking
- Opportunity Recognition
- Entrepreneurial Skills
- Managerial Skills

The second cluster have been grouped as **"Know-how factors"** as they include:

- Financial Capital Assistance
- Education
- Training

The third cluster have been grouped **as "Human factors"** as they include:

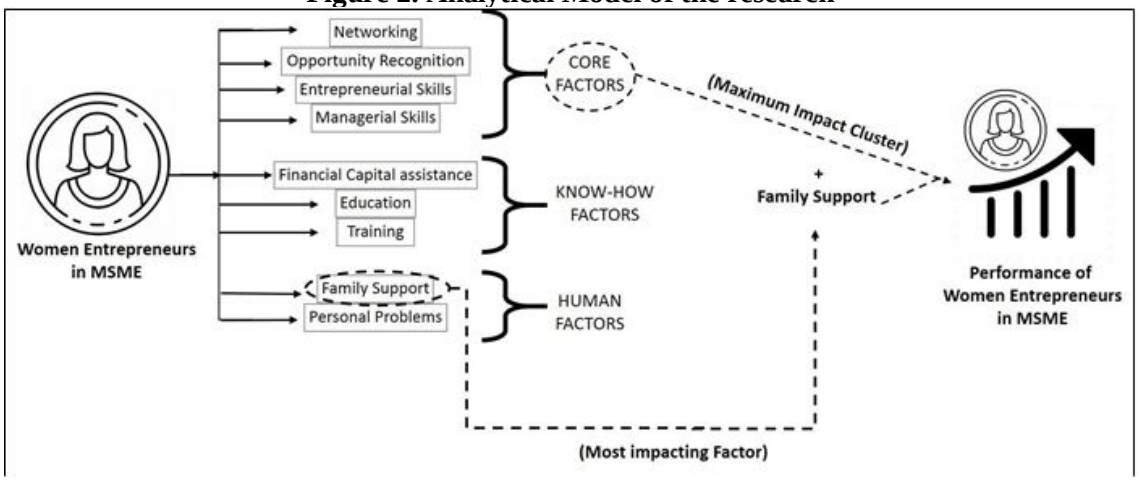
- Family Support
- Personal Problems

5.4 Discussion

The results of the factor analysis indicate that the means of the variables under the first cluster 'Core factors' comprising of Managerial Skills (3.86) Networking (3.82), Entrepreneurial Skills (3.82)and Opportunity Recognition(3.76) got the second, third and fourth rank respectively. So, the researchers come to the conclusion that this is the most important cluster that impact the performance of women entrepreneurs in the MSME sector.

Such outcomes were also found in other studies. (Birley &Norburn, 1987; Brush & Hisrich, 1991; Hisrich & Brush, 1984; Hoad & Rosko, 1964) identified that managerial skills and particular strengths in generating ideas and dealing with people were important for a woman entrepreneur in establishing a business. Boyd, 2005 said that networks have long been hailed as essential to the survival of female-run establishments. (Carter et al., 2006) mentioned in their study that network is a critical element for entrepreneurs in gaining access to capital/loans, advice and information needed for initiating and operating a new venture easily. Hisrich & Brush (1987) suggested that support systems, mentors, and advisors; business associates and friends; participation in trade associations and women's groups are the significant networks which are positively associated with business performance. Krishnan & Kamalanabhan, (2013) showed a significant direct relationship between entrepreneurial competencies like conceptual skill, strategic skill and learning leading to entrepreneurial success. Hasan & Almubarak, (2016) identified factors influencing women entrepreneurs' performance and corresponding challenges in SMEs in Bahrain. They also examined the opportunity recognition as a mediator between influencing factors and performance.

Having said that, researchers also analysed that the 'Family support' having the highest mean of 3.96 under 'Human factor' is the most crucial variable which impact the performance of women entrepreneurs. Indian society in general is a male dominated society and it is still believed that the responsibility of managing home and taking care of children is the sole responsibility of the



ISBN: 978-81-949278-6-0

women of the house. In this situation if there is not ample support from all family members, it becomes difficult for the woman to manage house and work.

Thus, it is found that the family moral support is inevitable for the performance of women entrepreneurs. Family members' moral/emotional support may encourage women to become entrepreneurs or provide psychological help in dealing with business problems (Eddleston & Powell, 2012). Family moral support gives a woman entrepreneur confidence that she can manage her family-work responsibilities, thereby increasing the chances of business growth. Along with Moral support, Financial support from the family is equally important for starting the business and sustaining it. This has a positive impact on the performance of women entrepreneurs. For a woman entrepreneur to be able to launch and grow her business venture, family financial support may be valuable and indispensable (Cetindamar et al., 2012). If a women is secured financially with support from the family, then she can concentrate better on the managing and developing the business. We can see from the survey responses that 46% entrepreneurs in our study has used own fund for financing the business followed by 32% entrepreneurs started the business by takings fund from friends and family.

With this analysis, the researchers have developed an Analytical Model that depicts how the 'Core factors' along with the variable 'Family support' from the cluster of 'Human factors' impacts the performances of the women entrepreneurs. The model is depicted in the below figure 2.

Figure 2. Analytical Model of the research

The analytical model in figure 2, shows that the factors which impact the performance of women entrepreneurs can be clustered in three groups namely 'Core factors', 'know-how factors and 'Human factors', The factors under the cluster 'Core factors' have the maximum impact on the performance of the women entrepreneurs as they have the means ranking between 2 to 5. But interestingly 'family support' is the factor which have the highest mean, doesn't fall under the 'Core factors' cluster. Rather, it falls under the 'Human factors'. So, the researchers identified that 'Core factors' along with the factor 'Family support' impacts the performance of the women entrepreneurs in the MSMEs.

Having identified that the top most impacting factor i.e. 'Family Support', for women entrepreneurs' performance doesn't fall under the cluster which is most impacting, the researchers have further tested the importance of this factor by cross tabulating it with all the demographic variables like age, marital status, educational qualification and prior work experience.

ISBN: 978-81-949278-6-0

Given below is the analysis of the relation between each demographic variable and the factor 'family support'.

Table 11: Demographic Variable: Age

		Family Support					
		Least Affecting	**Not Affecting**	**Neutral**	**Affecting**	**Most Affecting**	**Total**
Age	21-25	1	2	2	4	4	13
	26-30	2	0	2	3	2	9
	31-35	0	2	1	6	7	16
	36-40	2	0	3	6	8	19
	41-45	3	0	2	5	15	25
	46-50	1	1	2	4	4	12
	51-55	0	0	0	1	2	3
	56-60	0	0	0	0	3	3
Total		9	5	12	29	45	100

It can be seen from the above results that women across age group has said that family support is the most affecting factor which helps them in their performance.

The majority of our respondents (25%)are in the age group of 41-45 years, of them 80% have stated that family support is affecting / most affecting their performance. Even in the second largest age group, 36-40 years, which comprises of 19% respondents, 73% women have admitted that Family Support impacts their performance. If we further understand these two age groups, these are the women who have the maximum responsibility of managing their homes and children along with their business venture as compared to their younger counterparts. So without family support a work life balance cannot be maintained by them.

Table 12: Demographic Variable: Educational Qualification

		Family Support					
		Least Affecting	**Not Affecting**	**Neutral**	**Affecting**	**Most Affecting**	**Total**
Educational Qualification	Secondary	0	0	1	1	2	4
	Higher Secondary	0	0	0	1	8	9
	Graduate	2	1	5	9	14	31
	Post Graduate	5	3	2	11	12	33
	Technical/Professional	2	1	4	7	9	23
Total		9	5	12	29	45	100

From the table 12, it can be seen that out of 100 respondents 64 respondents are atleast graduates and of them 33 are post graduates. Thereby these two groups cumulatively have the maximum (64%) respondents. Out of these, 72 % respondents have agreed that family support is either affecting or most affecting their performance. This shows that despite higher educational background, women entrepreneur need support from families for better performance of their business. Moreover, if we see the groups with least education, it can be seen that 12 out of 13 women agree that Family Support is important and the remaining 1 is neutral about it.

ISBN: 978-81-949278-6-0

Table 13: Demographic Variable: Marital Status

		Family Support					
		Least Affecting	**Not Affecting**	**Neutral**	**Affecting**	**Most Affecting**	**Total**
Marital status	Married	6	4	9	21	35	75
	Unmarried	3	1	2	7	7	20
	Widow	0	0	0	0	1	1
	Divorced	0	0	1	1	2	4
	Separated	0	0	0	0	0	0
Total		9	5	12	29	45	100

It is evident from the table 13 that 75% of the total respondents are married thereby creating the largest group. Of these 56 respondents (74%)mentioned the importance of their family support on their performance. In our Indian society where marriage is an institution that connects families, this response from married women makes it all the more clear that family support is inevitable for success of women entrepreneurs.

Table 14: Demographic Variable: Prior work experience

		Family Support					
		Least Affecting	**Not Affecting**	**Neutral**	**Affecting**	**Most Affecting**	**Total**
Prior work experience	No	3	3	3	6	19	34
	Yes	6	2	9	23	26	66
Total		9	5	12	29	45	100

The table 14 shows that the respondents having work experience are 66 out of the total 100 respondents. Out of 66 respondents, 49 respondents (74%) mentioned that family support is affecting their performance. Herein we can see that despite the exposure through prior work experience, majority of these respondents agree that family support is very crucial in their professional journey.

6. CONCLUSION

The research showed that the factors were grouped in three clusters namely, Core Factors, Know-how Factors and Human Factors. Core Factors had all 4 factors that impact the business acumen of an entrepreneur directly. The Know-how factor comprised of factors that depicts the Knowledge of entrepreneur. The third cluster, Human factor focused on the human aspects of the entrepreneur.

The research found that the Core factor stands out to be the most impacting cluster as all 4 of its factors are appearing in the top 5 factors derived using descriptive statistics. The four factors in this cluster were:

Managerial Skills – This reflects that it is very important for women entrepreneurs to understand the nuances of business management and thereby handle the various aspects of business.

Networking – Networking is the key especially for startups and businesses which are operating in the MSME segment. A robust network help in variety of aspects such as financial assistance, technological assistance, marketing, business development, logistics and many more. In today's world a good network is one of the most important non-tangible asset that one can possess.

Entrepreneurial Skills – While many of the respondents had prior work experience, the role of an entrepreneur is completely different than that of a professional. Therefore it is very important to not just possess the skill set of an entrepreneur but also the attitude. Especially in case of

ISBN: 978-81-949278-6-0

women entrepreneurs this becomes all the more important as the society at large is still predominantly patriarchal.

Opportunity Recognition – Generally for any business and specifically for MSMEs, opportunities are limited, so as an entrepreneur, one needs to have an eye for sensing the market demand and perform accordingly to grow.

While the above four factors stood out as an impactful cluster, the top most (rank 1) of the factor affecting women entrepreneurs was not a part of this cluster. It came from the cluster – Human Factors. This factor was 'Family Support'. The research shows that even today for a women to perform well in her career, she believes, her family plays a very crucial role. The family support is broadly understood in two sub parts – Financial Support and Moral Support.

With this understanding the researchers conclude that 'even today in Indian society, women entrepreneurs perceive that their family's support is the key for their professional performance however the core business acumen stands a close second.'

7. PRACTICAL IMPLICATIONS

The outcome of this research has brought to light some concrete implications which have the potential to strengthen India's dream of becoming AtmaNirbhar Bharat. Stated below are these practical implications that primarily focuses on two segments of our society- the policy makers and the educational & developmental institutions.

1. Policy Makers

The policy makers can give incentives that motivates the families to encourage aspiring women entrepreneurs take up their ventures. This incentives can be in form of:

- Proving initial financial support to dependent members of the family for a specific time period (1 to 1.5 years depending on the nature of business)
- Ensuring the physical safety of entrepreneurs.
- Reduction of the societal pressure that families face by promoting the importance of entrepreneurship through public interest advertising.

2. Colleges, Universities and Incubation centres

These institutions can play a vital role by identifying interested students and horne their entrepreneurial skills using techniques like seminars, townhalls, workshops, pep-talks by existing entrepreneurs and also vocational trainings. At the same time to ensure family support for these aspiring entrepreneurs in the years to come, these institutions should organise consultation sessions for the family members by subject matter experts.

A STUDY ON ATTITUDE OF STUDENTS, PARENTS, TOWARDS STUDENT PARTICIPATION ON PHYSICAL EDUCATION AND SPORTS IN GOVERNMENT AND PRIVATE SCHOOLS

Kum. Bharani D. Dyavanoor
Research Scholar, Dept of Physical Education and sports sciences, Karnataka State Akkamahadevi Women's University Vijayapur

Prof. D. M. Jyoti
Research Guide & Professor, Chairmen, Department of Physical Education and sports sciences, Karnataka State Akkamahadevi Women's University Vijayapur

ABSTRACT
The purpose of the present research was to describe and A Study On Attitude Of Students, Parents, Towards Student Participation On Physical Education And Sports In Government And Private Schools The method of the study is descriptive analyses, age group 14 to 17 years school boys and girls total fifty samples representing selected and To collect the data the Students , standardized scale devised by T.S. Sodhi .and parent standardized scale also T.S. Sodhi has administered on the subject who are participating in sports later't' test was applied to assess the significant difference in Students, Parents attitude towards Student Participation on Physical Education and Sports in Government and Private Schools" the conclusion was drawn that Government school have possessed the high comparing to their counterpart, it was rationalized that nature of Private Schools participation develops and cultivates the Students, Parents.

INTRODUCTION
Sports and games in the modern era occupy a very prominent and important place in the life of people and also in every sphere of life. Sport consists of physical activity carried out with a purpose for competition, for self-enjoyment, to attain excellence, for the development of a skill, or more often, some combination of these. Sports differ in their dependence upon a set of individuals or team skills, as well as in the ways in which they have their participants compete. As fitness and sports go hand in glove there is a need to develop the ability in an individual to play the game with good skill and perform consistently well.

The popular adage 'health is wealth' throws light on the need to maintain good health for the overall well-being of individuals and societies. As against this, there is a growing tendency, especially, among the youth to lead a sedentary life devoid of stress and strain. There are enough reasons why they are indifferent to sports, the whole world is on their finger tips, then why waste youthful energy on very ordinary things? Such an attitude bodes well for easy-going people, but not for the genuine practitioners of healthy living. 'All work and no play make Jack a dull boy' is an oft quoted proverb. Here, the emphasis is actually on the need to do regular physical exercise. Our perception of health is so ill-conceived that we tend to go for healthy foods instead of following a strict exercise regimen and good eating habits. No wonder, several people turn obese in their mid-twenties! 'A sound mind in a sound body' is the English translation of a Latin proverb quoted in academic circles everywhere. Our forefathers were ever mindful of the attributes of good health and were practitioners of regular physical activities. It is, therefore, very apt to go deep into the attitude of college students towards physical activity in general.

ISBN: 978-81-949278-6-0

An attitude is more than a state of mind. It is a generalized tendency to think or act in a certain way in respect to some objects or situations, often accompanied by feeling. It is an enduring predisposition or readiness to behave in a particular way towards a given object or situation.

In this way attitudes are to a great extent responsible for a particular behavior of a person towards an object, idea or a person. But by this it should not be concluded that one‘s behavior is an absolute function of one‘s attitude. Behavior by all means is a function of both characteristics of behaving person and the situations in which he behaves. Hence a person may hold strong attitude and yet under circumstances, may behave in quite contradiction to those attitudes.

Parents’ attitude towards child’s education is important in determining school attendance and academic achievement of the child. Favorable attitude towards schooling and education enhances parents’ involvement in children’s present and future studies .Parent’s attitude towards their children’s education is affected adversely by low Socioeconomic Status of parents; it is assumed that the attitude of parents of tribal children will be unfavorable towards education. Parents’ attitude is a measure or an index of parents’ involvement. A child, brought up with affection and care in the least restrictive environment would be able to cope up better with the sighted world. Therefore, the family shapes the social integration of the child more than a formal school.

PURPOSE OF THE STUDY

The purpose of the study was to find out the “A Study on Attitude of Students, Parents, Towards Student Participation on Physical Education and Sports in Government and Private Schools”

HYPOTHESIS

1. It was hypothesiesied that there may be difference in the attitude of Students, Parents of government and private schools.
2. There would be a significance difference attitude of Students, Parents between of government and private schools.

METHODOLOGY

The purpose of the present research was to describe and A Study on Attitude of Students, Parents, Towards Student Participation on Physical Education and Sports in Government and Private Schools The method of the study is descriptive analyses, age group 14 to 17 years school boys and girls total fifty samples representing selected and To collect the data the standardized scale devised by T.S. Sodhi has administered on the subject who are participating in sports later‘t’ test was applied to assess the significant difference in Teachers attitude towards Student Participation on Physical Education and Sports in Government and Private Schools” the conclusion was drawn that Government school have possessed the high comparing to their counterpart, it was rationalized that nature of Attitude of Students, Parents, Private Schools participation develops and cultivates the Teachers. statistically analyzed by dependent’s’ test which is used to find out the significant improvement on selected criterion variables and Analysis of Covariance (ANCOVA) was used to find out the significant difference between the Government and Private Schools” on each variables separately. All the cases 0.05 level of confidence was fixed as a level of confidence to test the hypotheses.

Table-1: students of government and private schools with attitude scores towards student’s participation in physical education and sports

Schools	Mean	Std. Dev.	Std. Error	t-value	P-value
Government-students	8.53	1.51	0.39		
Private-students	5.87	1.68	0.43	4.5712	0.0001,S

ISBN: 978-81-949278-6-0

From the results of the above table, it clearly shows that, the calculated value of t test is 4.5712 and the critical value of t with 28 degrees of freedom at 5% level is 2.0480. It indicates that, the calculated value i.e. 4.5712 is greater than 2.0480. It means that, a significant difference was observed between students of government and private schools with attitude scores towards student's participation in physical education and sports. Thus, the null hypothesis (H_0) is rejected and alternative hypothesis (H_1) is accepted. It means that, the students of government schools have significant higher attitude scores towards student's participation in physical education and sports as compared to students of private schools. In another words, the students of government schools are more interested in participation of physical education and sports than their counterparts i.e. students of private schools The mean and SD of attitude scores towards student's participation in physical education and sports is also presented in the figure given below.

Figure-1: students of government and private schools with mean attitude scores towards student's participation in physical education and sports

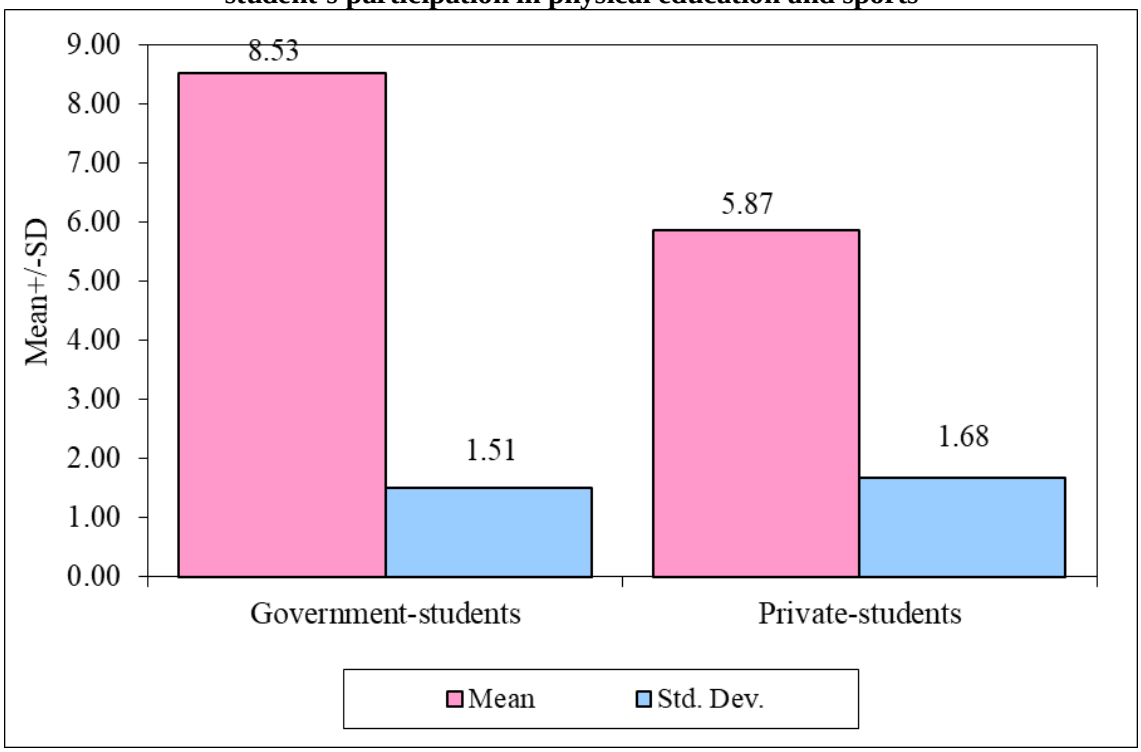

Table-2: parents of government and private schools with attitude scores towards student's participation in physical education and sports

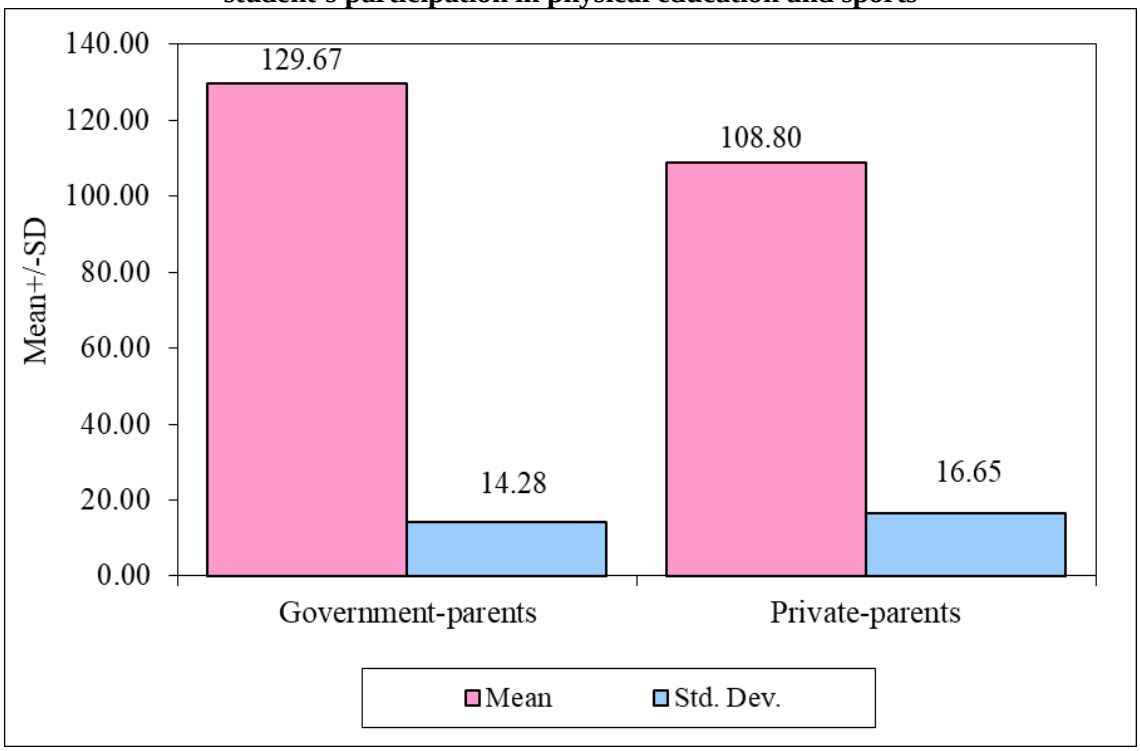

Schools	Mean	Std. Dev.	Std. Error	t-value	P-value
Government-parents	129.67	14.28	3.69		
Private-parents	108.80	16.65	4.30	3.6844	0.0010,S

From the results of the above table, it clearly shows that, the calculated value of t test is 3.6844 and the critical value of t with 28 degrees of freedom at 5% level is 2.0480. It indicates that, the calculated value i.e. 3.6844 is greater than 2.0480. It means that, a significant difference was observed between student parents of government and private schools with attitude scores towards student's participation in physical education and sports. Thus, the null hypothesis (H_0) is rejected and alternative hypothesis (H_1) is accepted. It means that, the student parents of government schools have significant higher attitude scores towards student's participation in

ISBN: 978-81-949278-6-0

physical education and sports as compared to student parents of private schools In another words, the student parents of government schools are more interested in participation of physical education and sports than their counterparts i.e. student parents of private schools The mean and SD of attitude scores towards student's participation in physical education and sports is also presented in the figure given below.

Figure-2: parents of government and private schools with mean attitude scores towards student's participation in physical education and sports

CONCLUSION

The students of government schools have significant higher attitude scores towards student's participation in physical education and sports as compared to students of private schools. In another words, the students of government schools are more interested in participation of physical education and sports than their counterparts i.e. Students of private schools. The parents of government schools have significant higher attitude scores towards student's participation in physical education and sports as compared to student parents of private schools. In another words, the student parents of government schools are more interested in participation of physical education and sports than their counterparts i.e. Student parents of private schools.

EFFECT OF SPECIFIC TRAINING PROGRAMME ON DRIBBLING PERFORMANCE AMONG UNIVERSITY HOCKEY PLAYERS

Jagadeeshaiah I. C
Research Scholar, Department Of Physical Education, Bharatidasan University Tiruchirappalli

Dr. A. Palanisamy
Research Guide & Professor, Department Of Physical Education. Bharatidasan University Tiruchirappalli

ABSTRACT
The purpose of the study was to find out the effect of specific training on dribbling performance among university hockey players. To achieve this purpose of the study, thirty men hockey players were selected as subjects who were from the Bangalore central university. The selected subjects were aged between 18 to 28 years. They were divided into two equal groups of fifteen each, Group I underwent specific training and Group II acted as control that did not participate in any special training apart from their regular sports and games practices. The subjects were tested on selected criterion variables such as dribbling prior to any immediately after the training period. The selected criterion variable such as dribbling was measuring by w dribble test. The analysis of covariance (ANCOVA) was used to find out the significant differences if any, between the experimental group and control group on selected criterion variable. The 0.05 level of confidence was fixed to test the significance, which was considered as an appropriate. The result of the present study has revealed that there was a significant difference among the experimental and control group on dribbling performance.

Keywords: Specific Training, Dribbling & Hockey.

INTRODUCTION
The primary objective of sports training is to stress various bodily systems to bring about positive adaptation in order to enhance sporting performance. To achieve this objective, coaches and athletes systematically apply a number of training principles including overload, specificity and progression, organized through what is commonly termed per iodization. The application of these principles involves the manipulation of various programme design variables including choice of exercise, order of training activities/exercises, training intensity (load and repetition), rest periods between sets and activities/exercises and training frequency and volume in order to provide periods of stimulus and recovery, with the successful balance of these factors resulting in positive adaptation (1). Sport specific training is simply fitness and performance training designed specifically for athletic performance enhancement. Training programs for athletic performance enhancement could include such areas as strength, speed, power, endurance, flexibility, mobility, agility, mental preparedness (including goal setting), sleep, recovery/regeneration techniques and strategies, nutrition, rehabilitation, pre-habilitation, and injury risk reduction. A general program should include all of these components and a more specific program may only include a few, depending upon the athlete's specific needs (based on strengths, weaknesses and/or imbalances) and the demands of the sport they participate in (2). Every shot in hockey is not just one motion, but a combination of many subtle movements. Every part of your body is working together to generate power, accuracy, lift and control of the puck. If one part of your shot is lacking, or incomplete this will result in less power and accuracy (3). Field Hockey coaches are constantly on the lookout for drills and skills that are going to make their players better. Further, being able to put those drills together with a practice plan to reinforce those skills makes it all the more effective. Repetition of skills is the best way

ISBN: 978-81-949278-6-0

to get your players to perform better. Knowing what to do when the opportunity presents itself is one of the hallmarks of a good player. The more practice, the more inclined your players are to do the right thing at the right time. Skill development in essential to having a good field hockey team.

- Ball Control Drills
- Passing, Shooting and Attacking
- Offensive and Defensive Drills and Tactics

The dribbling drills can be inserted at any time during the practice. "Dribbling"; where the player controls the ball with the stick and moves in various directions with it to elude opponents. To make a pass the ball may be propelled with a pushing stroke, where the player uses their wrists to push the stick head through the ball while the stick head is in contact with it; the "flick" or "scoop", similar to the push but with an additional arm and leg and rotational actions to lift the ball off the ground; and the "hit", where a swing at ball is taken and contact with it is often made very forcefully, causing the ball to be propelled at velocities in excess of 70 mph (110 km/h). In order to produce a powerful hit, usually for travel over long distances or shooting at the goal, the stick is raised higher and swung with maximum power at the ball, a stroke sometimes known as a "drive" (5). While there may be some sense of specificity to a program designed for an athlete of a specific sport, the truth is that there is a limit to the amount of application/carryover of a sports performance exercise to a sports skill. The most sports specific training that can be done is the sport itself. Sports specific skills practiced for the sport are as specific as one can get. The same is true for shooting the puck. However, while there are sports specific skills necessary for each sport, there are also physical skills necessary for each sport. Sports preparation is necessary for the sport specific skills (shooting a basketball, pitching a baseball, etc.) and physical preparation is needed for specific performance enhancement such as foot speed, strength, power, etc.

1. Objectives of the Study

The main objective of the study was to assess the effect of specific training on dribbling which would help to enhance performance of hockey players. The present study was designed to obtain the data on the men players from various faculties of Bangalore central university.

2. Statement of the Problem

The purpose of the study was to determine the effect of specific training programme on dribbling among Bangalore central university hockey players.

3. Delimitations

a. The study was delimited to Bangalore central university.

b. The study was delimited to 30 hockey players; their age was 18 to 28 years.

c. The study was restricted to the dependent variable is dribbling performance and independent variables are specific training.

4. Significance of the Study

a. The findings of the study may be helpful for university hockey players to apply specific training which will help in better performance.

b. The findings of the study would be helpful for the trainers to know the role of dribbling influence their performance.

ISBN: 978-81-949278-6-0

c. The results of the study may be helpful to fitness trainers, coaches, physical educationist and exercise physiologists to design proper training protocol for other populations.

METHODOLOGY

In the present study all the students studying in various faculties, Bangalore central university were considered as population for the study. A representative sample of 30 hockey players in the age of 18-28 years was chosen as sample for the study. The selected participants were divided into two groups. Group I underwent specific training and group II act as control group. The experimental groups underwent eight weeks of training in their particular workout. For this study dependent variable is shooting.

Test Administration – W Dribble Test

Purpose

The purpose of this test is to measure the dribbling ability of the hockey players.

Equipments and Materials

Hockey stick, balls, cones, stop watch, measuring tape, paper and pencil were used.

Scoring

The score is the elapsed time to the nearest tenth of a second between the starting from A to E and return back from E to A.

Analysis of Data

The data obtained were analyzed by analysis of covariance (ANCOVA). Analysis of covariance was computed for any number of experimental groups, the obtained 'F' ratio compared with critical F value for significance (7)

Results

The statistical analyses of dribbling performance due to specific training have been presented in Table I.

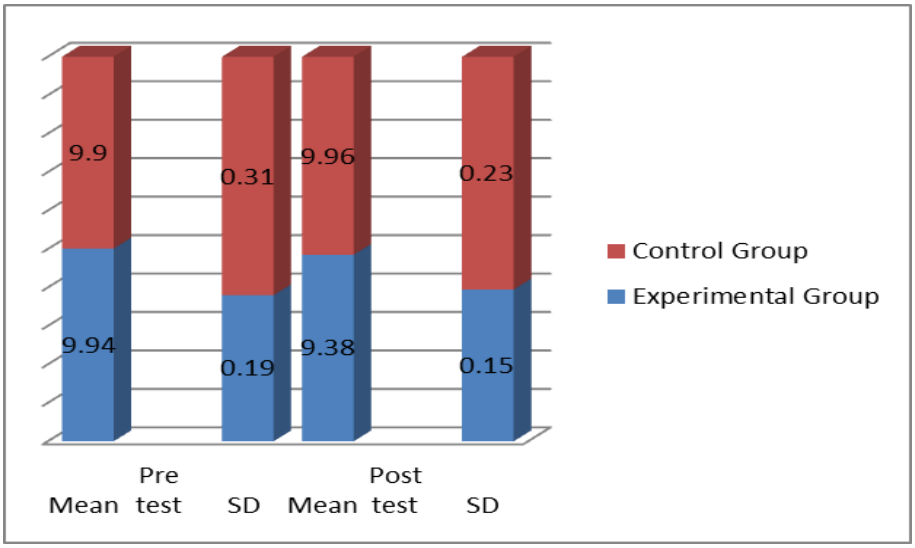

Table – I: Analysis of Covariance on W Dribble Test of Specific Training Group and Control Group

	Experimental Group	Control Group
Mean Pre test	**9.94**	**9.90**
SD	**0.19**	**0.31**
Mean Post test	**9.38**	**9.96**
SD	**0.15**	**0.23**

Significant at .05 level

ISBN: 978-81-949278-6-0

Graph -1: Analysis of Covariance on W Dribble Test of Specific Training Group and Control Group

Showed that the pre-test values of W dribble test for specific exercise training group and control group were 9.94 ± 0.19 and 9.90 ± 0.31 respectively. The obtained 'F' ratio value of 0.14 for pre-test score of specific exercise training group and control group on W dribble test was less than the required table value of 4.20 for significance with df 1 and 28 at .05 level of confidence. The post-test mean values of W dribble test for specific exercise training group and control group were 9.38 ± 0.15 and 9.96 ± 0.23 respectively. The obtained 'F' ratio value of 37.25 for post-test scores of specific training exercise group and control group was more than the required table value of 4.20 for significance with df 1 and 28 at .05 level of confidence. The results of this study showed that there was a significant difference among specific exercise training group and control group on W dribble test.

CONCLUSIONS

The results of the study proved that there were significant differences between control group and specific training group. The eight weeks of experimental treatment significantly influence on dribbling performance in university hockey players.

UTILITY AND RISK OF SOCIAL MEDIA IN HEALTHCARE AND ITS REGULATORY FRAMEWORK IN INDIA

Poonam Gupta[1], Asma Khan[2] and Amit Kumar[3]
[1]Associate Professor, Dyal Singh Evening College, Delhi University
[2]Associate Professor, Shobhit Institute of Engineering & Technology (Deemed-to-be-University), Meerut
[3]Research Scholar, Shobhit Institute of Engineering & Technology (Deemed-to-be-University), Meerut

ABSTRACT

Social media is increasingly becoming a powerful tool with more and more people and institutions embracing it. Growing usage of social media has created unprecedented impacts, benefits and risks for people in every aspect of life including healthcare. Social media platforms like Facebook, Twitter, YouTube, Instagram, blogs etc. have become the medium of choice for patients, professional and healthcare institutions. The user generated content has its own utility for the stakeholders in health care. Patients get instant information about a disease, its treatment, medical procedures, and medicines. Social media help them to connect with similar patients and various online help groups. This provides them the emotional support. They are able to easily connect to the health providers. They also get an opportunity to share health information, review doctors and hospitals. Patients/people also like to get health and diet tips on social media platforms.

For professionals/ Doctors, social media platforms provide a link to connect with peers and experts. They are able to provide patients education and online consultancy. The relationship of patients and professionals is becoming more equal due to enhance knowledge and connectivity. The health care service providers such as hospitals, pharmaceutical companies, insurance companies get a wider reach and social media help them provide better services at reduce cost.

However, the invasion of social media in daily lives has caused unpleasant experiences and unwanted impacts on physical and mental wellbeing. Many a times inaccurate and incomplete information put the lives of patients in danger. They feel that their privacy and confidentiality is lost. There is lack of security due to possible frauds, cyber bullying and abuse.

For professionals/health providers, social media is a pilferage of time. Undesired breach of patients' confidentiality may bring the risk of legal action, loss of professional image. Unprofessional behavior can even cause them loss of their profession license.

Thus, creating a regulatory framework to mitigate the risks and threats of social media has become a necessity. In India, up till now, there is no one specific legislation governing social media. However, there are varieties of other laws which provide relief. These are-

1. *Indian Constitution confers the right to privacy in India.*
2. *Indian Penal Code: Sections 292-294, 499, 503, 504, 153(A) and 295(A) provide protection against certain crimes.*
3. *Indian Medical Council (Professional Conduct) Etiquette & Ethics) Regulation, 2002 have set the professional standards & it regulates the nature and extends of doctor patients confidentiality.*
4. *Information Technology Act 2000 and 2008 provides safeguard against Technology based data breaches. Important section is 43(A), 72, and 72 A.*

ISBN: 978-81-949278-6-0

5. *Personal Data Protection Bill 2020. The Ministry of Electronic and Information has introduced a data protection bill in the parliament during December 2019.The bill is applicable to processing of personal data. However ,bill is still with JPC (Joint Parliament Committee) and waiting to be passed*

THE USE OF SOCIAL MEDIA AS MARKETING TOOL FOR HOTEL INDUSTRY

Dr. Sweta Rani and Dr. Somarata Chakraborty
Assistant Professor, Army Institute of Management, Kolkata

ABSTRACT

The emergences of social media technologies have benefited many service industries in promoting their services locally as well as globally. Hotel industry is also no exception. The importance of social media marketing is gaining popularity for the promotion of brand in Hotel Industry. The online content such as customer experiences, user feedback and product reviews generated by user in various social media websites become the important source of information for both consumers as well as business. This study aims to explore the implementation, challenges, and methods used to measure the role of social media platform in Hotel Industries of India. The study takes on a qualitative approach and the data collection has been done by using a semi structured interviewing technique. Content analysis has been adopted to derive the findings of the research. The findings of the study provide significant insights to the researcher, Hotel management and the consumer. It contributes in understanding the consumer behaviour in social media and the impact on boosting the sales revenue for this specific industry. Also the research work suggests some strategies to effectively design the user content in social media platforms to enhance consumer preferences for service quality and evaluate service performance.

IMPACT OF YOGASANA AND PRANAYAMA ON PHYSICAL AND MENTAL HEALTH OF SCHOOL STUDENTS

Mrs. Mahananda S. H
Research Scholar, K. S. A.W.University, Vijayapura, Karnataka

Dr. Jyoti A. Upadhye
Research Guide, K. S. A.W.University, Vijayapura, Karnataka

ABSTRACT
Yoga gives controlled stretch to the muscles and improves the flexibility which is basic need for good physical health of school students. Asana help to relax the body and mind, by controlling the prana one can control the mind. Pranayama helps to gain control over the breathing, anulom and viloma has a soothing effect on the mind. By practicing meditation one can easily concentrate and relax. Present study is focused on finding Impact of Yogasana and Pranayama on physical and mental health of school students

***Keywords**: Physical and mental health, breathing practices, physical fitness.*

INTRODUCTION
The conceptual background of yoga has its origins in ancient Indian philosophy. There are numerous types of yoga, each having its own specific impact regarding the relative content of physical postures and exercises, breathing techniques, deep relaxation, and meditation practices that cultivate awareness and consciousness. The application of yoga as a therapeutic intervention, takes advantage of the various physiological benefits of the practices. The asana increase physical flexibility, coordination of mind and remaining body, strength. The breathing practices and meditation helps to be calm and focus the mind to develop greater awareness and diminish anxiety, and thus result in higher quality of life. Other beneficial effects might involve a reduction of stress, blood pressure, and improvements in resilience, mood, and metabolic regulation.

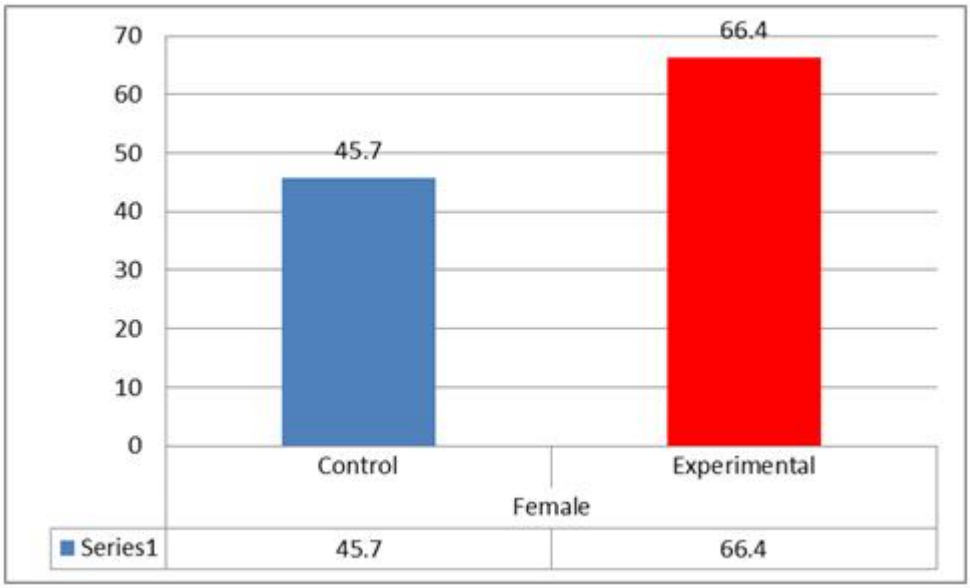
Yoga controls mental health, prevent depression, fatigue, anxiety, stress, posttraumatic stress disorder. It maintains physical fitness, sympathetic parasympathetic activation, and cardiovascular endurance. Regular practice of Yogasana improves cardio pulmonary conditions, hyper tension, pulmonary functions, metabolic processes, endocrine gland working, glucose regulation, musculoskeletal functions.

OBJECTIVE OF STUDY
- Evaluation of physical and mental health of female school students who don't practice yoga.
- Evaluation of physical and mental health of female primary school students who practice yoga.

HYPOTHESIS
- There is no significant impact of yoga on physical and mental health of female school students.

METHODOLOGY
Descriptive survey method was adopted for present study. 100 female school students were randomly selected as sample. 2 groups of students i.e., control and experimental group were prepared. Each group consists of 50 female students. Students of experimental group practiced yoga regularly for 40 to 50 minutes. Students of control group didn't practice yoga. Sample

ISBN: 978-81-949278-6-0



students were evaluated for their physical and mental health using a self prepared test paper. Collected data was tabulated and comparatively analyzed using mean, standard deviation and t value.

FINDING AND ANALYSIS

Table: Impact of Yoga on Physical and Mental Health of Primary School Students.

Gender	Group	Physical and Mental Health Status			
		Mean Value	Standard Deviation	t Value	Significant Level
Female	Control	45.7	1.34	0.78	0.05
	Experimental	66.4	1.0		

Fig: Impact of Yoga on Physical and Mental Health of Primary School Students

Data shows that yoga influence student's physical and mental health status of students. Female students, control group students have mean value 45.7 with standard deviation 1.34 while experimental group students have 66.4 mean values. For experimental group students mean found as 66.4 with standard deviation 1.04. Calculated t value is 0.78 which is significant at 0.05 levels. Hence hypotheses there are no significant impact of yoga on physical and mental health of female school students is rejected.

CONCLUSION

Yoga is helpful to keep better physical and mental health of school level students. The difference of impact on girls is not significant. Yoga increases self-confidence and self-efficacy. Govt. has accepted the importance of yoga that's why specific training sessions are organized for school teachers and students.

EFFECTS OF FARTLEK AND PLYOMETRIC TRAINING ON SPEED PERFORMANCE OF FOOT BALL PLAYERS VIJAYAPURA

Dr. Jyoti Awati
Research Scholar, ISSR POSTDOCTROL FELLOW (PDF)

Dr. Rajkumar. P. Malipatil
Research Guide, POSTDOCTROL FELLOW in K.S.A.W. University Vijaypur, Karnataka

ABSTRACT

The purpose of the study was effects of fartlek and plyometric training on speed performances of Foot Ball players Vijayapura. 45 from various schools. The selected subjects were of age group ranging from 14 to 16 years. The subjects were randomly divided into three groups and each group consisted of 15 subjects. Group-I underwent isolated fartlek training, Group-II was isolated plyometric training, and group-III act as control group was not given any special treatment. The experimental period was 12 weeks. Pre-test and posttest were taken before and after the training programme. The selected physical variables were Speed. During the intervention phase, a modified training program was offered by a well-trained to the experimental group under the supervision of the researcher at a school in Vijayapura. All participants were encouraged to continue their standard physical activities and routine procedures. The intervention phase 12 weeks and included morning 60 minutes and evening 60 minutes for alternative days in a week. To find out the significant Effects of fartlek and plyometric training on selected physical variable. The ANCOVA statistical technique was used to find the mean difference between the groups on physical variables. The results of the study revealed a significant group × test interaction ($p < 0.05$). Follow-up analyses indicated that while no group differences in physical variables existed between the four groups of the pre-test. In posttest all the experimental groups were found to have significantly ($p < 0.05$) better performance on the physical variables than the control group. The findings of the present study suggest that plyometric training improved the physical variables in school.

INTRODUCTION

Sports are integral part of the system of education. Training is a system of process in which Foot Ball players improve their fitness to meet the demands of their sport. Training uses both general and specific exercises to develop the Foot Ball players for their sport. Fartlek training refers to the training that uses some kind of fartlek to the contraction of a muscular force. In this training, the effort is normally performed more efficiently operating the Foot Ball players. Plyometric training involving repeated running to increase Speed. The plyometric training system can provide great amounts of energy but this system fatigues quickly. People participating in speed or power events like, football very familiar with this form of energy production.

METHODOLOGY

To achieve the purpose of the present study, 45 football players were selected from Vijayapur school, who had participated in the inter-school level tournaments. They were selected at random as subjects. All the subjects were of Vijayapura they had a similar academic work and regular activities in accordance with the requirements of their college curriculum. The selected subjects were of age group ranged from 14 to 16 years. The subjects were randomly divided into three groups and each group consisted of 15 subjects. Group-I underwent isolated fartlek training, Group-II was isolated plyometric training, and group-III act as control group was not given any special treatment. The study was conducted 12 weeks training schedule.Speed was selected as a dependent variable and it was tested through 50 meters run test. Pre test-post test-

ISBN: 978-81-949278-6-0

random group-research design was followed in this study. To find out the significant effects of aerobic and anaerobic training on selected Speed, analysis of covariance (ANCOVA) was computed (Clarke and Clarke, 1972) for the data collected aerobic, anaerobic, combined and control groups during pretest and posttest separately for each variable

Further to state, since four groups were involved, whenever the F ratio was significant, Scheffe's post hoc test was used determine which of the paired mean differed significance 0.05 was fixed.

RESULTS AND DISCUSSION

The statistical analysis comparing the initial and final means of agility due to effect of fartlek and plyometric training on selected physical fitness variable namely, Speed among Foot Ball players is presented in Table I.

Table –I Computation Of Analysis Of Covariance Of Agility.

	Faertlek training	Polymetric training	control	Source of varience sum of squares	Sum of squares	df	Mean squares obtained F	obtained
Pre test	**13.05**	**12.96**	**12.9**	**between**	**0.36**	**3**	**0.12**	**1.68**
				within	**5.45**	**76**	**0.07**	
Post test mean	**12.80**	**12.76**	**12.9**	**between**	**0.53**	**3**	**0.18**	**2.96**
				within	**4.73**	**76**	**0.06**	
Adjustmented post test mean	**12.83**	**12.77**	**13.9**	**between**	**0.87**	**3**	**0.29**	**17.79***
				within	**1.23**	**76**	**0.02**	
Mean Diff	**-0.16**	**-0.20**	**0.01**					

Table F-ratio at 0.05 level of confidence for 3 and 76 (df) =2.73, 3 and 75(df) =2.73 .*Significant

As shown in Table I, obtained F ratio of 1.68 on pre test means of the groups is not significant at 0.05 levels. This shows that there is no significant difference among the means of the groups at the initial stage and hence the random assignment of the groups is successful. The obtained F ratio on post test means is 2.86, and is significant at 0.05 level, being greater than the required F value of 2.73 to be significant at 0.05 level. Taking into consideration the pre test means and post test means, adjusted post test means are determined and analysis of covariance is done and the obtained F value 17.75 is greater than the required value of 2.73 and hence it is accepted. This shows that there are significant differences among the adjusted means on the Foot Ball players. Since significant improvements were recorded, the results were subjected to post hoc analysis using Scheffe's Confidence Interval test. The results are presented in Table II.

Table II Schaffer's Confidence Interval Test Scores on Speed

Fartlek training	Polymetric training	Control group	Mean diff	C.l
12,03	12.77		0.16*	0.12
12.83		12.96	0.13*	0.12
	12.77	12.96	0.29*	0.12

* Significant at 0.05 level.

ISBN: 978-81-949278-6-0

The post hoc analysis of obtained ordered adjusted means prove that (1) there are significant differences between fartlek training and plyometric training groups (2) fartlek and control group (3) plyometric and control group and . It is found that (1) there was no significant difference between fartlek and plyometric group .The ordered adjusted means are presented through bar diagram for better understanding of the results of this study.

Discussions On Findings As shown in Table I, the obtained F value on the scores of pre test means (1.68) is less than the required F value, which proves that the random assignment of the subjects were successful and their scores in Speed before the training were equal and there were no significant differences. Taking into consideration the pre test means and post test means, adjusted post test means are determined and analysis of covariance is done and the obtained F value 17.75 is greater than the required value of 2.73 and hence it is accepted. This shows that the interventional programmes significantly improve Speed of the Football players. The post hoc analysis of obtained ordered adjusted means prove that there are significant differences between (1) fartlek group and control group (2) plyometric group and control group. Comparing between the treatment groups, it is found that (1) there are significant differences between fartlek group and plyometric group .Thus, it is proved that while fartlek group and plyometric group improve Speed of the Football players compared to control group, plyometric group is better than improving Speed of the Football players the differences are significant at 0.05 levels. Bames Schilling and Falvo (2007) found large magnitude of differences on Speed performance among different categories of athletes and Speed covers 34% of the variance of performance. Under the twelve weeks fartlek and plyometric training the subjects were induced to exert more energy and training themselves. The findings proved that the twelve weeks fartlek and plyometric training had significant influence in improving Speed of the Football players. The finding of this study is in agreement with the findings of Bames Schilling and Falvo (2007) who found significant improvement in run time, a Speed improved performance due to frequent training protocol

CONCLUSIONS

1. It is concluded that effects of fartlek and plyometric training significantly improve Speed of the Foot ball Players.
2. The comparing among the treatment groups, the plyometric training would be better than fartlek training group and control Speed of the Foot ball Players. .

A SURVEY ON THE PERCEIVED IMPACTS OF PRIVATIZATION OF PUBLIC SECTOR UNDERTAKINGS

Dr Kushal De
Assistant Professor, Department of Commerce, Dhruba Chand Halder College, Kolkata

Madhuri Roy
Independent Researcher

ABSTRACT
Human resource management as a discipline has developed over the years and now it mainly focuses on training of individuals, providing opportunities to learn new skills, distributing beneficial resources besides concentrating on other development activities. India is expected to add about 250 million to its labor pool by the end of this year and the structure of domestic labor market has huge ramifications on labor outsourced by any nation with India being no exception. Privatization of public sector undertakings has been rampant in India since the 90s and the trends have increased in recent times. Under this backdrop, the present paper makes an honest attempt to assess the perceived impact of privatization of public sector undertakings on the society from a survey conducted on the general population on this issue. The results show that privatization of loss making public sectors are welcomed by the masses as they presume that it would enhance accountability, reduce negligence, give importance to customer service and satisfaction, and improve customer relationships.

Keywords: *customer, efficiency, employment, privatization, satisfaction.*

INTRODUCTION
Economist John R Commons first coined humans as resources in 1893 and the concept has grown since then. The main aspects of hiring, evaluating and compensating employees have taken a backseat today and full satisfaction of human resources is the present day mantra for sustainable development of nations. Human resource management as a discipline has developed over the years and now it mainly focuses on training of individuals, providing opportunities to learn new skills, distributing beneficial resources accordingly and concentrates on other development activities. It also ensures a match between the needs of an organization and that of an individual.

Human resource management is extremely crucial for India as she is one of the global hubs for labor outsourcing. India is expected to add about 250 million to its labor pool by the end of this year with additions at the rate of about 80 million a year, which is more than the entire labor force of the many countries. The structure of the domestic labor market has huge ramifications on labor outsourced by any nation and India is no exception. Migration also depends on various other factors like work pressure, job security, growth opportunities and incremental benefits besides the prime indicator named remuneration.

Privatization, described as the transfer of state-owned enterprises to private owners, is a common economic policy tool in the world. Privatization is not new to the government, although the government has always been vigilant about private sector participation in public enterprises. It has been argued that privatization of public sectors improves efficiency, curtails red tapes, reduces unnecessary costs and enhances accountability. On the other hand, it has been observed that human workforce productivity has improved under privatization but only when there are more job opportunities, the human resources can be provided with adequate rewards. Privatization of public sectors forces the companies to be efficient, or at least find some way to

make profit in order to revive the loss making public sector but, it has also led to less transparency and inflexibility.

However, the transformation of public sector units to private sector has a questionable effect on human resources. It is argued that the government should have clear and transparent regulations regarding numerous issues that can create problems to employees due to privatization such as the management structure, concerns about labor performance and dealing with financial crisis. There shouldn't be any hidden policy and the undertaking must be approached separately so that the performance level improves.

REVIEW OF LITERATURE

According to Ojta (2013), there can't be universal rules for all countries. One standardized method may not be appropriate for some countries. Therefore, one should correspond to privatization based on local conditions. There should be transparency in implementing the sale process; otherwise, fraud and corruption charges can't be stopped in society. According to their study, Gooderham et al (2018) showed that human resource development has progressed a lot as an educational discipline and people understand much more than they did four decades ago. However, to move forward, they suggested, HRM needs to adopt a theoretically well-established approach to HRM in multilevel reference, such as, serving multiple stakeholders and recognizing the importance of time. The comparative contextual framework gives us the rationale that future HRM research agendas will need to put special emphasis on external references which is considered institutionally as the best theory. Earl and Shapak (2019) stated that although economic analysis of privatization has largely focused on a more controversial question, it often impacts a firm and its employee's performances. Both policy makers and scholars feel that employment and wage effects are negative and activists around the world react to the possibility of privatization with protest and attacks, especially when foreign bosses are involved. Rachman and Sari (2019) showed that in terms of human resources, improvement in public service development has a growing impact with future-oriented training and team building methods, motivation and performance of all existing personnel, improvement in pattern of services rendered and increase the ability of knowledge, skills and attitudes in providing services to community. Public service reforms in the perspective of strengthening organizational culture changed the mindset and cultural setup of each personnel, based on value, integrity, professionalism and government ethics. So, a service culture that is high accountable is established which is service oriented to the interests of the community.

Jerset (2012) conveyed through his study that there were neutral effects of the process of privatization on the performance of employees and their salaries. There was no statistically significant difference due to the effect of privatization process. Employees' performance just accounted for their demographic variables. Philippovic (2005) stated that privatization, with appropriate structural reforms, creates incentives for improving economic efficiency, increasing investment and adopting new technologies. In addition, personalization plays an important role in creating ways to implement, paves the way for the right incentives and proper economic restructuring. It is necessary to note that the success of privatization largely depends on the government's commitment towards regulatory reforms.

Moynihan and Pandey (2007) found that recognizing the impact of public sector management means identifying a simultaneous set of organizational responsibilities. One of the alleged practical benefits of public sector management is that it helps to recruit individuals in the public sector and strengthens employee relations, provides a foundation for loyalty, motivation and commitment, which is more effective than monetary incentives. Public organizations should be aware of the impact on management systems and other organizational institutions. According to

ISBN: 978-81-949278-6-0

them, reducing and improving regulations that clarifies the goals and employees can have a positive impact on public sector management.

OBJECTIVES OF THE STUDY

Privatization is considered as one of the issues which attract lots of attention in the economic sphere. The aim of the present study is to assess how privatizations affect human resources and also examine if transformation of the public sectors would have far reaching consequences on labor, social security and employment relationship (as per the perceptions of the masses). In this backdrop, the present paper makes an honest attempt to assess the under mentioned issues through surveys conducted on sample of different ages about their perspectives on the subject.

1) The prevailing perceptions about the public sector and private sector undertakings.

2) Impact on human resources due to privatization of public sectors.

3) Perceptual impact on society due to privatization of public sector.

DATA AND METHODOLOGY

For the purpose of the study, a close ended questionnaire was designed by the researchers. It contained questions related to privatization of public sector and its impact on the human resource, economy, market and customers. 80 people residing in Bengal were chosen through purposive sampling technique as samples for study. The sample consisted of people belonging to various professions and having an employable age (ranging from 20-50 years). The sample has equal representations of both genders. The respondents were personally interviewed and their responses were tabulated in excel. The data so obtained were summarized and meaningful inferences were drawn.

FINDINGS FROM THE SURVEY

		Female N=40	Male N=40
Age	• Below 25 • 25-40 • Above 40	50% 42.5% 7.5%	42.5% 55% 2.5%
Occupation	• Service • Business • Self Employed • Others	27.5% 7.5% 15% 50%	42.5% 2.5% 20% 35%
Which Sector will you prefer to work for?	• Public/ Govt. Sector • Private Sector	62.5% 37.5%	65% 35%
Do you think Privatization of public sector will revive the loss making public sector?	• Yes • No • Maybe	35% 20% 45%	45% 32.5% 22.5%
According to you, which of the following sector should not be privatized?	• Education • Defense • Railways • Oil and Natural gas • Health Care • Insurance • Private security • Others	20% 37.5% 20% 2.5% 15% 2.5% 2.5% 0%	7.5% 37.5% 25% 7.5% 7.5% 0% 5% 15%

ISBN: 978-81-949278-6-0

As per the results from the survey, it is observed that more number of females and males surveyed prefer to work for public sector over private sector. Thus, employees till date wish public sector for employment. It is seen that both genders do not want few sectors to be privatized, primary among them being the defense sector, followed by education and railways. However, the sample had mixed views on the issue of privatization of public sectors for revival of losses.

Human Resource:

According to you, which sector focuses on talent for promotion?	• Public Sector • Private Sector • Both	17.5% 40% 42.5%	7.5% 62.5% 30%
According to you, what is the main cause for the underperformance of public sector?	• Lack of accountability • Lack of skilled labor • Too much job security • Unequal distribution of responsibility • Lack of proper training and guidance • Irresponsible consumer behavior • Others	10% 17.5% 30% 15% 17.5% 10% 0%	20% 7.5% 37.5% 7.5% 15% 7.5% 5%
Do you think privatization of public sector will create more job opportunities?	• Yes • No • Maybe	30% 30% 40%	37.5% 30% 32.5%
Do you think privatization of public sector will provide better and efficient training to the employees?	• Yes • No • Maybe	52.5% 15% 32.5%	65% 12.5% 22.5%
Do you think privatization of public sector will increase the efficiency and work ethics?	• Yes • No • Maybe	62.5% 15% 22.5%	67.5% 17.5% 15%
Do you think privatization of public sector will bring positive changes to the top level management?	• Yes • No • Maybe	50% 15% 35%	52.5% 17.5% 30%
Do you think in-house politics is more in private sector than public sector?	• Yes • No • Maybe	52.5% 17.5% 30%	45% 32.5% 22.5%

The result shows that private sector acknowledges talent more than the public sector. Thus, reward for efficiency in the form of promotion is more in the private sectors. It has been found that both the genders have the same perceptions regarding the cause of inefficiency of public sector. They feel that too much job security is the main factor for underperformance of public sector. Lack of skilled labor and lack of accountability are also deemed important factors in this regard.

The sample has mixed responses regarding creation of job opportunities due to privatization. The sample is confident that privatization of public sector will provide better and efficient training to the employees and also increase the efficiency and work ethics. Although most in the

ISBN: 978-81-949278-6-0

sample feel that in-house politics is more in private sector than public sector but still, they think that privatization of public sector will bring positive changes to the top level management.

Economy:

Do you think Privatization of public sector will contribute more to the economy?	• Yes • No • Maybe	25% 40% 35%	40% 40% 20%
Do you think privatization of public sector will help reducing the public finance crisis?	• Yes • No • Maybe	17.5% 35% 47.5%	35% 45% 20%
Do you think Privatization of public sector will increase the inflow of Foreign Direct Investment (FDI)?	• Yes • No • Maybe	50% 15% 35%	60% 17.5% 22.5%

The sample is indecisive about the contribution towards economy after privatization of public sectors. Thus from the nation's perspective, the sample is undecided about the gains. The sample is also not sure if privatization of public sector will help reducing the public finance crisis. But, the sample feels that inflow of Foreign Direct Investment (FDI) would increase due to privatization, as half of the total percentage of female and above 50% of the total percentage of male agreed on positive inflow of FDI after the privatization process.

Market

Do you think privatization of public sector will run the business more efficiently due to the profit motive?	• Yes • No • Maybe	65% 25% 10%	65% 12.5% 22.5%
Do you think privatization of public sector will lead open market economy?	• Yes • No • Maybe	47.5% 12.5% 40%	50% 32.5% 17.5%
Do you think privatization of public sector will encourage the shareholders to invest more?	• Yes • No • Maybe	45% 17.5% 37.5%	55% 25% 20%
Do you think privatization of public sector will reduce the cost of production?	• Yes • No • Maybe	50% 15% 35%	30% 52.5% 17.5%

Both the genders are optimistic that after privatization of public sector, the working efficiency would be enhanced. This view is shared by 65% of the sample. On the question leading to open market economy due to privatization of public sector, 47.5% of female and 50% of male acknowledged on it. 45% of female and 55% of male agreed that privatization of public sector will encourage the shareholders to invest more. In spite of the above benefits, the sample is indecisive whether privatization of public sector will reduce the cost of production.

Customers:

Do you think privatization of public sector will give more importance to customer service and satisfaction?	• Yes • No • Maybe	65% 5% 30%	67.5% 12.5% 20%
Do you think privatization of public sector will reduce the customer negligence towards the property?	• Yes • No	60% 15%	52.5% 30%

ISBN: 978-81-949278-6-0

	• Maybe	25%	17.5%
Do you think privatization of public sector will improve customer relationship?	• Yes • No • Maybe	70% 7.5% 22.5%	57.5% 17.5% 25%

The customers are regarded as god by modern marketers and privatization seems to have positive effect on their satisfaction. Both genders share the same beliefs on the issue that the customers will get better service and satisfaction after the privatization of public sector. More than half of the total sample believes that pragmatic and beneficial effect will come after privatization of public sector regarding negligence of customers towards the public property. A high percentage of respondents (70% and 57.5% of female and male respectively) agreed that privatization of public sector would lead to improvement of customer relationship.

CONCLUSION

Privatization of public sectors has been a topic of discussion in every economic forum. One school of thought strongly argues for it and another against it. A survey among general employable masses residing in Bengal show that privatization of loss making public sectors are welcomed by the masses as they presume that it would enhance accountability, reduce negligence, give importance to customer service and satisfaction, and improve customer relationship. The sample also believes that there would be better management of assets and enhanced inflow of FDI due to privatization. Interestingly, the sample is not so sure about reduction in the cost of production, investment by general public in the newly transformed company, creation of newer jobs and reduction of public finance burden.

As regards to human resources, the sample is of the opinion that privatization would increase work efficiency, improve methods of performance through training and development of employees, improve overall work culture and create stimulus for institutional growth. However, the sample has strong opinions against privatization of few important sectors like defense, education, railways, health, etc. It is believed that privatization of these sectors would be injurious to the society in the long run. The prime cause of inefficiency and underperformance of public sector, according to the sample, are job security of employees, lack of accountability, lack of adequate skills or training etc. Interestingly, when personally enquired, the sample would prefer to work in the public sector in spite of these hindrances at workplace. It can thus be comprehended that privatization is welcomed by the general masses in public sectors (barring few sectors) but the general employees till date prefer to work in the public sector undertakings.

ABOUT AUTHOR

Dr. Tazyn Rahman is an Associate Professor at Institute of Technology and Science (ITS), Mohan Nagar, Ghaziabad with close to fourteen years of experience in academics and industry. She holds a Ph.D. in Commerce from CCS University, Meerut and M.B.A with specialization in HR and Marketing from Gauhati University. She was a also a Programme Director of Management Development Programmes in "Brand Management" conducted by Jaipuria School of Business, Ghaziabad.

She is the Editor - In - Chief of International Journal of Research in Management & Social Science and International Journal of Advance & Innovative Research published by Empyreal Institute of Higher Education and Indian Academicians and Researchers Association, Guwahati respectively. She has been conference convener of many international conferences.

Her research interests are focused on Strategic Human resources Management, Entrepreneurship, Marketing with a focus on emerging markets. She has published /presented /contributed more than 50 research papers in various National and International Journals and conferences. She has four edited book to her credit. Her edited books are Digital India- A Road Ahead (ISBN: 978-81-930928-0-4.), Business Sustainability And Contemporary Practices: Business Management Cases (ISBN: 978-81-930928-6-6), Business Perspectives in Emerging Markets (ISBN: 978-81-930928-7-3) and Recent Research Trends in Management and Social Science (ISBN: 978-81-941253-2-7)

ABOUT THE BOOK

In the new millennium many old theories have now become redundant, and the study of Management, Social Sciences and Technology is now faced with new challenges. This book is an attempt to capture this transformation not just in practice but also in research. It tries to answer the challenges faced by the practitioners of management, social sciences and technology in their everyday lives by attempting to bring together both academics and practitioners together. This book presents a holistic view of the emerging trends in Management, Social Sciences and Technology on consumer behavior, financial ecosystem, human resources, quality management and international business in the global economy. This book not only highlights the issues hampering growth but also provides relevant solutions to foster economic growth and development.

We believe that this book will contribute to the colossal interest of scholars, researchers, policy makers, management practitioners, administrators and academicians in augmenting their intellectual growth and facilitate future research in the field of Advances in Management, Social Sciences and Technology.

निरमण्ड का इतिहास, सामाजिक, आर्थिक व देव परम्पराएं

डॉ. अंकुश भारद्वाज[1]
कौशल्या देवी[2]

शोध सारांश

प्रस्तुत शोध पत्र में निरमण्ड के सामाजिक, आर्थिक परिवर्तन और आध्यात्मिक आस्था के विभिन्न आयामों को प्रदर्शित करता है, इस शोध पत्र के (अधीन) अन्तर्गत पौराणिक कथाओं, जनश्रुतियों तथा सामान्यकरण के माध्यम से निरमण्ड क्षेत्र के इतिहास को समझने का प्रयास किया गया है। इस शोध पत्र में महत्त्वपूर्ण स्थल कैसे जनभावना का केन्द्र बन गए तथा उनके पौधे को ऐतिहासिक बोध को समझने का भी प्रयास किया है। भारतीय विरासत की ऋषि परम्परा को समझते हुए इस क्षेत्र में हो ने वाले परिवर्तनों जिसमें सामाजिक-आर्थिक घटनाक्रम आधुनिक भारत तक समझ गया है। इस क्षेत्र में होने वाले सांस्कृतिक घटनाक्रम जिसमें खेलकूद तथा जीवन के मनोरंजक पलों को विभिन्न आयामों को भी दृष्टिपात किया गया है।

संकेत शब्द : *निरमण्ड, कालखण्ड, इतिहास, सामाजिक, देव परम्परा।*

नाम की उत्पत्ति

पौराणिक ऐतिहासिक ग्रन्थ में दक्ष प्रजापति की बात निरमण्ड के इतिहास में आती है। जब भगवान शंकर के ससुर दक्ष प्रजापति के घर में यज्ञोत्सव चल रहा था। भगवान शिव और दक्ष प्रजापति के मध्य चल रहे मनमुटाव के कारण दक्ष प्रजापति ने शिव को यज्ञ में आमन्त्रित नहीं किया। हठ करके सती बिन बुलाए यज्ञशाला में पहुंच गई। यज्ञ में शिव का स्थान न देखकर सती यज्ञाग्नि में कूद पड़ी। शंकर जी को जब इस घटना का पता चला तो क्रुद्ध होकर वह यज्ञशाला में पहुंचे तथा सती का मृत शरीर त्रिशूल पर लटकाकर दिगम्बर रूप धारण कर भूमण्डल में भटकने लगे। शिवजी के इस मानसिक असंतुलन व क्रोध को देखकर भगवान विष्णु ने सुदर्शन चक्र का आह्वान किया। सुदर्शन चक्र से सती के अंग कटकर भूमि पर गिरने लगे। जहां-जहां जो अंग गिरा उसी के नाम से उस स्थान का नामकरण हुआ तथा वे शक्तिपीठ कहलाए। शंकर जी जब इस निरमण्ड स्थान पर पहुंचे तो त्रिशुल पर शेष बचा सती का सिर यहां गिरा और त्रिशूल मुण्डवहीन अर्थात् निर्मुण्ड हो गया। इसलिए यहां का नाम नृमुड पड़ा जो बाद में निरमण्ड बन गया।[1]

भौगोलिक स्थिति

निरमण्ड क्षेत्र जिला कुल्लू के अन्तर्गत आता है। यह क्षेत्र आनी, बंजार तथा शिमला जिले के भूक्षेत्र से घिरा हुआ है। निरमण्ड क्षेत्र के साथ ही सतलुज नदी जिसका उद्भव तिब्बत स्थित ऊंचाई १८५०० फीट मानसरोवर झील के पार्श्व से होता है, बहती है। राजस्व रिकार्ड के अनुसार निरमण्ड गांव ९३ बीघा, ५ बिस्वा क्षेत्र में बसा है, १२० अंश का कोण बनाते हुए यह गांव चारों दिशाओं में फैला हुआ है।[2] इस क्षेत्र की मुख्य खड्ड 'कुर्पन' है जो श्रीखण्ड कैलाश (५१८२ मीटर) के समीप 'नैनसर' नामक

Women's participation in National Movement : Role of Socio-religious Reform Movements

Dr. Ankush Bhardwaj

ABSTRACT

The entire story of the freedom movement is replete with the saga of bravery, sacrifice and political sagacity of great men and women of the country. In the long tale of the struggle for freedom with political and social reform activities had their part to play. It may be that some leaders might have emphasized one while others laid stress on the other, but generally the consciousness of their mutual impact on the effort towards independence was present all the time. The reform movement in nineteenth century was hastened by Western impact but its inspiration was indigenous, and it was but a continuation of the earlier reform movements which derived their inspiration from the essence of ancient Indian cultural traditions. Abuses in the religious and social spheres at everytime in the history of India have been sought to be remedied by recourse to the purity of the teaching of Vedas and Upanishads and the great treasure of our cultural heritage. Therefore, in this paper, an attempt has been made to understand the inter-relationship of socio-religious reform movement and struggle for freedom.

Keywords: *Social reforms, Nationalism, Asharam, Society, Struggle, Freedom.*

The passion for all round reform which had animated a host of medieval saint-reformers in India and many centuries earlier had inspired the Buddha and Mahavir to strive for the regeneration of man, manifested itself again in the nineteenth century.[1] The effective interpretation of India by the West, alike on the social and economic plane, may be said to have begun about 1800.[2] And the intellectual awakening in India which was one of its primary result and which in its turn was to produce far-reaching changes in Indian society, became distinctly visible shortly thereafter.[3]

The 19th and 20th centuries witnessed the beginning of many socio-religious reform movements in different parts of India. As part of the national renaissance, movements like Arya Samaj, Brahma Samaj, Prarthana Samaj and Theosophical Society spearheaded the social reformation in the various parts of India. Along with the generation of a national feeling, such movements fought against the evils like sati, infanticide, child marriage and other kinds of discriminations like caste system and untouchability.

Social reform and nationalism were but two facets of the Renaissance that began to convulse Indian life from the beginning of the Nineteenth century. One can broadly agree with "Zacharias" that movements for social reform and political emancipation were closely connected, that it is impossible to understand Indian political aspirations and activities if one divorces them from that nations great new

Traders of Western Himalayas: Study of Land Routes and Commodities of Trade in Sirmaur region in Himachal Pradesh

Neelam *
Anjali Verma**

Abstract

The geographic location of district of Sirmour in Himachal Pradesh in Western Himalayan region has provided link routes between Himachal Pradesh, Uttar Pradesh and Haryana. Traders of Sirmour never left their agricultural occupation and traded only the commodities of need, not luxury in the past. The present paper is a literary and empirical study of traders involved in various occupations and commodity exchange from colonial period to till today. The present study covers various land routes crossing various villages from Sirmur to Sarahan(in Himachal Pradesh), to Saharanpur (in Uttar Pradesh) and Jagadhari (in Haryana) for import and from Dadahu to Ambala (Haryana), Shimla and Yamunanagar (Haryana) for export. The formation of small *haats* and bazaars in-between provided spaces for exchange, inter-change and addition to their trade commodities for the next station that forms the base of this panoramic study.

It concludes that trade routes formed the life-line for import-export, exchange and purchase for new commodities in and around Sirmaur area with many neighbouring states. The present study involves besides available literary sources, the interview of a traders who remained involved in trade activities for more than six decades of their life. Present paper is the narration of their experiences as a trader. It concludes with important observation of change in life-style, attitude, economy and income of people from colonial times to the present century.

Keywords: Commodities, Export, Import, Sirmaur, Trade, trade-routes, Western Himalaya

Introduction

Sirmour, is one of the districts of Himachal Pradesh, but its socio-cultural and economic spheres extended far beyond its political boundaries to the adjoining parts of Uttar Pradesh, Haryana, Punjab and Uttrakhand. The references of trade activities in this region are scanty due to want of literary, numismatic and epigraphic sources. Still paper tries to streamline the facts involved in trade activities in this region through available literary sources and field interviews for better empirical understanding.

None of the hill states during colonial period in western Himalayan region was economically self-sufficient. It can be admitted that traders' class initially was not existing in Sirmaur. Agriculturists used to deal in various small trade/ occupations when they were free from their seasonal agricultural activities. Potters, weavers, tanners were part of village economy but were not traders in real sense as their consumers were their villagers only. They were a part of symbiotic relation of village agriculturist economy. Traders of Sirmaur were basically agriculturists who never left their agricultural occupation and traded only the commodities of need, not of luxury.

::

Abstract

Worship of *Nagas* is prevalent throughout India and as old as Indian civilization. Himachal Pradesh is among all those places where worship of *Nagas* traced back to Christian era. The people of Himachal Pradesh have great belief in snake worship. The temples of serpent are found in each and every village of Himachal Pradesh. But here two kinds of faiths are popular among inhabitants of Himachal Pradesh, one in the upper hills and other in the lower hills. Both are separate in their identity. Worship of snakes in the upper hills traces its origin from epic age, while in the lower hills (District- Chamba, Kangra, Hamirpur, Bilaspur, Una, Solan and Sirmaur of Himachal Pradesh) from medieval times. In the lower hills the cult of *Gugga* is prevalent. But the cult of *Gugga* had been prevalent in *rajputana* long before it was introduced into Western Himalayas. But traces of serpent worship goes back to early century, early inhabitants were familiar with the worship of venomous reptiles. Although strayed evidences found at *Dehra Gopipur* and *Bharoli* in the Kangra district indicate that life must be started very early in this region.

I

Religion and spiritual convictions are closely interlinked with society and culture of Western Himalayas. It has been become essential to study the religious practices and beliefs of hills, while discuss about the socio-cultural life of hills. Religion cannot be neglected from the socio-cultural life of hills. The people of hills are very devotional minded (Thakur, 1997) and obviously because religion and rituals have important role in their daily life. They have great belief in their local deities besides the pan Hindu pantheon of Indian sub-continent. These deities worshiped for the prosperity and well-being of the generations, protection of animals and safety from the natural calamities. These Devi's and Devtas are believed to be the manifestation of Lord Brahma, Vishnu and Mahesh. Mostly the local devtas are believed to be manifestations of Shaivites; worship of Shiva is more common in mountainous areas. The people of Himachal have a unique way of celebrating fairs and performing traditional rituals to mark births, deaths, harvests, or good rain fall. Ancient folk deals with stories of gods or war heroes or chieftains. The people of Himachal love festivals and participate with great enthusiasm in local festivals and fairs. In the western Himalayas no religious function is considered complete without the presence and blessings of the devta. The various cults of spatial origin are prevalent in Himachal Pradesh each village has its own deity called as Gram Devta (Village God) in Local language. The people of different ethnicity had migrated from various parts of the subcontinent. The process of migration was slow, but continued from centuries, up to the 18th century. They have different reasons for the migration; the most common was the safety of life during political turmoil of the plains. The people who had come to hills are not only physical migrations but they had brought their socio-religious practices. The worship of snake deities is one of them. Worship of snakes gods under the various twist of the

A RE-LOOK ON PROTECTION OF THE RIGHTS OF FOREST DWELLERS VIZ-A-VIZ MINING ACTIVITIES IN INDIA

- Dr M P Chengappa* & Ms Manisha Kayal**

INTRODUCTION

India is a very rich land when it comes to mineral resources, and most of these resources are located in the dense forests, which are the home to various indigenous people. The increase in various mining activities has lead to the exploitation of these indigenous populations, which are for commercial gain at the cost of the livelihood of these people. Every sustainable model of development should aim at the indigenous people having rights over their land and the improvement of their livelihood. The Constitution of India, 1950, and various other welfare legislations been enacted for protection of these tribal populations from being exploited, and they deserve the same rights and respect as any other person in the society.

The industrial development and urbanization process has been the cause of the destruction of major portions of the forests throughout the world. Mining activities are one of the activities which causes threat to enviorment as well as promotes economic development of the country which can lead to a negative impact on the forest, ecology, environment and the people living residing near such activities. These adverse impacts on the people and the environment can be prevented by following proper mechanisms and taking necessary precautionary measures.[1] There have been various instances where mining activities have bypassed the various provisions of law as it takes place in remote places where it is impossible to keep a track if 10 hectares of land is permitted and the concerned industry uses 15 hectares of land and damages further 5hectares.

Many people have been forcefully displaced from their land and have been shifted to other places, especially the forest dwellers, and the tribal population has been highly affected by such mining activities. These displacement processes not only take away the land from the tribal people but also affect their health, education, and economic status by forcing them to other places where they have no means of livelihood. The Supreme Court of India has played an active role by looking into the concerns of these people and has tried to create an equilibrium between

1. Philippe Cullet, 'Mining, Land and Water Law: Ensuring Sustainable and Equitable Outcomes' (The bloomsbury, 11 January 2017)<http://www.bloomsbury.ac.uk/studentships/studentships-2017/mining-land-and-water-law-ensuring-sustainable-and-equitable-outcomes-soas-bbk> accessed 30 March 2019.

the rights of the tribal population and the development projects. The tribal groups in India have been under the constant fight for protecting their rights against the development schemes, which affect their livelihood and force them to be displaced.

The ***Orissa Mining Corporation***[2] case has not only protected the rights of the tribal community but the Court also portrayed that development projects which are a platform for major employment opportunities for many people cannot be implemented by disregarding the rights of the tribal communities and the forest dwellers who mainly depend on the forests for their daily livelihood.This judgment was a landmark case after which the Indian Judiciary has evolved its approach to uphold the rights of the forest dwellers and protect them from unjust encroachment of their land and livelihood.

THE RIGHTS OF THE FOREST DWELLERS

'Tribe' is, in its common meaning, means the people of a social group living in primitive conditions in a fixed territory. They are the people who reside in the forests since the primitive ages and continue living there in modern society[3]. Forest dwellers are these tribal people who live in the forest land and depend on the forest products for their livelihood. They are considered to be a part of the forest itself as they are adapted in the various conditions of the forests. There are still various incidents where many indigenous communities are at the risk of being evicted without a necessary rehabilitation scheme being implemented. The legislative schemes,in many instances, have not beenable to protect the tribal community from large corporations that attempt to amass control over the collective resources of these tribal people and often end up destroying their life support system in the process.

Article 366 (25) of The Constitution of India, 1950, states that Scheduled Tribes are the people of the tribes or the tribal groups, as mentioned under Article 242, and Article 242 states that these are the tribes as declared by the President by the issuance of a public notification. Post-independence various legislations have been enacted to empower the Indian tribal group and upholding their rights like the Scheduled Tribes and other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006 (hereinafter referred to as the "FRA") and the panchayats Extension to Scheduled Areas (hereinafterreferred to as the "PESA") Act, 1996.

2. *Ibid.*
3. Anuj Kumar, 'Rights of tribals in india with respect to access to justice' (Legal desire , 25 June 2016) <http://www.legaldesire.com/rights-of-tribals-in-india-with-respect-to-access-to-justice/> accessed 15 March 2019.

Both the Acts aresocial welfare legislation to protect and promote the different traditions and practices of the forest dwellers.

The FRA states about various customary rights of the forest dwellers and the tribal people for usage of forest land. Sec. 2(o) of the FRA states that a person who lives in the forest or the forest lands and depends on it for his/her livelihood for three-generation is a 'forest dweller.' Sec. 2(c) of the FRA provides that a person belonging to the Scheduled Tribe is also eligible for the rights under FRA, and Sec. 4(1) discusses that a person who resides in the Scheduled Areas is also entitled to the rights under the FRA.

The FRA provides for three types of rights, land rights, use rights, and the right to protect and conserve. The land rights are for the rights over the land that the forest dwellers have been cultivating for their livelihood and residing under Sec. 4(3) and Sec 3(1)(a). Sec 4(4) of the FRA mentions the fact that these lands cannot be sold or transferred and has to be passed only by inheritance. Sec 3(1)(c) states that the forest dwellers are permitted to use the forest products which are traditionally collected by them, and Sec. 3(d) of the Act provides for the rights of using the grazing grounds for cattle and usage of water bodies. Sec. 3(1)(i) of the FRA grants a right and power to the forest dwellers to protect and conserve the forest land and the forest resources. Sec. 6 of the FRA discusses a three-stage process for deciding the rights of the forest dwellers. It states that the Gram Sabha has to propose who should be entitled to use the forest land for cultivation and forest resources. These suggestions have to be sent to the Taluka Committee, and the District Level Committee for their approval and the District Level Committee is empowered to take the final decision. But the Gram Sabha is the main authority to decide the people who would be eligible for any of the rights under this Act.

The PESA was implemented by the Government of India for the purpose of providing the authority to the Gram Sabha of the tribal regions to govern them. The PESA empowers the Gram Sabha to independently make laws about the traditions, customs, land, etc. of the tribal people, and the State legislations are not implemented on them. The Gram Sabha is also entrusted to be consulted before any land is acquired in the tribal area for any development schemes. The recommendations of the Gram Sabha have to be compelled with the purpose of any such development programs .[4]

4. *Supra* Note 4.

The advancement of any country is directly related to the well being and the rights of the common people. Most parts of the lands which belong to the tribal people are immensely rich in minerals and attracting mining based projects, both domestic as well as international investment. This leads to a dispute between the tribal community and the state when the state attempts to exploit these resources for the economic growth of the country[5]. In spite of the existence of stringent mechanisms for ensuring the protection of the tribal people and their rights, there are very fewer instances of strict implementation of them by the State.

JUDICIAL INTERPRETATION OF THE RIGHTS OF FOREST DWELLERS

The Supreme Court of India has been trying to keep a balance between the rights of the forest dwellers and the tribal community with the development projects while taking into consideration the genuine interests of the local inhabitants and protection of the forest lands. In ***Kailas v. State of Maharashtra,***[6] the Supreme Court of India had expressed its concern about the Scheduled Tribes who have been a victim for many years and the community's approach should change towards them and they should be granted social dignity, and their rights should be upheld and protected.

In ***BanwasiSeva Ashram v.State of Uttar Pradesh & Ors.***[7] , the main dispute was relating to the demands of the Adivasis(the tribal population) for their land and land-related rights as the land was being acquired for setting up a thermal power project by the State. The Court, while trying to address the issue,realized that there has to be a balance between development and the traditional rights of the forest dwellers and directed for the settlement of the rights of the Adivasis and also stated that they should be given proper title deeds. In ***Fatesang Gimba Vasava& Ors. v. State of Gujarat & Ors.***[8] , a complaint was filed by the Adivasis as they had been harassed by the Forest Department officers who were depriving them of their rights, such as the collection of forest products like bamboo. The Court upheld the claims and stated that they were entitled to collect forest products on which they have been dependent on primitive times. In ***Pradeep Krishen v. Union of India***[9] , the government had permitted the tribal people to collect leaves from sanctuaries and national parks as a part of their traditional rights which was challenged for

5. Shreya Sood and Shreya Mishre, 'Mineral Rights of Tribal with special reference to the Threesiamma Jacob Judgement' 8 NUALS Law Journal 231 (2014).
6. 1 SCC 793 (2011).
7. 1 SCR 374 (1987).
8. 1 GLR 219 (1987).
9. 8 SCC 599 (1996).

protecting the ecology and the wildlife at those places. The Court stated that the livelihood of the tribal people could not in any manner, destroy or hamper the wildlife or the environment and directed for precautionary measures to be implemented.

In ***Samatha v. State of Andhra Pradesh***[10], the government had by the execution of a lease deed permitted private mining companies to operate in tribal land, but the Supreme Court of India took the side of the tribal people and declared such lease deed to be null and void. Further, the Supreme Court of India issued guidelines to assess any application of mines in the forest area and stated that any mining operation could not be allowed to operate, which is detrimental to the forest growth and violates the rights of the forest dwellers. The case of ***Tarun Bharat Sangh, Alwar v. Union of India***[11] is one of the examples where the Court issued directions for the prevention of mining operations in the forests. The mining of limestone and marble had to lead to the drying of the water bodies in the forests, and the dynamites had mostly destroyed the hills. The Court permitted the mines situated outside the forests but passed immediate order to prevent the mines for operation which were inside the forests and had been damaging the forest.

Thus the Indian Judiciary in the various past instances has been trying to protect and promote the rights of the indigenous people in instances of their exploitation. In most instances, the Courts have realized that these tribal communities are not aware of their rights, and their grievances are not taken into account by the State, and in such a situation, the Courts have acted in a manner to safeguard these people.

THE FOREST DWELLERS' RIGHTS IN LIGHT OF ORISSA MINING CORPORATION LTD V. MINISTRY OF ENVIRONMENT & FOREST JUDGMENT

a) Factual Background

The state of Orissa is one of the richest states concerning minerals in the country. Various international companies like Vedanta Ltd, POSCO, and Arcelor-Mittal have constructed or proposed to construct projects in the state for its rich minerals. The Niyamgiri Hills, located in Orissa, is home to a huge population of tribal groups. These people have resided near the hills and worshiped the Niyamgiri Hills as abode of their god Lord Niyam Raja. A joint-venture project was entered into by the State-run Orissa Mining Corporation (hereinafter "OMC"), and London originated Vedanta Aluminium Ltd's subsidiary in India, Vedanta Resources Plc.For the

10. 2 SCR 305 (1997).
11. 3 SCR 21 (1993).

purpose of extracting bauxite over 250 square kilometers in the Niyamgiri region, which affected 12 villages of the tribal group. The tribal people were against the implementation of this project.

A writ petition had been filed before the Supreme Court of India by OMC against the order passed by the Indian Ministry of Environment and Forest, which had rejected the Stage II clearance of forest lands for mining of bauxite.This rejection was done based on three issues:

- Violation of the rights of tribal groups, which included the primitive tribal group, scheduled tribes, and traditional forest dwellers.
- Violation of provisions of the Environment Protection Act, 1986
- Violation of provisions of the Forest Conservation Act, 1980, dealing with adverse impact on the ecology and biodiversity.

Vedanta Ltd. and Steriline Ltd. were permitted Stage I clearance to set up an aluminum refinery, but the Stage II clearance was rejected for violation of forest laws on the suggestions made by the Saxena Committee. The Saxena Committee, in their report, expressed the grievance of the tribal people whose livelihood and habitat were being affected by the concerned project. Even their religious place which was located on the top of the mountain would be demolished by the mining activities. This raised a major concern among the tribal group and they had expressed their grievances. The forest areaand the environment were also being damaged and highly hampered by the concerned authorities for the execution of the project leading to depletion of soil and drying of flora and fauna.

b) Court's observation on the Rights of the Tribal people

The Supreme Court of India discussed the case of the ***Union of India v. Rakesh Kumar & Ors.***[12] , where it had stated about the rights of the primitive tribal groups and stated that these people were directly or indirectly being deprived of their rights by this mining activity if the clearance was permitted. The mining and the refinery activities were part and parcel of the same bauxite project, and such cannot be permitted to take away the rights of the locals residing in the forest land and forest resources, and their rehabilitation was a major concern. The Court discussed these issues and stated that tribal community plays an important role in developing and managing the environment with their traditional knowledge and traditional practices and the

12. 4 SCC 50 (2010).

State is under the obligation to promote them for effective, sustainable development, and it cannot in any manner take away these rights from the tribal group.

The Court further noted that Articles 244, 342, 362 and 366 of the Indian Constitution, 1950which provides for the socio-economic rights of the tribal people and the forest dwellers who are there to create an ecological balance. Also, the Court stated that religious rights protected under Articles 21,25, and 26 of the Indian Constitution, 1950,cannot be curtailed by the State in any arbitrary manner as the Niyamgiri Hills was a religious place of the tribal it needed to be protected. The Court also stressed on the fact that cultural, sustainability and customary rights of the tribal by looking into various international obligations like International Labour organization (hereinafter "ILO"), Convention on Indigenous and Tribal Populations Convention, 1957, Convention on Biodiversity, 1992 Rio Declaration, 1992 (Agenda 21) and the Earth Summit, 1992, India being a signatory to all these conventions[13]. There was also an international obligation on India to promote and protect the rights of the tribal population while protecting the forest land and not permitting any development project which would damage the environment in any manner.

In this case, the Supreme Court of India protected the rights of the forest dwellers, and by these types of judicial activism, the Court tries to keep a balance and set an example that industrial development cannot hamper the environment and the livelihood of the primitive people. The Court further discussed how the FRA and the PESA should protect and preserve the traditional cultures of the Scheduled Tribes and the forest dwellers, their rights to the community resources, and how the government cannot in any situation deprive them of their rights in the name of industrial development. In a situation where the legislation provides for a wide range of rights for the benefit and welfare of the forest dwellers and the Scheduled Tribes which includes their customary and traditional rights as a community, then they cannot be deprived of it for expansion of industrial development and the rights should be preserved. Most of the tribal population is not aware of their rights and privileges and does not have financial means to fight against the large corporations which damage their cultural heritage[14]. It is an implied responsibility of the State to make the tribal people aware of these rights for the management of the environment and sustainable development. The FRA is not limited to protect the rights of the

13. *Supra* Note 1Para 37-38.
14. *Supra* Note 1 Para 39.

forest dwellers in case of loss of habitat but also for their right to conserve the forest.

c) The Power of Gram Sabha

The main claim of OMC was that the FRA and its rules did not put any mandate on them to acquire the consent of the Gram Sabha to acquire the forest lands if the State government would permit them. The Court discussed the role of the Gram Sabha under the FRA, which had the competent authority to decide the grievances of the locals of the forest area against any mining activity. Sec. 6 of the FRA empowers the Gram Sabha to be the competent authority that had the power to assess the community as well as the individual rights of the forest dwellers. The Gram Sabha after considering them, has to communicate it to the Ministry of Environment and Forest, and the Ministry would take the final measure to protect them. The FRA provides the tribal people various rights, and the Gram Sabha is the central body to administrate the affairs of the tribal people, protect them and empower the tribal people with their rights .[15]

The Court also addressed the religious rights of the affected tribal people and stated that the Gram Sabha had the sole authority to decide over such matters. It stated that the tribal population residing in the forests have a fundamental right to profess religion under Article 25 and 26 of the Constitution and the State was under a mandate to protect such right. The Gram Sabha protected these rights under the FRA.

The decision was a huge disappointment for concerns like Vedanta and OMC as it addressed the grievances of the local habitats and imposed the consent of the Gram Sabha to be mandatory[16]. The Court also directed the State Government along with the Ministry of Tribal Affairs to help the Gram Sabha in settling all individual as well as community claims. The Gram Sabha had to decide in three months of the filing of these claims and had to inform the Ministry about the same, which had the authority to take the final decision and provide for its approval.

Mining activities that cause soil erosion damage the plants and streams of the area an affect the people, and the animals living in the forest area have to be closed down at once. Such activities not only damage the environment presently but also affect the environment for its future use. Any industrial development cannot be permitted to operate at the cost of environmental harm and needs to be stopped. The Indian Judiciary, in various past instances, has taken affirmative action against such activities, which in any manner causes serious damage to the environment.

---

15. *Supra* Note 1 Para 55.
16. *Supra* Note 1 Para 36.

Environment protection is the duty of every individual, as well as the State and any activity for the purpose of economic development, cannot be allowed at the cost of environmental damage.

THE PRESENT STATUS OF FOREST DWELLERS' RIGHTS

There are major loopholes in both FRA and PESA, like the claim settlement process operates at a very slow pace because of many structural issues. These Acts fall weak before the industrial development and before the proper mechanisms of its implementation[17]. In most instances, the rights of the forest dwellers have been considered to be secondary when there has been a requirement for extracting resources in the name of development. The traditional customs and the rights of the tribal population and the forest dwellers have to be balanced by the legal framework to empower them to a better future.

In ***K.Guruprasad Rao v. State of Karnataka & Ors***[18], was decided in July after the passing of the judgment of ***Orissa Mining corporation*** case in April, the Court again got the opportunity to discuss the rights of the forest dwellers about this case. The main issue was relating to mining operations being carried out near a temple which has been declared as a "protected monument" by the Government of Karnataka and also 200 meters of the temple was declared as a "safe zone," and no mining activity was supposed to be there. The State had granted a mining lease near the temple, and these activities were damaging the structure of the temple and affecting the lives of the population residing near it. The Supreme Court discussed the principle of sustainable development and how there is a need to keep a balance between development with environmental protection. The Court then referred the case of ***Orissa Mining Corporation Ltd,***[19] where it had previously discussed the customary and cultural rights of forest dwellers that have to protected and preserved and concluded that there is a need to protect the cultural, social, political, and economic rights of the forest dwellers. These rights are inherent rights which need to be respected and promoted. The forest dwellers are a part of the forest, and their rights cannot be separated. The Court then referred to ***AmritlalAthubhai Shah v. Union Government of India***[20], where it had stated that the rights of the forest dwellers have to be protected, and Gram Sabha is under the mandate to protect these rights. The Court finally stated that mining activities

17. MayankVikas , 'Commentary on The Global Indigenous Peoples Movement: It's Stirring in India' [2016] 2(141) Journal of Law, Property, and Society <http://alps.syr.edu/wp-content/uploads/2017/02/JLPS-2016-11-Vikas.pdf> accessed 28 March 2019.
18. 8 SCC 418 (2013).
19. *Supra* Note 1.
20. 4 SCC 108 (1976).

generate financial wealth, and historical monuments are the cultural and historical wealth, and both these have to be balanced. The Court directed for the creation of a buffer zone of 2Km from the protected area and 1 Km of the core zone beyond which mining activities will not be permissible and for control usage of blasting mechanisms.

In ***Wildlife First v. Ministry Of Forest And Environment and Ors.***[21] , it was seen that the FRA is a positive move by the government to address the historical wrongs and flaws to protect the rights of the forest dwellers and prevent their alienation from their land, which is a factor leading to the destruction of forest lands. The FRA is a remedy with its flaws to provide a cure for the historical injustice done to the forest dwellers. The mechanism of setting up the Gram Sabha to protect the rights of these forest dwellers and to allow them to use the forests in a sustainable way for their livelihood is a key factor in the protection of their rights. In furtherance to the same, the Gram Sabha is the body responsible for the conservation of the forest natural resources.

The legislation and the Courts have upheld the rights to the tribal population in most instances, but the problem arises when the industries do not follow the proper mechanisms and try to continue activities for their benefit. The ***Orissa Mining Corporation*** case is a major example as to how the rights of the forest dwellers should be protected and promoted and industries should compel with all the directed guidelines before carrying out mining activities.

CONCLUSION

The decisions of the Supreme Court in the Orissa Mining Corporation case is a major precedent for any issues which arise relating to the rights of the tribal population as it clearly states about the competent authorities to address the issues and also for prohibition of mining activities which might have an adverse impact on the ecology causing a loss to the biodiversity[22]. There have been various legislations and judicial decisions that have been made in favor of the tribal population and the Scheduled Tribes[23]. The Indian Judiciary has been playing an active role in trying to create a balance between the twin needs of the development and preservation of the traditional rights of the forest dwellers. It, in many instances,the proper mechanisms for the rehabilitation of the tribal people who are displaced due to development projects have highly

21. WP 109 (2008).
22. ZubairNazeer, 'Supreme Court Must Safeguard Tribal Rights OverNiyamgiri Hills in Odisha' (The wire, 17 March 2016) <https://thewire.in/25043/supreme-court-must-safeguard-tribal-rights-over-niyamgiri-hills-in-odisha/> accessed 14 March 2019.
23. *Supra* Note 14.

been criticized as the competent authority has not properly implemented them. The rights of these protectors of the forest land have to be taken into account while addressing any such instance.

The struggle between the tribal of the Niyamgarh Forest and one of the most powerful corporations of the world is a historical saga that demonstrates the passion of the tribal population over their forest and habitat. The Indian Government faced severe criticisms for affecting the whole tribal life and their place of worship while destroying a hundred streams that flowed through the region. The first fault done by the Government was permitting Vedanta to construct an aluminum refinery near the bauxite reserves in Niyamgarh Forest. It was obvious from Vedanta's point of view that they would want to get their supply of raw materials from the forest rather than various other regions.

The judgment has also shed some hope in the minds of the tribal people whose rights get violated at the cost of development schemes. First, the banning of mining activities in the State of Karnataka and then this judgment indicates that blind mining activities cannot be encouraged and until the corporations and the industries provide for proper rehabilitation schemes and follow proper mechanisms to get clearance for mining activities, it has become a difficult task to achieve.

With the development of the approach of the Indian Judiciary through time, the approach towards the forest dwellers has been an affirmative one when, in most instances, the Judiciary has attempted to protect the rights of these indigenous people rather than luring after economic benefits. These people and their rights have to be protected to enable them a better living and livelihood. The Bill on the forest dwellers' rights, which is pending at the Parliament, is a classic example that the rights of these people have to be protected, which has been accepted and is being attempted to be protected. In this modern world, it cannot be denied that progress cannot be achieved at the cost of someone else's livelihood, and it can only be achieved which goes hand in hand with every person in the society and their rights.

ADULTERY AND INSTITUTION OF MARRIAGE: AN ANALYSIS WITH SPECIAL REFERENCE TO JOSEPH SHINE V. UOI (2018 SC 1676)

-Dr Devinder Singh* & Mr Varun**

INTRODUCTION

Recently in ***Joseph Shine v. Union of India***[1] a five judges' bench of Supreme Court of India,has struck down the whole Section 497 of the Indian Penal Code, 1860[2] (herein after mentioned as IPC) and Section 198(2) of the Code of Criminal Procedure, 1973[3] (herein after mentioned as CR.PC). It has not been general practice, in the institutional history of Indian Judiciary to strike down the entire provision of the Penal Code. The reason provided by the Apex Court is the discriminatory nature of the said provision in the hands of husband, which violate the Article 14 and 21 of the Constitution of India, 1949 (hereinafter mentioned as Constitution). Section 497 of IPC imposed punishment on the male who had committed consensual sexual intercourse with a married woman knowing her to be married (that is, the male who trespassed into the institution of marriage). But the requirement of "consent and connivance of husband" to bring the adulterous act out of ambit of proscribed punishable offence provided for section 497 of IPC, has been held to be antithesis to the doctrine of equality and personal liberty of a married women[4] without qualifying doctrine of reasonable classification and intelligible differentia as per nature of modern Indian society. Thus, as per section 497 of IPC, a married man can have sexual relations with unmarried women without any proscription, but at the same time, it is held to be discriminatory by the judiciary that the act of consensual sexual intercourse with a married woman by any male, other than her husband was put in the category of an offence. By striking down the adultery law, the Apex Court has overruled the five judges bench judgment of the Supreme Court in ***Yusuf Abdul Aziz v. State of Bombay*** [5], three judges bench decision in ***Sowmithri Vishnu v. Union of India***[6] and the two judges bench decision in ***V. Revathi v. Union***

of India[7] in which Indian Judiciary upheld the validity of Section 497 by holding that it did not offend either Article 14, Article 15 or 21 of the Constitution.

CONCEPT OF MARRIAGE AND ADULTERY

Since initial days of civilisation in India, marriage has been considered as the most important social institutions. It has been considered as the foundation of peace and order of society.[8] It is a sacred and unique relationship between the husband and wife. The institution of marriage is the foundation of family and thus, directly related with the development of any civilized society in the world. However, the nature and concepts of marriage under various personal laws keep on changing with the changes in the society and the social order.[9] But, marriage is considered as a sacred union even by those societies who view it as a civil contract.[10] In Indian civilisation marriage has been considered as a sacramental union, and this continued to be so during the entire period. Mutual fidelity worked as the main thread to keep the tie intact in this institution.[11] The act of infidelity occurs in the marital tie, when one of the spouses voluntarily gets engage in sexual intercourse with an individual (stranger) of the opposite gender other than one's marital partner. Adultery is regarded as a sin by society and a matrimonial offence, as it shake the mutual thread of faith and trust between spouses towards each other and disturbed the institution of marriage and then family. If one of the spouses gets involved in an extra-marital affair, it will breach the marital vows and can collapse the marital tie beyond hope of its repair. According to the Old Testament, "Marriage is not just a social contract between man and woman; it involves God as well."[12] "God is witness to all marriage agreements and insists that couples should be devoted and completely faithful to each other."[13]

The word adultery derives its origin from the French word *avoutre*, which has evolved from the Latin verb *adulterium* which means "to corrupt."[14] As per Black's Law Dictionary, "adultery is the voluntary sexual intercourse of a married person with a person other than the offender's

13. *Ibid.*
14. *Supra* note 1.

husband or wife"[15]. According to Encyclopaedia Britannica[16], "Adultery means sexual relations between a married person and someone other than the spouse"[17] . According to Merriam-Webster dictionary it is "voluntary sexual intercourse between a married person and someone other than that person's current spouse or partner"[18]. From above definitions we can see that, definition of 'adultery' not limited to specific gender only; it may be committed by either of the Spouse/Sex. But it is very unfortunate, that under most of the statutes owing to patriarchal set up of society, it has been gender favoured and in most of the cases prescribes 'female adultery'. And it is the married woman whose extra-marital consensual sexual intercourse with any male other than his husband without the consent or connivance of her husband is an essential condition for the offence of adultery as per section 497 of IPC, 1860.[19] The current definition of adultery provided in PC, 1860 has been inherited from the cultural context of Victorian morality at the time of British era, where women was considered as the property of her husband and the offence was committed only by the adulterous man.[20] In this concept the act of wife corrupting the marital bond with her husband by having a relationship outside the marriage, was termed as adultery.[21]

HISTORICAL BEDROCK

Almost all ancient religions/civilizations punished the sin of adultery.[22] In one of the oldest, namely, in Hammurabi's Code, death by drowning was prescribed for the sin of adultery, be it either by the husband or the wife.[23] In Indian civilisation also the social condemnation for act of adultery is not new. An incident mentioned in Mahabharata, where Indra comes to Gautama's ashram in the disguise of a Brahmin, and when the sage is away, impersonate his face and asks Ahalya to have sexual act with him.[24] "After the act committed, Gautama orders his son Cirakarika to kill his mother, and leaves for the forest, where he repents for his hasty decision.

He blames Indra for polluting his wife because of his passion, My wife is thus in no way a culprit in the crime. The son ponders and concludes that a woman is not guilty if she has not consented to the act of adultery willingly; that women are physically weak and have to submit to the desires of men. So if a man leads a woman to adultery, the woman is not to blame."[25]

According to Vishnu Purana verse 3.11 even the thought of adultery has been condemned by stating that "A man should not think incontinently of another's wife, much less address her to that end; for such a man will be reborn in a future life as a creeping insect. He who commits adultery is punished both here and hereafter; for his days in this world are cut short, and when dead he falls into hell."[26] In Bhagavad Gita Chapter 1, versus 40-42[27] it has been mentioned that, "when a family declines, ancient traditions are destroyed. With them are lost the spiritual foundations for life, and the family loses its sense of unity. Where there is no sense of unity, the women of the family become corrupt; and with the corruption of its women, society is plunged into chaos. Social chaos is hell for the family and for those who have destroyed the family as well"[28]. Islamic law has considered adultery as one of the most serious offence, known as Hadd[29] offence, and adultery has been expressly condemned in Quran[30]. Further in verse 17.32 of Quran explained adultery as "Approach not adultery: for it is a shameful deed and an evil, opening the

30. In Islam, in An-Nur, namely, Chapter 24 of the Qur'an, Verses 2 and 6 to 9 read as follow, "The adulteress and the adulterer, flog each of them (with) a hundred stripes, and let not pity for them detain you from obedience to Allah, if you believe in Allah and the Last Day, and let a party of believers witness their chastisement."Supranote 1.

road to other evils."[31] In the Western Societies, adultery met Biblical condemnation[32] . The Common law recognised the "obvious danger of foisting spurious offspring upon her unsuspecting husband and bringing an illegitimate heir into his family."[33]

It is important to note that the original draft of Indian Penal Code, 1860, had not provided for the offence of 'adultery'. It was only after the recommendation of the Second Law Commission that it was added to the Code.[34] It isto be noted that in India, as per section 497 of IPC, a wife is not punished as an adulteress or an abettor for the offence of adultery.[35] It is only the man(stranger) who has such unlawful sexual intercourse with married woman will be punished under Section 497, IPC.[36] The reason given that why the wife would not be punished has been provided as, "The condition of the women of this country is, unhappily, very different from that of the women of England and France; they are married while still children; they are often neglected for other wives while still young. They share the attention of a husband with several rivals to make laws for punishing the inconsistency of the wife, while the law admits the privilege of the husband to fill his *'zenana'* with woman, is a course which we are most reluctant to adopt. We are not so visionary as to think of attacking by law an evil so deeply rooted in the manners of the people of this country as polygamy…"[37] Moreover, the wife of the adulterer has no locus *standi* to file a complaint against her deviated husband. It is only the husband of the (adulteress) wife who can file a complaint and upon whose complaint the Court can take cognizance of the offence as per Section 198(2), CR.PC, 1973.[38] The reason behind this position is that, women were treated as the victims and not the authors or abettor of the crime.[39]

It is important to mention here the recommendation of the Law Commission of India in its 42nd

report in 1971 where it has suggested substituting section 497 of the IPC, the substituting provision is "Section. 497. Adultery – Whoever has sexual intercourse with a person who is, and whom he or she knows, or has reason to believe, to be the wife or husband, as the case may be, of another person, without the consent or connivance of that other person, such sexual intercourse by the man not amounting to the offence of rape commits adultery, and shall be punished with imprisonment of either description for a term which may extend to five years, or with fine, or with both"[40] Later in 2005, Malimath Committee on Criminal Justice Reforms has recommended that men and women should be made to stand at the same footing.[41] It has been hold in the report that "A man commits the offence of adultery if he has sexual intercourse with the wife of another man without the consent or connivance of the husband. The object of this Section is to preserve the sanctity of the marriage. The society abhors marital infidelity. Therefore there is no good reason for not meeting out similar treatment to wife who has sexual intercourse with a married man."[42] Further "The IPC (Amendment) Bill, 1972 suggested that special privilege granted to women under section 497 be done away with."[43] But section was not amended as per suggestion.

The object of the law under Section 497, is to inflict punishment on those who interfere with the sacred relation to marriage,[44] the reason being that as adultery is an anti-social and illegal act [45], no peace loving citizen or person of good morals would like that it should be permitted to be indulged in before his very nose.[46]

JUDICIAL APPROACH

PRE JOSEPH SHINE APPROACH

Within one year of advent of the Constitution of India, 1949, section 497 IPC was assailed on the ground that it goes against the spirit of equality and personal liberty (Article 14 and 21) embodied in the Constitution, in the case of ***Yusuf Abdul Aziz v. The State of Bombay.***[47] A five judges bench of the Supreme Court[48], taking into consideration Article 15(3), opined that

40. Law Commission of India, 42nd Report on Indian Penal Code, page 327, (June, 1971).

44. *Ibid.*
45. *Ibid.*
46. Hatim Khan v. State, AIR 1963 J&K 56.
47. *Supra* note 5.

Section 497 is a special legislative provision in favour of women, taking note of vulnerable status of women in the society.[49] Rebutting the contention that Article 15(3) should be restricted to provisions beneficial to women and should not be used to give them a licence to commit and abet a crime with impunity, the Apex Court opined that, "We are unable to read any such restriction into the clause; nor are we able to agree that a provision which prohibits punishment is tantamount to a licence to commit the offence of which punishment has been prohibited."[50]

Supreme Court's judgement in ***Yusuf Abdul Aziz v. The State of Bombay***[51] upholding the validity of Section 497 of IPC came for reconsideration in ***Sowmithri Vishnu v. Union of India***[52] on the contention that, it being contrary to Article 14 of the Constitution, makes an irrational classification between women and men as it provide power to the husband to prosecute the adulterer but it does not confer a corresponding right upon the wife to prosecute the woman with whom her husband has committed adultery. Further no equal right is there with the wife to prosecute the husband who has committed adultery with another woman, and the provision excluded the cases where the husband has sexual relations with unmarried women, with the result that the husbands have a free license under the law to have extramarital relationship with unmarried women.[53]

The Supreme Court rejected all these arguments and ruled that Section 497 does not offend either Article 14 or Article 15 of the Constitution. Next important Apex Court decision on Section 497 of IPC was ***V. Revathi v. Union of India***[54] where, a wife challenged the validity of Section 198(2) of CR.PC, contended that it discriminatingly empower the husband of the adulteress wife to prosecute the adulterer but does not equally empower the wife of an adulterer husband to prosecute.[55] The Supreme Court observed that, "The community punishes the 'outsider' who breaks into the matrimonial home and occasions the violation of sanctity of the matrimonial tie by developing an illicit relationship with one of the spouses subject to the rider that the erring 'man' alone can be punished and not the erring woman. There is thus reverse discrimination in 'favour' of the woman rather than 'against' her. The law does not envisage the punishment of any of the spouses at the instance of each other. Thus there is no discrimination

48. *Ibid.*

55. *Ibid.*

against the woman insofar as she is not permitted to prosecute her husband. A husband is not permitted because the wife is not treated as an offender in the eye of law. The wife is not permitted as Section 198(1) read with Section 198(2) does not permit her to do so. In the ultimate analysis the law has meted out even-handed justice to both of them in the matter of prosecuting each other or securing the incarceration of each other." [56]

POST JOSEPH SHINE APPROACH

In the landmark ***Joseph Shine v. Union of India***[57] , case the Apex Court of India declared that Section 497 to be unconstitutional on ground of violation of Articles 14, 15 and 21 of the Constitution. And consequently, Section 198(2) of the CR.PC, 1973 which contains the procedure for prosecution under Chapter XX of the Indian Penal Code, 1860 are held to be non-applicable, to the extent it was applicable to the offence of Adultery under Section 497, IPC. And the decisions in ***Yusuf Abdul Aziz, Sowmithri Vishnu*** and ***V. Rewathi*** are hereby stand overruled.[58]

The five-judge bench of the Supreme Court has struck down Section 497, IPC and decriminalised adultery in India, however adultery still remains a civil wrong and ground for divorce under all personal laws as it previously stands. The judgment put blow of judicial review on the patriarchal and unequal provision of section 497 of IPC on following considerations

Autonomy and personal liberty of wife: The provision of "connivance or consent of husband" to put the adulterous act out of prescribed nature of wrong as per section 497 of IPC, 1860, has been considered in this judgement. It has been held that, a husband is not the master and equality is the governing parameter and the beauty of the Indian Constitution.[59] The Court referred the constitution of India and asserted that "Such a magnificent, compassionate and monumental document embodies emphatic inclusiveness, which has been further nurtured by judicial sensitivity when it has developed the concept of golden triangle of fundamental rights."[60] The court further held that, "It treats her as the property of man and totally subservient to the will of the master. It is a reflection of the social dominance that was prevalent when the penal provision was drafted."[61] The Supreme Court clearly lays down that autonomy, desire, choice and identity

56. *Ibid.*
57. *Supra* note 1.
58. *Ibid.*
59. *Ibid.*
60. *Ibid.*

are the important aspects of the dignity of a woman.[62]

Equality: As per the Apex Court, "Adultery is the voluntary sexual intercourse of a married person with a person other than the offender's husband or wife. However, the provision has made it a restricted one as a consequence of which a man, in certain situations, becomes criminally liable for having committed adultery while, in other situations, he cannot be branded as a person who has committed adultery so as to invite the culpability of Section 497 IPC."[63] The Supreme Court further opined that "Sub-section (2) of Section 198 treats the husband of the woman as deemed to be aggrieved by an offence committed under Section 497 IPC. It does not consider the wife of the adulterer as an aggrieved person. The offence and the deeming definition of an aggrieved person, as we find, is absolutely and manifestly arbitrary as it does not even appear to be rational and it can be stated with emphasis that it confers a licence on the husband to deal with the wife as he likes which is extremely excessive and disproportionate. We are constrained to think so, as it does not treat a woman as an abettor but protects a woman and simultaneously, it does not enable the wife to file any criminal prosecution against the husband. If the entire provision is scanned being Argus-eyed, we notice that on the one hand, it protects a woman and on the other, it does not protect the other woman. The rationale of the provision suffers from the absence of logicality of approach and, therefore, we have no hesitation in saying that it suffers from the vice of Article 14 of the Constitution being manifestly arbitrary."

Privacy and Right to life: The Apex Court refers the landmark judgement on right to privacy delivered in the case of ***K.S. Puttaswamy and another v. Union of India and others***[64] , where a nine judges' bench stated that importance has been given to the dignity of an individual. The judiciary held that "Having stated about the dignity of a woman, in the context of autonomy, desire, choice and identity, it is obligatory to refer to the recent larger Bench decision in ***K.S. Puttaswamy and another v. Union of India and others***[65] , which, while laying down that privacy is a facet of Article 21 of the Constitution, lays immense stress on the dignity of an individual[66]" Therefore, the Apex Court after analysing the whole concept of right to privacy and equality of women declares that section 497 of Indian Penal Code violates Article 21 of the Constitution, as equality and dignity of woman cannot be curtailed in such cases.[67]

---

61. *Ibid*
62. *Ibid.*
63. *Ibid.*
64. (2017) 10 SCC 1.
65. *Ibid.*
66. *Supra* note 1.

Adultery as a crime (criminal wrong): The Supreme Court asserted that "There can be no shadow of doubt that adultery can be a ground for any kind of civil wrong including dissolution of marriage. However, the pivotal question is whether it should be treated as a criminal offence. When we say so, it is not to be understood that there can be any kind of social licence that destroys the matrimonial home. It is an ideal condition when the wife and husband maintain their loyalty. We are not commenting on any kind of ideal situation but, in fact, focusing on whether the act of adultery should be treated as a criminal offence. In this context, we are reminded of what Edmund Burke, a famous thinker, had said, a good legislation should be fit and equitable so that it can have a right to command obedience. Burke would like to put it in two compartments, namely, equity and utility. If the principle of Burke is properly understood, it conveys that laws and legislations are necessary to serve and promote a good life."[68]

CRITICAL ANALYSIS

In this decision, the Supreme Court has struck down Section 497 IPC. Dilution in the institution of marriage can be the result, upon which the strong foundation of the Indian family system and civilisation rests. The deterrence effect on stranger to marriage to prevent him from trespassing this sacred institution has been out rightly blown. This cessation will lead to rapid profiling in the acts related to adultery. Adultery is no longer a criminal offence now. It is just a civil wrong for which divorce is the remedy.[69]

Judiciary held that a moral wrong is different from legal right and thus morality has not been the only base of state policy while enacting the law. Criminal law also meant to protect the historical cultural roots and moral principles of the society.[70] Moral wrong can shake the conscience of the society and can result into conflict and chaos in the society, especially when a strong cultural and civilisation root of society is interfered.

Declaring adultery as a criminal offence, no doubt amounts to intervention in the right to privacy, but also wrecks the life of another partner in institution of marriage. Further, it not only affect spouse but also takes down with it the children and the other family members. It is to be remembered that rights have corresponding duties and absolute rights can destabilise the

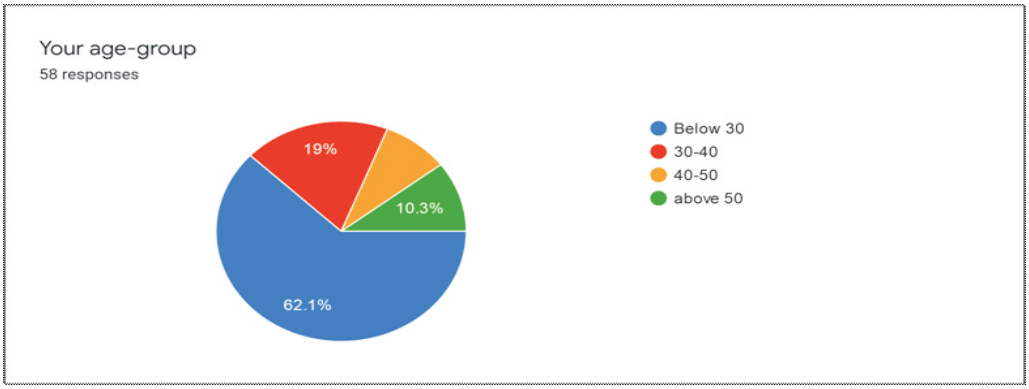
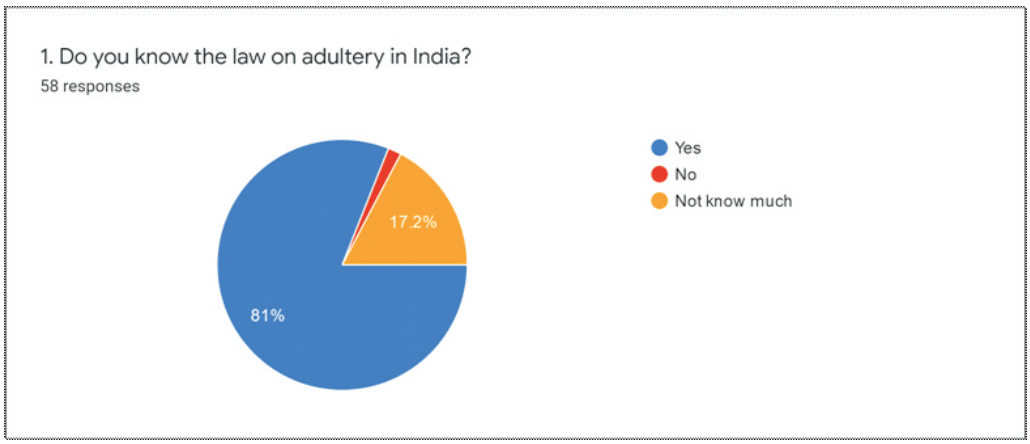
society. The moral and psychological effect on children will be most adverse and severe.



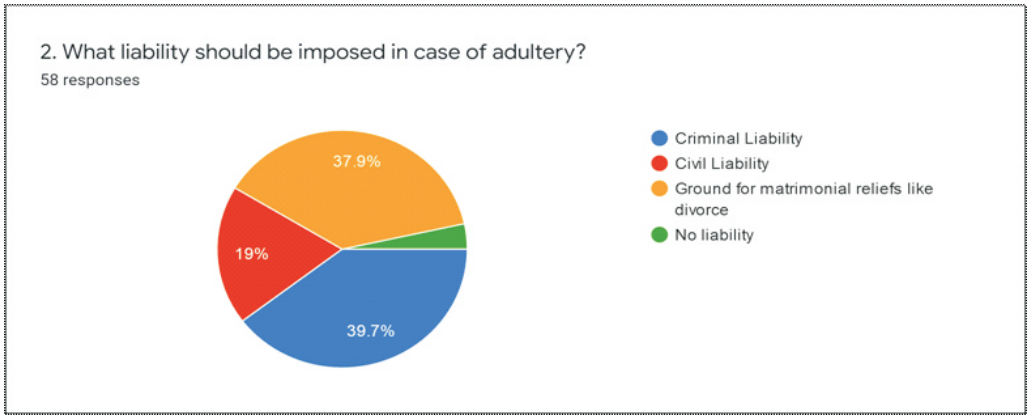
EMPIRICAL STUDY

A survey was conducted through online and offline questionnaire method to get responses from section of the society comprising both males and females who are either married or unmarried; most of the respondents are educated. The object was to know the view of society regarding act of adultery and its effects on the institution of marriage in the age of equality of rights. As a crime is a wrong which shake the sense of security or conscience of the society at large. In modern changing times when the very nature and form of institution of marriage is gradually changing, the perception of society may also be changed. The results of study is analysed as follows:



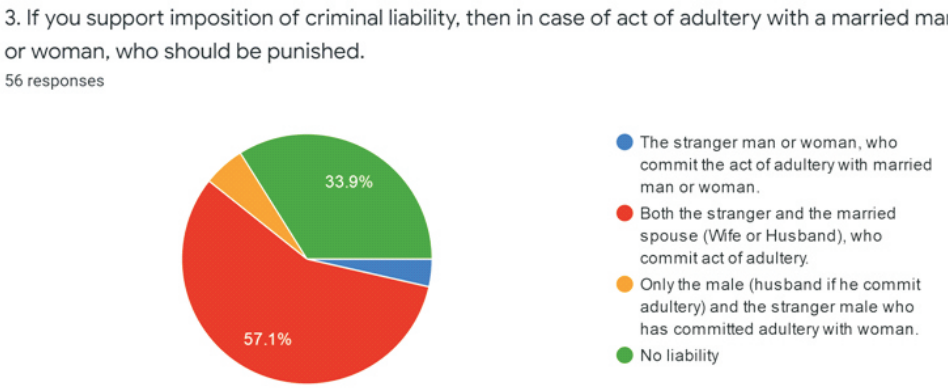
Pie Chart 1

Majority of the respondents are post graduate and least are under graduates.



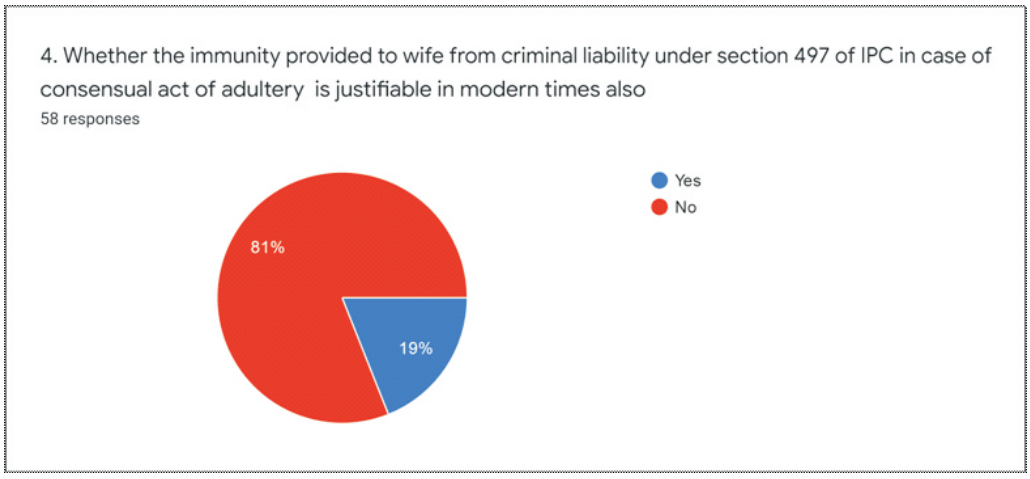
Pie Chart 2

Majority of respondetnts are below 30 years of age.



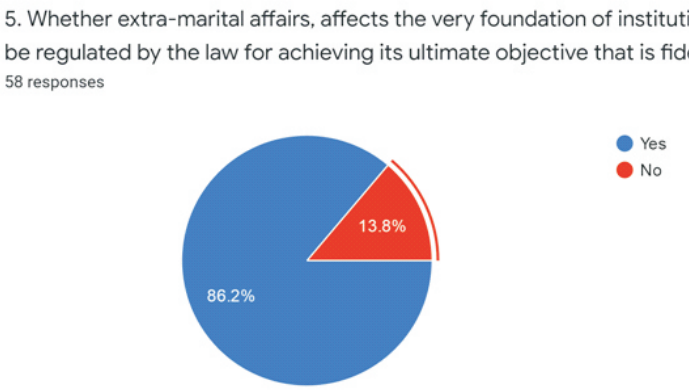
Pie Chart 3

Majority of respondetnts that is almost 4/5th know the law and only 2 percent are totally ignorant of it.



Pie Chart 4

Majority of respondents, i.e. approximatly 40 percent feels that criminal liablity should be imposed to regulate the wrong of adultery, while almost 38percent said that adultery should be limited as ground to dissolve the marriage. Only 19 percent feels it to be regulated by civil laws. And 3 percent respondent want it to be not legally regulated, i.e. a act free from state interferance.



Pie Chart 5

This question is to further get the opinion of respondent regarding the persons to be put under ambit of criminal liability. Majority of respondetnts want to put both the stranger and the married spouse (wife or Husband) who has commited the act of adultery under criminal liablity.where as the respondents who does not support criminal liability in pie chart 3, either choose no liability option or leave this option unfilled.

Pie Chart 6

Majority of respondetnts that is almost 4/5th feels that immunity to wife as provided earlier in Section 497 of IPC, 1860, is not justifiable in modern times.

Pie Chart 7

Majority of respondetnts, that is almost 86 percent, opined that the act of adultery affects the very foundation of institution of marriage and need to be regulated by law for achieving its object of mutual fidelity.

CONCLUSIONS AND SUGGESTIONS

Since the ancient era, almost in all the societies, adultery is a matter of consideration and has been rigorously condemned and punished, usually as a violation of the husbands rights.

In India, the wrong of adultery has been declared as a proscribed act as per state policy, by declaring it a criminal offence as per Section 497 of IPC. As per Section 497 of IPC, a male for committing the act of consensual sexual intercourse with the legally wedded wife of another with knowledge or reason to believe of her to be the wife of another man and without the consent or connivance of that man, shall be punished with imprisonment of either description for a term which may extend to five years, or with fine, or with both. But as per Section 198(2) of CR.PC only husband can initiate such criminal proceeding, as it has been specifically provided that no person other than the husband of the woman shall be deemed to be aggrieved by any offence. So the legal provision is discriminatory and derogates doctrine of equality against wife as not providing her equal right to initiate proceeding against in case act of adultery by her husband. Further the word consent or connivance of husband to put the act of sexual intercourse out of

required actus rea of section 497 of IPC make sexual autonomy of wife a property of husband, which is against spirit of article 21 of the Constitution of India ,i.e. life and personal liberty. Earlier many times the Apex Court of India upheld the validity of section 497, even in five judges' bench in the case of ***Yusuf Abdul Aziz v. State of Bombay***[71], but in the judgment of ***Joseph Shine v. Union of India***[72] an equal five judges bench has struck down Section 497 IPC and Section 198(2) CR.PC. It is a question of discussion as to whether an equal bench of the five judges can overrule a previous judgement of equal bench.

It is to be noted, that the issue in the case of ***Joseph Shine v. Union of India***[73] is discrimination of provision under Article 14 and 21 of the constitution. The word "consent and connivance" and sole right to husband to prosecute the stranger male who has committed consensual sexual intercourse with his wife has been under consideration in the present case. And declaring the whole provision as unconstitutional is need to be considered by the legislation, that whether Section 497 of IPC need to be redrafted or not.

Section 497 of IPC, 1860 provides special protection to wife as a victim in case of her consensual act of adultery with a male other than her husband. In ***Yusuf Abdul Aziz v. The State of Bombay***[74] , the five judges bench held that Section 497 is a special provision made for women and therefore is saved by clause (3) of Article 15.[75]

As per Indian civilisation setup family is vital social institution and marriage is the foundation of family. No doubt, in the modern era of democracy all social relationships and institutions are undergone a gradual change in India. Liberty, Equality and Fraternity which are three main pillars of idea of democratic society as per Indian constitutional is fully applicable on institution of marriage and consensual sexual relations also. But the institution of marriage can't be allowed to be disintegration or weakened in influence of western idea of marriage and consensual sexual relationships. In India marriage has been considered as sacred and special social institution and not just a civil contract meant to regulate opposite genders consensual sexual relationship and procreation of children. Among Hindus it is considered as holy union[76]

76. *Supra* note 8

and among Muslims as *ibadat* and *maumalat.* [77] Though as per its nature and effect adultery may not be such a serious wrong that it can shake the conscience or sense of security of the society, but it can play chaos in the lives of the people concerned. Thus it can effect concept of marriage, and then family and ultimately of Indian Society. Adultery may not be gravest of crimes but it can bring out grave consequences. The person committing the adulterous act is always aware of the fact that he or she is violating the basic norms and obligation of the institution of marriage, as the very credibility and trustworthiness of one spouse is being targeted.

In the judgement only criminal liability for the act of adultery has been removed. But it is still applicable for ground of divorce along with other matrimonial and civil remedies. But it has not expressly provided in the judgements, though clear if we read in between the lines. Not expressly clearing position for civil liability and consequences under personal law for adultery can be taken as a message to providing it a walk-in and walk-out relationship.

In ***Yusuf Abdul Aziz v. State of Bombay***[78] the Apex Court of India, upheld the validity of section 497 of IPC as per Section 14 and 15 of the Constitution. The Supreme Court declared that Article 15 is not absolute as far as prohibition of discrimination on ground of ex is concerned, as Article 15(3) of the constitution provides for legislation in favour of women. As we understand, that in cases of adultery, there are two types of considerations, one is that wife is not prosecuted, this provision favours the woman and the other is only husband can prosecute the third person (Stranger who trespass the institution of marriage) involved in act of adultery. In our view the Supreme Court in Joseph Shine[79] judgement has addressed the second point, which authorised the husband on behalf of wife or to protect the institution of marriage to take action against such third person. But first point which protects the wife is still open as far as this judgement is concerned. Therefore, we feel too verrule the ratio of Supreme Court in ***Yusuf Abdul Aziz v. State of Bombay***[80] case should have been appropriately considered by the larger bench. In case review by the Supreme Court does not take place because of legal technicalities involved in it, it

is further suggested that legislature can bring an amendment in consonance with the constitutional provision of Article 14, 15 and 21 to provides the best social engineering considering the very basic structure and beliefs of Indian society, rather than repealing or removing the penal provision completely. Legislation should bring husband and wife at equal footing by providing penal provision for act of consensual extra marital sexual intercourse by any stranger (man or woman) with a wedded man or woman. Further punishment should be decreased from five years to sex months.

Proposed legislation for Section 497 of IPC "Adultery — Whoever has sexual intercourse with a person who is and whom he knows or has reason to believe to be the wife or husband of another man or woman, all such persons; wife, husband and third person are individually guilty of the offence of adultery, and shall be punished with imprisonment for the a term of six months."

Proposed legislation for Section 198(2) of CR.PC "Both the husband and wife shall be deemed to be aggrieved by any offence punishable under section 497.

APPLICABILITY OF RES JUDICATA IN EXECUTION AND WRIT PROCEEDINGS

- Mr Gurpreet Singh*

"Res judicata changes white to black and black to white, it makes the crooked straight and the straight crooked." [1]

INTRODUCTION

Laws of each and every land are based on principles. These principles control the entire domain of jurisprudence in a nation. Such principles navigate legislation, give legitimacy to judicial pronouncements and defend the citizens of a nation. The judiciary embodies such principle in deciding cases and provides conformity by the legislature and executive to suchlike principles.

Res *judicata* is such a principle, whose origin cannot be amply traced. This notion exists in all jurisdictions of the world. Res *judicata* is based on public policy and has universal practice.[2] India has adopted the rule of res *judicata* in section 11 of the Code of Civil Procedure, 1908. Present day society is fraught with disputes and litigations. The courts are fraught with slow, frivolous and cumbersome cases. The incarnation of a rule like res *judicata* is one of the needs in our country. With regard to bring finality to litigation and preclude a person from being dragged to court again and again, res *judicata* is mandatory in any society.[3]

Res *judicata* is a plea accessible in civil proceedings under section 11 of the Code of Civil Procedure, 1908. Its primary aim is to bring finality to "lis" in first or appellate proceedings. The principle implies that an issue or a point once adjudged and accomplished finality should not be permitted to be revived and re-agitated again. Res *judicata* basically means 'a matter adjudged; a thing judicially acted upon or decided; a thing or matter settled by judgement'. This regulation engrants with a reason that a judgment delivered by a court of competent jurisdiction on the merits is final with respects to the privileges of the parties and their privies and establishes a flat bar to successive action concerning the same demand, claim or cause of action. Plea or right of res *judicata* is not accessible where there is no dispute on an issue among the parties and there is no aware adjudication of an issue.[4]

4. Escorts Farms Ltd. v. Commissioner, Nainital, (2004) 4 SCC 281.

With regard to decide the issue whether a subsequent proceeding is precluded by res *judicata*, it is mandatory to examine the issue with reference to:

a) The form or a competence of the court;

b) The party and the representatives;

c) Matters in issue;

d) Matters which ought to have been made ground for defence or attack in the former suit;

e) The final decision.[5]

The principle of res *judicata* embodies norms of public policy and rule of private justice. It is based on the need of giving finality to judicial decisions and the right of individual to be saved from vexatious multiplicity of proceedings.[6]

CONSTITUTIONAL ASPECT

Constitution of India has been awarded extraordinary remedies as provided under the Act against the State activities. Conferral of such constitutional remedies operates as a check against the misuse of power by the various agencies of State. Article 32, Article 226 and Article 227 of the constitution are most germane articles in this respect. Under these articles certain types of writ petitions can be filed but these articles mainly emphasis on the protection of the fundamental rights of the citizen which are enshrined in the constitution. Our constitution provides fundamental rights under Part-III and also gives liberty to approach the Supreme Court under Article 32 if any of the infringement is done in fundamental rights. Problem aroused in the Supreme Court, whether the rule of res *judicata* will apply to the fundamental rights of the citizen under Article 32? There were numerous conflicted decisions of the Supreme Court which started from the ***Ramesh Thapper vs. State of Madras*** case[7] to ***Srinivasa Reddy vs. State of Mysore***[8] case and the applicability of rule remained silent with respect to the fundamental rights. And finally in ***Daryao vs. State of U.P.***[9] case, the Apex Court stated that no doubt the rule has some technical aspect but it is footed on the rule of public policy i.e. giving finality to litigation and nobody is vexed twice. From these principles, the rule of res judicata will be applicable to writ petitions. The court further added that if a writ petition entertained under

9. AIR 1961 SC 1457.

Article 226 is dismissed on merit the parties will be bound by the decision until and unless the petition is modified or reversed in appeal or other appropriate proceeding allowed by the law of land.

APPRAISAL OF RES JUDICATA IN EXECUTION PROCEEDINGS

It is found during the research that prior to the Amendment Act, 1976 there were conflicting views regarding the provisions of section 11 of the Code of Civil Procedure, 1908, are applicable to the execution proceedings.[10] The section 11 is not comprehensive on the issue of res *judicata* and its universal principle is applicable to the execution proceedings also. Virtue of the landmarkjudgment of the Privy Council in the case of ***Ram Kirpal vs. Rup Kauri***[11] held in 1883, where Privy Council made a strong base for the application of res *judicata* in execution proceedings. Prior to this decision the general rules of the doctrine are only applicable to the civil suits not in execution proceedings. Privy Council remarked that though the section 11 in terms did not apply to the execution but the doctrine will be applicable in such proceedings. The report of Joint Committee justified that it had been already held by the *Privy Council* as well as the Supreme Court that the doctrine of constructive res *judicata* applies to the execution proceedings. The Committee, therefore, feels that in place of inserting new section 11(A), section 11 should be so amended as to make sure that the doctrine of res *judicata* may apply in its full magnitude, to proceedings in execution; but the insertion of a new explanation VII to section 11 has only codified the judicial dicta.[12]

An order passed in the absence of another party is named as an *ex-parte* order. *Res judicata* does not strictly apply to *ex-parte* orders but the catena of Supreme Court judgments states that in the situations where the courts satisfy that the notice is served upon the defendant, *res judicata* operates. Practically, the defendant takes a vague plea; the court enforces the discretionary power enshrined under section 151 of CPC and restores the particular case which violates the basic rule of public policy (no person be vexed twice). A stringent law must be formed which should state that *res judicata* must be completely applicable in ex-parte proceedings in execution so that there are no loop holes left.T he Orissa High Court in ***Bangsidhar vs. Jagmohan*** case[13] laid down that after the court is satisfied that the notice was served upon the

10. CPC (Amendment) Act 104 of 1976.

12. Report of the Joint Committee, Gazette of India 804(1976).
13. AIR 1945 Ori 21.

respondent, an ex-parte order was granted in execution proceedings, operate as *res judicata.* A notice of attachment of sale is received by the judgement-debtor but cannot claim exemption at initial stage under sec 60(1) (c) subsequently is barred from claiming such exemption at the time of proclamation of sale; constructive res judicata would apply in such cases[14]. But res judicata will not be applicable in *ex-parte* orders in the following circumstances:

i. When no notice is issued,

ii. When the notice is not duly served,

iii. When the notice does not clearly and plainly specify the nature of the claim.

iv. When an application for set aside of *ex-parte* order within limitation period.

Section 11 of the Code of Civil Procedure requires a suit to have been "heard and decided" by a court in order toapply as res judicata in a subsequent suit. However, not all cases conclude with a decisionfollowing full blown adjudication. In many cases, a suit may be brought to an end by acompromise entered into between the parties which may be formalised into a consent decree. A question that has arisen frequently in this context is whether such consent decrees can operate as *res judicata* in subsequent suits between the same parties.

As per the 144th Report of the Law Commission,[15] courts in India have vacillated over whether section 11 would apply in such situations. The High Courts of Sind,[16] Rajasthan,[17] Delhi,[18] Bombay[19] and Guwahati[20] have expressed the view that section 11 would not apply to consent decrees. On the other hand, in a few instances the High Courts of Bombay,[21] Calcutta[22] and Punjab[23] have held that section 11 would apply. The Supreme Court had itself wavered between the two positions between 1954 to 1991. In this context, the Law Commission expressed the need for legislative intervention in the area and recommended the insertion of a new explanation to the section which would clarify that consent decrees would also have a *res judicata* effect. No such amendment to section 11 has however been introduced.[24]

CRITICAL AND COMPARATIVE APPRAISAL OF JUDICIAL DECISIONS

Judiciary in every country plays a prominent role not only in judicial decision but also safeguarding and protecting the interest of society, citizens and State. Judiciary renders direction to the legislature and finds out the weaknesses and ambiguities. The courts in India have acknowledged the principle of *res judicata* in their numerous judgments in positive sense and magnified the scope of the principle by applying the general rule of *res judicata.* As the principle of *res judicata* is salutary one, which is applicable not only to matters governed by the clauses of the Code of Civil Procedure, 1908, but to all proceedings and litigations. The principle of *res judicata* has been applied by the courts with stipulation that there should be no unwanted litigation and whatever claims and defenses are liberal to parties shall all be put up at the similar time so that the finality should attach to the binding adjudication of the courts and the parties should not be vexed again with the identical kind of litigation.

In ***Mohan Lal Goenka vs. Binoy Krishan Mukherjee*** case[25] , Supreme Court follows the Privy Council decision wherein it stated that the rules of constructive *res judicata* would apply even in execution proceedings but this rule would not be applicable wherein the parties and title in subsequent suit are different from the previous suit or the previous application is not heard and finally decided. And in ***Barkat Ali & Another vs. Badri Narain*** case[26] , Supreme Court observed that the matter which has been finalised or deemed to have been finalised at preliminary stage, that matter cannot be re-opened not only in separate proceeding, but also in the later proceedings of the same suit.

For the application of res *judicata*, it is mandatory that the previous application must have been heard and decided. In ***Jethmal vs. Sakina***[27] case, court stated that if an application for execution is rejected for the default of appearance, a subsequent fresh petition cannot be barred by the rule of res judicata. Similarly in ***Kishore Bun vs. Prosuno Coomar***[28] case, an execution application filed under Order XXI rule 32 was rejected as decree-holder did not give an opportunity to the judgement-debtor to obey the decree. It was also stated that after such an opportunity has been provided to the judgement-debtor, later execution application is not restrained by the law of *res*

25. AIR 1953 SC 65.
26. AIR 2008 SC 1272.
27. AIR 1961 Raj 59.
28. (1894) 21 Cal 784.

judicata.

Pursuant to the recommendations made by the Law Commission in its *Fourteenth*[29] and *Twenty Seventh* Report[30] , the amended Code of Civil Procedure expressly provided that all questions including questions of title are to be settled finally in execution proceedings itself and not by a separate suit. So, it is the duty of the executing court to adjudicate all the claims raised before it. In ***Ravinder Kaur vs. Ashok Kumar*** case[31], the Apex Court reiterated that the claim may not be rejected on the sole ground that the claimant has an opportunity to prefer a claim or objection at an earlier stage of the proceeding. The court has to look into the circumstances of the case and come to a conclusion about whether the present claim is aimed at unnecessarily delaying the proceedings. Hence, by considering the above provisions the executing court has to decide the claim petitions effectively. Pleas which have already been adjudicated upon by the trial court cannot be agitated again in execution proceedings under section 47 and Order 21 rule 58 of Code of Civil Procedure because the executing court is not competent to go behind the decree and substitute its own opinion to the one expressed by the court which passed the decree.[32]

In ***Asgar and others vs. Mohan Verma and others*** case[33], the appellants are strangers to the decree. They were required to get that claim adjudicated in the course of their execution application which was under the provisions of Order XXI rule 97. Having failed to assert the claim at that stage, the deeming fiction contained in explanation IV to section 11 is clearly attracted. An issue which the appellants might and ought to have asserted in the earlier round of proceedings is deemed to have been directly and substantially in issue. It has been held that the observations that the appellants were free to pursue an appropriate remedy for the redressal of their grievances in accordance with law contained in the order of court cannot be construed to mean that the respondents would be deprived of their right to set up a plea of constructive *res judicata* if the appellants were to raise such a claim. This must necessarily be construed to mean that all defences of the respondents upon the invocation of a remedy by the appellants were kept open for decision. The liberty granted by this court was not one-sided. It encompasses both the ability of the appellants to take recourse and of the respondents to raise necessary defences to the

invocation of the remedy. The Hon'ble court held that constructive res judicata, in the same manner as the principles underlying res judicata, is intended to ensure that grounds of attack or defence in litigation must be taken in one of the same proceeding. A party which avoids doing so does it at its own peril. In deciding whether the matter ought to have been urged in the earlier proceedings, the court will have due regard to the ambit of the earlier proceedings, and the nexus which the matter bears to the nature of the controversy.

RES JUDICATA IN WRIT PROCEEDINGS

When we read the explanation of section 141 of the Civil Procedure Code, 1908 section 11 is not applicable to the proceedings under Article 226 of the constitution. But the rule of *res judicata* applies to writ petitions under Article 226 in spite of the fact that section 11 has no space in writ mechanism. When there is any violation of the fundamental right of a citizen then the applicability of the rule is stringent. Any issue decided under Article 226 or under Article 32 constitutes *res judicata* in later proceedings. While applying the rule, former decision must be a speaking order with proper reasoning. The res judicata is based on the public policy that when any decision attains finality it is not permissible under the law of land to take a plea that it ultravires Article 14 of the constitution; the parties will not be allowed to re-open the matter already adjudged.[34] The discussion and interpretation of *res judicata* in various Supreme Court judgments expands the scope and applicability of universal rules of res judicata in writ petitions registered under Article 226 and Article 32 of the constitution. As *res judicata* is applicable to various proceedings of the civil law, similarly, if a conclusion has arrived in the initial writ petition, successive writ petitions with regard to same subject matter will be restricted by the rules of res judicata, if challenged again under Article 32.[35]

WRIT OF HABEAS CORPUS IS AN EXCEPTION TO RES JUDICATA.

Where the issue of right to life or liberty is involved, *res judicata* will not be applicable. There is an only exception to the applicability of *res judicata* in writ mechanism i.e. habeas corpus. The English and American courts both agree on the fact that the rule of *res judicata* is not applicable to a writ of habeas corpus. Likewise, Indian courts too, the rule of res judicata is not made applicable to cases of habeas corpus.

In whole of the constitution Article 21 is supreme; neither substantive lawnor any procedural

34. Sir DinshahFardunji Mulla,The Code of Civil Procedure349 (Lexis Nexis, Nagpur, 2011).
35. Sudipto Sarkar and V.R. Manohar, Sarkar's The Code of Civil Procedure 180-181 (Lexis Nexis, Gurgaon, 2011).

law can curtail its scope. In ***Srikant vs. District Magistrate, Bijapur and others*** case[36] the petitioner filed a *habeas corpus* petition under Article 32 of constitution which was opposed by the State and other respondents by taking a plea of *res judicata*. The State urged that the previous petition was also dismissed on similar grounds and the present petition is totally devoid of merits; did not include any new fact or ground. While giving the judgement, the Supreme Court took into consideration the referred judgements of ***Ghulam Sarwar vs. Union of India and others***[37] (pronounced by Constitution Bench), ***Lallubhai Jogibhai Patel vs. Union of India and others***[38] along with ***Daryao vs. State of U.P.***[39] stated that the rule of constructive res judicata is only applicable to civil action. Wherein the issue of personal freedom or illegal detention is involved, the rule of public policy is inapplicable and the successive writ petition of habeas corpus under Article 32 is not barred.

A conflict between Article 21 and the applicability of *res judicata* is cited again in a recent judgement.A set of writ petitions under Article 226 and 227 of constitution are filed in ***Abdul Razak vs. State of Karnataka*** case,[40] in which the Full Bench of Karnataka High Court before pronouncing a judgement framed three issues; which were related to detention. The court reiterated that the rule of *res judicata* does not strike when it conflicts with the Article 21 and second writ petition is maintainable on fresh or new grounds, assailing the same detention order which were dismissed previously. Even the non-mentioning of the period of detention in the previous writ petition would not vitiate the second writ petition.

In ***T.P. Moideen Koye vs. Govt. of Kerala,***[41] the petitioner files a writ of *habeas corpus* before High Courtunder Article 226 against his detention and the petition is rejected (speaking order or by a non-speaking order) and the said order is not questioned by preferring a special leave petition under Article 136 and is permitted to become absolute, it would still be liberal for him to institute an independent *habeas corpus* writ petition under Article 32 of the constitution. The rule of public policy is not completely binding on an illegal detention and does not preclude a next writ petition of *habeas corpus* under Article 32.

CRITICAL AND COMPARATIVE APPRAISAL OF JUDICIAL DECISIONS

The doctrine of *res judicata* does apply to all writ petitions under Article 226 and Article 32 of the constitution. Therefore, the position is that when once a writ petition has been filed in a High Court or Supreme Court and has been dismissed there on merits, then a successive writ cannot be filed in the same court on the similar cause of action. However, this vision of the Supreme Court has been condemned by various jurists. They have asserted that judiciary has diminished the fundamental right in Article 32 by applying the golden rule. It is submitted that the researcher agrees with the view of the Supreme Court that there has to be finality to litigation. Gazing at the slow process of judicial remedy and frivolous proceedings in our community, it is rather indispensable that the doctrine of *res judicata* be given as liberal as interpretation and its scope and applicability should not be curtailed. Where the applicability of *res judicata* in writ petitions is concerned, the judgment delivered in ***Daryao vs. State of U.P***.[42] strikes first; without which the constitutional aspect of its applicability is incomplete. Thus universal rules laid down by the Supreme Court inthe aforesaid case has been taken as a benchmark for deciding application of *res judicata* in subsequent cases with respect to writ petitions instituted under Article 226 and Article 32 of the Constitution.The Supreme Court has described the following basic principles for the applicability of res judicata:[43]

a) The parties are barred to move Supreme Court under Article 32 with respect to same matter with same facts which was contested previously in a writ petition and was dismissed on merit would bind the parties until and unless it is reversed or modified by appeal.

b) A subsequent petition under Article 32 is not prohibited by law, if a former writ petition is dismissed because of latches or the party had some other alternative remedy but not on the merits.

c) The former petition dismissed in *limine;* subsequent writ petition totally depends upon the order pronounced by the court previously i.e. whether the bar of *res judicata* is to be enforced or not.

---

42. Daryao, *supra* note 9.
43. *Ibid.*

In ***Sharma vs. Krishna Sinha*** case,[44] the issue of the applicability of *res judicata* in writ proceedings under Article 32 was raised in the Supreme Court for the first time where the Apex Court had delivered its judgement with positive effects to widen its scope.Prior to this case there was no proper check or limitation on the repeated petitions under Article 226 or Article 32. The court stated that once the writ petition is decided on merit then it is not liberal to a party to move High Court under Article 226 or to Supreme Court under Article 32 for deciding the same issue again unless the order is reversed or modified in appeal.

In ***Pawan Kumar Singh vs. State of U.P. case,***[45] petitioner appealed for the compensation along with the interest in lieu of acquisition of plot under the provisions of the Land Acquisition Act, 1894. The respondent stated that the same petition was filed previously which was dismissed by the High Court on same cause of action and the instant petition is not maintainable under Order 23 rule 1 of CPC. The High Court referred many cases of the Supreme Court and mainly relied on the judgment given in ***Forward Construction Co. vs. Prabhat Mandal case***,[46] where it is held that res judicata is applicable on the order that dismissed the first writ petition and the petitioner has no right to institute another petition on the similar facts and on similar cause of action.

There is no hard and fast rule established by the law or any precedent settled by the court on the summary dismissal of the petition. In ***Hoshnak Singh vs. Union of India***[47] regarding the applicability of *res judicata* in decision without speaking order, the Supreme Court stated that the writ petition dismissed in High Court without speaking order cannot bar a subsequent petition on the same facts. The applicability of the rule would depend upon the order, the facts and circumstances of each case. The High Court in review petition can only correct errors which are face of the petition but the court have no jurisdiction to correct error decision which is decided on merit.

Any dismissal in *limine* of a petition may only prohibit the discretion of the court but lays no effect on the jurisdiction of the court in another writ petition. While pronouncing a judgment, court can consider the issue even the argument in *limine, res judicata* will apply on subsequent petition. *Res judicata* is applicableif a writ petition is dismissed on merit though in *limine*.The

44. AIR 1960 SC 1186.

46. AIR 1986 SC 391.
47. (1979) 3 SCR 399.

dismissal in limine of a writ petition without a speaking order implies no bar on the later writ petition. Withdrawal of a petition by a workman would not constitute as *res judicata* on another remedy claimed under Labor Court; Order 23, rule 1 is also not applicable to such suit.[48]

In ***Union of India vs. Javier case***,[49] Union of India and the Railway Administration filed a writ petition to quash the order of Central Administrative Tribunal. The respondent applied for the post of Junior EngineerII (Mechanical), Junior Engineer-II (Mechanical CADCAM) and Junior Engineer-II (Carriage and Wagon) and qualified the test but his name was not found in the list of final results. The respondent approached the Tribunal regarding the same. The Tribunal quashed the order and favored the respondent. The railway authority argued that the respondent had filed two different applications; initial before the Chandigarh Tribunal and the later before the Central Administrative Tribunal; and had committed fraud on the railway authority. The former application was dismissed and thus the application before Central Administrative Tribunal is not maintainable on the ground of *res judicata.* The High Court stated that the Chandigarh Tribunal gave liberty to file a fresh application while dismissing the original application, thus the issue framed by the Tribunal was never heard and finally decided. So, *res judicata* does not apply in this petition.

In ***P. Bandhopadhya & others vs. Union of India*** case,[50] the initial appeal was filed by the appellant before Bombay High Court for taking benefits of certain amount of his service in the government which is equal to Provident Fund. The court dismissed the petition and stated that this writ petition is not maintainable as this issue was squarely covered in the matter decided previously on merits by the Division Bench of this court in ***S.V. Vasaikar vs. Union of India*** case.[51] After the dismissal, the appeal was filed in the Apex Court. While awarding the judgment, the Apex Court upheld the Bombay High Court decision and heavily relied on the judgement pronounced by the Constitution Benchin ***Direct Recruit Class II Engineering Officers Association vs. State of Maharashtra & Others,***[52] wherein the court stated that 'general rules of *res judicata* are applicable to writ petitions'. The court further added that where the matter is finally adjudged by the High Court on the merit, later petition would not be

48. Haryana State Co-operative Land Development Bank v. Neelam, AIR 2005 SC 1843.

51. (2003) 2 MhL.J. 691.
52. (1990) 2 SCR 900.

maintainable on same facts and on similar grounds.

In ***Devilal Modi vs. S.T.O.*** case[53] , the petitioner challenged the validity of an assessment order under Article 226 in High Court. The petition was dismissed on merits and an appeal against the same was also dismissed on merit by the Apex Court. Another writ petition was filed in the same High Court on some additional grounds against the same assessment order and the petition was dismissed again by the High Court. On appeal, the Apex Court stated that the petition is barred by the rules of constructive *res judicata.* If constructive *res judicata* is not applied to such like proceedings, the petitioner will come up with few new facts every time which leads to the violation of the rule of public policy and the doctrine of finality of judgement will never be achieved.

In ***Amalgamated Coalfields Ltd. vs. Janapada Sabha*** case[54] , first time the matter of constructive *res judicata* in writ proceedings arose before the Supreme Court. The court stated *"constructive res judicata is a special and an artificial form of res judicata enshrined in section 11 of CPC should not usually be applied to petitions under Article 226 or Article 32 of the constitution."* No doubt constructive *res judicata* is said to be very technical but after reading a catena of judgements of the High Courts and Supreme Court the rule of constructive *res judicata* is also applicable to the writ proceedings.

CONCLUSION

The judicial system of India has many loopholes which lead to the disposal of cases in quiet slow and ineffective manner. Moreover, if multiplicity of litigations is permitted for the same issues it will not merely make the parties suffer immensely but also lead to the increased burden on the judicial system and also waste its assets by conducting trial on the similar issue. To curtail these issues and problems the principle of *res judicata* is mandatory to be enforced in an effective manner.With the landmarkjudgement of the Privy Council in ***Ram Kirpal vs. Rup Kauri***[55] the principle is widely applied by the court in execution proceedings and finally the amendment in CPC in 1976 give codification to this judgement in the way of explanation VII in section 11. The rule of law has been made applicable even to writ proceedings. The principle laid down in ***Daryao vs. State of Uttar Pradesh*** case[56] has been termed as a landmark judgement for the

application of res judicata in subsequent writ proceedings. Some jurists criticise the Supreme Court view regarding applicability of the rule in fundamental rights which challenge the validity of Article 226 and Article 32. But according to present circumstances as the long backlog of cases prevails, there is a need of such principle in the modern society. Keeping in mind the slow process of the judicial decision, it is significant that the scope and applicability of the rule should not be curtailed.

BASIC STRUCTURE DOCTRINE: WIDENING HORIZONS

Dr Monika Ahuja *

Time is not static Time changes and, therefore, the life of a nation is not static but dynamic and living.Its political, social and economic conditions change continuously. Social mores and ideals changes from time to time creating new problems and altering the complexion of the old ones. It is, therefore, quite possible that a Constitution drafted in one era, and in a particular context, may be found inadequate in another era and another context.[1]

Though, the process of judicial interpretation goes on in every constitution to a greater or lesser extent, yet it assumes a crucial importance in a country in which the formal method of constitution¬al amendment is very tardy and difficult.

The best example where this process has been used effectively for adaptation of the constitution is the United States, where the Supreme Court has from time to time given a new meaning tophrases and words in the constitution so as to make the 18th century, *laissezfaire* era document sub serve the needs of a vast, expanding and highly industrialized civilization of the twenty first century without many formal amendments being effectuated in its text.

The US Constitution being brief and couched in general language offers a vast scope for judicial creativity. For example, the First Amendment to the US Constitution guaranteesfreedom of speech in very broad terms. The Amendment says: "Congress shall make no law...abridging the freedom of speech or of the press". The provision lays down no limits or restrictionson the Fundamental Right to freedom of speech. But there can be no unlimited right. Therefore, theUS Supreme Court has taken upon itself to spell out the restrictions on this right.[2]

To a limited extent, in Canada and Australia also, the judiciary has adapted the constitution to the changing circumstances. The process of judicial interpretation is in progress in India as well. The Supreme Court by holding that it can reconsider its decisions from time to time has kept the way open for adjustmentsin constitutional interpretation so as to adapt the Indian Constitution to new situations. The Courthas on several occasions changed its views about the significance and meaning of several constitu¬tional provisions.[3]

1. M.P. Jain, Indian Constitutional Law 1724 (Lexis Nexis, 8th Edn., 2018).
2. *Ibid.*
3. *Ibid.*

Even though, due to the Indian Constitution being very detailed, and its language being rather specific, and not general, opportunities available to mould the Constitution by the judicial interpre¬tative process are somewhat limited, yet, there have been several outstanding judicial decisions which have had a deep impact on constitutional development. Since 1978, the interpretative process has entered a very dynamic phase because of judicial creativity.[4]

FORMAL METHOD

Practically, every constitution has some formal method of constitutional amendment. This consists of changing the language of a constitutional provision so as to adapt it to the changed context of social needs.

In some countries, the process may be easier than in others, and, accordingly, the constitutions are sometimes classified into flexible or rigid. A flexible constitution is one in which amendment can be effected rather easily, as easily as enacting an ordinary law. The best example of such a Constitution is the British Constitution which can be amended by an ordinary Act of Parliament, and there is, thus, no distinction between ordinary legislative process and constituent process.[5]

A rigid constitution is regarded as the fundamental law of the land in the sense that it lays down the basic principles for the country's governance which are considered to be of a permanent value. It is, therefore, thought that the method of constitutional amendment should ensure that the basic principles are changed only after thorough consideration and deliberation and hasty and ill-considered changes under political pressures of the day are avoided. Accordingly, in such a Constitution, the process of constitutional amendment is more elaborate and difficult than the enactmentof ordinary legislation. There, thus exists a distinction between legislative and constituent process; the former denotes making of an ordinary law and the latter denotes amendment of the Constitution.

If a Constitution is amendable easily by passing an ordinary law, then it will lose all permanence and supremacy. A written constitution usually is of the rigid type. A federal constitution has to be rigid, for it seeks to achieve a balance of powers between the Centre and the States, and it ensures that this balance is not disturbed lightly or unilaterally.

The terms 'rigid' or 'flexible' constitution, the difference being one of degree, because, in the ultimate analysis, a constitution which is incapable of adjustment and adapta¬tion will fail to

4. *Ibid.*
5. *Id.,* at 1727.

endure, and even a constitution of the flexible type may not be lightly amended owing to political repercussions apprehended. A constitution which may be *prima facie* rigid may, in practice, prove to be easily changeable, as has been the case in India so far.

Formal amendment is perhaps the most significant way of adapting the constitution to changing circumstances. The judicial interpretation may help to some extent in this respect but it cannot change the wordings of the basic law. The judicial process is slow and a change may be desired early. At times, some principles laid down by the courts may appear to be against public mores and political needs. An example of such a situation is furnished by the several amendments made in India to Article 31 of the Constitution concerning the Fundamental Right to property to overcome inconvenient judicial interpretation.[6]

SCOPE OF THE AMENDING POWER OF THE PARLIAMENT

Since the commencement of the Constitution, a constitutional battle has been fought, in this regard, both in the Courts as well as, inside the Parliament. It appears that Parliament has been asserting its supremacy as enjoyed by the British Parliament, but the Supreme Court has been interpreting Parliament as a creature of the Constitution,[7] exercising powers under and not beyond the Constitution. The Constitution, though expressly confers amending power on the Parliament, but it is the Supreme Court, which is to finally interpret the scope of such power and to spell out the limitations, if any, on such amending power.

Amendment of Fundamental Rights

The question as to the *scope of the amending power of the Parliament,* came before the Supreme Court for the first time in ***Shankari Prasad v. Union of India.***[8] In this case, the constitutional validity of the Constitution (1st Amendment) Act, 1951,was challenged before the Supreme Court. The Constitution (1st Amendment) was enacted to remove certain difficulties brought to light by judicial pronouncements in regard to Fundamental Rights and the Directive Principles of State Policy.

Soon after the commencement of the Constitution in 1950, some State Governments initiated proposals for incorporation of laws relating to agrarian reforms. These laws contained

7. Kesavananda Bharati v. State of Kerala, AIR 1973 SC 1461.
8. AIR 1951 SC 458. The Constitution (1st Amendment) Act, 1951 was enacted by the Constituent Assembly, acting as provisional Parliament.

provisions for the abolition of zamindari system, as well, for the compulsory acquisition of property for public purpose. One such measure was the *Bihar Land Reforms Act, 1950,* enacted by the Bihar Legislature. The Act, provided for the acquisition by the State of the estates and tenures of three leading 'zamindars' of the Bihar Province. The Act was challenged in ***Kameshwar Singh v.State of Bihar,***[9] before Patna High Court. The High Court struck down *the Bihar Act,* as unconstitutional and void as it contravened the provisions of *Article 14.* The Central Government felt that such judicial pronouncements would endanger the whole zamindari abolition programme. To overcome the difficulty, a new provision, *Article 31A,* was added by the Constitution (1st Amendment) Act, 1951.[10]

In ***Shankari Prasad v. Union of India***,[11] wherein the1st Amendment was challenged, the question before the Court was *whether an amendment of the Constitution made under Article 368* was included in the term "law" *in Article 13.*

The Court, upholding the constitutionality of the1st Amendment, observed that "Law" in Article 13 did not include an amendment enacted under *Article 368.* The Supreme Court distinguished between the *ordinary legislative power* and the *constituent power.* The Court held that, in the context of *Article 13,*"law" must be taken to mean rules or regulations made in the exercise of *ordinary legislative power* and not amendments to the Constitution made in exercise of constituent power. The Supreme Court, thus, laid down that *Article 368* conferred *constituent power* on the Parliament, in the exercise of which, it could amend every provision of the Constitution, including the Fundamental Rights.

Article 31-A as it stood before the Constitution (17th Amendment) Act, 1964,provided that a law in respect of acquisition by the State of any 'estate' would not be deemed to be void on the ground that it was inconsistent with Fundamental Rights contained in Articles 14, 19 or 31. The expression 'estate' had been defined differently in different States' Statutes, causing difficulties in regard to transfer of land from one State to another under the Scheme of re-organisation of States. To remove such difficulties, the Constitution (17th Amendment) *Act, 1964* modified the definition of the term "estate" in Article 31-A. The17th Amendment also added 44 Acts enacted by States in the *Ninth Schedule*.

9. AIR 1951 Pat 91.
10. Prof. Narender Kumar, Constitutional Law of India1008 (Allahabad Law Agency, Reprint 2019).
11. AIR 1951 SC 458.

The validity of the Constitution (17th Amendment) Act, 1964, was questioned in ***Sajjan Singh v. State of Rajasthan.***[12] The challenge was not against the power of the Parliament to amend the fundamental rights, but on procedural non-compliance, It was contended that since17th Amendment (it added 44 Acts to 9th Schedule) was likely to affect the powers of the High Courts under *Article 226,*[13] it had attracted the Proviso to *Article 368,*[14] and as the impugned Amendment had not been ratified by half of the State Legislatures, it was invalid. Rejecting the contention, the Supreme Court held that the impugned Amendment did not attract the provision of CI. (b) of the Proviso to *Article 368.* The Court observed that the impugned Act did not purport to change the provisions of *Article 226* and that it could not be said even to have that effect directly or in an appreciable measure. Referring to Article 368, the Supreme Court expressed its full concurrence with the decision in ***Shankari Prasad v. Union of India,***[15] and laid down that *Article 13 (2)* did not affect amendments of the Constitution made under *Article 368*. The Court held that the constituent power conferred by Article 368 on the Parliament, included even power to take away *fundamental rights* under Part III.

Then came the celebrated judicial pronouncement in ***Golak Nath v. State of Punjab.***[16] In this case, the constitutional validity ofthe Constitution 1st Amendment 1951, 4th Amendment, 1955 and 17thAmendment, 1964, was questioned. The petitioners, the son, daughter and granddaughter of one Henry Golak Nath, who had died in 1953, challenged the validity of the *Punjab Security of Land Tenures Act. 1953,* under which a part of their land was declared surplus, to be acquired by the State. They alleged that the provisions of the Act, under which the said area was declared surplus, infringed their fundamental rights secured by *Article 19 (1)* and 31(2) and *Article 14*. As the *Punjab Security of Land Tenures Act, 1953,* was added to the9th Schedule bythe Constitution (17th Amendment) Act, 1964, the petitioners sought a direction from the Supreme Court for striking down the Constitution (1st Amendment) Act, 1951, Constitution (4th Amendment) Act, 1955, and the Constitution (17th Amendment) Act, 1964, so far as they affected their Fundamental Rights.

---

12. AIR 1965 SC 845.
13. 44 Acts were added to the 9th Schedule, the High Courts, were excluded from looking into the constitutionality of these laws as a result of Article 31B.
14. The Proviso requires the ratification of the Amendment Bill having been passed by special majority in both Houses of Parliament, by half of State Legislatures.
15. AIR 1951 SC 458.
16. AIR 1967 SC 1643.

The Supreme Court by 6 : 5 majority overruled its earlier decisions in ***Shankari Prashad v. Union of India,***[17] and ***Sajjan Singh v. State of Rajasthan,***[18] and held that Parliament had no power to amend the Fundamental Rights. J. Subha Rao, C.J., speaking for majority, observed that *Article 368,* in terms, only prescribed the various procedural steps in the matter of amendment of the Constitution, but did not confer power on Parliament either expressly or impliedly to amend the fundamental rights. The Court held that an amendment was a legislative process and an amendment of the Constitution was made only by legislative process with ordinary majority or with special majority, as the case may be, and that *an amendment could be nothing but "law".*

The Supreme Court further declared that Parliament would have no power in future (i.e., from the date of Golak Nath decision on 27-2-1967) to amend any provision of Part III, so as to take away or abridge the Fundamental Rights enshrined therein.

In answer to the question as to whether there would be any way to change the structure of Indian Constitution or abridge the Fundamental Rights, J. Hidayatullah referring to the amending process under the French and the Japanese Constitutions, explained that

> *"Parliament could act in a different way to reach the fundamental rights. It could amend Article 368 to convoke another Constituent Assembly, pass a law under Item 97 of List I of Seventh Schedule, to call a Constituent Assembly. That Assembly might be able to abridge or take away the Fundamental Rights, if desired."*[19]

To nullify the effect of Golaknath decision and to provide expressly for Parliament, the power to amend any part of the Constitution, including Fundamental Rights, the Constitution (24th Amendment) Act, 1971 was *enacted.* The 24th Amendment *firstly,* inserted Clause (4) in *Article 13* to the effect that "Nothing in this Article shall apply to any amendment of this Constitution made under *Article 368". Secondly,* the marginal heading to *Article 368* which ran as *"Procedure for amendment of the Constitution",* was substituted by a new heading which runs as *"Power of Parliament to amend the Constitution and procedure there for".* Thirdly, a new Clause (1) was added to Article 368, to confer on Parliament, constituent power to amend by way of addition, variation, or repeal, any provision of the Constitution including Fundamental Rights. *Fourthly,*

17. AIR 1951 SC 458.
18. AIR 1965 SC 845.
19. The majority of the Supreme Court also spell out this way to change or abridge the fundamental rights, but did not express the final opinion on the question.

it made it obligatory for the President to give his assent to the Bill having been passed by the Houses of the Parliament. Lastly, a new Clause (3) was inserted in *Article 368* to the effect that *"Nothing in Article 13 shall apply to an amendment made under this Article".*

The Constitution (24th Amendment) Act, 1971, thus conferred absolute, unlimited and uncontrolled amending power on the Parliament.

The Constitution (25th Amendment) Act, 1971

After ***Golak Nath v. State of Punjab,***[20] judgment, some important pronouncements came from the Apex Court in regard to *right to property* contained *in Article 31,* as it stood then. In these cases,[21] the Supreme Court applied the *doctrine of "just equivalent"* and observed that *adequacy of compensation* and the *relevancy of the principles laid down for determining compensation,* to be paid to a person for depriving him of his property, were justiciable and that the Court can go into the question whether the amount paid to the owner of the property was *"just equivalent"* of what he was deprived of.

These decisions struck a blow to the government's programme introducing socio-economic reforms and would have stood in the way of implementing the *Directive Principles of State Policy.* To surmount these difficulties, the Constitution (25th Amendment) Act, 1971 was enacted. This amendment substituted the word *"amount" for "compensation" in Article 31 (2)* and it was expressly declared that *"adequacy of the amount"* to be given for depriving a person of his property, would not be called in question in any Court. Further, a *new Article 31-C* was inserted in the Constitution to provide supremacy to the Directive Principles contained in *Articles 39 (b) & (c)* over Fundamental Rights contained in *Articles 14, 19 and 31.*

Fundamental Rights case *(His Holiness Sripadagalvaru Kesavananda Bharati& Ors.v. State of Kerala)*

The Constitution (24th Amendment) Act, 1971 and the Constitution (25th Amendment) Act, 1971 along with the Constitution (29th Amendment) Act, 1972, [22] were challenged before the Supreme Court in ***Kesavananda Bharati v. State of Kerala,***[23] popularly known as *Fundamental Rights case.* This case was heard by a Bench of 13 Judges of the Supreme Court.

23. AIR 1973 SC 1461.

Out of 13 Judges, 11 Judges delivered separate judgments. Its hearing took five long months. In the constitutional history of free India, the Court gave the longest judgment running into 595 pages.[24]

Though all the 13 Judges upheld the constitutionality of the 24th Amendment and held that Parliament under *Article 368* had power to amend the Constitution, they, however, differed among themselves as to the extent or scope of the power. Six of the Judges (Sikri C.J., Shelat, Hegde, Grover, Jaganmohan Reddy and Mukherjee, JJ.) held that the power of amendment contained in *Article 368* was subjected to certain implied and inherent limitations and that in the exercise of its amending power Parliament could not amend the basic structure or framework of the Constitution. They further held that the *fundamental rights* enshrined in Part III related to the basic structure or framework of the Constitution and, therefore, were not amendable. While, the other six Judges (Ray, Palekar, Mathew, Beg, Dwivedi and Chandrachud, JJ.) were of the opinion that there were no limitations on the power of the Parliament to amend the Constitution.[25]

Khanna J., appears to have reconciled the two divergent views and took a middle path and thus tilted the balance in forming the majority decision with Sikri, C.J., Shelat, Hegde, Grover, Jaganmohan Reddy, Khanna and Mukherjee, JJ. Khanna, J. laid down :

> "The power of amendment under Art. 368 does not include the power to abrogate the Constitution nor does it include the power to alter the basic structure or framework of the Constitution. Subject to the retention of the basic structure or framework of the Constitution, the power of amendment is plenary and includes within itself the power to amend the various Articles of the Constitution, including those relating to fundamental rights as well as those which may be said to relate to essential features. No part of a fundamental right can claim immunity from amendatory process by being described as the essence or core of that right. The power of amendment would also include within itself the power to add, alter or repeal the various Articles."

Khanna, J., thus, held that Parliament had wide power of amending the Constitution under

---

24. Dissent Judges were Justice Ray, Justice Paleker, Justice Mathew, Justice Beg, Justice Dwiwedi, Justice Chandrachud. Majority judges were Chief Justice Sikri, Justice Hegde, Justice Mukherjee, Justice Shelat, Justice Grover, Justice Jagmohan, Justice Khanna.
25. *Ibid.*

Article 368, it extended to all the provisions of the Constitutions, including those relating to fundamental rights, but the *amending power is not unlimited and it did not include the power to destroy or abrogate the basic structure or framework of the Constitution.* The majority of the Supreme Court, thus, evolved the theory of Basic Structure.

Basic Structure of the Constitution

'Basic' means the base of a thing on which it stands and on the failure of which it falls. Hence, the essence of the 'basic structure of the Constitution' lies in such of its features, which if amended would amend the very identity of the Constitution itself, ceasing its current existence. It is not a 'vague concept' or 'abstract ideals' found to be outside the provisions of the Constitution. Therefore, the meaning and extent of 'basic structure' needs to be construed in view of the specific provisions, its object and purpose, and the consequences of its denial on the integrity of the Constitution as a fundamental instrument of governance of the country.

In India, the doctrine of Basic Structure is a judicial innovation, and it continues to evolve via judicial pronouncements of the Apex Court. The contours of the expression have been looked into by the Court from time to time, and several constitutional features have been identified as the basic structure of the Constitution, but there is not an exhaustive definition or list of what constitutes the 'basic structure of the Constitution- the Court decides from case to case, whether a constitutional feature can be regarded as basic or not.

Seven of the thirteen Judges in ***Kesavananda Bharati case,***[26] observed that Parliament in the exercise of its amending power under *Article 368,* could not alter *the basic structure or framework of the Constitution. The Basic Structure*[27] has been, thus, held to be a limitation on the amending power of the Parliament. It provides a touch-stone to test the extent of Parliament's power to amend the Constitution.[28] However, it is not possible to ascertain, from the opinions they delivered, as to what constituted the *Basic Structure* or which of the provisions of the Constitution, formed parts of the *basic structure.* Some of the Judges made observations in this regard.

Sikri, C.J., observed that the basic structure was built on the basic foundation, i.e., the dignity

---

26. Kesavananda Bharati v. State of Kerala, AIR 1973 SC 1461 at 1903-4.
27. The "Doctrine of Basic Structure" is essentially developed from the German Constitution. M. Nagraj v. Union of India, AIR 2007 SC 7.
28 I.R. Coelho v. State of Tamil Nadu, AIR 2007 SC 861.

and freedom of the individual. The basic foundation of the basic features, in his opinion, could be easily discernible from the Preamble, as well as, from the whole scheme of the Constitution. He articulated the following features as to constitute the basic structure:[29]

(1) Supremacy of the Constitution

(2) Republican and Democratic forms of Government

(3) Secular character of the Constitution

(4) Separation of powers between the legislature, the executive and the judiciary

(5) Federal character of the Constitution

Shelat and Grover, JJ., held that the basic structure was not a vague concept. They maintained that the basic features could only be illustrative and could not be catalogued. According to them the following features constituted the basic structure :[30]

(1) The Supremacy of the Constitution

(2) Republican and Democratic form of Government and Sovereignty of the country

(3) Secular and Federal character of the Constitution

(4) Demarcation of power between the legislature, the executive and the judiciary

(5) The dignity of the individual secured by the various freedoms and basic rights in Part III and the mandate to build a Welfare State contained in Part IV

(6) The Unity and the Integrity of the Nation

Hegde and Mukherjee, JJ., illustrated the following as the fundamental features:

(1) Sovereignty of India

(2) The Democratic character of our polity

(3) The Unity of the country

(4) The essential features of the individual freedoms secured to the citizens

(5) The mandate to build a Welfare State and egalitarian society

Jaganmohan Reddy, J., observed that the mere fact that the essential elements constituting the basic structure could not be enumerated exhaustively, was no ground to deny their existence. In his opinion, a Sovereign, Democratic, Republic, Parliamentary Democracy, and the three organs of the State constituted the basic structure.[31]

Khanna, J., by way of instance, held that the *democratic government* could not be changed into

---

29. Kesavananda Bharati v. State of Kerala, AIR 1973 SC 1461 at 1535.
30. *Id.,* 1603.
31. Kesavananda Bharati v. State of Kerala, AIR 1973 SC 1461, 1753-54.

dictatorship or hereditary monarchy, nor the Lok Sabha and the Rajya Sabha be abolished. Likewise, the secular character of the State could not be done away with. Khanna, J., however, categorically said that *right to property* was not the basic structure or framework of the Constitution.69

From the above discussion, it is not easy to identify with certainty, *the basic structure* or the provisions of the Constitution which constitute *the basic structure or the framework.* It *is, therefore, for the Supreme Court, to determine finally, as to what constituted the basic structure or what features and the essential features constituted the framework of the Constitution.* It may be stated that by laying down the concept of Basic Structure, the Supreme Court has assumed to itself the constituent power.

Hon'ble Chief Justice Chandrachud (as he then was), in ***Indira N. Gandhi v.Raj Narain,***[32] explained that for determining whether a particular feature of the Constitution was part of its basic structure :

> *One has perforce to examine in each individual case, the place of the particular feature in the scheme of our Constitution, its object and purpose, and the consequences of its denial on the integrity of the Constitution as a fundamental instrument of the country governance.*

The Supreme Court decision in *I.R. Coelho v. State of Tamil Nadu,*[33] on subjecting laws placed in the Ninth Schedule of the Constitution to judicial review¬ – on the ground of violation of fundamental rights forming part of the basic structure of the Constitution. It was in 1951 that Parliament through the first amendment to the Constitution carved out the Ninth Schedule as an enclave where laws could be placed beyond judicial challenge on the ground of violation on any of the fundamental rights. That move was a reaction to the spate of challenges to land reform laws. Originally, the Schedule was intended to cover land reform and nationalization laws besides laws to tackle concentration of economic power, and was only to be used sparingly. Yet, as the court has pointed out in its decision, the list expanded from 13 to 284, including many state laws. Parliament does not have a carte blanche to override all the fundamental rights, which is what the Ninth Schedule allows it to do. If in the early years of the Constitution, the courts had

---

32. AIR 1975 SC 2299, quoted in I.R. Coelho v. State of Tamil Nadu, AIR 2007 SC 861.
33. AIR 2007 SC 861. The doctrine has been embraced in other countries like Germany having controlled constitution.

conceded to Parliament an unfettered right to amend it, the Kesavananda Bharati case in 1973 introduced the doctrine that the basic structure and framework of the Constitution would be beyond the amending power. Following this line of reasoning, the nine-judge bench of the Supreme Court has now held unanimously that laws placed in the Ninth Schedule after 1973 are subject to judicial scrutiny.[34]

In ***Supreme Court Advocates on Record Association v. Union of India,***[35] the Supreme Court held that there are declared limitations on the amending power conferred on Parliament which cannon be breached. Breach of a single provision of the Constitution is sufficient to render the entire legislation ultra vires the Constitution.

In ***Kuldip Nayar v. Union of India (UOI) and Ors.,***[36] the Supreme Court, while dealing with the question of political party system vis-à-vis democracy observed that "parliamentary democracy and multi-party system are an inherent part of the basic structure of Indian constitution. It is political parties that set up candidates at an election who are predominantly elected as Members of the State Legislatures."

CONCLUSION

It is thus evident that so far, there has been no consensus in this regard laying down the features of the Constitution that may be considered 'basic'. The court has not foreclosed the list of the basic features as suggested by different judges in different cases. In Indira Gandhi's case Justice Chandrachud has observed that "the theory of basic structure has to be considered in each individual case, not in the abstract, but in the context of the concrete problem."

In Kesavananda's case it has been expressly held that the right to property is not a part of the basic structure of the Constitution and, therefore, any amendment can be made to the Constitution in total disregard of the right to property. The only restriction on the amending power is that the power cannot be used to alter or destroy the basic structure or framework of the Constitution.

Logically speaking, the limit to the amending power should be that the Constitution cannot be made to suffer a loss of identity through the amending process. The identity of the Constitution is the sum of its essential features,if the Constitution is not to suffer a loss of identity, each of its essential features has to be preserved.

These judgements of the Supreme Court somehow give the impression that there is a confrontation between Parliament and the judiciary. The confrontation is certainly unfortunate.

The parliament should enact laws with greater restraint and the restraint is more necessary in case of amending the Constitution. The amending power should not be used for political stunts and maneuverings.

INDIAN CONSTITUTIONAL MORALITY AND SECULARISM IN REFERENCE TO Dr AMBEDKAR'S PARADIGM

-Dr Bhupinder Kaur*

1. INTRODUCTION

India is a secular state or more correctly, a constitutionally secular state. Some other states are also considered to be secular such as USA, UK, Australia, France, Mexico, South Korea and Turkey, although none of these nations have identical forms of governance. It is many a times alleged that Indian secularism is an imported phenomenon from one or more of these countries, not essentially 'Indian' in character[1]. It is also assumed that as it now stands in the Constitution, is an imposed set of principles carried by some influential members of the Constituent Assembly, namely Pandit Jawahar Lal Nehru and Dr. Bhim Rao Ambedkar inculcated in their conception through the study of the West's medieval Church-State power clashes.

There were three kinds of groups in the Constituent Assembly, first led by Prof. K.T. Shah, an alumnus of the London School of Economics, which argued in favour of total divorce between religion and the state in the sense that for state there is no phenomenon like 'religion'. State does not believe in the legitimacy of religion's interference or obstruction in its way of governance for political, social and economic revolution and therefore, insisted upon the inclusion of the word 'Secular' in the clause 1 of Art.1 which defines the Union of India. The second group consisted of hard-core pro-religion leaders as well as some mild supporters of religious values, who unequivocally, though unable to define or elucidate, were of the view that religion can serve as a good check upon the powers of the State or can better realise it of its duty to protect Bhartiya Sanskriti, which is its sacred duty. The third group led by Pandit Nehru and Dr, Ambedkar rejected the contentions of both these groups. The duo, in the Constituent Assembly, through a majority of members, was successful in fixing the problem by creating a unique fabric of Fundamental Rights and Directive Principles of the State Policy along with the qualifications attached thereto. Ambedkar's approach to the concept of secularism arises more from the discourse of justice and equality than from an anti-religious position. Therefore, he rejected the religious bias of pro-religion statehood supporters as well as differed from the other group, in the Constituent Assembly in regarding the addition of the word 'Secular' as a redundancy.

1. G.P. Tripathy, Constitutional Law- New Challenges 54(Central Law Publications, Allahabad, 1st ed. 2015)

The term 'secularism' was first used by the British writer George Holyaake in 1851. In relation to Christianity, Holyaake argued that "Secularism is not an argument against Christianity; it is one independent of it. It does not question the pretentions of Christianity, it advances other. Secularism does not say there is no light or guidance elsewhere, but maintains that there is light and guidance in secular truth whose conditions and sanctions exist independently, and act forever". Applying the same lines on our country in the context of majority-minority conflict, it can be retreated that "Secularism is not an argument against Hinduism or Islam or others; it is one independent of them. It does not question the pretentions of them, it advances other. Secularism does not say there is no light or guidance in these religions, but maintains that there is light and guidance in secular truth whose conditions and sanctions exist independently, and act forever". This secular truth is nothing but the rule of law guided by reason and evidence, a rule of law deep rooted with the sense of Justice, equality, freedom and dignity of the human beings and a rule of law which guards its beneficiaries against any assault or obstruction on its secular truth, as and when it comes from anywhere whether religious forces or non-religious forces. Certain constitutionalists name it 'Constitutional Morality' or 'Secular Humanism'. Secularism is neither 'Pro-God' nor 'anti- God', rather independent of both of them. It is in this sense; Indian Constitution retains it through the efforts of Dr. Ambedkar, among others.

2. INDIAN CONSTITUTIONAL LAW OF SECULARISM VIS-A-VIS CONSTITUTIONAL MORALITY

India is a secular state. The concept of secularism is implicit in the Preamble of the Constitution which declares India as a Sovereign, Socialist, Secular and Democratic Republic and the resolve of the people to secure to all its citizens 'Liberty of Thought, Belief, Faith and Worship'. The word 'Secular' was not included in the preamble or in the body of the Constitution at the time of its making in Constituent Assembly, but added by 42nd amendment in 1976, though not defined anywhere, rather, words 'Right to Freedom of Religion' have been used for Art.25 to 28. Thus a question arises- does the term 'Secular' used in preamble conjointly with words Sovereign, Socialist and Democratic means something more than 'Right to Freedom of

Religion' or less than it or equal to it or something else? It needs attention of legal scholars. Was it skipped from Preamble because it is not the same as right to freedom of religion? The problem arises in situations like that of Tripple Talaq when the opponents of Tripple talaq use secularism in their favour in the sense that state can make law to abandon this practice for the sake of justice and equality whereas the proponents of Tripple Talaq also use the same secularism in their favour saying that state cannot interfere in religion as religion has its own divine sanctity and state is a worldly creation and because it has chosen to be secular, now it cannot touch upon religion. Art.25 to 28 thus, do limit the state power in this sense, though opponents find room for them in the form of reasonable restrictions. Thus a quandary arises that whether the state can abandon it because it is a secular state, constitutional morality gives it powers to do so or whether the state cannot abandon it because it is a secular state and being a matter of religion, it is out of its jurisdiction. It may, however be assumed, with probability of error, that due to this slipperiness of the term 'Secularism', Dr, Ambedkar did not approve of the amendments moved by Prof. K.T Shah to include the word 'Secular' in the text of the Constitution.

However, another view is that in responding to this proposal, Dr. Ambedkar said nothing at all about 'Secularism'; his entire response was about the words 'Socialist Republic'. What did he say? "I regret that I cannot accept the amendment of Prof. K.T. Shah. My objections, stated briefly, are two. In the first place, the Constitution, as I stated in my opening speech in support of the motion I made before the House, is merely a mechanism for the purpose of regulating the work of the various organs of the state. It is not a mechanism whereby particular members or particular parties are installed in office. What should be the policy of the state, how the society should be organised in its social and economic side are matters which must be decided by the people themselves according to time and circumstances. It cannot be laid down in the Constitution itself, because that is destroying democracy altogether." Ambedkar went on to make his second point: "The second reason is that the amendment is purely superfluous. My Honourable friend, Prof. Shah, does not seem to have taken into account the fact that apart from the Fundamental Rights, which we have embodied in the Constitution, we have also introduced other sections which deal with Directive Principles of State Policy…. My submission is that these socialist principles are already embodied in our Constitution and it is unnecessary to

accept this amendment"[2] . Thus, Dr. Ambedkar did not say he was opposed to Shah's proposal, he actually said that it was superfluous and that was why he could not accept the amendment .[3]

Secularism in India means that the State has no religion of its own declared to be religion of the state; the State treats all the religions equally and that the State does not discriminate among its citizens on the ground of religion. State is conceived with the relation between individual and individual and not between individual and God. Now again question arises whether the marriage and eating beef is something between individual and individual or something between individual and God. If former is true, the state can regulate, however if the later is true, the state cannot.

The quandary is who is to and how is to decide it is between individuals or between individual and God, the state itself or the religious leaders? The debates of Constituent Assembly are divided on this matter, however, the weight of authority prescribes that Dr. Ambedkar was in favour of giving an influential hand to state in this regard. It is clear from his struggle for the emancipation and empowerment movements of scheduled castes, not only in his speeches but in the provisions of the Constitution under Art. 15 (Right to equality and freedom from discrimination), Art. 16 (Reservation for SCs and STs in public employment and Art. 17 (Abolition of untouchability) through firm state action. For orthodox Hindus, caste division, non-dissolution of Hindu marriage and negation of property rights to women were integral to Hinduism and necessary for Undivided Hindu Family System, however Dr, Ambedkar, in support with other progressive members of the Constituent Assembly, entirely rejected it and supported Hindu Code Bill as a strong reform movement in personal law, an area earlier ruled by religion.

Art. 25 incorporates that there shall be freedom of conscience and the right to freely profess, practise and propagate religion. This provision is however subject to some reasonable restrictions such as public order, morality, health and other provisions of Part-III as well as to the laws regulating or restricting any financial, political or other activity associated with religious practice or any law providing for social welfare and reforms or the throwing open to all persons

the religious institutions, belonging to their religion or of a public character. Freedom of conscience means inner freedom of the person to mould his relation with God in whatever manner he likes. Profess indicates the declaration freely and openly of one's faith or belief. Practise means to perform the prescribed religious duties, rites and rituals and to exhibit his religious beliefs and ideas by such acts as prescribed by religious order in which he believes. The word propagate includes to speak and publicize one's religious views for the edification of others without any element of force, physical or mental

'Practice' is controversial term. Answering the question as to which practices can be said to be integral for a religion, the honourable Supreme Court held in ***Commissioner of Police v. Acharya Jagdeshwarnanda***[4] that the test is to find out whether the nature of the religion will be changed without that part or practice. If the taking away of that part or practice could result in a fundamental change in the character of that religion, then such part could be treated as an essential or integral part.

The honourable Supreme Court has declared the practice of Triple Talaq to be unconstitutional. The unconstitutionality has been declared on the basis of principles of constitutional morality as well as religious quandary as to its authenticity in Islam itself. The Court strongly reminded the legislature to play its part. Taking this in present scenario, it is again needful to well research the basic questions such as whether the beef ban is essential part of Hindu religion without which it will lose its character or having Teen Talaq is so essential for Islam that if not preserved, will fundamentally change its character? And further how to arrive at a conclusion whether and what fundamental change has it brought? Who will decide it- State or religious leaders? Therefore, we need to look back to the views of the makers of the Constitution. Whether these practices are fundamental for religion or merely associated with the religion? Mere association with certain religion, not able to change the character of religion- can serve as a test to validate or invalidate such practices.

However, this test is also not short of diversion of opinion. It is argued that "under the essentiality test, the court privileges certain religious practices over others. It does not have the expertise to decide which practice/ritual is essential or non-essential. These are purely religious questions, which is best left to clergy. Triple Talaq is certainly not an essential Islamic practice but its effect in dissolving marriage among most Sunni sects may be part of their core or essential

4. 2004(3) SCALE 146.

beliefs. No Judgement can change such beliefs but if the Muslim clergy itself comes forward, such beliefs may gradually change and the instant triple divorce may eventually end" [5].

Latham C.J. of the High Court of Australia, while dealing with the provision of section 116 of the Australian Constitution which inter alia forbids the Commonwealth to prohibit the 'free exercise of any religion' observed, "It is sometimes suggested in discussion on the subject of freedom of religion that, though the Civil Government should not interfere with religious opinion, it nevertheless may deal as it pleases with any acts which are done in pursuance of religious belief without infringing the principle of freedom of religion. It appears to me to be difficult to maintain this distinction as relevant to the interpretation of section 116. The section refers in express terms to the exercise of religion, and therefore it is intended to protect from the operation of any Commonwealth laws acts which are done in the exercise of religion. Thus, the section goes far beyond protecting liberty of opinion. It protects also acts done in pursuance of religious belief as part of religion" [6].

As early as in 1963, the Supreme Court of India observed in this connection that, "In deciding the question as to whether a given religious practice is an integral part of the religion or not the test always would be whether it is regarded as such by the community following the religion or not. This question will always have to be decided by the court and in doing so the court may have to inquire whether the practice in question is religious in character and if it is, whether it can be regarded as an integral or essential part of the religion and the finding of the Court on such an issue will always depend upon the evidence adduced before it as to the conscience of the community and the tenets of its religion" [7].

Appointments of clergy[8], determining the status of second marriage of a Hindu already having a lawful married wife[9], slaughter of healthy chattel[10], right of managers to share the offerings of the deity[11], use of loudspeakers at religious places[12], prohibiting untouchability and discrimination[13], prohibiting misuse of properties of religious places[14] etc. have been held to be

secular activities by the Courts and thus can be regulated by the state within the ambit of reasonable restrictions attached to the various Articles of the Constitution determining the secularism and providing for freedom of religion in India.

Art. 26 provides that every religious denomination or any section thereof shall have certain rights such as to establish and maintain institutions for religious and charitable purposes, to manage its own affairs in matters of religion, to own and acquire movable and immovable property and to administer such property in accordance with law. However, these rights are subject to reasonable restrictions such as public order, morality and health. Religious denomination must be a collection of individuals who have a system of beliefs which they regard as conducive to their spiritual well being, that is, common faith. It must have a common organisation and a distinct name. No person, under Art.27, shall be compelled to pay any taxes, the proceeds of which are specifically appropriated in payment of expenses for the promotion or maintenance of any particular religion or religious denomination.

On prohibition of religious instructions in educational institutions, Art. 28 provides that no religious instruction shall be provided in any educational institution wholly maintained out of state funds except in those institution which have been established under any endowment or trust which requires that religious instruction shall be imparted in such institution. No person attending any educational institution recognised by the state or receiving aid out of state funds shall be required to take part in any religious instruction that may be imparted in such institution or to attend any religious worship that may be conducted in such institution or in any premises attached thereto unless such person or, if such person is a minor, his guardian has given his consent thereto.

Art. 29(2) incorporates that no citizen shall be denied admission into any educational institution maintained by the State or receiving aid out of state funds on grounds only of religion, race, caste, language or any of them. Art. 30 guarantees that all minorities whether based on religion or language, shall have the right to establish and administer educational institutions of their choice. Where a law is made providing for the compulsory acquisition of any property of any

educational institution belonging to a minority, it shall be ensured that the amount fixed by or determined under such law is such as would not restrict or abrogate the right guaranteed under clause 1 of Art. 30. Clause 2 of Art. 30 further makes it clear that in granting aid to educational institutions, the State shall not discriminate against any educational institution on the ground that it is under the management of a minority, whether based on religion or language. The object is to recognise and preserve different types of people with diverse language and different beliefs, which constitute the essence of secularism. However, it cannot be taken as a privilege but a protection to religious and linguistic minorities to attain a status of equality and dignity with other religious or linguistic groups in India.

Explaining the necessity of Art. 28, Dr. Ambedkar stated in the Constituent Assembly on 7th December, 1948 -"Take a city like Bombay which contains a heterogeneous population believing in different creeds. Suppose, for instance, there was a school in the city of Bombay maintained by the Municipality. Obviously, such a school would contain children of Hindus believing in the Hindu religion, there will be pupils belonging to the Christian community, Zoroastrian community, or to the Jewish community. If one went further and I think it would be desirable to go further than this, the Hindus again would be divided into several varities: there would be Sanatani Hindus, Vedic Hindus believing in the Vedic religion, there would be the Buddhist, there would be the Jains- even among Hindus there would be the Shivites, there would be Vaishnavites. Is the education institution to be required to treat all the children on a footing of equality and to provide religious instruction in all the denominations? It seems to me that to assign such a task to the state would be to ask it to do the impossible" [15].

He further argued in the context of clause two of Art. 28 stating that , " There have been cases where institutions in the early part of history of this country have been established with the object of giving religious instruction and for some reason they were unable to have people to manage them and they were taken over by the State as a trusty for them. Now, it is obvious that when you accept a trust, you must fulfil the trust in all respect. If the State has already taken over these institutions and placed itself in the position of trustee, then obviously you cannot say to the Government that notwithstanding the fact that you were giving religious instruction in these institutions, hereafter you shall not give such instruction. I think that would be not only

permitting the State but forcing it to commit a breach of trust"[16] .
