Dr. Ramesh Thakur

Introduction of IUMS: Himachal Pradesh University has a robust ERP system having more than 30 ERP Modules called the Integrated University Management System (IUMS), established in 2016. The IUMS efficiently manages the academic lifecycle of students, from pre-admission to post-admission processes. This includes admissions, academics, fee management, examinations, and result processing.

Dedicated Portals for Students and Employees: The University has introduced dedicated portals for students and employees, simplifying daily interactions. Students can conveniently fill out exam forms online, make payments via the University's payment gateway, and receive notifications about fees, exams, and results. The employee portal provides access to salary slips, advance details, and other HR-related information.

Streamlined Finance, HR: HPU has streamlined its Finance and HR practices through the ERP system, including a Recruitment portal.

Campus-Wide Optical Fiber Network: The University has a comprehensive Local Area Network (LAN) setup under Phases I and II of the HPU Campus Wide Optical Fibre Network project. It consists of 809 I/O points, 44 L2 and 3 L3 manageable switches, a Core Backbone Switch, and extensive Optical Fiber and CAT-6 cable routes. Phase III extended this network to a Wireless (Wi-Fi) setup with 24 x 7 Wi Fi 322 Access Points, 55 L2 and L3 switches, and additional fiber and cable routes. The network covers more than 50 buildings, including departments, examination branches, administrative blocks, and hostels. 1 Gbps Internet connectivity is provided by the National Knowledge Network's through BSNL.

Online Screen Evaluation System: The University's examination wing has implemented an Online Screen Evaluation System to enhance efficiency, accuracy, and transparency. This system automates evaluation, reduces human errors, and supports simultaneous assessments, resulting in faster result declarations. It minimizes logistics costs, paper usage, and operational expenses, while ensuring data security through encryption and controlled access. The system also facilitates transparency through audit trails, real-time monitoring, and streamlined rechecking processes.

Environmentally Sustainable and Scalable: The Online Screen Evaluation System reduces paper consumption, aligning with environmental sustainability goals. Its integration with the ERP system supports seamless workflows, result compilation, and student record management. The system is a cost-effective, scalable, and modern solution, significantly improving service delivery for students and staff.
